- In this table, in the first row, as in all other tables in this chapter, the Septenarian Attributes/Roles are shown per the Natural Sequence from left to right, as is my custom. This consistency aids the correlation of Body Types with Roles from table to table.
- The second row shows Role/Body Type preferences as declared in José Stevens's book *The Michael Handbook*, on pages 259–260. Notice that sometimes more than one Body Type is listed; this is allegedly because it depends on what the Fragment wants to do in any given lifetime, and it picks an appropriate Body Type for the job.
- The third row shows Role/Body Type preferences as declared in the book *Michael: The Basic Teachings*, at the beginning of each page of descriptions. No preferred Body Type was ascribed to the Server.
- The fourth row is from Sarah Chambers in 1998, as shown in Table 4Dq.
- The fifth row is my own. I do not see a reason to make the *natural* Body Type different from the *preferred* Body Type, but I could be wrong about that; who knows, really?

I am not convinced that the sources had a rationale for their preferences because their preferences don't match their correlations: their correlations of Body Types with Roles says one thing, and their preferences of Roles for Body Types says another thing. So far as I know, I am the only one who has attempted a consistency.

Examining the Foundations of Body Type

Taking the previous sections into account, it is clear that there is a lack of consistency within the Michaelian teachings community regarding the fit of the Body Type system into the Overleaf System. Is there a good fit, but the Michaelian teachings community just has not found it? I think not. Is there a bad fit, and I have found it? You be the judge. In this chapter and other chapters in this *History* book, I have argued and evidenced another proposition, namely that the Body Type system has so little resemblance to the Overleaf System that the former does not belong in the latter no matter how hard we try — and that *fact* is the main reason for the lack of consistency that we find in the Michaelian teachings community. It was a misguided idea to ever attempt to fit the Body Type system into the Overleaf System. There are numerous septenaries that do not fit into the Natural Sequence, and, in my opinion, the Body Type system is one of those.

It is true that during the original Michaelian group, the Michaels went along with the Fellowship of Friends's Body Type system information — because that is what the original Michaelian group members already knew. To me, this is not the same thing as a ringing endorsement. My contention is that the Body Type information has some *value* to some people — and that is why the Michaels went along with it — even though it is not *valid* in any larger scientific or philosophical way; it does not belong in the same class as the Overleaf System that was revealed by the Michaels, and which has a fundamental cosmic validity as described and explained in my book *The Tao of Cosmology*.

But the lack of compatibility of the Body Type system and the Overleaf System is not the end of the problems with this subject. The bigger problem is that the Body Type system as originally formulated, and subsequently developed, had no validity in the real world — it was built on speculations and conjectures. In this section, I argue that Rodney Collin's entire theory was unsupportable to begin with: it does not hold up to logical or scientific scrutiny; it is metaphorically a 'house of cards' built on a 'foundation of sand'.

As noted in the section on Body Types in Part One, Collin cobbled together his theory of Body Types from four diverse sources, all of which have a dubious authenticity and veracity:

1. **Endocrinology:** Dr. Louis Berman in the early 20th Century ascribed Body Type characteristics to the functions of seven endocrine glands: thymus, pancreas, thyroid, parathyroid, adrenals, posterior pituitary, anterior pituitary.

- 2. **Mythology:** Ancient Roman and Greek mythological deities were said to be archetypes, and thus they had certain characteristics of body and personality.
- 3. **Astrology:** This is another ancient mythology that has also assigned characteristics to the seven visible planets, and they are mostly derived from the mythological deities.
- 4. **Enneagram:** This is a system of nine archetypal characteristics represented by a graphic with alleged correlations to the mythologies mentioned.

As we examine each of these below, we see that none of them have credibility in themselves, and we see that none of them provide keys to correlating the Body Type system with the Overleaf System. So, here and now we are going to look at each of the four alleged foundations of the Body Type system in some detail, but not exhaustive detail.

Endocrinology

One of Rodney Collin's four parameters for characterizing Body Types was an alleged correlation with endocrine glands, based on the work of a pioneering endocrinologist in the 1920s, Dr. Louis Berman. One of the medical doctors who was a member of the original Michaelian group had a problem with this:

Endocrinology in Rodney Collin's book is in dire conflict with modern day endocrinology.

Yes, it is. He misunderstood the limits of planetary influence where diet and inborn genetic errors are concerned [they have far more influence than planets].

If Michael is correct, it invalidates a third of Rodney Collin's book [The Theory of Celestial Influence].

That is not necessarily valid. Certain Body Types are far more prone to specific endocrinologic disorders than others. However, the Age of the Soul comes into play at this level. [S/C, 27 September 1973]

The third of the book that was "invalidated" was the part about Body Types. The line of questioning on this topic ended there, so perhaps the answer satisfied the medical doctor, but to me it seems that the answers were quite obscure and perhaps deserved further elaboration if one is to salvage the endocrinology connection to Body Types. Personally, I have no interest in pursuing it further. Nor do I have any interest or competence in evaluating whether Dr. Berman's endocrinology in relation to Body Types has been totally debunked or not. However, the reader might want to pursue it further, so take note of this: Berman's book is freely available as a downloadable PDF at these URLs: >http://www.gutenberg.org/etext/10266< and >moses.law.umn.edu/darrow/.../Glands_Regulating_Personality_Berman_1922.pdf<.

Another point that seems to debunk the endocrinology hypothesis is this: note that there are *seven* endocrine glands that were associated with the seven planets by Rodney Collin. However, another two were associated with planets in the Fellowship of Friends. In one of their cartoons, the gonads were correlated with Uranus and the pineal gland in the brain was correlated with Neptune. So that makes *nine*, but there are *twelve* ductless endocrine glands, so one wonders how Collin (or anyone else) would integrate this into his theory. Personally I am not interested in pursuing the matter, but curious readers can do an internet search on the words "louis berman endocrine body types" and study it to their heart's content.

Based on these considerations, it seems to me that endocrinology does not provide strong support for the integration of the Body Type system into reality, to say nothing of finding a place for it in the Overleaf System.

Enneagram

To understand Body Types as originally proposed, it is also necessary to understand the Enneagram — at least in the formulation by Rodney Collin and the Fellowship of Friends from which the original Michaelian group learned about Body Types, and then in the later Michaelian teachings forms, including Stevens, *MTBT*, and Hoodwin — these three Michaelian teachings sources mention the Enneagram.

There are a couple of Wikipedia wikis on the Enneagram. In the first one, there is a history of the Enneagram before Gurdjieff brought it out of obscurity: >https://en.wikipedia.org/wiki/Enneagram_of_Personality<. A relevant quotation from that article is this:

While Enneagram teachings have attained some degree of popularity, they have also received criticism including accusations of being pseudoscience, subject to interpretation and difficulty to test or validate scientifically. They have also been criticized as "an assessment method of no demonstrated reliability or validity". The scientific skeptic Robert Todd Carroll included the Enneagram in a list of pseudoscientific theories that "can't be tested because they are so vague and malleable that anything relevant can be shoehorned to fit the theory". [retrieved 29 January 2019]

I tend to agree with this assessment. My perception is that the Enneagram is an artificial contrivance dressed up to look respectable with numbers and a graphic, which are supposed to explain things and mean something. Actual scientists are not fooled by that practice, but non-scientists can be more easily fooled by this trick. Notice this statement from the other Enneagram wiki, >https://en.wikipedia.org/wiki/Fourth_Way_enneagram<:

The enneagram is a nine-pointed figure usually inscribed within a circle. Within the circle is a triangle connecting points 9, 3 and 6. The inscribed figure resembling a web connects the other six points in a cyclic figure 1–4–2–8–5–7. This number is derived from or corresponds to the recurring decimal 0.142857 = 1/7. These six points together with the point numbered 9 are said to represent the main stages of any complete process, and can be related to the notes of a musical octave, 9 being equivalent to "Doh" and 1 to "Re" etc. The points numbered 3 and 6 are said to represent "shock points" which affect the way a process develops. The internal lines between the points; that is, the three-point figure and the six-point figure, are said to show certain non-obvious connections, although here very little elucidation is offered. [Retrieved 29 January 2019]

An internet search on the Enneagram reveals the considerable extent to which this graphic has been adopted and adapted into various pop psychologies. One of the variations goes beyond Body Types and applies personality traits to the nine points of the Enneagram. Another one correlates Myers–Briggs personality types with the Enneagram:

Perhaps the reason the Enneagram might look substantial to some people is because it contains a couple of fundamental principles that *are* substantial, that are not contrivances, namely, what Gurdjieff called the Law of Three and the Law of Seven. There are sections on both those topics in Part One of this *History* book. However, my thesis is that these Laws are not well-formed in the Enneagram, but that they are well-formed in the Overleaf System when understood as an instantiation of *The Tao of Personality* and the *Natural Sequence* as explained in my books by those names, and in my 'general systems theory', aka 'systematic cosmology project' book, *The Tao of Cosmology*. The Enneagram should be retired; it was primitive and preliminary; it has been supplanted by a better system that incorporates the same universal principles, and more, in a beautiful and logical mathematical structure.

The only reason I bring this up is to provide you with an introduction to the topic of the Enneagram, and with that background information you can decide if it is worth pursuing for your own learning. There is also Chapter 1B in Part One of this *History* book, "Personality Typologies"; it includes a discussion of the Enneagram that goes into a lot more history and detail. Two points made in that chapter can be reviewed here.

The first point is that the planets are ordered around the periphery of the circle in the sequence of their speed in the heavens: 1 = Moon, 2 = Mercury, 3 = skip, 4 = Venus, 5 = Mars, 6 = skip, 7 = Jupiter, 8 = Saturn. Some versions of the graphic show the sun at node 9, but usually it is shown in the center of the circle. That is one type of sequencing embodied in the Enneagram, and there is another.

The other point that should be made in this subsection: Rodney Collin in *The Theory of Celestial Influence*, on page 90, said there was a progression from one planet to another planet in a certain order from lifetime to lifetime. If a body was not a pure Body Type, then the body had to be a mixture of the primary planet and the planet on either side of the primary in this sequence. The progression is: Moon \rightarrow Venus \rightarrow Mercury \rightarrow Saturn \rightarrow Mars \rightarrow Jupiter \rightarrow Sun \rightarrow Moon again. (This sequence was adopted in Stevens's book, *The Michael Handbook*, p. 260, and also in *Michael: The Basic Teachings*, p. 135.) The Enneagram sequence of the Body Types was negated in this channeling:

[Joe Namath has a] Venusian Body with lots of Saturn thrown in.... The concept of Venusian–Saturn is new to you only. It is possible to go from Mars to Lunar, from Lunar to Mercury. This influence is not typical but does occur in some bodies. This is the problem in many of the persons you cannot identify. [SJC, 20 November 1973]

Because certain Body Types are out of "proper" sequence according to the orthodox Enneagram teaching, you see why the Michaels said that the Venus–Saturn and the Mars–Lunar and Moon–Mercury Body Types were "unknown to students". So far as I am concerned, this is just more dubious channeling, considering the dubiousness of the statements in the channeling about planetary influences. To my way of thinking, this is just another 'nail in the coffin' of any pretensions of verifiable validity regarding this whole subject.

Spiritually-inclined people are sometimes inclined to adopt ideas that are outside of science if they tell a good story. Readers of this chapter are strongly encouraged to read about pseudoscience and scientism and the philosophy of science and related subjects in Wikipedia and other internet sources. The goal of that exercise in scholarship should be to sharpen your perceptions and skills at discerning what is –Theory and what is +Knowledge. "The unexamined teaching is not worth believing", I like to say. In my opinion, it is okay to work and play with Body Type categorization; just don't believe that there is any scientific validity to it — unless and until multiple, objective, scientific studies have been performed and published in peer-reviewed journals. This is the way that the Big Five Personality system was discerned, for instance; that is not the way that the Enneagram came to be.

My Chapter 1B in Part One, "Personality Typologies", has more to say about the Enneagram. Now let's move on to the next one of the four foundations of the Body Type system theory.

Mythology

Another one of Rodney Collin's four parameters for characterizing Body Types was the mythological significance of the seven visible planets. The problems with this, as I see it, are as follows:

- 1. The Romans identified the seven visible planets with certain mythological deities which had certain characteristics, fine, but there are dozens of other historical and current cultures that ascribe other characteristics to these planets. Why should we accept the Roman conceptualization as having universal human significance? To my way of thinking, it is not enough that the Roman Empire had a significant role in the history of Western Civilization.
- 2. The Roman deities, after which the planets are named in Western cultures, are said to have archetypal characteristics, but there were a lot of other Roman deities in the pantheon that did not have planets named after them. I do not cling to Collin's theory enough to actually test it this way, but I just bet that with some knowledge and effort someone could better correlate the seven Roles with Roman deities some of which had planets named after them and some of which did not than the correlations of the Body Type system with the Overleaf System described in this chapter.
- 3. The Roles themselves are archetypal figures, personifications of the Septenarian Attributes, aka the seven Rays of Theosophy. There are numerous other deities of numerous other polytheistic cultures that personify various 'principles', aka 'laws of nature', aka 'fundamental phenomena'. Considering how poor the match of the Body Type system to the Overleaf System is, almost surely one could find better matches than the seven that got their names attached to the seven visible planets in Greco-Roman mythology. Mars works well for Warrior, and Jupiter works well for King, but what about the others? The way that the Body Type system was developed did not bring order out of chaos very well at all.
- 4. The *scientific* enterprise–endeavor–aspiration is similar to the *mythological* enterprise–endeavor–aspiration in that they both want to discern the regularities in the laws of nature. The Body Type system is not successful in that, so far as I can see. My books make a case that the Overleaf System is scientifically defensible.
- 5. Pseudosciences have the trappings of science unencumbered by the actual scientific process of using tried and tested tools, and the feedback between hypothesis and experiment. This discussion of the scientific method that has evolved over the last few centuries is too extensive to discuss here. It looks to me like the Body Type system is a pseudoscience.
- 6. One of the problems with the Masculine–Feminine attributes of the planetary deities is that only two of them are female gods (Venus/Aphrodite and Moon/Selene); the other five are male gods. This does not work in the Overleaf System, which has two triads, an Ordinal and a Cardinal triad, plus the

Neutral to add up to seven. Therefore it makes more sense to correlate Passive deities with Ordinal Roles and Active deities with Cardinal Roles. I did not study this idea enough to discern if any of the Michaelian teachings sources used that criterion in their correlation of Body Types with Roles.

Astrology

It is alleged in the original Michaelian group transcriptions that a person's Body Type is influenced by the positions of planets at the time of both conception and birth, as a result of physical effects such as ionization and magnetization. I cannot find it within myself to take this seriously, supposing that any such planetary effects, if real, would be obliterated by much stronger local electrical and magnetic phenomena. The following arguments and evidences are presented for your consideration.

In the section on Body Types in Part One, the Michaels were channeled as saying that astrology as we know it is not valid. Context indicates that this meant that locations of planets at time of *birth* does not affect Personality. I have no problem with that statement. But they said that the location of planets at the time of *conception* did influence Body Type, and I do take exception to that. And they said that personality traits were not associated with Body Type, whereas other sources do ascribe personality traits to Body Types. Their opinions might challenge the beliefs and experiences of some people in the Michaelian community, therefore it seems appropriate in this section to explain my perception of astrology.

When I first got into metaphysical teachings in the early 1980s, at the same time that I became interested in the Michaelian teachings, a lot of my new-found friends were into astrology. I learned about it from them, from books, from classes, from attending meetings of the local astrology club, and from running astrological charts on my friends, relatives, and coworkers with the help of that new invention, the personal computer. Because astro*nomy* was one of my childhood hobbies, and because I had read Edith Hamilton's book on mythology in my teens, I immediately recognized that in astro*logy* the attributes ascribed to the planets were from Greek and Roman mythology, and that the attributes assigned to the twelve "signs" (of the Babylonian Zodiac) related to the name of the constellation (Aries the Ram therefore aggressive; Libra the Scales therefore balanced; *et cetera*), and that the attributes of the twelve "houses" also related to the signs of the Zodiac, with which I was familiar because of my interest in astronomy.

Because I knew from my childhood interest in astronomy that cultures other than the Romans gave other names and attributes to the planets, and because other cultures than the Babylonians invented other constellations, astrology did not seem plausible to me — it was not a part of the database of scientific knowledge among all humans; it was arbitrary; it was all made up; it was all different from culture to culture and from time to time. As I learned more about astrology, I found that there are several different types and interpretations of astrology. Besides Indian, Chinese, Mayan, and Celtic astrology, there are also sidereal and tropical astrologies, geocentric and heliocentric astrologies — refer to the Wikipedia wiki on the Zodiac to learn more about those. There are also differences among various "house" systems: Regiomontanus, Placidus, Koch, Equal, et cetera; refer to this internet website for more information about that dubious aspect of astrology: >http://www.geocities.com/astrologyhouses/housesystems.htm<. Obviously the contradictions alone among the various types of astrology call into question its validity — they could not all be right. And it seemed to me that, on principle, most likely that none would be valid. Even if one were to believe that souls chose to be born under specific astronomical conditions for reasons of cosmic coordination rather than actual planetary influence via ionization and magnetism as stated by the channeling, then one must ask which of the available astrological systems or configurations did they choose, and why? Who can say? People can make speculative conjectures. People can point to channeling. So what.

Although astrology seemed artificially contrived to me from the beginning of my exploration of it, there was something about astrology that seemed to "work" — about two-thirds of the time — when I compared people to their charts. I came to the conclusion that it was because of the built-in ambiguity (the same stuff appeared in several places — planets, houses, signs — and the definitions and descriptions were broad and general), and because of the way that charts were "validated". Typically, you do the chart and then you interrogate the person to see how well it fits. An astrologer who was more clever and knowledgeable than I was could probably make any chart fit with any person better than my two-thirds of the time. This ambiguity in the system itself makes the validation procedure subject to what is called "confirmation bias" (you see what you are looking for rather than seeing what is); more about that below. This common type of astrological reading and counseling is not a "scientific" method to either confirm or dis-confirm astrology.

A more scientific approach to validating astrology (or invalidating it) was one I saw on television many years ago. A professional astrologer was given twelve people (of approximately the same age but born under each of the twelve sun signs) to interview as long as he wanted, and he was given the twelve natal astrology charts that belonged to them, and he was told to match each chart to each person. He did not make even one correct match. Another way to scientifically validate (or not) astrology is to study the person until you truly believe that you have their planets/signs/houses worked out, *then* do the chart from their birth information and see how well you did. Do this lots and lots of times until you can have statistically significant results, and accept that there is probably a "null" result: the people do not fit their charts.

You are invited to do an internet search on the phrase, "debunking astrology". Or, if you prefer, you can read up on this one website that has gathered scientific studies of the scientific evidence about astrology: >http://www.astrology-and-science.com/<. Even though I subscribe to the principle that the universe as a whole has some sort of coordination — "as above, so below" as the Hermeticists say — many scientific studies indicate that there is no undisputed correlation of planetary positions at birth to peoples' personalities and destinies, regardless of the type of astrological system examined. You know that I like to say, "The unexamined teaching is not worth believing", and certainly this should apply to astrology. The world is full of falsehood, so it is valuable for everyone that they learn to distinguish science from pseudoscience. In my opinion, astrology is a manifestation of the meaning–making faculty of certain personality types — superstitious types — and always has been. It is true that we are all a part of something much larger and more coordinated than ourselves, but evidence is scant, if not absent, that astrology has discovered that coordination.

Nevertheless, I do not completely denigrate astrology; it is fairly harmless, and it can be used for good if it is acknowledged to be just a 'tool' or a 'game' with the goal of learning about reality. Only in this sense is it something to be taken seriously, even though it is not realistic per se. I think of astrology as like Monopoly, Risk, Dungeons & Dragons, Chess, and other games: games are useful in that they provide lessons that can be applied in the real world, but games themselves are not the real world. Children grow up playing with toys, therewith learning about the workings of the real world in a harmless way. Also, there can be meaningful and fruitful interaction between astrologer and astrologee as they provide feedback to each other on the verisimilitude, or not, of astrology with reality. That is, I like to say that even though astrology is apparently not valid, there is still value in the study and application of astrology — to promote introspection and extrospection, as a tool/game/toy for comparing and contrasting reality with unreality. Comparing astrology with reality causes one to ask questions about oneself and/or one's relationships, and one can conclude by the application of that method that this is accurate and that is inaccurate, and such an exercise helps to clarify and enlarge one's understanding and knowledge, which is Good Work. For instance, in the 1980s I had an astrologer friend who wrote a book about astrology which I found to be one of the most concentrated books of wisdom that I had seen up until then. This is what I mean by the value of astrology even though astrology is apparently not valid; one can learn much and have deep insights via playing games with toys.

Sorry not sorry, but there is no more Truth in Astrology than there is in the words of the song from a theatrical production: "When the moon is in the seventh house, and Jupiter aligns with Mars, then peace will guide the planets, and love will steer the stars! This is the dawning of the Age of Aquarius". That is just not so.

Likewise, the Body Type System is not worthless or useless; it is worthy and useful, even if it is not valid in scientific or philosophical senses. It seems unfortunate to me that Collin did not apply his considerable knowledge and talents to a better foundation for his Body Typing exercise. For instance, he could have picked the Rays of Theosophy to inform his system of stereotyping Body Types, rather than 'cherry picking' features of the dubious Enneagram, of dubious endocrinology, of dubious astrology, and of dubious mythology as the template. Theosophy was well known at the time, and there are correlates with certain features of the Gurdjieffian teachings (with which Collin was familiar), such as the Centers and the Law of Seven. At minimum, for Collin to have made the connection with the Theosophical Rays would have saved a lot of grief and disagreement among Michaelian students — and myself. My two books, *The Tao of Personality* and *The Tao of Cosmogony*, reveal the Natural Sequence embodied in the ancient teachings about Rays and the modern researches about developmental psychology — those are not pseudoscience.

Is There a Better Body Type System?

Near the end of the process of researching and writing this chapter, I serendipitously discovered a well-developed body type system, different from the Body Type system that we have been discussing so far in this chapter. It is documented at >mysomatotype.com<. The word somatotype is synonymous with the phrase Body

Type because *soma* is the Greek word for body, as in psycho*soma*tic. In what follows, I refer to this as the Somatotype Theory in order to distinguish it from the Body Type system.

The above-referenced website explains in detail the three body types that were proposed by Dr. William Sheldon in the early 1950s, about the same time that Collin was developing his Body Type system. I mentioned Sheldon in Chapter 1M in Part One, "The Seven Body Types". Recall that Sheldon's three primary Body Types are mesomorph (muscular), endomorph (fatty), and ectomorph (linear). In the documents that originated in the Fellowship of Friends that were found among the documents of the original Michaelian group, these three body types were correlated with the three Ordinal Centers: Moving, Emotional, and Intellectual respectively — and I agree that this correlation makes sense. So already we see a possible connection to the Ordinal Roles, Warrior, Server, and Artisan, or perhaps better yet with the three Axes of Action, Inspiration, and Expression respectively. With this cursory examination, this feature of the Somatotype Theory appears to provide a basis for correlating the Somatotype Theory with the Overleaf System.

But before we get into a discussion of the Somatotype Theory, let's review how we got to the place in this chapter where I am asking the question in the title of this section.

- 1. The Body Type system, invented by Collin, does not fit within the Overleaf System without considerable Procrustean violence: cutting and stretching. Even with considerable violence, the Body Type system is a misfit, both in its original form and its evolved form in the Fellowship of Friends.
- 2. Because of list item #1, Michaelian teachings sources have not been able to come to a consensus about how to fit the Body Type system into the Overleaf System; I am unsatisfied even with my own attempt to do so after considerable study and thought.
- 3. The foundation (endocrinology, mythology, astrology, Enneagram) upon which the Body Type system was originally built is insubstantial at best and dubious in the middle and misleading at worst. The theory was built on factors that have low or no empirical, scholarly, scientific, or philosophical credibility. The original Michaelian group channeling about the subject, in terms of planetary influences on the Body Type at conception, is dubious in the extreme; therefore likewise pseudoscientific.
- 4. I regard the Body Type system as an interim solution to the desire to include body types, as well as personality types, in the general aspiration to understand the human condition; the Body Type system serves as a placeholder until something better is found and/or developed, and then incorporated into the Overleaf System.
- 5. Documents from the Fellowship of Friends, found among the original Michaelian group documents, quoted in Chapter 1M in Part One, "The Seven Body Types", hinted that the Body Types might have a correlation to the Instinctive, Moving, Emotional, and Intellectual Centers, but so far as I know, the Fellowship of Friends never integrated the Body Type system and the Centers into a correlated system. The Zannos book, Human Types Essence and the Enneagram (1997), refers to these four Centers as "functions", and the seven Body Types as "types"; both factors were present in a person, and they were both used to describe people and their personality, but the two factors were not integrated into a single coherent system such as I would like to see with the Overleaf System.
- 6. Late in my research for this chapter, I discovered passages in the original Michaelian group transcriptions quotations from the Michaels themselves that more than hint at an association of Body Types and Centers: in fact, they conflate the Body Type system and the Centers into one Overleaf category:

Are there two or three Overleaves left? Are Body Types and Centers one [Overleaf]?

There are remaining three Overleaves, the physical makeup [Body Type and Center] counting as one. [S/C, 03 January 1974]

- 7. The topic of Centers was discussed in some detail in the previous chapter, Chapter 4C, "Which Trait Septenaries are Overleaves?". Briefly, the Centers are different from the other Overleaves in that they are perhaps more represented in the physical body than the other Overleaves are; according to the channeling, the Body Types and Centers are a part of the "physical makeup". How is this the case?
- 8. Unfortunately, the Michaels did not provide an explanation for conflating Body Types with Centers. I take the Overleaf System to be canonical, and I would like to have a body type system that fits the Overleaf System because of these original Michaelian group statements about the overlap of Body Types and Centers. One would ideally like to see seven Centers correlated with seven Body Types in a

- reasonable manner, rather than the ungodly mess that is the Body Type system as presented in the various Michaelian teachings sources.
- 9. My speculation is that the etheric body Centers are connected to Body Types via the chakras and via the Triune Brain Theory, as follows: In Chapter 4C, "Which Trait Septenaries are Overleaves?", I present a speculative case that the Centers are configured or Cast by the Astral Plane Fragment in the Physical Plane etheric body along with the other Overleaves chosen for an incarnation. This configuration of Overleaves constitutes the framework of the True Personality.
- 10. In that Chapter 4C, I present a speculative case that certain physical brain structures are an instantiation or outgrowth of the Centers configured in the etheric body, and I refer to these as Brain Types. The Brain Types reduce the abstract, archetypal Centers of the etheric body down to functions appropriate for Physical Plane experience. I refer to the Brain Types as an "instantiation" or Casting of the Centers at a 'lower' level of the Great Chain of Being.
- 11. The Michaelian teachings dogma—doctrine is that Overleaves, plus the Body Types, are chosen by the Astral Fragment, and if this is so, then I suspect that the Overleaves are somehow configured primarily in what is called the etheric body. My speculation is that the Overleaves are secondarily configured in the physical brain—body system. The etheric body exists and functions in the nonmaterial levels of the Physical Plane, the Cardinal levels. The etheric body is the "aura"; it is the "morphogenetic field" (google it) of the physical body. The physical body-brain lives on the Ordinal levels of the Physical Plane; it *could* have personality traits different from the etheric body Overleaf traits, but I believe these would be of False Personality. Body Types unencumbered by False Personality acquired after birth would express True Personality, the same as with the other Fragment-chosen Overleaves, especially the Centers.
- 12. One wonders if the etheric body can influence the selection of sperm and egg, and thereby have a genetic and/or an epigenetic influence on DNA such that it influences Brain Type and Body Type. (This makes more sense to me than the original Michaelian group transcriptions, reviewed in Chapter 1D in Part One, where it says that planetary positions at the time of conception influence this morphogenetic process.)
- 13. One wonders if the etheric body, as a "morphogenetic field" per Rupert Sheldrake, shapes the brain structures to express the Centers (and also the other Overleaves) chosen by the Fragment/soul; you are invited to do an internet search on Sheldrake and morphogenetic field.
- 14. In Chapter 4J further on, "The Chakras", the Centers are shown to have a strong correlation, if not causation, with the chakras. In Chapter 4C, preceding this one, "Which Trait Septenaries are Overleaves?", I proposed that the chakras are the energy channels that connect the physical body to the etheric body. Thus, by this means, it would seem that the physical body does express the Centers energetically if not morphogenetically.
- 15. But what about the morphology of the physical body, as distinct from the chakra energies and the brain morphology? In Chapter 4N below, "Casting Concerns", I argue that Casting starts with a unit that I refer to as the Oversoul. The Oversoul fragments itself down through a succession of levels or layers that we in the Michaelian teachings refer to as Cadre Group > Cadre > Entity > Side > Greater Cadence > Cadence > Position. My proposal in this section is that the process of Fragmentation takes three more steps for the purpose of incarnation: the Position on the Astral Plane sends a part of its consciousness into an etheric body on the Physical Plane where the Overleaves for an incarnation are configured or Cast; the etheric body configures or Casts the physical Brain Type; the Brain Type configures or Casts the physical Body Type. The Brain Type and the Body Type communicate with the etheric body via the chakras.

There is a cascade of speculations among these items, and a number of unanswered questions, so I do not have complete confidence in the argument as a whole. The weakness of this line of reasoning does not negate the value of looking for a body type system that is more compatible with the Overleaf System than the Body Type system is, which is the purpose of the next subsection.

The Body Type system, invented by Collin, developed in the Fellowship of Friends, and adopted by the original Michaelian group, clearly is not a scientific theory; it is a pseudo-scientific hypothesis, as explained in a section above. We will see below that the Somatotype Theory has some claims to be scientific in the empirical sense: it categorizes what one sees in the real world without speculation as to its cause or origin, and

it happens to be consistent with features of the Overleaf System. Hence, my recommendation that the Somatotype Theory supplant the Body Type system in the minds of Michaelian students.

Somatotype Theory

So now let's take a look at Somatotype Theory, to see how it fits better with the Overleaf System than the Body Type system does.

In the Part One chapter on Body Types, I mentioned the work of Dr. William Sheldon. After World War II, he worked on developing a classification of body types as a gig for the U. S. Army. After much study, he converged on three basic body types, which he named mesomorph (muscular), endomorph (fatty), and ectomorph (linear). There are many combinations of these three basic or extreme somatotypes, just as there are combinations of Body Types in the Michaelian teachings. These three basic somatotypes can be, and have been in the Fellowship of Friends, related to the three Ordinal Centers, Moving, Emotional, and Intellectual respectively.

Refer to this internet website for the complete story: >http://www.mysomatotype.com/body-type/<. What I have seen of somatotypes on that website makes more sense to me than the Body Type system that the Michaelian teachings inherited from the Fellowship of Friends. It has a firmer foundation in scientific observation and study of actual human bodies. I know that there is almost zero chance that the Michaelian teachings community as a whole

will adopt a better system than what they have now, but if they collectively ever do decide to get more scientific, then perhaps here it is, ready to integrate with the Overleaf System.

The diagram at right is a graphic representation of the Somatotype Theory copied from the Somatotype Theory website. In the graphic, M = Muscular—mesomorphy, F = Fatty—endomorphy, L = Linear—ectomorphy, and B = Balanced. Take a long hard look now at the graphic and you will understand how the Somatotype Theory source divides the three basic body types into twelve sub-types. The website author points out that most people are not at the three extremes; they are mixtures of the three in various portions. He says that about 70% of people are inside the circles, which are B = Balanced. This does make accurate typing using Somatotype Theory difficult, but it is no more difficult than the situation

we see with the Body Type system, where people are said to be various percentages of three planets.

On successive web pages, the author matches his somatotypes with personality typologies. He starts out with the four temperaments of antiquity: >http://www.mysomatotype.com/body-type/?page_id=1525<. Then he moves on to the four quadrant models in modern times: >http://www.mysomatotype.com/body-type/?page_id=1583<. Then the author moves on to correlations of the Somatotype Theory with the Myers-Briggs Type Indicator (MBTI) of modern times: >http://www.mysomatotype.com/body-type/?page_id=1543<. Then he moves on to the correlation of the Somatotype Theory with the Big Five personality trait system: >http://www.mysomatotype.com/body-type/?page_id=1590 <. He then correlates the Somatotype Theory with the Enneagram: >http://www.mysomatotype.com/body-type/?page_id=1600<. And finally he correlates the Somatotype Theory with the Holland Occupational Themes: >http://www.mysomatotype.com/body-type/?page_id=1600<. It is astonishing to me to see how much professional and amateur study has gone into the project of correlating somatotypes with personality typologies. If one looks at other websites, one can also be astonished at how much professional and amateur study has gone into the project of correlating various personality typologies with other personality typologies.

All of the above-mentioned personality typologies are reviewed in my Chapter 1B in Part One, "Personality Typologies". I found some approximate correlations of all of these personality typologies with the Overleaf System. However, I have not done the hard work of researching and pondering whether the way that this anonymous Somatotype Theory source (he does not reveal his name) correlated somatotypes with personality types is a better fit with the Overleaf System than the Body Type system we already have, or rather, I already have haha. A thorough investigation might be fruitful, but I have other things higher on my priority list at this time, and I am burned out on this topic. I suspect that the Body Type system model might be supplanted if/when I find time to correlate the Somatotype Theory with the Overleaf System. Or perhaps someone will volunteer for this project.

As a step in the direction of integrating the Somatotype Theory with the Overleaf System, I make the following preliminary suggestions.

- 1. Take a look at the graphic. The inner circle represents the Balanced somatotype. Instead of dividing the inner circle into three compartments, let's have no compartments. Then let's correlate this with the Assimilation Axis because that Axis is what you get when you combine all of the others. One of the major failings of the Body Type system in regard to correlation with the Overleaf System is that the Body Type system originally had no Neutral Assimilation Body Type, and none of the standard Body Types are a blend of all the extreme or archetypal Body Types. The Somatotype Theory has a completely bland average Body Type, which it names "Balanced". This is the same word that the Gurdjieffian teachings used to refer to the Neutral Assimilation node in the Law of Seven.
- 2. Unlike the usual progression of Tao's Template (mentioned several times in this book) from Oneness to Twoness to Threeness, in this graphic the progression from inside to outside is from Oneness to Threeness to Twoness. Oneness is in the inner circle; Threeness is between the inner circle and the perimeter; Twoness is between the outer circle and the perimeter. This is the step where I have the most problem with the Somatotype Theory: there is not a progression from Oneness to Twoness to Threeness as there is with the Overleaf System. As we see below, the fit of the Somatotype Theory with the Overleaf System is pretty good regarding matching the three primary somatotypes with the three Axes–Dimensions, but the Somatotype Theory does not do well with secondary somatotypes fitting into the Overleaf System. And that is where I reverted to the Body Type system to clarify the picture, as shown in Table 4Dr.
- 3. The three areas in the graph between the inner and outer circles represent the three Somatotype Theory archetypal somatotypes of mesomorph (muscular), endomorph (fatty), and ectomorph (linear). Let's say that these three correspond to three Axes of Action, Inspiration, and Expression respectively.
- 4. The six areas between the outer circle and the perimeter of the graph show a division of Threeness into Twoness, in that each of the three primary somatotypes are divided into two secondary somatotypes, for a total of six secondary somatotypes. Let these correspond to the six body types to be associated with the Roles as follows Mesomorph–Action > Warrior and King; Endomorph–Inspiration > Server and Priest; Ectomorph–Expression > Artisan and Sage.

The following table shows this progression in a way that is different from the graph, and it also shows the correlations with the personality typologies that were discussed in Part One and on the somatotype website.

| Table 4Dr — SOMATOTYPES and the OVERLEAF SYSTEM | | | | | | | | | |
|---|---|--|---|---------------------------------------|--|---|---|--|--|
| PRIMARY SOMATO- | MESOMORPH Muscular System working, moving, doing, | | ENDOMORPH Visceral System uniting, digesting, bonding, passive, slow, calm, receptive, | | ECTOMORPH Nervous System cell membrane, identity, boundary, planning, | | BALANCED Sensory System orientation, | | |
| TYPE | acting, dominance, active, action, fast, aggression, success, results, practical, power, work. | | tolerance, affection, relaxation, harmony, stability, surrender, dependence, order, desire craving, yearning, long- suffering, submissive, yielding | | conceptualizing, thinking, defensive, selective, flight, status, competitive, pride, rank, directional, precision, cautious, critical, fearful | | change, information, novelty, alternatives, exploration | | |
| SECONDARY SOMA-TYPE | MESO-ECTO | MESO-ENDO | ENDO-MESO | ENDO-ECTO | ECTO-ENDO | ECTO-MESO | BALANCED | | |
| PERSONALITY DESCRIPTION | Planning for results. | Uniting with one's work; embracing of one's work; love of one's work. | Working in unity; working for group acceptance. | Planning / protecting for unity | Surrender to perfectionism / group rules. | Working for identity; competing for status. | Searching for status, conceptualiz'g for change, searching for quick results | | |
| AXIAL | AC | ΓΙΟΝ | INSPIF | RATION | EXPRE | SSION | ASSIMILAT'N | | |

| Table 4Dr — SOMATOTYPES and the OVERLEAF SYSTEM | | | | | | | | | |
|---|--|--|--|---|---|--|--|--|--|

- The contents of this table depict the reasoning of the Somatotype Theory author of the website on this web page: >http://www.mysomatotype.com/body-type/?page_id=84<. There he presents his rationale for attributing personality types to somatotypes. Because his method correlates well with the Overleaf System, I find his procedure to be reasonable.
- SOMATOTYPE: The first row shows the four primary somatotypes that the Somatotype Theory author identifies as archetypal. The names of the archetypes are in upper-case letters; the one-word descriptions shown in lower-case letters are the Somatotype Theory author's keywords, extracted from the description of each somatotype. Read the text that derives these descriptive keywords and see if you agree with the correlation with the Overleaf System shown in rows below this row. The Mesomorph-Action correlation seems to be the most obvious; the Ectomorph-Expression correlation seems to be the second most obvious; the Balanced-Assimilation correlation seems to be the third most obvious; the Endomorph-Inspiration correlation seems to be the fourth most obvious. Overall, I believe the correlations of the Somatotype Theory and the Overleaf System are solid, at this point in the development. It gets murkier beyond this point.
- SOMATOTYPE: The second row shows the six secondary somatotypes, which are a combination of the three primary somatotypes. The correlation with the Centers is somewhat speculative; they are a best match based on personality factors shown in the rows below. The Somatotype Theory author divided the Balanced type into six secondary somatotypes by combining them with the other somatotypes, but I am not doing that.
- DESCRIPTION: The third row shows the descriptive phrase, in terms of personality, that the Somatotype Theory author applied to the combinations shown in the second row. The phrase is a distillation of keywords found in the first row. It is a bit of a stretch to say that the descriptions fit well with the Centers and Roles in the sixth and seventh rows.
- AXIAL: The Axial Attributes shown in the fourth row are my Overleaf System correspondences to the Somatotype Theory types.
- DIALECTIC: The fifth row shows the Dialectic Attributes of the Overleaf System: Ordinal, Cardinal, and Neutral. These Attributes apply all the way down in the columns below this row.
- CENTER: The sixth row shows the Centers of the Overleaf System that correlate with the Somatotype Theory as best I can discern it. The names of the Centers are my version, nouns rather than adjectives.
- ROLE: The seventh row shows the Roles that correspond to the Centers in the row above this row.
- BODY TYPE SYSTEM: The eighth row shows the Body Type System, with Planets (and their Poles) correlated with the rows above as I have reformulated it. In my opinion, the fit with the secondary somatotypes is not bad, considering the issues with this entire subject.

Regarding that bottom row in the table, notice that I arrived via the Somatotype Theory at similar correlations of Roles with the Body Type system as I did for the body types by rational means in the 1980s with a little help from the astrological-mythological descriptions of the planets. Therefore I regard the combination Somatotype Theory/Body Type system as on fairly solid ground. Michaelian students can therefore keep with their basic understanding of what the Body Types look like, but they would do best to correlate them with the particular Roles as I have done. The one place where that does not work well is that in the Somatotype Theory,

the Neutral body type, "Balanced", is an averaged blend of all the body types; there is no such averaged blend of the extreme archetypes in the Body Type system.

Another thing that needs to be investigated empirically is if the alleged attraction of body types is as formulated by the Fellowship of Friends, or if it is as speculated by my understanding of the polarities that appear in the Somatotype Theory. This alleged attraction of certain body types to certain other body types is not something that I have personally Validated.

The author of the somatotype website attempts to correlate many personality typologies with his theory of somatotypes. For instance, he fits all of the following into his system, with varying degrees of success: Four Temperament Models, Four Quadrant models, Myers–Briggs, The Big Five, Enneagram, and Holland Occupational Themes. All of these personality typologies were reviewed in Chapter 1B in Part One, "Personality Typologies". Considering the ambiguity of various personality typologies, it should be no surprise that I prefer some of my own correlations over that of the author of the Somatotype Theory.

Sheldon's conclusions are not without criticism, particularly the connection of Somatotype Theory and personality, some of which is referenced here:

>https://en.wikipedia.org/wiki/Somatotype_and_constitutional_psychology<. Therefore, I do not insist that there be a strong correlation of Somatotype Theory with personality. It would be enough to satisfy me if the somatotypes generally fit within the Action, Inspiration and Expression Axes of the Overleaf System.

My point with bringing up somatotypes is that if it were not for the 'historical accident' that original Michaelian group members had contact with the Fellowship of Friends, we might have eventually adopted some other body type system into the Michaelian teachings. I believe it is useful to have a Body Type system in the Michaelian teachings; Body Type is all part of one big cosmological puzzle. If any sort of body type system is to belong in the Overleaf System, then it needs to be significantly different from the Fellowship of Friends Body Type system. The Michaels in the original Michaelian group said that Body Types and Centers were to be regarded as one Overleaf. The Somatotype Theory looks promising to me, because it hints at a path toward the integration of the two septenaries.

Concluding Remarks on Body Type Systems

Of the dozen subjects that I explore here in Part Four of this *History* book, "Essays on Issues", this one is my least favorite. The reason is that, no matter what I do, no matter how hard I try, I cannot reasonably fit the Body Type system into the Overleaf System; it has all been an exercise in frustration and futility. Perhaps others, from the original Michaelian group to the present, have been satisfied with their efforts, but I have not.

Let's review the highlights of the history as given in the two chapters on the Body Type system in this *History* book.

- 1. So far as I know, the descriptions of the Body Types have not changed all that much from the original version theorized by endocrinologist Dr. Louis Berman in the 1920's. He was the fellow who came up with the idea and the descriptions of Body Types correlating with endocrine gland function and malfunction in the first place. Berman's endocrinology was primitive according to one of the members of the original Michaelian group who was a medical doctor so probably one should not put too much stock in it.
- 2. Heaping more theory upon Berman's theory of Body Types via endocrinology, Rodney Collin added some wrinkles in the 1950s in his book *The Theory of Celestial Influence*. These had to do with mythology, astrology, and the Enneagram. These factors are also of dubious merit, in my opinion. He strung together a lot of far-fetched, ungrounded ideas to paint a picture that made sense to him, but that no serious academic researchers would find convincing. The whole subject of Body Types unfolds into a much larger discussion of science versus pseudoscience (the *TCI* book being an excellent example of pseudoscience), but I am not going to go into that beyond the brief examinations of the foundations in the previous section. It is not always easy to tell frontier science from pseudoscience.
- 3. Another factor, not mentioned above, that makes the Body Type system difficult if not so amorphous as to be useless is that everyone is said to be a blend of two or three Body Types in various proportions: 60% of this, 30% of that, 10% of the other. The same criticism can be leveled at the Overleaf System, but the Overleaf System at least has its foundations in actual archetypes of logic and mathematics, whereas the Body Type system has its foundation in the alleged archetypes of mythological deities, astrology, and other pseudosciences.

- 4. Some people have found more value and validity in the Body Type system than I have. Near the time of its publication in 1986, I purchased and read the first edition of Joel Friedlander's book *Body Types*. The second edition was published in 1994, but I did not read it; nor have I read the third edition (2009). Friedlander was a member of the Fellowship of Friends group that original Michaelian group members departed from in 1972. That group tweaked the Body Type system to suit their growing understanding. And there is another book:
- 5. In 1996, Susan Zannos published the book *Human Types Essence and the Enneagram*. She was, and perhaps still is, a member of the same Fellowship of Friends group that some of the original Michaelian group members departed from in 1972, and that Joel Friedlander was or is a member of. You can get it from various bookstore websites, for instance, >alibris.com<, among others.
- 6. If you are fascinated by the subject, and if you believe that the Body Type system is, or might be, useful to you, and you want to read more than what has been provided by the Michaelian teachings community, then these two books are probably the best sources, because Friedlander and Zannos have studied the subject more than any Michaelian student. See for yourself if you gain useful insights that help you to understand yourself and others by reading their books; if there is any validity and value in the Body Type system, perhaps they have discerned it.
- 7. During the history over three decades of the Michaelian teachings, it has been an exercise in futility to attempt to correlate the Body Type system with the Overleaf System. However, it is completely safe to ignore the fact that the Body Type system does not map onto the Overleaf System; the discrepancies between the structural components of the two systems are pretty much irrelevant for any practical purposes. If you find values in the Body Type system, then I suggest that you approach it knowing that it has no legitimate relationship with the Overleaf System. Within the Michaelian teachings itself, the Body Type descriptions have not changed over the decades that is what is important; it is best to learn and apply the Body Type system as separate and distinct from the Overleaf System.
- 8. Besides not fitting into the Overleaf System, the Body Type system is a 'house of cards' (pseudo-structure) built on a 'foundation of sand' (pseudoscience). Perhaps because of the lack of validity and the lack of validatability, the Body Type system has not found much practical utility during the multi-decade history of the Michaelian teachings. In contrast, the Overleaf System, built on a firmer and truer foundation of logic and mathematics even if Michaelian students do not know this has found a much greater acceptance and utility within the Michaelian teachings. I suggest that the reason that the Body Type system has not captured the fascination of the Michaelian teachings community nearly as much as the Overleaf System is because the Body Type system is a bogus septenary. Heck; the Body Type system is not even a septenary if you include Uranus, Neptune, and Pluto, as some Michaelian teachings sources do.
- 9. It seems like an 'accident of history' that the Body Type system found its way into the Michaelian teachings through the original Michaelian group. If some of the founding members of the original Michaelian group had not attended the Fellowship of Friends in the early 1970s a group where the Body Type system was a 'thing' they might not have brought the Body Type system into the discussion with the Michaels.
- 10. The situation with the Body Type system reminds me of the situation with constellations groups of stars in the night sky. The stars themselves are randomly placed, but the human mind wants to see a pattern, so it connects the stars with lines that make them show a picture. Constellation charts that aid amateur astronomers, to see what others have seen, 'connect the dots' of stars in a constellation, or superimpose an image; for instance, of a lion or a scorpion or a person or a crown or a cross or a dipper. So it is with the classification of Body Types Collin took random data and chopped it up into a certain number of artificial categories.
- 11. The major take-away point to this whole discussion is that the Body Type system is not a "revealed" Overleaf category; it is not an Overleaf at all; it cannot be 'shoe-horned' into the Overleaf System without heroic mental gymnastics. However, like the legitimate Overleaves, the Body Type system is a shorthand term that allows Michaelian students to understand themselves and others, and to talk about Body Types with other students, and understand each other in the process. There are also insights that can be had about one's journey in life based on the characteristics of one's Body Type, if one is able to separate what is true (the 'wheat') from what is false (the 'chaff') in the descriptions of a

- Body Type (I have my doubts). It matters not so much if the Body Type system is *valid*, but (perhaps) it can still have *value* (I have my doubts).
- 12. This is a case where two systems of categorization are truly incompatible: the Body Type system does not belong in the Overleaf System, any more than the Enneagram is compatible with the Overleaf System. The Body Type system does not fit with the Roles, plain and simple (to my way of thinking, but not everyone thinks as I do). Consequently, various correlations have been advanced. Some sources have copied prior sources; some sources see problems with other sources so they advance other correlations. This is not unlike the situation with correlating chakras with Centers; descriptions of the former are ambiguous enough to be mistaken for more than one of the latter, as we will see in a subsequent chapter.
- 13. I like to use "information theory" as a metaphor for certain ambiguities that exist in the Michaelian teachings. Information Theory (see Wikipedia) provided a mathematical description of what has come to be called the "signal-to-noise ratio". The whole Body Type discussion has a lot of "noise" and not a lot of "signal" and it cannot be any other way because it is just not valid. One of my goals in my books is to increase the signal-to-noise ratio in the Michaelian teachings, but in this case, I feel that it is simply not reasonable.
- 14. Apologies for the frustration you might have experienced if you actually tried to understand this tortured subject in this confusing chapter. To fit the Body Type system into the Overleaf System has been an aspiration and an endeavor from the original Michaelian group to the present, but it just does not work. The premises of the Body Type system are faulty; the formulation is faulty; the application is faulty; the channeling is faulty. In spite of these defects and deficiencies, some Michaelian students might find the Body Type system to be a *useful* tool perhaps as part of the whole learning-to-understand-other-people aspiration. In any case, it is not a useful Truth, as the Overleaf System is.
- 15. Besides the lack of consistency in correlating Body Types with Roles, some Michaelian teachings sources ascribe different names for the Positive and Negative Poles of the Body Types. These are tabulated in Part Three, Chapter 23.
- 16. If there is anyone else out there who would like to formulate a better body type system, or better yet adjust the Somatotype Theory, so that the new system seems to belong with the Overleaf System better than I am willing to do, please have at it. The cost/benefit ratio of doing so, beyond what I have already done, is just not worth it to me.
- 17. If there is no body type system that can reasonably be reconciled with the Centers, or the Overleaf System in general, then let the properties of the physical body be like the octave "below" the personality as charted by the Overleaf System, and let Casting be the octave "above" the personality as charted by the Overleaf System.

Chapter 4E

THE SEVEN PLANES

The Michaelian teachings has a cosmology that includes seven "planes" of creation, six of which are beyond the physical realm. Of this there is no doubt or dispute. However — as with so many other facets of the Michaelian teachings — there are differences of opinion about the names and the natures of those seven planes in the various contingents of the Michaelian teachings.

In Chapter 1A in Part One, "The Seven Planes" we reviewed some sources other than the Michaelian teachings that might have been familiar to original Michaelian group members, and we reviewed passages from the original Michaelian group transcriptions themselves. We found that there were differences between the Michaelian teachings and the sources available prior to the Michaelian teachings. Here in Part Four we review the information about planes from Michaelian teachings sources published subsequent to the original Michaelian group. As it turns out, there are some differences between the original Michaelian group, the Yarbro contingent, and the non-Yarbro contingent. There are also some variations within the Yarbro group itself. Let's first review the original Michaelian group versions, then look at the Yarbro versions, then look at the non-Yarbro versions. There is much that we can learn by examining discrepancies in detail.

Table 4Ea below provides a graphic representation to aid you in following the presentation in subsequent sections of this chapter. Take a good look at it now, and note the discrepancies.

| Table 4Ea — THE SEVEN PLANES per THE MICHAELIAN TEACHINGS | | | | | | | | | |
|---|----------|-------------|------------|----------------------------|----------------------------|------------|----------|--|--|
| Dialectic Attributes | | | | Cardinal high" aka "upp | | | | | |
| Axial Attributes | Action | Inspiration | Expression | Assimilation | Expression Inspiration Act | | Action | | |
| Rank | First | Second | Third | Fourth | Fifth Sixth Sever | | | | |
| OMG Text | Physical | Astral | Causal | Mental | Buddhic | | | | |
| Chart #1 | Physical | Astral | Causal | Akashic | Mental Buddhaic Ta | | Tao | | |
| Yarbro | Physical | Astral | Causal | Akashic | Buddhic | | | | |
| Stevens | Physical | Astral | Causal | Akashic | Mental Messsianic Buddho | | | | |
| Van Hulle | Physical | Astral | Causal | Akashic | Mental | Messsianic | Buddhaic | | |
| Hoodwin | Physical | Astral | Causal | Akashic | Mental | Messsianic | Buddhaic | | |
| Tolley | Physical | Astral | Causal | Akashic | Mental | Messsianic | Buddhaic | | |
| Theosophy | Physical | Astral | Low Mental | Mental | High Mental | Buddhic | Atmic | | |
| Wittmeyer | Physical | Astral | Mental | Buddhic | Spiritual | Divine | Logoic | | |

My comments on this table are as follows:

• DIALECTIC: The first row below the title shows the Dialectic Attributes: Ordinal, Neutral, and Cardinal as they apply to the planes. The words "low", "lower", "mid", "high", and "upper" are descriptors that

- are typically used, in Michaelian teachings sources, as synonyms of the Dialectic Attributes in regard to the Planes and the levels within the Planes.
- AXIAL: The second row shows the Axial Attributes (Action, Inspiration, Expression, Assimilation) per
 the Natural Sequence, as is my custom. Unlike the situation with some other septenaries, there is no
 disagreement among Michaelian teachings sources that the Planes are arranged per the Natural
 Sequence.
- RANK: The third row shows the rank order of the planes, starting with First at the Physical Plane. Some sources start the ranking with "First" at the other end of the sequence, but this is irrelevant in this chapter.
- SOURCES: In the nine rows below the third row, the first column identifies the sources of the names of the planes shown in the second through eighth columns. A quick glance reveals that there is some consistency and some inconsistency in the naming conventions within the Michaelian teachings, and Michaelian teachings names are inconsistent with Theosophy, the teaching that is most similar to it.

In the following sections, we will examine the variations in detail. Not all of the variations are *semantic*. That is, the way the *nature* of each plane is understood, not just its *name*, can and does vary from source to source.

In the following sections, quotations from *Messages from Michael (MFM)* and *More Messages from Michael (MMFM)* are taken from the First Edition, not from the 25th Anniversary Edition.

Planes per the Original Michaelian Group

Following is the quick review of what was said about the seven planes in a chapter in Part One.

As shown in Table 4Ea above, there is a discrepancy within the original Michaelian group itself, and not only in the spelling, "Buddhic" versus "Buddhaic". Overleaf Chart #1 from the original Michaelian group, constructed in early 1974, provides names for all three Cardinal planes, namely 5–Mental, 6–Buddhaic, and 7–Tao. However, in the session transcriptions:

... the Mental Plane is the Akashic Plane ... [S/C, 29 November 1973]

Everyone in the Michaelian teachings agrees that the Akashic Plane is the fourth plane, the Neutral plane, "the photographic record of all history", not the fifth plane. In the original Michaelian group transcriptions, it seems that the three higher planes are collectively referred to as 'Buddhic':

Beyond this [Mental Plane] is the Buddhic Plane, and upon this level are all of those souls who have achieved physical communion with the Tao. Beyond this, of course, [is] the Tao. [S/C, 29 November 1973].

We do not have subsequent transcriptions where the text might describe the change that we see in Chart #1. But perhaps the creator of Chart #1 (Richard Chambers) ignored the text about Mental = Akashic, made Mental the fifth plane, Buddhaic the sixth plane, then interpreted the text as saying that the Tao "beyond" the Buddhic Plane was the seventh plane. My interpretation of the text, however, is that Tao is "beyond" all seven planes. In my own categorization/definition of "Tao", rather than confining Tao to the seventh plane, I put Tao both beyond the planes and infusing the planes — as both transcendent and immanent, to use theological terminology. No subsequent Michaelian student that I know of limits Tao to the seventh plane. For instance, refer to the graphic on page 8 of The Michael Handbook, and refer to the graphic on page 365 of the Second (2013) Edition of Journey of Your Soul. Both of those show Tao as beyond the Planes, this being the "transcendent" view of the Tao as beyond its creation. A discussion of the Tao as both transcendent (beyond its creation) and immanent (within its creation) is found in my book The Tao of Cosmology.

The original Michaelian group transcriptions refer to the Physical Plane as the "first" plane, implying the "second", "third", and so on as shown in the Table. In the transcriptions, the *lowest* level of the Astral Plane is also called the "first" Level (08 October 1973). This ranking convention has been adopted in all subsequent Michaelian teachings books. The reason that I make this point here is because in Theosophy, the numbering of the planes starts at the other end of the septenary, making the Physical Plane the "seventh" plane. What we learn from this comparison of two different teachings is that it is irrelevant which end of the septenary one starts the numbering with.

In the original Michaelian group transcription of 08 October 1973, there is a hint of a correlation with the fractilic Law of Seven in that we are told that all seven planes have seven levels each, each with three "lower" and three "higher" and a "middle" level in between. This is the basic pattern of the Natural Sequence, which has an Ordinal triad and a Cardinal triad separated by the Neutral between the triads; hence, the Dialectic

pattern of the Septenary. Because there are references to "high" planes in the transcriptions, one infers that there are "low" planes and a "mid" plane, the same as the structure of the sub-planes. This structure is shown in the first row of Table 4Ea. This Septenarian structure is also common in teachings about the planes not just in the Michaelian teachings but in other schools of thought.

Recall from the chapter on Planes in Part One that the Canonical Septenarian structure for them is:

Physical Plane = Ordinal Action

Astral Plane = Ordinal Inspiration

Causal Plane = Ordinal Expression

Akashic Plane = Neutral Assimilation

Mental Plane = Cardinal Expression

Messianic Plane = Cardinal Inspiration

Buddhaic Plane = Cardinal Action

This Canonical Septenarian sequence is the understanding in the entirety of the non-Yarbro Michaelian teachings community subsequent to the original Michaelian group, including myself, as we will see further on. But before we get to the non-Yarbro Michaelian teachings books that explicitly present the Septenarian Sequence structure for the seven planes, we will take a detour through the Yarbro books. The Yarbro books reflect no understanding of the attributes of the planes, let alone the Septenarian Attributes of the planes. If the Yarbro contingent of the Michaelian teachings community did have this understanding, it has not yet gotten published, so far as I know.

Planes per Yarbro

In Messages from Michael, five of seven names of planes are given in sequence:

There are, of course, seven planes in all, each with seven levels. First is the physical plane. Beyond the upper and lower astral planes are the causal plane with seven levels, three low, one mid-causal upon which we exist, and three higher levels upon which reside the high causal bodies, the transcendental souls contiguous with this plane. We remind you that our cycles consist of seven levels, just as yours do. The mental plane is the akashic plane, which is a photographic record of all history. Some very high adepts have access to this plane. On the mental plane reside the infinite soul and the low and Mid-Mental [sub-Plane] bodies. Beyond this are the buddhic planes, and upon that level are all those souls who have achieved physical communication with the Tao. Beyond this, of course, is the Tao itself. [MFM, p. 42]

This passage is a slightly edited version of more than one passage that Yarbro found in the original Michaelian group transcriptions. Comparing with the 29 November 1973 session transcription quoted above, note that Yarbro actually changed the original text to say "Buddhic PlaneS" — plural — apparently to cover the three highest planes. This is the way I also interpret the ambiguous original Michaelian group transcription, which used the singular, "Buddhic Plane". However, in two Yarbro books subsequent to MFM, Yarbro always used the singular, not the plural. Did this reflect a change? Not that I can tell. As we will see below, it makes sense to interpret her other mentions of the Buddhic Plane as a conflation of what other Michaelian students regard as three Cardinal planes.

The information on planes in *MFM* is all from the original Michaelian group. After the original Michaelian group, some names of planes apparently changed in the Yarbro group that met in the 1980s and produced two books.

First of all, there is no mention of the Mental Plane in either *More Messages from Michael* or *Michael's People*. Instead of "Mental" as in *MFM*, the name "Akashic" is always used for the middle plane, the fourth plane. For instance, *MP*, p. 72, lists them as Physical, Astral, Causal, Akashic, and Buddhic. In *MMFM*, pp. 43–44 there is mention only of Physical, Astral, and Causal Planes and what happens on those planes is described, but Akashic and Buddhic are omitted.

The second apparent change is that rather than seven "levels" as in MFM, there are said to be only three "levels" on the Astral and Causal Planes, namely "lower", "middle", and "upper": MMFM, p. 43. One wonders if this difference in quantity means anything. That is, one wonders if this is regarded in the Yarbro contingent as a real improvement over the original Michaelian group channeling that said there were seven "levels" in each of the seven planes, or is it just a semantic ambiguity. By "semantic" in the previous sentence I mean that perhaps instead of using "level" in both MFM and MMFM in two ways, "division" should have been used

for the three while "level" could continue to be used for the seven. Whichever is the case, it is obvious that this use of "lower, middle, upper" is an implicit reference to the usual Ordinal, Neutral, and Cardinal divisions of the septenary of planes. But, as I said above, there is no mention in Yarbro's books of other Septenarian Attributes for the planes.

Another curiosity is found at *MMFM*, p. 205, where the Akashic Plane is left out between Causal and Buddhic. The Akashic Plane is also left out between Causal and Buddhic names at *MMFM*, p. xiv. One need not regard these omissions of the planes at various locations in these books as indicative of anything other than a lack of consistency that is odious only to a stickler such as myself, because the Akashic and Buddhic Planes are mentioned again in the next book published three years later, namely at *MP*, p. 205, and all five planes are named again at *MP*, p. 277.

Another indication, in *MP*, that the name "Buddhic Plane" — singular rather than plural as in *MFM* — might refer to the conflation of the three highest planes, is this:

Total intimacy is the nature of the buddhic plane, which is the last step before entry and return to the Tao.... [MP, p. 208]

So here is the one instance where the nature of a plane or planes other than the physical is provided in the Yarbro books, but can it be correlated with a particular Cardinal Septenarian Attribute? Not that I can tell; it can only be correlated with Cardinality in general because "intimacy" is one of Cardinality's properties.

At any rate — unless the term "Buddhic Plane" was intended to cover all three higher/Cardinal planes — two of the "high planes" are never named in any of the Yarbro books, and I find this to be a curious omission or ambiguity. There was ambiguity and discrepancy in the original Michaelian group, and there is ambiguity and discrepancy in Yarbro's books. The names and natures of the planes found in the original Michaelian group is one subject that the closed Yarbro contingent of the Michaelian teachings did not clarify, so far as we in the open contingent of the Michaelian teachings know.

From reading what happens on these planes in the Yarbro books, one would never get the idea that the Septenarian Attributes apply to them. There is some description about what *happens* on those planes in regard to fragmentation and reintegration of soul groups. So far as I have been able to discover, the closest thing to a description in the Yarbro books of the *nature* of each plane is given in *MP*, p. 277 (underlines are mine):

The lessons of the physical plane are learned through <u>choice</u>, the lessons of the astral plane are learned through <u>interpretation</u>, the lessons of the causal plane are learned through <u>teaching</u>, the lessons of the akashic plane are learned through <u>experientiation</u>, the lessons of the buddhic plane are learned through <u>integral resolution</u>.

Unfortunately, nothing is said about qualities or characteristics of the two highest unnamed planes, if the Buddhaic Plane is not the same as the three highest planes in the Yarbro books. As to using this quoted passage to draw definite conclusions about correlations, in the lower planes, with the Septenarian Attributes, evidence-based understanding of the Septenary tends to bias me in favor of: Physical Plane "Choice" = Action; Astral (aka Emotional) Plane "Interpretation" = Inspiration; Causal (aka Mental) Plane "Teaching" = Expression. But I am not sure that I can argue this point convincingly to the reader.

However, from this text I can argue more convincingly that the next two planes in the sequence do fit with some Septenarian Attributes. It is reasonable from the above quote that Akashic Plane "experientiation" (also "a photographic record of all history" — MFM, p. 42) equates with Neutral Assimilation/Scholar. It is reasonable that Buddhaic Plane "integral resolution" equates with Cardinal Expression/Sage (compare positive pole of Higher Intellectual Center = "+Integration" and Positive Pole of Idealist Attitude = +Coalescence", and Greed). These two equations are reinforced in MMFM, p. 208: "...vast synthesis of the Buddhic Plane or the all-encompassing knowledge of the Akashic Plane". These two equations are enough to make the qualities of the "lower" planes to be Ordinal, and the qualities of the "higher" planes to be Cardinal, just as one who understands the Natural Sequence would naturally assume.

It is no help to try to match the planes with the names of the Poles of the Levels as given in *MMFM*, pp. 28 and 189. Thus, #1 +Purpose/–Simplicity does not remind one of "choice" on the Physical Plane; #2 +Stability/-Balance does not remind one of "interpretation" on the Astral Plane; #3 +Enterprise/–Versatility does not remind one of "teaching" on the Causal Plane. However, #4 +Consolidation/–Achievement is vaguely reminiscent of the Akashic Plane "experientiation" and "all-encompassing knowledge". But then, #5 +Expansion/–Adventure is not reminiscent of Buddhaic Plane "vast synthesis" or "integral resolution". They fit a little better with the Poles of #7, +Inculcation/–Eclecticism, so perhaps this is evidence that in the Yarbro

books, the Buddhaic Plane was the seventh, not the fifth, plane. (In Chapter 4K below, "The Names of the Levels", there is extensive discussion of the names of the Poles of the Levels that were revealed in *MMFM*.)

In the Yarbro books, there are a couple of other passages that could be interpreted as hinting at the nature of some of the planes. In *MMFM*, p. 192, the sixth and seventh Soul Ages are named "Astral" and "Causal" respectively — named after the planes on which souls are alleged to complete their individual evolution after five Ages are completed on the Physical Plane. So does this mean that the Astral Plane has #6 Cardinal Inspiration, aka "Priest-ish", qualities, and the Causal Plane has #7 Cardinal Action, aka "King-ish", qualities? This is not explicitly claimed in this passage and I do not believe that this is the case.

My contention is that even if it is true (we have no way to Validate) that souls do their sixth Age on the Astral Plane and their seventh Age on the Causal Plane (rather than the Physical Plane), this does not mean that the second and third Planes have Six-ish/Priest-ish and Seven-ish/King-ish qualities. It seems most reasonable to me that the planes have the qualities that go with their place in the Septenary of planes, not with their place in the humanoid/cetacean soul's sequence of evolution. Reasonably, the qualities ascribed to the high numbers in the Septenary should go with the high planes, plain and simple — and that is the way it is with the non-Yarbro contingent, as we see below.

Moving on to MMFM, p. 202, the Transcendental Soul is given a #6/Priest/Cardinal Inspiration quality, and the Infinite Soul is given a #7/King/Cardinal Action quality — presumably because two more Ages are needed to make seven beyond the alleged five Soul Ages that are allegedly completed on the Physical Plane. However, this is contradicted by MFM, pp. 79 and 86, where it says that the Transcendental Soul is from the high "Causal" (third) Plane, and says that the Infinite Soul is from the high "Mental" (fourth) Plane. So, does this give the Causal Plane Cardinal Inspiration qualities and the Akashic plane Cardinal Action qualities? I think not. Also, the Transcendental Soul is said to be a phenomenon distinct from the sixth Soul Age ("this soul is not a fragment and not a reunited entity [entity unity is said to happen at the end of the astral cycle], but a total...." — MMFM, p. 202). According to Yarbro, the sixth Soul Age is allegedly conducted on the Astral Plane, and the Infinite Soul is a distinct phenomenon from the seventh Soul Age, allegedly conducted on the Causal (third) Plane.

This confusion in the Yarbro books gets examined and sorted out, to the best of my ability, in an upcoming chapter, Chapter 4M, "The Seven Soul Ages". Refer to it for a thorough discussion of the relationship of Soul Age to the Planes, and a discussion of the Transcendental and Infinite Souls and where they come from and where they fit in.

When we try to come to a systematic understanding of the planes using Yarbro sources, we find it defective and deficient. It appears to be inconsistent, and it just leaves too many questions unanswered. I believe the non-Yarbro contingent makes much more sense, and it is much more thorough and consistent, and there is less ambiguity within and among the communities of the open contingent of the Michaelian teachings.

So let us take a look at that.

Planes per Non-Yarbro Books

In three non-Yarbro Michaelian teachings books, there are some differences in names and descriptions of the seven planes, with significant additional information compared to the Yarbro books.

In the 1986 book by José Stevens and Simon Warwick-Smith, *The Michael Handbook (TMH)*, on page 5, the names given in sequence are: Physical, Astral, Causal, Akashic, Mental, Messianic, and Buddhaic. Here, Buddhaic Plane is definitely placed last, seventh, whereas there is ambiguity in the Yarbro books. In *TMH*, the Tao is pictured to be above and beyond the seven planes, unlike Chart #1 from the original Michaelian group. No descriptions are given in *TMH* except for the Physical Plane.

In the 1990 book authored by Aaron Christeaan, JP Van Hulle, and M.C. Clark, *Michael: The Basic Teachings* (*MTBT*), pp. 13–19, the same names are given and the descriptions of those planes let you know they correspond to the Centers arranged per the Natural Sequence. Recall that the Natural Sequence of Centers is: Lower Moving, Lower Emotional, Lower Intellectual, Instinctive, Higher Intellectual, Higher Emotional, Higher Moving. The book is quoted below. We do not know if this information came through the authors' channeling or was derived from other sources or both. We may reasonably suspect both, based on evidence presented further on in this chapter. I take no exception to the following, and so far as I know, neither do other sources in the open contingent of the Michaelian teachings, as we will see further on:

The Ordinal Planes: The Physical [Plane] is where you experience solidity, separateness and forgetfulness.... The Astral Plane is where you...deal with emotional lessons.... On the Causal Plane you...learn intellectual lessons regarding the structure of the universe. You teach Astral beings in order to assist them in their emotional lessons.... The Neutral Plane... the Akashic Record exists solely for the purpose of record keeping... all [Causal Plane] thoughts, [Astral Plane] emotions, and [Physical Plane] kinesthetic experiences are stored... it is the Instinctive Center for the universe [all creation].... The Exalted [Cardinal] Planes: On the Mental Plane you have direct intellectual contact with the Tao...you have an intellectual perception of the whole.... The Messianic Plane is where ...you have direct emotional perception of the Tao.... The Buddhaic Plane is where you merge with the totality of the universe on an energetic level.... [MTBT, pp. 13–19]

On page 14, the Tao is graphically represented as exterior to the seven planes, but it includes them within it. This is the "transcendent/immanent" view of Tao that I mentioned previously, and that I subscribe to.

Moving on to Stevens's third book, *Earth to Tao* (*ETT*, 1989), on page 131 he has a table showing the correlation of the seven planes with the Centers, which is the same as *MTBT*:

Buddhaic Plane = Higher Moving Center

Messianic Plane = Higher Emotional Center

Mental Plane = Higher Intellectual Center

Akashic Plane = Instinctive Center

Causal Plane = Intellectual Center

Astral Plane = Emotional Center

Physical Plane = Moving Center

In Shepherd Hoodwin's 1995 book, *The Journey of Your Soul (TJOYS*, first edition), pp. 336–346, in a chapter devoted to the seven planes, the same names are given and some similar descriptions are given as in *MTBT*:

This universe has seven planes.... Three are ordinal (concrete), three are cardinal (abstract), and one is neutral, providing connection. The most ordinal plane is the physical, which is concrete energy. Its position is mirrored by the most cardinal plane, the buddhaic, which is abstract energy. The astral plane (concrete emotion) is the middle ordinal plane. It is mirrored in position by the middle cardinal plane, the messianic (abstract emotion). The causal plane (concrete thought) is the highest ordinal plane. It is mirrored in position by the lowest cardinal plane, the mental. This mirroring balances the universe.... The fulcrum of the balance is the neutral akashic plane.... [*TJOYS*, pp. 336–346]

Notice that these are exactly the same names as given in the two earlier books cited above. I assume Hoodwin copied from them. This same information can also be found on the Internet, so this schema is standard in the Michaelian teachings: >http://www.michaelteachings.com/7planes.html<.

Thus, it is explicitly stated in these Michaelian teachings books that the planes do have the Septenarian Attributes: there is a Cardinal/Ordinal and Action/Inspiration/Expression symmetry around the central Akashic Plane. Personally and generally, I accept these descriptions. Note that this information is not contradicted by the Yarbro books discussed in the previous section, and in a couple of places (relating to Planes #4 and #5), it seems to be confirmed by Yarbro.

Apparently the names of the Cardinal planes in the Michaelian teachings community — Mental, Messianic, and Buddhaic — came from channeling. The transcripts of those channeling sessions have not been published, but some books speak of the correlation of Cardinal Planes with manifestations of the Infinite Soul. This information was first tabulated on page 55 of *The Michael Handbook* in this way:

| Table 4Eb — CORRELATION of PLANES, CENTERS, AVATARS, and TEACHINGS per TMH | | | | | | | | | |
|--|---|-----------|---------|---------|--|--|--|--|--|
| [RANK] | [RANK] [CENTER] NAME INFINITE SOUL TEACHING | | | | | | | | |
| [Fifth Plane] | [Higher Intellectual] | Mental | Lao Tsu | Truth | | | | | |
| [Sixth Plane] | [Higher Emotional] | Messianic | Christ | Love | | | | | |
| [Seventh Plane] | [Higher Moving] | Buddhaic | Buddha | Oneness | | | | | |

The comment below the tabulation says: "What this means is that the Infinite Soul chooses to manifest one of the exalted planes of consciousness to give the teaching a particular flavor. Nevertheless, the teaching is all from the Tao itself." (I have not been able to find which plane Krishna, a fourth alleged Infinite Soul manifestation, represented.) In parallel with one of the above attributions there is this statement from another source, namely this Wikipedia article, >https://en.wikipedia.org/wiki/Plane_(esotericism)<: "Rosicrucianism teaches that the divine plane [the sixth plane] is where Jesus dwelt in Christ consciousness." (So, one wonders if this is the reason that the Michaelian teachings community refers to the sixth plane as "Messianic".)

The information in this table is repeated on page 18 of Michael: The Basic Teachings (1990).

Troy Tolley's website is in alignment with the above: >https://our.truthloveenergy.com/topic/152-20111113-michael-speaks-the-7-planes-of-existence/?tab=comments#comment-280<.

My impression is that this information about the specific origins of the various Infinite Soul teachings from specific Cardinal planes has been unchallenged in the Michaelian teachings community, and I have no basis for challenging it. We cannot really know whether or not this information is correct; that makes it an unValidatable dogma–doctrine in my books, but that does not mean that it is wrong. It does mean that it is in the 'gray' area between 'black' (probably wrong, based on evidence and argument) and 'white' (probably right, based on evidence and argument). As the reader must surely realize by now, if there is no "evidence" other than channeling, then that hardly counts as evidence so far as I am concerned, because of all the nonsense one finds in channeling, including channeling about the subject of this chapter.

Referring to Table 4Eb, one might think that the fifth plane would have been called "Taoist" to match the pattern of "Messianic" (the sixth plane, which Christ allegedly represented) and "Buddhaic" (the seventh, which Buddha allegedly represented), but the name "Mental" was already assigned to the fifth plane by previous Michaelian teachings sources. It is all very complicated and confused in the Michaelian teachings, and therefore I suggest to the Michaelian teachings community and its channels that re-examination and reform is appropriate.

Although there is general agreement in the Michaelian teachings (and in myself) regarding the planes conforming to the Septenarian Attributes arranged per the Natural Sequence, there is not total agreement on the names. Therefore, let's challenge the names of some of the planes. My arguments and evidences for that are presented in the next section.

General Comments on Planes

In this section I address some of the discrepancies between the various contingents of the Michaelian teachings. If we just thoughtlessly accept and promulgate the names of the planes given to us in the Michaelian teachings, then what do we really know and understand? Not as much as we could, so let's start to look at the information on Planes critically, and compare that information with other teachings. Teachings about planes did not originate with the Michaels, as we saw in the chapter on planes in Part One; the idea actually goes back thousands of years that we know of. So, let's review what some of the other esotericists had to say.

First of all, let me show you the contents of a table that originated with Lee Bladon. He has correlated various esoteric cosmologies regarding the planes and has shown them on his website at >https://esotericscience.org/article10a.htm<. The newest terminology is shown in the left-most column of the table, and the sources and terms get older as one scans the columns toward the right.

| Table 4Ec — LEE BLADON'S CORRELATION of the NAMES of PLANES | | | | | | | | | | |
|---|-----------------|---------------------|-----------|----------|-------------|--------|------------|----------|------------|--|
| # | Bladon | Laurency | Theosophy | Kabbalah | Var | s | Translat'n | | | |
| 7 | Upper Monadic | Manifestal | Logoic | Keter | Mahapara- | Atala | Sataloka | Adi | First | |
| | Lower Monadic | Mannestar | | Chochmah | nirvana | | | | | |
| 6 | Divine | Submanifes' | Monadic | Binah | Paranirvana | Vitala | Taparloka | Anupada' | Parentless | |
| 5 | Upper Spiritual | Super- Essential | Atmic | Da'at | Nirvana | Satula | Janarloka | Atma | Spirit | |
| | Lower Spiritual | | | Chesed | | | | | | |

| | Table 4Ec — LEE BLADON'S CORRELATION of the NAMES of PLANES | | | | | | | | | |
|---|---|-----------|-----------|----------|----------|------------|------------|--------|-----------|--|
| # | Bladon | Laurency | Theosophy | Kabbalah | Var | Translat'n | | | | |
| 4 | Unity | Essential | Buddhic | Gevurah | _ | Rasatala | Maharloka | Buddhi | Intuition | |
| 3 | Causal | Causal | Causal | Tiferet | Formless | - Talatala | Svarloka | Manas | Mind | |
| 3 | Mental | Mental | Mental | Netzach | Form | | | | | |
| 2 | Emotional | Emotional | Astral | Hod | Desire | Mahatala | Bhuvarloka | Kama | Desire | |
| 1 | Etheric | Etheric | Etheric | Yesod | | Patala | Bhurloka | Sthula | Coarse | |
| 1 | Physical | Physical | Physical | Malchut | | Tatala | | | Course | |

A few comments are offered on the information in this table in light of previous sections:

- In the left-most column are the numbers typically assigned to the seven planes in many esoteric conceptualizations. Some systems start the numbering at the other end, the top of the table. The ranknumbering system is just a convenient way of referring to them as parts of a hierarchical set or nested interpenetrating states of consciousness. In the Michaelian teachings, we conceptualize the seven Planes as being *inside* the Tao (there are graphics in Michaelian teachings books), as if the Tao surrounds the seven planes. That is based on a statement in MFM regarding what the Michaelian teachings calls the "Casting" of "Fragments" or pieces of Tao: "The Casting is not casting out, but rather casting into." [MFM, p. 42] The choice of the word and concept of Casting is that the formless substance of Tao is formed, or 'cast' as if in a 'mold'. The planes were the first things to be made of Tao stuff, some of the first 'thoughts' to be 'form-ulated' in the 'mind' of Tao. The alternative way that some people think of this creation process is that Tao is hidden at the central core and source of our being, so that we are 'expressions or manifestations of the divine'. By the way, these are Cardinal and Ordinal ways of viewing the situation we find ourselves in. The third way to look at this is the Neutral Assimilation way: it is all circular: "... the created in effect evolves to become the creator." (MFM, p. 23) The cosmos bootstraps itself into existence and is turning itself inside out. Those unexplained teaser statements are explained in detail in my book *The Tao of Cosmology*.
- Notice the word "Etheric" above the word "Physical". There is discussion of the etheric levels of the Physical Plane elsewhere in my books, such as in Chapter 4F next following, "Instinctive Center". This name refers to the three non-material, abstract levels (of seven levels) of the Physical Plane. This is where the laws of physics function, among other things. The Physical Plane has a material 'body' and an immaterial 'mind', so to speak. This is one of the ways that the fundamental principles of Ordinality and Cardinality manifest.
- Notice that in three left-side columns the sequence of first, second, and third planes are named Physical, Emotional, Mental. This is per the Natural Sequence, and this conceptualization is undisputed in the Michaelian teachings and by me. To my way of thinking, it is very unfortunate that all subsets of the seven planes, such as Life-Stages and Levels and Ages, are not also understood in the Michaelian teachings community as being structured the same way our involution and evolution through the planes are structured. This is all discussed at length in my book *The Tao of Cosmogony*.
- In the Michaelian teachings, the third plane is named the "Causal" Plane, as noted in previous subsections, and elsewhere in this *History* book. There are various versions of Theosophy, and in some of them, the third plane is the "Lower Mental" Plane and there is no "Causal" Plane. However, there is a "causal body", which is the "spiritual" body, which transcends the three lower bodies ("physical", "emotional" and "mental" bodies). The "causal body" is said to reside on the four higher planes, and I think it might correlate with what the Michaels call "Essence". This is not noted in Table 4Ec. Note that in the column headed by "Laurency", the name of the fourth plane is "Essential" and the name of the fifth plane is "Super-Essential".
- Misnaming the third plane "Causal" in the Michaelian teachings might have led to some misunderstanding among Michaelian students about the nature of the third plane ("Causal" might seem more Warrior-ish than Artisan-ish to some people. Certainly "Mental" seems more Artisan-ish

than Warrior-ish because Artisan and Intellectual Center are both Aspects of Ordinal Expression). I suspect that if this name "Causal" for the third plane had not occurred in Chambers's original channeling, and the correct descriptive name "Mental Plane" had been given, the Michaelian teachings might not be stuck with the erroneous correspondence of Warrior with Causal Plane, Artisan with Astral Plane, and Server with Physical Plane — and other misleading elements of the Michael Math Sequence. When the third plane is properly named the Mental Plane, it is not easy to make a case that "Threeness" belongs to the Warrior, rather than the Artisan, because the Artisan and the Intellectual Center are both Ordinal Expression ("Analysis"). One is treading on thin ice when trying to explain where someone else went wrong, but this is my speculation. Refer to my book *The Tao of Cosmogony* for a thorough discussion.

- Referring again to Table 4Ea, notice that the so-called "Mental" Plane shows up as the third plane, the fourth plane, and the fifth plane according to various teachers. One can see how this might happen on account of the third plane corresponding to the Artisan Role, the fourth plane corresponding to the Scholar Role, and the fifth Plane corresponding to the Sage Role these Roles are all "brainiacs", unlike the other Roles, which are of the Inspiration Axis and the Action Axis. However, notice that my preference is to apply that name and property "Mental" only to the third plane. That is because that is how this plane was characterized in various esoteric cosmologies long before the Michaelian teachings came into being. The entirety of the non-Yarbro contingent of the Michaelian teachings says that the nature of the third plane is mental, and corresponds to the Intellectual Center. Table 4Eb confirms this correspondence.
- Notice that Table 4Ec, in the Theosophy column, refers to the fourth plane as Buddhaic. There are different versions of Theosophy, so it is understandable that in the Theosophy row of Table 4Ea, the Buddhaic plane is the sixth plane. Who knows what was in the memory bank of Sarah Chambers when she first channeled information about the names of the planes. Anyway, it is unsurprising that there is also some uncertainty in the Michaelian teachings community about the placement of the Buddhic plane; the Michaelian teachings refers to (at least one of) the three higher planes by this name, but it varies.
- Notice that in the Laurency column of Table 4Ec, the fourth plane is referred to as "Essential" and the fifth plane is referred to as "Super-Essential". This might be referring to the same thing that is called "Essence" in the Michaelian teachings, and defined as the "intrinsic core of the soul" MFM, p. 36. The soul is defined as "that part of you which is immortal and eternal" MFM, p. 96. The general understanding in the Michaelian teachings community is that the word Essence refers to that aspect of our entire Being that resides on the Cardinal planes (Hoodwin, JOYS [2013], p. 398, glossary entry on Essence), whereas the word soul refers to the fragmentary aspect of our entire Being that resides on the Ordinal planes. The implication of this conceptualization and definition is that the soul is a Fragment of Essence that, in its quantitative evolution, joins with other kindred-soul Fragments until it becomes a high Mental (third) Plane body while still on the Ordinal planes. Beyond the Ordinal planes, the boundary between Essence and Tao does not exist, but there are still gradations, and the evolution of our entire Being on the Neutral and Cardinal Planes is qualitative.
- The words in the Kabbalah column are the Hebrew names of *sefirot*, or nodes, on the so-called Tree of Life, a graphic representation of the alleged structure of the cosmos. This was discussed in Chapter 1A in Part One, "The Seven Planes". Bladon did not make the same correlations that I did, or that the Kabbalists did, so far as I have been able to determine.
- Note the Translation of the Eastern Designations of the fourth plane is Intuition. Refer to Chapter 4F, following next "The Instinctive Center", for the explanation of why I like that word for the Positive Pole of the Neutral Assimilation Center.

There is a lot more information on the following website about variations in the understanding of planes: >http://www.kheper.net/topics/planes/index.html<. These were compiled by an integrator of esoteric information, M. Alan Kazlev.

So, that was an introduction to what other people think about the names of the planes. Now we are ready to take a look at what I think about them....

My Names for Planes

Note that numerous Michaelian teachings commentators refer to the Neutral Assimilation Plane as "Akashic", as shown in Table 4Ea. This practice goes back to the transcriptions of the original Michaelian group channeling sessions, and Yarbro quoted them in her book *MFM*. However, note that there is no mention of the Akashic Plane in Table 4Eb. Furthermore, the Wikipedia article

>https://en.wikipedia.org/wiki/Plane_(esotericism)< does not mention the Akashic Plane among the seven planes. Rather, the Wikipedia article found at this website, >https://en.wikipedia.org/wiki/Akashic_records<, indicates that this term only refers to the permanent records of the Physical Plane. The name Akasha was said to come from the Sanskrit language, and it referred to the etheric (nonmaterial, Cardinal) levels of the Physical Plane. It may be that the Michaels applied the name to the middle plane because of its correspondence to the Scholar Role — people of this Role are known to be collectors and archivists and historians by nature.

As an interesting aside, on the subject of the Akashic records, there is a theory in physics called the "block universe". The idea is that time is *not* fundamental; it "emerges" from more fundamental information structures. Time is subjectively experienced as sequential by us, but objectively, in the whole of reality, time is simultaneous, meaning that all time exists now. There is a variation of this idea called the "growing block universe". I refer you again to Wikipedia for an introduction, if you are interested. You can think of this as records being added to the akasha: >https://en.wikipedia.org/wiki/Growing_block_universe<. Physicist George Ellis has his own version of this theory.

There is much confusion in the names of the planes by different sources and interpreters; there is not as much confusion in the descriptions of the planes; they obviously follow the Natural Sequence, and they have the Septenarian Attributes. What is a person to do? After reading the Wikipedia article, and considering what I take to be the consensus there, namely at >https://en.wikipedia.org/wiki/Plane_(esotericism)<, I have decided to go with the names of planes shown there, as distinct from the Michaelian teachings, as shown in the following list. The main reason for this is that in my book *The Tao of Cosmogony* I have a chapter on the seven planes, and I might as well use the consensus that esotericists have converged on:

Physical Ordinal Action
Astral (Emotional) Ordinal Inspiration
Mental (Causal) Ordinal Expression
Buddhic (Unity) Neutral Assimilation
Spiritual Cardinal Expression
Divine Cardinal Inspiration
Logoic (Monadic) Cardinal Action

Whatever the names given to the seven planes, their natures can be understood somewhat from their Septenarian Attributes, which are listed above and shown in Table 4Ea. Really, I believe that the understanding of the characteristics of the planes took a significant leap forward with the revelation of the nature of Action, Inspiration, Expression, and Assimilation as manifestations of space/time geometry. Yarbro started the revelation, and I have expounded upon it, in my books *The Tao of Cosmology, The Tao of Cosmogony*, and *The Tao of Personality*.

Chapter 4F

THE INSTINCTIVE CENTER

This chapter is the first of three chapters that discuss the Overleaf Septenary called Centers. The premise of these three chapters is that the understanding of the Centers in the modern Michaelian teachings needs to be revisited and revised. Of the seven Overleaf Septenaries, the most misunderstood in the Michaelian teachings community may be the Centers. In my opinion, this is because the way that the Centers are typically explained is different from the way that the other six Overleaf Septenaries are explained, and that is because the category of Centers originated with Gurdjieff, well before the other six Overleaf Septenaries, with the underlying Septenary structure, were revealed by the Michaels. In my opinion, Gurdjieff's understanding of Centers was adopted into the Michaelian teachings without the amount of critical examination and adaptation that was needed to fit them consistently into the Overleaf System. Some of this misunderstanding and ambiguity was discussed in Chapter 4C above, "Which Trait Septenaries are Overleaves?" I have given considerable thought regarding revisiting and revising my understanding of the Centers, and that work is presented in these three Chapters of Part Four of this *History* book.

My belief is that Gurdjieff's understanding of the Centers was primitive and provisional, not final and authoritative; it needs to be 'brought up to date' with subsequent revelations about the entire set of Overleaf Septenaries. This evaluation applies to the Instinctive Center, the subject of this chapter. For the same reason, there is a lot of misunderstanding about Gurdjieff's so-called "higher" Centers. These three Centers are discussed in Chapter 4G, following next, "The Higher Centers". In addition to that, there is way too much misunderstanding about the meaning, and Axial Attributes, of the Action Centers, which are commonly called Moving and Sexual (or Higher Moving or Physical); this particular ambiguation happened partly because of Gurdjieff's primitive presentation, but also partly because Yarbro in her first Michaelian teachings book, *Messages from Michael*, switched the two from the way that Gurdjieff and the original Michaelian group had them placed. Consequently, the Michaelian teachings community as a whole cannot even agree on the correct names of the Action Centers. These two Centers are discussed in the third of these chapters, Chapter 4H, "The Action Centers".

As a reminder of things explained elsewhere, and for your easy reference, Table 4Fa tabulates the Centers in their relation to what I call the Natural Sequence, or just the Septenary, with the rank, the Septenarian Attributes, and the seven Centers. This table shows the names of Centers that I have settled on, rather than the common names:

| TABLE 4Fa — THE CANONICAL SEPTENARY | | | | | | | | | | |
|-------------------------------------|-------------------|------------------------|-----------------------|-------------------------|------------------------|-------------------------|--------------------|--|--|--|
| RANK | FIRST | SECOND | THIRD | FOURTH | FIFTH | SIXTH | SEVENTH | | | |
| SEPTENARIAN ATTRIBUTES | Ordinal Action | Ordinal Inspiration | Ordinal Expression | Neutral Assimilation | Cardinal Expression | Cardinal Inspiration | Cardinal Action | | | |
| CENTER | Motion | Emotion | Intellect | Impulse | Concept | Sympathy | Excitation | | | |

My comments on this table are as follows:

From left to right, the names originally given to the Centers by Gurdjieff and adopted by the Michaels
are: Moving, Emotional, Intellectual, Instinctive, Higher Intellectual, Higher Emotional, and Sexual.
Notice that I prefer the noun form for the names of the Centers, rather than the adjective form, which
was inherited from the Gurdjieffian teachings. The Michaels gave all of the other Overleaf traits (and

- their Positive and Negative Poles) names in the noun form, so my first proposed revision is to give names to the Centers that are also in noun form, rather than in adjective form as Gurdjieff did.
- My second proposed revision is to rename the so-called "Higher" Centers to "Concept, "Sympathy", and "Excitation". This is explained in the next chapter in this Part, Chapter 4G, "The Higher Centers".
- My third proposed revision is to rename the so-called "Instinctive" Center to "Impulse" Center. This chapter explains my rationale for that suggestion.

Because of the amount and type of misunderstandings, and because of my desire to sort things out with solid evidences and arguments, each of these chapters is rather long compared to most other chapters here in Part Four of this *History* book.

Introduction to Discussion of the Instinctive Center

In Part One of this *History* book, in Chapter 1D, "The Seven Centers", there is an introduction to the seven Centers as understood in the Gurdjieffian teachings, and in the original Michaelian group. It would be helpful for you to read that (again). This chapter, 4F, discusses the understanding of the Instinctive Center that has evolved since Gurdjieff and the original Michaelian group.

In the reviews of Overleaf Charts in Part Three, we have seen various ideas about the Instinctive Center, some of them contradictory, some of them supplementary, and some of them evolutionary. Let's review the basic history.

In the Gurdjieffian teachings, the Instinctive Center was a *Part* of the first, aka lowest, Center, the Moving Center, where it has Ordinal Action Attributes, but in the original Michaelian group, the Instinctive Center was made a *separate* Center and placed in the middle of the Septenary where it has Neutral Assimilation Attributes. What are the implications of this relocation and re-Attribution?

The original names of the Poles of the Instinctive Center given to the original Michaelian group were +Atomic and -Anatomic, and these names have been adopted by most Chart-makers. However, these names are obscure and were not explained at the time of their revelation, so far as we know. So what do the words mean, and are these the best terms, especially considering that the Instinctive Center got relocated and re-Attributed?

Because of the obscurity of the original names of the Poles of this Center, subsequent to the original Michaelian group some students proposed different names; indeed, half of the Charts show different names. A couple of Chart–makers even proposed different names for the Center itself, namely:

Chart #7 — MEF +Natural and -Mechanical

Chart #9 — Stevens V1 +Aware and –Mechanical (or –Automatic)

Chart #10 — Heideman +Aware and -Automatic
Chart #12 — Byram ASSIMILATIVE Center

Chart #13 — Cocconi +Essential and –Mechanical
Chart #14 — Hasselmann +Spontaneous and –Thoughtless

Chart #16 — Stevens V2 +Aware and –Mechanical
Chart #17 — Taylor +Aware and –Mechanical
Chart #19 — Benning +Natural and –Mechanical
Chart #20 — Personessence +Automatic and –Impulse

Chart #23 — Wittmeyer IMPULSE Center, +Intuition and –Instinct

This chapter, 4F, is the product of an attempt on my part to understand this history and these variations, and clear up the ambiguities and reconcile the inconsistencies that are found in the published Michaelian teachings. There is so much information that it is presented in several sections. We examine some historical background that preceded the Michaels' appearance. We also examine some written information from various teachers within the Michaelian teachings community. We also compare the nature of the fourth position in Canonical Septenaries other than the Michaelian teachings. Finally, evidences and arguments for a proposed clarification and synthesis are presented.

Our method for resolving the discrepancies in the understanding of the Instinctive Center (as well as the other Centers) is to come at the problems 'from the top down'. That is, I will interpret the meaning of the Instinctive Center working from the general to the specific. The Overleaf System is not an arbitrary collection

of unrelated personality factors. When properly understood, the Overleaf System is a beautiful picture, not an ugly mess, and the Instinctive Center has its place in that picture. The Instinctive Center is one of 49 Overleaf Traits arranged in a meaningful pattern, governed by the Dialectic and Axial Attributes. The Instinctive Center cannot be properly understood in isolation from the content and the context of the Overleaf System.

Instinctive Center According to Gurdjieff

Georges Gurdjieff introduced the term "Instinctive Center" and its description to his students and the world early in the Twentieth Century. Actually he first used a Russian word, then probably a French word, but whatever those words were, they have always been translated into English as "Instinctive". Some members of the original Michaelian group were students of the Gurdjieffian teachings in the early 1970's, and they were influenced by what they learned from it, and the Michaels adopted and adapted some of it into their teaching. Therefore, in order to understand how the Instinctive Center was understood in the original Michaelian group and is understood in some contingents of the Michaelian teachings community, it is useful to examine its original meaning in the Gurdjieffian teachings.

In the Gurdjieffian teachings and many subsequent Fourth Way groups, the Instinctive Center is said to be a Part of the Moving Center: The following quotation was taken from: >http://en.wikipedia.org/wiki/Centers_(Fourth_Way)<.

Moving or physical center. This brain is located in the spinal column. This brain makes beings capable of physical actions. Some, but not all, Fourth Way schools have further divided this Center into three distinct parts:

Motor: Controls motor functions. The acts of walking, the physical aspects of talking, as well as even functions that are considered "reflexive", are all part of this sub-center.

Instinctive: Controls faculties which are completely involuntary. This does not typically encompass "kneejerk" reactions, nor what we would typically consider reflexes. A common example of the functioning of this center is the contracting of blood vessels to facilitate the pumping of blood.

Sexual. Controls sexual functions.

Emotional or feeling center. This faculty makes beings capable of feeling emotions. This brain is dispersed throughout the human body as nerves which have been labeled as the "nerve nodes". The biggest concentration of these nerves is in the solar plexus.

Intellectual or thinking center. This center is the faculty which makes a being capable of logic and reasoning. It is located in the head. [retrieved 20 January 2019]

Although this text says the Instinctive Center is "distinct", it is also said to be a "sub-center" of the Moving Center. Elsewhere in Gurdjieffian teachings and Fourth Way publications, a sub-center is called a "Part" of a Center. (Hereinafter Part is capitalized because of its special usage in both the Gurdjieffian teachings and the Michaelian teachings.) The Gurdjieffian definition of the Instinctive Part of the Moving Center is explained by one of Gurdjieff's star pupils, Peter Ouspensky; he made a clear distinction between Instinctive Center and Moving Center:

Then there are two other functions which no system of ordinary psychology divides and understands in the right way — instinctive function and moving function. Instinctive refers to the inner work of the organism: digestion of food, beating of the heart, breathing — these are instinctive functions. To instinctive function belong also ordinary senses — sight, hearing, smell, taste, touch, the feeling of cold and warmth, things like that; and this is all, really. Of outer movements, only simple reflexes belong to instinctive function, because more complicated reflexes belong to moving function. It is very easy to distinguish between instinctive and moving functions. We do not have to learn anything that belongs to instinctive function, we are born with the capacity to use all the instinctive functions. Moving functions, on the other hand, all have to be learned — a child learns to walk, to write and so on. There is a very great difference between the two functions, since there is nothing inherent in moving functions, and instinctive functions are all inherent. [P. D. Ouspensky, *The Fourth Way*, pp. 3–4, emphasis mine]

Therefore, Gurdjieff's teaching about the Instinctive Center is that it referred to the *physiology* of the body, and has nothing to do with the *personality* of the psyche. The word "function" is used numerous times in this quote, and it will be used further on, because *function* can refer to both physiology and personality.

One wonders, if whatever word Gurdjieff used for the Instinctive Center had been translated into English as the Physiology Center to go with this description, then would some of the subsequent misunderstanding about the nature of this Center have found its way into the Michaelian teachings subsequent to the original

Michaelian group? We will see in subsequent sections that the original Michaelian group retained the Gurdjieffian understanding, but after the original Michaelian group, students who did not know either the Gurdjieffian or the original Michaelian group understanding took the meaning of "instinct" far beyond the original Gurdjieffian teachings understanding as a function of physiology.

It is perhaps because of this distinct and obvious difference between physiological and moving functions of the body that one of Gurdjieff's students, Rodney Collin (whom we know was known to the original Michaelian group because he is mentioned in the transcriptions thereof), departed somewhat from this understanding, and made the Instinctive Center distinctly separate from the Moving Center, not a Part of it. Collin was not the only one, as we see in the following quotation from Wikipedia.

The following quotation was taken from >http://en.wikipedia.org/wiki/Centers_(Fourth_Way)<.

Rodney Collin in his book "The Theory of Celestial Influence" [1968] says that he believes that the three centers seem to be a simplification of four centers: the emotional center, the instinctive center, the moving center, and the intellectual center. He believes that there is a clear separate existence of an instinctive and a moving center, as the instinctive center is born complete: nobody teaches the newborn baby how to breathe at birth, or to suck to be fed some hours later; however, it has to learn how to hold his feeding bottle some months later, or to stand and walk by himself some time later yet. Susan Zannos in her book "Human Types: Essence and the Enneagram" [1997], writes that the four suits of the common deck of playing cards represent the four lower centers: diamonds for the intellectual center, hearts for the emotional center, spades for the moving center, and clubs for the instinctive center. She shows how the three court cards (jack, queen, and king) are used to represent three levels of attention within man for each of the lower centers. She states that the sex center is represented by the ace of each suit, indicating how sex energy enters the other four lower centers. [Retrieved years ago; since removed from the Wikipedia article]

Maurice Nicoll, another student of Gurdjieff, also separated Instinctive and Moving Centers in his six-volume work *Psychological Commentaries on the Teaching of Gurdjieff and Ouspensky* (1952). There are pie charts of the Intellectual, Emotional, Moving, and Instinctive Centers, one each on four pages of Volume 1 of *PCTGO*, pages 76–79. The pie charts show the Parts of each of the four Centers; these charts are reproduced in Chapter 1D in Part One, "The Seven Centers". What I find interesting is that in the pie-chart of the Instinctive Center, the top half of the pie is labeled Positive Part with three equal slices labeled the Positive Moving, Positive Emotional, and Positive Intellectual Parts. The bottom half of the Instinctive Center pie also has three equal slices, in this case labeled the Negative Moving, Negative Emotional, and Negative Intellectual Parts. This layout is predictive of the way the Instinctive Center was later conceptualized in the Michaelian teachings, with Negative and Positive Poles that encompass the lower Center triad (Moving, Emotional, Intellectual) and the higher Center triad (Higher Intellectual, Higher Emotional, Higher Moving).

Anyway, these various sources seem to indicate that some students of the Gurdjieffian teachings moved away from the original idea that the Instinctive Center and the Sexual Center were Parts of the Moving Center, and made them separate Centers. Thus far in my investigation, I have not discovered where Nicoll, Collin, and Zannos relocated the Instinctive Center and the Sexual Center in the septenary of Centers, or even found out whether they understood the Centers as a septenary or not.

Whatever may have gone before in the Gurdjieffian teachings and subsequent Gurdjieffian communities, in the original Michaelian group and in the Michaelian teachings groups that followed, Instinctive, Sexual, and Moving Centers are three separate Centers. The quote above relates some of the history of the separation of the Instinctive Center from the Moving Center, but it does not relate the history of the migration of the Instinctive Center from the lowest position in the Septenary to the middle of the Septenary. I have not done enough research — and the information might actually be unavailable — to know if some post-Gurdjieffian teachings that preceded the original Michaelian group moved the Instinctive Center to the central position in the Septenary, which would explain why we find it there in the Michaelian teachings; so far as I know, the original Michaelian group transcriptions say nothing about any such transitional teaching. However, there are clues in the Gurdjieffian teachings itself that lead one to suspect that the migration was reasonable. The Wikipedia quote above relates that there was a rationale for separating the sub-Centers (Instinctive Center and Sexual Centers) from the Moving Center, but it turns out that there is also a rationale for sequencing them in a certain pattern, the Septenarian pattern: three "lower" and three "higher" Centers with an "intermediate" Center. You will recognize this as the Dialectic pattern described in numerous chapters of this History book.

The following section presents the case for that rationale.

Balanced Man According to Gurdjieff

The phrase "Level of Being" is Gurdjieff's name for the stages of development on his version of the spiritual path, the path from a "sleeping" person to a fully "awake" person. (On this subject, refer to Chapter 1J, "Level of Being", in Part One of this *History* book.) Another way to state this is that there is a rank-order development from lower states of spiritual awareness and consciousness to higher states. Following are some verbatim quotes on Gurdjieff's teaching from a couple of books. A few explanatory comments in [bracketed italics] have been added. Notice that the Levels of Being are correlated with the Centers, and therefore this aspect of Gurdjieff's teaching has bearing on an understanding of the Centers, including the Instinctive Center.

Man number one, number two, and number three: these are people who constitute mechanical [Gurdjieff's term for typical "sleepwalking"] humanity on the same level on which they are born.

Man number ONE means man in whom the center of gravity of his psychic life lies in the MOVING CENTER. This is the man of the physical body, the man with whom the moving and the instinctive functions constantly outweigh the emotional and thinking functions.

Man Number TWO means man on the same level of development, but man in whom the center of gravity of his psychic life lies in the EMOTIONAL CENTER, that is, man with whom the emotional functions outweigh all others; the man of feeling, the emotional man.

Man number THREE means man on the same level of development but man in whom the center of gravity of his psychic life lies in the INTELLECTUAL CENTER, that is, man with whom the thinking functions gain the upper hand over the moving, instinctive, and emotional functions; the man of reason, who goes into everything from theories, from mental considerations. [P. D. Ouspensky, *In Search of the Miraculous*, p. 71]

The first three categories are practically on the same level. Man number 1: a man in whom the moving or instinctive centers predominate over the intellectual and emotional — Physical Man. Man number 2: a man in whom the emotional center predominates over the intellectual, moving, and instinctive — Emotional man. Man number 3: a man in whom the intellectual center predominates over the emotional, moving, and instinctive — Intellectual man. In ordinary life we meet only these three categories of man. Each one of us and everyone we know is either number 1, number 2, or number 3. There are higher categories of man, but men are not born already belonging to these higher categories. They are all born number 1, number 2, number 3 and can reach higher categories only through [spiritual development] schools.

Man number FOUR is not born as such. He is a product of school culture. He differs from man number 1, number 2, and number 3 by his knowledge of himself, by his understanding of his position, and as it is expressed technically, by his having acquired a permanent center of gravity. This last means that the idea of acquiring unity, consciousness, permanent 'I', and will [dominates]. The idea of his development has already become for him more important than his other interests. It must be added to the characteristics of man number 4 that his functions and centers are more balanced, in a way in which they could not be balanced without work on himself, according to school principles and methods. [the original Michaelian group Overleaf Charts place the Instinctive Center here.]

Man number FIVE is a man who has acquired unity and self-consciousness. He is different from ordinary man because in him one of the higher centers already works, and he has many functions and powers that an ordinary man — that is, man number 1, number 2, or number 3 — does not possess. [the original Michaelian group Overleaf Charts place the Sexual Center here.]

Man number SIX is a man who has acquired objective consciousness. Another higher center works in him. He possesses many more new faculties and powers beyond the understanding of ordinary man. [the original Michaelian group Overleaf Charts place the Higher Emotional Center here.]

Man number SEVEN is a man who has attained all that a man can attain. He has a permanent 'I' and free will. He can control all the states of consciousness in himself and he cannot lose anything he has acquired. [the original Michaelian group Overleaf Charts place the Higher Intellectual Center here.]

Understanding this division of man into seven categories is very important, for the division has very many applications in all possible ways of studying human activity. It gives, in the hands of those who understand it, a very strong and very fine instrument or tool for the definition of manifestations which, without it, are impossible to define.

Take, for instance, the general concepts of religion, art, science, and philosophy. Beginning with religion, we can see at once that there must be a religion of man number 1 that is all forms of fetishism, no matter how they are called. A religion of man number 2 is emotional, sentimental religion, passing sometimes into fanaticism, the

crudest forms of intolerance, persecution of heretics, and so on. A religion of man number 3 is theoretical, scholastic religion, full of argument about words, forms, rituals, which become more important than anything else. A religion of man number 4 is a religion of man who works for self-development. A religion of man number 5 is the religion of a man who has attained unity and can see and know many things that man number 1, 2, and 3 can neither see nor know. Then there is a religion of man number 6 and a religion of man number 7, about neither of which can we know anything. The same division applies to art, science, and philosophy. One must try to find examples of these for oneself. [P. D. Ouspensky, *The Psychology of Man's Possible Evolution*, pp. 53–56]

Summary Comments on Gurdjieff's Levels of Being

- 1. These quotes are from Peter Ouspensky's writings, but they are about the Gurdjieffian teachings. Both of them generally correlated these ascending steps of greater consciousness with Centers. (By the way, the same claim is made about the chakras; refer to a subsequent chapter.) Instinctive Center is not mentioned as such, but "instinctive function" is mentioned as being associated with Man #1. Recall that instinctive function referred to physiology, not to psychology.
- 2. In my research so far, outside of the Michaelian teachings, I have not found anyone who correlated all seven of Gurdjieff's so-called "Man" numbers with Gurdjieff's seven Centers/Parts of Centers. To me this says a lot about the preliminary and provisional status of the Gurdjieffian teaching; it was a primitive precursor to the Michaelian teachings, and is not to be taken as the final, authoritative word on the subject.
- 3. The fact that the three higher Centers in the Gurdjieffian teachings are not shown per the Natural Sequence is, in my opinion, another indication of the preliminary and provisional status of Gurdjieff's understanding.
- 4. In the quote above and in the previous section, the Instinctive/Moving Center is the first and lowest Center. In the Michaelian teachings, the Instinctive Center is in the middle of the Septenary of Centers, not at the beginning. This change has great significance, as I have hinted before, and as we shall see further on.
- 5. Man #4 is referred to as "balanced", but unlike the other Men in the ascending Levels of Being, is not correlated here or anywhere else among Gurdjieff/Ouspensky students that I know of with any of Gurdjieff's version of the Centers. This omission of correlation was eliminated in the Michaelian teachings, where Man #4 correlates with the Instinctive Center. As argued and evidenced in subsequent sections, this location and correlation will provide a very different description and meaning for the Instinctive Center than that given by Gurdjieff and Ouspensky and their students.
- 6. In subsequent sections, we will examine the subject of the middle element in various septenaries when we view what other teachings have to say about it. Its description is very different from the Gurdjieffian view of the Instinctive Center as having only to do with physiology, but not dissimilar to Gurdjieff's teaching about the Man #4 Level of Being.

The above items, and perhaps more that are not uncovered here, is what the original Michaelian group members had to work with until the Michaels came along and made some significant changes and additions to an understanding of the Instinctive Center, as we see in the next section.

Instinctive Center According to the Original Michaelian Group

There seems to have been an ambiguity, or at least an evolution, of understanding about the Instinctive Center both before the original Michaelian group and during the original Michaelian group. In the previous section we reviewed the change before the original Michaelian group; in this section, we review the change during the original Michaelian group. In yet other sections, we review the changes subsequent to the original Michaelian group.

The Michaels' channeling to the original Michaelian group began on 12 August 1973. On 22 September 1973, Sarah Chambers, the original Michael channel, opined that "lust" came from the "Instinctive/Moving Center." Notice that she used the same term for the combined-function Center as we saw in Gurdjieff. Also notice that presumably "lust" refers to the Sexual Part of the Instinctive-Moving Center. Another member of the original Michaelian group who was familiar with Gurdjieff used the same combined-function term on 20 October 73. However, it seems from channeling on 29 November 1973 that the Michaels might have begun to make a separation of the two, although this is ambiguous:

Psychic [higher Center?] energy is the energy generated by the Essence. It is naturally a more refined energy than that generated by the internal [lower] Centers of Emotion, Intellect, and Instinctive and Moving functions. This energy is independent of the others. [SJC, 29 November 1973]

So, at this early stage of the Michaels' revelation, is Instinctive a Part of Moving Center, or not? It is hard to say based only on this passage.

Then on 16 June 1974 the channeling made a correlation of Centers with chakras. The Michaels did not use the common modern English names of the chakras, so those are shown in [brackets] in the quote below:

The lowest chakra [Root] corresponds to the output of the Instinctive Center.... The gut [Navel or Plexus?] chakra is Emotional Center, Intellectual Center manifests itself at chest level [Heart], and so forth [up the body from bottom to top]. The Sexual Center can be measured at the level of the thyroid [Throat]; the Higher Emotional Center at the level of the pineal body [Brow]; the Higher Intellectual Center at the level of the anterior pituitary [Crown]. Procreation is handled by the Moving Center [Root or Gonad?] in "sleeping" animals. [SJC, 16 June 1974]

All of the seven Centers mentioned here are presented as if they were separate Centers; none seem to be sub-Centers or Parts of Centers as in the original Gurdjieffian teachings. However, I perceive the correlation of Centers to chakras has two ambiguities in this passage: the location of the "gut" chakra could be either Navel Chakra or Solar Plexus Chakra, and the location of the Moving Center among the chakras was left out entirely. However, to be consistent with the sequence of Centers in the Gurdjieffian teachings regarding Levels of Being, it makes the most sense to me to place the Moving Center between the Instinctive Center and the Emotional Center. Assuming that such is the case, then the sequence of chakras/Centers appears to follow Gurdjieff's Levels of Being discussed in the previous section, wherein Balanced Man is not assigned a Center, and therefore not assigned a chakra in this passage. Thus:

MAN #0 = "lowest" = Root Chakra = Instinctive Center

MAN #1 = "procreation" = Gonad or Navel Chakra = Moving Center

MAN #2 = "qut" = Navel or Plexus Chakra = Emotional Center

MAN #3 = "chest" Heart Chakra = Intellectual Center

MAN #4 = Balanced Man

MAN #5 = "thyroid" = Throat Chakra = Sexual Center

MAN #6 = "pineal" = Brow Chakra = Higher Emotional Center

MAN #7 = "pituitary" = Crown Chakra = Higher Intellectual Center.

There is more discussion in subsequent sections about the "Man #0 = Instinctive Center" line item. Note that to have the Instinctive Center at the bottom of the chakra lineup per the channeling contradicts the original Michaelian group Overleaf Charts, where Instinctive Center is in the middle of the septenary. This tells me that in the original Michaelian group at this time there was not a clear understanding of the correlation of chakras and Centers, and this is confirmed in detail in Chapter 4J below, "The Seven Chakras".

On this same date, further on in the channeling session, there is a more definite inference that the Instinctive Center is separate from the Moving Center, only this time it would seem that the Instinctive Center is at the Navel (second) and/or Plexus (third) Chakra locations, where food is digested, rather than at the "lowest" (Root) chakra as in the previously-quoted passage. To wit:

There is now a brightening of the aura also in the region of the Instinctive Center as it digests your dinner. This will only last while the most significant work is being done, not while the contents are being dehydrated [in the large intestine]. This requires little expenditure [of aura energy]. The Moving Center is relatively quiet [as discerned by the aura in the region of that Center?]. [S/C, 16 June 1974]

So far as I know, Gurdjieff did not correlate the Centers with the chakras, so presumably his understanding of the Instinctive Center was that it concerned the physiology of the entire body. However, if it is correlated with one or more chakras such as in these passages, then it would seem to be localized in the digestive system and/or Root Chakra. This constitutes a significant ambiguity problem if we are to take this channeling seriously. The discrepancies in various passages call into question either the validity of the channeling and/or the Overleaf Charts created by the original Michaelian group members. Refer to the aforementioned Chapter 4J, "The Seven Chakras", for a proposed resolution. Basically and briefly, my solution is to make the Instinctive Center to be about physiology and refer to it as the Zeroth Center and correlate it with the Zeroth (Root) Chakra; more is said about this further on.

A month later, among many suggestions for group activities, one of the members suggested massage: Group massage. (Good for Instinctive Center.) [S/C, 07 July 1974]

This also seems to equate the Instinctive Center with the physiology of the entire body per Gurdjieff, not just of the digestive system per previous original Michaelian group quote — and obviously does not equate the Instinctive Center with the psychology of the Personality.

Then two months later we find the following comment, which also seemingly implies that the Moving and Instinctive Centers are different, but there is no indication that the Instinctive Center concerns anything more than physiology:

In Mechanical Man, the Moving Center takes over the rapid functions. This is, of course, necessary for survival of the body, as when a hand is removed from a hot stove by the Moving Center in cooperation with the Instinctive Center. In Balanced Man, the Intellectual Center claims its rightful functioning and becomes the decision-maker. In other words, Balanced Man chooses to remove the hand. [SIC, 17 September 1974]

"Mechanical Man" is Gurdjieff's term for what some others call an unenlightened person, but that is of no concern to us in this chapter except to say that some Overleaf Chart-makers prefer to rename the Negative Pole of the Instinctive Center "-Mechanical" rather than the original "-Anatomic". Those Chart-makers apparently had some familiarity with the Gurdjieffian teachings. In Gurdjieff's terminology, Balanced Man, Man #4, has achieved the first stage of enlightenment, but apparently this would not apply to the Negative Pole. At any rate, in both Gurdjieff and the original Michaelian group, Balanced Man was contrasted with Mechanical Man, who was considered to be spiritually "asleep". Basically, Balanced Man is said to be conscious enough to choose which of the lower Centers to use to respond appropriately to situations and circumstances.

In a transcription dated some months later, there is an ambiguous statement that might or might not imply that the Instinctive Center was a Part of the Moving Center rather than as a separate Center:

Instinctive Center does express itself, usually through the acting Part of the Moving Center, but at times through the thinking Part. [S/C, 15 April 1975]

To me, this says that the physiology of the body is able to communicate its functions to the behavioral and the mental functions of the Personality regardless of whether or not the Instinctive Center was conceptualized as a Part of another Center or a separate Center; more will be said about that in subsequent sections. In the original Michaelian group, the concept of Parts of Centers was adopted from the Gurdjieffian teachings. Each of the lower Centers was said to have Parts of the other lower Centers within it; that was documented in Chapter 1D in Part One, "The Seven Centers".

The following statement from the 16 June 1974 session is ambiguous about whether the Instinctive Center is a Part of the Moving Center per Gurdjieff, or a separate Center per the original Michaelian group Overleaf Charts, but it does refer to physiology:

... the Instinctive Center, which malfunctions only during organic illness.

In the final reference in the original Michaelian group transcriptions to the Instinctive Center, there is something of a definition from the Michaels for the Instinctive Center; it is all about the body and nothing about the personality:

...Instinctive Center needs — warmth, comfort, a full stomach, and passive entertainment. [S/C, 21 February 1977]

From these quotations it would seem that the original Michaelian group did not move outside the Gurdjieffian understanding of the Instinctive Center as referring to physiology rather than personality. However, among the transcriptions of channeling sessions of the original Michaelian group, there were four Charts showing the seven Centers. Instinctive Center is always separate from Moving Center (and Sexual Center). Therefore we know for certain — not inference from ambiguous statements — that the original Michaelian group departed from the Gurdjieffian teachings at some point. Furthermore, on those Charts Instinctive Center is shown in the Neutral Assimilation category in the middle of the Septenary. We don't know when, and we don't know how, and we don't know why this departure from the Gurdjieffian teachings was made. Either the Michaels made the change, or some astute original Michaelian group member and Chartmaker made the changes based on clues about the structure of other Overleaf Septenaries, or some student of the Gurdjieffian teaching, perhaps in the Fellowship of Friends, made the change. My studies indicate that these changes were an improvement on the Gurdjieffian structure because it brought the understanding of the

Centers into correspondence with the other Overleaves, and with other Septenaries — including chakras — in other teachings.

One change away from the original Gurdjieffian teachings takes Instinctive Center from being a Part of a Center to being a Center all by itself, and that has significance. However, the change of even greater significance is the relocation in the Septenary, and therefore the change in Attributes: from the #1 Ordinal Action position to the #4 Neutral Assimilation position. A formal name change suitable for this relocation is proposed further on, but for the time being we will refer to it by its Septenarian Attributes; thus: Neutral Assimilation Center. This helps keep references to Partial Ordinal Action Center and Neutral Assimilation Center unambiguous. The premise of the following sections is that, because of the change in Attributes, the Neutral Assimilation Center has a nature very different from that of a Part Ordinal Action Center. My assertion is that the Neutral Assimilation Center has nothing to do with physiology but has everything to do with psychology and Personality, the same as all the other Overleaves. Admittedly, this is not something that was understood in the original Michaelian group. And it is my assertion that the misleading word "instinctive" heavily taints the understanding of the Neutral Assimilation Center to the present day in the minds of many Michaelian students.

In order to begin to discern the definition of Neutral Assimilation Center as distinct from Part Ordinal Action Center, let's take a closer look at what "instinct" meant in the original Michaelian group itself, apart from Gurdjieffian influence. Spoiler alert: unlike the Instinctive Center itself, "instinct" does not refer to *physiology*; it refers to *psychology*.

Instinct in the Original Michaelian Group

Various dictionaries provide definitions of instinct as applied to human behavior (as distinct from animal behavior) as follows, extracted from some online dictionaries: "A powerful motivation or impulse; an innate capability or aptitude; inborn intuitive power; a natural aptitude or inclination; a natural tendency to behave or react in a particular way without thinking [or feeling] and without having been taught." None of these definitions say anything about physiology, the Gurdjieffian view of the Instinctive Center, but they do say something about behavior, emotions, and thoughts as part of personality. As we will see further on, I particularly endorse the notion that the underlined dictionary words (my emphasis) be retained in a proper understanding of the Neutral Assimilation Center.

None of the following quotes extracted from the original Michaelian group transcriptions say anything about physiology either. But then neither does the Michaels' description of instinctive behavior look exactly like the dictionary definitions in the previous paragraph. The Michaels' use of the term seems to apply to something in between physiology and personality; namely, behavior influenced by the built-in tendencies of the animal body that our spiritual souls inhabit, and the nature of Personality traits. The general idea is that people often behave impulsively, driven by influences that are not of thought or of emotion. This is similar to Gurdjieff's notion that undeveloped people are sleep-walking their way through life in an automatic, mechanical fashion, with no significant self-awareness or Self-awareness.

Nurturing, not loving, is instinctive. [S/C, 12 Aug 1973]

You know <u>instinctively</u> who to seek [as your teacher] and have so far sought with discrimination on an <u>instinctual</u> level. Now, you can move into doing it on a higher level. The knowledge is there [within you]. [S/C, 08 September 1973]

The King takes charge through knowledge and inherent power; the Warrior [takes charge] through an <u>instinctive</u> drive. [SJC, late October 1973]

The Warrior is a leadership Role. The Warrior leads <u>instinctively</u> [– it comes naturally to them]. There is an *inner drive* to lead. [*SJC*, 15 November 1973]

Both Artisan and Sage approach life artistically and with much innovation and originality, sometimes whimsically, the Artisan manually and the Sage verbally, the Artisan through <u>instinct</u> and the Sage through <u>innate</u> wisdom... The Warrior, while often an excellent leader because of the <u>instinctive</u> drive, can be a solitary fighter for a cause. [S/C, 20 February 1974]

Erotic love is a rationalization of False Personality, all owing for perpetuation of the species. Just look around you, Richard, and see how complicated this most natural <u>instinctive</u> function has become. The only reason that your culture has not built up a similar ritual, complete with rules, around defecation is that you do it all

alone. As soon as you come together with another personality, you begin to rationalize all functions and behaviors. [SJC, 24 February 1974]

This lady creates a vortex of negative energy that is particularly difficult for those souls in Acceptance, which is precisely why certain people <u>instinctively</u> elected not to go to this place. [SJC, 03 April 1974]

These are mostly cases where the instincts are not from the animal component of the human experience. In fact, in the case of the Roles, their impulses are not from physiology or animal instincts, but from Essence.

In a couple of successive sessions in late December of 1974, the Michaels waxed eloquent in a rant about "instinctive behavior" in society and culture that is left over from the animal phase of the development of the human being. This gives one a good idea of what "instinct" meant in the original Michaelian group: it did not refer to physiology, but it did refer to psychology — of the most primitive sort, not much above that of animals.

When souls are first cast into a dominant species, some, or rather many, of the instinctive drives of the creatures-of-no-reason still remain embedded with the bio-computer. The personality makes no attempt to override these instinctive behavior patterns, and fights against the intrusion of any outside source. This suggests that they can be overridden.... This, in part, relates to your not attempting in any way to override the embedded instincts left as vestiges of a more primitive self.... If the personality no longer felt threatened and alienated there would be no incentive to continue the instinctive drama.... You see, the instinctive drama is safe and easily learned, for the memories are all still there.... On some planes, even on this world, the distinction has been made by good students and adepts, and the instinctive patterns have been overridden.... You choose to continue to live with terror only because the instincts for survival in a terrifying environment are still so strong.... If this ceases, then again, the war is weakened, and all those instincts begin to spin wheels and leak energy.... Sexual behavior in this culture is largely instinctive to the point where any gesture of friendliness is interpreted as a sexual overture if it comes from one of the opposite gender, and the fantasies and expectations begin.... When you behave as society wishes you to, you can know for certain that instinct has a large part in it, unless of course, it happens to coincide with what you really desire, and this is rare.... Although the Physical Plane is by nature solid, ponderous and complex, you make it even more so by trying to analyze these behavior patterns in terms other than instinct. You have been taught that to even think of instinctive behavior in conjunction with human beings is bad.... The denial of pleasure and the pursuit of pain is high on your list of priority and it should be clear now why this is true, but there is no reason for it other than the instinctive memories.... Separation from the personality's conflicts allows the student to override the instinctive behavior patterns that now govern your actions.... Of course, there is a method by which you can override the instinctive behavior patterns that separate you from the truth. [S/C, 21 December 1974] We spoke before of <u>instinctive</u> behavior in man and we will continue with that information this evening. Only the personality that is enculturated retains this animal-like instinctive behavior.... Our use of the simile of the "top baboon" is not far from right in describing the behavior for many aggressive young exalteds in this culture, driven by primitive instincts to remain at the top of the pecking order.... Food gathering is also instinctive: just witness the hoarding that takes place when a favorite food stuff may be in short supply.... Yet, some have managed to come past instinctive behavior patterns and evolve to something more stable.... Without this cooperation, the concept of peace is ridiculous. It is not even a usable term, for as long as you retain the <u>instinctive</u> behavior of the herd animal, this is not a goal for you.... When a society decides to break from this <u>instinctive</u> behavior pattern, it usually comes directly on the heels of a shaking catastrophe something on the order of a nuclear war. [S/C, 28 December 1974]

There are instances which we remembered well where there has been total death or extinguishment of the False Personality, concomitant with the emergence of True Personality of the Essence. This was indeed gratifying to behold, but it happens rarely on the Physical Plane, even in adepts who are at a high Level of Being. They must be constantly alert to prevent the <u>instinctive</u> behavior *reactions* of the False Personality from sneaking in. [S/C, 25 January 1975]

This last statement actually gives a clue about the nature of the Negative and Positive Poles of instinctive behavior, namely that subconscious *reaction* is from the Negative Pole and False Personality, and superconscious (Essence) *response* is from the Positive Pole and True Personality. This idea will be expanded upon in sections further on, and its applicability to the Neutral Assimilation Center will be discussed. None of the statements in this section refer to the Instinctive Center directly or indirectly; some other Personality Traits, and Personality (False and True) in general, are mentioned as having instinctive or instinctual influences on them.

But the question remains, is "Instinctive" Center, originally said to have Ordinal Action attributes, still a good name for the Neutral Assimilation Center? My answer is that there was an element in both Gurdjieff and the original Michaelian group that aptly describes the Neutral Assimilation Center but under a different name, a name that we have already encountered: Balanced Man.

Balanced Man in the Original Michaelian Group

This section contains a few statements about Balanced Man extracted from the original Michaelian group transcriptions. (A more thorough treatment of Balanced Man is found in my book *Study Papers on the Original Michaelian Group*.) If one accepts the premise that Balanced Man, Man #4, is comfortably seated in the Neutral Assimilation Center, then the descriptions below begin to provide some understanding of the nature of the Neutral Assimilation Center.

I would like to know if the Gurdjieff idea of Man #1 [moving focused], Man #2 [emotionally focused], Man #3 [mentally focused], et cetera, is correct, and if so, at what level am I.

It is valid when the Man Number Six is thought of as the Transcendental Soul [and the man number seven is thought of as the Infinite Soul?]. You are going toward Balance [Man #4 — see description in a previous section]. Fear of emotional abandon holds you back — the fear of losing emotional control. [SJC, 20 October 1973]

This particular person was said to be prevented from becoming a Man #4 because of lack of mastery of the Emotional Center. Let me generalize that to say — as was said by Gurdjieff and the Michaels — that people must consistently operate out of the Positive Poles of the lower (Moving, Emotional, Intellectual) Centers before they can graduate to Balanced Man, seated in the Neutral Assimilation Center. Then, after people "crystallize" (a Gurdjieff concept; see below) in the Neutral Assimilation Center, they can graduate to even higher Levels of Being:

How does the "adept" and "occult master" correlate to the #4, #5, and #6 man of Gurdjieff?

They are not precisely the same, although the Adept is usually crystallized Number Four [Balanced Man]. The Occult Master [Man #5 & #6] has use of higher Centers at will. It ["crystallized"] merely means that this soul is in Balance with no danger of backsliding. [SJC, 03 March 1974]

Notice the word *balance* as a reference to Man #4 in the paragraph above and in the description of Man #4 in the quote from Ouspensky in a previous section. (It is proper to capitalize the word, in keeping with my practice to capitalize Michaelian teachings jargon words.) Recall that number Four is the Neutral Assimilation stage in the Natural Sequence, hence the appropriate use of the word Balance.

Not only does Balanced Man have the conscious, intentional use of lower Centers at his disposal, he is not trapped in his other Overleaves either:

Balanced Man has the confidence that only knowledge of truth can possibly bring. Balanced Man brings this confidence to bear in all of his endeavors. Balance implies obsolescence of the Overleaves. Balanced Man is no longer stuck. [S/C, 08 February 1975]

As we will see further on, this does not mean that Balanced Man has no Personality; it means that Balanced Man is conscious and self-aware and Self-aware enough to respond appropriately to situations rather than react habitually to them.

There are numerous other references to Balanced Man and becoming Balanced in the transcriptions of the original Michaelian group. This Q&A exchange is a sampling of numerous occurrences, particularly the ones that mention Centers:

Balance is just that — a Balance of all Centers. [S/C, 27 February 1974]

What is Balance of Centers? Comment: Access to all Centers at will when required — that is, all Centers doing their correct work, not wrong working, such as growing ulcers and causing hypertension, et cetera. [SJC, 03 March 1974]

A word about Balance for the new students: This means simultaneously utilizing the Moving Part of Moving Center, the Emotional Part of Emotional Center, and the Intellectual Part of Intellectual Center, and in a split second differentiating which applies in a given situation, with no consequent energy leak. [S/C, 10 July 1974]

This is a very pertinent quotation if one assumes as I do that Balanced Man operates out of the Neutral Assimilation Center, which by definition is a *combination* of all Centers, therefore able to "simultaneously utilize" whichever Center is appropriate.

The achievement of Balance is an act of will. The force behind it is the combined energies of the true "center of gravity" [a Gurdjieff term] within you. You always have this energy, but normally you allow it to dissipate unused. When you work toward Balance, you learn to conserve this energy and divert it into the [spiritual/consciousness] Work. This energy does not run out, by the way. It is part of the *neutral* universal flow and is infinite. You must learn to tap it, however. Your centers of gravity are now top-heavy, or off true center. When you go to Balance it is centered — ergo, Balanced; not very mystical, but far more practical. There is no leakage of energy in Balanced Man, and all of this energy can be diverted into the Work — whether this be meditation, concentration or study.... With students then, there is another pitfall. They begin to go toward Balance, find new experiences, and make a subliminal choice to stay there [less-Balanced] because it is a richer experience. [S/C, 26 November 1974]

In the climb toward Balance, this is one of the very real lessons that must be learned. Balanced Man is above all constant in his relationships. This constancy stems primarily from a lack of fear, for Balanced man knows that he cannot be "trapped" by another less-Balanced Personality. [SJC, 15 January 1975]

The Balanced Man is flexible above all. You remember the teaching of the man Regis [a pseudonym], insisting that you learn to turn on a dime. By becoming Balanced you replace the master tapes with thought. [SJC, 16 January 1975]

In order for the True Personality to emerge, the Student must be in a firm state of Balance, and if the Centers are Balanced, all work will be from the Positive Poles of all Overleaves. In fact, at that moment the whole concept of Overleaves becomes obsolete. Balanced Man is not a victim of his Overleaves any longer. This is, of course, why the Work is to strive for Balance, and why we attempt to effect those exercises that will allow you to choose the Work you need tailor made.... Centering, or Balance, is, above all, appropriate. That is what it means — the loss of all of these unreasonable lapses in the volition. When you react negatively, you are certainly not in control — your False Personality is in control. The True Personality of the Essence merely looks at the script and makes the appropriate response at the moment it is called for — from the Center equipped to handle that situation with dispassion. [S/C, 25 January 1975]

Balanced Man thinks with the Intellectual Center, perceives with the Emotional Center, and acts with the Moving Center. The divisions [Parts or Poles of Centers] no longer hold [when you are] in Balance. [SJC, 15 April 1975]

All of this indicates that the Michaels continued the use of the Gurdjieffian teachings phrase Balanced Man the same way Gurdjieff used it, as the middle Center of a septenary, sandwiched between Centers characterized as lower and higher. Many times in the original Michaelian group, the Michaels mentioned "going toward Balance", and this was always in the context of appropriate and positive use of the three lower Centers. These phrases do not appear in the Yarbro books after *MFM*, and one wonders if she understood the meaning, or maybe there were no Gurdjieff students in her group who would understand the reference if the Michaels were to use it. We take a look at that in the next section.

In summary and conclusion to this section: many times in the original Michaelian group there was discussion about the goal of spiritual work, and that was to become Balanced. Context and description indicate that this meant the same thing Gurdjieff meant. It is what many others refer to as "centered" — harmoniously serene inside and outside. It seems to equate approximately with what Buddhists refer to as mindfulness and nonattachment. Another channeled entity, Seth, called it divine nonchalance. A good phrase for this state of consciousness is BE ... HERE ... NOW, as popularized by Ram Das. It is also the "middle way" between extremes that is advocated in Buddhism. In other sections further on we will see that this understanding of Balance is similar to the fourth stage in other Septenaries that speak of developmental stages.

All of the above comments and inferences in the original Michaelian group transcriptions regarding Balanced Man in the Neutral Assimilation Center somehow escaped the notice and understanding of Chelsea Quinn Yarbro; she got it all wrong; she went crazy, apparently illegitimately extrapolating off of the potentially misleading word "instinctive".

The Neutral Assimilation Center in the Yarbro Books

The Yarbro books present a rather different view of the Neutral Assimilation Center than that presented heretofore in this chapter, in that there is no reference to physiology as there was in Gurdjieff and the original Michaelian group.

There is only a one-sentence description of the Neutral Assimilation Center in *Messages from Michael* (1979), and it is on page 114:

The Instinctive Center is not usually found in persons generally classified as sane. [MFM, p. 114]

It seems one is meant to presume that this was channeled by the same person who produced the original Michaelian group material, Sarah Chambers, but it is not like anything found in the original Michaelian group transcriptions. However, I can see how this statement is not an unreasonable extrapolation from the identification of the Instinctive Center with physiology rather than psychology. A person who was prompted by, and functioning in, no Center, but was only driven with physiological impulses would indeed appear to be insane.

This brief description was expanded — or maybe one would better say revised — in More Messages from Michael (1986), on page 37, and it is somewhat of an improvement over the characterization of the Neutral Assimilation Center as the abode of crazy people; but it is still allegedly not the abode of semi-enlightened Balanced people as has been implied by passages in the Gurdjieffian teachings and in the original Michaelian group.

The neutral center is the instinctive center, with the positive pole being atomic, [and] the negative pole being anatomic. Those whom you identify as "idiot savants" are often in the instinctive center. Those with remarkable facility with numbers are in the intellectual part of the instinctive center, those with artistic abilities are in the emotional part of the instinctive center. Often the fragments known as "feral children" are in the moving part of the instinctive center. [MMFM, p. 37]

There is no additional description of the Neutral Assimilation Center in the other two Yarbro books, *Michael's People* (1988) and *Michael for the Millennium* (1995). Perhaps these descriptions have influenced those Michaelian students who prefer information from the Yarbro contingent of the Michaelian teachings over the information from the non-Yarbro contingent. Because this latter quote does not square very well with what we read in the original Michaelian group transcriptions, it may be that it did not come from Sarah Chambers. We do not find psychological abnormality in the description of Neutral Assimilation Center in the original Michaelian group. Therefore, the connection of psychological imbalance with the Neutral Assimilation Center seems to be a doctrine only in the Yarbro books. I believe that this channel, whoever it was, was extrapolating these ideas from a misunderstanding of the nature of the Neutral Assimilation Center, rather than actual channeling. The extrapolation was based on that misleading word *instinct*, which originally referred to *physiology* only in the Gurdjieffian teaching, and which was appropriate when it was the Instinctive Part of the Moving Center. Channels in the non-Yarbro contingent of the Michaelian teachings decidedly did not go in that direction.

So let's see what other Michaelian teachers have to say in the next section. Their description is actually the antithesis of Yarbro, where the Neutral Assimilation Center is said to be a *healthy* and *balanced* place to abide.

The Neutral Assimilation Center in non-Yarbro Books

Non-Yarbro writings have a rather different understanding of the Neutral Assimilation Center than that found in the Yarbro books. Interested persons may take a look at — and better yet *study* — the following very extensive information:

José Stevens & Simon Warwick-Smith, The Michael Handbook, pages 225–229.

VanHulle & Christeaan & Clark, Michael: The Basic Teachings, pages 116–117.

José Stevens, Earth to Tao, pages 182–198 (Chapter 10).

Shepherd Hoodwin, The Journey of Your Soul (1995), page 26.

These descriptions provide an understanding of the Neutral Assimilation Center somewhat different from those of Gurdjieff, the original Michaelian group, *MFM*, and *MMFM*. Briefly and basically, what they say is this:

1. Although they describe the Neutral Assimilation Center as encompassing biochemical physiology, these authors were apparently unaware of the Gurdjieffian and original Michaelian group understanding of the Instinctive Center/Part Ordinal Action Center as being limited to physiology. Neither do they appear to understand the implications of the Part Ordinal Action Center → Neutral Assimilation Center relocation in the Septenary. Rather, they extrapolate from the name Instinctive Center, and propose that the Neutral Assimilation Center is only partly about bodily functions and sensations and the role that instinct plays in animals geared toward the surviving and thriving of the

organism with built-in patterns of behavior. This is more than the Gurdjieffian understanding of the Part Ordinal Action Center as mere biochemical physiology. You might say that they say that this aspect of the Neutral Assimilation Center is the *animal* component of the human being as distinct from the *spiritual* component.

- 2. However, going beyond that, these writers also propose that the Neutral Assimilation Center is a conduit to unresolved issues and resolved lessons of past lifetimes, as in reincarnation via the soul. Perhaps this is a human variation of the concept of animal instincts. The human individual soul is distinct from animals, which are said to have group or hive souls, one type for each species, and this hive soul influences the individual animal to do what it does automatically. The claim of these authors is that humans receive a similar influence from past lives via impulses from their individual soul.
- 3. Going even beyond that understanding of instinct, another teaching by these authors is that the Neutral Assimilation Center stores unconscious knowledge of the soul's plans or intentions for the present incarnation. This understanding of instinct therefore refers to more than just an analog of the animal component of the human being; it includes inheritance, one might say, from soul to body.
- 4. But these writers go even further, and propose that the Neutral Assimilation Center is the gateway to the higher Centers, and even to contact with Essence the higher Self, the spiritual component of the human being. Refer to Chapter 4G following next, "The Higher Centers", for a discussion of that topic.

In conclusion, these writers propose that the Neutral Assimilation Center is the Neutral Assimilation Center in its broadest possible meaning, extrapolated from all possible interpretations of the word "instinct". It is said by them to be a conglomeration of all the other Centers (which I agree with), and yet goes beyond them in a couple of ways: below (past lives) and above (future life), and the sub-conscious and the super-conscious minds, thereby encompassing the whole being even beyond the Personality. The Neutral Assimilation Center is said to receive impressions from the aspects of being that are not normally conscious, and are more than the Personality of the current lifetime.

The following quotation from Shepherd Hoodwin is a summary of the aspects of the Neutral Assimilation Center when understood as encompassing realms above and beyond the Personality; it is available on the internet: >http://www.michaelteachings.com/akashic_records.html<.

The instinctive (neutral) center is the location of a person's individual akashic records; it interpenetrates the other centers and stores their memories there; it is the seat of the subconscious. The individual instinctive center is, in turn, connected to larger 'storehouses,' such as the collective consciousness of humanity. Ultimately, it is connected to the whole, so when we clarify our instinctive center, through self-knowledge and healing, we are contributing to the clarification of the whole physical universe. Also, as our essence integrates the reincarnational self [that] we are in this lifetime, our akashic records become more accessible to our whole essence, and ultimately, our records will be distilled into the akashic plane, contributing to the knowledge of all the planes and the Tao. Scholars, being the neutral role, play a special part in this distillation process. So the integration simultaneously moves outward, from the individual to the whole physical plane, and upward, through the astral and causal planes to the akashic plane. [Hoodwin, *The Journey of Your Soul (1995)*, p. 26]

Besides this quotation from Hoodwin, the entire tenth chapter of Stevens's book *Earth to Tao* is about his understanding of the Neutral Assimilation Center, which is that this Center reacts and responds to influences far beyond the external world perceived by the body's sensory apparatus, filtered through the Attitudes. I have some reservations about this conceptualization, but I do not reject it as bogus. Rather, my preference is to both limit and expand the understanding of what the word Center refers to. This is an exercise in semantics and definitions, as follows:

With regard to the influence of the sub- and super-conscious minds and the "body mind" and the right brain hemisphere, an enormous amount of processing is happening that "I" am never consciously aware of. To say that this all comes through the Neutral Assimilation Center seems unlikely to me. My perception is that these ideas, enumerated above, are making too much of the word "instinctive". It makes more sense to me to limit Neutral Assimilation Center to an Assimilation of the other six Centers as is done with all of the other Neutral Assimilation Overleaves. That is to say, for instance, Scholar is a combination of all the other Roles, Observation is a combination of all the other Modes, and so on. Thus, my suggestion is that Assimilation Overleaves should *not* go outside the Personality traits of the Overleaf Chart itself. My suggestion is that the

impressions and influences from these realms beyond the Personality need not come only through the Neutral Assimilation Center just because it has been given a name that suggests that as a reasonable possibility.

One of my purposes in reframing and reformulating the Michaelian teachings is to mainstream certain portions of it to a non-metaphysical readership, and those people would not be interested in the soul and reincarnation and influences therefrom, so there would be no use attributing such supernatural influences through the Neutral Assimilation Center or any other Overleaves.

I have a method for limiting the range of the Neutral Assimilation Center to the Personality, even while including the expansion of a fundamental and archetypal concept of Centering into realms above and below the Overleaves of Personality. My explanation of that method begins forthwith.

The Range of the Concept of "Centers"

I put "Centers" in quote marks in the title to this section because the word can be applied to a much deeper phenomenon than we see as one of the Overleaf Septenaries.

There are a couple of passages in the original Michaelian group transcriptions that set me on a quest to understand the nature of Centers more broadly than has heretofore been attempted in the Michaelian teachings, so far as I know.

We have assumed our understanding of the Centers is the same as Gurdjieff describes. Are they talking of the same things, or is there some modification?

The information [about Centers] perpetuated by Georges Gurdjieff is valid. This concept [of Centering] can be extrapolated quite nicely out to whole worlds, as well as cities and countries. [S/C, 27 December 1973]

Can we talk about Centers on higher planes being counter part?

Not really. You see, the need for the Roles is a Physical [Plane] one, but the need of Centering is found throughout [the planes beyond the Physical] — at least in our experience it is. [S/C, 08 October 1974]

There is some discussion about these statements in Chapter 4C above, "Which Trait Septenaries are Overleaves?" I am not going to repeat all of that here, but I am going to both summarize it and add to it, starting with one of the first principles of what is required in order to have a creation at all, namely, a distinction between a self and a not-self. The big picture is explained step-wise in the numbered list of paragraphs below. Some of the steps of this explanation are elaborated in Part One of my book *The Tao of Personality*, and the concepts are fleshed out even more thoroughly in my book *The Tao of Cosmology*. The first principle under discussion here actually applies to the inanimate world as well as to the animate world, but here I am only going to discuss it in terms of the animate world in which humans participate, beginning with a single-celled organism and moving to larger and larger agglomerations of "bodies", including levels of soul bodies. The line of argumentation is long, but I think not tedious; there are just some simple key concepts to present to you before I get to the punchline.

- 1. Centering, by definition in the Michaelian teachings, refers to the phenomenon of "response to the environment", an environment that is perceived and interpreted through the filter/lens of the Attitude. In my understanding of Aspects of Personality, Center and Attitude are complementary pairs; they are the Cardinal and Ordinal Poles of the Expression Axis Aspects of Personality. The exposition in Part One of the *Tao of Personality* book reveals that Expression is three-dimensional (3-D). This means that Expression concerns the phenomenon of inside and outside, aka self and not-self separated/joined by a boundary or membrane that is permeable. In the case of you and me, that boundary is the skin, and our bodies' physical senses let us know what is going on outside in the world, and inside ourselves how our bodies react to the outside world.
- 2. But 3-D Expression goes way deeper than Personality; it goes all the way down to the foundation of existence itself. And if there is Centering "throughout" as stated in the quotation above then there must be Attitude throughout, because they imply each other; you cannot have one without the other. What Attitude and Center ultimately represent is that the self has an identity, and the not-self has an identity, and they interact. This is one of the most fundamental phenomena of creation: there is a feedback interaction mechanism between self and not-self, whether animate or inanimate, sentient or insentient, from the least to the greatest, from the smallest to the largest, from the oldest to the newest, from the lowest to the highest. In biology, the smallest unit is the cell, which has a permeable membrane, and there is a dialog or communication across the membrane to and from the environment. (Actually, cells are made up of smaller identifiable organelles that have a self-hood and

a function that serves the greater good of the cell, and those organelles also have a permeable membrane.) Cells can either go their own way as, for instance, amoebas, or they can join with others to form a multicellular organism. When cells assemble to make a larger body, the cells of a type make up organs which also have membranes that distinguish their function within the environment; the organs are of various types that go together to make up an even larger body. This phenomenon of cellularity does not stop with the physical body because it is a universal phenomenon, per the Michaels' statement about the "need for Centering throughout".

- 3. Note this quotation from the Wikipedia article >https://en.wikipedia.org/wiki/Great_chain_of_being<:

 The *Great Chain of Being* is a hierarchical structure of all matter and life, thought in medieval Christianity to have been decreed by God. The chain starts with God and progresses downward to angels, demons (fallen/renegade angels), stars, moon, kings, princes, nobles, commoners, wild animals, domesticated animals, trees, other plants, precious stones, precious metals and other minerals.... The *Great Chain of Being* (Latin: *scala naturae*, 'Ladder of Being') is a concept derived from Plato, Aristotle (in his *Historia Animalium*), Plotinus and Proclus. [retrieved 12 January 2019]
- 4. This is just an emanationist cosmology by another name (look that one up on Wikipedia); in the Michaelian teachings it is known as the Fragmentation of the Tao, proceeding from the largest Being to the smallest Being. There is also the reintegration of the Tao, proceeding from the smallest Being to the largest Being.
- 5. Being and body are synonymous. In the Michaelian teachings, the word Fragment and the word body are often used as synonyms for a self which appears to be separate or distinct from a not-self; there is a boundary around the self. The (Cardinal) Overleaf Aspect called Center concerns a self in active response to a not-self; the (Ordinal) Overleaf Aspect called Attitude concerns a not-self being passively perceived by a self. Therefore, to have Being (a body) is to have a Center that reacts and responds to another Being that it perceives via the Attitude. This phenomenon exists at all levels of the Great Chain of Being; hence this is my interpretation of what the Michaels said as quoted above about the "need of Centering throughout". My perception is that they might as well have said that there is a need for embodiment, aka self-hood, aka cellularity, throughout.
- 6. The Personality has a Center that is an Aspect of the Overleaf Septenary. My speculation presented here and elsewhere in my books is that the Overleaf Septenary is configured by the soul in what is called the etheric body, and that it is the etheric body that provides influences, urges, and nudges across a boundary to the physical body, and that gives the incarnate Personality its Overleaves. With the influence of a different etheric body such as in the case of a so-called "walk-in" of a different soul the Overleaves would change. That is the common understanding in the Michaelian teachings and in other esoteric lore on the subject of walk-ins.
- 7. In esoteric cosmologies such as Theosophy, the etheric body is a property of the three Cardinal levels (of seven) of the Physical Plane, which are not material. The reader would do well to refer to >https://en.wikipedia.org/wiki/Etheric_body< if you are not familiar with that conceptualization, for a start. Besides what the Theosophists have to say, the etheric realm is the realm of abstract mathematical principles and the laws of physics of the Physical Plane; it is the "Platonic" realm of abstract archetypal forms and ideas. It shows up in quantum physics as non-local interconnections, in terms of non-locality both in space and in time; the etheric levels of the Physical Plane are the metaphorical 'fabric' of spacetime, the framework principles out of which spacetime emerges. If you are unfamiliar with this concept, refer to >https://plato.stanford.edu/entries/plato/< for a start.
- 8. In reference to The Great Chain of Being, let's 'ascend' from the etheric. The etheric body is not the Astral Plane body or the Causal Plane body; it is its own Being. Beyond the etheric body, one could think of the Fragment as a body, the Cadence as a body (it contains more Fragments), the Greater Cadence as a larger body, the Entity as a larger body, the Cadre as a larger body, and so on all the way 'up' the integration 'ladder' to the Akashic level of the fourth plane, where evolution ceases to be quantitative in terms of adding ever-larger bodies. (In the Cardinal Planes, evolution is the process of 'ascending' a single qualitative gradient.) All of these bodies have a Center from which they respond to, and act upon, environmental conditions, as indicated in the quotation above. There is more discussion of these bodies in this *History* book in Chapter 4M further on, "The Seven Soul Ages", and in Chapter 4N, "Casting Concerns", and in the chapter on "The Subtle Bodies" in my book *The Tao of Cosmogony*.

- 9. Now let's go 'down' the Great Chain of Being from the Center (and other Overleaf categories) of the etheric body which provides the Personality of an incarnation. The chakras are perhaps the interface between the etheric body Overleaves and the physical body, and, as such, the chakras can be described to have characteristics similar to all of the Overleaf categories, not just the Centers. The physical body is a self of its own, with a mind of its own, and consequently it needs a "center" in order to function in the world. That would be an Instinctive Center in the brain that involves the processes of physiology, and an "attitude", so to speak, that perceives the environment through the five senses. There are other parts of the brain: a reptilian brain that is mostly involved with the movement of the body (Moving Center); there is a mammalian brain that is mostly involved with social interactions with other selves in the environment (Emotional Center); and there is a human brain (cerebral cortex) that is mostly involved in processing thoughts about the environment (Intellectual Center). For more information, refer to the chapter on "The Triune Brain" in my book *The Tao of Cosmogony*.
- 10. In my opinion, Gurdjieff knew of these physical body/brain centers because their existence is obvious, but he might not have known about the etheric body Centers, which knowledge requires a supernatural revelation such as is found in Theosophy and Neo-Theosophy. The configuration of the brain can be different from the configuration of the etheric body. This image of the Centers in the etheric body reflected as they are instantiated in the physical body and brain functions is probably why the topic of Centers is rather confusing and ambiguous to Michaelian students, and why I believe the Gurdjieff understanding of the Centers as only of the physical body is preliminary.
- 11. The Great Chain of Being is like Russian Dolls: there is a nested space-like hierarchy of larger and smaller bodies. (This is counterpart of the nested, fractilic time cycles of developmental sequences from Monads to Levels to Ages.) In regards to the Cadence Body, which is a composite of seven kindred-soul Fragments, the seven "Positions" in the Cadence are typically characterized as the seven Roles because that is the way Yarbro did it in the "Michael Math" chapter of MMFM. I would like to suggest that they could handily be characterized as the seven Centers in keeping with the statements in the original Michaelian group transcriptions about Roles being of the Physical Plane, and Centers being of all Planes. This could apply to the Greater Cadence Body (49 Fragments) and the Side Body (343 Fragments) and the Entity Body (1029+ Fragments) and the Cadre Body (7203+ Fragments). (Better yet, rather than Role or Center, I would apply the Septenarian Attributes to each of the divisions of the seven-fold bodies and let it go at that.)
- 12. In the chapter on Soul Age here in Part Four of this *History* book, there are said to be influences from past-life "sub-personalities" and Essence "super-personalities" with regard to Soul Age. The same can be said for influences on the Role via Casting and Essence Twin. Usually these are conceptualized as influences on Age and Role respectively. But really, all of the Overleaves are flavored and colored by all of the other Overleaves. That is why I say that I am doubtful of influences only coming to the conscious Personality through the Neutral Assimilation Center.
- 13. There are obviously influences from bodies above (Astral, Causal) and below the etheric body (Personality) as stated by Stevens and Hoodwin, but my suggestion is that these influences are not just on the Neutral Assimilation Center; they are on the entire human body-mind. My preference is to view the seven Centers as like the visible light spectrum, which is a very narrow range of the entire electromagnetic (e-m) spectrum. There is a large range of the e-m spectrum at longer wavelengths than visible light, and this is analogous to phenomena below the Centers. Part Ordinal Action Center physiology and past-lifetime influences are there. There is a large range of the e-m spectrum at shorter wavelengths than visible light, and this is analogous to phenomena above the Centers. Spiritual and soul stuff beyond human Personality is there. My preference is to understand the Neutral Assimilation Center as limited to expression of Personality factors, the same as the other Overleaves are understood. I say that, yes, there is influence from below and from above, but these do not all come to the conscious personality through the Neutral Assimilation Center; these extraneous influences color and flavor all of the Overleaves.
- 14. The point of this lengthy introduction is that it is not the Aspect of Personality misleadingly called Instinctive Center that has access to all of the phenomena below and above the Personality; it is the entirety of the human being (the body/brain system) that receives and gives influences, including the energy centers called chakras, and the brain centers.

I have some more comments about this whole subject of Centers that are relevant to this particular section on the Instinctive Center.

It is true that the Akashic Plane — referenced by Hoodwin in the quotation above — is said in the Michaelian teachings and elsewhere to be the fourth plane, so there is a *correlation* with the fourth Center, the Neutral Assimilation Center. However, with the other Overleaves, Michaelian students have not typically gone beyond the notion that the Assimilation Overleaf refers to the combination of the other six Overleaves in the same category, whereas Stevens and Hoodwin definitely do go beyond Personality with their descriptions of the Neutral Assimilation Center. My preference is to limit the Neutral Assimilation Center to *Personality*, and to not extend it to functions of *body* and *spirit* in its description.

One can look at the #4 Center in two ways: the Ordinal way which excludes the other six Centers; and the Cardinal way which includes the other six Centers. It might be that most Michaelian students think of the #4 position only in the Ordinal way of looking at it — as a stand-alone Trait in its own right — and forget that it is an assimilation of all six Centers. It consists of the full spectrum of normal every-day personality response from the lowest to the highest. However, unlike Stevens and Hoodwin, I contend that the Neutral Assimilation Center does not span the entire range from the physical body's genetic programming and physiology — which is indeed more primitive than the Lower Moving Center — to the spiritual body's soul programming. I suggest that those should not be included in the Neutral Assimilation Center as non-Yarbro Michaelian students are doing. Yes, there is influence to the personality from the physiology below the incarnate Personality, and yes, there is influence to the Personality from the soul or Essence above the incarnate Personality, but my preference is to say that the Neutral Assimilation Center is not the only receiver of the influence. My assertion is that the Negative and Positive Poles of all of the Overleaves are receivers of influence from the lower self and the higher self, the body self and the soul self, respectively.

As stated in the previous paragraph, theoretically and ideally, the #4 Neutral Assimilation Center is the combination of all of the other six Centers, and those Centers concern *Personality*. Thus, the Gurdjieffian Part Ordinal Action Center (physiology only) appears to *precede* the Center Septenary (Personality only). One might say that the Part Ordinal Action Center is at position "zero" in the Septenary. That means the #0 Part Ordinal Action Center concerns the *physiology* of the organism, and has nothing to do with the *personality*, whereas the seven Centers are aspects of Personality. The #0 Part Ordinal Action Center functions in a person who is in a persistent vegetative state or asleep or otherwise unconscious, but the #4 Neutral Assimilation Center only functions in a person who is awake and conscious — and sane. It is necessary to have a functioning #0 Part Ordinal Action Center to support a conscious human with a personality that includes the seven Centers. It could also be said that the #8 position, beyond the Personality, is filled by the various size bodies beyond the Physical Plane. Such is the Great Chain of Being.

May I present a little diversion while on this subject? There is a condition where the subconscious physiology can potentially act to enhance well-being, if the person is willing to turn their attention to their body. Some people have learned to consult their 'gut instincts' that tell them what not to do when they face an uncertain situation. They describe this as an unpleasant sensation in their physical body, and they cannot give an emotional or rational justification; they "just know". This is the body-mind informing the personality mind. Some people are quite unaware of their physiological states; other people have a strong conscious connection to their physiological states. I believe this ability can be used to advantage, if it helps you respond appropriately to the situations you find yourself in, similarly to the function of a Balanced person in the Neutral Assimilation Center. This phenomenon is not an unerring guide, but it is often a good guide. I suggest that if you have this proclivity and capacity, you learn to cultivate it — pay attention to what your body is telling you about a course of action, and give it credence, as well as attending to what your emotions and your thoughts are telling you.

The Fourth Stage in Other Septenaries

That Gurdjieff referred to Man #4 as Balanced Man is not the only clue as to what the Neutral Assimilation Center might be about. Many Septenaries outside the Michaelian teachings have the same pattern as the Septenary in the Michaelian teachings. That is, there is an Ordinal triad of items and a Cardinal triad of items mirrored around a Neutral item in the middle, at the number 4 position. If we look at the #4 item in these other Septenaries, we get the picture that the fourth stage of the Septenary is the turning point, the balance point, the integration zone between the lower and the higher, the early and the late, the yin and the yang, the

masculine and the feminine. We get the sense that its primary positive attributes are health and wholeness — ease rather than disease, balance rather than distortion, fluidity rather than rigidity.

There are dozens of manifestations of the Septenary to be found in various developmental systems. About two dozen of these Septenaries are examined in detail in my book *The Tao of Cosmogony*. However, in this section of this history book, we are only going to look briefly at three Septenaries: Maslow, Chakras, and Rays.

Abraham Maslow

The first Septenary to be examined places a middle level between lower and higher triads. This is Abraham Maslow's famous (at least in psychology circles) "Hierarchy of Human Needs". Actually, this hierarchy is an octave of eight levels. With our understanding that the Gurdjieffian Part Ordinal Action Center #0 properlynamed Physiology Center is not a part of the Personality and underlies the Septenary of personality Centers, we see that this correlates with Maslow's lowest level, which has to do with satisfying physiological needs. His next three levels obviously correlate with Gurdjieff's and the Michaels' Moving Center, Emotional Center, and Intellectual Center. The next level up was originally referred to as the well-known Self-actualization level, and it correlates with a person seated in the Neutral Assimilation Center. Late in his career, Maslow amended his system to rename the fifth level (fourth if you omit Physiological Needs) to Cognitive Needs, and then added three higher levels. These three obviously correlate with the so-called higher Centers in the Gurdjieffian teachings and the Michaelian teachings. Following is a relevant quote, with a correlation with the Septenarian Attributes indicated in [italics in brackets]. Notice that Maslow's descriptions do not match the descriptions of the Centers as much as they do with the correlates of the Centers — the other six Overleaf Traits in the same Process = with the same Septenarian Attributes. In the case of the Neutral Assimilation Center, the other six Neutral Assimilation Overleaves are: Stagnation Goal, Observation Mode, Stubbornness Chief Feature, Scholar Role, Pragmatist Attitude, and Mature Soul.

The following quotation was taken from >http://chiron.valdosta.edu/whuitt/col/regsys/maslow.html< but now this link redirects to >http://www.edpsycinteractive.org/<. However, I could not find the following quote there.

MASLOW'S HIERARCHY OF NEEDS

by William Huitt, (2004), Educational Psychology Interactive, Valdosta, GA: Valdosta State University. Abraham Maslow (1954) attempted to synthesize a large body of research related to human motivation.... Maslow posited a hierarchy of human needs based on two groupings: deficiency needs [Ordinal needs] and growth needs [Neutral and Cardinal needs]. Within the deficiency needs, each lower need must be met before moving to the next higher level. Once each of these needs has been satisfied, if at some future time a deficiency is detected, the individual will act to remove the deficiency. The first four levels are:

- 1) Physiological: hunger, thirst, bodily comforts, et cetera.; [stay alive]
- 2) Safety/security: out of danger; [Ordinal Action]
- 3) Belongingness and Love: affiliate with others, be accepted; [Ordinal Inspiration]
- 4) Esteem: to achieve, be competent, gain approval, recognition. [Ordinal Expression]

According to Maslow, an individual is ready to act upon the growth needs if and only if the deficiency needs are met. Maslow's initial conceptualization included only one growth need — self-actualization.... Maslow later differentiated the growth need of self-actualization, specifically naming two lower-level growth needs prior to general level of self-actualization (Maslow & Lowery, 1998) and one beyond that level (Maslow, 1971). They are:

- 5) Cognitive: to know, to understand, and explore; [Neutral Assimilation]
- 6) Aesthetic: symmetry, order, and beauty; [Cardinal Expression]
- 7) Self-actualization: to find self-fulfillment, realize potential; [Cardinal Inspiration]
- 8) Self-transcendence: to connect to something beyond the ego or to help others find self-fulfillment and realize their potential. [Cardinal Action]

Maslow's description of the Cognitive Need is described in his own words in the quote below. Notice that it is far more similar to the Scholar Role than it is to the Neutral Assimilation Center. However, Scholar and Neutral Assimilation Center do share the Neutral Assimilation Process/Axis, so there is some similarity. The key descriptive words are emphasized with underlined text, the emphasis being mine and not in the source material.

The following quotation is from >http://www.xenodochy.org/ex/lists/maslow.html<.

THE DESIRES TO KNOW AND TO UNDERSTAND

So far, we have mentioned the cognitive needs only in passing. Acquiring knowledge and systematizing the universe have been considered as, in part, techniques for the achievement of basic safety in the world, or for the intelligent man, expressions of self-actualization. Also <u>freedom of inquiry and expression</u> have been discussed as preconditions of satisfaction of the basic needs. Useful though these formulations may be, they do not constitute definitive answers to the questions as to the motivational role of <u>curiosity</u>, <u>learning</u>, <u>philosophizing</u>, <u>experimenting</u>, etc. They are at best no more than partial answers.

Above and beyond these negative determinants for acquiring knowledge (anxiety, fear), there are some reasonable grounds for postulating positive *per se* impulses to <u>satisfy curiosity</u>, to know, to explain, and to understand.

- 1. Something like human *curiosity* can easily be observed in the higher animals. The monkey will pick things apart, will poke his finger into holes, will <u>explore</u> in all sorts of situations where it is improbable that hunger, fear, sex, comfort status, etc., are involved.
- 2. The history of mankind supplies us with a satisfactory number of instances in which man <u>looked for facts and created explanations</u> in the face of the greatest danger, even to life itself. There have been innumerable humbler Galileos.
- 3. Studies of psychologically healthy people indicate that they are, as a defining characteristic, <u>attracted to the mysterious</u>, to the unknown, to the chaotic, <u>unorganized</u>, and <u>unexplained</u>. This seems to be a *per se* attractiveness; these areas are in themselves and of their own right interesting. The contrasting reaction to the well-known is one of boredom.

Finally, the gratification of the cognitive impulses is subjectively satisfying and yields end-experience. Though this aspect of <u>insight and understanding</u> has been neglected in favor of achieved results, learning, etc., it nevertheless remains true that insight is usually a bright, happy, emotional spot in any person's life, perhaps even a high spot in the life span. [retrieved 29 September 2019]

Is that not an excellent description of the Neutral Assimilation Role, Scholar?

Many people have noticed the similarity of Maslow's Hierarchy and the chakra system. When I did an internet search on "maslow hierarchy chakra" some years ago it returned a hundred thousand results. For instance, take a look at this one: >http://personalalchemyblog.blogspot.com/2008/09/maslows-hierarchy-revisitedthe-eastern.html<.

If you read this or any of the other hits you will find they have a numerical correlation that does not match mine. That is because there are two key misunderstandings: 1) they knew about five stages in Maslow's early work, and they did not know about the eight stages of his later work, and 2) they started counting with physiological needs (physiology is the Part of Ordinal Action Center per Gurdjieff) instead of safety needs (Man #1, Moving Center, Warrior Role) in their correlation. Otherwise, the premise that there is a correlation between Maslow's hierarchy and the chakras is well-known, even if not correctly correlated. And, if you accept the premise that the chakras correlate with the Centers, then you have the chakras correlated with Maslow's Hierarchy. I leave it to the reader to do that research if they so choose, but one may also refer to Chapter 4J further on, "The Seven Chakras", here in Part Four of this *History* book, for some more information that will quide the researcher to more internet resources.

And then there is the next section, which serves as an introduction to the chakras. There I will point out that, as with Maslow's Hierarchy of Needs with its zeroth Need, there is a zeroth chakra that can be best understood as having to do with physiology, leaving seven chakras to correlate with the Centers.

Chakras

Let us take a brief look at chakras, particularly the Heart (fourth) Chakra as described in the next three quotations.

Michaelian students often compare the chakras to the Centers because of their obvious similarities. The chakras are said to be energy centers in the body, and the Centers are said to be functions in the Personality, and the similarity of descriptions indicate that there is a correlation. In the following three quotes, the key words that best fit with the Neutral Assimilation Center are in <u>underlined</u> text.

You will notice that the word *love* is often used for the Heart Chakra. The context shows that this word does not refer to the romantic or sexual attraction of males and females. Nor does it refer to a sentimental emotional feeling. It does refer to the union of opposites of whatever polarity. That understanding of love fits

with the Neutral Assimilation Center as the Assimilation of lower and higher Centers, of yin and yang. The kind of health that comes from holism is also mentioned, because disease is often a product of incompleteness or imbalance. The third quote on chakras mentions that there is a process of development contained in the chakra Septenary, and the fourth stage is the transition from lower to higher. This is very reminiscent of the Gurdjieffian teachings about progress in Levels of Being up through the Centers, with Man #4 being the balance point between lower and higher Levels of Being.

The following quotation was taken from >https://www.chakras.info/heart-chakra/:

Heart Chakra Psychological Meanings

The main meanings or functions associated with the heart chakra are:

- Love for oneself and others
- Relating, relationships
- · Compassion, empathy
- Forgiveness, acceptance
- Transformation, change
- Ability to grieve and reach peace
- Compassionate discernment
- Center of awareness, integration of insights

When the heart chakra is open, you may feel being deeply connected, the harmonious exchange of energy with all that is around you, and the appreciation of beauty. However, when there's a blockage in the heart chakra, you may experience difficulties in your relating with others, such as excessive jealousy, codependency, or being closed down, withdrawn.

What Role the Fourth Chakra Plays in our Lives

The Heart chakra is associated with the following psychological and behavioral characteristics:

- Capacity to love
- Integration, bridge between earthly and spiritual aspirations
- · Transcending personal identity and limitations of the ego
- Experience of unconditional love and connection with all
- Heart-centered discernment
- · Appreciation of beauty in all things
- · Experiencing deep and meaningful relationships

The fourth chakra <u>connects the lower and upper chakras</u>. In other words, the heart chakra acts as a center of <u>integration</u> of earthly matters and higher aspirations. Far from seeing these energies as separate, the experience of the heart integrates them effortlessly and harmoniously.

The Heart chakra is all about connecting and relating. The emphasis here is on love, giving and receiving, and how open we are in relationships. Love is the energy that helps transfigure emotions and experiences. It's an essential element in any relationship, whether it's with others or oneself.

Love experienced through the fourth chakra is not just about romance, but about going beyond the limitations of the ego and personal preoccupations to open up more fully to compassion and acceptance of all that is, as it is. When we live from our heart and our heart energy is opened and balanced, we can see clearly and position ourselves in any situation, no matter how challenging it is, with discernment and compassion.

The heart chakra is also a center through which we experience beauty in life. Seeing the world through a balanced fourth chakra is being in a state of openness and acceptance that brings us in touch with our world and ourselves in profound and fulfilling ways. [>https://www.chakras.info/heart-chakra/< — retrieved 23 March 2023]

Quotations such as this could easily be multiplied by the scores from various sources, but this one is adequate to make the point that neither the fourth chakra nor the Neutral Assimilation Center is about physiology or insanity or base instincts or influences beyond the seven chakra system.

In Chapter 1C in Part One, "The Seven Chakras", in the section titled "Lower Chakras and Centers", I point out that there is some disagreement about the location of chakras below the heart chakra. My reconciliation is to suppose that there are four primary chakras on the body below the — heart chakra, which I number from

zero to three, thus: 0) root/sacral, 1) pubic/gonad, 2) navel/spleen, and 3) solar plexus. Not only does this scheme reconcile differences of opinions about the chakra system, but it also reconciles it with the Centers when one includes the Physiology Center at the zeroth location in the septenary, and with Maslow with the "first" Need, physiology, numbered as the zeroth Need. The zeroth chakra, at the base of the spine, is the source of kundalini energy, and its activation has a profound and pervasive effect on the physiology of the body. A typical account of kundalini awakening is provided by Michaelian student Barry McGuinness; his story is related here: >http://personalityspirituality.net/<.

In addition to that, in Chapter 1A in Part One, "The Seven Planes", in the subsection titled "The Third Approximation", I correlate the lowest *Sefirot* on the "Tree of Life" of the Kabbalah, *Melchut*, with the Physiology Center. This is a tidy scheme, and I like it on that account alone, but I acknowledge that the correlations between the three esoteric systems (Centers, Chakras, *Sefirot*) and one exoteric (Needs) system are a bit of a stretch.

Anyway, let's get back to the subject of the Centers.

Rays

In addition to Maslow's Hierarchy and the chakra system, there is another widely-known (at least in esoteric circles) Septenary that bears on the subject of the Neutral Assimilation Center. The next quote is taken from a treatise on the seven Rays of creation as understood in the channeled material of Alice Bailey. This description is so thorough and so similar to my understanding of the Neutral Assimilation Center (and Neutral Assimilation Overleaves in general) that it needs no commentary. The key words which are the best descriptors of someone abiding in the Neutral Assimilation Center are shown in underlined text; the emphasis is mine. It is also a very good description of what Gurdjieff called Balanced Man, aka Man Number 4.

The following quotation is from >http://www.uppertriad.org/Chapters/4_TOP_15.pdf<.

The FOURTH ray is called the ray of harmony through conflict. The fourth ray is the mystical ray of balance, between the inwardly directed rays (the first three rays) and the outwardly directed rays (the last three rays), and between each major ray and its reflection. The fourth ray is also a ray of balance and struggle between the objective and subjective worlds, and between all of the various pairs of opposites (such as: male and female, good and evil, positive and negative, soul and personality, reality and illusion). This ray is a major factor in the life of the spiritual student whose task it is to balance the pairs of opposites and tread the middle path. In the objective world, the fourth ray is the ray of beauty, culture, and art. It is a ray of imagination, perception, dramatization, and expression. The fourth ray of duality is a ray of conflict, struggle, and instability leading to harmony, peace, balance, and stability. It is often a painful ray with many lessons for the human personality; it is a ray of crisis, tension, and challenge. With fourth ray energy the spiritual student gradually learns to control the emotional life and bring it into harmony with the dominant mind. Then the student learns to bring the head (mind) and the heart (buddhi) (and the higher emotions) into balance. The fourth ray energy leads the student from the selfish personal life into the unselfish, relatively impersonal life; from passion, extravagance, self-deception, and alternation of moods, to selfcontrol, serenity, purity, and balance; from duality and separation from God to unity and oneness with God. The fourth ray principle in man is the spiritual intuition, the buddhic principle, the voice of the soul, the enlightenment and encouragement of the Christ-self. When the personality has been integrated, it must then be aligned properly with the soul so that the lower self may be guided and directed by the higher self through the intuition. The spiritual intuition is not the emotional or astral sensitivity, though it is often confused with that lower psychic sense. The spiritual intuition is a much higher sense, as the higher self or soul functions through the mind that has integrated the personality. The possibility exists for both emotional and intellectual self-deception, until the mind has been properly absorbed by the soul. (pp. 13-14) [retrieved 17 November 2019]

Besides these three Septenaries, there are numerous other Septenaries that reinforce the above descriptions of the fourth stage in the Natural Sequence, and bolster my arguments in this section for a proper understanding of the Neutral Assimilation Center. These three and dozens of other Septenaries are reviewed in my book *The Tao of Cosmogony*, so I will not repeat them here.

So, now that we know what the Neutral Assimilation Center is about, maybe we should think about renaming it to something that fits the description. That is the exercise we will do in the next section.

Renaming the Neutral Assimilation Center

Part of the problem in understanding the true nature of the so-called Instinctive Center is — it should be clear by now — the name. But I make it even clearer in this section.

The problem is that we have the same name for two different phenomena, one referring to *physiology* and one referring to *psychology/personality*. We need an upgrade from the word chosen by Gurdjieff. It would have been better if Gurdjieff had named it the Physiology Center to fit his description. Yes, it forms the necessary foundation or precursor for the Centers of Personality, but it is not one of them or even a part of them. With a physical body it is necessary to have a physiology before one can have a psychology. Animals, including human children, are born with fully-developed physiological functions, but they are undeveloped or underdeveloped in psychology — the seven Centers of Personality. Furthermore, while asleep or under anesthesia, physiological functions keep the body alive while the Centers of Personality are unconscious. So it is in the case of a persistent vegetative state, when brain damage has wiped out the consciousness, and therefore the personality, and therefore the Centers. Senile dementia and Alzheimers can also erase so-called higher Centers, as well as Intellectual and Emotional Centers, with Moving Center being the last psychological Center to go. The Physiology Center is the very last brain/body function to disappear — with the death of the organism.

One may debate whether to continue to name the Neutral Assimilation Center "Instinctive". The fact that the #1 Part of Ordinal Action Center with Ordinal Action Attributes was moved to the #4 position with Neutral Assimilation Attributes strongly suggests that we should consider renaming it. Furthermore, to keep the old name would seem to condone and perpetuate several misunderstandings, namely the *physiological* baggage left over from the Gurdjieffian teaching, the *insanity* baggage added by the Yarbro books, and the *animalinstinct* baggage plus *past-life* baggage added by some people in the Michaelian teachings. So as not to disorient students too much, we might rename it Instinct Center, a noun rather than an adjective, but that does not really fix anything. Some of the dictionary definitions of *instinct* come pretty close to my understanding of the Negative Pole of the Neutral Assimilation Center, and do not necessarily include either physiology, animal instincts, or insanity. Some of the dictionary synonyms and descriptions include the words "spontaneous, impulsive, inborn, automatic, without reasoning". In my opinion, these synonyms are not inappropriate for the Negative Pole of the Neutral Assimilation Center, as we will see in the next section.

Naming it the Balance Center for reasons explained in previous sections was a possibility, but that name does not tell one enough about its actual expression, in my opinion. I also considered naming it the Systemic Center because that gives it some sense of being a combination of the entire system of Centers. I also considered the name Function Center, because the word *function* reminds one of the Pragmatist Attitude, which is on the Assimilation Axis along with the Neutral Assimilation Center: both are concerned with 'whatever works'. The basic idea is that a person in the Function Center has the capacity to respond to situations in a pragmatic way, from whatever other Center is appropriate, which is what Gurdjieff taught about a Balanced Man #4. Function Center was my second choice for a name for the Neutral Assimilation Center. Neither Balance nor Systemic nor Function are descriptive enough to suit my taste for what the Neutral Assimilation Center actually does: how it processes experiences, input from the body's physical senses filtered through the Attitudes.

After much pondering I have settled on Impulse Center for the time being, although that is not completely satisfactory either. In my estimation, many of the Overleaves do not have a perfect name, and this is one of them. Recall that numerous Overleaf Chart—makers reviewed in this book have proposed variations to the original names, this Center being a common target for revision. Note also that the name Impulse is a noun as I name all of the other Overleaves in my reconstruction of the Michaelian teachings from the ground up, rather than an adjective like the original names given to the Centers by Gurdjieff. (Note that all other names of Centers have been changed from adjectives into nouns — Motion, Emotion, Intellect, Concept, Sympathy, Excitation — in order to be consistent with the grammatical form of all of the other names of Overleaves.) The basic idea is that because Centers are the part of one's Personality from which one reacts or responds to situations, in the case of the Impulse Center the reaction or response is not otherwise defined as one of the other six Centers, but rather, it is the combination of the other six Centers; hence *impulsive*.

Because the Neutral Assimilation Center is the Assimilation of all Centers, the impulses that the Impulse Center mediates can come either from among the triad of Ordinal Centers or from among the triad of

Cardinal Centers — and that is a clue for the understanding of the Poles of this Center, as we see in the next section.

Renaming the Poles of the Impulse Center

Having settled on the notion that the Impulse Center is the Assimilation of the other six Centers, I also settled on the idea that the Negative Pole of the Impulse Center is an assimilation of the Negative Poles of the other six Centers (some of which I have also renamed), thus: –Activity, –Sentimentality, –Reason, –Fantasy, -Sensitivity, and –Arousal. This puts the Positive Pole of the Impulse Center as an assimilation of the Positive Poles of the other six Centers (some of which I also renamed), thus: +Endurance, +Sensibility, +Thought, +Integration, +Empathy, and +Vitality. From a theoretical point of view, Assimilation in the Overleaf System means the combination of the other six.

Now that we have a better understanding of the Impulse Center, the original names of the Poles of the Instinctive Center — –Anatomic and +Atomic — might seem lacking in relevance. For instance, here is one explanation of the names of these Poles:

The instinctive center has a positive pole of "atomic." You might think of that as taking you all the way to the Source, to the place where physicality emerges from the Tao; the atom is source of all form. In its most healthy alignment, the instinctive center is in the flow of everything, whereas "anatomic," the negative pole, suggests more mechanical experiences of the anatomy that's trying to keep itself alive. [Shepherd Hoodwin, >https://www.michaelteachings.com/michael-on-centers.html<]

This thinking stretches the range of the meaning of the Instinctive Center way beyond my thinking about the range of the Impulse Center. My preference is to limit it to the mere human Personality, as is the case with the other Overleaves.

-Anatomic → -Instinct

So what are the best names for the Poles of the Impulse Center? Although I am not completely comfortable with it (similar to my discomfort with the name of the Impulse Center itself), I have not been able to come up with a better word than –Instinct for the name of the Negative Pole. The meaning of the original name of the Negative Pole given in MFM, –Anatomic, seems to be referring to anatomy — the functions of the physical body, therefore somatic or animal instincts or physiology as previously noted. One might expect this name for the Instinctive Center, but one would not necessarily expect this name for the Impulse Center when limited to personality functions, and not including bodily functions. To my way of thinking, no better name for the Negative Pole of the Impulse Center seems to fit than –Instinct in the dictionary definitions mentioned a few sections previous — "spontaneous, impulsive, inborn, automatic, without reasoning"; these are descriptions of personality traits — psychological phenomena — not physiological phenomena. This also fits with the Michaels' own use of the word instinct mentioned a few sections previous. It fits well enough as a combination of the Negative Poles of the other six Centers. A brief description of a person who functions in and responds to situations from this Pole says that they are coming from what is often called the "lower self"; this is a pejorative term, suitable for a Negative Pole.

In its worst manifestation, the Negative Pole of the Impulse Center shows up as arbitrariness. This is an unhealthy, inappropriate, random regression to a lower state of consciousness, untethered to any reality, rather than a progression to a higher state of consciousness, a higher reality in the Positive Pole.

Some creators of Overleaf Charts within the Michaelian teachings prefer the word –Mechanical for the Negative Pole of the Impulse Center, and they contrast this with +Aware as the Positive Pole. I do not know for a fact where those Chart–makers got that idea, but I can guess that it came from their knowledge of the Gurdjieffian teaching. In the Gurdjieffian teachings, the word mechanical was applied to behavior, emotions, and thoughts that arose from unconscious processes or functions; people who are mechanical are not self-aware. Gurdjieff believed that most people were little more than automatons — asleep and sleepwalking, as it were, oblivious to why they do what they do — compared with the fully awake self-aware and Self-aware state that was possible for spiritually-mature people. Many spiritual traditions besides Gurdjieff present means for liberation and ascension out of this primitive state of consciousness — ways to escape mechanicalness — and develop their full potential of consciousness.

An unreflective person does not discern which of the Centers results in this or that reaction to a life event. Such thoughtless, inappropriate behavior is not the best expression of being a human being. It might even be

'off the wall', and in extreme cases "crazy", so the description of this Center given in *MFM* and *MMFM*, especially in the Negative Pole, might not be completely wrong, just incomplete and/or exaggerated. Therefore, I am somewhat comfortable with the use of –Mechanical and +Aware for the Poles of the Impulse Center, but to my way of semantic categorizing, they refer too much to the subconscious and superconscious levels of being, rather than the conscious Personality as embodied in the Overleaf System as a whole.

Even though I suggest above that biochemical physiology *per se* should not be considered a manifestation of the psychological Impulse Center, I suggest here that the Negative Pole, whether called –Anatomic, as originally given, or –Instinct, as I propose, does have to do with a sensitivity to sensations in the organism. A person in this Pole is *psychologically* attuned to the state of their body. The body has a 'mind' of its own, you might say, and that mind communicates with the mind of the Personality self. That is to say, there is a strong feedback in the psycho-somatic and somato-psychic circuits; the mind-body interface is active: if the personality is feeling lousy or good, then the body feels lousy or good, and *vice versa*. People who are strong in this Pole must take good care of their physical health — via good food, good exercise, good sleep, and so on — or their awareness as Personality-mind gets a strong message from their abused body-mind. Likewise, bad moods and thoughts in the psyche adversely affect their physical health more than that of people who do not have a strong Impulse Center.

And this insight about –Instinct applies, I believe, not just in the realm of sensitivity to one's own physical well-being. There are people who have a strong –Instinct Pole who are unusually sensitive to the physical health of other people — they 'pick up on' ill health in others, to the point that they feel ill around sick people, because they have a sympathetic/empathetic resonance of sensations in their own body. In extreme cases, these people are called medical intuitives: people who can — psychically it would seem — detect exactly where and what is wrong with the body of another person. Some sensitive persons can use this para-psychological perception for healing arts of one sort or another. The Impulse Center is about holistic, balanced well-being, and this includes physical health in the Negative Pole, and psychological health in the Positive Pole; see per next paragraph.

+Atomic → +Intuition

Has any Michaelian student seen an explanation for the name originally given: +Atomic? This name is so obscure that it has been puzzled over from the time of its original revelation. Perhaps it referred to spontaneous, unpredictable, random, quantum-mechanical behavior such as is seen in an atom. This idea seems to correlate with the Yarbro description that Instinctive-Centered people are insane. However, an interesting explanation has come forward in the last couple of decades. Some scientists now propose that we have a quantum mechanical connection to a supernatural higher mind via certain brain structures, from which we receive inspiration and insights that make us much more intelligent and versatile and creative than other animals. Could this be the +Atomic pole of the Impulse Center as discovered by science? (Refer to this website: >https://en.wikipedia.org/wiki/Shadows_of_the_Mind<) People in either Pole of this Center are pretty impulsive in the sense that you cannot always tell 'where they are coming from' — because they do not seem to be operating out of any of the other easily-recognized Centers specifically. Rather, they are coming 'out of the clear blue sky', so to speak.

Because the original name, +Atomic, is so obscure, my preference is to call the Positive Pole +Intuition; it seems like a good word for the combination of the Positive Poles of the higher Centers. In doing so, another problem is resolved, for me at least: that is, I changed the original name of the Negative Pole of the Higher Emotional (what I prefer to call Sympathy) Center from –Intuition to –Sensitivity. In my observations of people with a strong Sympathy Center, there seemed to be an extreme touchiness, a hyper-sensitivity, when reacting from that Pole of this Center. So, the description of the Positive Pole of Impulse Center is most simply a response from the higher Centers without being specific. People who are strong in the so-called higher Centers, far more than those in so-called lower Centers, believe they have psychic abilities. They are in touch with their healthiest, most holistic self. The word *intuition* is also often used in descriptions of the fourth stage in other Septenaries, one of which was quoted in a previous section. A person who cultivates their +Intuition will learn to gracefully and graciously flow through difficult situations, because they will 'just know' what the right thing to do is; they will respond to situations appropriately. Another synonym for the Positive Pole is +Insight, people who live here are very insightful in their processing of experiences, and responses to experiences. Some Chartmakers prefer the word +Aware for the Positive Pole, probably because of their familiarity with the Gurdjieffian teachings that a Balanced Man #4 is now "awake". Certain entrancing spiritual practices are designed and

implemented to intentionally minimize the functions of the lower Centers, where the "ego" lives, in order to bypass ego on the way to higher Center experiences. Meditation — the quieting of the body, emotions, and mind — is designed and practiced to facilitate crossing the bridge, the Impulse Center, to get to higher Centers.

People in +Intuition are connected to their own higher self, but it seems to me that they are also connected to the zeitgeist, the 'spirit of the world'. They sense the holistic 'vibrations' of humanity, but also of animals and plants. They are able to 'attune and commune' with others and with the environment. This is the assimilation function of the Neutral Assimilation Center.

Concluding Remarks on the Neutral Assimilation Center

Adherence to the understanding originally provided by Gurdjieff about the Centers results in issues. Therefore it is advisable to disambiguate what he said, and in some cases to disentangle from what he said. As we have seen in this chapter, the so-called Instinctive Center is certainly within that purview, and something needs to change. This is a review of my proposals for the needed changes.

- 1. Considering the ambiguity of the word instinctive, it is no wonder that there has been a difference of opinion about the function and meaning of the so-called Instinctive Center in the Michaelian teachings community. The meaning in the Gurdjieffian teachings was clear it had to do with physiology but there has been an evolution during the Twentieth Century and beyond, from Gurdjieff to the present day. The Center so named started out as a Part of the lowest (Moving) Center according to Gurdjieff; it has ended up in the middle of the Septenary according to the Michaelian teachings. Properly understood, this is not so much a relocation as it is a disambiguation first a split, and then a renaming of the factions of the split, and then a reinterpretation of each faction.
- 2. Gurdjieff's description of the Instinctive Center referred only to bodily functions and sensations that are common to all animals. It was said to not actually be a part of the conscious human personality as the other Centers are. The body sends signals about what it is doing and what it needs to the conscious personality self, of course, but this is a *physiology* function, which is not like the other Centers in Gurdjieff (and the other Overleaves), which are functions of *psychology*, the conscious Personality self.
- 3. To accommodate this physiological function within the modern understanding of the Centers, which have to do with *psychology*, I have pushed the Instinctive Center off the bottom of the Overleaf Septenary to the zeroth position, so to speak, and renamed it the Physiology Center: it is of the *body self*, not of the *Personality self*. I have given the middle Center of the Septenary, the fourth Center, another name, the Impulse Center. In the Neutral Assimilation Position, the Impulse Center is a combination of all of the other Centers. This is in keeping with the understanding of the other Overleaf Septenaries, where the Neutral (neither Cardinal nor Ordinal, or both Cardinal and Ordinal) is said to be the Assimilation of the other six Overleaves in the same category.
- 4. A Physiology Centered person might well be insane as described in Yarbro if the other Centers are absent. But Impulse Centered people are *very* sane, especially in the Positive Pole: they do the appropriate thing for the situation. They are so consciously self-aware and self-composed that they can respond to situations from the appropriate Center at will because they have assimilated all of the other Centers, and are in *balance*. It was an important goal of the Gurdjieffian teachings and the original Michaelian group to produced Balanced Man which I understand to be people comfortably and imperturbably ensconced in the Impulse Center. The Impulse Center addresses the goal of Balanced Man; it gives people a versatility of response options. They do not respond from the Intellectual Center when the Emotional Center or Moving Center is appropriate. They can even respond from the Cardinal Centers when appropriate. This is the proper use of the Impulse Center: to respond to situations in the right way at the right time, depending on the circumstances.
- 5. A further point to make here in this context is that there is a distinction between the pure abstract notion of the Instinctive (physiology) Center and the Impulse (Personality) Center, and the way it manifests in the human experience. From the beginning, my attempts to understand the Overleaf System have moved away from the anthropological manifestation of the Overleaves, and moved toward their pure abstract meaning as first principles the basic laws of nature as a whole. Michaelian students typically do not see the Overleaf System as a particular, limited, distorted instantiation of what I call Tao's Template, but I do. Looking for this universal manifestation of the

- Impulse Center in the #4 position of the cosmology of sevenness rather than in the #1 position where Gurdjieff put it, has led me to the exposition you see in this document. The Impulse Center is #1, but it is also #2, #3, #4, #5, #6, and #7 combined.
- 6. The concept of 'center' goes way beyond (above and below) its use in the Overleaf System. In its most general sense, it is the fact that Being/body/self is distinct from the environment/other-self/not-self, and that Being/body/self interacts with the environment/other-self/not-self. Thus, the archetypal aspect of manifest Being that goes by the name 'center' has many instantiations, all 'up' and 'down' the Great Chain of Being. It is Good Work to make distinctions among these levels and instantiations: there are the Centers that are an Aspect of the Overleaf System that are configured in the etheric body; there are 'centers' in brain structures that regulate movement, emotions, and thoughts in animal and human bodies; there are 'centers' in the body that are called chakras; there are 'centers' in the subtle bodies at higher levels of integration of Fragments into composite bodies that function on the Astral and Causal (aka Mental) Planes that help them navigate the environments on those planes.

The next two chapters cover some of the Centers other than the Impulse Center — namely the Higher Centers and the Action Centers — and the chapter after those two covers a correlate of the Centers, namely the chakras. If you were ever puzzled by the discrepancies regarding the Centers and chakras that exist in the published Michaelian teachings, I think you will find that chapter informative, maybe a bit surprising, as with this chapter.

Chapter 4G

THE HIGHER CENTERS

This chapter is the second chapter in a series of three that cover the Centers. This chapter is about the so-called higher Centers; the previous chapter is about the so-called Instinctive Center; the third chapter is about the Action Centers. By using the phrase "so-called", I provide a hint that I have issues with those designations.

The premise of these three chapters is that the understanding of the Centers in the modern Michaelian teachings needs to be revisited and revised. The origin of the concept of Centers was with Gurdjieff; his understanding of Centers was adopted into the Michaelian teachings without critical examination. In my opinion, some work needs to be done to adapt them to conform to the understanding of the other six Overleaf categories, which were revealed by the Michaels. I have done that work, and it is presented herewith.

Introduction

The final two Overleaf Charts that were reviewed in Part Three, #23 and #24, my own, do not show the usual names for the Higher Intellectual or the Higher Emotional or the Higher Moving Centers as used in most of the other Charts. Instead, you see the Concept, the Sympathy, and the Excitation Centers in their place, respectively. What is up with that? It is perfectly understandable that I made a change from the original adjective form to the noun form of words for names of Centers in order to conform to all of the other names of Overleaves being in the noun form, but is there something else going on here with regard to the names of the so-called "higher" Centers? Why yes, there is, and that is the subject of this chapter.

The orthodoxy in the Michaelian teachings is that a person normally only gets to be in the three lower Centers (Lower Moving, Lower Emotional, Lower Intellectual); one does not normally get to be in the higher Centers. The explanation given in the Michaelian teachings for this divergence from other categories of Overleaves, where there is no such limitation, is that the "energy" in the higher Centers is too much for the organism to bear — see quote below. But there is no explanation why this should apply only to the Cardinal Centers, and not to the other Cardinal Overleaves.

I believe this orthodoxy is a rationalization for what is said about the higher Centers in the Gurdjieffian teachings, which is where the original Michaelian group first learned about Centers. I believe that this doctrine about the normal inaccessibility of the higher Centers is a holdover from that teaching, and that it should be reexamined in the light of actual Validated experience, and that it should be reexamined in the light of the context of the entire Overleaf System.

The two main points of this section are as follows:

- 1. I have found by observation and personal experience that there is in fact an *ordinary* version of the higher Centers. This unorthodox idea is what I here present to the Michaelian community for their consideration and use. Yes, there is still that *extraordinary* experience of the higher Centers spoken of in the orthodox Michaelian teachings, but I am making a distinction between the ordinary and the extraordinary, and explaining the differences.
- 2. While we are looking at that, I will present why I believe the higher Centers should always be referred to as Cardinal Centers. I propose that the word higher is a naming convention held over from the Gurdjieffian teachings that distorts their nature and function, as explained further on.

So, lets now delve into a new understanding of the nature and function of the Cardinal Centers.

The Orthodox and the Unorthodox

As indicated above, the Michaelian teachings orthodoxy is that few people function from the higher Centers, and even if they can get there on occasion, they can't stay there for long. This was originally stated in *Messages from Michael*:

Acceleration does occasionally happen to old souls in touch with their higher centers. The average soul glimpses the higher [Centers] only in moments of extreme stress or agony. [MFM, p. 198] You can sense higher centers in exalted souls on your planet. [MFM, p. 34]

This was repeated several years later in Yarbro's second book on the Michaelian teachings, *More Messages from Michael*:

We have stated before but we will reiterate that the higher emotional and the higher intellectual centers are not often experienced except during moments of great stress or extreme elation. We are unaware of any fragments extant on the physical plane who are habitually centered in the higher intellectual or the higher emotional center, although we would also say that most fragments will have brief moments when these centers are engaged. [MMFM, p. 36]

The higher intellectual center is not often attained, nor for very long. The higher emotional center, again, is very rarely attained. [MMFM, p. 37]

Subsequent to this, the published Michaelian teachings books and Michaelian student community in general pretty much agree with these statements from the Yarbro books. For instance:

Higher centers are high energy places to experience, and for that reason, people generally don't spend long periods of time there. The centers can be seen as like a thermometer — you use energy to rise out of the lower centers and into the higher ones. The impact and value of being there is high as you transcend the mundanity of everyday life. [Stevens, *The Michael Handbook* (1986), p. 230]

Let us begin in descending order with the higher centers first. These exalted centers are called upon temporarily in states of spiritual insight and peak experiences. They are not daily experiences for most people and their purpose is not to carry out survival activities in the physical world. Their negative poles do not make you feel bad or uncomfortable. They are simply narrower bands of an expansive experience. Although you don't live on a daily basis out of these centers, they can occasionally be enormous sources of healing for the mature and older soul levels. Very young souls have trouble accessing the higher centers and when they occasionally experience one, they can be so terrified that the healing potential is negated. Except for a few advanced-level souls, most people are learning to balance the four other centers because they are much more related to the daily affairs of running a physical body, dealing with karma, and living in society with others. Therefore they are the centers we will concentrate on here. [Stevens, *Earth to Tao*, pp. 172–173]

Essence chooses only from the three ordinal centers. No one is centered in one of the higher centers. The energy in the three exalted centers is so intense that the physical body cannot stand having that much energy run through it all the time and would quickly burn out. Also, we are here to do physical plane lessons with more solid, slower, lower amounts of energy — not to use higher center energy to that degree. Humans can step into the higher centers momentarily, then step back out of them and remember this as an enlightened experience, but they don't stay in higher centers all the time. [Christeaan, Van Hulle, and Clark, *Michael: The Basic Teachings*, p. 111]

However, the original idea about the abnormality of access to the higher Centers has been challenged in more recent times, and not only by myself. For instance, there are these statements from Shepherd Hoodwin. The first statement is taken from one of his books, and the following group of paragraphs is from this website: >https://www.michaelteachings.com/michael-on-centers.html<.

The transcendent experiences associated with the higher centers occur when we are in them intensely, but we also use them in common low-key ways. For instance, we may have a blissful moving-center high during a dance performance (and a mild one in an aerobics class) but we also use the moving center during ordinary movement. An intense experience in the higher intellectual center may bring a profound truth, but we also use it in everyday life to conceptualize. In the higher emotional center, we might be powerfully moved by something beautiful, but we can also feel calm altruism there. [Hoodwin, *Journey of Your Soul* (2013), pp. 283–284]

Then there are the three higher, or abstract, centers. By higher, we do not mean superior in value — all the centers are intrinsic to the whole. However, they are gateways into your less earthbound experiences, even though they are part of your human makeup. They can provide more direct experiences of beauty [aka energy], truth, and love, which are the building blocks of the universe.

The ordinal centers are sensory; they are on the front lines of the physical plane, sensing what is there to be experienced. The cardinal centers work to place experiences in a larger context, ultimately of the eternal. The whole purpose of human existence is to further the eternal through specific experiences....

It would not be practical to choose your higher emotional center as your primary gateway. It would not allow for living a normal human life, even though having that center well developed is a blessing. Similarly, you would not use your higher intellectual center as your gateway for day—to—day experience — you would be too cut off from the mundane things that you have to deal with. It would be redundant to have your instinctive center as your primary center because it is already working automatically; it does not need your conscious intention to function....

With all the overleaves, there is a mechanism called "sliding." Sliding means that there is a structure that allows for easily moving to another overleaf that is connected by reason of being on the same axis. In the case of the items on the far right-hand column of the Michael chart, the assimilation axis (which is not divided into ordinal and cardinal), one can slide to any of the others. That's not really applicable with the centers, since people are not centered full-time in the instinctive center. However, if you are emotionally centered, you can more easily slide to the higher emotional center. Therefore, your mundane emotions can more easily become more exalted, profound, and overarching. Crying because of an unresolved emotion might give way to a sense of loving connection to the divine for no other reason than that you happen to open to essence (your soul), so you are using that gateway to open yourself up more. Someone who is intellectually centered may fairly easily stumble upon a truth that delights and expands her. Someone in the physical center may start to move his whole body that leads to a profound gestalt that feels liberating, such as on the dance floor where his body seems to be moving itself; time seems to stop....

The higher or cardinal version of the intellectual center is called the higher intellectual center. This is where you form ideas, context, and philosophies. In the intellectual center, you might balance your checkbook; in the higher intellectual center, you might see the patterns, not only from this month's bank statement but from previous ones and your various other financial experiences, and formulate them into an overarching budget. That is an ordinary higher intellectual experience. As the energy of the center becomes more refined, there come more subtle philosophies about life. In the most thrilling experience of the higher intellectual center, you have revelations of truth in which you see new meanings and importance in your life.

An ordinary experience of the higher emotional center might be crying at a movie that portrays someone dying, helping you empathize with the suffering of others. This not necessarily revelatory, and could even result from being manipulated by the movie. It is a higher center experience because it is abstract; it is not directly related to something in your own, local life, although memories of your own grief, which are of the (ordinal) emotional center, might also be triggered. The most refined experiences of the higher emotional center uplift you out of the illusions of the physical plane and help you feel unconditional love, or agape, for all things.

A sense of the eternal and infinite is the hallmark of the most exalted experiences in all three higher centers. Your personality becomes subsumed by your essence, the part of you that knows that all is well. Your lower centers often have difficulty remembering that because they are on the front lines of what can be a harsh existence.

In the Michael teachings, we speak about balancing the centers. If one were too much in the higher centers, there would be a lack of practicality. Such a person might be said to be a dreamer, unable to function in daily life. However, most people are imbalanced in the other direction — they are all too aware of their bodily appetites and their mundane thoughts and feelings. It can be hard for them to remember beauty [aka energy], truth, and love. [>https://www.michaelteachings.com/michael-on-centers.html< — retrieved 23 March 2024]

Some paragraphs of that web page were omitted from this quotation, but the reader would do well to read the entire posting at the >michaelteachings.com< website. One quibble is with Hoodwin's naming and understanding of the Instinctive Center, an issue that is addressed in the previous chapter of this *History* book.

So there it is: there is in these passages the common idea that there is an *extraordinary* experience of the higher Centers, but there is also here the uncommon idea that there is an *ordinary* experience of the higher Centers. I agree with this, and I will examine these ordinary manifestations of the higher Centers in more detail in the remainder of this chapter.

But before we get to that, there is another issue that needs to be resolved first.

In the quote above, you might have noticed that Hoodwin regards the Moving Center as a higher Center. This is controversial; many sources in the Michaelian teachings community regard the Moving Center as a lower Center, and they claim that there is a Higher Moving Center to go with the Higher Intellectual and

Higher Emotional Centers. What is going on here? Why doesn't Yarbro, in the *MMFM* quote given a few paragraphs above, include the Higher Moving Center with the Higher Emotional and the Higher Intellectual as routinely inaccessible?

The answer is that she introduced an anomaly into the Michaelian teachings when, in *Messages from Michael*, she mysteriously switched the Sexual and Moving Centers on the Action Axis from the way it was understood and taught by Gurdjieff and the original Michaelian group. She repeated this anomaly in her second Michaelian teachings book:

The moving center is the only higher center which Fragments have habitual access to, and it is the cardinal center of the action polarity. [MMFM, p. 37]

In Gurdjieff and the original Michaelian group, the Moving Center was an Ordinal Center and was also very commonly a habitual Center along with Emotional and Intellectual. This discrepancy between branches of the Michaelian teachings is discussed at length in Chapter 4H next following, "The Action Centers". For the moment, just know that I do not agree with Yarbro's change, and neither does the branch of the Michaelian teachings that traces its lineage from the original Michaelian group, through Leslie Briggs, and through JP Van Hulle and the Michael Educational Foundation — they refer to the Sexual Center as the Higher Moving Center. They say, and I say, that Yarbro is inconsistent with the original teaching — and inconsistent with herself — by making an alleged Cardinal Center a Center that is commonly and ordinarily experienced, whereas the other Cardinal Centers were not commonly and ordinarily experienced. At any rate, in discussions to follow, I include the Sexual (aka Higher Moving) Center along with the Higher Intellectual and Higher Emotional Centers.

Now back to the subject of the alleged uncommon/extreme manifestations of the Cardinal Centers. What originally led me to question that one statement in *MFM* (page 198, quoted above) to this effect was Ouija board channeling in 1981 that said that my primary Center was the Higher Intellectual Center. It took some years to figure out why this was said about me, and, briefly, the conclusion I came to is that a different understanding of the higher Centers is in order. I regard it as a useful improvement in our understanding to make a break with the Gurdjieffian teachings and the original Michaelian group, as explained below. I agree with the Michaelian teachings orthodoxy that the Cardinal Centers are of little use for dealing with mundane, ordinary life in the outer world. However, as explained further on, my current understanding is that the Ordinal Centers are more suited to extroverts, who make up the majority of the population (according to what I have read). My current understanding is that the Cardinal Centers in their ordinary manifestation are more suitable for introverts and highly creative types, neither of which are in the majority in the population, and some of whom have difficulty in daily, mundane endeavors, because that is so not where their attention and energy is focused.

I believe this situation with Centers is similar to the situation with Roles: Ordinal Roles are more common in the general population, and Cardinal Roles are less common — this was revealed by channeling, and has been confirmed empirically. The Ordinal Roles (Warrior, Server, Artisan) are much more common than the Cardinal Roles (Sage, Priest, King). According to Yarbro, Ordinal Roles add up to 64% of the population, and Cardinal Roles add up to 22% of the population (*MMFM*, p. 26). In the case of Roles, the reason for this was said to be pragmatic: societies and cultures work better with these proportions (*MFM*, p. 96). My suggestion is that the same principle of pragmatism applies to the Centers. Thus, I would say that the experience of the *ordinary* manifestation of the Cardinal Centers is much less common than of the Ordinal Centers. And the *extraordinary* manifestation of the Cardinal Centers is even way less common. Therefore, to be in a Cardinal Center, as redefined in this section, does not mean that one is in a momentary extreme of stress or agony or creativity. Quite the contrary, to grow spiritually enough to have routine access to Cardinal Centers was one of the goals of the Michaelian teachings in the original Michaelian group. This is discussed in detail in my book *The Tao of Relationships*. It is also a theme in many other spiritual paths, some of which are discussed in my book *The Tao of Cosmogony*.

That was a lengthy introduction, but it is useful to outline the extent of the ground covered in this section. To begin our journey of analysis and synthesis, we look at the Gurdjieffian teachings in regards to the higher Centers.

Higher Centers per Gurdjieff

A good summary of Gurdjieff's understanding of the higher Centers has been provided by one of his foremost students, Peter Ouspensky:

Man number ONE: a man in whom the moving or instinctive centers predominate over the intellectual and emotional, that is, Physical man. [The original Michaelian group Overleaf Charts correlate the Moving Center here.]

Man number TWO: a man in whom the emotional center predominates over the intellectual, moving, and instinctive — Emotional man. [The original Michaelian group Overleaf Charts correlate the Emotional Center here.]

Man number THREE: a man in whom the intellectual center predominates over the emotional, moving, and instinctive — Intellectual man. [The original Michaelian group Overleaf Charts correlate the Intellectual Center here.] In ordinary life we meet only these three categories of man. Each one of us and everyone we know is either number 1, number 2, or number 3. There are higher categories of man, but men are not born already belonging

number 1, number 2, or number 3. There are higher categories of man, but men are not born already belonging to these higher categories. They are all born number 1, number 2, number 3 and can reach higher categories only through [spiritual] schools.

Man number FOUR is not born as such. He is a product of [spiritual] school culture. He differs from man number 1, number 2, and number 3 by his knowledge of himself, by his understanding of his position, and as it is expressed technically, by his having acquired a permanent center of gravity. This last means the idea of acquiring unity, consciousness, permanent 'I', and will. That is, the idea of his development has already become for him more important than his other interests. It must be added to the characteristics of man number 4, that his functions and centers are more balanced, in a way in which they could not be balanced without work on himself, according to school principles and methods. [The original Michaelian group Overleaf Charts correlate the Instinctive Center here.]

Man number FIVE is a man who has acquired unity and self-consciousness. He is different from ordinary man, because in him, one of the higher centers already works, and he has many functions and powers that an ordinary man — that is, man number 1, number 2, and number 3 — does not possess. [The original Michaelian group Overleaf Charts correlate the Sexual Center here.]

Man number SIX is a man who has acquired objective consciousness. Another higher center works in him. He possesses many more new faculties and powers, beyond the understanding of ordinary man. [The original Michaelian group Overleaf Charts correlate the Higher Emotional Center here.]

Man number SEVEN is a man who has attained all that a man can attain. He has a permanent 'I' and free will. He can control all the states of consciousness in himself and he already cannot lose anything he has acquired. [The original Michaelian group Overleaf Charts correlate the Higher Intellectual Center here.]

Understanding of this division of man into seven categories is very important, for the division has very many applications in all possible ways of studying human activity. It gives, in the hands of those who understand it, a very strong and very fine instrument or tool for the definition of manifestations which, without it, are impossible to define.

Take, for instance, the general concepts of religion, art, science, and philosophy. The first three categories are practically on the same level. Beginning with religion, we can see at once that there must be a religion of man number 1 that is all forms of fetishism, no matter how they are called. A religion of man number 2 is emotional, sentimental religion, passing sometimes into fanaticism, the crudest forms of intolerance, persecution of heretics, and so on. A religion of man number 3 is theoretical, scholastic religion, full of argument about words, forms, rituals, which become more important than anything else. A religion of man number 4 is a religion of man who works for self-development. A religion of man number 5 is the religion of a man who has attained unity and can see and know many things that man number 1, 2, and 3 can neither see nor know. Then there is a religion of man number 6 and a religion of man number 7, about neither of which can we know anything. The same division applies to art, science, and philosophy. You must try to find examples of these for yourselves. [P. D. Ouspensky, *The Psychology of Man's Possible Evolution*, pp. 53–56]

In another book by Ouspensky, he quotes Gurdjieff as saying:

... in ordinary conditions the difference between the speed of our usual emotions and the speed of the higher emotional center is so great that no connection can take place and we fail to hear within us the voices which are speaking and calling to us from the higher emotional center. The higher thinking center ... is still further removed from us, still less accessible. Connection with it is possible only through the higher emotional center. It is only from descriptions of mystical experiences, ecstatic states, and so on, that we know cases of such connections.

These states can occur on the basis of religious emotions, or, for short moments, through particular narcotics; or in certain pathological states such as epileptic fits or accidental traumatic injuries to the brain, in which cases it is difficult to say which is the cause and which is the effect, that is, whether the pathological state results from the connection or is its cause. [P. D. Ouspensky, *In Search of the Miraculous*, p. 195]

In this quoted material, it is obvious that the higher states of consciousness and Being are allegedly not common or easily attained. For more information about that, refer to Chapter 1J in Part One, "Gurdjieff's Levels of Being". In my opinion, Gurdjieff's error was to confuse the difficulty of achieving higher Levels of Being with the rarity of experience of higher Centers in their extraordinary form. As already stated, I am proposing an ordinary form that is much more common.

To put this another way, I suspect that where Gurdjieff went astray in his understanding of the higher Centers is that he equated the seven Levels of Being with the seven Centers. Noting the extreme rarity of extreme spiritual development, he supposed that the manifestation of the higher Centers was also rare and extreme. This idea was inherited by the original Michaelian group, and then brought into the subsequent Michaelian teachings communities. This description of higher Center function was retained without examination or evaluation in the original Michaelian group.

So let's see what we find in the transcriptions of the original Michaelian group.

Higher Centers in the Original Michaelian Group

The first mention of higher Centers was very early in the original Michaelian group, and it came from Soleal, not from the Michaels:

Love, to mean anything in the line of consciousness, cannot be predicated on anything material. It must come from higher centers. ... Sexual energy, when used to express higher centers, can be incredibly strong. ... To get to higher centers, do what Jesus did: fasting, meditation, and agonizing self-appraisal. Exercise the body, learn to love unselfishly. [SJC, 03 July 1973]

As I stated above, a goal of a typical spiritual path is to achieve the higher Centers. I would add that the extraordinary as well as ordinary manifestations are valuable and achievable.

The Michaels had things to say about the higher Centers for years after they appeared to the original Michaelian group in August of 1973:

We [the Michaels] come only through higher centers. [S/C, 08 September 1973]

Moments of pure consciousness do produce contact with higher centers, yes. [SJC, 09 February 1974] No one can feel Agape in an ivory tower. It can only be felt when higher centers are contacted in the course

of close association with others. [S/C, 18 February 1974]

Many of the theoretical scientists are indeed immired in the intellectual part of intellectual center. This is a route to higher centers when there is balance. ... Until you have sufficiently detached yourself from the mundane and can come to the higher centers. The occult master has use of higher centers at will. [SJC, 03 March 1974]

If you were able to contact higher centers, this would open up new dimensions of experiences. [SJC, 06 March 1974]

The higher centers are capable of ecstasy or bliss; the lower centers are not. [S/C, 24 April 1974]

Students expressing the higher centers can, for instance, withstand physical torture that the personality would buckle under in the first five minutes. This is readily observable in the behavior of some adepts under fire. [S/C, 25 January 1975]

Only the higher centers long for the Tao, through the emotional center. [SJC, 12 December 1976] Love from the higher centers cannot even be made by the part of the lower center from which the overleaves operate. It can be glimpsed in those rare moments when the overleaves are vanquished, either by mind expanders or by religious ecstasy or by application of the work — that is, either through meditation or concentration that is diligently pursued. [SJC, 30 September 1977]

Those statements confirm again and again my assertion that it is Good Work to pursue experiences of the higher Centers.

To these statements from the original Michaelian group transcriptions can be added a couple more from Yarbro books, as follows:

Understanding scientific principles is a way to higher intellectual energy, just as feeling religion is the way to the higher emotional center. [MFM, p. 208]

Those working in fine arts are connected to the higher emotional center, and those with words [especially poetry] with the higher intellectual center. [MP, p. 112]

Yarbro has more to say about the higher Centers than most any Michaelian teachings writers that I know of (other than myself), and those statements will be referenced further on. Following are some of my statements.

My Understanding of Higher Centers

I know that there is a risk of confusing the typical Michaelian student by presenting an unusual teaching about the Centers. I can only say that my understanding has come out of personal experience, and out of my unusual perspective as someone normally in the *ordinary* manifestation of a higher Center, and occasionally in the *extraordinary* manifestation of a higher Center; others can Validate or not Validate as it suits them. My hope is that some unusual Michaelian students might find it liberating to discover that they too are often if not normally in the *ordinary* manifestation of a higher Center — as redefined further on. And Michaelian students might find it helps them to understand that some other unusual people are normally in the *ordinary* manifestation of a higher Center, and occasionally in the *extraordinary* manifestation of a higher Center.

So here is my story.

When I began using the Ouija board to obtain Overleaves on people back in 1981, I took a hint from a passage in MFM (p. 113) that everyone has all Centers active to some degree, not just the Ordinal Centers. I asked the board to give me the rank of people's Centers from strongest to weakest. It did so, and consequently/subsequently I have developed a way of understanding Centering different from the way it has been presented in the published Michaelian teachings. In fact, many people were said to have one or more of the higher Centers as their strongest, which contradicts the published teaching, then and now. Myself was said to have the Higher Intellectual Center as the strongest, the Instinctive Center as the second strongest, and Sexual Center as the third strongest. The previous chapter in this book discusses the so-called Instinctive Center — which I prefer to call the Impulse Center — and reveals that it is a very interesting place to hang out if one is interested in spiritual development. The next chapter of this book discusses the Sexual Center, and reveals that it is properly understood as a Cardinal Center, the Higher Moving Center — or Excitation Center as I prefer to call it. It is also a very interesting place to hang out if one is interested in spiritual development, as revealed in my book *The Tao of Relationships*.

I had no idea what these Centers meant at the time, so I was surprised and confused when the Ouija board contradicted the book. It took many profile charts and study of many people over several years to come to the conclusion that there is apparently an *ordinary*, everyday way that the Cardinal Centers show up. I found that one does not necessarily have to be having an extreme mystical experience to be said to be in the Higher Intellectual Center. I discovered that one does one have to be having an extreme ecstatic experience to be said to be in the Higher Emotional Center. I noticed that one does not have to be extremely psychically energized to be said to be in the Higher Moving Center. I did not encounter people who had the *extraordinary* manifestations of these Centers; I only read about them. This was to be expected based on their rarity.

In my own case, as someone in the Higher Intellectual Center, I saw that I naturally gravitated to its *ordinary* manifestation — interest in archetypal principles — when I got the distracting mundane affairs of life out of the way, the kind of affairs one normally takes care of in the Ordinal Centers. There have been many times also when I truly achieved the mystical state of consciousness that is the *extraordinary* experience of the Higher Intellectual Center. For instance, during the first few months of 1992, I was in a somewhat continuous mystical state of consciousness, receiving information about the fundamental workings of the universe. You can read about some of the fruit of that journey in Part One of my book *The Tao of Personality*. Indeed, all of my books are products of my Higher Intellectual and Instinctive Centers, and that is one reason why they have an unusual quality compared to other Michaelian teachings books. That is to say, they have a comprehensive, systematic, integrated quality — where I extrapolate and interpolate from profound insights about fundamental principles.

My integrated and systematic comprehension of the Michaelian teachings, driven by the Higher Intellectual (Concept) and Instinctive (Impulse) Centers, naturally led to a push to clarify and regularize some of its inconsistent and misleading terminology. You will read about that in the next section.

"Exalted" and "Higher" versus "Cardinal"

Oftentimes in the original Michaelian group transcriptions, and as quoted in MFM, the term "exalted" was applied to the Sage, Priest, and King Roles. It was said that the Sage is the Artisan exalted; the Priest is the Server exalted; the King is the Warrior exalted (MFM, p. 95). Furthermore, the term "higher" was applied to Higher Intellectual and Higher Emotional Centers. The latter two names were adopted straight into the original Michaelian group from the Gurdjieffian teaching. (Recall that, as stated above, unlike in MFM, the Moving Center was a lower Center in Gurdjieff and in the original Michaelian group, and the Sexual Center was a higher Center — that is a subject for the next chapter in this History book.)

In MMFM, the term "exalted" was simply dropped without explanation, and never used to refer to those Roles in that and subsequent books authored by Yarbro. Instead, the term "Cardinal" was used to refer to those Roles, but the term "higher" was retained when referring to those Centers. In my opinion, Cardinal is a better term than either exalted or higher because Cardinal and Ordinal are both mathematical terms, as explained in Part One of my book The Tao of Personality. I regard it as a significant (and meaningful) improvement to drop exalted and adopt Cardinal; I have chosen to go the entire distance in the trend that Yarbro started. That is, not only are the exalted Roles to be referred to as Cardinal, but also the higher Centers are to be referred to as Cardinal. Therefore I chose a word that actually describes the natures of the Cardinal Centers: thus Higher Intellectual became Concept and Higher Emotional became Sympathy and Sexual/Higher Moving became Excitation.

The only other source within the Michaelian teachings that I know of that has chosen to rename the Cardinal Centers is Varda Hasselmann in her channeled book *Archetypes of the Soul* (1993). The source of this channeling actually calls itself "Die Quelle" — The Source — and claims to be in the same Cadre as the Michaels. Anyway, therein The Source refers to what I call the Concept Center as the Spiritual Center, and The Source refers to what I call the Sympathy Center as the Ecstatic Center. There are a few pages of description of each Cardinal Center in the book. The Source kept the Axial placements of the Sexual and Moving Centers the same as Yarbro.

The proper understanding of the nature of the Cardinal Centers has been subverted and distorted by the tradition of referring to them as higher and/or exalted Centers. This is true even for an otherwise gifted teacher in the Michaelian community:

Higher centers expand or "exalt", as Michael puts it, what occurs in the ordinal centers. All the ordinal centers involve some sort of excitation: intellectual, emotional, or physical. Excitation is response on a small scale. The excitation in sex is a good illustration of the physical center. When one slides to the moving center in sex, there is a larger response; it can take the form of moving the body as a whole, which is a larger response than the excitation or vibration of its parts. In addition, it can take the form of bringing the body into a transcendent experience of pure energy, which can also occur in meditation and other experiences. Like rhythmic movement during sex, this is an expansion of scope in the body's energy. The moving center isn't "better" than the physical center; in fact, we couldn't have one without the other, and there is much reciprocity between them.

Experiencing the positive pole of any center is pleasurable. The amount of pleasure, again, depends on the intensity. The difference between the cardinal and ordinal centers is similar to the difference between any other cardinal and ordinal overleaf — the cardinal is simply expanded. However, with the higher emotional and intellectual centers, we would not generally want to be that expanded in everyday life. [Hoodwin, *The Journey of Your Soul* (1995), p. 287]

Note that in this passage, what Hoodwin calls the "Physical" Center is said to be a lower Center, and the Moving Center is said to be a higher Center, following Yarbro (rather than the Michael Educational Foundation *et al*) — which is erroneous in my book as explained in the following chapter, 4H, "The Action Centers". That alone is enough to make the paragraph suspect and potentially misleading.

But also the passage relates the misunderstanding that the Cardinal Overleaves, including the higher Centers, are just "exalted" or "expanded" or "larger" versions of the Ordinal Overleaves, including the lower Centers. This shows how the use of the terms "exalted" and "higher" has misled otherwise fine Michaelian students into overlooking a basic property of the more fundamental concept named Monads — which applies to the entire Overleaf System — which is that Ordinal and Cardinal Poles of Monads and Overleaves are the opposite of each other in one way or another. This is perfectly obvious in the case of Acceptance versus Rejection Goals, Passion versus Repression Modes, Realist versus Cynic Attitudes, and Greed versus Self-destruction Chief Features, for instance — and all of the other Cardinal/Ordinal Overleaf Axial pairs if one

takes the time to study them. This property of Monads is discussed in more detail in Chapter 1K in Part One, "Gurdjieff's Law of Three". This factor is also discussed in more detail in Part One of my book *The Tao of Personality*. Further, one of the study papers in my book *Study Papers on the Original Michaelian Group* is on Monads.

The basic premise of Monads is that in various lifetimes one experiences something and later experiences the *opposite* of, or the absence of, that something: rich versus poor, strong versus weak, healthy versus sick, powerful versus powerless, positive versus negative. It is exactly the same with the Overleaf System: Synthesis versus Analysis, Evolution versus Involution, Origination versus Termination, Positive versus Negative, and so on. It is unfortunate that in the Michaelian teachings there is such a basic misunderstanding of the nature of Cardinal versus Ordinal, Yang versus Yin, Positive versus Negative. It could not be more clear when you contemplate the names of the Overleaves and their Poles — except that this basic fact about the way the universe works has been obscured by faulty terminology introduced into the Michaelian teachings at a very early stage, and left unexamined and unvalidated ... until now.

While we are on the subject of misleading terminology, note that it was misleading to refer to the Cardinal Roles as exalted versions of the Ordinal Roles. Someone with more knowledge of mathematics once told me that cardinal numbers were originally referred to as exalted numbers. I have not been able to verify this, but if true, it would explain why the terminology was changed from the old way to the new way, not only in mathematics but also in some contingents of the Michaelian teachings.

At any rate, in my books there are no exalted Roles just as there are no higher Centers. There are only Cardinal and Ordinal categories of them. The term "higher" was brought over to the original Michaelian group from the Gurdjieffian teaching. Gurdjieff did not have all of the other Overleaves to compare and contrast with his understanding of the Centers. He did not have the advantage of seeing and understanding things in the context of the entire system of Overleaves. If one were to be consistent with the use and understanding of "higher "in terms of the Overleaves other than Center, then one would have to say Higher Artisan when referring to Sage, and Higher Cynic when referring to Realist, and Higher Self-deprecation when referring to Arrogance, et cetera. You see how ridiculous this seems. Well, I now ask you to begin to look at Higher Moving Center as being a ridiculous way to refer to what I call the Excitation Center; Higher Emotional Center as a ridiculous way to refer to what I call the Sympathy Center; Higher Intellectual Center as a ridiculous way to refer to what I call the Concept Center. I propose that the misleading Gurdjieffian legacy terminology should quite simply be dropped from the consciousness of the Michaelian teachings community, and I have done this in my books.

Hoodwin's understanding in the second edition of his encyclopedic book about the Michaelian teachings, published in 2013, departs somewhat from, and supplements, the passage quoted above. It corroborates what I have said about the *ordinary* and the *extraordinary* experiences of the Cardinal Centers, but it also minimizes the assertion that the Cardinal Centers are an expansion or exaltation of the Ordinal Centers. This is an improvement, but does not quite go far enough, in my opinion:

The ordinal centers respond on a small scale. That can be a warm-up for sliding to the corresponding cardinal center. Higher centers expand or "exalt" what occurs in the ordinal centers. The physical center may react with nerve excitations, for example, leading to moving the body as a whole in the moving center. A person who becomes excited may then jump for joy (or hit someone). The reverse is also true: a moving-centered person can easily go into the physical part of the moving center, becoming excited by movement.

The transcendent experiences associated with the higher centers occur when we are in them intensely, but we also use them in common low-key ways. For instance, we may have a blissful moving-center high during a dance performance (and a mild one in an aerobics class) but we also use the moving center during ordinary movement. An intense experience in the higher intellectual center may bring a profound truth, but we also use it in everyday life to conceptualize. In the higher emotional center, we might be powerfully moved by something beautiful, but we can also feel calm altruism there. ... The most intense experiences in the higher emotional and intellectual centers can be revelatory and life-changing. They often occur when our backs are against the wall, and life circumstances force us either to open to something higher or be engulfed by the stresses. [Hoodwin, Journey of Your Soul (2013), pp. 280, 283–284]

At any rate, the following sections are brief discussions of the three Cardinal Centers as I understand them. There are lengthier descriptions in my book *The Tao of Personality*. Other than that, in my opinion, José Stevens has the best description of the higher Centers in his book *The Michael Handbook*, pages 232–237.

However, any verbal description of the nature of experience in Cardinal Centers will only take you so far. Words go a long way in describing Ordinal Center experiences because they are common to all people, but not all people have had Cardinal Center experiences, so mere verbal descriptions can fail to convey what they are really like. I have had Concept Center mystical experiences, Sympathy Center spiritual experiences, and Excitation Center non-dual experiences in the Cardinal Centers, but cannot impart that experience to you in mere words, or any other way really. You may not fully understand what I am trying to convey until you experience your very own Cardinal Centers in their *ordinary* or *extraordinary* forms.

The Michaels mention but do not dwell on the experience of Cardinal Centers, apparently because for the vast majority of their students their spiritual growth takes place in the Ordinal Centers. I hope this will change as the Michaelian teachings and the Michaelian students mature. Yarbro had more to say about them than any subsequent writer. This can change as the Cardinal Center experiences, as may be hoped, become more common. There are ways to promote and evoke the experiences, but I will not delve into that here; the subject is covered in my book *The Tao of Relationships*.

Descriptions of the Three Cardinal Centers

As an introduction to a much fuller descriptions of the three Cardinal Centers that is found in my book *The Tao of Personality*, I present the following.

Concept Center

MFM, p. 208, says that "understanding scientific principles" is a way to experience this Center. MMFM, p. 278, says that the experience of this Center is "quite indescribable", "something that is beyond words to explain", "this understanding that is beyond explanation and transcends words". MP, p. 70, says "enhanced concentration" is another feature of this Center. MMFM, p. 278, says that "the experience is exhilarating and occasionally frightening." Based on my own personal experiences, I do not have a problem with any of these descriptions. Some of these descriptions are of the extraordinary manifestation rather than the ordinary that I propose, but they are all accurate clues to the experience of the ordinary manifestation of the Concept Center. In any case, it does not mean "highly intellectual".

Basically, this Center is about Truth. I prefer to name this Center as Concept, instead of the misleading name Higher Intellectual, as explained above, because the word concept is descriptive of its actual nature; it deals with abstract and fundamental ideas and images rather than words. The Concept Center provides insight about archetypes — pervasive and fundamental philosophical and scientific and logical and mathematical principles. These are not *logical* in the way that the Intellect Center is reasonable; rather, they are *categorical*: based on patterns and similarities. Things that are intuitively obvious (sensible) to the Concept Center can be counter-intuitive (nonsensical) to the Intellect Center, and vice versa. The difference between Intellect Center and Concept Center shows up in the common understanding of the difference between "left brain" and "right brain" functions — they are different ways of understanding our experience of the world: left brain with words and other symbols; right brain with images and patterns and concepts. The Intellect Center is an Aspect of the *Analysis* Process on the Expression Axis; the Concept Center is an Aspect of the *Synthesis* Process on the Expression Axis — that information alone should provide you with some understanding of the differences.

One of the visual arts that is driven by this Center is the creation of beautiful abstract art, such as that by Jackson Pollack. Also, fantasy art generally falls in this category. Just do an internet search on the phrase "beautiful abstract art" and you will see what I mean. If you find this kind of art fascinating and intriguing and captivating, then you might have a strong Concept Center.

The original name of the Positive Pole of this Center was +Integration, and I have retained that in my understanding and presentation. Above, the Michaels were quoted saying that "understanding scientific principles" was a hallmark of this Center. With respect to the universe, it is at the extremes of fast and slow, beginning and ending, large and small, that the principles are found. These have fascinated me from the time I was a teenager until now. In this context, I would like to point out that the word +Theory is an appropriate synonym for this Pole. In science, a theory is a comprehensive, integrated, coordinated, elegant, understanding of the regularities in Nature at its fundamental levels. The scientific enterprise — an external exercise — is in fact directed to discovering and discerning the basic, deep, eternal, and universal truths of the world. In its extraordinary expression — an internal exercise — this is also what mysticism does; +Integration is a return to the One, out of which the many have come.

The original name of the Negative Pole of this Center is –Telepathy, and that seems appropriate for this Center in its *extraordinary* or extreme manifestation. Because this is my strongest Center, I have often thought that I knew what people were thinking even when they did not verbalize it. However, I prefer another name, –Fantasy for the Negative Pole in the *ordinary* manifestation that is not as uncommon as the *extraordinary* manifestation. In its better expression, people in the Negative Pole have an overactive imagination. I used to have a somewhat active fantasy life in that, in retrospect, I would imagine what I "should" have done or said instead of what actually happened. I can still get carried away with my "dreams" or "flights of fancy" — short of actual delusions, of course. In its worse expression, some people can actually hang out in some strange, ungrounded, unreality or weird belief system. In this Pole, in combination with the Negative Pole of the Skeptic Attitude, –Suspicion, conspiracy theories are hatched and believed. With this change in name and nature, you see that the Negative Pole of this Center in its *ordinary* manifestation can be pathological, the same as the Negative Pole of other Overleaves.

In both the Positive and the Negative Poles, the mental musings are metaphorically aimed toward 'connecting the dots' to form a 'picture' that 'looks right'. In the Positive Pole, this exercise yields a legitimate result that improves our understanding of reality; in the Negative Pole, the result is illegitimate in that it improves our understanding of unreality.

Sympathy Center

MMFM, p. 278–279, says that music is a common gateway to the Higher Emotional Center. (I would add that it has to be spiritually uplifting and inspiring music rather than some other kind, that is attuned to some other Center.) That passage also says that a superb meal or an entrancing storm can evoke an experience of this Center. MP, p. 111, says the same thing. Based on my own personal experiences, I have no problem with these statements, whether it be for the *ordinary* or the *extraordinary* manifestations of this Center.

Basically, this Center is about Love. I prefer to name this Center, Sympathy, instead of the misleading name Higher Emotional, as explained above, because the word sympathy is descriptive of its actual nature. I have retained the original name for the Positive Pole, +Empathy, but I have changed the Negative Pole from the original –Intuition to –Sensitivity because of my observations of people who were said by my Ouija board to have a strong Sympathy Center. The name –Sensitivity is more negative than the name –Intuition implies, and that word fits better with my understanding that the Cardinal Centers have an *ordinary* somewhat common manifestation, so therefore the Negative Pole should have a negative connotation, the same as the other Overleaves.

This was said to be my weakest Center in the original Ouija board session where my Overleaves were given in 1981. This weakness was in stark contrast to my two strong Cardinal Centers, Concept and Excitation, plus the Neutral Center, Impulse Center. (Ironically, the opening of my higher chakras in 1986 was via the chakra that corresponds to the Sympathy Center, the brow chakra. This story is told in my book *The Tao of Relationships*.) The remnant of that experience that persists to this day is that I am inspired by beautiful, spiritual New Age music. I would also add that I suspect that writers of situation comedies are in the Sympathy Center, and I appreciate that talent very much.

Following is what I have observed in people who have a strong Sympathy Center.

People in the Positive Pole of +Empathy have an internal bliss generator; they are naturally optimistic; they are very "spiritual" — they "love God". They are also very loving and compassionate toward people, because of the ability to feel and internalize the joy as well as the suffering of others. This suffering does not bother them, because they are able to transcend and transmute what might otherwise be felt as a 'downer'. They are close to fulfilling the injunction of Jesus to "love your neighbor as yourself". They have no need for the defenses and boundaries that typically separate one person from another, so they have the capacity for intense intimacy, especially when reciprocated by another loving person. In my book *The Tao of Relationships*, I recommend — as a conscious and intentional exercise to foster the experience of this Pole of this Center — what I call "attuning and communing" with the 'energy' or 'soul' of other people. I have had experiences of this Center with a couple of people: there was bliss, awe, reverence, joy, amazement. Psychic union is a "cerebral orgasm", to use the Michaels' own words.

People in the Negative Pole of –Sensitivity are overly attuned to the "spirit" of whatever external circumstances they find themselves in. In its better manifestation, this Pole can include psychic gifts such as medical intuition; they literally 'feel your pain'. In it worse manifestation, life is often uncomfortable for people in –Sensitivity; they might even need to isolate or insulate themselves from unpleasantness of various

kinds. Perhaps you have heard of the "highly sensitive person"; google it — it is not all that uncommon in the general population. People in this Pole are extremely touchy, psychologically fragile, and overly reactive. This hypersensitivity sometimes happens as a result of a psychological trauma, but some people are born this way. With this change in name and nature, you see that the Negative Pole of this Center in its *ordinary* manifestation can be pathological, the same as the Negative Pole of other Overleaves.

Excitation Center

This Center was originally — in the Gurdjieffian teachings and in the original Michaelian group — called the Sexual Center, but since then most Michaelian students are in agreement that some alternative name is to be preferred. Believing (erroneously) that it is an Ordinal Center, Quinn Yarbro renamed it the Physical Excitation Center, and Shepherd Hoodwin renamed it the Physical Center. You can read their books if you want to come to understand their rationales or rationalizations for their views. Believing (correctly) that it is a Cardinal Center, others (Stevens, Van Hulle, Cocconi, *et al*) have renamed it the Higher Moving Center; my preference is to call it the Excitation Center because I believe that word has the best of both worlds and is the most accurate single word for what that Center involves. You can read my books to understand my rationales and rationalizations for my views.

The Excitation Center is an Aspect of the Cardinal Action Process, and that Process is all about making things happen, about bringing events into actuality. In this sense, the Excitation Center is about 'fertility' and 'fecundity' and 'potency' and 'generativity' and 'creativity' and 'propagation' — about bringing events into the world — same as when it is referred to as the Sexual Center.

Basically, this Center is about Energy. In Oriental esoteric traditions, this energy is referred to as *chi* and *qi* and *prana*. These energies can be cultivated with various forms of yoga, such as Tantra and Kundalini. You have heard the expressions, "Whatever turns you on", and, "Whatever gets your juices flowing". These are references to the function of this Center. Naturally, we want whatever adds zest and zing to our lives, whatever makes us feel really alive. Sex is perhaps the most obvious energizing thing we routinely encounter, but there are other experiences that can be enlivening and stimulating. Kundalini Yoga is my second favorite. My third favorite is being in a raw extreme natural environment (the beach of an ocean with crashing waves, majestic snow-capped mountains, a rugged desert landscape, a dense forest of very tall trees); visits there can be energetically exhilarating and invigorating for me. If you are thrilled and enthralled and fascinated by watching an exquisitely choreographed dance and/or ice-skating routine, as I am, then you might have a strong Excitation Center.

Because the nature of this Center has been reinterpreted by various Michaelian students from the original Gurdjieffian presentation, it is appropriate that the names of the Positive and Negative Poles be revised. Originally, in the Sexual Center, they were called +Amoral and -Erotic. (For sexual energy — not a Center — I put these names of Poles in the noun form, and name them +Amor and -Eros.) Although still referred to as the Sexual Center, Die Quelle via Varda Hasselmann has changed the names of the Positive and Negative Poles to +Productive and -Seductive respectively. In my opinion, these do not make much sense when this Center is distanced from mere sexuality. Some proposals for renaming the Poles have been: +Beauty / -Desire, +Integration / -Desire, +Harmony / -Lust, +Integration / -Erotic. None of those make good sense to me when this Center is enlarged beyond sexuality. Consider the Positive Poles of the other five Cardinal Action Overleaves: +Leadership, +Dynamism, +Audacity, +Mastery, and +Perception — and that will help you understand why I prefer +Vitality for the Excitation Center. Look at the Negative Poles of the other five Ordinal Action Overleaves: -Dictatorship, -Belligerance, -Intolerance, -Tyranny, and -Supposition — and that will help you to understand why I prefer -Arousal for the Excitation Center.

A couple of paragraphs above, I used several words that fit with the name of the Positive Pole of +Vitality, namely "energized", "enlivened", "exhilarated", "invigorated". In the common vernacular, that means "turned on". Those words can also be used to refer to the Negative Pole, which I call –Arousal. However, I see the Negative Pole as thrill-seeking behavior such as is found in dangerous, extreme sports, and I perceive that manifestation as an addictive, negative, unhealthy, perhaps even pathological, phenomenon driven by an "adrenaline rush". The Positive Pole is a healthy and productive use of natural energies that feed the spiritual Essence self and serve the greater good, not the unhealthy pursuits of the worldly Personality self. After the excitement experienced in the Negative Pole, there is a let-down; after the energization experienced in the Positive Pole, there is no let-down. With this change in name and nature, we see that the Negative Pole of this Center in its *ordinary* manifestation can be pathological, the same as the Negative Poles of other Overleaves.

This Center is covered in greater detail in Chapter 4H, "The Action Centers", the next chapter after this one.

IQ, EQ, AQ

By the way, while we are on the subject of the Cardinal Centers, the Michaels said, "Let it be known that intellect is not a factor in any of these Cycles" (late August 1973). The same could be said for the Overleaf System in general. That is, one cannot look at someone's Overleaf Chart, ponder their array of Traits, and discern how smart, how talented, how wise, how competent, how virtuous, how conscientious, and so on, they are. The Overleaf System covers what it covers of the human condition and does not cover what it does not cover. Those and many other factors are outside the purview of the Overleaf System.

There might be a possible exception, which I mentioned in the sections above. The Cardinal Centers are rare in the general population, but they might not be so rare in the "gifted", aka "genius" population. My speculation is that there are three types of gifted geniuses, and they result from favorable combinations of Centers on the three Axes of Expression, Inspiration, and Action. Thus, the three possibilities are a strong Intellect—Concept Centers combination resulting in a high Intellectual (intelligence) Quotient (IQ); and a high Emotion—Sympathy Centers combination resulting in a high Emotional (intelligence) Quotient (EQ); and a high Motion—Excitation Centers combination resulting in a high Athletic (intelligence) Quotient (AQ).

If a scientific study is ever made of the Overleaf System, then to verify my speculation about these types of gifted intelligences, my thesis about the existence of the *ordinary* manifestation of the Cardinal Centers would have to be recognized.

Concluding Remarks on the Cardinal Centers

It helps us both if I put my thoughts into a numbered list at the end of each chapter. So it is, and so shall it always be.

- The traditional understanding of the experience of the higher Centers was brought into the Michaelian teachings from the Gurdjieffian teachings more or less intact: higher Centers are said to be extreme experiences. It has taken, and is taking, some decades for the Michaelian teachings community to find its way out of that distortion.
- 2. Gurdjieff did not have the benefit of comparison and contrast with the complete Overleaf System, which includes six other Overleaf categories. We in the Michaelian teachings find that a consistent application of a system of interpretation such as found in my Process/Aspect System based on logic, mathematics, and physics allows for a neither unusual nor extreme version of the experience of the higher Centers.
- 3. When we are unaware of the possibility of the everyday experience of the higher Centers, we do not notice them in ourselves or in other people. Once we learn that there is a normal experience of the higher Centers, we start to notice it in ourselves and in other people in terms of our/their mental states, emotional states, and body states.
- 4. If Michaelian students want to maintain the tradition in the Michaelian teachings that the "higher" Centers are extreme experiences and are normally inaccessible, I say let them continue to be called "higher" Centers. However, in order to promote the newfangled Process/Aspect System, that they are typical though rare experiences that are normally accessible, let them be called "Cardinal" Centers. Perhaps this will mitigate some of the confusion. This terminology also promotes consistency with the six other Overleaf categories.
- 5. The manifestation of the Cardinal/Higher Centers appears to span a wide spectrum from low to high and mild to intense. At the low end of the spectrum, in the Cardinal Centers, the person is not that disconnected from the physical world, although their perception of and response to the world is different. Toward the higher end of the spectrum, in the higher Centers, the person is increasingly connected to the metaphysical world, which is more abstract than the physical world.
- 6. People in the ordinary and extraordinary manifestations of the Negative Poles of the Cardinal Centers are untethered from mundane reality in an unhealthy way, to a lesser or greater extent respectively. The question to ask about people in any of the Cardinal Centers is, are they connecting to an abstract reality (Positive Poles), or are they disconnecting from all realities (Negative Poles), abstract or mundane. It has often been said that the distance between genius and madness is not very far; in my conceptualization, it can be the 'distance' between the Positive and Negative Poles.

- 7. People who are gifted in one or more of the Cardinal Centers are typically described as geniuses or prodigies when their gift is combined with giftedness in an Ordinal Center, such as high IQ (Intelligence Quotient), and/or high EQ (Emotional Quotient), and/or high AQ (Athletic Quotient).
- 8. In the case of the Cardinal Expression Center, at the low end of the spectrum, the Concept Center, the person is more "right brained". That is, the person has a good imagination, has a gift for perceiving patterns, and is capable of integrating a lot of ideas into a coherent system. At the high end of the spectrum, in the Higher Intellectual Center, the person is in a mystical state of consciousness approaching comprehension of oneness with the universe.
- 9. In the case of the Cardinal Inspiration Center, at the low end of the spectrum, the Sympathy Center, a person is sensitive and empathetic with whatever situation they find themselves in. They are attuning and communing with the "vibes", so to speak. At the high end of the spectrum, in the Higher Emotional Center, the person is having a "religious" or "spiritual" experience of reverence, awe, wonder, bliss, and joy.
- 10. In the case of the Cardinal Action Center, at the low end of the spectrum, the Excitation Center, a person is filled with energy and vitality. This is sometimes referred to as being "in the flow" of events and actions, which is described as an effortless and exhilarating state of consciousness which is reflected in graceful interaction with the environment; it is also referred to as having a "peak experience". At the high end of the spectrum, the Higher Moving Center, a person has psychokinetic power or magical abilities, the capability to make things happen in the world with a psychic force of will.

My opinion, based on my experience, is that all three Cardinal Centers are less typical than the Ordinal Centers, but not all that rare in the human population. All three Cardinal Center states are not as 'grounded' as the Ordinal Center states, because they are not focused on the ordinary affairs of the Physical Plane, but they are still well within the bounds of normalcy, even though they are uncommon and rare. This equality of accessibility of the three Cardinal Centers makes for a consistency with other Overleaves — no explanation or rationalization of an alleged difference is required.

Thorough descriptions of all of the Centers, in addition to all of the other Overleaves, are to be found in Parts Two and Three of my book *The Tao of Personality*.

Chapter 4H

THE ACTION CENTERS

This chapter is the third in a series of three that cover the Centers. Having covered the "Instinctive" Center and the "higher" Centers — wherein you've seen my issues with those traditional designations — this chapter examines the differences of opinion and/or channeling regarding the Action Centers.

The premise of these three chapters is that the understanding of the Centers in the modern Michaelian teachings needs to be revisited and revised. So far as the original Michaelian group was concerned, the origin of the concept of Centers was with Gurdjieff; his understanding of Centers was adopted into the Michaelian teachings without critical examination. In my opinion, some work needs to be done to adapt them to conform to the understanding of the other six Overleaf categories, which were revealed by the Michaels. I have done that work, and it is presented herewith for your consideration and evaluation and validation.

Introduction

The following is a tabulation of the Action Centers as named on the various Overleaf Charts that were reviewed in Part Three. Even with a cursory look, clearly this is an area of inconsistency between sources, but please carefully and thoughtfully review this tabulation now before you proceed to read the text. Take conscious notice of the differences. How could this blatant contradiction have happened? Think about what this all might mean for the validity of channeling, not only in this specific case, but in general.

| Table 4Ha —ACTION CENTERS per Charts in Part Three | | | | | | |
|--|---------------------------|---------------------|-----------------|--|--|--|
| CHART NUMBER | CHART NAME | ORDINAL ACTION | CARDINAL ACTION | | | |
| 0 (~1920s) | Gurdjieff | Moving | Sexual | | | |
| 1–4 (1974–1975) | original Michaelian group | Moving | Sexual | | | |
| 5 (1979) | MFM (Yarbro) | Sexual | Moving | | | |
| 6 (1980) | Louise Briggs | Moving | Sexual | | | |
| 7 (1984) | MEF (JP Van Hulle) | Moving | Sexual | | | |
| 8 (1986) | MMFM (Yarbro) | Physical Excitation | Moving | | | |
| 9, 16, 20 (1986+) | José Stevens | Moving | Higher Moving | | | |
| 10 (1988) | Carol Heideman | Moving | Sexual | | | |
| 11 (1990) | Basic Teachings | Moving | Higher Moving | | | |
| 12 (~1991) | Larry Byram | Moving | Higher Moving | | | |
| 13 (1992) | Stephen Cocconi | Moving | Higher Moving | | | |
| 14 (1993) | Varda Hasselmann | Sexual | Moving | | | |
| 15 (1995) | Shepherd Hoodwin | Physical | Moving | | | |

| Table 4Ha —ACTION CENTERS per Charts in Part Three | | | | | | |
|--|----------------------------|----------------|-----------------|--|--|--|
| CHART NUMBER | CHART NAME | ORDINAL ACTION | CARDINAL ACTION | | | |
| 17 (~2005) | Barbara Taylor | Moving | Higher Moving | | | |
| 18 (~2007) | Mature Scholar Steve | Sexual | Moving | | | |
| 19 (2009) | Terri Benning | Moving | Higher Moving | | | |
| 21 (2012) | Troy Tolley | Moving | Higher Moving | | | |
| 22 (~2012) | Cocconi — Motivation Cards | Moving | Higher Moving | | | |
| 23, 24 (present) | Philip Wittmeyer | Motion | Excitation | | | |

My comments on this table are as follows:

- CHART NUMBER: All of the Charts reviewed in Part Three are shown in the first column.
- CHART NAME: The sources of all the Charts reviewed in Part Three are shown in the second column.
- ORDINAL ACTION: The third column shows the name given to the Center that was placed in the Ordinal side of the Action Axis by the source shown in the first and second columns.
- CARDINAL ACTION: The fourth column shows the name given to the Center that was placed in the Cardinal side of the Action Axis by the source shown in the first and second columns.

Basically, what Table 4Ha shows is that Gurdjieff and the original Michaelian group had Moving Center as Ordinal and Sexual Center as Cardinal. However, Yarbro reversed these with the publication of *MFM* in 1979, and has apparently retained this placement to the present day, as indicated on Chart #18 (2007) by Mature Scholar Steve, a member of the Yarbro contingent of the Michaelian teachings. Shepherd Hoodwin has followed Yarbro (except he refers to the Sexual Center as the Physical Center); Varda Hasselmann, unaware of non-Yarbro sources, has also followed the Yarbro amendment. All other Chart–makers, including myself, follow Gurdjieff/original Michaelian group.

Besides the differences in location on the Ordinal/Cardinal Axis, there are some differences in the names of the Centers, and if you read the writings of the creators of these Charts, you see that there are differences in the descriptions. These descriptions indicate that the Yarbro contingent and Hoodwin are mostly the reverse of the non-Yarbro contingent of the Michaelian teachings.

(The Positive and Negative Poles of the Centers are not listed here, but they are, of course, shown on the Overleaf Charts reviewed in Part Three of this book. There are discrepancies with regard to these names also, and these are tabulated in Chapter 25 in Part Three. These discrepancies are not discussed in this chapter; it is left to the reader to research those by reading the writings of the authors of the Charts, and to sort out what they regard as the most appropriate names. My choices are shown on my Charts, and explained in a section near the end of this chapter. There is a thorough explanation in my book *The Tao of Personality*.)

So what's up with these differences? Let's take a close look.

The Gurdjieff Version

The information about seven Centers originated (in its modern form) with Georges Gurdjieff in the first half of the 20th Century. He had a detailed teaching about the seven Centers, and he — or his students — apparently put the Sexual Center with the "higher", aka Cardinal, Centers. It is not completely clear because Gurdjieff did not have quite the orderly system of classification that the Michaels did, but that is the way I read it in (Gurdjieff student) Peter Ouspensky's book, *In Search of the Miraculous*. The relevant quotes are as follows:

We know that [ordinary] man has five centers: the thinking, the emotional, the moving, the instinctive, and the sex... The full and proper functioning of the five centers brings them into union with the higher centers... [ISM, p. 282] In the first place it must be noted that normally in the sex center as well as in the higher emotional and the higher thinking centers, there is no negative side. In all the other centers except the higher ones, in the thinking, in the emotional, in the moving, in the instinctive, in all of them there are, so to speak, two halves — the positive and the negative... When the energy of the sex center is plundered by the other centers and spent on useless work, it has nothing left for itself and has to steal the energy of other centers [the four mentioned above] which is

much lower and coarser than its own. And yet the sex center is very important for the general activity, and particularly for the inner growth of the organism, because ... it can receive a very fine food of impressions, such as none of the ordinary centers can receive.... According to its energy, that is to say, if it uses its own energy, the sex center stands on a level with the higher emotional center. And all the other centers are subordinate to it. Therefore it would be a great thing if it worked with its own energy. This alone would indicate a comparatively very high level of being. [ISM, pp. 257, 259]

Notice a couple of things in passing, things that are not exactly relevant to the subject of this section, but are interesting nevertheless:

- The lower Centers have "positive and negative sides", which sounds very much like the Positive and Negative Poles that the Michaels gave to the Centers. However, it was said that the higher Centers do not have positive and negative sides, and this also sounds very much like the names that the Michaels gave to the Negative Poles of the three higher Centers not all that bad; —Telepathy, —Intuition, and —Erotic. More is said about the higher Centers and their Poles in the previous chapter.
- Refer to Chapter 1J, "Gurdjieff's Levels of Being", in Part One for a discussion of the phrase Level of Being; it was Gurdjieff's and Ouspensky's measure of a person's spiritual development. Briefly, there are seven Levels of Being, they correspond with the Centers, and the Sexual Center is near the top of the list, along with the other higher Centers. The implication is that an evolved and awake person will be able to use sexual energy rightly and for spiritual development. More was said about this in the previous chapter on the "Higher Centers"; even more is said about it in my book *The Tao of Relationships*.

The reader can find out more about the Levels of Being and the Centers in Ouspensky's book and various other books about the Gurdjieffian teachings. Throughout the Gurdjieffian teachings, the Moving Center is placed in triad with Emotional and Intellectual Centers and Parts of Centers — the lower Centers. According to a Wikipedia article on the Gurdjieffian teachings, there was a time when the Sexual Center was considered to be a sub-Center of the Moving Center, but later on it was thought of as a separate Center by students of Gurdjieff, and moved to be among the higher Centers, as indicated in the quote above. There is documentation for this in Chapter 4F above, "The Instinctive Center". The Sexual Center is not grouped with the lower Centers in the Gurdjieff/Ouspensky books that I have read. Furthermore, the Moving Center is always (several places) described as ordinary bodily activities — nothing extraordinary; this is in contrast to what Yarbro says about the Moving Center, as is seen further on in this chapter. The higher Centers are repeatedly said to be extraordinary. Therefore it is apparent to me that Gurdjieff and Ouspensky, in Ouspensky's book at least, place the Sexual Center among the higher Centers. The Fellowship of Friends, where some founding members of the original Michaelian group got some of their education about Gurdjieff and Ouspensky, apparently regarded the Sexual Center as a higher Center. This placement was retained in the original Michaelian group, as we see in the next section.

The Original Michaelian Group Version

The original Michaelian channel, Sarah Chambers, was a student of the Gurdjieffian teachings, as were some of the other founding members of the original Michaelian group. In the original Michaelian group transcriptions, the Center most often mentioned to access (other) Cardinal Centers is the Sexual Center. Following are several instances of that.

The turned-on feeling is what you are striving for. That is the goal. It enables you to get in touch with the sexual energies for the first time. [When] you are aware of them, you can now reach them at will, but it will take practice. It requires that you go through the same set of exercises that you use in any consciousness—raising ritual: the detachment/concentration monad [— turning your attention away from physical pleasure and onto spiritual pleasure]. Concentration [is focus on] a single goal. In this case, the goal [of the turn-on] would be ecstasy. [S/C, 12 August 1973]

What is Kundalini? Is it true? High energy?

In a broad sense, this is what you refer to as sexual center — the energy therein. It is a liberating force for the Essence.

Moses "raised the serpent" and Jesus said, "If I be lifted up", etc. What is the relationship to kundalini here?

Yes, this is the highest form of movable energy you have at your disposal, and therefore that which you can utilize for each: the emotional states or Higher Emotional Centers, Higher Intellectual Centers.... The lower

Centers are fixed, and the energy is like a closed system. The higher Centers are capable of ecstasy or bliss; the lower Centers are not. The Sexual Center, or the kundalini force, can only be breached by bringing the lower Centers into harmonious balance... [SJC, 24 April 1974]

Read this carefully again. Notice that the Sexual Center seems not to be included among the lower Centers. Notice that the lower Centers have "fixed" and "closed" energy, implying that the higher Centers have the opposite of this, namely "movable" and "open" energy. Particularly, the Sexual Center was said to have "movable" energy which can be utilized to achieve ecstasy and bliss in the (other) higher Centers. This strongly suggests that the Sexual Center was understood by the original Michaelian group as a higher Center.

This was elaborated upon in a session a couple of months later:

Ram Dass says the spirit body has holes or chakras connecting to the physical body. He says that normally people's holes are "plugged up" — the energy is there but can't flow. Is this true? (Michael has stated that sexual energy is the only "mobile" or available energy.)

This [Sexual Center] is the first of the [higher] Centers not solely governed by maya [like the lower Centers] and consequently mobile. The fixed amount of energy [in the lower Centers] is fixed by the organism, not by cosmic shortages. We can give an example of the fixing; it works well: The body has a chore to do that it dislikes. It dwells on the undesirability of the proposed action until it renders the Moving Center inactive and unable to perform its task. Normally able to perform such action, the body is simply too exhausted to move, yet twenty minutes later some happy diversion is offered. Suddenly the body undergoes a miraculous recovery, and actually expends far more moving energy in the pleasure activity, for instance, tennis, than it would have in the work activity, for instance, shopping for groceries. [SJC, 16 June 1974]

The same as in a previous passage, the passage above implies that the Moving Center is a lower Center that can be rendered immobile.

A thorough accounting and review of what the original Michaelian group transcriptions had to say about sexuality is presented in the chapter "Sexuality" in my book *Study Papers on the Original Michaelian Group*.

Throughout the original Michaelian group transcriptions, the Moving Center is typically placed in triad with Emotional and Intellectual Centers and Parts of Centers, whereas the Sexual Center is not grouped with the lower Centers. On four original Michaelian group Overleaf Charts, this pattern is explicit: the Sexual Center is a higher Center; refer to the expositions on Charts #1, #2, #3, and #4 in Part Three. The original Michaelian group transcriptions and Charts are not ambiguous on this point.

For a thorough presentation on the use of "sexual", aka "kundalini", aka "polar" energy to achieve higher Levels of Being (to use that Gurdjieff phrase), refer to my book *The Tao of Relationships*.

The Yarbro Version

As indicated in Table 4Ha, in her book MFM Yarbro switched the Cardinal/Ordinal positioning on the Action Axis of the Moving and Sexual Centers from the way that Gurdjieff and the original Michaelian group had them. We do not know if Yarbro took it upon herself to do this, or if it resulted from the Michaels feeding Chambers the change after the original Michaelian group sessions ended and before MFM was written, or if one of the other channels affiliated with Yarbro came up with it. There is no hint in MFM or subsequent books that Yarbro was familiar with the Gurdjieffian teachings, and one does need to read the transcriptions carefully and look at the original Michaelian group Overleaf Charts to see that the Sexual Center was considered to be a higher Center in the original Michaelian group. It seems unlikely that Yarbro overlooked these clues, so she must have switched them deliberately. But, unfortunately, she did not tell us why.

It would be pure speculation on my part to propose a reason why Yarbro made the Sexual Center an Ordinal Center, contrary to the prior sources, Gurdjieff and the original Michaelian group. If in fact she did have any awareness of the Gurdjieffian teachings, it might have been an earlier version where sex was a sub-Center or Part of the Physical Center, a "lower" Center; perhaps she did not know about the evidence that some students of Gurdjieff preferred to see the Sexual Center as separate from the Moving Center and as a higher Center.

And there is another possibility. I suggest that Yarbro might have been aware of and influenced by the fact that kundalini is commonly latent within the first ("Root") chakra and sexuality is commonly ascribed to the second ("Gonad/Pubic") chakra, as documented in Chapter 1C in Part One, "The Seven Chakras". If she otherwise correlated Centers with chakras the same way that I have, then she might have considered this as sufficient rationale to make the switch from the way things were in the original Michaelian group transcriptions and as shown on original Michaelian group Overleaf Charts, and the Briggs chart, Louise and

Leslie Briggs being members of the original Michaelian group who continued to work after the original Michaelian group disbanded.

Anyway, may I also wonder if the following is a less-speculative clue for the switch? In original Michaelian group sessions quoted above, the Sexual Center is mentioned as a way to achieve the (other) higher Centers. In another early original Michaelian group session this is confirmed in the following Q&A exchanges:

Sexual energy, when used to express higher Centers, can be incredibly strong. [S/C, 03 July 1973]

... then you are using the Sexual Center as access to the higher Centers. [SIC, 12 August 1973]

Are some people Sexually Centered?

No. Sexual energy is separate and apart from all other energy sources and can be effectively used to reach higher emotions.

If you were to experience sex on a higher level what would be going on?

Cerebral orgasm. The whole soul experiences ecstasy. The body cannot experience ecstasy, only satiation. Only the Essence is capable of that experience [of ecstasy]. [SJC, 27 September 1973]

Noting the above statement that no people are normally in the Sexual Center, this is consistent with the placement of the Sexual Center with the higher Centers, because in the orthodox Michaelian teachings (as with the Gurdjieffian teachings) no people are normally in the Higher Intellectual and Higher Emotional Centers either. Now let's compare the above quote with *MFM*, p. 203, where it says, quoting the passage from the original Michaelian group transcriptions that I just quoted:

Are some people sexually centered?

Yes, but that is not the same thing as having sexual energy. Sexual energy is separate and apart from all other energy sources and can be effectively used to reach higher emotions.

If you were to experience sex on a higher level what would be going on?

Cerebral orgasm. The whole soul experiences ecstasy. The body cannot experience ecstasy, only satiation. Only the essence is capable of that experience [of ecstasy]. [MFM, p. 203]

So, Yarbro's quotation of the Michaels reversed one of Chambers's quotations of the Michaels from a "no" to a "yes" and then added an explanation. To me this change seems consistent with the notion introduced by Yarbro that the Sexual Center is an Ordinal Center, where people typically reside along with the Emotional and Intellectual Centers. This is not the only case where later "channeling" reversed earlier "channeling" in the Michaelian teachings, but personally I do not believe that Yarbro came closer to the truth with this change. Based on personal experience, I agree with the original Michaelian group/Yarbro statement that "sexual" energy is not properly part of any of the Centers. Why? Because both of the Action Centers facilitate it — sexual action in the Ordinal Center, and sexual energy in the Cardinal Center — but are not the source of it, sexual energy being separate from other sources. This point is argued in greater detail below, and in my book The Tao of Relationships. However, this understanding of the place and function of sexual energy does not change the place and therefore function of the Sexual Center on the Ordinal/Cardinal Axis.

In MFM, there is no significant information about the meaning of the two Action Centers beyond their names and their Positive and Negative Poles (p. 114). However, Yarbro does have more to say about the Sexual and Moving Centers in two of her other books. In More Messages from Michael, there was an actual description — a description, by the way, that indicates some dissatisfaction with the name of the "Sexual" Center:

The ordinal center of the action polarity is the sexual center, which has as its positive pole amorality and its negative eroticism. We will remind you all that we do not limit sexuality to copulation and peculiar clothing, but to an entire aspect of reaction. ... [MMFM, p. 37]

The only higher center to which there is constant and relatively easy access is the moving center, which is the cardinal polarity of the sexual center. We perceive, incidentally, that there are those here present who misunderstand our use of the word sexual in this context. If you would prefer another word, the physical excitation center would have something to do with it. Sexuality is not confined to such things as genital contact and carnal appetites. Sexuality is pervasive in all fragments possessing sex. In your society, there are very few fragments sexually centered because the society does not acculturate for it.

However, the extension and therefore the exaltation of the sexual or physical excitation center is the moving center, which applies the stimulus, as it were, to some form of action. As to the higher, moving center [—] and we address this center first because it is accessible to fragments on the physical plane in a fixated or routine sense, and can [therefore] be described in some degree of accuracy [— w]hen the moving center is in its positive pole, it creates a stamina that carries through in all things, not just the body. There is a certain kind

of high that some athletes experience — and we do not mean the masochistic euphoria that results from pain and exhaustion — that leaves the body tired but extended. Dancers experience it more often than more traditional athletes. So do those athletes who work with animals, such as equestrians and lion tamers, where the action of the body and the rapport with the animal become a continuous interaction. [MMFM, pp. 277–278]

The second, longer quote above was attributed to "Jessica" and dated October 1975. (This is after the large group was disbanded in early 1975, and before Chambers met Yarbro and started the *MFM* book project in 1976.) This excerpt is from a session that has not found its way into the greater Michaelian community, so we cannot tell if the channel was actually Sarah Chambers, and if the date is true. (We acquired no original Michaelian group sessions dated between April 1975 and November 1976, but we have reason to believe that there were none.) Whatever the particulars, this information contradicts the information given through Chambers during the original Michaelian group as quoted in the previous section.

Frankly, I regard the *MMFM* statements about the switcheroo of the Action Centers as tangled and tortured rationalizations for a misunderstanding of ambiguities in terminology in the Gurdjieffian teachings and in the original Michaelian group transcriptions. Therefore, exceptions can be taken to a couple of statements in the quote above (from *MMFM*, pp. 277–278).

First: "The only higher center to which there is constant and relatively easy access is the moving center". It is obviously an inconsistency to qualify (as easily accessible) an alleged higher Center the way the lower Centers are qualified as easily accessible. There was no such confusion in the original Michaelian group. It is consistent to put the easily-accessible Moving Center in the Ordinal Action position and the Sexual Center (in terms of its "energy" manifestation) in the extraordinary Cardinal Action position. The original Michaelian group and Gurdjieff/Ouspensky understood it this way, as noted in previous sections of this chapter. It is also the majority opinion of the Michaelian community, as shown in Table 4Ha. This statement from MMFM, alleged to be channeling, seems to me to be illegitimate, a rationalization to cover the original error of switching the Action Centers on the Ordinal/Cardinal Axis. That is to say, it looks to me as if Yarbro went astray in MFM, and then had to backtrack in MMFM, trying to make what should have been a retraction look like a clarification. But that is just my interpretation of the situation. The backtracking continues, as shown in my second exception:

Second, there is this statement: "... the extension and therefore the *exaltation* of the sexual or physical excitation center is the moving center, which applies the stimulus, as it were, to some form of action." This use of the word "exaltation" is reminiscent of the statements about the King being the Warrior exalted, the Priest being the Server exalted, and the Sage being the Artisan exalted found in *MFM* on page 95. Some students might extrapolate and suppose from this statement that the Higher Intellectual Center is the Intellectual Center exalted, and the Higher Emotional Center is the Emotional Center exalted, although this is not stated anywhere in Yarbro. Perhaps one of the ideas that led Yarbro astray here is to think of the higher Centers as just "exalted" versions of the lower Centers, when in fact they are more like opposites, or complements, in the same way that Acceptance and Rejection are complementary, and Realist and Cynic are complementary. In Gurdjieff, the Higher Intellectual and Higher Emotional Centers are described as way different from the lower Intellectual and lower Emotional Centers. Chapter 4G above, "The Higher Centers" goes into this misconception in some detail.

"Trance Dance" and other bodily activities in the lower Moving Center are generally recognized as ways to reach Cardinal Centers, but there are other Ordinal Centers that foster Cardinal Center experience. The Michaels mention a few:

Many of the theoretical scientists are indeed immired in the Intellectual Part of Intellectual Center. This is a route to higher Centers when there is Balance. [SJC, 03 March 1974]

To get to higher Centers, do what Jesus did: fasting, meditation and agonizing self-appraisal; exercise the body [and] learn to love unselfishly. [SJC, 03 July 1973]

Understanding scientific principles is a way to Higher Intellectual energy, just as feeling religion [spirituality] is the way to the Higher Emotional Center. [S/C, 13 September 1973]

Those working in fine arts are connected to the Higher Emotional Center, and those with words [poetry] with the Higher Intellectual Center. [MP, p. 112]

My take on this is that this use of the words "exalted" and "higher" is inconsistent at best and misleading at worst, for the following reason. If one looks at all of the other Overleaves in the Goal, Mode, Attitude, and

Chief Feature categories, it is obvious that the Cardinal trait is not the exalted version of the Ordinal trait on the same Axis (Action, Inspiration, Expression). They are more like opposites of each other, or, to choose a more technical term, complements. The Ordinal of the complementary pairs are typically in some sense the negation of the Cardinal of the pair. Take some pairs at random: Acceptance versus Rejection, Passion versus Repression, Idealist versus Skeptic, Impatience versus Martyrdom, and so on. With some pairs it takes more thought and insight to see the complementarity, but it is inherent in the meaning of Cardinal and Ordinal. Students do Good Work to parse the words until they understand the complementarity, as I have done in my book The Tao of Personalty. This complementarity is a good reason (for consistency's sake) to always use the name Cardinal for what, in the orthodox Michaelian teachings, are called "exalted" Roles and "higher" Centers. By my convention, there are no "exalted" Roles or "higher" Centers, and the Higher Moving Center by any other name is not an exalted version of the Moving Center by any other name, such as the MMFM statement indicates. To be consistent with the other Overleaves, there needs to be more contrast between descriptions of the Ordinal and Cardinal Action Centers than we see described in Yarbro. It is present in the non-Yarbro books, as will be seen in the next section. The nature of the so-called "higher" Centers is also discussed at length in the previous chapter,4G. "The Higher Centers", here in Part Four, and that makes what I am saying here even more clear.

There will be an even more critical examination of this Yarbro passage further on. As another suggestion, when one changes the name of the Center from Sexual to Physical Excitation as proposed by Yarbro, should one not also change the names of the Poles from those with sexual connotations (+Amoral and –Erotic) to those with Physical Excitation connotations? This was not done by Yarbro that we know of (not even by the year 2007 per Chart #18), but it will be discussed further on.

We have one more quote from one of the Yarbro books to review, from *Michael's People*:

Physical Excitation can be experienced in many ways that are not often regarded as sexual, since they have little to do with erotic stimulus, such as hiking, skiing, most forms of sport, cooking, and indeed most physical activity that is not senselessly repetitious. This physical excitation is present in almost all sexual manifestations except those that are abusive. To assume that therefore sexuality is the underlying purpose is far from the point, however. We would say rather that physical excitation is the underlying purpose of sexuality. It is not inappropriate to remember that the physical excitation center and the moving center are on the action polarity and therefore are directly concerned with action. It is the application and focus of the action that determines the degree of Physical Excitation evoked by the action. [MP, p. 143]

Compare this description of the Physical Excitation Center and its mention of the words "hiking, skiing, sport, cooking" with the quote from *MMFM* above about the Moving Center and the mention of the words "athletes, dancers". Study the descriptions and you will see that, according to Yarbro, the descriptions of the two Centers are not that different from each other. Both Centers in Yarbro's description seem to deal primarily with activity of the body, with just a difference in quality between the Ordinal and the Cardinal. It is reasonable to argue, as I did above and as I do further on, that the difference between the two should be less ambiguous and more distinct than that — the descriptions should be in some sense opposites, just as with Traits on other Axes.

Regarding Chart #14 in Part Three from Varda Hasselmann: she has written a book in the German language that has been translated into the English language as *Archetypes of the Soul*. She traces her understanding of the Michaelian teachings to the Yarbro books, rather than to the non-Yarbro contingent of the Michaelian teachings. Consequently, her descriptions of the Sexual and Moving Centers in that book do not differ that much from the descriptions provided by Yarbro, except that they are much more extensive. You may read about them on pages 268–273 and 285–294 of *Archetypes of the Soul*. The descriptions that she provides of the Sexual and Moving Centers are thorough and not much distorted, in my view, but they are switched on the Action Axis from their true locations (in my estimation), and, of course, this does cause some distortion in the descriptions.

That Hasselmann and Yarbro agree does not mean that they are both correct; to me it means that they are both incorrect — based on comparison with the larger body of evidence presented in this chapter. On this matter of the Action Centers, Hasselmann is not really channeling; she is merely subconsciously following the lead of Yarbro, and elaborating on Yarbro's basic (mis-)understanding. Apologies if that sounds harsh and opinionated, but in a case where there are irreconcilable differences among channels, someone must be wrong. My approach is to figure out who is wrong and who is right by examining all of the evidence from various sources, inside and outside the Michaelian teachings, and applying sound arguments to sort out the

evidence, and arrive at a solution that is coherent with other components of the Michaelian teachings, and consilient with other sources. No single source is authoritative; no two sources are authoritative; no three sources are authoritative; the collective evidence of many sources is as close to authoritative as we can approach.

Besides Varda Hasselmann, Shepherd Hoodwin is the only channel/teacher who has more or less adopted the Yarbro version of the placement of Action Centers on the Cardinal/Ordinal ends of the Axis. The reader might wish to compare and contrast his descriptions with hers, in two editions of his books, *The Journey of Your Soul* (First Edition, 1995), pp. 284–288, and *Journey of Your Soul* (Second Edition, 2013), pp. 279–281. He has a lot to say about "sliding" between the lower and higher Action Centers in various activities and experiences, which embellishes Yarbro's understanding of these Centers. This is useful information, because the same insights and understandings pertain even if the names are changed, and even if the descriptions are skewed or confused, and even if the Centers are switched on the Ordinal/Cardinal Axis — as I believe is the case with Yarbro, Hasselmann, and Hoodwin. I perceive Hoodwin's description as more thorough and less confused. Nevertheless, the non-Yarbro contingent other than Hoodwin never adopted Yarbro's placement and understanding of Centers on the Action Axis. They kept it the way Gurdjieff and the original Michaelian group had it, and with them they retained the clear distinction between the pure Ordinal and the pure Cardinal Action Centers. The fact that in any given individual, the two Centers appear in various proportions on a spectrum between the two pure poles of the Axis as described by Hoodwin and Yarbro, does not get around the proper understanding of which Center is on which pole of the Action Axis.

This clear distinction is exemplified in the books of José Stevens.

The Stevens Version

José Stevens published his first book about the Michaelian teachings, *The Michael Handbook*, shortly after *MMFM* was published, in 1986. In Stevens's description of the Cardinal "Higher Moving Center", there is more emphasis on "energy" as distinct from "activity" on the Action Axis:

The higher moving center is concerned with ... pure energy. Higher moving center represents energy in its pure form, just as higher emotional represents love and higher intellectual represents truth. Together they form the triad Truth, Love, and Energy, the basic building blocks of the universe.

This center was originally called sexual center, and then changed to be consistent with higher emotional and higher intellectual centers. Calling it sexual center resulted in people thinking of individuals experiencing sex, and the focus shifted to sexual matters. Sexual intercourse and its many variations is actually mostly moving-centered experience.

The higher moving center governs energy. This relates to a more subtle or core energy than what you use to walk and talk and move your body around as in the lower moving center. The higher moving center has to do with the manipulation of energy beyond the normal functions of walking and running, into a higher and more sophisticated form.... Creative energy originates from the higher moving center ... the manifestation of what you want as goods in your life ... how you take care of your body and whether it is sick or healthy ... it is an interactive energy flow ... your general level of vitality — where your general level of energy is and whether or not it might be blocked. The higher moving center is a feeling of intense energy. In groups it is contagious and manifests as a feeling of camaraderie, well-being and excitedness.... The higher moving center is a Buddhaic plane experience. The energy is already present in the universe and this center determines how you bring it into your body and let it flow through, directing it in terms of intentional behavior. [The Michael Handbook (1986), p. 234–236]

Just so you know, this is also my present understanding of this Center, which I call the Excitation Center. It was actually during the late 1990s that I gradually came around to this understanding of the Sexual, aka Higher Moving, aka Excitation Center on my own recognizance, and then re-found it described so well in Stevens's book from a decade earlier than my realization. It actually took a few years for me to totally depart and reorient myself away from the Yarbro understanding, which I had held since 1981 as a result of studying MFM.

Because of my own difficulty in changing my mind on this matter, I understand why students in the Yarbro camp might find it difficult to depart from their initial training if it became ingrained and habitual and reinforced by repetition. One of the cognitive biases known to psychologists is called "anchoring bias", which is where one tends to believe what one learns first. Then after, that "confirmation bias" kicks in, which is the tendency to count evidence that confirms the original belief and discount evidence that disconfirms the

original belief. Biases such as these are some of the reasons why cults of "true believers" arrive and survive and thrive. More is said about such things in the chapters and sections on Validation in this book and my other books.

Moving right along now after that digression, notice how different this description of the Sexual/Higher Moving Center is from the Moving Center in *The Michael Handbook*, p. 223:

Moving center retains everything you've ever learned ever since you came into your body. You learned how to walk and talk, move your eyes, run, throw and so on. Doing all of what you have learned is moving center. Moving-centered people are constant balls of activity. They tend to be restless and move about the room changing positions frequently. Often they are attracted to such occupations as professional athletics, aviation, police work, traveling sales, or anything that will keep them on the go.

Notice that this description is all about bodily motion and activity. Note that this can be done without the energizing "turn-on" of the Cardinal Action Center. Likewise, the turn-on of the Cardinal Action Center does not require bodily activity — one can feel its turn-on sensation while the body is motionless. An analogy makes this clear: the *internal temperature* of a steel ball (Cardinal Action Center) has nothing to do with whether or not the ball is in *external motion* (Ordinal Action Center). That is to say, the steel ball can be very hot or very cold or anything in between; it can be motionless or careening around wildly or anything in between; and it can have properties of both internal and external movement in innumerable proportions. This analogy is an apt description of the difference between the Moving and Higher Moving Centers. In fact, internal "temperature" is such an obvious analogy for sexual energy that a person who is perceived by others as having a lot of sexual energy is described as "hot", and when a person is "horny" (full of sexual energy) they have "the hots" for a sexual encounter.

The Stevens description makes the difference between the two Centers very clear and distinct, as they should be — because that is an obvious fact with all of the other complementary Trait pairs. The Yarbro description quoted in the previous section confuses the functions and descriptions of these two Centers. My surmise is that this ambiguation was probably a consequence of switching their original and proper positions on the Cardinal/Ordinal Action Axis. Furthermore, people usually express some mixture of the two Centers rather than express one or the other extreme, and this has perhaps confused Yarbro and Hasselmann and Hoodwin.

Comparing Yarbro and Stevens

Yarbro and Stevens (and Hoodwin and myself and some others) are in agreement that the term Sexual Center as used by Gurdjieff and in the original Michaelian group is too limiting for either of the Action Centers — the term is misleading and obsolete. In fact, the original Michaelian group channeling, quoted above, does say that sexual *energy* is separate and apart from other energies, presumably meaning not a function limited to any particular Center. Sexual libido and activity generally happen during the middle years of a lifespan due to hormones involved in reproduction, not in youth and old age, therefore independently of the function of other Centers. However, you must do sexual *activity* in an Action Center, whether one assigns that to the Ordinal or the Cardinal Pole of the Axis, so there is potential for confusion there. Refer to my book *The Tao of Relationships* for a thorough explanation of sexual energy that is better understood as a particular kind of "polarized" (yin and yang, Ordinal and Cardinal) energy.

If one studies and ponders these quotes from Yarbro and Stevens, it is obvious that there is significant disagreement between Yarbro and Stevens in their descriptions. When one reads Yarbro's description of the "Physical Excitation" (Ordinal Action) Center, it seems only somewhat like Stevens's description of the "Moving" (Ordinal Action) Center, and when one reads Yarbro's description of the "Moving" (Cardinal Action) Center, it seems only somewhat like Stevens's description of the "Higher Moving" (Cardinal Action) Center.

Let's look at this more closely. Reading the description from Yarbro of the Ordinal Action Center, it can be said that the phrase "physical excitation" and its description on its own really does not clear up all of the misunderstanding that arose around the word "sexual". Does it mean externally active as in whole-body movement, or does it mean internally active as in "turned-on"? The latter description does not appear in the description given in Yarbro. I do not see any conclusive evidence that it refers to the "energy" that the non-Yarbro writers attribute to the "Excitation" Center, whatever they name it and wherever they place it on the Cardinal/Ordinal Axis. There is of course arousal associated with the physical activities mentioned in connection with the Ordinal Action Center, but this does not seem to be the same thing as what "energy" is according to Stevens. It looks to me to be easier to make a case for an internal turn-on in Yarbro's Cardinal

Action Center — what with "runner's high" and other activities leading to an altered state of consciousness. That is why I think that Yarbro and Stevens are only remotely reconcilable, reconcilable in the sense that they both put turn-on energy in the Cardinal Pole of the Action Axis, and your everyday bodily activities in the Ordinal Action Center. It does make more sense to me to put grounded — normal daily bodily — activity in the Ordinal Center, and ungrounded, entrancing, activity in the Cardinal Center than the other way around. What makes this assignment ambiguous is that Yarbro describes very little difference between the two Centers, and this is solved when Stevens describes a lot of difference.

Concluding Remarks on the Action Centers

Considering the discrepancies between the contingents claiming to be official spokespersons for the Michaels, I have had to sort this out on my own. Good channels come down on both sides of this issue, and long-time students with fine minds come down on both sides of this issue. The placement of the two Action Centers may be ambiguous, but what is not ambiguous is that it is more important that one understands and utilizes one's Centers properly. That is one of the core teachings of both Gurdjieff and the Michaels, and it is covered, explained, and emphasized in my other books as well as in all of the Michaelian teachings books, regardless of what they say about this picky matter. All that said, it is worth at least something that we have a correct understanding of both Action Centers, and it looks to me as though we cannot have that correct understanding without understanding the nature of Ordinal Action and Cardinal Action. Personally, I happen to have tumbled over the years to an understanding of the Cardinal Action Center very similar to the description given by Stevens, and very dissimilar to the description by Yarbro. That is because Stevens makes a greater distinction between the two — the Cardinal is not just an "exalted" version of the Ordinal.

One can read books or websites about the Michaelian teachings by other authors and find that they have mostly followed Stevens's understanding of the Action Centers. This fact is shown in the table in the Introduction to this chapter, and the various Overleaf Charts reproduced in this volume. For instance, refer to *Michael: the Basic Teachings* (1990), pp. 119 and 129. The authors of that book have a slightly different, and therefore informative, understanding of the two Action Centers, but are mostly in agreement with Stevens rather than in agreement with Yarbro. For a complete understanding of what is going on with these two Centers, it is useful to read about them from the various resources, and integrate the various perspectives.

I have done that study and integration; following is my summary and conclusions, in a numbered list, as regards the Action Centers.

- 1. In Gurdjieff groups and the original Michaelian group, evidences and arguments indicate that the Moving Center was a so-called "lower" Center, and the Sexual Center was a so-called "higher" Center, higher and lower being terms used in both groups. In my opinion, these designations, higher and lower, should be superseded by thoughtful students of the Michaelian teachings. My preference is to use the terms Ordinal and Cardinal in substitution for the words lower and higher in reference to the Septenary of Centers.
- 2. In MFM, the Yarbro contingent proposes a reversal of the higher/lower, Cardinal/Ordinal placement of the two Action Centers from their original placement. If this was done intentionally, then it was done for reasons unknown outside that closed group. This created the inconsistency that the Moving Center was said to be the only Cardinal Center that is easily accessible, unlike what was said of the other Cardinal Centers.
- 3. In MMFM, the Yarbro contingent said that Sexual Center was a misleading term and renamed it Physical Excitation Center, while suggesting no appropriate change to the names of its Positive and Negative Poles.
- 4. The non-Yarbro contingent retained the original Axis placement, but the same as the Yarbro contingent recognized that Sexual Center was a misleading term because it was limited and misleading, and some of them changed it to Higher Moving Center to be consistent with the names of the other Cardinal Centers, Higher Emotional and Higher Intellectual.
- 5. It looks to me as though Yarbro, in *MMFM*, moved closer to the understanding of the original Gurdjieffian/original Michaelian group understanding of the Ordinal and Cardinal Centers, even though the names she used were still reversed from their original Axis placements. Said another way: it looks to me as though Yarbro in *MMFM* had to backtrack from her original *MFM* error of switching the Action Centers on that Axis, resulting in a situation where, based on her *MMFM* descriptions, one

- can hardly distinguish between the two Centers. However, the non-Yarbro contingent has always had a very distinguishable understanding of the qualities and nature of Ordinal and Cardinal Action Centers, as Gurdjieff did.
- 6. I have come to prefer the non-Yarbro understanding for reasons explained above. In order to avoid some confusion caused by the two contingents placing the Moving Center on opposite sides of the Ordinal/Cardinal Axis, I have first of all changed adjectives to nouns (to be consistent with names of other Traits), and second of all, for the time being, I have settled on certain names for these two Centers with their Positive and Negative Poles as follows: Ordinal Action Center = Motion with +Endurance and -Activity, and Cardinal Action Center = Excitation with +Vitality and -Arousal. These Centers and Poles are discussed at length in my book *The Tao of Personality*.
- 7. I also renamed the other two Cardinal Centers Concept and Sympathy, because those names say something about their nature that avoids the misleading word "higher". The nature of the Cardinal Centers is covered in detail in the previous chapter, 4G, of this *History* book.
- 8. Sexual energy, said in the original Michaelian group and MFM channeling to be separate from the Centers, is simply the strongest type of energy exchange appropriated by the animal organism for the perpetuation of the species. However, as explained in my book The Tao of Relationships, there are other categories of energy, somewhat analogous to physical sexual energy, and that are often confused with sexual energy, because they are likewise polarized yin-yang and are often experienced between genders and entangled with sexual energy, and they can be correlated with the Centers and the chakras, but they serve functions other than sexual energy, and they are more subtle. For this reason, I prefer to do away with the term "sexual" energy except when it applies to the reproductive realm and replace it with the term "polar" energy for these additional types that are involved with Centers and chakras.
- 9. The sex *act* can happen without any sexual *energy* exchange (masturbation is the most extreme example of this) this is of the Motion Center. Contrariwise, Sexual *energy* can be exchanged without any sexual *action* (the "intercourse" can happen via aura mingling while motionless) this is of the Excitation Center. The Excitation Center is "horny", not just for sex, but for life in general in a way that is not just driven by hormones for reproduction purposes.
- 10. Yarbro said that the Moving Center was a Cardinal Center, and that it was the only Cardinal Center to which the typical person had routine access. Most Michaelian students say that the Moving Center is an Ordinal Center. I say that the Excitation Center is the Cardinal Center to which a typical person is most likely to have routine access, according to the following argument. To the extent that the Excitation Center includes sexual energy, aka libido, a strong Excitation Center will result in the trait being passed on to the next generation; if your parents were horny, you are more likely to be horny, and you are more likely to pass the gene on to your children. There is no such reproductive impulse connected with the Cardinal Intellectual (aka Conceptual) and Cardinal Emotional (aka Sympathy) Centers; it might even be the case that those two Cardinal Centers down-regulate the reproductive impulse. Therefore, the evolutionary pressure of "natural selection" will produce more people with a strong Excitation Center than people who have either of the other Cardinal Centers. This idea is predicated on the supposition that the Overleaves are configured in the etheric body before birth into the physical body, except that Centering seems to be more 'hard-wired' into the organism, the brain structure, than the other categories of Overleaves.

Now that we have what I regard as a proper understanding of the Centers — one of the most confused components of the Michaelian teachings — it is appropriate that we turn our attention to the chakras, which are often correlated with the Centers. In the next chapter we review the Michaelian-source information about chakras, and we find it to be even more confused than the Centers.

Chapter 4J

THE SEVEN CHAKRAS

This chapter is a continuation of Chapter 1C, "The Seven Chakras", in Part One of this *History* book. In that chapter there is an extraction from the Wikipedia article on chakras, and extractions from other sources. Plus, there is information about how chakras were understood in the original Michaelian group. In my analysis there, it appears that the two, Wikipedia+ and original Michaelian group, do not match in six out of seven correlations. This chapter here in Part Four picks up where Part One left off, and discusses the understanding of chakras in the Michaelian teachings community subsequent to the original Michaelian group. Fair warning: it is a mess; one of the biggest messes in the Michaelian teachings; here again, there is not much of a match-up among Michaelian teachings sources, or with sources external to the Michaelian teachings. Nevertheless, because of the ubiquity of the chakra system among spiritual seekers, I believe that it is important that we get the understanding of it right, so that it is correlated correctly with other septenaries, both inside and outside the Michaelian teachings community.

As with other chapters in this Part, my guiding lights for fixing Michaelian messes are the three Cs:

- 1. CONSISTENCY: One of my biggest complaints about the Michaelian teachings (as currently formulated) is that it is overflowing with egregious contradictions, a feature of the teachings which, of course, detracts from its credibility in the perception of any person who values consistency as a property of truth. The subject of chakras is one of the best examples of self-contradiction reviewed in this Part of this *History* book.
- 2. COHERENCE: Another one of my biggest complaints about the Michaelian teachings (as currently formulated) is that it is not coherent within itself, meaning that students have not been taught how components of the teachings fit together and follow an underlying or overarching pattern when put together with other components of the Michaelian teachings. In this chapter I will connect and correlate the chakras with other systematic components of the Michaelian teachings.
- 3. CONSILIENCE: Yet another one of my biggest complaints about the Michaelian teachings (as currently formulated) is that it is not consilient with other esoteric teachings that talk about the same subject, meaning that the Michaelian teachings about chakras does not agree with or conform to the consensus of other esoteric teachings. In this chapter I will connect and correlate the chakras with other systematic components of some other teachings.

As with other systematic components of the Michaelian teachings that are huge messes, it is extraordinarily messy to clean it up and make it tidy. Consequently, some readers might be troubled by the messy cleanup process. However, this is the way the world works: we all do the best we can at the time, and some people make messes and some people unmess messes.

Introduction

Just in case any reader does not know what a chakra is, these are said to be "energy centers" of the human body. It is said that there are seven main chakras, along the mid-line of the front and/or back side of the body, and it is said that there are numerous other minor chakras. This is a teaching that has been extant in the oriental world for thousands of years, and then it spread into the occidental world in the late Nineteenth and the Twentieth Centuries. Typically, the seven main chakras are rank-numbered from one to seven, from bottom to top along the body from the perineum to the top of the head. Typically, these are named as follows: Root or Sacral or Groin, Spleen or Navel, Solar Plexus, Heart, Throat, Brow, and Crown, respectively. (Various sources have differences in the names and locations of the chakras below the heart chakra.) Typically these

are assigned the colors of the rainbow as follows: Red, Orange, Yellow, Green, Blue, Indigo, and Violet, respectively. Table 4Ja below shows these traditional rank-numbers, names, and colors in the top row. Wikipedia has a good introduction to the chakras, and >https://www.chakras.info/< is another scholarly website, and it also has a history of the concept.

Even though the chakra system is not a part of the Michaelian teachings *per se*, information about it is widely known in esoteric circles, and that includes the Michaelian teachings community. The Centers are a part of the Michaelian teachings, one of seven Overleaf categories. Several Overleaf Chart–makers have correlated chakras with Centers and then shown them on their version of the Chart. Several other people within the Michaelian teachings have ventured to correlate chakras with Centers and put their correlations in writing, either in books or on websites. There are significant differences among these sources, a confusion that indicates to me that there is good reason for us to compare and contrast them here in this *History* book, to see what we can learn, and presumably gain from the intellectual exercise.

From the original Michaelian group to the present, the question has been: do the chakras correlate with the Centers? The reason the question is repeatedly asked is that the similarities of the descriptions of chakras and Centers strongly suggests that there is a correlation. The answer from the Michaels and elsewhere has generally been Yes. The next question has naturally been: then what is the correlation? The answer has often differed from channel (or student) to channel (or student).

Nowhere does anyone say that the Centers *are* the chakras. When/where I show "Center = chakra" (or other designations connected by the *equals* symbol) in this and in other chapters, I use that as a shorthand for "...corresponds somewhat with...". If the discussion is about septenaries that are manifestations of the Natural Sequence (as I regard the chakras and the Centers to be) then I regard the correspondences as exact even when the descriptions differ somewhat. The explanation for this is that the descriptions of the chakras and the Centers differ to suit their *environments*. The Centers are in the Personality whereas the chakras are in the body — very different environments, so naturally the descriptions are somewhat different — but recognizably similar enough in terms of some similar function to make an accurate and confident correlation. In other words, chakras and Centers share some of the same underlying essence because they are instantiations of a deeper pattern, the Natural Sequence schema, as with other instantiations of Tao's Template.

Table 4Ja below is a summary of all of the sources of Charts and books and websites that will be examined in this chapter. In order to be consistent in the tabulation, I use the original names of Centers as revealed in the original Michaelian group and in *Messages from Michael (MFM)* even when the source used a different word, except as follows.

This chapter is complicated by three factors, arising from the fact that there is some confusion about chakras in the esoteric community, and there is also some confusion about Centers in the Gurdjieffian and Michaelian communities. So, obviously, this adds a layer of difficulty to the process of making explanations, as well as to the process of making correlations. Following is a summary of the result of my research.

- 1. There is some disagreement in the esoteric communities about the names and locations and functions of the lower chakras, those below the Heart Chakra: I sorted this out in Chapter 1C on chakras in Part One. My solution to those discrepancies was to:
 - make the so-called Root or Base Chakra the Zeroth Chakra and correlate it with what I refer to as the "Physiology" Center, referred to as the "Instinctive" Center in the Gurdjieffian teachings (see Chapter 4F above);
 - make the Sacral aka Gonadic Chakra the First Chakra and correlate it with the Moving Center;
 - make the Navel aka Spleen chakra the Second Chakra and correlate it with the Emotional Center;
 - make the Solar Plexus Chakra the Third Chakra and correlate it with the Intellectual Center.
- 2. The understanding of the Action Centers is confused in the Michaelian teachings. I sorted this out in Chapters 4H on the Action Centers. The confusion is caused by the fact that their names have been changed by various channels during the development of the Michaelian teachings, and the fact that the placements of the Centers on the Action Axis, Ordinal versus Cardinal, is in dispute. My solution to those discrepancies was to:
 - accept the pattern of most Michaelian teachings contingents, namely those who regard the
 Moving Center as the Ordinal Action Center as it was in Gurdjieff and the original Michaelian

- group, and change the name of the Sexual Center to the Higher Moving Center and regard it as the Cardinal Action Center.
- This solution is still complicated by the fact that Yarbro and Hasselmann and Hoodwin use the name "Moving" Center for what other sources name the Higher Moving Center. I point this out in the discussion that follows, then revert to the more common view, and my view, in order to be consistent. In the table below, Table 4Ja, I show the Moving Center as Ordinal and the Higher Moving Center as Cardinal, regardless of what the source named them.
- 3. Some of these correlations are also complicated by my idea that the so-called "Instinctive Center" correlates with both the Zeroth Chakra and the Fourth Chakra, depending on one's understanding of "instinct". My solution is to make the "Physiology" Center the Zeroth Center and correlate it with the Root Chakra, the lowest of four lower chakras, and make the "Impulse" Center correlate with the Fourth Chakra, the Heart Chakra. However, I have decided not to show the Zeroth chakra, aka Physiology Center, in Table 4Ia because it is useless to do so in the context of this chapter.

Because it would 'muddy the waters' beyond tolerance to attempt to accommodate these three confusions completely in this chapter, I prefer to ignore them or simplify them in Table 4Ja. Even so, where appropriate, I take note of them in the course of this chapter. The purpose of this chapter is to resolve the confusions with the fixes I propose, not to revisit the confusions that are addressed fully in other chapters.

Four of the Sequences discussed in Chapter 2C in Part Two, "Proposed Sequences of the Overleaves", can be found in this tabulation. Thus, for comparison, the Gurdjieffian Sequence, the Natural Sequence, the Vibration Sequence, and the Michael Math Sequence are also shown in Table 4Ja, because some of the Chart–makers and writers apparently used them as templates for some of the correlations. In the following presentation in this entire section, note that these are named and abbreviated as Gurdjieffian Sequence (GS), Michael Math Sequence (MMS), Vibration Sequence (VS), and Natural Sequence (NS).

In Table 4Ja, I colored the cells of those sources who provided color assignments to the chakras and/or Centers. Refer to Chapter 4P, "Color Assignments", for a thorough essay on that subject. Only where the source provided a color for the Center-chakra correlation are the rows or cells colored.

Following this table, we will discuss the Charted and written sources in detail. Finally, arguments and evidences will be presented to arrive at a suggested resolution to the Center–chakra discrepancies.

| Table 4Ja — ATTEMPTS to CORRELATE CHAKRAS with CENTERS | | | | | | | | |
|--|-----------------------|---------------------------|---------------------------|--------------------------|-------------------------|-------------------------|----------------------------|--|
| RANK → NAME → COLOR → | FIRST GROIN RED | SECOND NAVEL ORANGE | THIRD PLEXUS YELLOW | FOURTH HEART GREEN | FIFTH THROAT BLUE | SIXTH BROW INDIGO | SEVENTH CROWN VIOLET | |
| GURDJIEFFIAN | Moving | Emotional | Intellectual | [Balanced] | Hi'r Moving | Hi'r Emot. | Hi'r Intell. | |
| Chambers1 | Instinctive | Moving | Emotional | Intellectual | Hi'r Moving | Hi'r Emot. | Hi'r Intell. | |
| Chambers2 | Emotional | Moving | Intellectual | Instinctive | Hi'r Moving | Hi'r Emot. | Hi'r Intell. | |
| MICHAEL MATH | Emotional | Intellectual | Moving | Instinctive | Hi'r Intell. | Hi'r Emot. | Hi'r Moving | |
| Yarbro | Emotional | Intellectual | Moving | Instinctive | Hi'r Intel. | Hi'r Emot. | Hi'r Moving | |
| Hoodwin | Emotional | Intellectual | Moving | Instinctive | Hi'r Intell. | Hi'r Emot. | Hi'r Moving | |
| Tolley1 | Emotional | Intellectual | Moving | Instinctive Hi'r Intell. | | Hi'r Emot. | Hi'r Moving | |
| VIBRATION | Warrior | King | Scholar | Server Sage | | Artisan | Priest | |
| Stevens1 | Instinctive | Hi'r Moving | Moving | Emotional | Intellectual | Hi'r Intell. | Hi'r Emot. | |
| Stevens2 | Instinctive | Hi'r Moving | Moving | Emotional | Intellectual | Hi'r Emot. | Hi'r Intell. | |
| Taylor | Instinctive | Hi'r Moving | Moving | Emotional | Intellectual | Hi'r Intell. | Hi'r Emot. | |
| Tolley2 | Instinctive | Hi'r Moving | Moving | Emotional | Intellectual | Hi'r Emot. | Hi'r Intell. | |

| Table 4Ja — ATTEMPTS to CORRELATE CHAKRAS with CENTERS | | | | | | | | |
|--|-----------------------|---------------------------|---------------------------|----------------------------------|--------------|-------------------------|----------------------------|--|
| RANK → NAME → COLOR → | FIRST GROIN RED | SECOND NAVEL ORANGE | THIRD PLEXUS YELLOW | HEART THROAT BRO | | SIXTH BROW INDIGO | SEVENTH CROWN VIOLET | |
| Basic Teach. | Instinctive | Hi'r Moving | Moving | Emotional Intellectual Hi'r Inte | | Hi'r Intell. | Hi'r Emot. | |
| Cocconi | Instinctive | Hi'r Moving | Moving | Emotional Intellectual Hi | | Hi'r Intell. | Hi'r Emot. | |
| Hasselmann | Instinctive | Moving | Hi'r Moving | Emotional | Intellectual | Hi'r Intell. | Hi'r Emot. | |
| Benning | Instinctive | Intellectual | Moving | Emotional | Hi'r Intell. | Hi'r Emot. | Hi'r Moving | |
| NATURAL | Moving | Emotional | Intellectual | Instinctive | Hi'r Intell. | Hi'r Emot. | Hi'r Moving | |
| Wittmeyer | Moving | Emotional | Intellectual | Instinctive | Hi'r Intell. | Hi'r Emot. | Hi'r Moving | |

To the extent possible, these sources have been grouped according to the Sequence apparently preferred by the named individuals. One cannot be certain that one person copied from another specific person just because they are similar or even identical.

Even a cursory look at this table reveals that there is a considerable amount of inconsistency. Scanning down the columns, we see that no particular chakra is consistently correlated with any particular Center. Some chakras are correlated with three Centers, some with four Centers, and some with five Centers; higher Centers are sometimes correlated with lower chakras and *vice versa*. On the basis of those discrepancies, a lot of these people must simply be wrong. (Actually, all of them must be wrong except Wittmeyer, as we will see.) How is it that several channels in the Michaelian teachings do not agree? How is it that three of the channels disagree with themselves? Are the descriptions of the chakras and Centers really so ambiguous that it makes them impossibly difficult to correlate? Are there some confounding factors that cause channels and students to be 'all over the map', so to speak? Is there actually no correlation, and are attempts to do so just exercises in futility and we should give it up already? Can we say that the Michaels are inconsistent just because their channels do not agree? What is really going on here?

I would like to believe that I am not the only one who cares about this sorry state of affairs, so let's you and me look at what has been said in the Michaelian sources over the decades, and see if we can find a sensible solution to the nonsense.

Examining the Sources

Let's examine the sources one by one and see if we can tease out answers to the questions posed above. First up: an acknowledged precursor to the Michaelian teachings.

Georges Gurdjieff

The Gurdjieff row of Table 4Ja above shows the lineup of Centers per the Gurdjieffian teachings as I have been able to reconstruct it for the purposes of this chapter. There are some questionable things about it: refer to Chapter 1D in Part One, "The Seven Centers", Chapter 1J in Part One, "Gurdjieff's Levels of Being", and Chapter 4F, "The Instinctive Center", for a complete account of the reconstruction. Gurdjieff did not provide a correlation of chakras with Centers, so far as I know, and he did not assign colors to the Centers, but he did assign ranks to the Ordinal Centers when he correlated Centers with his Levels of Being. Therefore, the assignment of colors to this row is indirect. The thing that is distinctive about this row is that the sequence of the "lower" Centers is *repeated* (not mirrored or reversed) in the "higher" Centers.

My other reason for including this row is that this sequence and this correlation of Centers and chakras appeared in the original Michaelian group transcriptions as the product of the first Michaelian channel, none other than:

Sarah Chambers

We all know that Sarah Chambers was the first Michaelian channel in the current crop. Following is some of Chambers's channeling found in the transcriptions of the original Michaelian group. Underlines in the quotations are my emphasis; my comments are interspersed among the quotations.

I want to know about chakras.

The significance probably lies in the fact that so many have become aware of this at all, some not even on the path, or following strange pseudo-paths. These 'chakras' of course correspond to the measurable energy flow from the individual Centers. In other words, the <u>lowest chakra</u> corresponds to the output of the <u>Instinctive Center</u>.

Can the chakras be perceived through the 'third eye' [Brow Chakra]?

They are normally perceived through the Emotional Center or gut chakra.

Do the Centers and chakras correspond?

Yes, they do. This is what the yogis perceive when they expound on this. In one able to visualize the <u>auras</u> this becomes easy, for there is a transitory puff of <u>color</u> accompanying significant outputs, such as occurs in the digestion of the major meal of the day or in deep meditation. The <u>gut chakra</u> [?] is <u>Emotional Center</u>, <u>Intellectual Center</u> manifests itself at the <u>chest level</u> [Heart Chakra], and so forth. The <u>Sexual Center</u> can be measured at the level of the <u>thyroid</u> [Throat Chakra]; the <u>Higher Emotional Center</u> at the level of the <u>pineal</u> body; the <u>Higher Intellectual Center</u> at the level of the anterior <u>pituitary</u>. Procreation is handled by the <u>Moving Center</u> in 'sleeping' animals [which includes most humans]. [SJC, 16 June 1974]

Is there a correlation between energy Centers and chakras?

When one becomes Balanced there is tremendous correlation, yes, for you feel the use of the energy in these spots described as, or called chakras, with the <u>Higher Intellectual Center</u> being, of course, analogous to the <u>highest chakra</u> or the chakra of liberation that places it above the physical body. All the chakras would be felt as energy centers, yes. At the moment that the <u>Emotional Center</u> was responding to an appropriate situation, this would be felt in the <u>gut chakra</u>. [S/C, 25 January 1975]

Combining the information from these two Q&A exchanges would seem to put Chambers's sequence of chakras = Centers as follows (common ranks and names and colors are in the row under the title row):

| Table 4Jb — CORRELATION of CHAKRAS with CENTERS per the ORIGINAL MICHAELIAN GROUP | | | | | | | | |
|---|--|---------------|-----------|--------------|---------|------------------|----------------------------|--|
| RANK → NAME → COLOR → | → ROOT SACRAL/NAVEL PLEXUS HEART THROAT BROW CROWN | | | | | | SEVENTH CROWN VIOLET | |
| OMG NAME | lowest | (procreation) | gut | chest | thyroid | pineal | Pituitary or highest | |
| CENTER | Instinctive | (Moving) | Emotional | Intellectual | Sexual | Higher Emotional | Higher Intellectual | |

My comments on this table are as follows:

- RANK: The first row lists the common rank-order sequence universally ascribed to the chakras in
 various modern sources. This is partly for convenience in talking about them, but it is also a
 developmental sequence in that it is said that kundalini energy rises from the lowest chakra to the
 highest chakra during a certain type of progressive and expanding awakening or liberating or
 enlightenment experience.
- NAME: The second row lists some common names for the chakras in modern sources. These names also reveal their location on the body, from the "root" at the perineum area to the top of the head, the "crown". There is disagreement among sources about the names and locations of the lower chakras; the table shows my preference.
- COLOR: The third row lists the rainbow spectrum sequence of primary and secondary colors that are commonly ascribed to the chakras in various modern sources. These color attributes are not real in any way; they were ascribed mostly for convenience in talking about the chakras. The analogy seems to be with lower versus higher "vibrations" on the spectrum of red to violet, which is a metaphor for the rise of kundalini energy up the chakras, and the psycho–social–spiritual development from the lower self to the higher self.

- OMG NAME: The fourth row lists the words used in the original Michaelian group channeling to refer
 to the location of the chakra on the body. Notice that although the locations are the same as the
 common locations, none of these are the common names of the chakras, which are shown in the
 second row. Besides not using the common names for the chakras, they are not assigned ranks or
 colors in the channeling.
- CENTER: The sixth row lists the Centers that correspond to the chakras, according to the channeling. Other channels and sources have a different correlation, as we see further on in this chapter.

This is referred to as Chambers1 in Table 4Ja at the beginning of this chapter. As one can see by comparing Chambers1 with the row above it in Table 4Ja, the sequence tabulated above is similar to the Gurdjieffian Sequence (GS) for the Centers. (The differences are explainable, but irrelevant to this chapter.) I believe that Chambers was subconsciously following the Gurdjieffian teachings (with which she was very familiar), rather than truly channeling the Michaels, because none of the usual names of the chakras were given, and as we see in the subsections further on, they do not fit the traditional descriptions or sequence of the chakras. This leads me to believe that Chambers likely did not know the traditional names and placements, or they would have been used.

I have some further comments on the Chambers1 correlation of chakras and Centers:

- 1. Notice that this sequence follows neither the Natural Sequence nor the Michael Math Sequence nor the Vibration Sequence nor any of the other usual sequences favored by other expositors of the Michaelian teachings. The Michael Math Sequence is thoroughly examined in Chapter E-2 of this *History* book and the NS is thoroughly explained in my book *The Tao of Cosmogony*.
- 2. The Instinctive Center is placed first; then the lower triad is per the Natural Sequence (Moving, Emotional, Intellectual). Refer to Chapter 4F above, "The Instinctive Center" for a discussion about this. This placement of the Instinctive Center is contrary to its placement on the Overleaf Charts that originated within the original Michaelian group, but it makes sense if one accepts my evidence and argument that the Instinctive Center in the Gurdjieffian teachings referred more to physiology than it did to personality, which is why I prefer to call the lowest Gurdjieffian Center the Physiology Center.
- 3. The Sexual Center is placed with the higher Centers (and higher chakras). This is discussed at length in Chapter 4H above, "The Action Centers", which discusses the names and placements of the Action Centers.
- 4. The sequence of the higher triad (Fifth, Sixth, Seventh) repeats the sequence of the lower triad (First, Second, Third) in regard to Action, Inspiration, and Expression not the reverse as in the Natural Sequence. That is, they are sequenced the way the Gurdjieffian Sequence did it: the higher triad repeats the sequence of the lower triad, rather than mirroring it.

There is some disagreement in esoteric circles about the location of the lower chakras, and some of that might show up in the correlations shown in this table. For instance, the so-called "gut chakra" might refer to the Navel or Spleen Chakra rather than the Solar Plexus Chakra, and the so-called "procreation chakra" might refer to the gonads rather than the Navel Chakra, because the gonads are at different locations in male bodies versus female bodies. It is not just that there is disagreement within the Michaelian teachings; there is also disagreement among other sources, which is probably partly responsible for disagreements among some Michaelian teachings sources.

In her later years, Chambers had some more to say about the chakras. Some of it agreed with her early years, but some of it did not. Underlines in the quotations are my emphasis:

True Rest means activities of the third eye [aka brow/sixth] chakra and involve getting in touch with Higher Emotional Center, even if that contact is superficial. [unpublished, 08 March 1996]

... we endeavor, in many ways, to point the way toward the opening of <u>Higher Emotional Center</u> [previously said to be the sixth chakra] through the opening and liberation of the <u>seventh or crown chakra</u>. [unpublished, 26 January 1997]

I want to ask about the relationships or resonances between the chakras and the goals.

Acceptance/crown [seventh]; growth/sixth [brow]; rejection/third [plexus]; retardation/one [Root/Sacral]; dominance/fifth [throat]; submission/two [spleen/navel]; stagnation/four [heart]. [unpublished, 07 June 1997]

Unlike the 1970s channeling, here the chakras are assigned ranks, and twice some common names are used (Crown, Third Eye). Undoubtedly Chambers herself learned something in the intervening two decades. By

further correlating those Goals with their corresponding Centers, as typically done, the correlation of Centers and chakras per the later channeling is derived, as follows:

```
1st = Retardation = Ordinal Inspiration = Emotional Center
```

2nd = Submission = Ordinal Action = Moving Center

3rd = Rejection = Ordinal Expression = Intellectual Center

4th = Stagnation = Neutral Assimilation = Instinctive Center

5th = Dominance = Cardinal Action = Sexual [Higher Moving] Center

6th = Growth = Cardinal Inspiration = Higher Emotional Center

7th = Acceptance = Cardinal Expression = Higher Intellectual Center

This lineup is referred to as Chambers2 in Table 4Ja. The first, third, and fourth chakras do not agree with her earlier channeling, but the other four do. This sequence is not duplicated by any other source within the Michaelian teachings, and it does not fit with the usual mainstream description of the chakras, as we will see further on. So, we know where Chambers got her first correlation of chakras with Centers — from Gurdjieff — but we do not know where Chambers got the second correlation of chakras with Centers … unless we assume (which I do not) that "Michael" correctly got his message through in this one instance and not in all of the other instances alleged to come from them.

Leslie Briggs

After the original Michaelian group ceased open operation in early 1975, Leslie Briggs, who had been a member of the original Michaelian group, took up the mantle of channeling from Chambers, and did so with a mostly different group of people, apparently unbeknownst to Chambers. The channeling was recorded and transcribed by her mother Louise, and has been published by The Center for Michael Teachings, Inc., in the book *Michael Speaks* — the Legacy of Leslie [Susan] Briggs (LSB). In that book we find that some of her students asked about the correlation of chakras with Centers, but the answer they received from Briggs/Michael was that there was no correlation, contrary to channeling during the original Michaelian group, as documented above, and after, as documented below. This happened about three times over the years, in the early 1980's. So far as I know, this was and is the only voice within the Michaelian teachings community that negates the notion that Centers at least loosely correlate with chakras, even if there is a scrambling of the correlation, depending on whom you ask. The problem within the Michaelian teachings community, as I see it, is that they have not come to a consensus on what the correlation is.

There was one session in which the following Q&A exchange occurred:

(There was some question that didn't get taped. No doubt it was about chakras.)

You have chakras, which are energy fields. They are not Centers. They're energy centers, but they're not Centering.

In Actualism, there are centers that don't necessarily correspond with the chakras.

You can think of the Intellectual Center as your brain, the Moving Center as your body (arms, legs), Emotional Center as the hypothalamus. [LSB, 10 November 1980]

This information is obviously not applicable to this section on correlation of chakras with Centers.

Chelsea Quinn Yarbro

During the years 2007 to 2010, an anonymous member of the Yarbro group, "Mature Scholar Steve", led an internet discussion group on >www.yahoo.com<. In August of 2009 he posted a spreadsheet that showed chakras correlated with the other septenaries of the Overleaf System. The chakras were not named, but colors were given, and they approximate the colors of the rainbow that are commonly assigned to the chakras in the esoteric community. Therefore we can construct the correlations of Centers to chakras per the Yarbro contingent of the Michaelian teachings as follows:

```
ONE = Ordinal Inspiration = Red and Violet = Emotional = Groin
```

TWO = Ordinal Expression = Red and Orange = Intellectual = Navel

THREE = Ordinal Action = Yellow-Gold to Yellow-Green = Sexual [Lower Moving] = Plexus

FOUR = Neutral Assimilation = Green to Turquoise = Instinctive = Heart

FIVE = Cardinal Expression = Turquoise to <u>Blue</u> = Higher Intellectual = Throat

SIX = Cardinal Inspiration = All Psychological Colors = Higher Emotional = Brow

SEVEN = Cardinal Action = All Impossible and Possible Colors = [Higher] Moving = Crown

In Table 4Ja, the first five Centers of the "Yarbro" row are colored, but the last two are not. Also the Action Centers are shown as I understand them, not as Yarbro understands them, just to maintain some consistency in Table 4Ja as a whole.

The lineup shown above the previous paragraph is shown on Chart #18 in Part Three. This correlation is per the Michael Math Sequence, which is shown in the row above the row labeled "Yarbro" in Table 4Ja. There should be no surprise about this, because Yarbro presented the Michael Math Sequence to the world in *MMFM* in 1986. Hoodwin and Tolley duplicated this sequence and correlation of Centers and chakras, as we will see further on. I say "duplicated" rather than "copied" because the non-Yarbro Michaelian teachings contingent has known about the Michael Math Sequence since 1986, but is even now probably not aware of this correlation, which was only revealed in 2009.

This is an appropriate place to emphasize the point that I make in several places in this *History* book, namely that when a channel knows what another channel has already said, then usually the later channel agrees with the earlier channel, but when a channel does not know what another channel has already said, then usually the channels do not agree. One conclusion that I have drawn from this fact is that we should not be credulous about the channels and their alleged sources; hence my motto: *the unexamined teaching is not worth believing*. Another conclusion that I have drawn from this fact is that just because two channels might say the same thing is not much evidence that what they say deserves credibility. Thus, using channels to confirm or dis-confirm other channels is an iffy proposition, and it troubles me when I myself use that method of "Validation" as a last resort, such as when no better means of approaching credibility is available.

Varda Hasselmann

As you may recall, Varda Hasselmann is a German channel who is in contact with an entity, Die Quelle, who is in the same so-called "Cadre" as the Michaels, and who has a very similar message. She has published several books in the German language, two of which have been translated into English at the time of this writing (early 2020s). Hasselmann published *Archetypes of the Soul* in the German language in 1993 and in the English language in 2004. In the English translation of her book *Archetypes of the Soul*, in Chapter IV, "The Seven Centers", which covers pages 248 to 294, there are extensive descriptions of the Centers, and there are mentions of the alleged corresponding chakras.

Even though Hasselmann declares a debt of gratitude to Yarbro for introducing her to the Michaelian teachings, when we look at her correlation of chakras with Centers, we find that she obviously did not coordinate with Yarbro on this (physical) plane or any other plane (channeling mid-Causal Entities): there is not a single agreement between the two, as you can see by comparing their two rows in Table 4Ja. And apparently Die Quelle did not pay any attention to the ranks and colors that are commonly assigned to the chakras in modern esoteric lore.

Throughout the *Archetypes of the Soul* book, the descriptions of each Overleaf trait are always presented in the order of the Michael Math Sequence; this is what one might expect from a person who was introduced to the Michaelian teachings by the first two Yarbro books, rather than via some other Michaelian teachings source who prefers some other sequence for the septenaries.

So, Hasselmann correlated the chakras with Centers as shown in the row in Table 4Ja labeled "Hasselmann". The table below is more extensive; it is derived from information scattered in the Centers chapter of *Archetypes of the Soul*, specifically pages 252, 254, 258, 261, 271, 274, 283, 284, 285, and 287.

| Т | Table 4Jc — CORRELATION of CHAKRAS with CENTERS per DIE QUELLE | | | | | | | | | | | |
|-----------------------|--|---------------------------|---------------------------|--------------------------|-------------------------|-------------------------|----------------------------|--|--|--|--|--|
| RANK → NAME → COLOR → | FIRST GROIN RED | SECOND NAVEL ORANGE | THIRD PLEXUS YELLOW | FOURTH HEART GREEN | FIFTH THROAT BLUE | SIXTH BROW INDIGO | SEVENTH CROWN VIOLET | | | | | |
| CENTER RANK | First | Second | Third | Fourth | Fifth | Sixth | Seventh | | | | | |
| CENTER | Emotional | Intellectual | Sexual | Instinctive | Spiritual | Ecstatic | Moving | | | | | |
| LOCATION | Heart | Neck | Gonads | Sit on it | Third Eye | Crown | Solar Plexus | | | | | |
| ENERGY COLOR | Sky Blue | Butterfly Yellow | Blood Red | Grass Green | Sunny Yellow | Ocean Blue | Purple | | | | | |
| CHAKRA RANK | Fourth | (Fifth) | (Second) | (First) | Sixth | Seventh | (Third) | | | | | |

My comments on this table are as follows:

- RANK → NAME → COLOR →: This row shows the chakra ranks, locations, and colors per the common understanding in the modern esoteric community. Compare these three rows with the rows below and you will see that there is so little correspondence that it is obvious that Die Quelle had other ideas.
- CENTER RANK: This rows shows the ranks of the Centers that were explicitly given by Die Quelle. As you can see by comparison with the next row, this is the Michael Math Sequence.
- CENTER: This row shows the names of the Centers per Die Quelle when translated into the English language. The so-called "Spiritual Center" is the Higher Intellectual Center, and the so-called "Ecstatic" Center is the Higher Emotional Center. Die Quelle followed Yarbro's Michael Math Sequence in this row and the previous row. Notice that the Sexual Center, which is regarded as an Ordinal Center here, is often as not named the Higher Moving Center by others. Notice that the Moving Center, which is regarded as a Cardinal Center here, is often as not regarded as an Ordinal Center by others.
- LOCATION: In this row are the names of the locations on the physical body that Die Quelle used to refer to the chakras. There are no real surprises here when compared with the standard modern chakra lore, so this would seem to indicate that Die Quelle and/or Hasselmann knew about them. However, it is a mystery why they departed from the standard chakra lore in regard to the chakra ranks in every case; see last row.
- ENERGY COLOR: In this row are the names of the so-called "energy" colors that Die Quelle assigned to the three rows above this row. They are similar enough to the rainbow spectrum colors that it allows us to correlate them with the standard chakra colors, thus: Blue, Orange, Red, Green, Yellow, Indigo, Violet respectively. Four out of seven match the standard chakra colors shown in the first row.
- CHAKRA RANK: In this row are the three ranks Fourth, Sixth, and Seventh that Die Quelle mentioned in the *Archetypes of the Soul* book. If the missing ranks are named in some other book, I do not know about it (only two of nine books have been translated into English). However, one can guess at the ranks of the missing four if one looks at the Location row; the results are shown in (parentheses). Compare the Chakra Ranks with the Center Ranks and you will see that there is not a single match.

The correlations shown here reflect several of the common misconceptions, such as Heart Chakra = Emotional Center and Throat Chakra = Intellectual Center. These and other common misidentifications are addressed in the second half of this chapter.

One wonders what Hasselmann would have come up with if she had encountered José Stevens's book rather than Quinn Yarbro's books. So let's see what Stevens had to say on the subject.

José Stevens

José Stevens, PhD, is one of the foremost expositors of the Michaelian teachings. He has lectured widely and published several books on it. Let's take a look at those books and see what he has to say about the chakras, numbers, colors, and Centers. He has a lot to say. Most of it is inconsistent with itself, similar to the inconsistency we see throughout the Michaelian teachings on the subject of chakras and Centers.

Colors associated with the Roles are given in *The Michael Handbook* (1986, page 78, of the English version). Recall that I refer to Steven's prism analogy as the Vibration Sequence. No source for this information is given, so I do not know if Stevens channeled it or borrowed it from somewhere else. The basic idea is that the metaphorical 'white light' of Tao is differentiated into seven 'colors' of the rainbow, as if through a prism, and these seven colors are alleged to differentiate the seven fundamental 'energies' we know as Roles. This basic idea (except for the Roles part) did not originate with Stevens: it is found in the emanation cosmology of ancient and modern times. In those other teachings, the seven colors are commonly referred to as Rays, and the Rays typically follow the rainbow spectrum color sequence; refer to Chapter 1F, "The Seven Human Temperaments", in Part One for more information. However, Stevens did not follow any of that. Take a look at the list of Stevens's correlations in the list below. Although Stevens does not have numbers in his list, it is a sequence, so for purposes of comparison with Stevens's other correlations, numbers have been added in [brackets] for the Vibration Sequence, and what I show in the Vibration row of Table 4Ja.

[1 =] Warrior = red; [2 =] King = orange; [3 =] Scholar = yellow; [4 =] Server = green; [5 =] Sage = blue; [6 =] Artisan = indigo; [7 =] Priest = violet.

Roles, rather than Centers, are shown in the Vibration row of Table 4Ja, because as we will see below, Stevens never ascribes colors to the Centers, but a Michaelian student who took his classes and regards Stevens as a mentor, Barbara Taylor, does. The correlation shown in the list above is special enough that I refer to it as the Vibration Sequence throughout this *History* book. Because of its similarities to other emanationist cosmologies, this concept and this sequence is discussed in some depth in Chapter 2C in Part Two, "Proposed Sequences of Overleaves". Among other Michaelian students, Barbara Taylor and Stephen Cocconi have adopted the Vibration Sequence into their understanding; we will look at what they have to say in sections further on.

Table 4Jd below is a mashup of information shown in three tables in two Stevens books that specifically concern themselves with chakras and Centers. The first of those tables connects the Roles to the chakras, which are ascribed colors in the Vibration Sequence, so that is why I provided the list above.

So let's look at Steven's first attempt to correlate Centers and chakras and locations and Roles. On page 213 of *The Michael Handbook* (1986), Stevens says, "The seven centers roughly correspond to the seven major chakras located along the spinal column. Chakra is a Sanskrit work meaning wheel or vortex and refers to the seven subtle centers of consciousness located along the length of the spinal column."

On the next page of *TMH*, page 214, Stevens provides the following correlation table of Centers, chakras, locations, and Roles. Table 4Jd was redrawn by myself in order to show three additional columns: the added column on the left side shows the colors (shown in [brackets]) that have been assigned to the chakra ranks and locations in the modern formulation. The four columns in the center of Table 4Jd shows the correlation that was adopted by Taylor, not some of Stevens's other numerous septenarian schemas. These four columns provide the schema that is referred to as "Stevens1" in Table 4Ja.

The two columns on the right side show correlations from another book by *Earth to Tao* (*ETT*, 1989). On page 228 of that book, Stevens lists and numbers the seven chakras this way:

1. Root—base of spine; 2. Abdominal; 3. Solar Plexus; 4. Heart; 5. Throat; 6. Brow; 7. Crown".

This numbering and those locations are entirely consistent what what he wrote years before in *The Michael Handbook*. And the list is consistent with the modern Western understanding.

Then, on the next page of ETT, page 229, Stevens says,

The centers, although generally related to each of the chakras, more accurately represent certain combinations of them. Their [center] balance is intimately related to the balance and harmony of the chakras. Knowing how the centers work, and how you can get trapped in a center, helps greatly in understanding which chakras habitually become blocked or overused. With this knowledge you can directly intervene with your patters of imbalance and learn to use your centers and your chakras efficiently and appropriately.

What that combination of chakras within Centers might be is not described. I suspect this caveat might be a reference to, or an acknowledgment of, the ambiguity of the descriptions of the chakras by various sources.

At any rate, on that same page he numbers and names the Centers thus:

1. Moving; 2. Emotional; 3. Intellectual; 4. Instinctive; 5. Higher moving; 6. Higher Emotional; 7. Higher Intellectual.

Notice that this most resembles the Gurdjieffian Sequence, which somewhat resembles Chambers 1. (It is known that Stevens was familiar with the Gurdjieffian teaching.) Notice that the numbering of the Centers in

ETT differs from the numbering given in TMH in every case, and that, of course, dis-correlates the Centers from the chakras as shown in TMH. Therefore it would seem that in Stevens's correlations, chakra/Center numbers have no more significance than chakra/Center colors do to him. And/or, it might be that Stevens changed his understanding of the correlation of chakras with Centers between the writing of TMH and ETT. I is hard to say what is going on here with this discrepancy; other instances where Stevens scrambles the components of septenaries without discernible 'rhyme or reason' are documented in the Prologue of my book The Tao of Cosmogony.

| Table 4Jd — CENTER-CHAKRA-ROLE SEQUENCE per STEVENS | | | | | | | | | | | | |
|---|------------------------|------------|---------------------|---------------------|-------------------------------|--------------------|---------------------------|--|--|--|--|--|
| [Esoterica] | The Mic | hael Handb | ook (TMH, 198 | TTE, (1988) | Earth to Tac | o (ETT, 1989) | | | | | | |
| [COLOR] | CENTER | CHAKRA | LOCATION | ROLE | CHAKRAS | 7 CHAKRAS | 7 CENTERS | | | | | |
| [RED] | INSTINCTIVE | FIRST | BASE OF SPINE | KING (orange) | 1ST/ROOT INSTINCTIVE | 1. ROOT | 1. MOVING | | | | | |
| [ORANGE] | HIGHER MOVING | SECOND | ABOVE SEX ORGANS | ARTISAN (Indigo) | 2ND/SPLEEN SEXUAL | 2. ABDOMINAL | 2. EMOTIONAL | | | | | |
| [YELLOW] | MOVING | THIRD | SOLAR PLEXUS | WARRIOR (red) | 3RD/PLEXUS MOVING | 3. SOLAR PLEXUS | 3. INTELLECTUAL | | | | | |
| [GREEN] | EMOTIONAL | FOURTH | HEART | SERVER (green) | 4TH/HEART EMOTIONAL | 4. HEART | 4. INSTINCTIVE | | | | | |
| [BLUE] | INTELLECTUAL | FIFTH | THROAT | SAGE (blue) | 5TH/THROAT INTELLECTUAL | 5. THROAT | 5. HIGHER Moving | | | | | |
| [INDIGO] | HIGHER INTELLECTUAL | SIXTH | THIRD EYE | SCHOLAR (yellow) | 6TH/BROW HI'R INTELLECTUAL | 6. BROW | 6. HIGHER EMOTIONAL | | | | | |
| [VIOLET] | HIGHER Emotional | SEVENTH | CROWN | PRIEST (violet) | 7TH/CROWN HI'R EMOTIONAL | 7. CROWN | 7. HIGHER INTELLECTUAL | | | | | |

My comments on this table are as follows:

- [COLOR]: The first column shows the colors that have been ascribed, in the modern chakra system, correlated with the lineup of chakras that are numbered and located in the third and fourth columns. Notice that this is the rainbow spectrum sequence. This first column was not shown in Stevens's table, but I added it in my redrawing so as to compare and contrast it with the colors shown and named in the fifth column. Notice that there is a match in only three (Green, Blue, Violet) of the seven rows.
- CENTER: The second and fifth rows show the correlation of Centers with Roles from the table on page 214 of *TMH*. This disagrees four out of seven times with the correlation of Centers and Roles given first in *MFM* in 1979, and henceforth; it is a correlation undisputed by any other Michaelian student that I know of. That is, Stevens correlates King with Instinctive Center rather than Sexual/Higher Moving Center; he correlates Artisan with Sexual (lower Moving) Center rather than Intellectual Center; he correlates Sage with Intellectual Center rather than Higher Intellectual Center; he correlates Scholar with Higher Intellectual Center rather than Instinctive Center. Stevens gives no explanation as to why he made this departure from the otherwise–universal Michaelian teachings understanding, and I am completely at a loss to explain it in his stead; it makes no sense to me.
- CHAKRA: The third row shows the ranking sequence of the chakras, which is the same as the standard rankings in the modern Western chakra system.
- LOCATION: These locations of the chakras on the body do not differ from the common modern understanding. This column and the one to the left, the ranks shown in the third column, means that Stevens was surely familiar with the modern understanding of chakras, whereas it appears that Chambers1 was not. However in none of his books did Stevens ascribe colors to chakras any colors, whether modern or otherwise.

- ROLE: The full header of this column in the table in *TMH* was "Related Role", so we know the correlation of Roles with Centers and chakras was intentional, not accidental. In this table, it is I who has assigned colors to the Roles per Stevens's Vibration Sequence, not Stevens himself. When this is done, we see that this list scrambles the traditional colors assigned to the chakras, agreeing in only three places, Green, Blue, and Violet. Another thing that puzzles me about this column is that the sequence of Roles in this table does not match his sequence of Roles in his Vibration Sequence or any other sequence found anywhere else in the Michael teachings that I have noticed, or even his own numerous septenarian lineups. Based on a lack of consistency in numerous of his lists of seven things, my guess is that it did not even occur to Stevens to correlate the Vibration Sequence colors with the traditional chakra colors; consistency appears to be at the bottom of Stevens's priority list of tools.
- TTE: The sixth column shows the ranks of the chakras, the names/locations of the chakras, and the corresponding Center as given in Stevens's book *Tao to Earth* (1988), on pages 231-232. This information was not tabulated; a paragraph was dedicated to each chakra/Center. Not shown on the table is that Stevens also correlated the first five chakras/Centers with the first five Soul Ages, Infant, Baby, Young, Mature, and Old. Notice that this information is the same as shown in *TMH*: the second, third, and fourth columns. I refer to columns 2, 3, 4, and 6 as Stevens1 in Table 4Ja. I have not been able to figure out or find out where either Stevens1 correlations came from. For instance, it agrees with the Gurdjieffian Sequence a prior sequence that Stevens might have been familiar with in only one location, First Chakra = Instinctive Center.
- 7 CHAKRAS: The seventh column reproduces a numbered list of the names of chakras on page 228 of
 Earth to Tao (ETT, 1989). Stevens repeats what was written in a previous book, TMH. This ranking and
 locating and naming is per the modern Western chakra system.
- 7 CENTERS: The eighth column reproduces a numbered list of the names of Centers on 229 of Earth to Tao. This is a repeat of what is said on page 157 of this same book, except on page 157 the Centers are explicitly correlated with chakras as shown in the seventh column of this table. I refer to this as Stevens2 in Table 4Ja because he reversed the sequence of the last two chakras/Centers from what was said previously, Stevens1. No explanation for the switch was given, but I am guessing that it was intentional; putting Higher Intellectual Center at the Crown Chakra conforms to Gurdjieff, so maybe the earlier correlation was recognized as a "mistake" and he "corrected" it. It is known that Stevens is familiar with the Gurdjieffian teaching. However, his student Taylor (see next subsection) adopted Stevens1 in her schema.

Barbara Taylor

As mentioned above, Barbara Taylor made, on her version of the Overleaf Chart, exactly the same correlations as Stevens regarding Roles = colors in his Vibration Sequence, and she attributes the schema to Stevens, her mentor. This Chart can be found at >https://www.itstime.com/gameboard.htm<. On another chart, available at >https://www.itstime.com/download/GameBoard_wNeeds_Color_BW_12-10-2011.pdf<, she also numbers and names the chakras, but these are not per the mainstream understanding; these are the same as Stevens. Relevant portions of the combination of Taylor's two Overleaf charts are shown in Table 4Ja. (However, as you can see from the top row of Chart #17, she used the Michael Math Sequence for numbering the Septenarian Attributes. This is not numbering that Stevens used in his 1980s books, and I have seen no evidence other than the Taylor charts that he adopted the Michael Math Sequence in later decades.) Thus, her correlations are the same as Stevens Vibration Sequence in the following table. The common, standard chakra colors are shown in [brackets]; notice that the Stevens–Taylor Vibration Sequence colors dis-correlate with the standard chakra colors in four out of seven cases.

| | Table 4Je — ROLE/ENERGY RELATIONSHIPS per BARBARA TAYLOR | | | | | | | | | | |
|------------------------------|--|--|-------------------------------------|---------------------------------------|--------------------------------|--|--------------------------------------|--|--|--|--|
| [AXIAL] | [EXPRE | SSION] | [INSPIR | ATION] | [ACTION] | | [ASSIMILAT'N] | | | | |
| [DIALECTIC] | INTERNAL (2) (ORDINAL) | EXTERNAL (5) (EXALTED) | INTERNAL (1) (ORDINAL) | EXTERNAL (6) (EXALTED) | INTERNAL (3) (ORDINAL) | EXTERNAL (7) (EXALTED) | NEUTRAL (4) | | | | |
| ROLE | Artisan | Sage | Server | Priest | Warrior | King | Scholar | | | | |
| LIGHT/COLOR SPECTRUM | Indigo | Blue | Green | Violet | Red | Orange (or Gold) | Yellow | | | | |
| RELATED CHAKRA [COLOR] | 2 Sexuality Abdomen [ORANGE] | 5 Throat [BLUE] | 4 Heart [GREEN] | 7 Crown [VIOLET] | 3 Solar Plexus [YELLOW] | 1 Root [RED] | 6 Third Eye, Forehead [INDIGO] | | | | |
| FUNCTION OF CHAKRA | Sex, Vitality, Creativity | Self-Expression, Communi- cation | Compassion, Agape, Acceptance | Spiritual Wisdom, Connectedness | Power, Control, Competition | Survival, Instinct, Past Life Information | Perceptivity, Intuition | | | | |
| RELATED CENTER | Higher Moving | Intellectual | Emotional | Higher Emotional | Moving | Instinctive | Higher Intellectual | | | | |

The results from this table are shown in the row named "Taylor" in Table 4Ja. Notice that Taylor–Stevens here, in about the year 2005, used the *Tao to Earth* (1988) version placing Higher Emotional in the #7 position rather than Higher Intellectual as in *Earth to Tao* (1989). Furthermore, to use the Michael Math Sequence numbers dis-correlates with the traditional chakra ranking numbers, and to use the Vibration Sequence colors (ascribed to Roles by Stevens) dis-correlates with the traditional chakra colors. It appears to me that confusion rather than consistency reigns in the Stevens–Taylor realm. Therefore, in my mind, no credence can be lent to any of their schemas.

As you can see as I struggle to describe and tabulate these discrepancies, it is all so confusing to try to untangle various sources that do not agree with each other or with the modern Western chakra understanding. Let's see if the situation improves with other Michaelian teachings sources that are otherwise highly regarded in the Michaelian teachings community. As it turns out, the consensus preferred "Stevens1" rather than "Stevens2", the same as Taylor did.

Michael: The Basic Teachings

This book was authored by JP Van Hulle, Aaron Christeaan, and M. C. Clark. It was first published in 1988, with a second edition in 1990. It duplicates the numbering and naming of the chakras that Stevens put forward in his first two books, not *Earth to Tao*. One might reasonably expect them to be identical because these people were all friends and associates living in the Bay Area of California. Thus:

The seven chakras, the energy centers in the body which govern different aspects of your individual behavior, relate to the centers in the following way:

1st chakra (base of spine) = Instinctive

2nd chakra (genitals) = Higher Moving

3rd chakra (stomach) = Moving

4th chakra (heart) = Emotional

5th chakra (throat) = Intellectual

6th chakra (brain) = Higher Intellectual

7th chakra (top of the head) = Higher Emotional. [MTBT, p. 112]

No correlation with the seven colors normally associated with the chakras is given. This list is referred to as "Basic Teach." in Table 4Ja. Because they are the same correlations as one of the schemes presented earlier by Stevens ("Stevens1") and later by Taylor, the same comments apply.

Steven Cocconi

Cocconi is yet another California channel for the Michaelian teachings. His thoughts on the correlation of chakras with Centers can be found on his website, and I quote them as follows.

The Centers are another way of interpreting the Chakra system posited by Hinduism and Buddhism. In The Michael teaching, Centering is an added layer of function which biases the way an individual receives and interprets incoming stimuli. Every person of course has all seven Centers and possesses all the chakras. However, what makes Centering an interesting element to consider in regards to Personality formation is the order of activation; and the tendency for people to develop blockages and therefore adaptations when receiving information. Centers are activated in chakras but have a corresponding etheric body.

[>http://www.themichaelteaching.com/michael/overleaves/centers/< — retrieved 11 September 2021]

Below this text is a graphic that shows the ranks and colors of the Centers in the following way:

```
Centers: primary data gathering and processing.
```

```
1st chakra = red = Instinctive Center
```

2nd chakra = orange = Higher Moving Center

3rd chakra = yellow = Moving Center

4th chakra = green = Emotional Center

5th chakra = blue = Intellectual Center

6th chakra = indigo = Higher Intellectual Center

7th chakra = violet = Higher Emotional Center

This correlation is referenced as "Cocconi" in Table 4Ja. You can see that it duplicates the numbering of the chakras and correlation with Centers that Stevens put forward in his *Handbook*, specifically in "Stevens1" (not in "Stevens2", Stevens's amendment). One might reasonably expect the two to be identical because these people were all friends and associates living in California. However, Cocconi's color scheme does not duplicate Stevens's color scheme per the Vibration Sequence, as Taylor did; it follows the standard number and color sequence for chakras. This means that Cocconi did not slavishly copy Stevens in every regard; he went outside the previous and prevailing schema within the Michaelian teachings community and adopted the prevailing schema in the esoteric community.

The next Michaelian teachings source, another Bay Area channel who was friendly with the others, did not copy the Stevens1 or Stevens2 scheme either in every regard, and some research and original thinking was displayed.

Terri Benning

Next we look at the correlation given by Terri Benning on her website, Michael Mosaics, at this URL: >http://www.michaelmosaics.com/sevens/essentialsevens.html<. Terri is another channel of long standing in the Michaelian teachings community.

```
1st = root chakra = red = instinctive center
```

2nd = navel chakra = orange = intellectual center

3rd = plexus chakra = yellow =moving center

4th = heart chakra = green = emotional center

5th = throat chakra = blue = higher intellectual center

6th = brow chakra = indigo = higher emotional center

7th = crown chakra = violet = higher moving center

This correlation is referred to as "Benning" in Table 4Ja. Here the chakra numbers and names and colors are all typical for what can be found on any internet search on the topic of chakras. In fact, Benning borrowed many quotations about chakras from other websites. As for the correlation with Centers, this is the Michael Math Sequence except with Instinctive Center and Emotional Center switched. She prefers the Michael Math Sequence in her other septenaries. Perhaps because of this discrepancy between her correlation and the Michael Math Sequence, she has the following comment on the above arrangement:

Please note that there are minor correlations within the chakra system and the System of Sevens that do not quite come together, such as the centering placements of the Scholar and the Server positions. They are reversed in the Chakras — Centers chart, for instance, however [they] are consistent in their respective placements within the other two charts. For the moment, I am choosing to attribute this inconsistency to the Laws of Random Chaos. 'We' are looking into the dynamics of involution and evolution as a potential route to greater understanding of

their appropriate placements and correlations. [>http://www.michaelmosaics.com/sevens/essentialsevens.html< — retrieved 11 September 2021]

Further on I examine whether or not Random Chaos makes sense as an explanation for an inability of the Michaelian teachings community as a whole to consistently correlate chakras and Centers. And not only is Benning's septenarian cosmology internally inconsistent, it is externally inconsistent with regard to all other Michael channels examined in this section. She has some explanations for each chakra borrowed from other websites on her website, and it can be argued that there is a better fit for some correlations of chakras with Centers than what she shows. This evidence will be presented further on in this section.

Shepherd Hoodwin

In the second edition (2013) of his book Journey of Your Soul, Hoodwin has this to say about chakras:

Chakras are points of energy in the body that focus certain issues for us. Health problems in the area around each chakra may relate to that chakra's issues. I have seen many ideas about which chakras correlate with which roles. I prefer the approach that correlates them based on which number the roles resonate with, as given in Yarbro. [JOYS, p. 177]

Hoodwin is a careful researcher of the Michaelian teachings, so he has become aware of the different correlations of Roles with chakras put forth by others, and by extension, chakras with Centers. In saying "as given in Yarbro" he refers to what I am calling the Michael Math Sequence. In the next seven paragraphs of his book he correlates them as follows:

```
1st chakra = server (= emotional center)

2nd chakra = artisan (= intellectual center)

3rd chakra = warrior (= "physical" aka "sexual" center)

4th chakra = scholar (= instinctive center)

5th chakra = sage (= higher intellectual center)

6th chakra = priest (= higher emotional center)

7th chakra = king (= moving center)
```

This listing is complicated by the fact that Hoodwin retains the Physical (aka Sexual) Center as Ordinal and Moving Center as Cardinal, the same as Yarbro does, whereas many others have Moving Center as Ordinal and Higher Moving Center as Cardinal. This discrepancy is addressed in Chapter 4H above, "The Action Centers". Furthermore, if Hoodwin compared and contrasted the descriptions of the Centers with the common descriptions of the chakras in the esoteric community, this is not stated; he does explain his reason(s) for preferring the Yarbro arrangement, so I invite readers of my book to read his book and discern if his rationale makes more sense to them than my rationale, presented near the end of this chapter.

Hoodwin stated his awareness of the differences of opinion about the correlation of chakras with Centers in the Michaelian teachings community, and so does the next source.

Troy Tolley

Tolley is another Michaelian channel, and he has a very extensive website on the Michaelian teachings at this URL: >https://our.truthloveenergy.com<. It is appropriate to end this list — of attempts to correlate chakras with Centers — with Tolley, because, like Hoodwin, he has noticed the diverse correlations made by his fellow channels, and he has acknowledged them. Beyond that, unlike Hoodwin, he has attempted to incorporate more than one of them into his own understanding in some way; or perhaps I should say, in *two* ways.

His understanding about chakras correlated with Centers is spread across many posts on the website, and a search on the term "chakra" will return many hits. I found a couple of pages that show graphically, with colored tables, two versions that are not found elsewhere in the Michaelian teachings community.

For instance, there is a spreadsheet posted by Tolley himself, showing Overleaves and related items, such as chakras and planes: >https://our.truthloveenergy.com/topic/1003-overleaf-and-center-resonation/? tab=comments#comment-6038<. He announced the Chart with the words: "Here is an embedded map of the Overleaves and the magical, mystical, confusing, and conflicting world of Chakras vs Sequence vs Centering correlations... color-coded for your further inconvenience." He got that right. Underlines are my emphasis. But it does not need to be that way.

Take a look at that table, redrawn below, as Table 4Jf, for your convenience, and you will see what he means by "confusing" and "conflicting", because in every column except two (Cardinal Inspiration = Indigo, Ordinal Action = Yellow) there is some scrambling of colors. And there is no discernible pattern to the scrambling — unless you know the "reason", and the apparent reason is that Tolley is attempting to honor more than one channel regarding the correlation of chakras with Centers, and perhaps other correlations that are irrelevant to this section of this chapter.

| Table 4Jf — TOLLEY'S OVERLEAF CHART | | | | | | | | | | | |
|-------------------------------------|---------------|----------------|-----------------|-------------------|---------------|---------------|--------------|--|--|--|--|
| [AXIAL] | INSP | IRATION | EXPRES | EXPRESSION | | ACTION | | | | | |
| [DIALECTIC] | ORDINAL | EXALTED | ORDINAL | EXALTED | ORDINAL | EXALTED | NEUTRAL | | | | |
| VALUE | Oneness | Sixness | Twoness | Fiveness | Threeness | Sevenness | Fourness | | | | |
| COLOR | Red | Indigo | Orange | Blue | Yellow | Violet | Green | | | | |
| ROLE | Server | Priest | Artisan | Sage | Warrior | King | Scholar | | | | |
| GOAL | Reevaluati'n | Growth | Discriminat'n | Acceptance | Submission | Dominance | Relaxation | | | | |
| MODE | Reserve | Passion | Caution | Power | Perseverance | Aggression | Observation | | | | |
| ATTITUDE | Stoic | Spiritualist | Skeptic | Idealist | Cynic | Realist | Pragmatist | | | | |
| CENTER | Emotional | Hi'r Emotional | Intellectual | Hi'r intellectual | Moving | Higher Moving | Instinctive | | | | |
| C'FEATURE | Self-deprecat | Arrogance | Self-destruct' | Greed | Martyrdom | Impatience | Stubbornness | | | | |
| BODY TYPE | Lunar | Saturn | Jupiter | Mercury | Venus | Mars | Solar | | | | |
| AGE | Infant | Transcendent | Baby | Old | Young | Infinite | Mature | | | | |
| CNTR/Chakra | EMOT/Heart | HI-EMO/Brow | INTEL/Throat | HI-INT/Crown | MOV/Plexus | HI-MOV/Sacral | INST/Root | | | | |
| Chkr#/CNTR | 1-Root/INST | 6-Brow/HI-EMO | 2-Sacral/HI-MOV | 5-Throat/INTEL | 3-Plexus/MOV | 7-Crwn/HI-INT | 4-Heart/EMO | | | | |
| CNTR/Plane | EMO/Astral | HI-EMO/Messia' | INT/Causal | HI-INT/Mental | MOV/Physical | HI-MOV/Budd' | INST/Akashic | | | | |
| PLANE#/Cntr | PHYS/Moving | MESSIA/Hi-Emo | ASTRAL/Emo | MENTAL/Hi-Int | CAUSAL/Intel. | BUDDH/Hi-Mov | AKASHIC/Inst | | | | |

Let's take a look at my redrawing of Tolley's Chart, shown above. Near the bottom of this Chart are two rows; one labeled CENTER/Chakra, and one directly below it labeled Chakra#/Center. In Table 4Ja, I refer to the first one as Tolley1, and the second one as Tolley2. Tolley1 is per the Michael Math Sequence; Tolley2 is the same as Stevens2. There are a couple of other rows below those two rows that show how the chakra rainbow spectrum colors and chakra rank-order numbers allegedly "qualify" the characteristics of the seven planes, but those are irrelevant to this chapter except to the extent that they reinforce my perception that Tolley is attempting to reconcile disparate channeling here, as he does in other matters.

At any rate, the mental gymnastics required to make sense of Tolley's table prompted someone else on >our.truthloveenergy.com< to take the trouble to make another tabulation showing these same variations in correlations that Troy had come up with, plus adding information about "Qualities" and "Resonations" and "Sequences": >https://our.truthloveenergy.com/topic/3770-is-it-time-to-change-king-and-priest/page/2/<.

Table 4Jg below is based on that latter table, but with the irrelevant (to this discussion) Overleaf categories removed.

| | Table 4Jg — TOLLEY'S "QUALITIES", "RESONATIONS", AND "SEQUENCES" | | | | | | | | | | | | |
|--------------------------------|--|---|---------------------|---------------|---------------------|-----------|----------|--|--|--|--|--|--|
| | МІС | CHAEL MATH SEQUEN | ICE | SCRAMBLED | SEQUENCES | NATURAL | SEQUENCE | | | | | | |
| "Quality" Number & Color | Essence Role | Septenarian Center Center "Sequence" Center & Chakra Role vs Chakra | | Plane Name | Plane "Sequence" | | | | | | | | |
| 1 red | Server | Ordinal Inspiration | Emotional | 4 green | Heart = Scholar | Astral | 2 orange | | | | | | |
| 2 orange | Artisan | Ordinal Expression | Intellectual | 5 blue | Throat = Sage | Causal | 3 yellow | | | | | | |
| 3 yellow | Warrior | Ordinal Action | Moving | 3 yellow | Plexus = Warrior | Physical | 1 red | | | | | | |
| 4 green | Scholar | Assimilation | Instinctive | 1 red | Root = Server | Akashic | 4 green | | | | | | |
| 5 blue | Sage | Exalted Expression | Higher Intellectual | 7 violet | Crown = King | Mental | 5 blue | | | | | | |
| 6 indigo | Priest | Exalted Inspiration | Higher Emotional | 6 indigo | Brow = Priest | Messianic | 6 indigo | | | | | | |
| 7 violet | King | Exalted Action | Higher Moving | 2 orange | Sacral = Artisan | Buddhic | 7 violet | | | | | | |

Certain numbers and colors are normally attached to the chakras, and these are shown in the first column of Table 4Jg, and Tolley labels that column "Quality". There are two re-orderings of the basic Quality numbers/colors in other columns in order to accommodate two other variations found in the Michaelian teachings. These variations from the basic Chakra Quality have to do with what Tolley refers to as differences in "Sequence" and "Resonation" — words that are shown in the headers of this table. The rainbow spectrum colors and the rank-order numbers shown in the left-most column always correlate with each other, but other categories shift with respect to the colors/numbers because of alleged differences in rank-order "Sequence" and color "Resonation" as applied to those other categories. There is only one number-color that spans all rows from left to right on the Chart: #6–Indigo; all of the other number–colors jump around twice; hence the need for a Tolley1 and a Tolley2 in Table 4Ja.

Following are some numbered points that further elaborate on this elaborate scheme.

- 1. The four columns on the left, from top to bottom, are per the Michael Math Sequence. The numbers and colors are all properly sequenced, per rank order and the rainbow spectrum that is typically assigned to chakras by the esoteric community. This correlation of chakras with Centers is labeled Tolley1 in Table 4Ja.
- 2. The two columns on the right, headered "Plane", are numbered and colored per the Natural Sequence, but their sequence down the columns is scrambled in order to align with the Michael Math Sequence on the other side of the table since Tolley assumes that the planes are "Qualified", you might say, by the Michael Math Sequence even though they exist and function in the Natural Sequence, and the Chart is configured to show that. That is, each of the Planes has a nature that is allegedly characterized by the "Quality" of the chakra numbers/colors. This does not provide a different correlation of Centers and chakras; it just ascribes some extra Qualities to the planes that do not come with the characteristics they have by virtue of following the Natural Sequence. The planes are discussed at length in Chapter 4E above, "The Seven Planes".
- 3. The rationale or origin for the middle two columns, the "Scrambled Sequences", is mysterious to me. Apparently these columns have to do with the way the Roles are "Qualified" by the Michael Math Sequence. The Roles are sequenced from top to bottom in the column in a way that I do not recognize, which Tolley calls "Chakra/Role Resonation". The numbers and colors in the left of the two columns are per the Michael Math Sequence, although their order from top to bottom is scrambled to match the order in the right of the two columns, and the numbers/colors are out of the sequence shown in the left four columns. The document that accompanies this table, dated 10 May 2003, does not actually explain where the various correlations came from. I see similarities to other schemas by other Michaelian teachings sources, but I hesitate to say where the schemas come from, if the source was other than Tolley's imagination or channeling.

4. So, as part of this discussion about Centers and chakras, Tolley has acknowledged the Michael Math Sequence and the Stevens2 sequence (and the Natural Sequence when it comes to the planes). Tolley's method of using "Qualities" and "Sequences" and "Resonances" — to make everyone right? — exemplifies the aura of confusion that surrounds this subject. Let me use the *reductio ad absurdum* argument at this point: not every correlation found in Michaelian teachings sources is included in Tolley's table; they are included in my Table 4Ja, and there are yet other Sequences in that table, such as "Gurdjieff" and "Vibration" and "Benning". To make *everyone* right, one would need to invent even more "Resonations" or "Qualities" or "Sequences" or "Whatevers".

Succinctly stated: Tolley1 is the esoteric chakra color+rank sequence married to the Michael Math Sequence; Tolley 2 is Stevens's correlation of chakras and Centers, shown on page 157 of Earth to Tao, grafted onto the Michael Math Sequence. The part about the planes is not relevant to this chapter on chakras, except to state that the planes are said in the Michaelian teachings to follow the Natural Sequence (and I agree), and I believe that the chakras do also; see further on.

In my opinion, the "Tolley method", as it could be called, is not the way to do integration of disparate channeling; it just perpetuates the lack of coherence that pervades this particular topic and a few other topics within the systematic component of the Michaelian teachings. I see no need to accommodate dubious and bogus channeling by the Tolley method or any other method. In the *reductio ad absurdum* extreme, the Tolley method when fully applied would ambiguate the categories so much that they would become meaningless. And that is what is so absurd about his whole mess. What are we to do instead? Is there a better method?

The point has been adequately made with the tabulation of these sources: confusion about correlating Centers and chakras reigns in the Michaelian teachings community. Personally, because it is such obvious nonsense, I find it remarkable that this egregious state of affairs has been tolerated; all the more remarkable because this confusion is all so very unnecessary.

Let's Start to Untangle the Mess

Rather than using the Tolley method, I have a different approach to properly correlating chakras with Centers. It does not include trusting channels implicitly. It does not involve diluting categories by switching around colors and ranking numbers, to such an extent that their nature becomes meaningless. It does not include every possible permutation of correlations, whether shown in Table 4Ja or not. My strategy is to actually read about the chakras on the internet and in the most comprehensive book on the subject (Kurt Leland, *Rainbow Body*), and compare that with the Natural Sequence — my favorite sequence because it is supported by dozens of sources external to the Michaelian teachings. When I do that, the correlation is obvious, as indicated in the next section. In this section, the following is just a preliminary presentation to all of the arguments and evidences that the chakras follow the Natural Sequence; the full treatment is in my book *The Tao of Cosmogony*.

Based on my investigations, I would say that this chakra affair is one of the worst messes among several in the Michaelian teachings, but it has similarities to other discrepant parts found in the Michaelian teachings community, so this is a good place to consider possible sources and solutions. I submit for your consideration that the Center = chakra correlation issue is another one of those Michaelian teachings discrepancies that the Natural Sequence can resolve.

Many students of the Michaelian teachings have probably not even noticed these discrepancies. And if they did, some students might just follow their preferred leader, with or without question. Some students might say that we should get some channeling on the subject, and let the Michaels sort it out — as if "channeling" was not the source of the problem in the first place. Some students might just metaphorically 'throw up their hands' in hopeless frustration at these kinds of contradictions. Some students might say that it doesn't matter to them and so they don't care about this issue at all. Nevertheless, I press on, because for some reason it does matter to me, and if it matters to you also, then you can press on with me. Personally, I think it matters to have an accurate 'map' of the 'territory' that we are 'exploring' on this planet, in these human bodies. In my way of looking at the world, this confusion that presently exists in the Michaelian teachings on the subject of chakras does not promote personal growth or group cohesion.

Elsewhere I speculate that the Overleaf choices are configured, for purposes of reincarnation, by the Astral Body soul (the Position in Casting) in the Etheric Body which inhabits the three non-material ('higher') levels of the Physical Plane. One of the complicating things about Centers is that there is a correlate of the etheric Centers in the physical body, and they are the chakras. Another complication is that the physical-body brain

itself seems to have correlates of the etheric-body Centers. These factors might seem to make it difficult to untangle the mess if one does not appreciate the explanatory power of the Natural Sequence schema.

The following numbered points are not an exhaustive list of how and why the Michaelian teachings community has gone astray in the matter of Centers = chakras, but it is a good start. The documentation for what I say below is found elsewhere in my books, mostly my book *The Tao of Cosmogony*, in the chapter on chakras.

- 1. If there were not a considerable similarity in the descriptions of Centers and chakras, many Michael students would not have asked various channels if there was a correlation, and various channels would not have pontificated about it it is not just that there are seven of both; it is not just that there are lower and higher triads in both septenaries separated by an intermediate it is because there is in fact a noticeable similarity in the descriptions.
- 2. But, considering the inability of the Michaelian teachings community to agree on the correlation of chakras with Centers, it would appear that (choose one or more): A) Michaelian students and channels might not have actually read very much about the chakras; or B) if they did read about them, they might not have paid close attention to what they read; or C) if they did comprehend what they read, then they must have dismissed it as irrelevant in the face of what they regarded as authoritative channeling; or D) the descriptions of Centers and chakras have enough ambiguities that makes the correlation difficult even if it is obvious that there must be a correlation.
- 3. It is not my preference to regard any channeling as authoritative if it ignores solid evidence and sound argument. What should be perfectly clear after one reads the descriptions of the Centers and of the chakras, and makes the obvious correlation, then if the channel cannot correlate the two, then the channel is not actually channeling; something else is happening.
- 4. On any given topic, when there is not a consensus within the Michaelian teachings community, then I suggest that it is Good Work as part of our Validation process to look at other sources outside of the Michaelian teachings. It so happens that there are an abundance of freely-available sources that describe the chakras.
- 5. Outside of the Michaelian teachings, the esoteric sources ascribe physical functions to the First/"Root" Chakra, emotional functions to the Second/"Sacral" Chakra, intellectual functions to the Third/"Solar Plexus" Chakra, harmony of opposites to the Fourth/"Heart" Chakra, and various higher states of consciousness to the higher chakras. Some of the expositors explicitly say that the higher chakras are a reverse-order mirror of the lower chakras which is a feature of the Natural Sequence but not of any other proposed sequence. There is nothing to misunderstand here if only one actually reads the descriptions. The chakras are an instantiation of the Natural Sequence, the same as many other Canonical Septenaries.
- 6. There is a rare phenomenon, known in esoteric circles, that involves kundalini energy rising through the seven chakras, starting with the root chakra at the base of the spine and ending with the crown chakra at the top of the head. This phenomenon is associated with successive stages of awakening or liberation or enlightenment, from identification with the lower self to identification with the higher self. In other words, the chakras are an instantiation of a *developmental* sequence.
- 7. Several of the Michaelian teachings sources, as documented above, subscribe to the Michael Math Sequence as their preferred method of correlating chakras with Centers. The Michael Math Sequence was introduced in Chapter 2C, "Proposed Sequences of Overleaves", in Part Two. As demonstrated in Chapter E-2 of this *History* book, the Michael Math Sequence if it has any legitimacy applies to contingent *deployment* of Septenarian resources, not to inexorable *development* in the Septenarian sequence; that is what the Natural Sequence does. Unfortunately, the Michael Math Sequence, which was apparently meant to be applied to a deployment sequence, has hijacked the proper place of the Natural Sequence as a developmental sequence in the conceptual framework of many Michaelian students. Outside the Michaelian teachings, in the esoteric community, the chakra system is understood as a *developmental* sequence from #1 at the bottom to #7 at the top; that is what "raising the kundalini" is all about; that is one type of spiritual path from the mundane world to the transcendent world. The distinction between inexorable *development* (necessitated by the underlying structure of reality) and contingent *deployment* (via the choices of free agents) is explained thoroughly in my book *The Tao of Cosmogony*.

- 8. In regard to several issues in this *History* book, I have put forward the notion that the structure of the Natural Sequence should inform our understanding of those septenaries that appear to be instantiations of the Natural Sequence. That is because the Natural Sequence is built on first principles of the most fundamental sort: logic and mathematics. The seven-chakra system has a wide acceptance in esoteric communities; it would not be unreasonable to see if it fits into the Natural Sequence. The Michaelian teachings communities agree that the planes and the levels within the planes follow the Natural Sequence, and that the *development* of the soul through the planes is therefore according to the Natural Sequence. In this *History* book and in my other books, I have applied this tool to the Life-Stages and the Levels and the Soul Ages other *developmental* sequences and it makes sense to apply it here with the chakras, where there is ambiguity and uncertainty, even contradiction, among Michaelian expositions and presentations.
- 9. With that Natural Sequence developmental model in mind, it would make the most sense if the lower Centers correlated with the lower chakras, and the higher Centers correlated with the higher chakras. I agree with that principle. Although several Michaelian teachings expositors do it, as shown in Table 4Ja, I consider the mixing of lower Centers with higher chakras, and *vice versa*, as conceptually confused and therefore illegitimate.
- 10. Many of the sources listed in Table 4Ja showed the Instinctive Center correlated with the Heart Chakra. This is per the Michael Math Sequence, so those who preferred the Michael Math Sequence made that correlation. It is also the correlation from the Natural Sequence, so I am fine with it. Refer to another chapter here in Part Four of this *History* book where it is explained why this makes sense, even though it might not seem obvious to some readers: Chapter 4F above, "The Instinctive Center".
- 11. However, the most popular correlation in the Heart Chakra column of Table 4Ja was Emotional Center. This started with Stevens, and some of the sources kept the correlation even when they did not adopt the entirety of Stevens's correlation lineup. Maybe that feels right to you, but the problem with this correlation is that no expositor of the chakra system that I know of applies the attribute of emotionality to the Heart Chakra; they typically apply it to the second chakra, the Sacral Chakra; that correlation is per the Natural Sequence. The Heart Chakra has nothing to do with anything resembling the romantic sentimentality of the Emotional Center; it does have everything to do with the reconciliation of opposites, of harmony, of the middle way, and of the bridge between lower and higher chakras.
- 12. The most common correlation in the Root Chakra column of Table 4Ja is the Instinctive Center. This has support from the Gurdjieffian Sequence, but none of the other Sequences; apparently it was Stevens who initiated the idea in the Michaelian teachings community, and some others adopted it, even when they did not adopt his entire correlation lineup. It might make sense to some readers, thinking that instinct is basic, but here again I refer you to Chapter 4F above, "The Instinctive Center". There you will see that the so-called "Instinctive" Center is misunderstood and maligned in the minds of some Michaelian students; it is actually the most benevolent-acting and open-hearted and fair-minded Center overall.
- 13. The Root Chakra is always described in the esoteric literature as having to do with the most down-to-earth physicality; it is set in opposition to the Crown Chakra, which has to do with the highest spirituality. In the Natural Sequence, these correlate with the Action Centers. The confusion in the Michaelian teachings between the names and characteristics of the Action Centers is addressed in Chapter 4H, "The Action Centers", immediately preceding this chapter.
- 14. There are discrepancies in the various chakra sources about the names and locations of the lower chakras. One solution, my preferred solution, is to regard the lowest chakra, the Root Chakra, as the "zeroth" chakra, and equate it with the Gurdjieffian understanding of the Instinctive Center, which is that it has to do with physiology only, and nothing to do with psychology, as explained in Chapter 4F above. In this schema, I regard the Sacral Chakra as the "first" chakra, and correlates it with the Moving Center, and to the extent that it correlates with sexuality it is sexual action, not sexual energy. In this schema, the second chakra, variously referred to as the Navel or the Spleen Chakra, correlates with the Emotional Center; both the umbilicus and emotionality are concerned with nourishing and nurturing. In this schema, the third chakra, the Solar Plexus, is a nerve bundle for abdominal organs, acting somewhat like a brain for them; therefore it makes sense that this chakra is

- in fact correlated with mental function in the chakra literature, hence the correlation with the Intellectual Center.
- 15. The Solar Plexus Chakra column in Table 4Ja is most often filled with the Moving Center. This is per the Michael Math Sequence and Stevens; many have adopted those correlations. Near as I can tell, people do this because of a typical description of the Plexus Chakra as having to do with "personal power". That sounds like Ordinal Action, right? It could be, but another common description of the Plexus Chakra is that it has to do with *mentality*. The top result when (10 January 2019) I searched for "solar plexus chakra" found this link: >http://www.chakras.info/solar-plexus-chakra/<.

'Radiate your power in the world,' could say the solar plexus chakra. Characterized by the expression of will, personal power, and mental abilities, the energy of the third chakra or Manipura in Sanskrit is mobilized when we assert ourselves in the world. Discover its key characteristics and how to make the most of this powerful energy center.

In my book *The Tao of Cosmogony*, the Third Chakra is described as Artisan-ish with a Sage-ish mojo per the Taijitu Tango Principle (which is explained in various places in this *History* book). The Solar Plexus is a sympathetic nerve system bundle that is a sort of mini-brain to parts of the body in that vicinity. Therefore it makes sense to correlate the Intellect Center of the Personality with the Plexus Chakra of the body, per the Natural Sequence. Besides Artisan and Intellect, in the Natural Sequence, the third Process is called Analysis, and the lineup of Ordinal Expression Overleaves in that Process is Rejection, Caution, Renunciation, Skeptic and Young Soul: these are all about finding and expressing one's personal integrity, often as ego-istic self-assertion in its most negative manifestation. That is the kind of "personal power" that is ascribed to the third Chakra.

16. There are numerous other descriptions of the chakra system that can be found on the internet. One of the common assertions is that the Heart Chakra is the bridge between the lower and higher chakras, the physical and the spiritual chakras. Furthermore, one of the sources, Joseph Campbell, said that the lower and the higher chakras mirror each other in their qualities. This is a feature of the Natural Sequence but not a feature of any of the other Sequences discussed in Chapter 2C in Part Two, "Proposed Sequences of Overleaves", or shown in table 4Ja. Therefore, this common understanding of the fourth chakra in esoteric circles makes complete sense to me.

Tabulation of Websites — 27 February 2024

The creation of this section was prompted by an email exchange with a Michaelian student (not one of those reviewed in this chapter) who believes that the chakras follow the Michael Math Sequence. In terms of the Ordinal triad of chakras and Centers, this means to those believers that the first chakra correlates with the Emotional Center, the second chakra correlates with the Intellectual Center, and the third chakra correlates with the Moving Center. He suggested that I search for "seven chakras" on the internet to verify his claim. I did exactly such a research project decades ago for a very early version of my book *The Tao of Cosmogony*, and what that exercise did then was teach me that the Natural Sequence provides a better fit with the chakra sequence than the Michael Math Sequence does. However, to honor his suggestion, I did it again today, using the Google search engine in the Chrome browser. Table 4Jh below summarizes the result.

As stated elsewhere in this chapter, the descriptions of the chakras found on various websites leave somewhat to be desired in terms of consistency and clarity. In other words, the data set is of rather poor quality, so distinguishing between the Natural Sequence and the Michael Math Sequence could be expected to present some challenges. Furthermore, there are an enormous number of websites that discuss the chakras, so, in order to minimize the 'noise' and maximize the 'signal' in my harvest of the data, I established some rules for this project, as follows:

- I limited the research to the first nine search results returned by the search engine (because nine happens to fit the tabulation onto one sheet when printed). Thus, I let the search engine do the selecting, rather than myself 'cherry pick' the websites that best promote my earlier conclusion that the chakras correlate better with the Natural Sequence than they do with the Michael Math Sequence.
- Esotericists have used the chakra system as a 'kitchen sink' in which to dump many septenarian elements that have no easily discernible correlation to components of the Overleaf System. For instance, the chakras are often correlated with endocrine glands and yoga poses and colors and so on. In order to minimize the irrelevant stuff, and to keep the table reasonably small, only key words and

- phrases that seem relevant were copied from the descriptions of the chakras on each website and included in the Table.
- The Natural Sequence and the Michael Math Sequence only differ in the three lower chakras/Centers, so I only included them in the table.
- In the Michaelian teachings, the chakras are most commonly correlated with the Centers, and secondarily with the Roles. In order to enhance the chance for an accurate correlation, when one compares chakras with the Overleaves, my suggestion is that one does well to include not just the correlated Ordinal Center (Moving, Emotional, Intellectual) or Role (Warrior, Server, Artisan), but also the entire lineup of Overleaf categories (Goal, Mode, Shadow, Role, Attitude, Center, Soul Age) that are in the same Process (Ordinal Action, Ordinal Inspiration, Ordinal Expression) as the Ordinal Center and Role. I show all of those Overleaf categories in the rows along the top of the table.

In the table, the first row below the title row shows the ranks of the lower chakras; the second row shows the Sanskrit and English names of the lower chakras, the third row shows the Ordinal Overleaf categories from left to right per the Michael Math Sequence; the fourth row shows the Ordinal Overleaf categories from left to right per the Natural Sequence (so that the reader can easily compare the Overleaves with the chakras in the same column). The next eighteen rows alternate rows showing the URL of the websites and keywords and phrases for the lower chakras. After the table, as usual, I provide a bulleted list of explanatory comments.

My comments on this table are as follows:

- The descriptions of the chakras are not as definitive as the descriptions of the personality traits in the Overleaf System. Therefore the best fit of the lower chakras with Ordinal Action, Ordinal Inspiration, and Ordinal Expression Overleaves can be argued both ways, Natural Sequence and Michael Math Sequence. As it turns out, upon careful examination, neither are so ambiguous as to evade correlating them with reasonable certainty. Basically and briefly, where there is arguable ambiguity as in a civil court legal procedure we arrive at our convictions based on "the preponderance of evidence", "beyond a reasonable doubt".
- Some of the fuller descriptions of each chakra on the website, not reproduced in the table, indicate that there is a behavioral component (Action) and a value component (Inspiration) and a belief component (Expression) in the way the chakra manifests. This does not obscure the notion that one of the lower chakras is primarily about behaviors (Moving Center, Ordinal Action Overleaves), another is primarily about values (Emotional Center, Ordinal Inspiration Overleaves), and another is primarily about beliefs (Intellectual Center, Ordinal Expression Overleaves). We exist and function on the Physical Plane a plane primarily and basically about Action (not primarily and basically about Inspiration or Expression) but our Actions can be primarily and basically energized by our behavior system (Action), or inspired by our value system (Inspiration), or motivated by our belief system (Expression). Thus, the same activity here on the Plane of Action can result from, and be driven by, these three different basic types of 'energies'.
- In a case such as this where the correlation of the three lower chakras and the lineup of Ordinal Overleaves might not be perfectly and glaringly apparent, I suggest that it is best to start by correlating the most obvious of the three, and work from there to the less and least obvious correlations by a process of elimination. In my view, the most obvious correlation would seem to be in the middle column, where the description of the second chakra is said on eight of nine websites to have emotions as a major component, and various emotions are noted, so it fits well with Ordinal Inspiration, particularly the Emotional Center, as in the Natural Sequence, not the Michael Math

- Sequence. It also seems obvious to me that most of the words in the second column are descriptive of the primary concerns of the Baby Soul. Please review that column now and see if you agree.
- Believers in the Michael Math Sequence might point out that "creativity" another word mentioned numerous times in the second column is the name of the Positive Pole of the Artisan Role (which is on the Expression Axis) and seize on the notion that therefore the center column has do with Ordinal Expression. That is a stretch; I say this because the word "sexuality" is also mentioned numerous times in the second column, and in the Michaelian teachings, sexuality is typically associated with the Action Axis, not the Expression or Inspiration Axes. My suggestion is that those two words, creativity and sexuality, are used as descriptors of the second chakra because of the proximity of the reproductive organs to this chakra, which is said in various sources to span from the male reproductive organs to the female reproductive organs, from the pubic area to the navel area. Therefore, the reproductive "creativity" is connected to the "sexuality", and those are implied by the location of this chakra on the physical body. Be that as it may, the Center associated with the second chakra is unequivocally the Emotional Center per the Natural sequence, not the Intellectual Center per the Michael Math Sequence (or the Moving Center per the Chambers' sequences).
- A less obvious correlation, in my opinion, is that the descriptions of the chakras shown in the first column fit better with Ordinal Action Overleaves including Moving Center per the Natural Sequence, than they fit with Ordinal Inspiration Overleaves including Emotional Center per the Michael Math Sequence. Take a look now down that column and see if you do not agree with me that, of the Overleaves, the best fit for the descriptive words in first column is the Warrior Role, geared as that Role is to meet the challenges of "survival" and "safety" and "stability" the three most common adjectives found in the first column. It also seems obvious to me that most of the words in the first column are descriptive of the primary concerns of the Infant Soul.
- By a process of elimination, where the first two chakras fit better with the Natural Sequence than they do with the Michael Math Sequence, it would seem that the third chakra would also have to go with the Natural Sequence. However, the third column is the one that believers in the Michael Math Sequence might regard as their strongest case; they would point to the numerous mentions of "personal power" and say, see there: Warrior! Believers in the Natural Sequence might regard the description of the third chakra as their weakest case — unless they realize that the numerous mentions of "self-" this and "self-" that are expressions of the deep meaning of the Overleaves in the Ordinal Expression lineup, which I refer to as Aspects of the Analysis Process. That is to say, all of the Overleaves in this Process — especially Skeptic and Caution and Rejection — are about defining the self as distinct from the not-self, which makes them competitive and controlling and ego-istically selfassertive; the motivation for these actions is the inherent urge to be independent, to be unique, to be distinctive. This is also what the Intellectual Center does: it names and defines the self-hood of the things in the world. Some of those other words seem Warrior-ish, but the explanation for Natural Sequence believers such as myself is that the driver, the motivation, the energy behind similar behaviors is different for Ordinal Expression than it is for Ordinal Action (or Ordinal Inspiration), even if the same action is the result. Besides that, by the process of elimination, we are induced to interpret the third column as Ordinal Expression.
- Expanding on the references to "self-" this and "self-" that, the websites summarized above, and others, mention that the negative expression of this chakra look very much like the Chief Feature of Self-Destruction, or what I call the Shadow of Renunciation, which is about having a negative self-image in general: all of the "self-"positives in the descriptions are turned to "self-"negatives, such as self-denial and self-doubt.
- Believers in the Michael Math Sequence might not be convinced by arguments in the previous bullet point. A little bit further down the internet research results I found this internet website:
 https://www.chakras.info/solar-plexus-chakra/<. Of all the websites that I reviewed for this project, it provided the most thorough description of each chakra. There the "main meanings associated with the third chakra" were said to be:</p>

Will, Personal Power; Taking responsibility for one's life, taking control; <u>Mental</u> abilities, the <u>intellect;</u> Forming personal <u>opinions</u> and <u>beliefs</u>; Making <u>decisions</u>, setting the direction; Clarity of <u>judgments</u>; Personal identity, personality; Self-assurance, confidence; Self-discipline; Independence; <u>Intellectual</u> abilities; The "accounting <u>mind</u>" that <u>categorizes</u> everything, <u>assesses</u> the pluses and minuses in life; Ability

to establish <u>ideas</u> and <u>plans</u> into reality; Influences preoccupations about social status and self-image; At higher levels, it conveys wisdom.

In my view, that description clinches the third chakra in favor of the Natural Sequence. That description clearly correlates the third chakra with the Intellectual Center, and it also very nicely describes the characteristics of the various Overleaves in the entire Ordinal Expression lineup, each Overleaf being an Aspect of the Analysis Process. This is a different way of understanding the motto of the Young Soul — "Do it my way" — as motivated by Artisan-ish ego-ism per the Natural Sequence rather than as Warrior-ish competitiveness per the Michael Math Sequence. By the way, the descriptions of the first and second chakras on this website reinforce what the other websites say, but with greater detail.

- I did not record it in the table, but the >mindbodygreen.com< website correlates the chakras with stages of life (such as childhood, adulthood, middle age), and so do some others below the top nine search results recorded in the table. Refer to Chapter 4Q, "Life-Stages", for a discussion of that phenomenon. There you will find that the Life-Stages follow the Natural Sequence. The point to be emphasized here is that septenaries in many realms follow the same pattern, the Natural Sequence schema. This coherence across domains of nature and lived experience is called "consilience", and it is sadly lacking in the Michaelian teachings as commonly formulated (meaning: other than in my books).
- Some of the ambiguity in the descriptions of the chakras found on various websites can be ascribed to an ambiguity in their locations on the physical body. For instance, the second chakra, the Sacral Chakra, is said in different sources to be in the pubic area or the navel area, thereby covering both male and female reproductive organs. As you can read elsewhere in this chapter, I equate the Root chakra with the Physiology Center, the Sacral Chakra with the Moving Center (used in sexual activity in the male), and the Navel Chakra with the Emotional Center (used in reproducctive activity in the female).
- As I said above, the Overleaf System is less ambiguous than the descriptions of the chakras. My suggestion is that if we were to lessen the ambiguity in the descriptions of the chakras, we would move some of the words into different columns in the table. In the previous bullet point, I noted that reproductive "sexuality" (and therefore "creativity") are ascribed to the second chakra, apparently because that is near were the reproductive organs are found in this particular instantiation of the Natural Sequence schema. In order to be more consistent with other instantiations of the Natural Sequence in other of its instantiations, I would move the word "sexuality" from the second column to the first column, and I would move "creativity" from the second column to the third column. Otherwise, in my understanding of both chakras and Overleaves, the words in the three columns fit the Natural Sequence convincingly well.
- If there is any lingering doubt about the correlation of the chakras with the Natural Sequence, then I refer the reader to Chapter II-9, "The Seven Chakras", in Part Two of my book *The Tao of Cosmogony*. There one can read that those Occidental esotericists who adopted and adapted the Oriental teachings about the chakras in the Western world, used the chakras system as a "kitchen sink" for numerous septenarian esoteric cosmologies. Among the septenaries that they correlated with the chakras were planes and subtle bodies or layers of the aura. These also have their own chapters and sections in Part Two of that book, and these follow the Natural Sequence with less ambiguity in their names and descriptions. These are yet more examples of consilience in esoteric teachings as well as in nature.

Concluding Remarks on the Correlation of Chakras and Centers

Rather than repeat here what is said in the extensive documentation about the chakras in my book *The Tao of Cosmogony*, let me just say that the evidence is sufficient to conclude with confidence that the chakras follow the Natural Sequence as shown in the last two rows of Table 4Ja. The evidence is that, just like the Natural Sequence, the three higher and the three lower chakras are the mirror image of each other around the central Heart Chakra. The book *The Tao of Cosmogony* discusses dozens of septenaries found in exotericism and esotericism that demonstrably also follow the Natural Sequence. This consistent information on the subject of chakras outside the Michaelian teachings community makes the inconsistency inside the Michaelian teachings community obsolete.

The reason I split these two sections on chakras between two books is because this *History* book is dedicated to the Michaelian teachings, so I present the Michaelian teachings information on chakras. But my book *The Tao of Cosmogony* is actually dedicated to a discussion of a plethora of other teachings in addition to the Michaelian teachings. Therefore it is appropriate to thoroughly document in that book rather than in this *History* book the numerous internet sources that demonstrate that the chakras follow the Natural Sequence.

Please indulge my philosophizing here, in the following numbered list, about this and other confusions in the Michaelian teachings.

- 1. In the process of tracing the history of the chakras in the Michaelian teachings, I have not been able to find an authoritative source; so far as I can tell, it looks to me as if everyone is guessing and no one has really studied the subject in the available literature.
- 2. We know that channeling is not an authoritative or accurate source on the chakras because the numerous contradictions that it has produced have proven it be be unreliable.
- 3. There are groups of channels who knew of each other's work; they mostly agreed on their correlation of chakras with Centers. There are other groups of channels who agreed among each other. The point of trying to figure out who is copying from whom is to emphasize the point that these channels are apparently not channeling the Michaels when it comes to correlating chakras with Centers; they are "channeling" other channels. (There is a lot of stuff in the Michaelian teachings like this.) This is abundantly obvious when you compare and contrast to see who copied whom. There is a group that prefers the Michael Math Sequence; there is a group that prefers Stevens; none of the channels knew of Chambers1 and Chambers2, so she did not get copied. And then we also note that there are nine sources and there are twelve correlations. Yes, that means that some people have more than one correlation, as shown in Table 4]a.
- 4. Looking at Table 4Ja at the beginning of this chapter, we see that there is not even one chakra that has been correlated consistently with a particular Center in the Michaelian teachings. All of the chakras have at least three Centers correlated with it, one has four, and one has six. So how did this happen and what can we do about it?
- 5. It might be the case that the chakra septenary sequence simply does not correlate with the Centers Septenary. (We found that to be the case with Body Types and their lack of correlation with Roles in Chapter 4D above, "Body Types".) Nevertheless, most Michaelian teachers agree, and my studies also indicate, that there is in fact a correlation between chakras and Centers. Those Michaelian expositors have been reviewed above, but they disagree in so many ways that I find the lack of consistency to be astonishing.
- 6. In Chapter 4D, "Body Types", we see that in the original Michaelian group, the Body Types and Centers were said to be one Overleaf category, and I explained how that was the case, and I explained how the discrepancies in the understanding of Body Types can be resolved by adopting a different Body Type System, one that conforms to the Natural Sequence and to the Centers. In this chapter, we see how the chakras correlate with the Centers and follow the Natural Sequence. Therefore, the Body Types when correctly understood are seen to correlate with the Chakras. Therefore, we see that Body Types and chakras, two subjects that have heretofore found no consensus in the Michaelian teachings community, achieve consensus via the same archetypal principle, the Natural Sequence schema.
- 7. It seems to me that this is an excellent time and place to question channeling itself. Some of these discrepancies have been created by alleged channeling, but when you get right down to it, we do not know where this stuff comes from. We do not know if it is what it purports to be, a teaching from a mid-Causal Entity. It seems to me that if these chakra–Center correlations do all come from the same source (the Michaels), then the connection of channels with them is so tenuous as to be worthless when it comes to chakras, and obviously to some other things, such as the Overleaves of celebrities and historical figures. Various students prefer various channels for reasons of resonance with personalities or the type of information certain channels allegedly bring forth from a higher realm of knowledge, but in the overview, there is no use trying to claim one channel is better than the other. What one must do instead is to evaluate the actual information, not speculate about the source of the information. Besides Chapter 4B on Validation above, there are sections in two of my other books The Tao of Personality and The Tao of Cosmogony that present my views on what the Michaelian teachings refers to as Validation.

- 8. Because this situation cannot be resolved by more channeling, we need a different method. The method I prefer is to actually look at the descriptions of the chakras in internet sources and books to see if there are similarities to the descriptions of the Centers. Strangely enough, in my estimation, this seems not to have been done by most of the channels to any great extent, if at all, except perhaps Terri Benning; she has material on her website borrowed from internet resources. The original oriental esotericism about chakras has been modified considerably by occidental esotericists over the last century and a half. Nevertheless, according to my review of the sources, it seems that it is converging on the Natural Sequence. The chapter on the chakras in my book *The Tao of Cosmogony* is mostly based on the most authoritative and scholarly book that I have found, namely *Rainbow Body A History of the Western Chakra System from Blavatsky to Brennan*; authored by Kurt Leland. It is 500 pages long; the last hundred pages is the Bibliography and end notes, which is an indication of the depth and breadth of the scholarship. Is it too much for me to hope that Michaelian students will converge on the Natural Sequence as other esotericists have?
- 9. If you do an internet search on the subject of chakras, you will get hundreds of thousands of hits. If you then read even the first dozen or two websites listed, you will find somewhat differing interpretations of what each chakra means. It seems that various expositors want to place every possible human experience and other structured esoteric systems somewhere in the chakra schema. (The same sort of thing has happened to astrology, the Enneagram, the Myers-Briggs typology, and so on.) One wonders how much of the understanding of chakras is part of the "signal" (truth), and how much is part of the "noise" (falsehood). Let me explain: in the science of information theory, there is the concept of signal versus noise — they are inversely related. That is, the more of one the less of the other; if there is too much noise, then one cannot discern the signal. The available information on the internet about chakras seems to have a lot of noise and not much signal in it; many people have put their own spin, twist, tweak, and embellishment on it; there is no absolutely authoritative source of truth about chakras. My perception is that the various descriptions of chakras from various teachers have become ambiguous because of this movement toward syncretism over the decades and centuries — the signal has been diluted with a lot of noise. I believe that this is one reason that there is so much diversity of opinion among Michaelian channels and other Michaelian teachings expositors about how to correlate chakras with Centers. Because of the ambiguity, if one has a preconceived notion about the chakras, then one can cherry-pick parts of the diverse descriptions to suit one's preconceptions. This is referred to as "confirmation bias" by psychologists.
- 10. My bias is to want to reverse the ambiguation trend and provide a disambiguation of the chakra system by comparing with the other less ambiguous septenaries. My own bias favors the Natural Sequence, and the reason for this bias is simple: it is not really a bias; there is a lot of evidence to back it up, and the quality of that evidence is considerable. As one can see in my book The Tao of Cosmogony, there is an enormous amount of evidence and argument from the natural (and esoteric) world that confirms it. In that book I examine dozens of instantiations of the Natural Sequence, the chakra system being one of them. I have found no confirmatory evidence for the Gurdjieffian Sequence or the Michael Math Sequence or the Vibration Sequence anywhere in the natural world or the esoteric world other than the Michaelian teachings. The chakra system is a part of both the natural world and the supernatural world. Therefore it makes sense to me that it would follow the Natural Sequence. It is my own nature to prefer solid, demonstrable, natural explanations for things, and that evidence and argument includes logic, mathematics, and physics. Those realms are not as ambiguous as our lives are, which are so full of noise that it is difficult to discern the signal. The scientific enterprise is about discerning the principles that underlie this confusing reality system in which we find our consciousness embedded. Besides my book The Tao of Cosmogony, these realms are presented in my book The Tao of Personality.
- 11. Considering the ambiguity of the chakra system as currently understood in various parts of the greater esoteric community, may I be so bold as to suggest that it be clarified by the Overleaf System, and more specifically, the Centers. The esoteric sources have, it seems to me, been converging on the Natural Sequence for a very long time. I invite them to go all the way. Within the Michaelian teachings, I suggest that we should also go there, as a group and/or as individuals.
- 12. I have one other philosophical complaint about the way the Michaelian teachings has evolved, namely that it has developed without external checks and balances. It seems to me that there has

been entirely too much 'inbreeding' within this 'clan'. During the original Michaelian group there were many favorable references to other esoteric teachings, and some features of the Michaelian teachings were obviously borrowed from them. Consequently, the Michaelian teachings has other significant similarities to these prior occult philosophies, theologies, and cosmologies. The basic work of esoteric cosmology has already been done by others. Alas, there seems to have been little study of these extraneous teachings after the original Michaelian group. I dare say that if there had been some critical examination and comparison, some of the errors that were introduced, by way of bogus or dubious channeling, could have been 'nipped in the bud' instead of being spread around promiscuously, to become so entrenched in the belief system of Michaelian students that it might be impossible to dislodge them; old habits of thinking die hard. One of these pernicious errors is the Michael Math Sequence. It has no basis in logic, mathematics, science, nature, or esotericism that I have been able to find. Yet it pervades the structure of the septenary in the orthodox Michaelian teachings, and it has polluted a proper understanding of several significant portions of the systematic component of the Michaelian teachings, including the correlation of chakras with Centers. We can do better than this.

End of rant in this chapter; let's see what the next chapter has in store for us.

Chapter 4K

THE NAMES OF THE LEVELS

This chapter is the first of three chapters that cover various aspects of Soul Age as understood and taught in the Michaelian teachings. Within each Age there are said to be seven Levels; this chapter discusses them. The next chapter after this one discusses those seven Ages. The next chapter after that one discusses an anomaly among the Levels referred to as the "Mid-Cycle".

Introduction

So far as we know, there was no description of the seven Levels given during the original Michaelian group; they were simply labeled as First, Second, Third, and so on. Apparently Chelsea Quinn Yarbro questioned the Michaels via Sarah Chambers about the Levels as part of fleshing out the Michaelian teachings for the purpose of publication in *Messages from Michael (MFM,* 1979). Consequently, on page 82 of that book, there is a description of what might be called the "story arc" of the process of a Fragment evolving through the Levels via many reincarnations.

In her second book on the Michaelian teachings, *More Messages from Michael (MMFM,* 1986), Yarbro expanded on the story arc, and gave names to the Poles of the Levels. She did not give names to the Levels themselves, preferring to stick to First, Second, Third, and so on. This was five years into my own study of the Michaelian teachings, and upon first reading the names given in *MMFM*, it struck me as anomalous that they did not fit with the other Overleaves as the other Overleaves fit with each other. For more than five years, I tried to make those names work within the context of the other Overleaves, but I finally gave up in frustration, and began to work on names that I thought did fit with the other Overleaves. This chapter reveals the reasons for my discomfort with the names given, and the rationale for the names that I prefer. A thorough description of each Level, as I now understand it, is provided in my book *The Tao of Personality*.

This chapter is one of the most tedious of the entire series of chapters in this *History* book. The reason is that there is such a lack of clarity in the Michaelian teachings community about the Levels. There is ambiguity, there is contradiction, there are defects, and there are deficiencies; it might be one of the more confused parts of the entire Michaelian teachings. Consequently, my process of analysis and synthesis and assimilation of the Michaelian teachings regarding the Levels has taken a lot of time and effort to figure out and write about. This time and effort is reflected in what follows, and in my other books.

To begin with, let's review what the various publications say about the nature of the Levels.

Descriptions of the Levels

Central to the Michaelian teachings as a practical spiritual path is Validating one's Overleaves, hence the capitalization of the word Validation. Every now and then someone in the Michaelian teachings community asks the Michaelian teachings community about Validating their Level within their Soul Age. My personal experience is that this is perhaps the most difficult of the Overleaves to Validate. One of the reasons for this difficulty is that a person's Level is obscured by other, stronger, Overleaves, but I believe the main reason is because there is disagreement between publications that purport to describe the nature of each Level. For your convenience, I have tabulated the information from several Michaelian teachings books about the seven Levels. I have chosen key words from the descriptions. Look carefully, and I think you will notice some similarities and some differences, perhaps even some contradictions, as I do. I suggest that you look up the complete descriptions in the published books and see if that helps or hinders your Validation process.

| | Table 4Ka — DESCRIPTIONS of LEVELS | | | | | | | | | | | |
|---------|---|---|--|---|---|---|---|--|--|--|--|--|
| LEVEL | <i>MFM</i> p. 82 | <i>MMFM</i> pp. 28–29, 189 | <i>ТМН</i> pp. 57–64 | <i>TTE</i> pp. 105, 308 | <i>MTBT</i> pp. 34–36 | <i>TJOYS</i> pp. 212–4 | PAS | | | | | |
| FIRST | fairly clueless about the nature of the cycle and actions within it | +Purpose -Simplicity; set out on the new journey with deliberation | introduction; tentative examination of cycle; tends to revert to previous cycle | +Purpose -Simplicity; Examine new soul age; explore. | introduction; growing up; emerging new perceptions but mostly old ways | 'stick toe' in the new cycle | TERMINATION (backward) Ordinal Action RESOLUTION +Institution -Regulation | | | | | |
| SECOND | now some comparison and under- standing of the cycle; emotional centering | +Stability -Balance or +Balance -Stability (there is a contradiction) | transition & creation; self-karma; emotional centering; internal dilemmas | +Stability -Balance Transition / creation, self- karma; plunge in. | difficult because of teetering between former cycle and new cycle | half submerged in the new cycle | INVOLUTION (downward) Ordinal Inspiration IMMANENCE +Affiliation -Indoctrination | | | | | |
| THIRD | even greater discernment, evaluation, awareness of actions within the cycle | +Enterprise -Versatility neg. pole = "jack of all trades and master of none" | introspective; self-conscious; internal adaptation to the cycle; fixed values | +Enterprise -Versatility Introspection adapt to change internally. | internalized perception of the cycle; inward focus; quieter than other levels | totally submerged in the new cycle | ANALYSIS (outward) Ordinal Expression SEPARATION +Individuation -Alienation | | | | | |
| FOURTH | gather knowledge, establish foundation on which to build further | +Consolidation -Achievement | emotions; extroverted; karma creation; grounding; application; identification | +Consolidation -Achievement Emotions exemplify this stage. | out in the world, busy and visible; karma formation in relationships | reemerge to take our under- standing to the world | COMBINATION (pan-direct.) Neutral Assimilation EXPERIENCE +Consolidation -Achievement | | | | | |
| FIFTH | integration begins; some under- standing of the context of the cycles | +Expansion -Adventure | new knowledge; eccentric; exploratory; boundary-buster; karma creation | +Expansion -Adventure New knowledge; eccentricity. | eccentric; glimpses of next cycle; unstable; don't fit in; exploratory | play and work with the new cycle | SYNTHESIS (inward) Cardinal Expression UNIFICATION +Philosophy -Ideology | | | | | |
| SIXTH | integration becomes conscious awareness; obligatory to deal with issues | +Harmony -Connection several circles of acquaintances or friends | karmic completion; demanding; challenging; fast- paced | +Harmony -Connection Karmic completion; intense and busy life. | busiest karma completion; outgoing; relationship- oriented; on the move | others play and work with us in the new cycle | EVOLUTION (upward) Cardinal Inspiration TRANSCEND. +Ascension -Exaggeration | | | | | |
| SEVENTH | final inculcation of entire cycle; preparation for next cycle | +Inculcation -Eclecticism bring all previous lessons to bear & then move on | teaching; mentoring; comfortable; self- karmic | +Inculcation -Eclecticism Teaching; share, consolidate, prepare for next stage. | more relaxed than previous Levels; teaching; advising; counseling | completion of under- standing | ORIGINATION (forward) Cardinal Action ACTIVATION +Causation -Agitation | | | | | |

In the table above,

MFM = Messages from Michael (1979) — Chelsea Quinn Yarbro

MMFM = More Messages from Michael (1986) — Chelsea Quinn Yarbro

TMH = The Michael Handbook (1986) — José Stevens & Simon Warwick-Smith

TTE = Tao to Earth (1988) — José Stevens

MTBT = Michael: The Basic Teachings (1988, 1990) — Christeaan & Van Hulle & Clark

TJOYS = The Journey of Your Soul (1995) — Shepherd Hoodwin

PAS = *The Tao of Personality: The Process/Aspect System of Personality Traits* (1981–present) — Philip Wittmeyer General comments on the descriptions of Levels as shown in Table 4Ka are as follows:

- LEVEL: In the first column, the rank-order number of the Levels is shown from top to bottom in the column.
- MFM: In the second column, the MFM descriptions tell a "story" about the whole process of going through the Levels from beginning to end. However, there is not much in the way of clues about the "nature" of each Level. Nor is anything said about the Levels correlating with the other Overleaves. In fact, there is no hint that they do correlate. Personally, I thought that there was probably a correlation when studying MFM starting in 1981, and sure enough five years later, in the "Michael Math" chapter of MMFM, there was said to be a correlation. However, it made no sense when I actually took a critical look at the alleged correlation. This lack of correlation will be discussed at length further on in this chapter. And there is also a thorough discussion of a related issue, the Michael Math Sequence versus the Natural Sequence, which is even more thoroughly discussed in my book The Tao of Cosmogony.
- MMFM: The third column shows the names given in MMFM to the Poles of the Levels, plus some qualitative descriptions of most of the Levels. And then some comments went beyond names and descriptions: MMFM (p. 189) stated that there was a "resonance" with the Overleaves that have the same Septenarian Attributes. However, as explained in subsequent sections of this chapter, the names given do not have the resonance claimed. Unlike the story in MFM, in MMFM no story was given of the progress through the Levels. In some cases there is a vaque similarity with the MFM story/descriptions. In subsequent sections of this chapter, I register my dissatisfaction with the names of the Poles of the Levels as given in MMFM. Briefly: so far as I have been able to discern, those names do not follow the clear pattern of Axial, Dialectic, and Septenarian Attributes that the other Overleaves follow, except the Fourth Level is obviously Neutral Assimilation. The MMFM names seem to follow some other rationale, such as perhaps number mysticism, which the Overleaves do not follow. There might be something to this number mysticism speculation, but until I understand it, I am not promoting it. My understanding of the Overleaf System Septenaries is not based on number mysticism. The more I think about it, the more it seems that the MMFM names of Poles are not based on some number mysticism either, but just a rationale for the same kind of story that is told in MFM — and TMH and MTBT and TJOYS.
- TMH & TTE & MTBT: In the fourth, fifth, and sixth columns, the TMH and TTE and MTBT descriptions are very similar because they came from the same group of people, the Bay Area non-Yarbro channels and teachers. They are somewhat similar to MFM in that they also tell a story about the whole process of the cycle from beginning to end without characterizing the nature of the Levels in a way that resonates with the nature of the other Overleaves that have the same Septenarian Attributes.
- TMH & MTBT: In the fourth and sixth columns, these two non-Yarbro books ignored the names of the Poles of the Levels as given in MMFM and shown in the third column of the table. In fact, a careful comparison reveals a lack of compatibility between the non-Yarbro contingent and the MMFM names in some cases, and a difficult fit in others. Instead, it seems as if the non-Yarbro contingent enlarged on the descriptions of the Levels as given in MFM and shown in the second column, perhaps with additional channeling and/or intuitions and/or observations.
- TTE: In the fifth column, José Stevens, in his book Tao to Earth, repeats the MMFM names of the Poles of the Levels, and also gives a story line for what happens at each Level. Notice that there is not generally much similarity between the names and the descriptions. This, of course, embodies my complaint about the problem of understanding the Levels: the lack of consistency within the Michaelian teachings community, and indeed the lack of internal consistency by this particular teacher.

- TJOYS: In the seventh column, there are very brief descriptions of the Levels given by Hoodwin in The Journey of Your Soul in 1995. In the book itself, there is a much more thorough description that appears to be an embellishment of all the previous publications. His synthesis even makes a story about how the Poles of the Levels given in MMFM transition and express from Level to Level, without addressing what seem to me to be fairly obvious incompatibilities between some of the MMFM names of the Levels and the non-Yarbro book descriptions. Don't just take my word for it: read and study the descriptions in the various sources listed above and see if you don't agree with my assessment that the situation lacks clarity and consistency.
- The eighth column shows an introduction to my way of understanding the nature of the Levels. One could call Level #1 the Warrior Level, #2 = Server, #3 = Artisan, #4 = Scholar, #5 = Sage, #6 = Priest, and #7 = King. Unfortunately, this technique might not actually make it easier to Validate one's Level, since Role itself is already so diluted with the layers of one's Casting (Position, Cadence, Greater Cadence, Side, Entity, Cadre, Greater Cadre). My solution to that potential ambiguity is to give names to the Levels that cover all six of the Overleaves with the same Septenarian Attributes. Recall that I refer to the Overleaves with the same Septenarian Attributes as being "Aspects" of the same "Process". For instance, the name I give to the Sixth (Cardinal Inspiration) Process is "Evolution". I gave a name with a similar meaning to "Evolution", namely "Transcendence", to the Sixth Level, because it seemed to me to also well-represent the combined meaning of Growth, Passion, Arrogance, Priest, Spiritualist, and Sympathy Overleaves. Referring to each Level by its corresponding Role certainly makes it easy to understand something about the nature of the Level, something more than one gets in the general descriptions that have been offered over the decades since the original scanty descriptions in MFM on page 82. Using Role this way is a simplification, of course, in that the nature of the Level is the assimilation not only of Role, but of the five other Aspects (Goal, Mode, Attitude, Center, Chief Feature) of Overleaves with the same Septenarian Attributes ("Cardinal Inspiration", "Ordinal Action", and so on).

There is of course a story to be told about the progression from each Level ('chapter' in the story 'book') to the next, and the story one might make up will change if the sequence is per the Michael Math Sequence (Server, Artisan, Warrior, and so on) or Natural Sequence (Warrior, Server, Artisan, and so on). Implied in the concept of Levels is a natural development from Level to Level, each Level built on the foundation of the Level before. This is true of the Natural Sequence, but it is not true of the Michael Math Sequence.

Because I have Validated the Natural Sequence in so many septenaries, and because I am not completely satisfied with previous descriptions and stories of Levels and names of Poles of Levels, I apply the Natural Sequence to the Levels. That is, I believe the Natural Sequence is the story that the Levels are telling us, just like so many other developmental stories in the history of the universe. Unlike the *MMFM* names of the Poles of the Levels, I came up with names of Levels and their Poles and some other key words that *do* fit with the rest of the Overleaf System. These are shown in the last column.

In TMH on page 61 the identification of Poles for the Levels such as is found in MMFM and The Tao of Personality is denigrated:

Positive and Negative Poles of soul Levels ... exist and can be identified. However their value is limited because the inference is that the Negative Poles are undesirable. For soul levels this is untrue — you seek to experience absolutely everything that relates to your soul level. So the approach here is to describe the level in its entirety without using the Polarities that might mislead people into discriminating about what is and is not appropriate for them.

Personally, I do not agree with this rationale. I do not see a reason to apply a different and arbitrary standard to one of the Overleaf categories. One of the easiest ways to Validate one's Overleaves other than Level is by observing oneself in the Negative Pole of the Overleaf. Therefore I suggest that it is appropriate to do that with Level also.

Based on personal experience, I believe that we all have all of the Overleaves present in our Personalities to some extent, but that it is only really useful to look for a primary and a secondary, and maybe a tertiary Overleaf of each category. We already do this in terms of Role if you include Casting, and Center if you include "Part" and "Trap", and Chief Feature if you include primary and secondary and tertiary, and the other Overleaves if you include the one that you "slide" to. There is the thing some Michaelian students call "manifested" Soul Age as distinct from "real" Soul Age; the inference there is, do you 'act your age' or not? So,

my policy is to just make it a general principle of interpretation for all Overleaves to have a primary and a secondary (and maybe a tertiary) Overleaf in every Aspect. Therefore, I suggest that we could look for a primary and a secondary Level. Or we might find that we "slide" to an earlier Level under duress. If we cannot discern our exact Level, we might be able to discern if we are "early" Level or "late" Level or somewhere in or near the middle.

After nearly forty years of observing Overleaves in myself and in others, I would say that the brutal truth is that often it is difficult to discern one's Overleaves, but especially Age and most especially Level. The Overleaf System is a grid of boxes with distinct words in them, but people are all fuzzy and variable, and it isn't always easy to put people into the boxes. It is a notorious fact that different channels will apply different Overleaves to you and others. So, ultimately it is up to every person to Validate for themselves, no matter how much they might trust a channel. Even if one gets accurate Overleaves from a channel, the information does one no good unless one understands their Overleaves — and all of the others for the sake of comparison and contrast. Every person can only really do this if they study, truly study, each and every Overleaf. Otherwise, they might fall into seeing what they are told is the case by someone or something they regard as an authority figure, rather than seeing what is actually the case. It also helps to get feedback on one's Overleaves from mature, knowledgeable students who have lived up to the name "student" and truly studied the Overleaf System and a lot of people with various Overleaves.

There are a number of things that impede Validating one's Level: A) the descriptions given in the literature are sometimes contradictory; B) there are influences from other Overleaves; e.g. even if one is in an Ordinal Level, one might have a lot of Cardinal Overleaves that make one seem more advanced, or *vice versa;* C) there might be environmental influences such as parents and society that could boost or retard one's apparent maturity level; D) there might be influences from kindred souls — if they are way ahead or way behind it could conceivably skew one's apparent maturity level; E) if one has several Overleaves in the same Process, it could make one seem like one's Level was in that same Process.

Validating our Level is so very far from the most important thing we will ever do in our lives in this teaching; it is mostly an intellectual exercise. The conclusion that I have come to is this: it is not likely that we can truly Validate our Level until we die and check the Overleaf records on the Astral Plane, if such there be. Heck, we might not even be able to Validate our Soul Age until we get there. I have found that Overleaves other than Age and Level are easier to Validate. Sometimes I wonder if our understanding of Age and Level is complete or accurate; refer to the next chapter, Chapter 4M, "The Seven Soul Ages", for more information.

All this is not to say that one should not even try to Validate their Level. The exercise will teach one something even if one does not succeed to their own satisfaction during the lifetime. I have not succeeded to my own satisfaction, but hey, look at all that I have learned in the attempt.

This section has served as an introduction to an examination of the names of the Poles of the Levels, which is the subject of the next few sections of this chapter.

Development of My Understanding of Levels

Being an Artisan, I am interested in understanding the structure of things — how they relate to each other and work together. When I first began to study the Overleaves in 1981, after reading MFM, in addition to understanding each personality trait, I was focused on how the traits should be arranged in a system. Some of this pattern was revealed in MFM, but not all of it. In MFM the Traits are divided into seven categories, consisting of three (Action, Inspiration, Expression) pairs (Cardinal and Ordinal) of Axes and a Neutral (Assimilation). I refer to these as the Septenarian Attributes. In MFM, the Ages and Levels were not included in these categories, but from the beginning of my study of the Overleaf System I believed that they should be. Why shouldn't they? — there were seven of them also. I did what I could to figure it out on my own. The path I took is as follows.

First of all, I took it upon myself to put a meaningful name on each of the seven categories of Septenarian Attributes. That is, I gave the name "Termination" to the Septenarian Attributes of "Ordinal Action", for instance. Collectively I called these seven categories "Processes". (The rationale for this is explained in detail in Part One of my book *The Tao of Personality*.) Second of all — after reading *The RA Material* in 1983, which led me to a physics theory by Dewey Larson — I perceived that the three Axes of the Overleaf System had a numerical sequence. That is, Action was a manifestation of one-dimensional motion (called "translation" by Larson); Inspiration was a manifestation of two-dimensional motion (called "vibration" by Larson); Expression

was a manifestation of three-dimensional motion (called "rotation" by Larson); and Assimilation was a manifestation of pan-dimensional motion (called "scalar" by Larson). Third, I speculated that the sequence of Levels would ascend from Ordinal to Cardinal, and ascend from one-dimensional to two-dimensional to three-dimensional to pan-dimensional. Fourth, I felt that the Levels should have names, as all the other Overleaves did, and that these names should be approximately synonymous with the names I gave to the seven Processes. This information is tabulated as follows:

Ordinal Action = One-dimensional Negative Translation = Termination Process = Potentiation (First) Level Cardinal Action = One-dimensional Positive Translation = Origination Process = Activation (Second) Level Ordinal Inspiration = Two-dimensional Negative Vibration = Involution Process = Foundation (Third) Level Cardinal Inspiration = Two-dimensional Positive Vibration = Evolution Process = Illumination (Fourth) Ordinal Expression = Three-dimensional Negative Rotation = Analysis Process = Purification (Fifth) Level Cardinal Expression = Three-dimensional Positive Rotation = Synthesis Process = Inculcation (Sixth) Level Neutral Assimilation = Pan-dimensional Neutral Scalar = Combination Process = Consolidation (Seventh)

I stayed with this understanding until 1986. I did not feel totally comfortable with the names and associations of the Levels with the Processes given above, but the rest of it (the "dimensionality") felt right then and still feels right at the time of this writing. Some resolution to my uncertainty came in February 1986 when *MMFM* was published and I read it. Names for Positive and Negative Poles of the Levels were given, and an association with the seven Processes was given. They are as follows:

First Level & Infant Soul & Server = Ordinal Inspiration = +Purpose and –Simplicity

Second Level & Baby Soul & Artisan = Ordinal Expression = +Stability and –Balance

Third Level & Young Soul & Warrior = Ordinal Action = +Enterprise and –Versatility

Fourth Level & Mature Soul & Scholar = Neutral Assimilation = +Consolidation and –Achievement

Fifth Level & Old Soul & Sage = Cardinal Expression = +Expansion and –Adventure

Sixth Level & Transcendental Soul & Priest = Cardinal Inspiration = +Harmony and –Connection

Seventh Level & Infinite Soul & King = Cardinal Action = +Inculcation and –Eclecticism

I came to call this the Michael Math Sequence because it was in the "Michael Math" chapter of MMFM. Note that the Michael Math Sequence places Ordinal Inspiration first, Ordinal Expression second, and Ordinal Action third in the septenary. According to this, Level and Age as well as Casting — the major topic of the "Michael Math" chapter of MMFM — follow the Michael Math Sequence. However, I have come to regard the Michael Math Sequence as a legitimate but unvalidatable possibility, but for Casting only. I have come to regard the Michael Math Sequence as incorrect for Soul Age and Level. This is explained in great detail in my book The Tao of Cosmogony. The Natural Sequence places Ordinal Action first, Ordinal Inspiration second, and Ordinal Expression third in the septenary, while leaving the four other Septenarian Attributes, aka Processes, in the same order as the Michael Math Sequence does.

After MMFM was published in 1986 and before I rejected the Michael Math Sequence as applying to Soul Age and Level in 1991, I tried to explain in my book manuscript The Tao of Personality the names of the Poles of the Levels given in MMFM to fit with the Michael Math Sequence correlation of Levels and Ages with other Overleaves. There is no public record of that attempt. After 1991, I retained the names of the Poles of the Levels given in MMFM, but correlated with the Natural Sequence. You can read about that at this Michaelian teachings website hosted by Dave Gregg: >http://www.michaelteachings.com/introduction_to_levels.html<. (This is now obsolete, but there is no public record of the successor, until this book.) I never felt comfortable with it because I had to try very hard to makes the names of the Poles of the Levels as given in MMFM fit with the other Poles of the corresponding Overleaves, whether Michael Math Sequence or Natural Sequence, and the names that I had for the Levels themselves did not fit with the names of their Poles.

There are two reasons for my rejection of the *MMFM* names of the Poles of the Levels: lack of *resonance*, and lack of *complementarity*. And those two criteria were given at the same time that the names of the Poles were revealed, in the "Michael Math" chapter of *MMFM*. But before I get into explaining those two problems, let me now give you the names I currently use for the seven Processes and the seven Levels:

First Level (Ordinal Action = Termination Process) = RESOLUTION, +Institution, -Regulation

Second Level (Ordinal Inspiration = Involution Process) = IMMANENCE, +Affiliation, -Indoctrination

Third Level (Ordinal Expression = Analysis Process) = SEPARATION, +Individuation, -Alienation

Fourth (Neutral Assimilation = Combination Process) = EXPERIENCE, +Consolidation, -Achievement

Fifth Level (Cardinal Expression = Synthesis Process) = UNIFICATION, +Philosophy, -Ideology

Sixth Level (Cardinal Inspiration = Evolution Process) = TRANSCENDENCE, +Ascension, -Exaggeration

Seventh Level (Cardinal Action = Origination Process) = ACTIVATION, +Causation, -Agitation

Note that the only names I retained from MMFM are for the Fourth Level. It might help you to notice the use of words with opposite meaning for each Axis polarity when they are juxtaposed thus:

Ordinal Action = Termination Process = Resolution Level
Cardinal Action = Origination Process = Activation Level
Ordinal Inspiration = Involution Process = Immanence Level
Cardinal Inspiration = Evolution Process = Transcendence Level
Ordinal Expression = Analysis Process = Separation Level
Cardinal Expression = Synthesis Process = Unification Level
Neutral Assimilation = Combination Process = Experience Level

Lack of Resonance and Complementarity

As mentioned in the previous section, when names of the Poles of the Levels were revealed in *MMFM*, it was claimed that there were two criteria by which the names of the Levels and their Poles should abide: *resonance* with Overleaves that have the same Septenarian Attributes, and *complementarity* with Overleaves that have the opposite Septenarian Attributes. All of the other Overleaves abide by these two criteria, so it is only reasonable that the Levels should also. However, strangely enough, that is not what happened. Following is a detailed analysis of what went wrong.

Lack of Resonance

My first problem with the names of the Poles of the Levels as given in *MMFM* is their lack of *resonance* with the other Poles of Overleaves in the same Process, which is to say, Overleaves having the same Septenarian Attributes. That word "resonance" is not only mine; it was used by the Michaels.

According to *MMFM*, in the middle of page 189, names of the Positive and Negative Poles of the numbers one through seven are given. Then it says, about 2/3 of the way through that paragraph, "These polarities apply to casting order as well as to levels and, in fact, *resonate* through all the Overleaves". I took this to mean that the names of the Poles of the Levels should be an "assimilation" of the meaning of the six other Poles of Overleaves in the same Process. This is exactly what I had in mind from the beginning of my attempt to understand the Overleaf System, starting five years before *MMFM* was published. Ever since 1981, I had understood Level (and Age) to be the Neutral Aspect of the seven Overleaf categories, aka Aspects of Personality (Role, Goal, Mode, Attitude, Center, and Shadow).

What I and MMFM are asserting is that the meaning of each Level is like a blend of all six of the other Aspects of Personality in the same Process. I am saying it differently from MMFM, but I believe I mean the same thing as MMFM. That is, the meaning of Level is the combined meaning of the six other Aspects of Personality. For instance, Level Four (which I have named "Experience") is a blend of the other six Neutral Assimilation Aspects: Scholar, Stagnation, Observation, Pragmatist, Instinctive, and Stubbornness. Likewise, in each Level the inherent qualities of the corresponding Attitude, Mode, and so on, exist but are "blurred", "mixed", "combined", and only the essence remains.

What I suggested in the previous section of this chapter is that there is a more meaningful or descriptive word or name for "Neutral Assimilation" and the other six Processes, and that these seven names have synonyms suitable for the seven Levels. This blended meaning gives the Level Aspect an "emphasis in life", but so do the other six Aspects (Role, Goal, Mode, Attitude, Center, and Shadow) in the same Process, but in their own un-blended way. The problem was, when I encountered *MMFM*, I had thoroughly studied out what that resonance between Overleaves in the same Process was, and I could see no such resonance in the names given in *MMFM*. Out of respect for otherwise good information, I squirmed mightily at the time to make it work. However, I have since given up trying to make the names of the Poles of the Levels given in *MMFM* resonate with the other Overleaves in the same Process.

In the paragraphs below, I am going to point out the specific lack of resonance between *MMFM* names and the other Overleaves.

Take a good, long, hard, thoughtful look at the following table with seven rows and see if you do not agree with me that the names of the Levels in the middle row, given in MMFM, simply do not fit with the names of the other Overleaves in the other six columns, given in MFM, in the same Process. When I first read these names of the Levels in MMFM in 1986, I felt very uncomfortable with them, noticing that they did not fit well with the other names of Overleaves and their Positive and Negative Poles. As I said above, I had come to a thorough understanding of what the seven Processes were all about, and when the names of the Poles of the Levels showed up in MMFM, the discrepancy with my understanding of the Processes was quite disconcerting. Nevertheless, I worked very hard to make them fit when I tried to explain them in an early version of my book manuscript The Tao of Personality. The mental gymnastics required to fit the given names with the other Overleaves was torture for me. In retrospect, I see this as intellectual dishonesty on my part, impelled by respect for the otherwise good channeling in the Yarbro books.

| | Table 4Kb — OVERLEAF CHART with POLES of LEVELS per MMFM | | | | | | | | |
|--|--|--|------------------------------------|--|--|-------------------------------------|--|--|--|

All of the names of Overleaves and their Poles are from the Yarbro books; other students sometimes show other names. Please take the time to study this table, particularly the seven horizontal rows. The names of the seven Overleaves in each row should *resonate* with the name of the Septenarian Attributes and the name of the Process shown in the left-most column. Some thought will reveal to you that this is the case with all of the Overleaves other than Level, and is not the case with the names of the Poles of the Levels. In my opinion, it would be Good Work if you studied the Overleaf System enough to come to the same conclusion that I have: the names of the Poles of Levels given in *MMFM* do not resonate with the other Overleaves as claimed. However, I am going to let you in on some of my own observations.

We could perhaps force a better resonance by assuming the names of the Poles of the Levels were channeled out of order. I noticed that often the names seem to fit better elsewhere, on some other Axis. For instance: +Harmony/-Connection in Cardinal Inspiration (Sixness) seem to me to belong with Cardinal Expression

(Fiveness — compare Sage and Acceptance) more than they do with Sixness. Also, +Inculcation/-Eclecticism in Cardinal Action (Sevenness) fit better with Neutral Assimilation (Fourness — compare Scholar) than they do with the other Cardinal Action traits. Also, +Stability/-Balance — (or is that +Balance/-Stability, because two times in MMFM it is one way — page 28, page 189 — and one time it is the other way — page 191) — always reminded me a lot more of the Positive and Negative Poles of Stagnation, +Suspension and -Inertia (Fourness), than the other Twoness traits. To my way of thinking, +Expansion/-Adventure in Cardinal Expression (Fiveness) fits better with Cardinal Inspiration (Sixness) (compare the Goal of Growth and the Passion Mode) than it does with the other Fiveness traits in Cardinal Expression. Furthermore, the proposed Negative Pole of Level One, -Simplicity, is the very word MFM used to explain the Positive Pole of Retardation, +Atavism. Also, +Enterprise/-Versatility (Threeness) do not fit with any other of the Ordinal Action traits that it is supposedly one of. I do happen to like +Consolidation and -Achievement for the Poles of Fourness, but they are the only names of the Levels that I retained after my examination. This looks like a lot of ambiguity to me, and I don't like that.

Might there be a way around the apparent ambiguity? I will make a suggestion because of what it says in *MMFM,* page 189:

You can perceive that while one is ordinal and seven is cardinal, that the first half is cardinal and the last half is ordinal — in other words, the pattern "doubles back on itself". This is what is implied by the "yin–yang" symbol, and it would probably be of use to keep the "yin–yang" in mind while considering what we tell you of the function of the levels and numbers. [MMFM, p. 189]

Elsewhere in this book I have referred to this as the Taijitu Tango Principle. The Ordinal triad and the Cardinal triad of traits are what provide the *complementarity* of the first half and the second half of the Septenary. Here I ask the question: if the Michael Math Sequence is valid, did the Michaels perhaps mean that positions One and Seven are a composite of Ordinal Inspiration and Cardinal Action, positions Two and Six are a composite of Ordinal Expression and Cardinal Inspiration, and positions Three and Five are a composite of Ordinal Action and Cardinal Expression? The following table will make it clearer what I have in mind with this suggestion:

First Level: Is +Purpose/–Simplicity a blend of Ordinal Inspiration and Cardinal Action?

Second Level: Is +Stability/-Balance a blend of Ordinal Expression and Cardinal Inspiration?

Third Level: Is +Enterprise/-Versatility a blend of Ordinal Action and Cardinal Expression?

Fourth Level: I agree that +Consolidation/-Achievement (Neutral Assimilation) is a blend of all Levels.

Fifth Level: Is +Expansion/-Adventure a blend of Cardinal Expression and Ordinal Action?

Sixth Level: Is +Harmony/-Connection a blend of Cardinal Inspiration and Ordinal Expression?

Seventh Level: Is +Inculcation/-Eclecticism a blend of Cardinal Action and Ordinal Inspiration?

Perhaps we could carry my attempted rationalization of dubious channeling of names of Poles of Levels one step further. The names of the "Negative" Poles of the Levels given in *MMFM* do not seem all that negative to me. Perhaps the Positive Pole of the Level corresponds to the Cardinal Pole of the Axis, and the Negative Pole of the Level corresponds to the Ordinal Pole of the Axis. This suggestion is tabulated below, along with the yin-yang and Axis blending I propose as a possible but yet another dubious interpretation of the Michaels' "doubles back on itself" statement:

First Level: +Purpose = Cardinal Action? and -Simplicity = Ordinal Inspiration?

Second Level: +Stability = Cardinal Inspiration? and -Balance = Ordinal Expression?

Third Level: +Enterprise = Cardinal Expression? and -Versatility = Ordinal Action?

Fourth Level: +Consolidation and -Achievement (Neutral Assimilation)

Fifth Level: +Expansion = Cardinal Expression? and -Adventure = Ordinal Action?

Sixth Level: +Harmony = Cardinal Inspiration? and -Connection = Ordinal Expression?

Seventh Level: +Inculcation = Cardinal Action? and -Eclecticism = Ordinal Inspiration?

This demonstrates the mental gymnastics that I exercised in my efforts to reconcile *MMFM* with itself. You might really have to study this to begin to understand what I am trying to convey. With a lot of effort, this might seem sensible, but I believe it is a very forced attempt at justifying what *MMFM* said. It also seems to contradict the statement that the Levels resonate with the other Overleaves, which are not a blending of Cardinal and Ordinal halves. I do not see how one can have it both ways. Anyway, I leave it to the reader to

decide what makes sense to them, but to my way of thinking, it is a Procrustean exercise of cutting and stretching to fit the names of the Poles of the Levels with the names of the combination of Axes–Polarities as well as an unblended correlation of Levels with Overleaves. I find all these ideas repugnant for their lack of clarity. The other Overleaf categories (Role, Goal, Mode, Attitude, Center, Shadow) do not have this confusing ambiguity, so it makes no sense to me that the names of the Levels would.

To me it is obvious that the names *MMFM* gave to the Poles of the Levels are ambiguous enough to be placed in other of the seven categories than where they were placed — if I sincerely believed these names were legitimate. I suspect the person who channeled them was not the same person who channeled the names of the other Overleaves (they were given in two books published 8 years apart), and the names just don't fit with the other Overleaves because the second channel had a different understanding from the first channel, and so the information was distorted if not downright erroneous. Consequently, I have dumped the *MMFM* names of the Levels into my "dubious channeling bin" until further explanation from the Yarbro channel(s) appears.

Lack of Complementarity

My second problem with the names of the Poles of the Levels given in *MMFM* is the matter of *complementarity*. In the Overleaf categories other than Level, it is relatively easy to see the complementarity between Cardinal Processes and Ordinal Processes on the same Axis (Action, Inspiration, Expression). For instance: +Acceptance versus –Rejection, +Passion versus –Repression, +Realist versus –Cynic, and so on with eighteen complementary pairs. Some of the other complementarities are not as easy to discern as these examples, but with just a little thought and an understanding of the real nature of the Axes themselves, it can be done. I do not perceive that sort of easy complementarity with the *MMFM* names of the Poles of the Levels. What a Procrustean exercise of mental gymnastics we have to do to cut and stretch +Purpose/–Simplicity (Ordinal Inspiration) to be complementary to +Harmony/–Connection (Cardinal Inspiration). Also, +Stability/–Balance (Ordinal Expression) versus +Expansion/–Adventure (Cardinal Expression) is still a big cut and stretch, but not quite as bad a fit. And what about +Enterprise/–Versatility (Ordinal Action) versus +Inculcation/ –Eclecticism (Cardinal Action)? That makes no sense that I can see in terms of complementarity. If we moved things around as I suggested in the preceding section, it would be a little better fit perhaps, but it would still be deforming a rationale into a rationalization, in my opinion.

What if we shift the names from the Michael Math Sequence to the Natural Sequence per the yin-yang symmetry (Taijitu Tango Principle) that we are told to remember in *MMFM* on page 189? We do worse, in my subjective evaluation. Do you agree with me that we would have to struggle mightily to invent even a strained, not easy, complementarity between +Purpose/–Simplicity versus +Inculcation/–Eclecticism; and +Stability/–Balance versus +Harmony/-Connection; and +Enterprise/–Versatility versus +Expansion/– Adventure? So why is the pattern of complementarity that was established with the other Overleaves broken with the Levels?

No matter what I do, no matter how hard I try, I have not been able to make any sense of the MMFM names, and per the Michaels' instructions in the same book, I am unwilling to accept them "on faith". Unfortunately, we do not have access to the Yarbro contingent to ask for clarification. I have not been able to figure out a structural rationale for them, and without some explanation I put them in my "unValidated" category until I figure that out or the Michaels reveal it.

Is there any other rationale for the Michael Math names of Levels? I know of only one other possibility.

Numerology and Levels

In spite of the lack of *resonance* and the lack of *complementarity*, is there some way to salvage the *MMFM* names of the Poles of the Levels? Someone might suggest that there is a numerology significance to the names.

I am not predisposed to favor the type of numerology that finds significance in one's life by adding up the numbers in one's birth date or house number, et cetera, and reducing to a number less than ten. However, I have a book authored by Michael Schneider, A Beginners Guide to Constructing the Universe: the Mathematical Archetypes of Nature, Art, and Science — a Voyage from One to Ten. This is a different type of "numerology", one that you can discern from the subtitle. It presents a rational, scientific basis for divining a meaning to numbers, and it includes the historical, mystical meaning of numbers for comparison. What if the names of the Poles of the Levels given in MMFM, and (less likely) the descriptions of the Levels and Ages given in MFM and MMFM, are really based on the Michaels' understanding of the mystical numerology meaning of numbers in a base-seven system?

I checked and it doesn't work in Schneider's base-ten exposition. His chapter titles were:

- 1 = wholly one
- 2 = it takes two to tango
- 3 = three-part harmony
- 4 = mother substance
- 5 = regeneration
- 6 = structure-function-order
- 7 = enchanted virgin

These don't look anything to me like the *MMFM* Levels. There are three other numbers in his lineup of ten, but of course they don't relate to the Septenary either.

It seemed that numerology could conceivably explain why there is no significant discernible resonance of descriptions and names of Levels and Ages with the Processes (Cardinal and Ordinal Action and Inspiration and Expression, and Neutral Assimilation) of the Overleaf System (even though *MMFM* page 189 said there was). It seemed that this could conceivably explain why there is no significant discernible Cardinal/Ordinal complementarity between the first half of those septenaries and the second half (even though *MMFM* page 189 said that there was). Could it be that the Aspect of Levels/Ages is structured according to a different system from the rest of the Aspects, despite both being Septenaries? Is there an extant base-seven numerology? If so, what is the meaning of the numbers in that system? Does it look anything like the *MMFM* names of the Poles of the Levels or descriptions of the Levels and Ages?

Another suggestion for a Scholarish student: One might also make a three-column, seven-row table containing the names of the Poles of the Levels in the first column taken from MMFM pages 28–29 and 189, key words for the Levels in the second column taken from the same location and MFM page 82 and elsewhere, and key words for the Ages in the third column taken from MFM pages 69–80 and elsewhere and MMFM pages 27–28 and elsewhere. Can a correlation be discerned such that we can presume the Michaels' understanding of a base seven numerology? Just so you know, and if it makes any difference to you, I personally do not prefer the numerology explanation for the names and descriptions given to the Levels and Ages. But I am now wondering if the channel for the names of the Poles of the Levels, because of familiarity with some numerology system, got the names from the subconscious rather than from the Mid-Causal Plane. But who knows what some Internet numerology research or additional channeling might turn up?

In the final analysis, my heroic efforts in mental gymnastics to salvage Yarbro's names for the Poles of the Levels have failed. Can I do any better at *resonance* and *complementarity*? You be the judge:

My Names for the Levels

As shown in Table 4Ka, *The Michael Handbook*, and *Michael: the Basic Teachings*, and Joya Pope's book *The World According to Michael*, all have descriptions of what supposedly happens in the seven Levels, but they do not even attempt to correlate each Level with a specific Process and apply Septenarian Attributes to them. Perhaps then a case could be made that the *MMFM* names simply correlate with what happens in the Levels as if there were no resonance with their corresponding Process. That is the way the Levels have typically been described in the books and understood among many students, starting with *MFM*, page 82. Reading the descriptions of the Levels in those books, and comparing them with the *MMFM* names of the Poles of the Levels, you might conclude, as I have, that there is merely a *vague* resemblance in *some* cases.

So is there a resonance of Levels with Processes or do the names of the Poles of the Levels only reflect the descriptions of the Levels? My opinion is that there is — and should be — a resonance with the Processes and that the descriptions of the nature of the Levels in the books should be adjusted accordingly, and I conclude that the MMFM names do not really reflect that resonance. In Chapter 11 in Hoodwin's book The Journey of Your Soul (1995), he makes a valiant attempt to reconcile the MMFM names of the Levels with the other Overleaves in the same Process, but personally I find his rationale strained beyond the breaking point, as strained as I found my own original rationalizations. I submit that there are other names, better names than given in MMFM, that do not strain reasonableness. Students have changed names of Overleaves and Poles before, and I think it is totally warranted in this case.

In the table below, I show my names for the Levels and their Poles, names that actually have *resonance* and *complementarity*. Notice that most of them are quite different from the names given in *MMFM*.

| Table | Table 4Kc — OVERLEAF CHART — "SPACE STRUCTURE" — AXIAL JUXTAPOSITIONS | | | | | | | | |
|--|---|---|--|--------------------------------------|--|--------------------------------------|--|--|--|

It is surprising to me that, other than myself, no Michaelian student that I know of has seriously attempted to understand the structure of the Overleaf System. That being the case then, it is not so surprising that no one other than myself that I know of has noticed that the names of the Poles of the Levels given in *MMFM* do not have either the *resonance* with other Overleaves that have the same Septenarian Attributes, or have the Cardinal/Ordinal *complementarity* that was claimed when they were first revealed, and that all the other Overleaves have. While looking at the Chart above, you might also notice my proposed "improvements" to some of the names of the Overleaves and Poles.

Concluding Remarks on Names of the Levels

- 1. There are two ways that one can characterize the Levels, and both of these have been used in the Michaelian teachings over the decades. One way can be called the "relative" way each Level is part of a story arc, so the Level can be characterized by its place in the story. It would not necessarily be appropriate to have names for the Levels (and the Poles of the Levels) if this was the whole story because descriptions of the story arc would suffice. The other way can be called the "absolute" way each Level has a nature regardless of its relationship to the other Levels; therefore it is appropriate to have names for the Levels and the Poles of the Levels, not just descriptions of the Levels. Another way to say this is that there is the Ordinal (aka relative) way and the Cardinal (aka absolute) way to characterize the Levels.
- 2. Near as I can tell, the names that Yarbro gave to the Poles of the Levels were intended to reflect the Ordinal, relative way of characterizing the Levels, the same as the MFM channeling, in spite of the declaration that there was resonance with other Overleaves. However, this approach by itself leads to

- problems with integrating the Levels into the other Aspects of the Overleaf System, which have names and Poles and placements in the structure of the Overleaf System.
- 3. In *MMFM*, page 186, it is said that the names of the Poles of the Levels *resonate* with the other six Overleaves with the same Septenarian Attributes. I accept this premise as valid because it is true of all the other Overleaf categories, but to my mind the names of the Poles of the Levels as given by Yarbro simply do not resonate, no matter how hard I try. It looks very much like a contradiction within *MMFM* to me, as well as there being some conflicts with the original descriptions of Levels in *MFM*.
- 4. It is also perfectly obvious to me that the names of the Poles of the Levels given in *MMFM* do not have the *complementarity* that all of the other names of Overleaves on opposite sides of the same Axis have with each other, no matter how hard I try to force the fit.
- 5. Personally, the matter of names of Poles of Levels was a big lesson for me regarding intellectual honesty in my study of the Michaelian teachings. In retrospect, it is embarrassing to me to see the lengths I went to in an effort to justify what to me now appears to be dubious and/or bogus channeling.
- 6. The person who channeled the names of the Poles of the Level was almost surely not the same person who channeled the other Overleaf names they were given in two books published 8 years apart, apparently with channels from two different groups. Rather than go with my own original rationalizations and Hoodwin's rationales, it makes more sense to me that the *MMFM* channel did not actually understand the *resonance* or the *complementarity* of the Overleaves given in *MFM*, and so the information given for *MMFM* came through distorted if not just plain wrong.

Chapter 4L

THE MID-CYCLE DISCREPANCY

In Part Two we reviewed Overleaf Chart #8, which was derived from information first published in 1986 in Yarbro's book *More Messages from Michael (MMFM)*. That Chart showed a "mid-cycle" between the Third and Fourth Levels of each Soul Age. This is not something shown on any of the other Overleaf Charts reviewed in Part Three. So what are we to make of this?

Basically, there is a discrepancy in channeling about the meaning of the term *mid-cycle*. The term is used numerous times but not defined in *Messages from Michael (MFM)*, first published in 1979. *More Messages from Michael* (1986) — and therefore the Yarbro branch of the Michaelian teachings — defined the mid-cycle as a transition stage overlapping Third and Fourth Levels of a Soul Age. However, ten years later Sarah Chambers, the original Michaelian channel, channeled that in the original Michaelian group, which met from 1973 to 1978, the term mid-cycle was just another name for the Fourth Level of seven Levels within each Soul Age. The non-Yarbro students of the Michaelian teachings have not adopted the *MMFM* definition of mid-cycle as a transition stage in their publications. Discrepancies such as these present an extraordinary opportunity for intellectual exercise in discernment and learning as we sort them out. (In the remainder of this chapter, quotations and page numbers from *MFM* and *MMFM* are from the First Editions rather than the 25th Anniversary Editions.)

The Meaning of Mid-Cycle in the Original Michaelian Group

Shepherd Hoodwin provided me with the transcription of a private channeling session that he had with Sarah Chambers on 14 April 1996:

In Yarbro, there is extensive material defining "mid-cycle" mature, for instance, as a unique combination of Third and Fourth Levels; this is also Victoria's and Sandhya's [former members of the Yarbro contingent] understanding of that term. Sarah, however, remembers it as meaning simply Fourth Level. Please clarify.

We also remember our definition of "mid-cycle" as being the fourth of seven. We do not try to make this information difficult for students, and there is nothing peculiar about the use of the word "mid" here. It means just what it appears to mean — the middle of the cycle.

It could be claimed that Sarah's memory and/or channeling was in error. We can examine some available documents to see if there is any evidence of this.

In MFM, on pages 90 and 91 where it lists the average Soul Age of various nations, it mentions "early" Level 18 times, "mid-cycle" 7 times, and "late" Level 16 times. These are the first occurrences of the term "mid-cycle" in this book. It makes sense to use the word "mid" here rather than "fourth-of-seven" because of the contrast with "early" and "late". There is no definition given, so it comes naturally to assume that "fourth-of-seven" was the intended meaning rather than an anomalous overlap of Levels.

One could argue that the use of the term mid-cycle here might conceivably refer to Levels 3, 4, and 5, since these collectively are all mid-way in the cycle of seven, leaving two "early" and two "late" Levels. This seems unlikely, because if it were true then there would be more occurrences of "mid" than either "early" or "late". Furthermore, in MMFM, p. 189, it is indicated that the three "early" Levels are "Ordinal/Cardinal" whereas the three "late" Levels are "Cardinal/Ordinal" and the Fourth Level is "neutral", making a further meaningful distinction between the natures of "early", "mid", and "late". This distinction between Ordinal, Neutral, and Cardinal with respect to the mid-cycle merits further discussion, but for now we note that it buttresses the quantitative argument that the most natural and sensible understanding of "mid" is that it means "fourth" in this context rather than "third, fourth, and fifth" collectively.

The term mid-cycle is not defined anywhere else in *MFM*. The term does appear again in the lengthy presentation of the Overleaves of example people from pages 120 to 150 in *MFM*. Here mid-cycle is used 8 times among 4 occurrences of First Level, 10 of Second, 17 of Third, 23 of Fourth, 21 of Fifth, 19 of Sixth, 11 of Seventh, and one occurrence of "final" Level. Because it was previously stated that there are seven Levels (*MFM*, p. 81), it seems most reasonable to assume that in this context "final Level" is another name for "Seventh Level", and that "mid-cycle" is another name for "Fourth Level". Otherwise it could be argued that these texts constitute evidence that there are nine Levels, contrary to the explicit statement that there are seven. This is sufficient evidence for the argument that there can be two names for one Level.

The term mid-cycle is not the only use of the prefix "mid-" in MFM. It is used three times to refer to the fourth Level of the Astral (second) Plane, four times to refer to the fourth Level of the Causal (third) Plane, and once to refer to the fourth Level of the Mental (Fourth) Plane. There can be no dispute about the use of mid- as meaning fourth-of-seven when the Michaels discuss the planes, because they say so explicitly in the following quote. Note below that there are three "low" Levels and three "high" Levels on either side of the "mid-" Level, just as one would naturally assume with "early" and "late" when applied to the seven Levels within a Soul Age, as previously stated.

There are, of course, seven planes in all, each with seven Levels. First is the Physical Plane. Beyond the upper and lower Astral Planes are the Causal Plane with seven Levels, three low, one Mid-Causal [sub-Plane] upon which we exist, and three higher Levels upon which reside the high Causal bodies, the Transcendental Souls contiguous with this plane. We remind you that our cycles consist of seven Levels, just as yours do. The Mental Plane is the Akashic Plane, which is a photographic record of all history. Some very high adepts have access to this plane. On the Mental Plane reside the Infinite Soul and the low and Mid-Mental [sub-Plane] bodies. [MFM, p. 42]

The first Level of the Astral Plane is populated by living fragments adept at astral travel, and those souls who penetrate this plane accidentally through drugs. The second Level of the Astral Plane is inhabited by all those between bodies. The third Level attracts Old Souls who are trying to burn final karma without being reborn. The <u>mid</u>-Astral bodies are partially reunited Entities. You have manifested a <u>Mid</u>-Astral [sub-Plane] entity previously. The three higher Levels are progressively integrated. [MFM, p. 171]

Information similar to this about the Levels of the planes is repeated in *MMFM*, pages 43–44, so there was no change by the Yarbro branch in the years following publication of *MFM*. In no Michaelian teachings publication that I know of is there mention of a sub-plane that overlaps the third and fourth planes.

Channeling that appears in *MFM* was extracted from transcriptions of the original Michaelian group. Some original Michaelian group channeling transcriptions not quoted in *MFM* surfaced into the greater Michaelian community during the mid-1990s, so we can check them for evidence of the meaning of mid-cycle in the original Michaelian group. There, First Level occurs 30 times, Second 27 times, Third 38 times, mid-cycle 60 times, Fourth 19 times, Fifth 54 times, Sixth 59 times, Seventh 17 times, and final 24 times. Note that 17 of Seventh Level plus 24 of final Level equals 41 total, bringing seventh Level more in alignment with the quantities of the other Levels. Note that 19 of Fourth Level is way below the quantities of the other Levels, but if we add 60 of mid-cycle to it, the total quantity is more in alignment with the totals of the other Levels. It makes the most sense of these numbers if mid-cycle is another name for Fourth, and final is another name for Seventh.

Considering the above, we can say with confidence that there is no evidence in *MFM* or original Michaelian group to indicate that Chambers's memory and channeling that mid-cycle equals Fourth Level is incorrect. Indeed, the evidence is suggestive that her memory and her channeling in fact *was* correct. On the other hand, note that there is nothing in *MFM* or the original Michaelian group transcriptions that *proves* that mid-cycle *cannot* refer to something other than Fourth Level. That fact perhaps contributed to Yarbro's idea that mid-cycle refers to something other than Fourth Level.

Let's take a look at Yarbro's original assertion in the next section.

MMFM Channeling

As indicated above, the evidence from the original Michaelian group and from MFM and from Chambers's 1996 channeling is that mid-cycle referred to the Fourth Level. A different understanding is presented in MMFM. In the midst of a presentation about the seven Levels within each soul Age, on page 29, it says:

There is also the mid-cycle, which incorporates elements of both the third and fourth Level, so that the enterprise [Positive Pole] of the third Level is part of the consolidation [Positive Pole] of the fourth Level. This is the only time that this overlap occurs between Levels, and the similarities of function are what make the overlap possible. Let us point out that the fragments at the mid-cycle have the 'outward thrust' [apparently their definition of 'enterprise'] of the third Level along with the 'gathering together' [apparently their definition of 'consolidation'] of the fourth, often making them appear inconsistent or contradictory in their behavior. [MMFM, p. 29]

This channeling deserves scrutiny. It might be a clarification on what we would merely *infer* from previous channeling. There are examples of improved understanding via later channeling in the Michaelian teachings. The improvement is usually obvious, and it finds general acceptance in the Michaelian teachings community. However, about this particular channeling, several questions and objections do come to mind.

It could be argued that the discrepancy between the *MMFM* channeling and Chambers's channeling could be reconciled if we just say that here is a semantic problem, not a real one. In other words, we have the same name for two different phenomena, and this could be cleared up if we give one of them a different name. Those who prefer this solution would do well to rename the *MMFM* version. The prefix mid- is obviously and naturally applicable to the Fourth Level because of the precedent set by the other Mids — Mid-Astral, Mid-Causal, and Mid-Mental — as pointed out above. Therefore, let us henceforth refer to the *MMFM* version of the mid-cycle as something other than that, namely the "Level Overlap".

However, "solving" the channeling discrepancy by renaming is unsatisfactory — at least to me — because the *MMFM* description raises several concerns. Renaming just metaphorically 'sweeps things under the rug'. If one reads over the paragraph without thinking about it, it sort of makes sense, but if one really scrutinizes it, the rug starts to 'unravel'. Following are some questions that have come to my mind.

- Question #1: From the description in MMFM, is the Level Overlap a fully separate Level with distinct boundaries between Third and Fourth Levels but with a blended meaning? Or is it is just a fuzzification of Levels 3 and 4 so that there is really no distinct boundary between the Level Overlap and the two adjacent Levels? Giving it a distinct name implies that it is a separate zone as if it were a separate Level, but describing it as an "overlap incorporating elements of both Levels with similarities of function" implies a smooth transition. Is it a "Level" or isn't it?
- **Question #2:** There is alleged to be an "overlap" because of a special "similarity" of the Positive Poles of two adjacent Levels, a similarity that allegedly does not occur with any other two adjacent Levels. Can we validate this assertion of similarity in any way?
- Question #3: The MMFM description mentions the Positive Poles of Levels Three and Four (allegedly +Enterprise and +Consolidation, respectively). What about the Negative Poles of Levels Three and Four (which allegedly are -Versatility and -Achievement, respectively)? Is there a special similarity causing an overlap with the Positive Poles only?
- **Question #4:** Since the Level Overlap itself has a name as if it were like a separate and distinct Level, are there Poles to the Level Overlap that should have their own names like the Poles of the other Levels, names which are revealed in *MMFM* for the first time in passages before and after the description of the Level Overlap? If so, what are those names?
- Question #5: Does it take approximately seven lifetimes, two hundred years or more on average, to get through the Level Overlap as it allegedly does to transit the other seven Levels each? (MFM, p. 87) Or does it take fewer lifetimes or maybe even less than a lifetime because it is an overlap; or does it take more lifetimes to transit the mid-cycle because it evokes "inconsistent" and "contradictory" behavior, thereby distracting the soul's focus?
- Question #6: The second half of the description seems to contradict the first half of the description. Thus, there are alleged "similarities of function" between the Positive Poles in the first part of the description generating an "overlap", but then there are alleged "inconsistent or contradictory" behaviors in the second part of the description generated by the difference between those same two Positive Poles. Can it be both ways?
 - Question # 7: This use of the word mid is anomalous for two reasons. First, the MMFM description
 is not what one would expect from the mere word as it appears undefined in the original
 Michaelian group transcriptions and MFM. Second, there is no alleged 3–4 overlap in other
 instances of the septenary. For instance, there is no alleged mid-Age between 3–Young Soul and 4–

Mature Soul; there is no alleged mid-Life-Stage between Third Life-Stage and Fourth Life-Stage; there is no alleged mid-Plane between 3–Causal and 4–Mental Planes; there is no alleged mid-Love between 3–Reciprocity and 4–Appreciation (*Michael's People*, pp. 56–57), and so on for the numerous instances of the septenary in the Michaelian teachings and various other teachings about the septenary (Gurdjieff, Theosophy, Alice Bailey, Bible, and so on.). So *why* is there allegedly a Level Overlap between Third and Fourth Levels *but* no overlaps in any other septenaries that we know of? Or, if there are 3–4 overlaps in all other septenaries, *why* have they not been revealed and explained heretofore in this or any other septenarian system that we have encountered?

Inquiring minds want to know the answers to these self-evident questions.

Answers to Questions

Answers to the questions listed above are addressed, to the best of my ability, in the following subsections.

Question #1 — The Ambiguity of the Description

There is a brief statement in another one of Yarbro's books, *Michael for the Millennium* (*MFTM*, 1995) that gives us further information about the Level Overlap:

Incidentally, those lives where the transition from Level Three to Level Four "overlap" in function are, in fact, mid-cycle lives, although we will not usually identify them as such. [MFTM, p. 185]

This is at the very beginning of a lengthy chapter about all of the lifetimes in all of the Levels of one particular soul chosen at random as representative of reincarnation. Although the lifetimes at mid-cycle are claimed to exist, the channeling does not identify any lifetimes as distinctly mid-cycle. There are only Third and Fourth Levels, nothing in between or overlapping. Just as in *MMFM*, this passage in *MFTM* describes it as a "transition" with "overlap in function", indicating that it is apparently not a full, distinct Level as are the seven standard Levels, although here we have the additional information that the Level Overlap allegedly encompasses an entire lifetime (or maybe multiple lifetimes?), and is not just a fraction of a lifetime. It is said to be like a Level in some ways and different in other ways. It both is and isn't a Level; it neither is nor isn't a Level. Maybe it is in a category all its own. This passage does not actually answer Question # 1.

Note that none of the numerous publications of the non-Yarbro branch mention the Level Overlap, so the *MMFM* description seems not to have been adopted by them. It could be reasonably argued, based on the *MFTM* passage, that even in the Yarbro contingent of the Michaelian teachings, this version of the mid-cycle (as something other than the Fourth Level) is insignificant enough to be negligible 'for all practical purposes'.

Question #2 — The Dubious Numerology

How can we validate the *MMFM* statement that +Enterprise (Third Level Positive Pole) and +Consolidation (Fourth Level Positive Pole) have a special similarity facilitating "transition overlap" that other adjacent Levels do not have with each other? Following are the names given to the Levels in *MMFM*, pp. 28–29, and *MMFM*, p. 189: (First) +Purpose, (Second) +Stability, (Third) +Enterprise, (Fourth) +Consolidation), (Fifth) +Expansion, (Sixth) +Harmony, and (Seventh) +Inculcation. These names for the Poles of the Levels are discussed in Chapter 4K, "The Names of the Levels". Trying to come up with a rationale for or against the *MMFM* statement of special similarity of 3–4 by comparing and contrasting the names of the Positive Poles of all these Levels would be a very subjective exercise indeed. It would be an exercise in futility to compare these names of Positive Poles in an effort to validate the alleged special similarity of +Enterprise and +Consolidation.

Perhaps we should forget the names and go with principles, specifically the principle that the Fourth Level is an aspect of the Neutral Assimilation process. As such, it is a "+Consolidation" and "-Achievement" (combination, collective) of all six of the other Levels — Cardinal and Ordinal — equally. The mid-cycle is said to be a "transition overlap" between 3 and 4 in the *MFTM* passage quoted above. The Fourth Level is also the "transition overlap" of the three Ordinal and the three Cardinal Levels. Based on this simple principle, the transition from Neutral Four to Cardinal/Ordinal Five is equally as much an overlap as the transition from Ordinal/Cardinal Three to Neutral Four. If one thinks of the other steps from Level to Level as whole-integer transitions, then both 3 to 4 and 4 to 5 are the same fraction-of-a-whole-integer transitions, therefore equal in "overlap-ness".

An astute observer will note the use of Cardinal/Ordinal and Ordinal/Cardinal above. This is taken from a statement in the "Michael Math" chapter of *MMFM*. On page 289, it says that:

You can perceive that while one [and two and three] is ordinal and [five and six and] seven is cardinal, that the first half [minus the Neutral] is cardinal and the last half [minus the Neutral] is ordinal — in other words, the pattern "doubles back on [is a mirror image reversal of] itself". This is what is implied by the "yin–yang" symbol, and it would probably be of use to keep the "yin–yang" in mind while considering what we tell you of the function of the Levels and numbers. [MMFM, p. 289]

This yin-yang symmetry makes sense if one considers the Levels to be designated by their pure numbers, thus: 1/7, 2/6, 3/5, 4/4, 5/3, 6/2, 7/1. In each case the Cardinal/Ordinal and Neutral/Neutral and Ordinal/Cardinal pairs add up to eight. If this *abstract* statement about the numbers is true, which it obviously is, then it becomes even more unreasonable to say that there is a special similarity for the Positive Poles of adjacent Levels 3 and 4 that is not also present in adjacent Levels 4 and 5, whatever *concrete* names are given to the Poles.

Let us take the *MMFM*, p. 289, assertion of symmetry in the septenary to be true. A big problem is that the channeling went on to contradict itself in the pages following the assertion of symmetry quoted above. That is, the sequence of the Septenary given is not symmetrical. It was given as One = Ordinal Inspiration (Server), Two = Ordinal Expression (Artisan), Three = Ordinal Action (Warrior), Four = Neutral Assimilation (Scholar), Five = Cardinal Expression (Sage), Six = Cardinal Inspiration (Priest), and Seven = Cardinal Action (King). This is what I call the Michael Math Sequence. A symmetrical sequence would have mirrored Action, Inspiration, and Expression on both sides of Assimilation. This is what I call the Natural Sequence.

It so happens that there is a rationalization for this asymmetry in another passage in the Michael Math chapter, and it seems to be related to the mid-cycle.

[In the Michael Math Sequence] in most instances [2 out of 3] the numbers of the polarities add up to seven, which in the positive pole brings inculcation [the alleged name of the Positive Pole of Level Seven. In the Negative Pole one might assume it brings "–Eclecticism", the Negative Pole of Level Seven.]; the exception, that of the action polarity, is compensated for with the interaction of Warrior and Scholar — three and four — essences, and the nature of the mid-cycle ["similarity" yet "contradiction"], which is reflected in this interaction. [MMFM, p. 212]

The "polarities" alluded to here are Server-Priest (Inspiration) and Artisan-Sage (Expression) and Warrior-King (Action). Making the arithmetic easy for the reader: in the Michael Math Sequence, 1-Server + 6-Priest = 7 and 2-Artisan + 5-Sage = 7, but 3-Warrior + 7-King do not, so instead 3-Warrior + 4-Scholar = 7 and King is 7 alone. What we have here is one rule with two exceptions, and this numbers game is alleged to mean something in spite of the exceptions. Some inference is required to make sense of this, but it seems to be saying that there is something resembling a "complementarity" between 3-Warrior and 4-Scholar (and hence Third Level and Fourth Level in the Level Overlap) sorta kinda like the natural complementarity between 1-Server to 6-Priest and 2-Artisan to 5-Sage just because in all three cases their number assignments add up to seven when arranged per the Michael Math Sequence. Role "complementarity" is thus apparently said to be reminiscent of the "similarity" and "contradiction" existing in the Level Overlap. The alleged quasicomplementarity of Warriors with Scholars is one exception to the rule; the other exception is that in the Michael Math Sequence, 7-King becomes the sum of all the other 'numbers-Roles'. In the Natural Sequence schema, this job is performed by the 4-Scholar in the Neutral Assimilation position. Thus the Michael Math Sequence schema apparently gives a touch of Scholarliness to the King Role. The names given in MMFM to the Poles of Level Seven, that is, "+Inculcation" and "-Eclecticism", also seem reminiscent of the Scholar. The assertion seems to be that the last position in the Michael Math Sequence is the assimilation of what has gone before. This makes sense considering that the Seventh Level is the last Level of each Age, but in my mind it is not a compelling argument that the Michael Math Sequence must rule the Levels rather than the Natural Sequence.

Beyond the fact that the Michael Math Sequence rule has two exceptions, what makes the Michael Math Sequence and the Level Overlap seem all the more strange is that the number–Role assignments of the Michael Math Sequence have no rationale in themselves. There is a number–Role sequence where the Axial pairings are symmetrical (as in the yin–yang symbol referred to above), and this makes all the Axial pairings add up to eight with no exceptions to a rule. Thus, 1–Warrior + 7–King = 8, 2–Server + 6–Priest = 8, 3–Artisan + 5–Sage = 8, and 4–Scholar + 4–Scholar = 8. With this schema we have *one* rule and *no* exceptions, and yet we can retain the "similarity" (due to Axis) and yet "contradiction" (on opposite poles of the Axis) of the inherent "complementarity" of the Roles when numbered per the Natural Sequence schema. The conclusion of this line

of reasoning is that no weight can be given to the argument in MMFM that the 3–4 transition is unique just because 3 + 4 = 7.

It can also be argued that there is nothing special about starting the numbering from the Ordinal end rather than the Cardinal end of the septenary. In the Alice Bailey channeling (Chapter 1F, "The Seven Human Temperaments" and Chapter 1E, "The Seven Soul Ages"), the numbering starts with 1–Cardinal Action and goes to 7–Ordinal Action, so if we apply the numerical argument of *MMFM*, that would make a special affinity between 3–Sage and 4–Scholar. Both Roles are said to pursue knowledge (*MFM*, p. 95). If we applied the *MMFM* argument to the Natural Sequence schema, then the special affinity would be between 3–Artisan and 4–Scholar. Both Roles are said to be "remote" (*MFM*, p. 193), and the affinity of Scholar science and Artisan technology is evident. All of this evidence and argument indicates that the *MMFM* numbers game is an illegitimate rationalization rather than a legitimate rationale. It simply does not have the feel of valid channeling.

However, even if the rationalizations presented in the two passages in *MMFM* for the Level Overlap are illegitimate, that in itself does not mean the Level Overlap is illegitimate. It might be a real phenomenon, but poorly explained or supported. If the alleged affinity in the nature of 3–ness and 4–ness is valid, then the assertion is that this 3–4 overlap zone should occur in all other manifestation of the septenary, not just in the Levels. Thus, there should be a mid-Age between 3–Young and 4–Mature; there should be a mid-Life-Stage between 3–youth and 4–middle-age; there should be a mid-plane between 3–Mental and 4–Akashic; and so on for all Canonical Septenaries. However, no such 'mids' have been revealed or noticed, so far as I know.

Questions #3 and #6 — Similarity versus Contradiction

Question #3 asks what would presumably happen between the Negative Poles of Levels 3 and 4. Question #6 points out the discrepancy between the first half of the description of the Level Overlap ("similarity") and the second half of the description of the Level Overlap ("contradictory"). Although this cannot be stated with any conviction because there are doubts about the reality of the Level Overlap, perhaps the Positive Poles of Levels 3 and 4 produce the "similarity" and the Negative Poles of Levels 3 and 4 produce the "contradiction". Although the wording of the *MMFM* passage indicates that the Positive Poles are responsible for both, perhaps this was mis-channeled. This rationalization is offered to those who prefer to regard the Level Overlap as real.

Question #4 — Positive and Negative Poles of the Level Overlap

An answer to the question whether or not there are Positive and Negative Poles to the Level Overlap is proposed in the section below regarding what I have come to call the Mid-Cycle Principle: see further on.

Question #5 — Duration of a Level Overlap Lifetime

There are no clues in the published channeled material that answer the question, does it take longer or shorter times to get through the alleged Level Overlap than the seven standard lifetimes. If one doubts the actual existence of the Level Overlap, the question becomes moot.

Question #7 — Exclusivity of Level Overlap to Levels

The absence of evidence for 3–4 overlaps in Septenaries other than Level is not evidence of absence. There could conceivably be some legitimate reason why the overlap only occurs with Levels and none of the numerous other Canonical Septenaries. Anyone who believes in the actual existence of the Level Overlap should explain this anomaly. If one doubts the actual existence of the Level Overlap, there is no need to explain its absence in other Septenaries.

The Mid-Cycle Principle

With those questions and answers behind us, in this section I propose an understanding of the Mid-Cycle that salvages as much of the original description as seems reasonable to me. Then it goes beyond merely salvaging the concept as much as possible; it uplifts it to the status of a general principle, and that is why I capitalize the phrase as the Mid-Cycle Principle.

Looked at from a practical and functional point of view rather than as an "excruciating exegetical exercise" or a "doctrinal disputation dissertation" (such as I often indulge in in this book), even if the Level Overlap as Yarbro described it is a real phenomenon, its value seems insignificant and therefore negligible. Often we can

hardly discern and validate via dueling channels and personal perceptions what a person's Soul Age is, let alone a person's Level, let alone this alleged Level Overlap.

What good then is the notion of the Level Overlap? I suggest that the Level Overlap should be elevated to a *general* principle, the Mid-Cycle Principle, if you will. This principle would be applied to the transition between *all* steps in various manifestations of the Natural Sequence during a lifetime — and transcending lifetimes — not just the transition between Third and Fourth Levels. In other words, in any major life transition, behavior, feelings, and thoughts can *blend* ("overlap") between old and new ways of being, or *alternate* ("inconsistent or contradictory") between old and new ways of being, during the transition from one relatively stable and well-defined stage to the next relatively stable and well-defined stage. We may call this an "identity crisis" — because that *is* the common name for this common phenomenon. One might vacillate between old and new identities, or go blended for a while, until it all gets sorted out and stabilized in the new stage. There are many self-help psychology books devoted to methods for successfully traversing traumatic transitions. By understanding that one is going through a rough or empty phase, one can better deal with the "slings and arrows of outrageous fortune" (Shakespeare) between more stable periods in life. Whereas the original understanding of the Mid-Cycle is fairly useless, *this* understanding — of the many transitions and transformations from stage to stage that we go through many times in our lifetimes — is genuinely beneficial.

There is even a mythic and psychological name associated with this phenomenon, namely "metamorphosis". Wikipedia has an article on it: >https://en.wikipedia.org/wiki/Metamorphosis<. The archetypal example of this process is the caterpillar spinning a cocoon around itself, the contents of the cocoon turning into mush, a butterfly forming in the cocoon, and then this new, very different form emerging, nothing like its former self. This biological phenomenon is often adopted as a metaphor for the similar psychological phenomenon of death and transition and rebirth into a higher state of consciousness, a transformation so significant that the person feels like a new and different person; the old person has metaphorically 'died' and the new person has been 'born anew'. If this has not happened to you, to some degree/extent or other, at some time or at some times in your life, you are a rare individual.

I suspect that what I am calling the Mid-Cycle Principle goes deeper than ordinary phenomena in the psychological and biological worlds; there is perhaps also a physics instantiation that is more than metaphorical. And that is why I want to elevate the mid-cycle to the status of being a general *principle*, the Mid-Cycle.

A physics analogy is the well-known Schrodinger's cat, a stand-in for what is called a superposition of two opposite states. You know the story: the cat is said to be alive and dead at the same time, until the "state vector collapses" when an "observation" or "measurement" requires a definite state to appear. Perhaps we exist in a state of 'quantum superposition' when we are going through a big change, metaphorically equivalent to what was called "overlap" in the channeling. When one is in a transition phase, one does well to take a good hard look at one's life, and notice what needs to change, so that one can be stabilized in a different and definite state.

I have another analogy to share with you.

The science of information theory is about signal versus noise. There is a reciprocal relationship of signal versus noise, which simply means, the more of one the less of the other. In information theory, there are two states where there is no discernible information content in a data stream; I call these the –Void state and the +Chaos state. If there is no signal/noise at all, that can be called –Void; if there is only noise and no signal, that can be called +Chaos. You are familiar with these opposite, information-free states in a television set, first as a television turned off, such that there is nothing on the screen, and then as a television tuned to no station, such that there is only 'snow' on the screen and 'static' in the audio. We could liken these two states of a physical system to two states of a psychological system and also call them "+Chaos" and "-Void". Both states represent an absence of what is called "information"; the person is feeling "I don't know who I am anymore". This approach might also provide an answer to Question #4 above about the Positive and Negative Poles of the mid-cycle. In regard to the Mid-Cycle Principle let us say that the "inconsistent" type of transition is +Chaos and the "overlap" type of transition is -Void.

There are other ways to explain the Poles of a transition. In the –Void condition of the transition, one is in *neither* the prior nor the following state; in the +Chaos condition of the transition, one is in *both* the prior and the following state. In the –Void condition, one is passive, 'adrift at sea in the doldrums', waiting for an inner signal about where to go from here. In the +Chaos condition, one is active, restlessly searching and

experimenting, 'scanning the horizon', looking for an outer signal about where to go from here. My guess is that introverts experience more of the -Void condition, and that extroverts experience more of the +Chaos condition. In either Pole, the future life of the person is in 'incubation' or 'gestation'; it is 'pregnant' with possibilities.

What the outer-world objective state of 'noise' and the inner-world subjective state of Mid-Cycle lack is a 'signal' — a distinct and stable identity. Oftentimes we are metaphorically sailing through life 'merrily rowing our boat gently down the stream', and then we come upon some rapids with rocks and waterfalls buffeting us about — "Shift Happens", as the bumper sticker says. Perhaps we oscillate/teeter between stages as speculated above — metaphorically equivalent to what was called "inconsistent or contradictory" behavior, feelings, and thoughts in the channeling. If you find yourself in one of these vacillating +Chaotic or ambiguous –Void states, take it easy for a while: center yourself, don't make any big decisions, and 'take a break' until the craziness passes.

Personally, I have found that the Mid-Cycle Principle has shown up unmistakably during the Life-Stages. There has always been a –Void and a +Chaos at the transition from one Life-Stage to the next, and at the seven sub-Life-Stages within each Life-Stage; refer to Chapter 4Q in Part Four, "The Seven Life-Stages". Personally, when I am going through one of those transitions, I just have to 'bide my time' while the psyche does its thing getting from one Life-stage or sub-Life-Stage to the next Life-Stage or sub-Life-Stage. During the transitions, the past seems meaningless, the present seems directionless, and the future seems amorphous. Therefore, I do not make any life-changing decisions or major course corrections during the transition. So far, I have never failed to emerge out of –Void and/or +Chaos, and so when that happens I just get on with the next 'chapter' of my life 'story' because it again has meaning, direction, and form.

Concluding Remarks on the Mid-Cycle

This matter of the Level Overlap as presented by Yarbro seems bizarre, to say the least. It makes no sense when we examine it thoughtfully. It may have been the result of a garbled transmission from the mid-Causal Plane into the mind of someone not in the original Michaelian group who had the misunderstanding to begin with. Once the erroneous meme got seeded there, it continued to grow there. The Level Overlap has not been adopted by the non-Yarbro branch of the Michaelian teachings community. It is well known that errors occur in channeling, so perhaps this instance is nothing to be disturbed about. People who think about this relatively insignificant matter can look at the evidence and arguments offered here and either make up their own minds, or ignore it altogether, or 'throw up their hands' in frustration. The discrepancy in channeling between Chambers and Yarbro is something that can be Validated neither by personal experience nor channeling. There is often disagreement between channels about what a person's Soul Age is and their Level within the Age, to say nothing of the Level Overlap. The two MMFM passages on the Level Overlap seem defective and deficient to me. Since the Michaelian teachings appears to be a 'work in progress', the Yarbro branch has made some improvements compared to the original Michaelian group. However, their take on the Level Overlap does not appear to be one of the improvements. For now, let us put the Level Overlap in the dubious channeling category and ignore it, just as it was ignored in *MFTM* and in the non-Yarbro branch. Chambers's channeling with regard to this question seems the best approach: the mid-cycle equals the Fourth Level in every instance.

This matter of the Level Overlap is something I worked on years ago when we kicked it around on Dave Gregg's >www.michaelteachings.com< list on about three occasions. Funny how an obscure bit of dubious channeling came up for discussion repeatedly. In retrospect, it seems that I devoted far more energy to it than it deserves *per se* — it now seems marginally valuable to have nitpicked subjects like the Level Overlap that don't matter a whit in the real world. Therefore, the points I hope to drive home by sharing the above exposition are these:

- 1. The Level Overlap, as originally presented, appears to be useless FAPP (For All Practical Purposes). Regarding impractical theoretical purposes, it also appears to be indefensible by argument and/or evidence. In a case like this, I say the Level Overlap, as originally presented, can be safely ignored or even dismissed. Can anything of value be salvaged from this investigative exercise?
- 2. The Mid-Cycle Principle, as herein presented, retains all of the features of the original description of the Level Overlap, except the notion that it *only* pertains to the Third Level-to-Fourth Level transition.

- 3. I believe that elevating the mid-cycle to a general Mid-Cycle Principle was a Very Good Thing™. Turbulence and ambiguity, +Chaos and –Void, more 'noise' than 'signal' in the transition zone between stable plateaus those are good things to know about in the step-wise climb on the ladder of development in our daily lives.
- 4. The gist of the Michaelian teachings is not about obscure portions of what I have come to call the dogma-doctrine component of the Michaelian teachings stuff that cannot be Validated. We might do better to focus our attention on the stuff that does matter and that we can Validate, namely the psychotherapeutic aspects of the Michaelian teachings.
- 5. The only values per se that I can see in examining the mid-cycle dogma-doctrine are:
 - o Intellectual exercise to sharpen our mental acuity and critical thinking
 - Honing our interpersonal communication skills to get along better by understanding each other more deeply.
 - Learning from errors, and extracting understanding from errors.

I have not been able to think of a good reason why it matters in our daily lives if the Level Overlap is something other than Fourth Level or not. On the other hand, the Mid-Cycle Principle is genuinely valuable to know about.

Chapter 4M

THE SEVEN SOUL AGES

This is the third in a series of three chapters that discuss three components of what is referred to as Soul Age in the Michaelian teachings. The first chapter in the series discussed the seven Levels within each Age; the second chapter in the series discussed the so-called "mid-cycle", an alleged half-step between the Third Level and the Fourth Level. This chapter examines the Michaelian teachings on the seven Soul Ages themselves.

At the beginning of several other chapters here in Part Four, "Essays on Issues", I have made the comment that the subject of that chapter is one of the most confused in the Michaelian teachings. Sad to say, this is another one of those chapters, all the more sad because the subject of Soul Age is at the heart of the Michaelian teachings. Read on if you are okay with having your heart broken ... and then mended in a better configuration.

Introduction

You might reasonably ask: What is the central or pivotal message of the Michaelian teachings? You would not be the first to ask this question. For instance:

Ralph: It seems to me that the presentation of this teaching has focused on SRGA (Soul-Role-Goal-Attitude) [and] has not been successful in communicating to others. Should another approach be used? Do the SRGs [Overleaf System] make this teaching unique from all others?

We would hesitate to call this system of naming behavior patterns [Overleaves] as the cornerstone of our teaching. Rather, we would see you all ascertaining from those expressing interest in this teaching: whether or not they are ready to accept in full the concept that they have lived before, and that this life is merely a continuation of an experience begun in another time frame. And by this we mean, to be sure within yourselves that they do in fact accept this as truth for them. All the rest [of the Overleaves], including the Soul levels [Ages], will come easily. It is upon this premise [reincarnation] that the entire [Michaelian] teaching is based, and it is therefore <u>useless</u> (underlined) to any student not knowing this truth for himself — it becomes a parlor game of meaningless words. [SJC, 13 January 1975]

There you have it: the core message of the Michaelian teachings is about reincarnation; Soul Age is the essence of that message; Soul Age was the first Overleaf that the Michaels revealed, a couple of weeks after their first appearance to the original Michaelian group.

As all students of the Michaelian teachings know, the Soul Age component of the Overleaf Charts refers to the seven major stages of development of the soul in its overall journey of incarnations. So far, I have discovered only three precursors to this revelation of specific and distinct stages, along with descriptions of each stage, of the soul's evolution in other spiritual-esoteric teachings, even though reincarnation is a factor in many such teachings over several millennia, and even though many such teachings have a cosmology built on the framework of the septenary. This paucity of descriptions of stages of reincarnation seems remarkable to me, but there it is. Those three instances are found in the Kabbalah, the books of Alice Bailey, and commentators on her work, and in the book by Meher Baba, *God Speaks*; this information was covered in Chapter 1E in Part One, "The Seven Soul Ages".

Also in Part One there is a discussion of the revelation of Soul Ages from the Michaels as found in the transcriptions of the original Michaelian group: Chapter 2A in Part Two, "Revelation of Overleaves". There have been departures from this original revelation, at various times and in various ways, by subsequent Michaelian teachings sources. Below is a table showing the names given to the Ages on the various Overleaf

Charts reviewed in Part Three, the Kabbalah, two Theosophical sources, Meher Baba, and four additional (not precursor) sources that will be discussed in this chapter. (Charts that did not show the Ages category are omitted from the tabulation.) This makes it easy to see that there are apparently discrepancies among them. Obviously then, the Michaelian teachings as a whole does not have a consistent understanding of the seven Ages.

What shall we do about this? Anything? Pick what we like? Or just ignore the whole matter? If we do examine the differences, what can we learn from them? Can we discern which of them, if any, is the correct understanding? Can the discrepancies be reconciled in part or in whole? The reason for the existence of this chapter is to find answers to these and other questions.

So first of all, is the matter of discrepancies in the Michaelian teachings regarding Soul Age important enough to merit investigation? Why, yes it is! — at least according to this Q&A exchange recorded in the transcriptions of the original Michaelian group:

Gene: All of a sudden, we're having this huge body of information about souls and it must be important, and I would like an overview. Is this information going to be practical to me? Can I use it? Why this topic?

This [Soul Age] is another Overleaf [in addition to Body Type/Center], and integration must take place before you are able to perceive the Synthesis [the Michael's name for their teaching], which, of course, must precede perception of the Tao. Yes, it can be of great value to you. Body Typing answers some questions. This [Soul Age] answers still another set of questions. This is a broader Overleaf, and there are more. [SJC, 18 September 1973]

This chapter of this *History* book is an academic exercise in scholarship, but it is also more than that. Frankly, I cannot say that about all the other chapters in this book. Personally, I have found the information about Soul Age to be one of the most useful parts of the Michaelian teachings when it comes to understanding myself and others and current world events and world history. The concept explains so very much.

Soul Age was the first Overleaf to be revealed by the Michaels (the Body Types/Centers were already known via Gurdjieff), in late August of 1973, about a week and a half after the Michaels themselves appeared on 12 August. This fact alone speaks somewhat to its importance in the Michaelian teachings. The core doctrine of the Michaelian teachings is reincarnation, and the core tenet of reincarnation is the development of the soul in 'earth school'. Therefore it is important to get it right. But, frankly, after reading about it in the Michaelian teachings and elsewhere, I suspect that we still do not have it correct or complete because, as we will see in this chapter, there are so many apparent contradictions and unanswered questions.

The original revelation was ambiguous enough, and/or incomplete enough, and/or erroneous enough, that subsequent Michaelian students have clarified, and/or added to, and/or departed from it in various ways. There are very good reasons for the discrepancies that have arisen subsequent to the original Michaelian group, and it is Good Work that we examine them. My goal in this Chapter is to make the Soul Age information more accurate and complete, and therefore useful, than it was as originally formulated, and than it has become subsequently by other Michaelian teachings sources.

In most of the Overleaf Charts reviewed in Part Two, five distinct Ages are said to manifest on the Physical Plane, the Sixth and Seventh Ages not so much. The discrepancies among those Charts have to do with what is done with the Sixth and Seventh Ages in order to fill out the septenary of seven Ages; various solutions have been proposed over the decades since the original revelation, and these will be examined in this chapter.

Please study the tabulation below and take note of the differences and similarities.

| Table 4Ma — SOUL AGE NAMES from VARIOUS OVERLEAF CHARTS* | | | | | | | | |
|--|------------|----------------------------|------------------------------|--------------------------|--------------------------------|--------------------------------------|----------------------------|------------------------|
| CHART | AUTHOR | FIRST | SECOND | THIRD | FOURTH | FIFTH | SIXTH | SEVENTH |
| _ | Kabbalah | Nefesh "Life Force" action | Ruach "Spirit" emotion | Neshama "Soul" mentation | Chaya "Living" intuition | Yechida "Singular" imagination | Tzaddik "Righteous" | Mashiach "Anointed" |
| _ | Bailey | physical | emotional | mental | balanced | mystical | integrated | masterful |
| _ | Pearson | primitive | ordinary | civilized | advanced | spiritual | _ | _ |
| _ | Meher Baba | Survivor | Feudalist | Conqueror | Empathizer | Telepath | Regulator | Enlighten'd |
| 1, 2, 4 | OMG | Infant | Baby | Young | Mature | Old | Transcend'l | Infinite |
| 5 | MFM | Infant | Baby | Young | Mature | Old | Transcend'l | Infinite |
| 8 | MMFM | Infant | Baby | Young | Mature | Old | Astral | Causal |
| 9* | ТМН | Infant | Baby | Young | Mature | Old | Transcend'l | Infinite |
| 10 | Heideman | Infant | Baby | Young | Mature | Old | Transcend'l | Infinite |
| 11* | МТВТ | Infant | Baby | Young | Mature | Old | Transcend'l | Infinite |
| 12 | Byram 1 | Infant | Baby | Young | Mature | Old | Transcend'l | Infinite |
| 14 | Hasselmann | Infant | Child | Young | Mature | Old | Trans- personal | Trans- liminal |
| 15 | Hoodwin | Infant | Baby | Young | Mature | Old | Transcend'l | Infinite |
| 16, 20 | Stevens | Survival Oriented | Rule Oriented | Success Oriented | Relationship Oriented | Philosophic Oriented | _ | _ |
| 17 | Taylor | Surviving | Rule- making | Competing/ Striving | Relating/ Partnership | Teaching/ Philosophic | Guru | Spiritual Master |
| 18 | SteveMS | Infant | Baby | Young | Mature | Old | Astral | Causal |
| 21 | Tolley | Infant | Baby | Young | Mature | Old | Transcend'l | Infinite |
| 23 | Wittmeyer | Primitivism | Tradition- alism | Materialism | Collectivism | Holism | Trans- personalism | Messianism |
| 24 | Wittmeyer | Infant | Child | Young | Mature | Senior | Elder | Ancient |
| * | Byram 2 | Survival | Safety & Security | Outer Success | Relationship | Inner Success | Personality Integration | World Service |
| _ | TYDragons | Infant | Toddler | Child | Adolescent | Adult | Elder | Master |
| _ | Garfield | Infant | Child | Teenage | Adult | Mature | Old | Volunteer |
| _ | Newton | Beginner | Lower Intermediate | Inter- mediate | Upper Intermediate | Advanced | Highly Advanced | Old Ones |
| _ | Daniel | Beginning | Well Started | Midpoint | Well Along | Nearing End | Service Choice | _ |
| _ | Bladon | primitive | civilized | developed | humanistic | enlightened | _ | _ |

* In some cases, Soul Age is not a category on an author's Overleaf Chart itself, but it is given in the book in which the author's Chart appears.

My comments on this table are as follows:

- The revelations about Soul Ages listed in the first four rows were discussed in some detail in Part One, in Chapter 1E, "The Seven Soul Ages".
 - Regarding the first row, Kabbalah emerged out of ancient Jewish mysticism in the 12th and 13th
 Centuries among the Jewish diaspora in Europe. The names in the table are not as definitive for discerning the nature of the Ages as are the descriptions provided in Chapter1E.
 - Regarding the second row, Alice Bailey was a channel who founded a branch of Theosophy
 during the first half of the 20th Century. These names were extracted from the descriptions
 provided in one of her books, and are obviously similar enough to Michaelian descriptions that
 the
 - Regarding the third rows, Pearson was an expositor of Theosophy who published a book in 1957 that discussed stages of reincarnation. For the names of Pearson's five stages, I chose to use his own words because he had no description of each stage from which to extract a key word.
 - Neither Pearson's nor Bailey's names are capitalized because their stages were not formally named by them. The perceptive Michael student will see from Table 4Ma alone, even without reading the chapter in Part One, that these two Theosophists are seeing the same categories found in the Michaelian teachings.
- The fourth row in this table is for Meher Baba. The website author had a number of descriptive words for each "Plane of Consciousness", and from those I chose those words that are shown in the table.
- The next seventeen rows are from Michaelian teachings sources that will be reviewed in sections and subsections further on.
- The last four rows in this table are not from Overleaf Charts that are reviewed in Part Three; they are
 from books or internet resources that were published during the decades subsequent to the original
 Michaelian group revelation. They are reviewed here in Part Four, in sections and subsections further
 on. Really, it would be good for you to study this table now, because it will make it easier for you to
 follow the presentation in the remainder of this chapter. Note the differences and similarities in all
 seven columns.

You are going to find that the convoluted process of sorting out the discrepancies in the channeling and in the other sources, as summarized in this table, with the resulting complexity of the issues involved, has made this chapter into the longest one in this *History* book. That length is merited because of the importance of the subject. We are going to review various issues, anomalies, and ambiguities that appear when Soul Age is discussed, then examine the Transcendental Soul and Infinite Soul as discussed in several Michaelian teachings authors, and then look at Seven-Age systems without the Transcendental Soul and Infinite Soul, first in the Michaelian teachings and then in the publications of some non-Michaelian teachings writers. Sorting through all of that leads to my own analysis and synthesis, summarized at the conclusion of the chapter.

It is helpful if you know now where this chapter is headed, so that you pay attention to the arguments and evidences. My conclusion is that the soul probably and usually experiences all seven Ages on the Physical Plane in the usual course of its normal evolution, one way or another, in ways that you might find surprising. The gist of the thesis that I develop throughout this chapter is that incarnation through the Ordinal Ages is of a *singular* Fragment that completes the necessary life Monads (smart–stupid, healthy–sick, beautiful–ugly, competent–incompetent, and so on), whereas incarnation through the Neutral and all three Cardinal Ages is of a Composite; meaning, a partially or wholly recombined Cadre. This increased 'size' of the 'soul' that is accessed by the incarnate personality is largely responsible for the expanded and inclusive worldview of older souls as distinct from younger souls. This idea was hinted at in the Theosophical literature, and in some of the Michaelian teachings literature. There are other hints of this thesis sprinkled along the way in this chapter, and then my thesis is fully explained near the end of this chapter.

Issues Related to Soul Age

For the sake of brevity, henceforth in this chapter, Soul Age is usually abbreviated to just Age.

The concept of Age is one of the central aspects of the Michaelian teachings, it being basically about reincarnation and the ramifications of reincarnation. But yet it is one of the most confused subjects. In addition to the ambiguities covered in this chapter, there are a number of issues about Ages and related matters that are covered in other chapters of this *History* book, and my other books, as follows:

- 1. There is an exposition on the nature of each Age in my book *The Tao of Personality*, in Part Three, "Worldviews". That is my name for the Ages when the description of each Worldview is presented without reference to the reincarnation of souls, and the maturation of souls that escalates as a result of reincarnation. I did it this way for the purpose of mainstreaming the Overleaf System to a non-metaphysical readership. Some other Michaelian teachings teachers did something similar for the same reason, namely José Stevens, Barbara Taylor, and Larry Byram. Those Michaelian teachings teachers are featured in sections further on.
- 2. The subject of Age is so fraught with uncertainty that there is even disagreement about whether or not Age belongs among the Overleaf categories; that disagreement is addressed in Chapter 4C, "Which Trait Septenaries are Overleaves?" There you will find that I regard Age as an Overleaf; it is an overlay of Essence like other Personality factors. In my understanding and definition, the Essence, the intrinsic core of the soul which exists outside of Physical Plane time, does not have an Age in the sense that incarnate Personalities do it is outside the space/time limitation that incarnate souls are subject to. I mention this here because it figures into some explanations presented further on.
- 3. This Age subject is further complicated by the fact that the planes "above" the Physical Plane go by various names; these discrepancies are covered in Chapter 4E, "The Seven Planes", and in a chapter in Part One by the same name. I believe that the discrepancies in naming conventions have obscured the nature of the lower planes. In this chapter here, I use the names used in the Michaelian teachings community, rather than the names used in other esoteric cosmologies, even though I regard the latter as more accurate. The reason this matters is because the Ages Septenary is a subset of the planes Septenary, the same as the Levels Septenary is a subset of the Ages Septenary and they have a similar nature, which is obvious when correlated properly; meaning, there are similarities in their qualities and characteristics all up and down the nested holarchy of timescales.
- 4. The entirety of my book *The Tao of Cosmogony* is about this correspondence between the seven stages of various time-based developmental Septenaries that are found in the Michaelian teachings and elsewhere. That is, Life-Stages are a subset of Levels, Levels are a subset of Ages, and Ages are a subset of planes cycles within cycles within cycles within cycles and they are all structured according to the Natural Sequence. That is, to use the Septenarian Attributes, the sequence of the structure is: Ordinal Action, Ordinal Inspiration, Ordinal Expression, Neutral Assimilation, Cardinal Expression, Cardinal Inspiration, Cardinal Action. When seven elements are ordered in this pattern, I refer to it as the Natural Sequence. Other septenaries that do not follow this pattern are not canonical and do not get capitalized.
- 5. Also in my book *The Tao of Cosmogony*, there is a thorough discussion about the nature of the three Ordinal Ages, generally called Infant, Baby, and Young in the Michaelian teachings. There is a brief description, but little is said about their nature in the original Michaelian group transcriptions or in the Messages from Michael (MFM) book that would identify their Septenarian Attributes. However, in More Messages from Michael (MMFM), Yarbro correlated them with Ordinal Inspiration (Server), Ordinal Expression (Artisan) and Ordinal Action (Warrior) respectively — this is what I call the Michael Math Sequence. Yarbro's correlation is contradicted by a considerable body of evidence, as I show in my book *The Tao of Cosmogony*. Because it is covered so thoroughly in that book, I will not say anything more about it in this chapter, except to say that the Infant Soul Age is properly correlated with Ordinal Action (Warrior), the Baby Soul Age is properly correlated with Ordinal Inspiration (Server), and the Young Soul Age is properly correlated with Ordinal Expression (Artisan). Arguments and evidence for the application of the Natural Sequence to the earlier Soul Ages is documented in an Epiloque to this *History* book, namely Chapter E-2. Here in this "Soul Age" chapter of this *History* book, we are only concerned about the Cardinal Ages, whatever their names. There is no disagreement in the Michaelian teachings community that the Fourth Age correlates with Scholar, the Fifth with Sage, the Sixth with Priest, and the Seventh with King. I agree with these correlations, for reasons documented in my book *The Tao of Cosmogony*. Because of the variation of names given to the Sixth

- Age and the Seventh Age as shown in Table 4Ma above I hereby name them thus, and capitalize them henceforth.
- 6. It so happens that I also have some issues with the names and descriptions of the Levels within the Ages as given in the orthodox Michaelian teachings. These are discussed in Chapter 4K, "The Names of the Levels". I placed that chapter before this chapter because some of the conclusions reached regarding Levels serve to inform the reader about the subject of Age in this chapter.
- 7. This whole matter of Age is complicated by a number of issues having to do with reincarnation. For instance, in Volume 2 of *Michael Speaks The Legacy of JP Van Hulle*, there is the transcription of an entire session on "sub-personalities" (17 February 1992). The description there is of various parts of False Personality contributing to a whole personality, but also of True Personality, in that the older the soul, the more sub-personalities they have, because there is allegedly more bleed-through from more past lifetimes. There are also what could be called "super-personalities". Some statements in the original Michaelian group transcriptions, and the Michaelian teachings in general, indicate that there is also bleed-through from discarnate kindred souls, especially the Essence Twin. Both of these, sub-and super-, will be discussed when I present my understanding of Age near the end of this chapter.
- 8. In the original Michaelian group, the subject of reincarnation was rather simple, but it has gotten increasingly complicated over the decades since then. For instance, there is the matter of "concurrents" and there is the matter of "parallels". Concurrent lifetimes are allegedly when Essence runs more than one lifetime at the same time, rather than sequentially. Parallel lifetimes allegedly spin off when Essence wants to explore an alternative choice in a parallel universe. Both of these are not amenable to Validation, so I put them in the category that I call "dogma-doctrine"; they might or might not be true; there is no way to say for sure. Whatever their ontological (reality) and epistemological (our knowledge of reality) status, I am not going to talk about them in this chapter because I do not see how they directly relate to the seven Ages. There are other complexities about Age that have accrued in the Michaelian teachings, and they are relevant; those will be discussed in this chapter.
- 9. Advancement through the Ages should not be confused with spiritual development such as characterized in Gurdjieff's Levels of Being, discussed in Chapter 1J; the two correspond in terms of Septenarian Attributes, but Ages take scores to hundreds of lifetimes of soul development, whereas Level of Being can rise significantly in a single lifetime of spiritual development. The same goes for another Septenary with stages that correlate with Ages, Maslow's Hierarchy, which also only applies to psycho–social–spiritual development during a single lifetime. Both of these are discussed in my book *The Tao of Cosmogony*. The Life-Stages also affect the manifestation of Age during a lifetime, but they should not be confused with Age itself just because Life-Stages and Ages are both manifestations of the Septenary. These three related Septenaries are discussed in various places in this chapter.
- 10. The relationship of the Astral Plane evolution of the soul to the Physical Plane evolution of the soul is generally presented in terms of sequential time, rather than simultaneous time. That is, it is said that after all the Old Souls from an Entity graduate from the Physical Plane, then the Entity is fully reunited, and then it might reincarnate as a Transcendental Soul. This conceptualization is questionable, because many sources say that Astral Plane 'time' is not limited by or dependent on Physical Plane 'time'; that is, 'time' there is not like 'time' here. This is actually understood in the Michaelian teachings, but perhaps some of the consequences have not been understood when it comes to Age. One of the ways I try to reconcile various accounts of the Transcendental Soul and the Infinite Soul and the Astral Plane and the Causal Plane to the Physical Plane, for instance, is to explain the difference between sequential 'time' and simultaneous 'time' in the different reality systems that are referred to as planes. For the most part, however, I would rather not get into this particular technicality, mostly because it is still one of my big unanswered questions regarding the subject of Age.
- 11. As if things were not complicated enough when including ramifications of the above noted and numbered items, another confounding factor is semantic in nature. Sometimes the same name is applied to two different phenomena; sometimes a different name is applied to the same phenomenon. Some of the semantic issues are covered in the next section.

As if the above considerations were not enough to complicate and confuse any attempts to understand Age, there are even more complications to consider, as discussed in the next section.

Some Anomalies

There are souls, mentioned in the Michaelian teachings and elsewhere, who do not seem to fit into any of the Age boxes on the typical Overleaf Chart. What shall we do with them? Even before we dig into the subject of Age in detail, it is appropriate to present some anomalies to the usual understanding of Age in the Michaelian teachings. Knowing about these anomalies will make it clear that something needs to change about the way dthat Age is commonly understood in the Michaelian teachings, if that is not already clear to you.

Old Soul Transcendent

There is a phrase in the original Michaelian group transcriptions that did not come with much of an explanation. There are two references to the "old soul transcendent" (OST). This was said to not be the same thing as the "Transcendental Soul". Context and some thought about what it could possibly mean indicates that it probably refers to an older soul who does not need to reincarnate for the purpose of burning karmic Ribbons or completing Monads and Agreements. (Those capitalized words refer to subjects beyond the scope of this book, but they are covered in numerous books about the Michaelian teachings, and in my book *Study Papers on the Original Michaelian Group.*) Some Michaelian students and teachers have put forth the idea of a "voluntary" incarnation, and they put it into their description of the Sixth Age or the Seventh Age. Non-Michaelian teachings expositors on the subject of Age also used the general idea of a voluntary incarnation, and the term Bodhisattva is sometimes applied. We will discuss the Bodhisattva in sections further on.

Here are the two instances of the OST phrase:

The man, John, [Pope John XXIII] was the archetypal Sixth Level Old Soul transcendent. His acceleration was more marked in the last year of his life. Yes, a Slave and yes, in Passion and Emotional Center; mostly Jovial, some Martian; a Spiritualist in Growth. He jumped from Sixth Level Old to transcendental level. [SJC, 18 May 1974]

Yes, we do see much Arrogance in the man Fulton [Sheen]. This is a final Level Old Soul transcendent and not a manifestation of a Transcendental Soul; there is a difference. [S/C, 14 December 1974]

This makes it pretty clear that the OST is just a special type of Old Soul, not a category beyond Old Soul, as one might suppose from appending the word "transcendent". Therefore, this anomaly has little bearing on the subject of this chapter. Apparently the implication of the word transcendent is that a person can finish the necessary schoolwork (karma, Monads, Agreements, and so on) that they signed on for in a given lifetime before they finish the whole curriculum, meaning, before they experience "all of life". As we will see further on, the Michaelian teachings majority report on the incarnate Transcendental Soul is that it has fully graduated from the necessary curriculum of earth school, plus it has routine access to an entire thousand-souled karma–free reunited Entity.

Some channeling from Troy Tolley posted on >https://our.truthloveenergy.com/blogs/entry/2593-anandamayi-ma-jnaneshwar-maharaj/< was surprising to me in that it said any Age can be Transcendent, and it explained what that meant:

This Fragment [Anandamayi Ma] was Transcendent in that she was unapologetically self-realized and present and no longer confined by or defined by wounding or ego or Overleaves. When one becomes Transcendent, one is free to float or move around the sphere of who one is, rather than back and forth between polarities. Any Soul Age can be Transcendent. Transcendence is local to the Personality. A Soul is already Transcendent.

See also >https://our.truthloveenergy.com/blogs/entry/2582-dream-of-mother-meera/<:

Transcendent Souls are those Fragments who are no longer defined by any combination or limitation of emotion, intellect, or action and have learned to live as a whole that is greater than the sum of parts. They are no longer functioning with one Center at work, but all Centers at work as necessary and seamlessly. There are no more habits. Only harmony. [retrieved August 2019]

This description is similar to the description of a Balanced Man in the Gurdjieffian teachings and in the original Michaelian group transcriptions. Balanced Man was said to be liberated from slavish, unconscious imprisonment by the Overleaves of Personality. I wonder if it might also refer to an incarnate soul who has completed the karma, Monads and Agreements of a Level and/or of an Age, any Level or Age, even when there is more 'school curriculum' to experience in later Levels and Ages. I suggest that these are questions

worth pursuing the answers to, for the sake of clarity of semantics. Even though the passages quoted above do not explicitly say so, my understanding is that an incarnate personality of any Age becomes Transcendent when it has completed the karma and Monads and Agreements planned for that lifetime, and no longer even necessarily uses the Overleaves chosen for that lifetime; it is so free that it can assume an Overleaf that is more appropriate for a situation than the Overleaf chosen by the incarnating soul.

Acceleration

As near as I can tell, the phrase Old Soul Transcendent, at least in the first quote in the section above, is attached to a person who has "accelerated". Here again we have a term that is not thoroughly explained in the original Michaelian group transcriptions; we have to surmise its meaning from contexts in ambiguous statements — see below. The statement above about Pope John XXIII indicates that it is possible to jump to the next higher Level within a lifetime, rather than what has been said in the Michaelian teachings to be the usual case: jumping a Level from one lifetime to the next lifetime.

There is also a hint in the following statement that does not appear in the original Michaelian group transcriptions, but does in *MFM*:

It should be noted here that if this process is interrupted during a lifetime, for instance by violent or early death from illness, the fragment <u>rarely</u> advances a level. A fragment can <u>usually</u> advance through a level of experience only by going through the entire process. [MFM, p. 218]

This statement follows immediately upon the description of the seven Milestones, aka Internal Monads, aka Life-Stages. Therefore, the implication with the use of the words 'rarely' and 'usually' is that completing the Life-Stages Septenary before advancing a Level is not *always* the case. Therefore, my assumption is that when this general rule is broken, it is called "acceleration".

The reason I bring this obscure and iffy subject up at all is because I believe that there is in fact a *principle* here, namely that evolution is usually rather orderly, and each step must normally be taken one after the other, and each stage is built on previous stages. Metaphorically, one must complete each 'class' successfully in the 'school' before one can 'graduate' to the next 'grade'. This principle figures into my arguments presented in a subsequent section.

The phenomenon of acceleration, if it is a real thing, is — using the school metaphor again — like 'prodigies' who can skip a 'class' or a 'grade' because they are so 'gifted' or because they 'study' really hard. Outside of the Michaelian teachings, this goes by the name of a "Spiritually Transformative Experience" (STE), which is usually spontaneous, but can also be the product of spiritual practices and/or psychedelics; the veil that separates the Personality self from the unlimited Essence self is lifted to one degree or another. I invite the reader to do an internet search on that phrase, and include the name Yvonne Kason.

There are some other original Michaelian group transcriptions that speak to this phenomenon. There is one instance where accelerated soul evolution is mentioned in the original Michaelian group transcriptions that appears to support what is implied in the quotation above, namely that a person can jump to the next higher Level within a lifetime:

The Mature Soul can also accelerate within the Cycle [jump to a higher Level?]. Young Souls can burn karmic Ribbons rapidly sometimes and accelerate. Elizabeth Blackwell and Florence Nightingale are examples. Louis Pasteur, Walter Reed, Marie Curie, [and] Frank Lloyd Wright accelerated. [SJC, 18 September 1973]

There are other mentions of "acceleration" in the original Michaelian group transcriptions, but in those cases there are no implications that the acceleration was more than rapid psycho–social–spiritual advancement within a lifetime. These are quoted and commented in the chapter "Acceleration" in my book Study Papers on the Original Michaelian Group.

As far as I know, in the original Michaelian group transcriptions — with the possible exception of the Old Soul Transcendent — there is no record of a soul that has returned to reincarnation after it has completed all the mandatory Monads (necessary life experiences), burned all their karmic Ribbons, completed all their Agreements with other souls, and learned all they needed and wanted to learn in "earth school". The assumption I am making here is that this means they graduate from *negative* attachment to reincarnation on the Physical Plane, but there might be such a thing as a *positive* attachment to reincarnation on the Physical Plane, similar to the description of Bodhisattvas presented in a section further on.

Astral Plane Evolution in Lieu of Physical Plane Evolution

In the Michaelian teachings, the understanding generally is that reincarnation is almost a necessity if the soul is to advance through the Life-Stages and Levels and Ages. However, there are statements in the original Michaelian group transcriptions that declare that this is not always the case; there are anomalies. For instance, consider these passages:

The third level [of the Astral Plane] attracts Old Souls who are trying to burn final karma without being reborn. [SJC, 08 October 1973]

Tomas is a part of the high Astral body. These are entities who choose to work out karmic Ribbons not on the Physical Plane. Many try. Few make it. It is easier to be born again. Some chose, as Tomas has, to work out remaining karmic Ribbons on the high Astral Plane — Astral angels, so to speak. [SJC, 04 September 73]

This question is lost. It was a question about Tomas.

This entity is attempting to work out of karma on the Astral Plane. This is an opinion [of his].

Is the entity of Tomas a young soul?

This fragment, in the last physical interval, accelerated because of psychic growth. If he chooses to remain on the Astral Plane for several more of your centuries, growth may be such that he will be reincarnated as a first level Old Soul. He has an advantage over you. He is not encumbered by the physical vehicle.... [SJC, 20 December 73]

Tomas said you could substitute astral for earth experiences.

This can be done but it takes much longer. [S/C, 12 June 74]

How do we burn Ribbons on the Astral Plane? Was Tomas on the Astral Plane burning Ribbons? Is it easier that way?

It is less painful in a physical sense, but that does not mean that it is pain-free. It takes much longer to accomplish anything this way, as all [that] can be offered is guidance to those who are on the Physical Plane and to whom the debt is owed. It involves patient monitoring and the establishment of rapport through the barriers of the planes. [SJC, 19 November 74]

These passages might be implying that it is possible, though not at all common, to 'graduate' from 'earth school' after the Mature Soul Age. If that is true, then the question that comes to my mind is, Is there more to 'learn' in 'earth school' after the Old Soul Age? My answer is that, yes, there is more to learn, more Monads to complete, if one chooses. To use the school metaphor once again: call them 'post-graduate degrees' if you want. Or call them 'secondary degrees' if you want. This will be covered in more detail further on.

Because it is apparently so unusual, the burning of karmic Ribbons on the Astral Plane does not have any bearing on the subject of Age in this chapter.

Wanderers

In the Ra Material — channeled information published in the early 1980s — it is said that there are souls who incarnate on planet Earth who are not indigenous to the planet, who are not doing their evolution here, who come here from other planets for one reason or another. They might be very advanced souls on their native planet, but here on this planet they do not fit in, and they do not always adjust well to the conditions here. For more information, refer to: >https://www.lawofone.info/results.php?c=Wanderers<.

The Michaels have not commented on these souls, so far as I know; therefore, we do not know where Wanderers should fit in the Ages paradigm as explained by the Michaels, if anywhere. My opinion is that we should not try to fit Wanderers within the Ages paradigm, which is apparently meant for souls who do their entire evolution on planet Earth. They might fit, however uncomfortably, within the category called Bodhisattva, as discussed in the next section.

Bodhisattvas

In some oriental spiritual teachings, particularly Buddhism, the term Bodhisattva refers to "a person who is able to reach nirvana but delays doing so out of compassion in order to save suffering beings." That is a dictionary definition found on the internet; Wikipedia has an extensive article on the concept, which you can read here: >https://en.wikipedia.org/wiki/Bodhisattva<.

In Michaelian teachings terms, and using the school metaphor once again, we could say that Bodhisattvas are souls who have completed the 'curriculum' of 'earth school', have 'graduated', do not need to return to tie up loose ends or complete any unfinished business, but do so anyway, out of the goodness of their hearts. One might therefore think that Bodhisattvas are 'Priest-ish' — in Michaelian terms — and I agree; there is a

correspondence there. Some Michaelian students might think that Bodhisattvas should therefore be placed into the Sixth Age. You can see evidence of this perception in Garfield's book (discussed further on), but there the name Volunteer is applied to the Seventh Age, and the description of Volunteer fits with Bodhisattva. As argued further on, my preference is to fit the Bodhisattva concept within both the Sixth and Seventh Ages, and stipulate that even though they do not *need* to return, there is still voluntary work to do for the greater good of humanity, and there is still learning to be had here for the soul itself.

The whole subject of Bodhisattvas introduces another question that could be asked: When in the Age spectrum does reincarnation switch from being mostly involuntary to being mostly voluntary? — if there is such a turning point. This question will be discussed further on in this chapter.

Whether Bodhisattvas are equivalent to Transcendental Souls is answered in the affirmative by José Stevens; see further on.

Adepts and Masters

The modern Theosophical traditions has the notion that there is a class of people who are very similar to the Bodhisattvas discussed in the previous subsection. Wikipedia describes it as follows:

The ritual magicians of the Western mystery tradition sometimes refer to the Great White Brotherhood as the "Great White Lodge", a name that appears to indicate that they imagine it constitutes an initiatory hierarchy similar to Freemasonry. Gareth Knight describes its members as the "Masters" or "Inner Plane Adepti", who have "gained all the experience, and all the wisdom resulting from experience, necessary for their spiritual evolution in the worlds of form". While some go on to "higher evolution in other spheres", others become teaching Masters who stay behind to help younger initiates in their "cyclic evolution on this planet". Only a few of this community are known to the human race; these initiates are the "teaching Masters".

[>https://en.wikipedia.org/wiki/Great_White_Brotherhood< — retrieved 25 December 2021]

Refer to the chapter, "Brotherhood (Occult)", in my book *Study Papers on the Original Michaelian Group* and you will see that the Michaels during the original Michaelian group apparently endorsed the validity of the Great While Brotherhood. If there is any validity to this endorsement, then here is another example of a class of souls who do not neatly fit into a simplistic and tidy notion of the evolution of the soul through five or seven categories, and then they are finished with the Physical Plane. In that chapter, you will see that the Occult Brotherhood is made up of late Level Old Souls "transcendent", aka karma-free — as discussed in a subsection above.

Avatars

Wikipedia has a wiki on the phenomenon called Avatar. As with the Bodhisattva concept, the Avatar concept goes back thousands of years. Essentially, it is said that a "god" can "step down" its consciousness enough to incarnate. This is basically equivalent to what the original Michaelian group transcriptions say about the Infinite Soul:

In regard to Christ, when the Ouija board said, "When the teacher dies, the teaching dies," did they mean Christ?

The descent of the High Mental body supersedes all that has gone before. The High Mental body does not live in the sense that you know life. When the avatar descends, the Logos is brought to bear. This is not a teaching. When the avatar descends again, the Logos will again be brought to bear, but in the language of today. Teachings are interpretations of the Logos. They must be updated, not because the Logos changes, but because language does. [S/C, 08 September 1973]

It is not coincidental that the Michaelian teachings, what with its Transcendental Souls and Infinite Souls, has correlates in ancient esoteric spiritual teachings, what with its Bodhisattvas and Avatars. The question addressed in this chapter is, do these relate to the Sixth Age and the Seventh Age? And if they do, then how? This will be discussed in sections further on.

The other idea of note about Avatars that should be mentioned here is that various "gods" with various characteristics and missions can incarnate into a human. The Michaelian teachings has evolved to say something similar, as we shall see below. That is, not all Infinite Souls are the same: they have different qualities and missions, and come from different planes beyond the lower planes. This is how you tell different Avatar "gods" in a pantheon apart; this is why different manifestations of the Infinite Soul have different messages and effects; each tells a different story; each brings different energies to inform and/or unite and/or inspire and/or provoke humanity; each brings, from the high planes, different facets of the Logos, the Pathos, and the Ethos to bear.

For the Theosophical perspective on Bodhisattvas and Avatars, the reader may wish to refer to this web page: > https://en.wikipedia.org/wiki/Initiation_(Theosophy) <. All that I will say here is that the subject is complicated.

Additional Ambiguities Regarding Maturity

This section is not exactly relevant to this chapter, except to the extent that it emphasizes just how difficult it is for us to accurately discern a person's Age in *practice*, and this fact has probably contributed to the fact that the subject of Age has been difficult to accurately discern in *theory*. And one can look at this the opposite way: the *theory* of Age within the Michaelian teachings has been so encumbered with ambiguities and apparent discrepancies over the decades, that it makes accurate discernment of a person's Age in *practice* rather iffy. It is not that discerning a person's correct Age is impossible and attempts should just be dismissed as unworkable, but all of the factors in the numbered list below make it difficult, and these difficulties should be taken into account when attempting discernment of Age in any particular person.

I am not going to do it here, but you can do it if you want. If you compare the Age of specific public figures from lists by various channels, you will find that we have a problem with "channeling" — there are a lot of discrepancies. In fact, discrepancy is the *norm* rather than the *exception*. This issue is well known within the Michaelian teachings community, but it is mostly shrugged off, accompanied by a recommendation: Validate it on your own if you can; good luck with that, ha ha. I do not think it is funny, so I have spent a lot of time and energy figuring out what the problems are; here are the problems as I see them.

- 1. The Yarbro contingent typically channels people to be approximately one Age category younger than the non-Yarbro contingent; they disdain the arrogance of the non-Yarbro contingent by referring to this as "Soul Age inflation". (And they claim that the non-Yarbro contingent is not even channeling the "real" Michael.) Besides the divergent channeling itself, people in the two contingents apparently discem people's Age accordingly; that is, they have different perceptions of what the Ages look like. There might be a semi-legitimate reason for this difference in perception between the two contingents: mid-Level Mature is the dividing line between younger souls (Infant–Baby–Young) and older souls (Senior–Elder–Ancient in my naming convention). It is relatively easier to distinguish between the broader categories of younger souls and older souls than it is to distinguish the narrower category of late-Level Mature and Old Soul. Maybe what the Yarbro contingent considers to be a Mature Soul is just Early Mature from the perspective of the non-Yarbro contingent; maybe what the non-Yarbro contingent perceives to be an Old Soul is just a late-Level Mature Soul from the perspective of the Yarbro contingent. Thus, maybe this difference of perception and channeling is just a semantic (naming) problem.
- 2. Another fact: theoretically speaking, the three Cardinal Levels of the Mature Age are of the same quality as the three Cardinal Ages, but their intensity is less. How shall we distinguish the former from the latter? My perception is that an Old Soul of any Level tends to be more individualistic ("Do what you want.") and more interested in disentangling from mundane things than Mature Souls. Mature Souls are more concerned with understanding the world in collectivist terms than the Old Soul. The Cardinal Levels of the Mature Age are precursors or harbingers of the three Cardinal Ages; therefore one should not underestimate the depth and breadth of the contribution that Late Mature Souls make to the advancement of understanding and influence in the world. Old Souls simply do not contribute that much to the well-being of the general population, which consists of younger souls.
- 3. It has been formally recognized in the Michaelian teachings community and with some channels that there is such a thing as "Manifested Soul Age" (MSA). This supposedly means that not everyone is actually living up to what I call their "Potential Soul Age" (PSA). Channeling often provides both the alleged PSA and the MSA. The MSA can be as much as seven Levels below the PSA. For instance, refer to Hoodwin's book *Journey of Your Soul (JOYS, 2013)*, pp. 319–323. It is generally acknowledged in the Michaelian teachings community that the younger the soul, the more susceptible it is to imprinting from parents and culture. I suggest that MSA is not just younger than PSA; it can also be older, such as in a situation where practically everyone around you is an older soul than you are, and it metaphorically 'rubs off' on you. I refer to this as "Apparent Soul Age" (ASA). This makes ASA a part of what is called False Personality in the Michaelian teachings, a factor which also goes by the names "acculturation" and "imprinting".

- 4. In my Process/Aspect System (refer to my book by that name) reformulation of the Overleaf System, Age, aka Worldview, is said to be a "Neutral" Aspect of Personality one might think of it as neither Cardinal nor Ordinal, or one might think of it as both Cardinal and Ordinal. In either way of looking at it, it is generally recognized in the Michaelian teachings community that a Neutral Overleaf is more subject to being metaphorically 'colored' or 'flavored' by other Cardinal or Ordinal Overleaves that a person might have. Consequently, people can be perceived, and perceive themselves, as being younger (MSA) or older (ASA) on the Age spectrum depending on whether the preponderance of Traits in their Array of Overleaves is Ordinal or Cardinal respectively. If you add up your Cardinal Traits and subtract your Ordinal Traits, you get a positive or a negative number that I call the "Cardinal/Ordinal Index"; doing that calculation will tell you, in part, how much your MSA or ASA departs from your PSA. This phenomenon is discussed in some detail in my book *The Tao of Personality*.
- 5. If the Level is much lower or higher than the MSA-PSA, that ambiguates a person's MSA-PSA. It seems to me, based on observation of actual people, that Level has about one third of the influence on perceptions as Age does. Therefore, a Level that is much lower or higher than Age can skew the person's ASA to be younger or older respectively.
- 6. And not just Level, but where one is located in the process of transiting the Life-Stages, colors/flavors one's MSA-PSA-ASA. An older person who has successfully transited the Life-Stages will be much more mature. It is said in the Michaelian teachings that a person does not fully manifest their Age until they have successfully transited the corresponding Life-Stage. That is, Mature Souls do not come into their full maturity until they are in their forties, and Old Souls do not come into their full maturity until they are in their sixties. I can't put my finger on where I got this idea, but this seems right to me, based on personal experience.
- 7. And not just Level and Life-Stages, but there are other measures of psycho-social-spiritual maturity, such as Maslow's "Hierarchy" and Gurdjieff's "Level of Being" that might have a bearing on MSA, and on how yourself or others perceive a person's Age, ASA. Both of these factors are discussed in my book *The Tao of Cosmogony*; refer to that book for a thorough examination of dozens of Septenaries that follow the Natural Sequence; it describes the differences and similarities of these other Septenaries to Age.
- 8. It is said in the Michaelian teachings that one's Essence Twin, especially if discarnate, can influence a person considerably. Hoodwin has a section on this alleged phenomenon in JOYS, 2013 edition, pp. 222–225. Perhaps the same thing can be said of one's other kindred souls but to a lesser extent. The general conceptualization is that if the average Age of Fragments in one's Entity is much older or younger than oneself, then it will perhaps skew one's MSA and/or ASA. It has been channeled [[specify]] that there can be a spread in Age in an Entity of about two entire Ages before the Entity fully reunites. Some Fragments are metaphorical 'tortoises' and some are 'hares' in the 'race' to get through the cycle of incarnations. This idea of influence from Fragments of one's Astral Entity greatly figures in to my explanation of how Age works, presented near the end of this chapter.

For these reasons of ambiguity, I personally acknowledge how difficult it is to discern Age in practice, and therefore I prefer to study what I call "Worldview" in theory — and that is what I have done in my book *The Tao of Personality*. The Ages are archetypes of maturity, and one can stereotype the archetypes, but to pigeonhole any particular person into one of the abstract categories is fraught with difficulty and uncertainty.

Do We Just Live With Anomalies and Ambiguities?

So what are we to make of these discrepancies in channeling and perception? So far as I know, they mostly get shrugged off as unsolvable or unimportant by the Michaelian teachings community. However, you should realize by now that I take this type of situation as a challenge; it is who I am; it is what I do — here in Part Four of this *History* book. I begin to propose tentative resolutions to some of these Soul Age issues in the next section of this Chapter.

I do not know what is going on in other people's heads except to the extent that they speak or write about it. Various Michaelian teachings sources do not generally explain their reasons and/or rationales for departing from the original revelation, so I generally have to guess. In explaining the situation about Age, first I will trace the history of Age in the Michaelian teachings, then I will attempt to synthesize all that information into something that makes sense to me; perhaps it will make sense to you also. My philosophy on this particular

subject — because it is mostly in the realm of unvalidatable dogma—doctrine — is to not be any more dismissive of apparent contradictions than necessary, but rather, my intention is to be as inclusive as I can, where differing ideas can be reconciled between each other and within the context of the Overleaf System as a whole. This is the "both-and" principle of "integral thinkers". The approach assumes that if one is overly inclined to be dismissive of one source or another, that stops the learning process for approaching truth (at which one never arrives, by the way). On the other hand, there are some things that just cannot be reconciled, or are just plain wrong, and sometimes one idea is in fact better than another. So, there is a place for discernment in this and all other realms of life and learning. On other subjects that I cover in my books I can often apply more fundamental scientific tools to the resolution of discrepancies. In this chapter I just use some tools of academic scholarship.

So let's get started on this journey of discovery.

Transcendental and Infinite Souls

In this section, we examine the most common names for the Sixth and Seventh Ages seen on the Overleaf Charts and shown in Table 4Ma, namely the Transcendental Soul and the Infinite Soul. The names have not changed over the decades since their original revelation to the original Michaelian group, but their descriptions have changed, as we will see in the following subsections. Some might see disagreement, and others might see clarification and elaboration, in the history of revelations on the subject. I see some of both, but I aim for clarification and elaboration. There is also my policy to be as inclusive as reasonable, which has resulted in regarding the evolution of the description as an expansion rather than as a contradiction.

Transcendental Soul and Infinite Soul according to the Original Michaelian Group

The Overleaf Charts that originated within the original Michaelian group are consistent in that they name the Sixth and Seventh Ages as Transcendental and Infinite. These names were repeated subsequent to the original Michaelian group, in numerous Charts over the decades, as you can see in Table 4Ma.

The thing to notice and remember about the Transcendental Soul and the Infinite Soul according to the transcriptions of the original Michaelian group is that the Transcendental Soul was said to descend as an avatar from the upper levels of the third (Causal) plane and the Infinite Soul was said to descend as an avatar from the upper levels of the fourth (Mental–Akashic) plane:

Quite often, however, the high Causal [third plane] <u>body</u> [Transcendental Soul] or the high Mental [fourth plane] <u>body</u> [Infinite Soul] displaces an Older Soul and at that time of the manifestation, the sexual activity ceases. [S/C, late August 1973]

The high Causal <u>body</u> [Transcendental Soul] last manifested through Mohandas Gandhi. [*SJC*, 26 August 1973]

The high Causal <u>body</u> [Transcendental Soul] manifests only in times of social or religious unrest. Then if the revolution does not come about, the high Mental <u>body</u> [Infinite Soul] manifests and brings the Logos to bear... The Infinite Soul manifested through the physical forms of Lao Tsu, Sri Krishna, Siddhartha Gautama and Jesus; no others. The Transcendental Soul has manifested through Socrates, Zarathustra, through Muhammad, and through Mohandas Gandhi. [SIC, 18 September 1973]

There are, of course, seven planes in all, each with seven levels. Beyond the Astral Plane is the Causal Plane with seven levels, three low, one mid-Causal Plane level upon which we [the Michaels] reside, and three higher levels upon which reside the high Causal <u>bodies</u> — the Transcendental Souls contiguous with this plane — and the Mental Plane is the Akashic plane, which is a photographic record of all history. Some very high adepts have access to this plane. On the Mental [fourth] Plane resides the Infinite Soul [on the high levels], and the low and Mid-Mental [sub-Plane] <u>bodies</u>. Beyond this is the Buddhaic Plane, and upon this level are all of those souls who have achieved physical communion with the Tao. Beyond this, of course, [is] the Tao. [SIC, 29 November 1973]

(For your convenience, I have used the names of the planes that are used in the Michaelian teachings, not the names that are used in other esoteric teachings and that I prefer; refer to Chapter 1A and Chapter 4E, "The Seven Planes".)

I have underlined the word <u>body</u> in these passages because I am calling attention to my perception that the understanding of "bodies" is important for understanding the subject of Age. Physical bodies are made up of

cells of various types; this is also true of the Transcendental Soul and the Infinite Soul bodies, which are made up of what the Michaels call Fragments of various types.

So what are these references to the "high Causal body" and the "high Mental body" all about? There is a chapter in my book *The Tao of Cosmogony* that discusses these bodies; usually the word appears in a phrase, "subtle bodies". Briefly, the four bodies of Gurdjieff and other esoteric cosmologies are: 1) the "physical" body that resides on the Physical Plane; the "emotional" body that resides on the Astral (second) Plane; the "mental" body that resides on the Causal (third) Plane; and the "spiritual" body that resides on the Mental–Akashic (fourth) Plane. Apparently there are no "bodies" on the three Cardinal planes; Fragmentation of Tao does not exist there; there is no "quantification", although there is a spectrum or gradation in "qualification" on the three Cardinal planes. Henceforth in this chapter I am going to capitalize the word Body, so that you know where it refers to a united collective of Fragments; it might be a Cadence, or a Greater Cadence, or a Side, or an Entity, or a Cadre, or a Cadre Group — referring to terms used in the "Michael Math" chapter of *MMFM* and elsewhere in the Michaelian teachings literature.

This original Michaelian group information about the natural abode and origin of the Transcendental Soul and Infinite Soul on those particular planes has been superseded or ignored or enlarged in some subsequent Michaelian teachings publications, as documented further on.

Yarbro quoted portions of the above-quoted passages, and added to them, in her first book on the Michaelian teachings, *Messages from Michael (MFM,* 1979). Refer to pages 42, 78–79, 86, 178, 185, and 209 of the Classic edition. It would be stretching copyright "fair use" to quote them here, but it would be useful for you to read those descriptions now in the book itself. Most of that material must have come from the special sessions that author Quinn Yarbro had with channel Sarah Chambers in order to flesh out the meager information on the Transcendental Soul and Infinite Soul that we find in the original Michaelian group transcriptions. *MFM* does not contradict the original Michaelian group statement that the origin of the Transcendental Soul is the higher levels of the Causal (third) Plane, and the origin of the Infinite Soul is the higher levels of the Mental–Akashic (fourth) Plane. Nor does *MFM* contradict the original Michaelian group Charts showing that the Transcendental Soul and Infinite Soul occupy the Sixth Age and the Seventh Age respectively on the Overleaf Chart.

However, Yarbro must have come to question this original Michaelian group dogma–doctrine in subsequent years, because in *MMFM* (1986) she changed both the origin and the placement; see next subsection. And that was just the beginning of the slipping and sliding away from the original Michaelian group channeling, resulting in ambiguities and apparent contradictions in the Michaelian teachings community. Hence the desirability for this chapter of this *History* book in an attempt to sort it all out.

On a personal note, I myself, when I studied MFM in the early 1980s, thought it just a bit strange that these anomalous beings, the Transcendental Soul and Infinite Soul, were placed into the last two Age slots in the Overleaf Chart. It made sense to have something there in order to finish the septenary, as with the other six Overleaf categories, but why the Transcendental Soul and the Infinite Soul? They do not in fact comfortably fit the pattern, and it was obvious, but back then I was too ignorant to seriously question it. Yarbro seriously questioned it, and came up with what she thought was an improvement, which she published it in her second book on the Michaelian teachings in 1986 — refer to the next subsection.

Transcendental Soul and Infinite Soul According to Yarbro

In the minds of some Michaelian students, as shown in Table 4Ma, the understanding of, and naming of, the Sixth Age and the Seventh Age changed subsequent to the original Michaelian group. The trend started in the Yarbro group that followed after the original Michaelian group. The amendment that originated in that group was published in *More Messages from Michael (MMFM,* 1986). With this effort, Yarbro started to address some of the apparent problems regarding Age not addressed in the original Michaelian group:

As far as essence is concerned, the astral [second] plane experiences are the sixth cycle of growth, and the causal [third] plane experiences are the seventh cycle, finishing out the five [Soul Age] cycles begun on the physical [first] plane. [MMFM, p. 44]

The sixth cycle that can be experienced by individual fragments occurs on the astral plane, where the entities gather to reunite. This experience is the fulfillment of the Priest experience and has to do with the nature of the sixth level.... [MMFM, p. 201]

Because of these statements, the Sixth Age and the Seventh Age are named "Astral" and "Causal" respectively on Overleaf Charts #8 and #18, both of which originated in the Yarbro contingent of the Michaelian teachings.

On the physical plane, the six experience occurs during manifestation of the transcendental soul. This [transcendental] soul is not a fragment and <u>not a reunited entity</u>, but a <u>total</u> which generally brings about massive social and cultural rebirth and/or change. The infinite soul, being of the seven nature, brings the Logos to bear during its manifestations [on the physical plane].... The experience of the manifestation of the transcendental soul on the physical plane does much to make astral fragments more accessible to those on the physical plane. The experience of the manifestation of the infinite soul on the physical plane brings more mid-causal teachers — reunited entities such as we are — to seeking students on the physical plane. While those on the physical plane are not yet into the sixth or seventh cycles, which are experienced on the astral and causal planes, validation of these cycles is possible for even very young souls during manifestations of the transcendental and infinite souls. [MMFM, pp. 201–203]

The origins of the Transcendental Soul and the Infinite Soul are not explicitly stated here, but the implications are that the Transcendental Soul is associated with the Astral Plane where Entities (about a thousand Fragments) are said to reunite, and the Infinite Soul is associated with the Causal Plane where Cadres (about seven thousand Fragments) are said to reunite. This relationship of Transcendental Soul and Infinite Soul to specific planes is stated again in the third Yarbro book on the Michaelian teachings:

...the priest nature, which is related to the number six and to the astral [second] plane and transcendental soul ... the king essence, tied to the inculcating number seven, to the causal [third] plane and the infinite soul... [MP, pp. 181–182]

These statements apparently contradict the statements from original Michaelian group and *MFM* that the Transcendental Soul avatar descends from the higher levels of the third plane, and the Infinite Soul avatar descends from the higher levels of the fourth plane, thus one plane higher in each case than per *MMFM*. Naturally, this discrepancy puzzled me when I compared the two accounts decades ago, and I am suggesting that it should puzzle you also.

One thing that is clearly stated in *MMFM* is that the Transcendental Soul is not a reunited Entity (underline in quote was my emphasis), even though it is allegedly related by nature to the Astral Plane, where Entities are said to unite with their Fragments on the upper levels. Even though it is not stated in the passage quoted above, it would follow logically that the Infinite Soul is not a reunited Cadre just because of its alleged relationship with the third plane, where Entities are said to unite into their Cadres. There are at least two ways to understand these assertions: 1) the Transcendental Soul and the Infinite Soul are each some sort of "total" (to use Yarbro's word) or some sort of "Body" (the term used in the original Michaelian group and elsewhere, and that I use in this chapter). That is to say, they are composed of kindred-soul Fragments of some quantity, even if that is not the sum total quantity of an Entity or a Cadre; or 2) maybe the Transcendental Soul and Infinite Soul are just a consortium of Fragments or Bodies, temporarily allied in their mission during their collective incarnation. I have not seen any corroboration of this testimony, and it does not figure into what I have to say further on in this chapter.

Because of the explicit differences between original Michaelian group/MFM and MMFM, it is apparent that Yarbro had issues with the channeling in the original Michaelian group with respect to the Sixth Age and the Seventh Age, and with the nature and origin of Transcendental Soul and Infinite Soul before their manifestations. My assertion is that her resolution of her issues was a step in the right direction, but was not the complete solution; others, including myself, have issues with both original Michaelian group/MFM and MMFM. It seems to me that the MMFM assertions were not complete; they did not go far enough, and they created even more issues that beg for a reconciliation and/or an explanation.

My arguments and evidences for these assertions are as follows:

1. The way that MMFM presented the Transcendental Soul and the Infinite Soul was not as a clarification of the information given in original Michaelian group/MFM; rather, it appears to be a contradiction to the original Michaelian group/MFM presentation. This is not necessarily a bad thing if an error is corrected and the truth is furthered. However, I prefer to reconcile them by proposing that perhaps both descriptions are incomplete, and when the whole story is told, they are both true in some way. As we see in subsequent sections, even more of the story is indeed told, and it fleshes out and modifies both the original Michaelian group/MFM and MMFM stories in various ways. In my own scheme, with

- the help of that subsequent channeling, I do make this *MMFM* amendment (with modifications) into an improvement; see below and in subsequent sections.
- 2. The way that *MP* explains it, the Astral Plane correlates with the Transcendental Soul and the Priest and Six-ness, and the Causal Plane correlates with the Infinite Soul and the King and Seven-ness. So does that mean that the Physical Plane correlates with Sage and Five-ness? Obviously not, but that would have a certain logic to it. And where would Four-ness and Three-ness and so on fit in the numerology of planes suggested by Yarbro in *MP*? Answer: nowhere; there is no logic to the *MP* assertion that the Astral Plane expresses the nature of Six-ness and the Causal Plane expresses the nature of Seven-ness unless there is some validity to the assertion that the Astral and Causal Planes are the Sixth Age and the Seventh Age of the soul's evolution. I am not convinced; refer to evidence and argument further on.
- 3. It would seem, from the quoted text, that in MMFM and MP the Astral (second) Plane is thought to have a #6 Cardinal Inspiration nature, and the Causal (third) Plane is thought to have a #7 Cardinal Action nature. (As near as I can tell, the possible reason that Yarbro correlates Sixness with Astral and Sevenness with Causal, is that she seems to be relatively clueless about the correspondences of the seven planes with the other Septenaries.) This is contrary to the various teachings about the nature of those planes, as documented in chapters on "The Seven Planes" in Part One and here in Part Four of this History book. Briefly: teachings about the seven planes, in the Michaelian teachings and other esoteric teachings, typically associate the Physical Plane with First and Ordinal Action and Warrior, Astral Plane with Second and Ordinal Inspiration and Server, and Causal Plane with Third and Ordinal Expression and Artisan. Therefore, the Priest is properly associated with the Sixth Plane, and the King is properly associated with the Seventh Plane, not the way Yarbro has it. My perception is that the Yarbro channeling presents a confused inconsistency with respect to all these other teachings. Stating this another way: the attempt to correlate the Sixth Age with Priest (Cardinal Inspiration) is correct, but Priest does not correlate with Astral — otherwise known as the Emotional Plane — instead, Server (Ordinal Inspiration) does. And while it is correct to correlate the Seventh Age with King (Cardinal Action), King does not correlate with the Causal Plane (known in Theosophy as the Mental Plane) — Artisan (Ordinal Expression) does.
- 4. Although the Transcendental Soul is said to be "related" to the Astral Plane, and the Infinite Soul is said to be "related" to the Causal Plane, nowhere does it say in the second and third Yarbro books that the Transcendental Soul and the Infinite Soul Bodies reside on, and then descend from, the planes that they "relate" to. If they did say that, they would contradict what was said in the first Yarbro book, MFM, and in the transcriptions of the original Michaelian group, where the Transcendental Soul is said to be a high "Causal (third plane) Body", and the Infinite Soul is said to be high "Mental (fourth plane) Body". My suggestion to reconcile MMFM with MFM is that the Transcendental Soul Body resides on the third plane per MFM, steps its consciousness down into an Astral Body per MMFM, and then steps its consciousness down again to incarnate as a Sixth Age "Priest-ish" manifestation. My suggestion is that the Infinite Soul Body resides on the fourth plane per MFM, and then steps its consciousness down into a Causal Body per MMFM, and then steps its consciousness down into an Astral Body, and then steps its consciousness down to incarnate as a Seventh Age "King-ish" manifestation. This method of reconciliation stretches my credulity, and maybe yours, but there is support for it in other channeling, as we see further on.
- 5. Throughout MMFM there is no mention of astral, causal, or mental Bodies at all, in connection with Transcendental Soul or Infinite Soul or otherwise, as there was in MFM. My impression is that (unlike Chambers, who channeled for MFM) Yarbro and the channels affiliated with her were unfamiliar with Gurdjieff and Theosophy, so they had no affinity for the information in the Gurdjieffian teachings and in the original Michaelian group about "subtle" Bodies and other Gurdjieffian and Theosophical terms. There are a number of subject categories for which Yarbro did not continue to mention, in her books subsequent to MFM, Gurdjieffian material mentioned in the original Michaelian group channeling by Sarah Chambers.
- 6. The Michaelian teachings community in general has not adopted Yarbro's amendments to the original revelation: no Overleaf Charts other than the Yarbro Charts show the "Astral" and "Causal" Ages in the sixth and seventh boxes. It should be no surprise then that other amendments have been suggested by other Michaelian teachings channels and students who, like Yarbro, recognized the

- original Michaelian group/MFM presentation as ambiguous or incomplete or inaccurate, but do not accept the MMFM presentation, perhaps because it does not make any more sense to them than it does to me
- 7. In the Michaelian teachings it is said that there are seven Levels within each Age. This point has been universally adopted in the Michaelian teachings community, and it is also said in Theosophy to be the case. This point is spelled out in detail regarding the first five Ages, but nothing is said in any Michaelian teachings sources that I know of, about seven Levels within these alleged Astral and Causal Ages of the soul's development. One wonders how it could be true about the alleged Astral and Causal Ages. But also, neither has seven Levels of the Transcendental and Infinite Ages been revealed by those who regard the Transcendental Soul and Infinite Soul as the Sixth and Seventh Ages. To my way of thinking, such an obvious inconsistency between the Sixth and Seventh Ages versus the First thru Fifth Ages argues against the reality of the original Michaelian group/MFM and MMFM presentations unless there is reconciliation and explanation that I do not know about.
- 8. The underlined text in the quotation above says clearly that the Transcendental Soul is not a reunited Entity; it is something else vaguely described as a "total" of some kind. Other channeling says that the Transcendental Soul is a reunited Entity; see Stevens further on. This is another instance where I attempt to reconcile two apparently contradictory sources by saying that both are true; my suggestion is that it is perhaps the case that the definition and description of the Transcendental Soul phenomenon or manifestation is broader than any one source declares.

Despite what I say above, all is not lost with the Yarbro scheme, in my opinion. Further on, in my analysis and synthesis of the Age issues, I propose a partial reconciliation of the Sixth Age—Astral Plane—Transcendental Soul, and the Seventh Age—Causal Plane—Infinite Soul, with the Physical Plane Sixth Age and Seventh Age respectively. That is, I propose that the concepts are related, but not in the way presented heretofore. That is, there seems to me to be a way to understand the MMFM/MP presentation such that it can be thought of as partially true; there seems to me be a way to partially untangle the confusion about the nature of the Sixth and Seventh Ages that has accrued over the history of the Michaelian teachings. Fortunately, over the decades, the Michaels themselves have clarified the early channeling published by Yarbro, as we see further on.

The Yarbro contingent of the Michaelian teachings typically estimates a person's Age to be about one Age lower than the non-Yarbro contingent. This might be a semantic problem — different names for the same Age. Or it might be something else. In a section further on, the work of Laeh Maggie Garfield is presented. Based on her descriptions, it looks as though she divides what the Michaelian teachings calls Mature Soul into two "Mansions" which she names "Adult" and "Mature". Another idea is to name the Fifth Age "Senior" with characteristics between "Mature" and "Old", and then name the Sixth Age "Elder", as I have done, and ascribe the characteristics of the Old soul to Elder. Frankly, I am not certain what the solution is to the difference between Yarbro contingent and non-Yarbro contingent perceptions and semantics; someone might be right and someone might be wrong, or both might be wrong and we are all missing something. I have suggestions but no firm convictions on the solution to the differences in perceptions between the two contingents of the Michaelian teachings.

In passages not quoted, four personages are listed as Transcendental Souls: Zoroaster, Socrates, Mohammad, and Gandhi. Subsequent channels have added somewhat to this list of Bodhisattvas, as we see further on. The original Michaelian group transcriptions (*SJC*, 20 December 1973) listed the Egyptian Pharaoh and heretic monotheist, Ikhnaton, as a Transcendental Soul, but this is not widely known. In the original Michaelian group transcriptions, four personages are listed as Infinite Souls: Krishna, Siddhartha Gautama (Buddha), Lao Tsu, and Jesus (Christ). Subsequent sources have added somewhat to this list of Avatars, as we see further on.

The discrepancies between channels (Chambers and Yarbro) do not end here. The clarification and modification to the Yarbro presentation took some time, decades even; refer to the next subsections.

Transcendental Soul and Infinite Soul According to Varda Hasselmann

Varda Hasselmann is a German woman who started channeling in the mid-1980s, after reading Yarbro's book *Messages from Michael*. In Hasselmann's book *Archetypes of the Soul (AOTS,* 1998), Hasselmann presents some of her channeling from "Die Quelle" — The Source. This is one of two books (out of eight published in German) that have been translated into English at the time of this writing. This Source is said to be a soul family on the

same plane as the Michaels, that is, the (erroneously-named) "Causal" (third) Plane (properly named "Mental" Plane).

Even though Hasselmann in her books expresses a debt of gratitude to Yarbro and the Michaels and the Messages books, The Source presents some information that is a bit different from the standard Michaelian teachings. Among those differences, The Source provides an understanding of the Sixth and Seventh Ages that is different from that of the Yarbro books reviewed in previous subsections. The name given to the Sixth Age is "Transpersonal" and the name given to the Seventh Age is "Transliminal". These are names translated into English from the original German, so one wonders if the English words capture the nuance of whatever German words were used; it is, however, easy enough to see that these refer to the Transcendental Soul and the Infinite Soul respectively. My guess is, based on the following quoted description, that the Transpersonal Soul has that name because it is composed of more than one soul. My guess is, based on the following quoted description, that Transliminal means "beyond limitation", thus Infinite. These two names are shown in the sixth and seventh boxes on the Overleaf Chart in the above-referenced books, just as Infinite Soul and Transcendental Soul are shown on other Overleaf Charts. You can see this on Chart #14 in Part Three.

Following are a couple of quotations from one of Hasselmann's books that has been translated from German into English, *Archetypes of the Soul*.

The beginning of the description of the sixth stage of soul evolution on the Physical Plane, the Transpersonal Soul, is as follows.

When almost all members of a Soul Family [aka Entity] have completed their path and the majority of this family is now forever in the non-bodily dimension, it can happen that the united energy, which is in the third territory [Level] of the Astral World [Plane], will take the opportunity to use a body to again manifest itself, not as an individual soul but with the united and familiar power of many hundred souls. As a collective, it then occupies the body of a soul sibling who has just completed its last incarnation, that is, the seventh stage [Level] of the Old Cycle [Fifth Age]. This very rare phenomenon represents the archetypal energy of the Priest's Soul Role. Its principle is consolation [+Compassion]. Although this only occurs under exceptional circumstances, it is the way in which a meaningful part of soul development may be realized. [AOTS, pp. 349–350]

There follows two more pages of details, which are summarized as follows: The collection of souls does not return under the necessity of completing karma, Monads, or Agreements; it does so to help a sibling soul in its development, and out of love for humanity. It can do deeds not available to typical ensouled humans. Usually there will be no more than ten Transpersonal Souls active on the planet at a time. The incarnation happens immediately upon the natural death of the host body, concomitant with exit of the final Level Old Soul in its last incarnation. The infusion of hundreds of souls gives the personality a radiant charisma that is palpable, which often manifests as non-verbal teaching, and healing energy. Typically, only other advanced sibling souls can tolerate the intensity of this energy field, but they convey this energy and understanding and healing to others outside the inner circle. By their contact with the Transpersonal Soul, the sibling souls are comforted and inspired, and prepared for their final exits from the Physical Plane. Transpersonal Souls also help with the transition of large groups of souls from one Age to another.

The beginning of the description of the seventh stage of the evolution on the Physical Plane, the Transliminal Soul, is as follows:

Another rare soul manifestation unites not the Astral World, but the Causal World with your Physical World in a powerful, unbelievably rich and effective way. It only seldom occurs in the course of the universal development history of Souls. Transliminal Souls are teachers and leaders of entire Soul Nations [aka Cadres]. This phenomenon concerns not only one, but many disembodied, reunited Soul Families [aka Entities] who are now existing in the Causal World but who, out of a love for themselves and for humans, decide to inhabit the dying body of an Old Soul [Fifth Age] who has finished his last incarnation. His individual soul moves on to the Astral World where it belongs and joins his own Soul Family [aka Entity]. But a new type of ensoulment takes place. It differs from that of the Transpersonal Soul in that it is not members of one's own Soul Family who occupy the dead body, but more highly developed entities unknown to the departed soul. These entities of several thousand once human souls are unable to act, lead, and influence on the planet earth without a mortal frame which can accommodate their total energy. For high energies in a human form lessen the fear of transformation in normal humans. This is the archetypal energy of the King's Soul Role. Its principle is leadership. [AOTS, pp. 352–353]

There follows three more pages of details, which are summarized as follows: Transliminal Souls are unlimited in their abilities. They manifest only when necessary, about every two thousand years, when the

human race as a whole is beginning to transition from one Age to the next. The Transliminal Soul consists of about 7000 individual souls. The body inhabited by a Transliminal Soul is invulnerable and immortal; it does not age or need food. It can dematerialize and rematerialize anywhere on the planet. Because its energy emanations are so strong, only the most spiritually advanced souls can approach it physically. Its mere presence on the planet raises the awareness level of all humans on the planet.

Here are my comments on AOTS:

- Hasselmann's description agrees more with MMFM than it does with original Michaelian group/MFM.
 That is, MFM says that the Transcendental Soul is an avatar from the third plane, whereas AOTS and MMFM say that the Transcendental Soul is related to the second plane; original Michaelian group/MFM says that the Infinite Soul is an avatar from the fourth plane, whereas AOTS and MMFM say that the Infinite Soul is related to the third plane.
- 2. However, AOTS departs from the MMFM description more than it embellishes it. Whereas in MFM and MMFM, the Old Soul "walks out" of the physical body to make way for the Transcendental or Infinite soul, AOTS says the Transcendental Soul and Infinite Soul take over the body at the moment of death. But perhaps this is just a semantic distinction, not an actual difference. Or perhaps the two descriptions refer to two different types of Transcendental Soul manifestations. AOTS embellishes MMFM in ways that surprised me and evoked questions rather than answering them. And AOTS is not supported by other Michaelian teachings books, as we see in the next subsections but maybe it does not need to be supported by others, if it is simply expanding the definition of Transcendental Soul beyond the dogma–doctrines of other sources.
- 3. Overall, I would say that the AOTS presentation is not a natural extension or clarification of MMFM, despite the fact that Hasselmann was familiar with it. Rather, it takes off in a new direction, one that I find difficult to reconcile unless one expands greatly the definition of Transcendental Soul and Infinite Soul to include a far broader spectrum of manifestations than mentioned in MMFM. And if one were to include the descriptions in original Michaelian group/MFM, AOTS would broaden the definition of Transcendental Soul and Infinite Soul even more. Maybe the descriptions in each of these three sources are just too narrow when considered separately. Maybe the problem is just semantic: maybe various incarnations of the Transcendental Soul and the Infinite Soul come from different places in planes higher than the physical, do it in different ways, do it for different purposes, and have different results. We can say for certain that we do not really know anything for certain about the Transcendental Soul and Infinite Soul as long as we rely on channeling.
- 4. Whatever the truth of the matter may be, other than those objections about not agreeing with previous revelations, I find some things in the AOTS descriptions that are found in subsequent descriptions from other sources, inside and outside the Michaelian teachings. For instance, further on we will see an AOTS idea about the Transpersonal Soul repeated, that some souls reincarnate even though they do not "need" to. It is not that they must reincarnate in order to complete the necessary 'school curriculum' of Monads, karma, and Agreements, and to "experience all of life" so that they have a "complete understanding" of the Physical Plane before they 'graduate from earth-school'. Rather, they incarnate as volunteer teachers of humanity after they have finished being students as humans. Personally, I perceive merit in that idea.
- 5. I see the AOTS presentation as moving the understanding forward from the MMFM/MP presentation in a certain way. That is, there are some things about the AOTS presentation that fit well with and inform my understanding of the Sixth and Seventh Ages. My analysis and synthesis near the end of this chapter explains how this is so.
- 6. No personages are named as either Transcendental or Infinite Souls.

The discrepancies among channels (Chambers and Yarbro and Hasselmann) does not end here. Moving on to other Michaelian teachings books, we find yet more discrepancies than those among original Michaelian group/MFM and MMFM and AOTS. Let's add them to the mix and see if we can fit them into some reconciliation strategy.

Transcendental Soul and Infinite Soul According to José Stevens

José Stevens's book *The Michael Handbook*, pp. 53–54, says that reunited Entities, sourced from the Astral Plane, the second plane, can choose to reincarnate as a Transcendental Soul. This contradicts *MFM* where it says the

Transcendental Soul is from the third plane. It also contradicts *MMFM*, published earlier in the same year, which says that the Transcendental Soul is not a reunited Entity.

But anyway, here is the extensive quotation from *The Michael Handbook* about the Transcendental Soul; underlines are my emphasis, and there is an explanation after the quotation:

The name 'transcendental' refers to the ability to see beyond the overleaves that overlay our essences and our perceptions. Transcendental souls are able to transcend the personality and the illusion that comprises the physical plane.

The transcendental soul stage <u>follows</u> the old soul stage; however the transcendental soul historically rarely incarnates on the earth.... If the old soul cycles off the physical plane, then how does the transcendental soul manifest?

At the seventh level of the old soul age, each fragment cycles off to the astral plane to join its entity and <u>await</u> the other fragments. <u>Once</u> the fragments have all completed their reincarnational process on the earth they are reunited into one entity to pursue experiences and lessons on the higher planes of existence. *Occasionally one of these reunited entities will reincarnate again on the earth as a transcendental soul* [= Type 1 Transcendental Soul].

Often the transcendental soul manifests during the life of the final fragment to leave the earth. When this final level old soul has completed all karma and all personal lessons [thus becoming and Old Soul Transcendent], the entity then joins him for the remaining years of the body's life [= Type 2 Transcendental Soul]. The single fragment in the body now can interchange at will with other fragments and has access to the total knowledge of the entity and the experiences of all completed lifetimes.

Historically, the importance of a transcendental soul has been as a teacher who comes for a specific purpose. In the Buddhist tradition, he is known as the Bodhisattva or 'great soul' who returns to earth in order to help others gain enlightenment. [TMH, pp. 53–54]

Then on page 55 it is said that the Infinite Soul "chooses to manifest one of the exalted [Cardinal] planes of consciousness to give the teaching a particular flavor". It is likely that this information comes from channeling that we do not have record of at this time. Lao Tzu is said to have been an avatar from the Fifth Plane with a message of Truth; Christ is said to have been an avatar from the Sixth Plane with a message of Love; Buddha is said to be an avatar from the Seventh Plane with a message of Oneness.

I have some comments on this information:

- 1. The description is per the usual sequential-time narrative, as if evolution on the Astral Plane *follows* evolution on the Physical Plane. This might or might not be what is happening, since 'time' here is not the same as 'time' there; see sections further on for an alternative viewpoint.
- 2. This description does not explicitly say whether the Transcendental Soul comes from the Astral and/or Causal Plane. It only says that a Transcendental Soul is a reunited Entity; recall that a reunited Entity is said in original Michaelian group/MFM channeling to span the high Astral and the low Causal Planes.
- 3. We will return to the Bodhisattva numerous times in subsequent sections. The Bodhisattva does not come to the Physical Plane to *learn* via karma and Monads like other souls; it comes to *teach* what it has learned, and be an inspiration and catalyst for transformation and revolution.
- 4. Recall that *MFM* says the Infinite Soul comes from the fourth plane, not one or the other of the Cardinal planes as Stevens says. Recall that *MMFM* and *AOTS* says the Infinite Soul comes from the third plane. Which one of these is true? Are they all true but incomplete in each their own way? We review other sources, looking for a reconciliation, further on.
- 5. Note that some of the words in this account were underlined. Stevens explains the relationship of the Astral Plane evolution of the soul to the Physical Plane evolution of the soul in terms of sequential time, rather than simultaneous time. That is, it is said that "after" all the Old Souls graduate from the physical plane, the Entity reunites, and then comes back as a Transcendental Soul. In sections of this chapter further on, this conceptualization is questioned, because there is doubt that Astral Plane 'time' is limited by or dependent on Physical Plane 'time'; that is, 'time' there is not like 'time' here. One of the ways I try to reconcile various accounts of the Transcendental Soul and the Infinite Soul is to explain the difference between sequential and simultaneous 'time'.
- 6. Note that Stevens says the final level Old Soul Transcendent (karma-free) can become a Transcendental soul when it becomes inhabited by cycled-off members of the Fragment's Entity. This

was posed as a variation on the theme, where Transcendental Souls, consisting of an Entity's worth of Fragments, are born as such. The Stevens account introduces the idea that there are different types of Transcendental Souls, and sources referenced below say that there are different types of Infinite Souls as well. In my mind, these sources bolster the idea that the solutions to discrepancies between channels is to be inclusive; maybe each source is like the proverbial blind people each feeling a different part of the elephant, and describing only the part that they feel.

Stevens's account lacks a lot of detail, but fortunately a lot more detail is provided in other accounts. Let's look at the account of one of Stevens's friends in the Bay Area.

Transcendental Soul and Infinite Soul According to JP Van Hulle, et al.

A Michaelian teachings book with three authors, *Michael: The Basic Teachings*, says this about Transcendental Souls:

The Transcendental Soul is a representative member of an entity that has completed its lessons on the Physical Plane and has recombined all its fragments astrally. One of the fragments of this recombined entity takes a body in order to teach their (the entity's) students directly about the greater connectedness of the universe, as seen through a higher center. Transcendental Souls can come from any of the higher planes: Astral, Causal, Mental, Messianic, or Buddhaic. All entities do this at least once in at least one parallel universe....

Examples of Transcendental Souls from the past are Mahatma Gandhi, Yogananda Paramahansa, Meher Baba, Hazrat Inayat Khan, Mother Cabrini, Pope John XXIII, and St. Francis of Assisi.

Transcendental Souls are not necessarily self-aware. Unlike the Infinite Soul, Transcendental Souls do not necessarily display "superhuman" attributes. Mainly, they just look like fine examples of balanced human beings who identify with a group consciousness. Since Transcendental Souls are a group, they tend to see themselves as members of humanity, rather than feeling they are on their own, personal path. [MTBT, p. 32]

In the glossary, in the entry on the Transcendental Soul, John the Baptist was listed among some of the others listed above. This makes sense in that the Transcendental Soul is said to often be a precursor to the Infinite Soul, in this case Jesus. In the Biblical Gospels, John the Baptist was said to "prepare the way" for Jesus.

On page 33 it says this about Infinite Souls:

The manifestation of the Infinite Soul retains the consciousness of the Tao when it enters the physical body. Thus the Infinite Soul is self-aware, knowing its purpose and it superhuman abilities. The Infinite Soul will occasionally manifest through the personality of a Seventh Level Old Soul who has cycled off. [MTBT, p. 33]

As usual, I have some comments about the differences and similarities with other accounts:

- 1. Stevens and Van Hulle supplemented the original Michaelian group/MFM channeling, probably with other channeling, perhaps their own or that of others in their group of channeling friends in the Bay Area during the 1980s.
- 2. Here again we find some agreement and some disagreement with all of the prior Michaelian teachings publications. For the most part I can reconcile them all by saying that they are describing different parts of the same phenomenon and that none of them present the complete picture. However, in one matter I do not agree, and that is with the assertion that the origin of the Transcendental Soul can be from a Cardinal plane; I prefer the channeling that limits the origin of the Transcendental Soul to the Ordinal planes; explanation follows further on.
- 3. Seven names are on the list of Transcendental Souls; only one of them was on previous lists, and three names were dropped. We see this as a pattern: various sources lack consistency in the Overleaves ascribed to historical and famous figures, so it should be no surprise that the same thing happens with Transcendental Souls.

That said, let's move on to yet another source of information, and see what he says.

Transcendental Soul and Infinite Soul According to Shepherd Hoodwin

Shepherd Hoodwin presents a combination of information of some of the sources presented previously, as can be seen in this quote from *The Journey of Your Soul* (First Edition, 1995) on page 352, at the beginning of Chapter 29:

An infinite soul is a representative of a reunited cadre from one of the three high planes. A transcendental soul is a representative of a fully reunited entity from the upper causal plane.

I leave it to the reader to compare and contrast that statement with other statements from other Michaelian teachings books previously quoted; some of it agrees and some of it differs. Here again, does Hoodwin provide information that advances our understanding, or does it just advance the confusion? My suggestion is that some of it can be reconciled by supposing that each source presents just part of the picture, but together they present the entire picture. We cannot actually *know* the truth on the subject of the Transcendental Soul and the Infinite Soul anyway, so my strategy for dealing with the inconsistencies is to assemble the various little stories into one big story where possible or reasonable. There are no practical downsides to this strategy that I see.

Another suggestion is that Hoodwin revised his idea about the Transcendental Soul eighteen years later in the publication of the Second Edition. There is one brief relevant statement in the second edition of *JOYS* (2013), page 313, in the chapter on Soul Ages:

Although we experience only five soul ages on the physical plane, we will each experience being a member of our [astral] entity and [causal] cadre when they are reunited on higher planes. In other words, we will experience the sixth and seventh soul ages, transcendental and infinite, but <u>probably not on the physical plane</u>.

This statement looks a lot like Yarbro in *MMFM*. My thesis, presented further on, is that the Astral portion of the Transcendental soul, and the Causal portion of the Infinite soul, are more intimately connected to the Sixth Age and Seventh Age experiences on the Physical Plane than previous accounts — including this one — lead one to believe. What I am saying is that "probably not on the physical plane" might be erroneous.

There is an entire chapter on Infinite and Transcendental Souls in this same book, pages 377 to 380. The most pertinent paragraphs to my thesis that the Sixth and Seventh Ages are of the Physical Plane are these, on page 379:

Some channels have received information that certain living people are transcendental souls. Technically, if a person's entity still has fragments incarnating, he cannot be considered a transcendental soul; the oldest soul age is seventh-level old.

According to my channeling, when people other than Gandhi, Zoroaster, Mohammed, and Socrates are channeled as being transcendental, it does not refer to complete displacement of the originally incarnate soul but to a shared energy. The essence originally occupying the body is still present and responsible for the life being lived. It is being assisted by an essence (or essences) from a reunited entity through unconscious or conscious channeling, or a full-time sharing of the body, in which case it would account for no more than about seventy-five percent of the person's life force. This collaboration helps both the incarnate essence achieve her life task and the entity achieve its purposes. [JOYS, p. 379]

This conceptualization is in the realm of reconciliation of other sources mentioned above and below. Hoodwin does not make the connection of the Transcendental Soul to the Sixth Age here, but I do make the connection in my presentation further on. And I connect the Infinite Soul to the Seventh Age there also. My thesis is that all seven Ages are experienced on the Physical Plane, and *some* of that happens via Transcendental Soul and Infinite Soul manifestations, and *some* of it happens by other means, via Bodies other than the Transcendental Soul and the Infinite Soul. There might be some murky semantics here in the definitions of the Transcendental Soul and the Infinite Soul.

Anyway, much of what Hoodwin states here is confirmed by what Troy Tolley has also channeled, but in more detail. Tolley is the subject of the next subsection.

Transcendental Soul and Infinite Soul According to Troy Tolley

The following is a quotation about Transcendental Souls taken from Troy Tolley's website, from a session held in February 2009: >http://our.truthloveenergy.com/topic/67-michael-speaks-february-2009/<. With this revelation from Tolley's channeling, I believe some real progress was made in understanding the Transcendental Soul and its relation to the Sixth Age and the Astral Plane and the Causal Plane:

A Transcendental Soul is our way of describing an incarnation of one fragment representing the <u>collective</u> knowledge of its entire cycled-off Entity. They "manifest" in the same way that any other fragment incarnates, with a birth, internal monads, life, etc. However, they are free from any Karmic Ribbons, though not free from Self-Karmic explorations, since Personality and imprinting is still involved.

We have described through our channels about the "manifestation" of the Transcendental Soul, and by this we describe the individual's realization of that direct connection to his or her Entity on some significant level. However, this "manifestation" is not much different from any of you realizing your own Essence and "manifesting" this. It is not a magical or specifically elaborate ordeal, but it does change the nature of the life to a

great degree. Manifestation of the Transcendental Soul could be described as "displacing the fragment," and we have described it as such through some channels, but this simply describes the fragment shifting from that individual focus to the <u>collective</u> focus, representing a whole, and not just a part.

We [the Michaels] will incarnate as a Transcendental Soul in at least one parallel [universe]. All Entities do so. Gandhi is a clear and relatively recent example of a Transcendental Soul. Socrates, Confucius, Mohamed, and Zarathustra are other examples of Transcendental Souls. These are the only ones we know of in recorded history that may be known to you, as well.

Contributing to the list of Transcendental Souls among our channels and students are those souls who have contributed in ways similar to a Transcendental Soul, but are not Transcendental Souls. It may not come as a surprise to some of you that so many cannot accept the extraordinary from the ordinary. In fact, many fragments are capable of what the Transcendental Soul effects. In addition to the names we listed above, many Transcendental Souls have come and gone without notice on global scales, but are tremendously effective in villages, communities, family lines, societies, etc. The impact can be a cumulative, slow, long-term effect fulfilled by many with little recognition brought to the originator of that social revolution.

This description of the Transcendental Soul is rather different from the descriptions seen in previous sections of this chapter, but I regard it as a clarification and extension of them. I would say that even this description of the Transcendental Soul is not complete, however, and more will be said about it in subsequent sections, as I include other descriptions of the Transcendental Soul. This channeling presents an understanding that is very similar to my own, which is presented in detail further on. That is, certain enlightened and powerful incarnations bring the exalted and expanded consciousness of a collective of souls with them, and they best fit in the Sixth Age box on the Overleaf Chart. In the case of the Transcendental Soul, I label this as the Sixth Age only when manifest during incarnation, not during its embodiment on the Astral Plane as Yarbro does, because Sixness has nothing to do with the nature of the Astral Plane itself.

And, the same as in this quotation, I say that this type of Transcendental Soul/Sixth Age manifestation is much more common than the original Michaelian group revelation about the Transcendental Soul leads one to believe. The description encompasses the karma-free "Volunteer Mansion" (Age) mentioned in a subsequent section, and the "Bodhisattva" phenomenon mentioned in a previous section, and the guru phenomenon that is fairly well known. Thus, the enlarged description of the Transcendental Soul provided by Tolley spans the entire spectrum from the Sixth Age incarnation through the high Astral Plane Body of MMFM to the high Causal Plane Body of original Michaelian group. My analysis and synthesis of the available channeling agrees with this, and more evidence and argument in sections further on supplement this picture.

This limit of the designation of what a Transcendental Soul is (four major manifestations only) differs from what other channels say, so who are we to believe? Are we quibbling about semantics again? I suspect so. Personally, I am willing to broaden my definition of what a Transcendental Soul is, or what a "Transcendental Soul-like" manifestation is, in order to accommodate a broad spectrum of types of manifestation within the Sixth Age.

There is more to be learned from Tolley's channeling, this time regarding both the Transcendental Soul and the Infinite Soul. The following quotation is from a session held in 2011:

> http://our.truthlove energy.com/topic/203-20110717-infinite-and-transcendental-souls-the-logos-pathos-and-ethos/?tab=comments#comment-379<.

While there is great emphasis on the 5 Soul Ages, there are actually 7, and all of "you" will go through those in some way, in some when.... Because teaching of a high order tends to require a form that is relevant to a species, the Infinite Soul tends to emphasize the Higher Intellectual, or Logos, the Truth, Higher Expression because there has to be a relevant delivery system. Most manifestations would then include speech, writing, or other form of Expression that delivers the higher knowledge. This is why we tend to refer to these manifestations as bringing the Logos to bear, but in other species, the Ethos or Pathos may be the primary delivery system. In ALL instances, regardless of the emphasis for delivery, Logos, Ethos, and Pathos will be built in. Or the Truth, Beauty/Energy, and Love, respectively. Every Infinite Soul manifestation brings one of these three THROUGH Logos, much like Center/Part might be understood. Because your species is rather Expressive/Intellectual, the delivery system accommodates this by being Expressive, Intellectual, The Word ['Logos'].

Transcendental Souls will tend to be more flexible in this, and act as pathways or preparations to the Infinite Soul manifestations. It could be said, then, even if crudely, that the Transcendental Souls, or high Causal <u>bodies</u>, emphasize Ethos, Logos, and/or Pathos, as potential paths to the Infinite Soul, or high Mental <u>bodies</u>, if that

manifestation would be necessary. As if Transcendental Soul acts as "parts" for the "centering" that is the emphasis for Infinite Soul. Again, this is a crude analogy, but can work in helping to understand the dynamic. Though we use the term Logos to describe that delivery system, Logos can emphasize the Truth, Love, or Energy that are Universal and necessary for help of a species. For instance, Lao Tzu emphasized Truth, while Jesus emphasized Love, and Buddha emphasized Energy/Beauty. Logos, Pathos or Ethos are packaged and delivered almost always through the Logos as a primary delivery system. We would also clarify that though there are emphases on Truth, Love, or Energy as it varies among the Infinite Soul manifestations and as it comes through the Logos, there will also always be Truth, Love, and Energy combined in some way....

The Infinite Soul requires no review, at least in the same way that we understand a review to entail. The Infinite Soul is Tao, manifested, but as such, is hosted first through the emphasis of the plane of Logos (truth, love, or energy), which can come from any three of the high [Cardinal] planes, which is then hosted through the high Mental bodies (usually a Cadre) from the Mental Plane, which is then hosted through a 7th Level Old Essence in a body. This process is a means by which Tao can manifest into denser forms that can then be utilized by the densest of those forms. Though Tao is "everywhere", to manifest the Logos in such a way requires a kind of stepping down of the energy in a way that can accommodate the final host. As such, there is no real "remerging" necessary, but there is a kind of conversion or dispersion of the energy that was used in the process, and this becomes the "seeds" of which we spoke earlier.

More on this subject can be found here: >https://our.truthloveenergy.com/articles.html/library/soul-ages-levels/ages/infinite/infinite-souls-manifest-r972/<.

The individual who embodies his or her entity [a Transcendental Soul], or hosts the Infinite Soul, will have worked to resolve, or will have resolved, all conflicts between the rational and intuitive. A Transcendental Soul would not have "levels" in the same way that we delineate the first five Soul Ages. It is true that there are Levels, but only one within the Physical Plane.

Transcendental Souls are born. Infinite Souls manifest. However, they do function in similar ways for much of the life. The Transcendental Soul gains access to the Entity only upon manifestation of his or her own Essence as representative. A Personality as Transcendental Soul can reject this access to Essence, as any Personality can, but it is rare. It is much easier for the host of the Infinite Soul to reject manifestation than it is for the Transcendental to reject the Essence. The reason for this is because the Infinite Soul must always have a host "on hand" for potential manifestation, but the manifestation is not always necessary, and so it is passed up, and because the Personality will always trump potential manifestation, there must always be "back up". However, the birth of the Transcendental Soul is planned quite specifically, and "everyone" is in on the plan, so it tends to unfold as planned, even if altered by various choices of the Personality.

Yet more channeling from Tolley is this, from, >https://our.truthloveenergy.com/blogs/entry/4056-the-6th-and-7th-soul-ages/<:

The Sixth Soul Age is [the] Transcendental Soul Age. A reunited Entity returns to live a Physical Plane life to impart what was learned in the Causal Plane. A single Fragment incarnates as representative of the entire Entity. This Fragment speaks on behalf of the entire Entity. The emphasis of the life is always about implementing greater effects through the higher understanding of greater causes. Every reunited Entity will have a Transcendental/Sixth Soul Age. We [the Michaels] get that single lifetime. This is why so many Causal Plane Entities teach through channels. This helps us to practice our access and delivery of information that will be used for our Transcendental lifetime.... We are [reunited Entities] not subject to the Internal Monads [Milestones] in a Transcendental lifetime, as we are transcendent. This is why you have a wild variety of Transcendental Souls who may or may not be quite outrageous or immature or rogue or ignoring social norms.

The 7th Soul Age is the Infinite Soul Age. This is the final incarnation for all Fragments and all Fragments will participate in being part of an Infinite Soul Age. There is no birth for an Infinite Soul and no Internal Monads [Milestones] for the Infinite Soul. However, all of the usual processes of incarnation apply to the individual host who will manifest the Infinite Soul. The Infinite Soul can include a <u>range of Fragments from the size of Cadres to Energy Rings and Spheres</u>. Depending on the bodies of the species, Manifestation can last for various periods of time. For Humans, this tends to be a maximum of 30 days. The individual Fragment is a host and has their own individual trajectory of evolution. This is the only form of incarnation for Fragments that is not for the sake of evolving the Fragments, themselves. It is explicitly for the sake of contributing to the evolution of others.

CLARIFICATION: The Infinite Soul Age is the only form of incarnation/Manifestation that is not for the sake of evolving those Fragment manifesting. There is a bit of a paradox involved regarding the Infinite Soul Age. Infinite Souls tend to be OUR SELVES. Infinite Souls are our "future", or more accurately, the parts of us that are outside

of time and space in a way that allows for this Soul Age. We exist on all Planes. We do not evolve as a single point of consciousness. The "you" that you know as Essence and as Personality are percentages of you that exists across all Planes. The process of evolution is a process of remembering. Re-collecting. All of your incarnations as a Human being across all parallels is equivalent to approximately 1% of the energy that is "you". Your Essence/Role is approximately 5%. Approximately 95% of who we are is spread across the Planes and our return to Tao is that path or remembering and collecting ourselves again. The Infinite Soul Age is "us" helping us to remember "us", This is not always the case that it is our own Sentience, but for most of our cycles as a Sentient race, it is us.

My comments on Tolley's presentations are as follows:

- A distinction is made between ordinary and extraordinary Transcendental Souls. This supports my
 thesis that there is a broad spectrum of manifestation for the Transcendental Soul see next
 subsection.
- 2. The name of Confucius was added to the list of four extraordinary Transcendental Souls.
- 3. If you are not familiar with the terms, "Logos Pathos Ethos", but want to be, you could do an internet search on the terms as a group. A careful reading of the quotation above informs you that, basically, these can be understood as somewhat equivalent to Truth, Love, and Energy respectively. Or you can equate them more generally with the three Axes of the Overleaf System: Expression, Inspiration, and Action respectively. You can also equate them with the nature of the fifth, sixth, and seventh planes respectively. Transcendental and Infinite souls teach about the Logos, Pathos, and Ethos.
- 4. Tolley agrees with the original Michaelian group/MFM assignment of the Transcendental Soul to the high Causal body, and the assignment of the Infinite Soul to the high Mental body, in contrast to MMFM and MP.
- 5. The dividing up or stepping down of the consciousness of the Transcendental Soul and Infinite Soul in order to inhabit a human is an important principle that will help us understand what is going on with other stages of the Age phenomenon. You will learn more about that in my analysis and synthesis further on.
- 6. Instances of the terms <u>collective</u> and <u>body</u> are underlined because I want to draw attention to a very important component of my synthesis, which is explained further on and not just in regard to the Transcendental Soul and the Infinite Soul.
- 7. A sentence in the early quotations states that Transcendental Souls have "levels", but only one level within the Physical Plane. This statement is not accompanied by an explanation of how or why this is the case. May I offer a totally speculative suggestion, namely that there are seven types of Transcendental Soul, one for each of the seven Septenarian Attributes that govern the nature of each of the seven Levels. This is somewhat like saying, as some do, that various Infinite Souls come from various Cardinal Planes with various jobs to do and various ways to do it.
- 8. Further on I will emphasize a point made in the last qu.otation, that the Transcendental Soul is a collection of Fragments, said here to be the size of an Entity but said elsewhere to be a larger conglomeration of Fragments. The Infinite Soul is here said to be a collection of Fragments larger than an Entity ("Cadre, Ring, Sphere"). This might seem to contradict statements elsewhere that the Infinite Soul comes from beyond the realm of Fragmentation. It may be illegitimate, but one way I presumably reconcile these differing descriptions is to say that there is a range of various Infinite Soul Manifestations that span from the size of a Cadre and other larger collectives on the third plane, to the realm beyond Fragmentation, beyond the three Ordinal planes. The other way to presumably reconcile these differing descriptions is to suppose that the Tao steps down, or breaks down, its infinite "energy" into a finite amount that can be tolerated by the host body. This latter explanation is a description of what happens with normal incarnations of Fragments with Overleaves, but in the cases of Infinite Soul Manifestations, my surmise is that the final product is not divided in terms of having specific Overleaves. A remaining question in my mind is whether a Transcendental Soul has Overleaves.

General Comments on the Transcendental Soul and the Infinite Soul

When we look at all the channeling that has been done on the Transcendental Soul and the Infinite Soul over the decades — including the descriptions of Bodhisattvas and Avatars in other teachings — we could interpret the evidence to indicate that there are contradictions galore, as well as similarities. The other interpretation,

the one that I propose in this subsection, is that each channeling and teaching is just a part of the picture. You may have heard the story of the blind men feeling different parts of an elephant — legs, sides, ears, tail, trunk, tusk — and giving different descriptions. I propose that both the Transcendental Soul phenomenon and the Infinite Soul phenomenon are like a metaphorical elephant. That is, there is a range or spectrum of different phenomena that nevertheless have a similar overarching theme to them — the variant descriptions are of different parts of the same 'animal'; the Transcendental Soul is one kind 'animal', and the Infinite Soul is another kind of 'animal'. And various aspects of the Transcendental Soul and the Infinite Soul bring different parts of the whole 'animal' into manifestation. If we do not interpret and reconcile the various sources this way, then we can have no confidence in any of the channeling. However, in my opinion, some of the 'minority report' data does not fit into the 'majority report' data, and into the philosophy of the Age system as a whole, and thus should perhaps be discarded, or at least held in limbo until further clarification arrives.

Following is what I personally prefer when I look at the whole picture — contradictions and confirmations — of the Transcendental Soul phenomenon that has been described to us from various sources; your mileage may vary.

- 1. There is universal agreement that the Transcendental Soul is not the representative of an individual Fragment soul, however glorified that may be; rather, it is a "collective" of many Fragments, united in consciousness, generally but not always considered to be the size of a thousand-souled Entity. Another name often used for these collectives is Bodies. As we will see further on, another term that the Michaels used in the original Michaelian group transcriptions was Composite. I like that term, and will use it henceforth.
- 2. There is general agreement that one of the defining characteristics of the Transcendental Soul is that it is not compelled by karma to reincarnate, but that does not mean that there is not much to learn when it chooses to reincarnate. My suggestion is that it completes the Monad that the Sixth (Priestish) Age has with the Second (Server-ish) Age. More will be said about this idea further on. The Transcendental Soul comes to the Physical Plane as a volunteer, to be of service to kindred souls, to groups of aspirants, and to humanity in general, and to give all of its Fragments the experience of the Sixth Age on the Physical Plane.
- 3. There is general agreement that it is necessary to experience all seven stages of the Age septenary in order to have a complete understanding of the Physical Plane. There is general agreement that the Transcendental Soul has something to do with the completion of the soul's experience on the Physical Plane, and that the natural niche is in the Sixth Age. The disagreement between sources is where the completion takes place Physical Plane or Parallel Universe or Astral Plane. My proposed reconciliation is to say that some of it is here, and some of it is there, and the different sources are seeing an incomplete picture.
- 4. In order to accommodate varying descriptions, it becomes expedient to say that there is a spectrum of manifestations that can all be placed within the designation Transcendental Soul (and if not that, then at least that it is of the Sixth Age on the Physical Plane); it is a broad category, encompassing a number of related phenomena. All of these various Transcendental Soul manifestations are Composite consciousnesses that have "transcended" karma hence the name but choose to return for various purposes as appropriate for the Composite itself and for humanity in part or in whole. The range is from reunited Entities on the upper second (Astral) plane, to Composites that inhabit the lower levels of the fourth plane (which goes by various names). All of these can inhabit and energize a human body on the Physical Plane, in various ways of course, depending on the nature of the Composite involved and the needs of kindred souls or of humanity in general for stimulus and healing and transformation. The way I say this is that, the Composite and Humanity form a mutually-beneficial Monad they complement each other.
- 5. The Transcendental Soul, of whatever size Composite, descending from whatever Plane, when it inhabits a Physical Plane body, can legitimately be placed in the Sixth Age, the Priest-ish stage, because it has that Priest-ish energy. This is in addition to souls that fulfill the Sixth Age in the evolution of humanoid consciousness in other ways if the synthesis that I present further on is correct. My thinking and proposal is that the Transcendental Soul on the planes beyond the Physical Plane does not necessarily have a Priest-ish nature, contra Yarbro, because its habitations are various, and the nature of the Composite is various.

- 6. In its largest Composite, the Transcendental Soul is the epitome of the Ordinal phase of a Grand Cycle, the three lower planes, where experience is fragmentary; it sums up all the parts and pieces of the spectrum from the reunited Entity on the Astral Plane to a reintegrated low fourth plane Composite Body.
- 7. From a sequential-time point of view, Fragments cycle between the Physical Plane and the Astral Plane. Likewise, a Transcendental Soul might cycle between the Physical Plane and the lower fourth plane. It is as useful for the Transcendental Soul to do this cycling between planes in its evolution as it is for the Fragment to do its cycling between the two lowest planes. From a simultaneous-time point of view (more on this below), the Physical Plane Fragments and the Transcendental Soul Composite simultaneously enrich each other continually.
- 8. This idea will be developed further on, but I want to introduce it to you now: Incarnations at the Infant Soul Age start out as portions of a singular Fragment. The Fragment reunites with other Fragments to become a Composite during subsequent Ages; the Seventh Level Old Soul is energized by a partial Composite of a reunited Entity. This phenomenon in the Fifth Age is a precursor to the same phenomenon, only more so, in the Sixth Age and the Seventh Age. The Transcendental Soul and Infinite Soul manifestations are somewhat like that also, only way more so.
- 9. The Transcendental Soul can be cast to the Physical Plane from anywhere on its spectrum of integration, from a reunited Entity on the upper Astral Plane to a Composite of the low fourth plane Body, depending on its mission to bring the Ethos–Pathos–Logos to bear on its kindred souls, or larger groups, or the entirety of humanity.
- 10. A 'world-class' Transcendental Soul can properly be called a Bodhisattva, but the Transcendental Soul appellation can also apply to a mere local community organizer if the manifestation is at the low end of the spectrum. Wherever the Transcendental Soul falls on the spectrum, even if it has some self-karma (personal lessons) to deal with, it has a Sixth Age, Priest-ish, presence and influence.
- 11. There is universal agreement in the Michaelian teachings communities that an appropriate vehicle is chosen for the manifestation, usually a person with compatible characteristics in an appropriate condition and situation, and that the manifestation is by Agreement for mutual benefit, the Transcendental Soul and the Fragment.

Turning from the Transcendental Soul to the Infinite Soul, following is what I personally prefer when I look at the whole picture of the Infinite Soul phenomenon that has been described to us from various sources; your mileage may vary:

- 1. According to various Michaelian teachings sources, we find that there are various types of Infinite Soul, one type for each of the four planes from the upper levels of the Fourth Plane to the Seventh Plane
- 2. In whatever range of its manifestation, the Infinite Soul can legitimately be placed in the Seventh Age, because it represents a stage in the evolution of cosmic consciousness as well as human consciousness, the Cardinal Action stage, the King-ish stage, and each stage is necessary for the complete evolution of the Infinite Soul itself, as well as the evolution of the individual soul. This concept is per the Hermetic axiom: "As above, so below".
- 3. The Infinite Soul is an avatar to the Physical Plane from any plane beyond the middle level of the Fourth Plane; those planes have different *qualities*. Evolution on the Cardinal Planes is *qualitative*, whereas evolution on the Ordinal Planes is *quantitative*; which is to say, Fragmentary, with different size Bodies. Some claim the Infinite Soul comes from the Third Plane, and perhaps this is at the lower end of its range of manifestations. This does not seem "infinite" enough to me, but maybe the name Infinite should be changed; who knows for sure about any of this. My preference is that the Infinite Soul only comes to us from the fourth through seventh planes.
- 4. According to the majority report of the channels, the qualitative needs of humanity on the Physical Plane at the time of the manifestation of the Infinite Soul avatar determine the mission, and the avatar descends from the appropriate Neutral or Cardinal plane to serve that need. That is, the energy of a Neutral or Cardinal Plane is stepped down in power enough that it can be temporarily contained in a mere human body. That it steps down *through* the third plane might be what some sources are picking up on, if one of its manifestations does not *originate* from the third plane. The consciousness of the avatar then steps down though the Astral Plane and lands in a mere mortal.

5. An appropriate vehicle is chosen for the manifestation, usually a person with compatible characteristics in an appropriate condition, who is prepared for the manifestation. There is Agreement between the avatar and the displaced soul.

My perception is that there is something very special about the eight individuals who have been labeled Transcendental Soul and Infinite Soul in the original Michaelian group and in *MFM*. These manifestations are at the extreme high end of their respective spectra. So far as I have been able to tell, these eight did not say or do anything that numerous other truly enlightened people down through history did not also say and do, yet those eight were the founders of the major world religions, and they otherwise changed the course of history. I attribute this extraordinarily powerful influence to an "energy" they emanated or represented, to "bring the Logos–Pathos–Ethos to bear". A step down from these highest manifestations are lesser Transcendental Soul and Infinite Soul manifestations, mere reintegrated Entities and Cadres perhaps. They do have a wide and strong influence, but not like the 'full-blown' manifestations.

Maybe it is just me, but previously I have been conceptualizing the Transcendental Soul and the Infinite Soul as "out there" or "up there" rather than "in here", meaning, inside my own consciousness with barriers that separate me from my highest Selves, namely the Transcendental Soul and the Infinite Soul. There are the outward manifestations of the Transcendental Soul and the Infinite Soul at historical turning points, but I suggest that instead of conceptualizing that the Transcendental Soul and the Infinite Soul step "down" their consciousness into an incarnation, we could think of it as also stepping "up" our consciousness to access higher and higher levels of Bodies/Composites as the artificial barriers/partitions are dissolved. It can be said that we are a part of the Transcendental Soul and the Infinite Soul, and they are a part of us; the barriers that separate are dissolvable.

Let me say that a little differently.

If we think of the *ultimate* Transcendental Soul and Infinite Soul manifestations — the ones described in the original Michaelian group transcriptions — as representatives of Tao itself in terms of sequential time, then the general idea is that the Transcendental Soul and the Infinite Soul (whatever they are) on the higher planes (wherever that may be) dis-integrate into singular Fragments, then the singular Fragments eventually reintegrate into the Transcendental Soul and the Infinite Soul (whatever they are) in the higher Planes (wherever that may be) after completing the reincarnation cycle on the Physical Plane. In that sense, the Transcendental Soul and the Infinite Soul are our own individual and collective "higher" and "highest" Selves respectively. Therefore, when the Transcendental Soul and the Infinite Soul avatars descend into an incarnation, all of us Fragments meet our own Higher/Highest Self in the flesh, energetically speaking. I suggest that this is the reason for their magnetic and electric effect on an entire planet. In terms of simultaneous time, all this inspiration from the Transcendental Soul and empowerment from the Infinite Soul is available to us in the here and now; that is, the Transcendental Soul and Infinite Soul are always with us in spirit even if not in flesh, and the question for us is, to what extent does our consciousness tap into their consciousness. Nevertheless, occasional incarnations are useful to kick unconscious and semi-conscious humans in the butt: "It's time to wake up!"

In my opinion, many have been misled by the original Michaelian group placement of the Transcendental Soul and Infinite Soul in the Sixth and Seventh Ages. This to me does *not* mean that the Transcendental Soul *when not incarnate* is flavored with the qualities of Six-ness; nor that the Infinite Soul *when not incarnate* is flavored with the qualities of Seven-ness. Rather, when we consider the descriptions of the Transcendental Soul and the Infinite Soul as a whole as they have been revealed over the decades in the Michaelian teachings, it boils down to two things: the Infinite Soul comes from the Cardinal Planes where experience is qualitative rather than quantitative. The Transcendental Soul comes from the Ordinal planes where experience is quantitative rather than qualitative; meaning, the Transcendental Soul is not infinite, it is finite. For the sake of clarity in our thinking, I suggest we need <u>not</u> think of the *ultimate* manifestations of the Transcendental Soul and the Infinite Soul as fitting into the Sixth and Seventh Ages at all; those Cardinal Ages should be reserved for the final stages of human evolution on the Physical Plane, augmented by quantitative infusions from Composites on the Astral and Causal Planes. The connection of the Infinite Soul and Transcendental Soul to those Ages is that the nature of the Infinite Soul is unitary, somewhat like the Seventh Age, and the nature of the Transcendental Soul is binary, somewhat like the Sixth Age, but there the resemblance ends.

In conclusion, my understanding is that all of these different descriptions in the Michaelian teachings and elsewhere could be reconciled by saying that all or most of them are true to some extent, that the Transcendental Soul and the Infinite Soul have all these origins and influences, and that they manifest in different ways in different

cases on different missions. This might or might not be the correct interpretation; I am just putting my analysis and synthesis out there for consideration by Michaelian students, or by the Michaelian teachings community in general, should the community ever decide to get its heads together and get its story straight. More about that at the end of this book.

Seven Ages without Transcendental Soul and Infinite Soul

Because the ultimate Transcendental and Infinite Souls are so far removed from our personal experience that we cannot Validate the channeling one way or another or some combination thereof — they are a part of what I call the dogma–doctrine component of the Michaelian teachings — should we perhaps just ignore them in this discussion of the seven Ages of the Overleaf System? What would that look like? Where would that lead? It would lead to seeing seven Ages without the Transcendental Soul and the Infinite Soul.

Since some channels and some students of the Michaelian teachings appear to be dissatisfied with the apparent ambiguities and contradictions noted and discussed thus far in regard to the Transcendental Soul and the Infinite Soul, in the next few subsections we look at what proposals they have to offer as their solutions. Basically, their solution is to modify or ignore the various discordant dogma–doctrines about the Transcendental Soul and the Infinite Soul, and to suppose that Essences reincarnate within all seven Age categories on the Physical Plane and shown on the Overleaf Charts. You might have noticed that fact in the Charts reviewed in Part Three, and in Table 4Ma at the beginning of this chapter. Let's look at these proposals in detail.

José Stevens and Seven "Stages of Maturity", aka "Perspectives", aka "Perceptions"

In three books published in the 1980s (*The Michael Handbook, Tao to Earth, Earth to Tao*), José Stevens attributes the Age spectrum to reincarnation, and as usual there are five Ages that are experienced on the Physical Plane, plus Transcendental Souls and Infinite Souls in the Sixth Age and the Seventh Age respectively. This was shown in the first of his Overleaf Charts, #9. However, in his book *Transforming Your Dragons*, published in 1994, which was aimed at a self-help psychology market, he does not continue with that practice.

Chapter 2 of *Transforming Your Dragons* is named "Stages of Maturity". In that chapter he expounds at length about there being *seven* such stages, not five. The description of the first five obviously correlate with the standard Michaelian teachings Ages from Infant to Old, but the descriptions of the last two stages obviously do not correlate with the standard descriptions of the Transcendental Soul and the Infinite Soul, nor the Astral and Causal stages of soul maturity that Yarbro proposed in *MMFM*. One should read Stevens's entire chapter, pages 31 through 64, for the full story because it is very informative, but let's take a brief look here.

Stevens has an extensive description of each of the first five Stages of Maturity, and those descriptions closely follow the usual first five Ages of a typical Michaelian teachings publication. However, rather than "Infant — Baby — Young — Mature — Old" per the Michaelian teachings convention, he names them "Infant — Toddler — Child — Adolescent — Adult". These are the names you see in Table 4Ma, fifth row from the bottom. Evidently he prefers these names because, in his view, the characteristics of these stages of human development (from birth to mature adulthood) match well the characteristics ascribed to the five stages. This leaves a couple of slots for stages beyond his so-called Adult stage. His detailed descriptions of those five stages take up pages 38 to 58 — more extensive than almost anywhere else in the published Michaelian teachings, and well worth reading for insights and understanding. Then on pages 59 to 62 he describes the two most mature stages, which he calls "Elder" and "Master". An extraction of key words from the descriptions serves our purpose:

Stage Six: Elder. ... no dragons [Chief Features]... no personal agenda ... no fear ... serve ... no effort ... powerful ... effective ... altruistic ... balance ... mystical ... intuition ... wisdom ... truth ... spiritual development ... serene ... philanthropy and teaching ... work toward peace on earth and value hard work ... dedicated to humanity ... few preferences. Gandhi, Mother Teresa, Saint Francis of Assisi, Rumi, Gurdjieff, Seneca, Chief Seattle, many mystics and wise people.

Stage Seven: Master. ... no dragons ... perceive no dualities ... no personal agenda ... supernatural abilities ... perform miracles ... telepathic ... exude love ... no fear ... being. Jesus Christ, Buddha, Lao Tzu, avatars.

I don't have much to say that is contentious regarding what Stevens says; my thinking is pretty much in alignment with his. As you will see further on, I have some amendments and additions that I make to Stevens's descriptions. He came to this understanding at least twenty years before I did to mine. Apparently he

did this by focusing on what we can know empirically, by observation; he found a story that is consistent with numerous sources, not just channeling. So, let me just summarize his understanding, and encourage you to read his book.

- 1. Because Stevens does not claim that these Stages of Maturity are the product of reincarnation, he makes no statement that these Stages are not natural or normal developments in the course of a healthy life, or at least *potential* stages of maturity. This is similar to Gurdjieff's teaching about Levels of Being, as explained in Chapter 1J in Part One, "Gurdjieff's Levels of Being"; Stevens is familiar with the Gurdjieffian teaching. Stevens's presentation is also reminiscent of Maslow's Hierarchy of self-actualization, as explained in a chapter in Part Two of my book *The Tao of Cosmogony*; as a practicing psychotherapist and former academic, it is reasonable to assume that Stevens is familiar with Maslow's Hierarchy, which has obvious similarities and correlates to the Ages.
- 2. Although the descriptions of the Stages of Maturity are very similar to the descriptions of the Ages, the context that Stevens puts them in is that of psycho-social development through a lifetime, such as is found in developmental psychology books that include all of a lifespan, not just infancy and childhood. He is, after all, a Ph.D. psychologist, counselor, and teacher of clinical psychology, who surely has studied the subject in his academic/professional career.
- 3. The premise seems to be that people evolve during a lifetime up to a certain Stage of Maturity, and then go no further. Students of the Michaelian teachings would recognize this as the difference between their Manifested Soul Age versus their actual Soul Age. They would also recognize that Life-Stages figure into this. That is, it has been said in the Michaelian teachings in various places that a person does not fully manifest their Age until they successfully transit the corresponding Life-Stage. This happens because there is a correlation between the Septenarian Attributes of each Life-Stage and each Level and each Age from first through seventh. There is a chapter about the Life-Stages in Part Four of this *History* book, Chapter 4Q. A very popular version of psycho-social development is called Spiral Dynamics; refer to a section on that topic in Chapter 1B in Part One, "Personality Typologies".
- 4. Because the last two Stages of Maturity are said to be extraordinarily rare, just as stated in the Michaelian teachings, there is not much description that can be applied from standard developmental psychology. Therefore, I suspect that Stevens borrowed descriptions from what is called Transpersonal Psychology, as well as from the Michaelian teachings and Alice Bailey, plus theoretical interpolation and extrapolation of information in those sources. And he is a channel, so some of the description might have come from the Michaels. He borrowed some of the descriptions of the Transcendental Soul and the Infinite Soul with regard to their function on the Physical Plane. This is a presentation that is similar to AOTS, but without the unvalidatable supernatural bits.
- 5. Because Stevens's Stages of Maturity are not about Age in the reincarnation sense, Stevens's presentation cannot really be harnessed to solve the problem that I submit is the central issue in this chapter on Ages: do souls reincarnate in the Sixth Age category and in the Seventh Age category as normal and usual phases of their maturation process, and if so, how? Therefore, I believe that Stevens has not really solved for me all of the problems of seven Ages that I see in the Michaelian teachings sources.
- 6. Stevens's name for the seventh Stage of Maturity is 'Master'. This is the same name as Gurdjieff gave to the seventh Level of Being. It is also reminiscent of the Positive Pole of the King Role, +Mastery, King being associated as it is with Sevenness. This might or might not be a coincidence; probably not.
- 7. The review of Stevens's work does not end here, because subsequent to *Transforming Your Dragons* he published a couple of other Overleaf Charts. These are reviewed in Part Three, namely Chart #16 (2002) and Chart #20 (2011). With those Charts for the first time in the Michaelian teachings so far as I know Stevens departed from the implication that the Stages of Maturity are stages of maturity. Thus, he named them Perspectives in Chart #16 and Perceptions in Chart #20. (In *MFM*, p. 68, there is a paragraph that talks about the differences in "perceptions" of the Ages.) This is a logical consequence of mainstreaming the information to people who have no interest in reincarnation. In both cases, he listed only five categories. From the names alone it is perfectly obvious that these are the first five Ages of the Michaelian teachings. Consequently, I do not know what his current thinking on the Sixth and Seventh Ages might be; is it different from the presentation in *Transforming Your Dragons?*

Perhaps we can get a clue from one of Stevens's students, Barbara Taylor, who has published somewhat on the subject of the seven Ages; refer to the next subsection.

Barbara Taylor and Seven Perspectives

Barbara Taylor has been a student of the Michaelian teachings since the late 1980s. She regards José Stevens as one of her mentors in the Michaelian teachings, and it appears that she has borrowed, and perhaps embellished, some of Stevens's understanding of the seven Ages. This subsection is placed at this location in this chapter because of her affinity for his work.

Along with a lot of information about the Michaelian teachings, and about her other studies, she has posted a brief description of all the Overleaves — including seven Perspectives — on her website >http://:itstime.com<. The same as Stevens has, she has presented her various studies to a non-metaphysical audience, and she has modified the description and naming of the Perspectives to obscure its original presentation as being a result of maturation via reincarnation. In other words, each Overleaf category, including Perspective, is presented as a personality trait that one is born with or that one can grow into, without the information that the soul chooses its Overleaves before an incarnation, and that it matures via reincarnation.

Her description of the first five Perspectives will not be quoted here, but they are shown and named in Table 4Ma at the beginning of this chapter, and their correlation with the usual names and descriptions of the first five Ages is perfectly obvious: Surviving = Infant Soul; Rule-making = Baby Soul; Competing/Striving = Young Soul; Relating/Partnership = Mature Soul, Teaching/Philosophical = Old Soul. Notice that the names themselves do not necessarily imply that these are Stages of Maturity, which was the natural implications of the names that Stevens chose to use in his 1994 book *Transforming Your Dragons*. Rather, notice the similarity of the names that Taylor used to the names that Stevens used in Chart #16 and Chart #20 in the 2000s. Stevens offered the first instance in the Michaelian teachings of this practice of obscuring the maturity spectrum; Taylor continued the practice; Byram did the same thing — see next subsection.

Her description of the last two Perspectives is quoted below, taken from this page of her website: >http://www.itstime.com/game.htm#perspective<.

"Guru" Perspective [Sixth]

People using this perspective view life with detachment. They have transcended the day-to-day existence on this planet and focus on a larger reality, beyond the concerns of the rest of us.

The Guru perspective teaches from a place of "When I see you, I see me" and "When I serve my brother or sister, I serve myself." (Percent of population — extremely rare).

Famous People: Mahatma Gandhi, John the Baptist, Prophet Mohamed, Socrates, St. Francis of Assisi, Zarathustra.

"Spiritual Master" Perspective [Seventh]

People using this perspective have power far beyond those of most people.

The Spiritual Master perspective is "Love is all there is" and "There is no you or I, there is only we," an extremely rare and enlightened person who can change the course of history. (Percent of population — extremely, extremely rare).

Famous People: Abraham, Amon-Ra (the Sun God), the man Siddhartha Gautama who became Buddha, the man lesus of Nazareth who became Christ at the end of his life, Confucius.

I have some general comments on Barbara Taylor's presentation:

- 1. Whereas Stevens names the category Perception (Values) in his Personessence Chart (#20, 2011), on her website, Taylor prefers to call the category Perspectives, as Stevens does on his Pivotal Resources Chart (#16, 2002).
- 2. Four of the named Sixth-Perspective Gurus are the same as those identified as Transcendental Souls in the original Michaelian group, namely Gandhi, Mohamed, Socrates, and Zarathustra; Taylor added a couple more, namely John the Baptist and St. Francis of Assisi. The latter was thus categorized by Stevens; the former is not to be found on other people's list of Sixth Age luminaries.
- 3. Two of the named Masters are the same as those identified as Infinite Souls in the original Michaelian group, namely Siddhartha Gautama (the Buddha) and Jesus. Krishna and Lao Tzu are left out, but Abraham, Amon-Ra, and Confucius are added to the list of Seventh Age luminaries. These latter differ from other people's lists.

- 4. These Perspectives are not presented as being on a story arc of maturation via reincarnation, so they do not really add to, or subtract from, the primary issue that I have identified in the Michaelian teachings understanding of Age in general; that is, are the Sixth and Seventh Ages a normal progression of the soul's development during reincarnation on the Physical Plane?
- 5. For the first five Perspectives, Taylor correlates them with Maslow's Hierarchy, which is a type of spectrum, but not exactly a maturity spectrum. Maslow's Hierarchy was touched on briefly in a section of Chapter 4F above, "The Instinctive Center", but for a thorough description of how Maslow's Hierarchy correlates with the Overleaf System, including Level and Age, refer to the chapter on this topic in my book *The Tao of Cosmogony*. The point to be emphasized here is that there are ways of understanding and explaining the nature of the seven Ages other than as the maturity spectrum presented in the orthodox Michaelian teachings. I do exactly that when I describe the seven Worldviews in my book *The Tao of Personality*.
- 6. So, even though Taylor gives names to the sixth and seventh Perspectives that are different from the standard Michaelian teachings names, the descriptions seem to be an extension of the standard Michaelian teachings five-Age maturity spectrum, combined with elements of the Transcendental Soul and Infinite Soul, which are not normally thought of as on the maturity spectrum of soul development. This has been identified by other sources, reviewed above, as one of the primary issues with the inclusion of the Transcendental Soul and Infinite Soul on the maturity spectrum. Furthermore, Taylor did not relate the sixth and seventh Perspectives to Maslow's Hierarchy, but I do that in a chapter on this topic in my book *The Tao of Cosmogony*.
- 7. Taylor's name for the seventh Stage of Maturity is "Master" which is also Stevens's name. This is also the same name that Gurdjieff gave to the seventh Level of Being. It is also reminiscent of the Positive Pole of the King Role, +Mastery, King being associated as it is with Sevenness. This might or might not be a coincidence.

There is one other student of the Michaelian teachings who has a lot to say about the Sixth and Seventh Ages, and it is closer to my understanding than that of either Stevens or Taylor.

Larry Byram and Seven Worldviews

Larry Byram was involved with the Alice Bailey teaching before he became involved with the Michaelian teachings in the San Francisco Bay Area in the mid-1980s. He led regular classes and billed himself as a channel for more than a decade. He moved to Boulder, Colorado, in the late 1990s. There he continues to instruct students with an amalgamation of various teachings, up to the time of this writing. He lives about three miles from where I live now; I attended his meetings for about five years. So far as I can tell, most of his work seems to be based on the Michaelian teachings, but one can see the influence of Alice Bailey. You can verify this for yourself because there is a great deal of written material on his website at this URL: >https://alignmenttechnologies.us<. He describes Role, Goal, Mode, Attitude, Body Type, Pacing (aka 'Frequency'), and so on. Then there is the personality factor that he calls Worldviews, which can be found at this URL: >https://alignmenttechnologies.us/worldview<. These are obviously the Ages by a different name.

His teaching is that psycho-social-spiritual development takes seven steps, which he calls WorldViews. Rather than saying that the soul matures, he says that "consciousness grows". The names for these WorldViews are listed in Table 4Ma at the beginning of this chapter: 1) Survival; 2) Safety and Security; 3) Outer Success; 4) Relationship; 5) Inner Success; 6) Personality Integration; 7) World Service. A thorough description of each stage is provided on the website. Although Byram gives names to the stages that one might not recognize as having to do with increasing maturity, without even reading the extensive description, a knowledgeable Michaelian student will recognize that the first five Worldviews are very similar in description to the first five Ages (Infant — Baby — Young — Mature — Old). But then the last two Worldviews are obviously neither Transcendental Soul and Infinite Soul nor Astral stage and Causal stage. Byram also says there are seven "levels" within each of these Worldviews, just as is said in the Michaelian teachings about the Levels within the Ages.

Byram does not put forward reincarnation as the explanation for Worldviews. In fact, he says that one should work to raise one's Worldview, which, in the Michaelian teachings, is said to be virtually impossible. This idea of spiritual development is similar to the view of Gurdjieff, what with his Levels of Being (described in a chapter of Part One of this *History* book) to which one can ascend in a lifetime. There are also reflections of the Maslow's Hierarchy, which also posits stages that one can ascend in a lifetime. There are also reflections of the

Life-Stages in Byram's descriptions; that is, as one matures during the lifetime, one tends to mature through the Worldviews. This is more or less the idea we find in the Michaelian teachings, namely, that we do not fully come into our Age until we successfully transit the corresponding Life-Stage. That is, for instance, we are not fully "Old Souls" until after we have transited the Seniority Lifestone in the Positive Pole at about retirement age.

Some keywords and phrases extracted from the lengthy description of the sixth stage, Personality Integration, are as follows:

... aspiration to transcend our self-imposed limitations ... whole-heartedness ... discovering our best and highest usefulness ... the death of ego so we can be reborn in spirit ... fully dedicated to our higher creative contribution ... forgive and accept ourselves, allowing us to maximize our contribution ... we are able to transcend our perspectives and beliefs ... we develop inner tools of meditation, concentration and contemplation ... sensitivity automatically translates to greater consciousness ... focus on inner-growth ... intuition, spiritual will and spiritual radiance ... Focuses on higher motives ...

Personality Integration Worldview individuals can be identified by:

- a) Their sense of detachment and the clarity they use to see others around them objectively.
- b) Their ability to see a person's greatest gifts as well as acknowledge their greatest weaknesses demonstrates their ability to embrace paradox.
- c) They have compassion for people and the ability to empathize and communicate inclusively when tragedy strikes.
- d) They speak playfully and paradoxically, typically forgiving and acknowledging the fears and judgments of society as a whole.
- e) They are able to integrate and use their inner masculine and feminine simultaneously, enabling them to be powerful creators.
- f) They learn to operate without compromise by taking principled stands despite the consequences, realizing that to pull back denies their divinity.
- g) They learn to love themselves to the point where their inner life and light shines forth revealing a startling unity of purpose and ability to attract what's needed to make their fullest contribution.
- h) Become self-conscious about internal mythology and begin to use abstract thinking to generate new ways to create. No longer limited to pre-existing group thought patterns. Can manifest unique insights.
- i) Sees all defensive structures as a balancing act where we use paradox to transcend the pairs of opposites that keep us identified and attached to our duality. [>http://www.higheralignment.com/personality-integration<—retrieved August 2018]

The astute reader will easily recognize these as Cardinal Inspiration characteristics; that is to say, Priest-ish — precisely as one would expect for the sixth stage of a Septenary. On the other hand, these descriptions do not fit a Transcendental Soul. Nor do the descriptions fit the Astral Plane stage of soul growth. Therefore, it would seem that Byram proposes a strictly Physical Plane experience for the sixth Worldview. The name of this stage, Personality Integration, was borrowed from Alice Bailey's description of her next-to-last stage of spiritual development via reincarnation; this was quoted in Chapter 1E in Part One, "The Seven Soul Ages". This differs from Gurdjieff, who placed "Integrated Man" in the fifth Level of Being.

Byram places many noble celebrities and spiritual gurus in this category. For instance:

Deepak Chopra, Oprah Winfrey, Andrew Harvey, Jack Kornfield, Corrie Ten Boom, Carlos Castaneda, Dorothy Day, Che Guevara, Dag Hjalmar Hammarskjöld, Herman Hesse, Nikola Tesla, Bertrand Russell, Assen Zlatarov, Daniel Berrigan, Starhawk, Desmond Tutu, Malcolm X, Abraham Maslow, Paul Tillich, Evelyn Underhill, Joseph Campbell, C. S. Lewis, Huston Smith, Robert Funk, Stevie Wonder, William Blake, James Joyce, Walt Whitman, Benjamin Franklin, Abraham Lincoln, Mother Cabrini, Pope John XXIII, Socrates, Plato, and Ram Dass.

Other Michaelian students typically place many of these in the Old Soul Age, and no one else puts them in the Sixth Age (except Socrates, an alleged Transcendental Soul), whatever the name given to the Age.

So much for the sixth Worldview.

Some keywords and phrases extracted from the lengthy description of the seventh Worldview, World Servers, are as follows:

... full creative manifestation ... group leaders, motivators and spiritual catalysts ... engrossed in our "mission" that we commonly have very little personal life ... aligned with Universal Intent ... automatically drawn to fulfill

whatever group purpose is in front of us ... radiate our Being in the world ... manifest the power to express ourselves outside of typical human expectations ... a world citizen and are automatically drawn to where we can contribute the most ... identified by our inexhaustible energy ... connect spirit to matter so we can manifest things wherever we place our attention ... sensitive to natural energies ...

World Service WorldView individuals can be identified by:

- a) They illustrate their lack of interest in personality expressions by a lack of small talk or conformance to social expectations. Can end up seeming aloof or arrogant and unavailable to lower-level expressions. They focus on their contribution as they see it, and not as others would wish it to be.
- b) They demonstrate an ability to differentiate the problems of others from their own, which can seem indifferent to the boundary issues and personality needs of others in lower WorldViews.
- c) They honor the free will of others over their own personality interests and will not try to convince others to do something without their express invitation. They realize that inner unity is achieved only through free will.
- d) Their focus is on bringing out people's highest creativity, which initially may not have tangible form and structure, causing distress in some people by how they shift their reality so suddenly.
- e) They become examples of how to be of the greatest service by the way they design their lives. Others are encouraged to find their own gifts and are inspired to do so.
- f) Use pre-existing agreements to invert the way others perceive issues to teach a unified way out of the pain and self-generated illusions. [>http://www.higheralignment.com/world-service< retrieved August 2018]

The astute Michaelian student will easily recognize these as Cardinal Action characteristics; that is to say, King-ish — precisely as one would expect for the seventh stage of a Septenary. On the other hand, these descriptions do not fit an Infinite Soul. Nor do the descriptions fit the Causal Plane stage of soul growth. Therefore, it would seem that Byram proposes a strictly Physical Plane experience for the seventh Worldview. The name of this category, World Servers, is from the Alice Bailey work; refer to the website of the Lucis Trust, which is the present-day custodian of the Alice Bailey material: >http://www.mindlight.info/aab/dkngws.htm< and >https://www.lucistrust.org/world_goodwill/key_concepts/the_new_group_world_servers3<.

Byram placed all of the Transcendental and Infinite Souls by name in this category, as well as many of the other high spiritual teachers of the present and of the past. For instance:

Mother Teresa, Mother Meera, Lobsang Gyatso, Tarthang Tulku, Palden Gyatso, Hazrat Inayat Khan, Yogananda, Saint Francis of Assisi, Albert Schweitzer, Meher Baba, Rabindranath Tagore, Alice Bailey, Helena Roerich, Nicholas Roerich, Janusz Korczak, Viktor Tihonovich Chernovolenko, Rabbi Malka Drucker, Sogyal Rinpoche, Richard Wilhelm, Niels Bohr, Ivan Efremov, Galina Ulanova, Anna Pavlova, Maya Plisetskaya, Chögyam Trungpa, Mary Daly, Mary Baker Eddy, Aimee Semple McPherson, Bhaktivedanta Prabuphada, Zalman Schachter-Shalomi, Shirdi Sai Baba, Abdul Bahá, Dietrich Bonhoeffer, Gustavo Gutiérrez, Martin Luther King Jr., Oscar Romero, Dalai Lama (Tenzin Gyatso), Abraham Joshua Heschel, Vivekananda, Hans Küng, Reinhold Niebuhr, Alexander Schmemann, Joseph Soloveitchik, Thomas Berry, Martin Buber, Mircea Eliade, Abraham Isaac Kook, D. T. Suzuki, Simone Weil, Dorothy Day, Catherine de Hueck Doherty, Maha Ghosananda, Mawlana Muhammad Ilyas, Walter Rauschenbusch, Robert Holbrook Smith, Thich Nhat Hanh, Bawa Muhaiyaddeen, Black Elk, Bede Griffiths, J. Krishnamurti, Seyyed Hossein Nasr, Ajahn Chah, Maharishi Mahesh Yogi, Thomas Merton, Pema Chödrön, Ramana Maharshi, Seung Sahn, and Shunryu Suzuki.

Other Michaelian students typically place most of these added names in the Old Soul Age, and no one else puts them in the Seventh Soul Age.

I have some general comments on Larry Byram's presentation:

- 1. Byram's classes and website appear to be aimed primarily at his self-help psychology clientele in the Relationship Worldview = Mature Soul Age. In order to mainstream his teaching to the non-metaphysical population, Byram did what José Stevens and Barbara Taylor did: present the Age categories as psycho-social-spiritual maturity without mentioning the cause that was originally given in the Michaelian teachings, namely development over many lifetimes via reincarnation.
- 2. Because Byram portrays all seven stages as achievable in a single lifetime if one works hard enough, this makes his Worldview stages somewhat like Maslow's Hierarchy and Gurdjieff's Levels of Being. The former are said to be stages of psychological maturity, and the latter are said to be stages of spiritual maturity; but Age is about soul maturity driven by reincarnation, not "work" on oneself.

- 3. Much of Byram's program for eliminating negativity and thereby increasing consciousness would be familiar to Michaelian students, although he does not use such terms as False Personality, maya, acculturation, Negative Poles, or Chief Features. Elements of the Michaelian teachings teaching on Internal Monads that maturity that normally comes with 'getting older and wiser' can also be identified in Byram's descriptions of his Worldviews.
- 4. Refer to my book *The Tao of Cosmogony* for chapters on Maslow's Hierarchy, Gurdjieff's Levels of Being, and the Life-Stages. I regard it as true that there is a correspondence among these three septenaries and the Ages, because they are all structured per the same Septenarian pattern. These similarities can sometimes make it difficult to discern which factor a person is coming from but they are not the same thing, and it is Good Work to distinguish them.
- 5. Because Byram conflates different manifestations of the Septenary at different time scales into one factor, Worldview, none of them necessarily having to do with reincarnation, his presentation about Worldviews does not provide solid evidence for or against the idea that there are seven Ages of the soul's experience on the Physical Plane.
- 6. Even though Byram divorces the Worldviews from the reincarnation explanation, he seems to prefer to understand the Worldviews approximately the same way that Alice Bailey channeled them in the first half of the Twentieth Century, and as I have come to understand the Ages recently.
- 7. The thought occurs to me that during the decades subsequent to the original Michaelian group, the Michaelian teachings could be seen as dealing with obfuscations rather than revelations on this matter of Age unless the various sources are conflated into a coherent understanding, rather than remain being seen as conflicting narratives.
- 8. There is a table on Byram's website titled "49 Worldview Lessons". Byram lists seven Levels in each Stage, the same as the Michaelian teachings. The seven Levels are named: 1) Introduction, 2) Exploration, 3) Quiet Before Storm, 4) 100% in, 5) Eccentric Testing, 6) Remediation, and 7) Embodiment. It is difficult for me to see that the nature of each Level is similar to, or corresponds with, the nature of the corresponding Stages/Worldview; it is not like Level recapitulates Stage, so far as I can tell. Therefore, I suspect that the names were chosen as a keyword to describe the Levels as if they were a step in the story arc of a Stage. Some Michaelian teachings commentators describe Levels one way (with a nature similar to the Role with the same Septenarian Attributes) and some describe it the other way (as a story arc). Refer to the previous chapter, "The Names of the Levels", for a thorough discussion of these two types of description of the progression through the Levels.
- 9. The previous point elicits the question, Do the Sixth Age and the Seventh Age have seven Levels just as the first five Ages do if they are experienced as Astral and Causal per Yarbro, or as Transcendental and Infinite per some others? If so, what do those others say about this question, if anything? Tolley channeled that the Transcendental Soul only experienced one Level during incarnation on the Physical Plane; see above.

What I like about Stevens and Taylor and Byram is that they bring the Sixth and Seventh Ages out of the realm of dogma–doctrine regarding Transcendental and Infinite Souls, and Astral and Causal Planes, and into the realm of pragmatic and empirical Validatability. That is to say, you can see the qualities and characteristics attributed to the Sixth (Cardinal Inspiration = Priest-ish) and Seventh (Cardinal Action = King-ish) Ages in famous people who can be observed, even studied, in the real world.

Stevens and Taylor and Byram — in their outreach to the non-metaphysical, non-Michaelian student readership — realized that it makes sense to maintain the consistency of seven Overleaves in every Overleaf category, and to say that these are a part of typical soul evolution on the Physical Plane, and/or part of psycho-social-spiritual development whether or not this spectrum of maturity has anything to do with reincarnation.

Seven Ages in non-Michaelian Teachings Sources

Because of all the contradictions within the Michaelian teachings community, one begins to wonder if insights are to be found in other spiritual teachings about reincarnation. Could they be of any help in sorting this out, or would they just add to the confusion? In Part One we examined Alice Bailey's channeling. Review it now if you like, or just recall that it had ten stages of soul development that could reasonably be pared down to seven in order to then correlate reasonably with the Michaelian teachings. In that chapter in Part One, there is also

the teaching of Meher Baba, who lists seven Planes of Consciousness, with descriptions that match the Ages of the Michaelian teachings, with two post–Old Soul categories. These two teachers preceded the Michaelian teachings. I have found a few other teachers, independent of the Michaelian teachings but subsequent to the Michaelian teachings, who have somewhat to say about stages of the soul's evolution on the Physical Plane, and I summarize them in this section.

Recall that those pre-Michaelian sources described seven Ages without mentioning Bodhisattvas and Avatars, the oriental esoteric equivalents of what in the Michaelian teachings are named Transcendental Soul and Infinite Soul. However, an internet search on the subject of "Soul Age Reincarnation" reveals that other sources have become abundant because of the Michaelian teachings subsequent to the invention of the internet. In this section we explore three sources for the subject of Age that appear to be totally independent of the Michaelian teachings. In its broad outlines, it confirms the orthodox Michaelian teachings, but there are other ideas presented that supplement the Michaelian teachings, or at least expand it in some way or other.

The most thorough of these is the work of:

Laeh Maggie Garfield and Seven Mansions

In Shepherd Hoodwin's book, *The Journey of Your Soul* (1995), page 211, he mentions a book that mentions seven Soul Ages:

Laeh Maggie Garfield, in her book *How the Universe Works*, suggests a scheme of seven soul ages that are experienced by everyone on the physical plane: *infant, toddler, teenage, adult, mature, old,* and *volunteer*. Garfield does not mention the source of her ideas. Her explanations differ from Michael's in various ways, but in general, her approach is similar. She seems to arrive at seven physical-plane soul ages by dividing Michael's *mature soul cycle* into *adult* and *mature*. Her designation *volunteer soul* would be described by Michael as a "seventh-level old *soul transcendental,*" who has no remaining karma and could cycle off, but reincarnates mainly to be helpful to others. Her terms *toddler* and *teenage* are fundamentally equivalent to Michael's terms *baby* and *young*. She describes each soul age, and the seven levels of each soul age, as correlating with the chakra in the same numerical position.

Garfield's book was first published in 1991 by Celestial Arts, Berkeley, California. The subtitle is *Pathways to Enlightenment*. Garfield refers to each of the seven Ages as Mansions, and each of the seven levels as Stories in the Mansion, for a total of 49 Stories, the same as in the Michaelian teachings — if one were to accept the notion that the Sixth and Seventh Ages have seven Levels. Following are some key words extracted from pages 47 to 53. Extensive additional material can be found in the book, of course, but the following is a decent introduction.

- [1 = Ordinal Action] INFANT SOULS "The Mansion of Survival" Root Chakra to learn survival and other aspects of physical life: Loving, uninhibited, defenseless, helpless, self-centered, temperamental, surrendered, innocent, placid, demanding, changeable, unpredictable, unduly open to or fearful of people, guileless, makes eye contact and tells blunt truth but need to be told what to do.
- [2 = Ordinal Inspiration] TODDLER/CHILD SOULS "The Mansion of Emotion:" Sacral Chakra Emotional balance, self-reliance: Uncontainable, alternately cooperative and uncooperative, tiring, energetic, fun, oppressive, envious, greedy, curious, affectionate, selfish, selectively loyal and/or loving, perceptive, possessive, honest, charming, exploring, needs boundaries, not leaders, narrow-minded, intolerant, wants to be helpful, work best as followers.
- [3 = Ordinal Expression] TEENAGE SOULS "The Mansion of Power:" Solar [plexus] Chakra Power, control: Challenging, idealistic, inconsiderate, maturing, ambitious, insightful, jealous, freedom-loving, ambivalent, rebellious, loving, fearful of differences, sexually preoccupied, con-artists, overly active or repressed, power hungry, seducible, inventive, helpful, dreamers, easily taken in by material world, obnoxious, wide emotional swings, cruel, humorous, supportive, conformists, iconoclasts.
- [4 = Neutral Assimilation] ADULT SOULS "The Mansion of Love" Heart Chakra To love, have compassion: Seekers, adventurers, accepting, envious, generous, diplomatic, hides true self, caring, judgmental, controlling, conforming, explorers inwardly and outwardly, creative, competent, infrequent strivers, self-sufficient, hard working.
- [5 = Cardinal Expression] MATURE SOULS "The Mansion of Sound" Throat Chakra Communication: Reliable, serene, likes rules, sincere, honest, faithful, compassionate, doesn't impose their will on your life, adore good things in life (won't obtain them by killing or manipulation), adaptable, flexible, can fight constructively,

open-minded, sense of proportion, listens to others, helpful, has integrity, backbone of society, sensitive, insightful, rational.

[6 = Cardinal Inspiration] OLD SOULS — "The Mansion of Knowledge" — Brow Chakra (third eye) — telepathic skills, intention, control through thoughts: Mellow, non-judgmental, accepting, caring, not status-conscious, giving and generous, wise, tolerant, strong, enduring, spiritual rather than religious, compassionate, self-knowledgeable, farsighted visionaries, break all rules without infringing on others.

[7 = Cardinal Action] VOLUNTEER SOULS — "The Mansion of Wisdom" — Crown Chakra — To enlighten other human beings — mystical, master builder, total competence, unlimited understanding.

As is my custom, I provide some comments on the Garfield material:

- 1. The differences between Garfield's names and descriptions and the Michaelian teachings names and descriptions indicate that the former did not borrow from the latter; she is an independent source. Nor do I see that Garfield borrowed from any other source that I have become aware of. In fact, there are statements in the book that Garfield received her information via inspiration, from shamanic journeying, and from mystical insights and such. The book is worth purchasing; it echoes and enriches many aspects of the Michaelian teachings.
- 2. It is interesting to me to read what an independent source has to say about a subject that is so central to the Michaelian teachings. Garfield's description of each Mansion has many similarities to what we find in the Michaelian teachings on each Age, but of course there are some differences a Michaelian student might put some descriptive words in different categories from where Garfield puts them, and *vice versa*. This is in keeping with my point, made elsewhere in this chapter, that such descriptions of Ages are necessarily stereotypical and archetypal, and that the reality of how any particular person manifests their Age is ambiguous, and therefore it is difficult to put specific people and specific descriptions in a particular box.
- 3. Notice that I added the Septenarian Attributes in brackets along with the ranking number. I cannot help but think that if Garfield had been aware of and better yet had full knowledge of the structure and meaning of the Natural Sequence schema, with the way the Septenarian Attributes are arranged and delineated, she would have a more definitive, less ambiguous, understanding of each Mansion.
- 4. Despite the ambiguities, based on a careful reading of Garfield's complete description in her book of each Mansion, I tend to agree with Hoodwin that what the Michaelian teachings refers to as the Mature Soul Age is two categories in Garfield. That is, what she names Adult and Mature Mansions are what the Michaelian teachings names early-Level Mature and late-Level Mature Souls respectively. This discrepancy in perception is reminiscent of the discrepancy in perception within members and contingents of the Michaelian teachings itself, where some perceive that Age is overestimated (the Yarbro contingent does this), and some perceive that Age is underestimated (the non-Yarbro contingent does this); this phenomenon is discussed elsewhere in this chapter. It is all a matter of semantics: sometimes the same name is applied to different categories, and sometimes the same categories get different names. What should govern the descriptions, in my opinion, is the Septenarian Attributes; they provide the pure abstract archetypes of which the Ages are an instantiation.
- 5. Garfield correlates her version of the seven Ages with the seven primary chakras, newest to oldest Age in the same sequence as the chakras from bottom to top. Refer to the chapter in Part One and the chapter here in Part Four on the chakras, and you will see that I have an understanding that differs slightly from Garfield. There you will find evidence and argument that the chakras follow the Natural Sequence in this way: 0) Root Chakra = Physiology; 1) Gonad Chakra = Ordinal Action; 2) Navel Chakra = Ordinal Inspiration, 3) Plexus Chakra = Ordinal Expression, 4) Heart Chakra = Neutral Assimilation, 5) Throat Chakra = Cardinal Expression, 6) Brow Chakra = Cardinal Inspiration, 7) Crown Chakra = Cardinal Action. This propensity to correlate various metaphysical teachings is typical of many spiritual students; my offerings in that realm are found in my book *The Tao of Cosmogony*.
- 6. Garfield's description of the Mansions and their correspondence with chakras also leads to the comparison with Gurdjieff, where he correlates his Levels of Being with the Centers chakras and

- Centers being a common target for correlation. Refer to other chapters in this *History* book where Gurdjieff and Centers and chakras are discussed in detail.
- 7. Garfield's description of the seventh Mansion, Volunteer, is very much like the characterization of Bodhisattvas in Eastern mystical traditions. These are souls who incarnate, not because they must in order to burn karmic ribbons or finish the Physical Plane 'curriculum', but because of compassion for humanity, as high teachers, guiding lights, way-showers, and such. Something like Bodhisattvas appears in other descriptions of the Sixth and Seventh Ages, so naturally this type of soul is discussed at length in other sections of this chapter.
- 8. That Garfield made the Seventh Age the Bodhisattva age, rather than the Sixth Age as normally understood in the orthodox Michaelian teachings, is what Meher Baba did in his description of the seven Soul Ages. Refer to the chapter on Soul Ages in Part One of this *History* book. Neither Garfield nor Baba had a place in their septenaries for the Avatar, aka the Infinite Soul; that manifestation was 'off the Chart', so to speak, and I tend to concur, unless one stretches definitions considerably; refer to subsequent sections of this chapter.
- 9. Garfield says that there are seven Stories within each of the seven Mansions. This is equivalent to the Michaelian teachings concept of seven Levels within each Age.

Garfield is not as well known in the esoteric community as the next source of information is.

Michael Newton and Seven Stages

A few years after Garfield published her book derived from mystical inspiration, another author's book was published, with information derived from inter-life hypnotic regression; that is the subject of this subsection. As it so happens, it also describes seven categories of soul advancement in the process of reincarnation. I find it interesting and Validating that apparently independent sources come to similar conclusions.

Michael Newton, Ph.D., was a psychotherapist who lived and worked during the latter part of the Twentieth Century. He used hypnotherapy in his practice. He inadvertently discovered that he could make contact with the soul of his clients and thereby regress them beyond their childhood and into their between-lives state. He subsequently wrote three books: Journey of Souls, and Destiny of Souls for the general public, and Life Between Lives for professional hypnotherapists. (Case studies written by his students have been published in Memories of the Afterlife and Wisdom of Souls.) From those sessions — among many other things that nicely corroborate the Michaelian teachings — Newton discovered that souls have a spectrum of maturity, from new souls to old souls.

Below is a table that I found on the internet, adapted and redrawn from a slideshow and talk that a guy named Douglas Kinney gave at a meeting of the Baltimore branch of the Institute of Noetic Sciences (IONS) in about the year 2011.

| Table 4Mb — NEWTON'S MODEL for SOUL DEVELOPMENT LEVELS and CORE COLORS | | | | | | | | | |
|--|--------------------|---|------------|--------------|--|--|--|--|--|
| LEVEL | LEARNING STAGE | ENERGY CONSCIOUSNESS | POPULATION | GUIDE STATUS | | | | | |
| ı | Beginner | White (bright and homogeneous) | 42% | none | | | | | |
| II | Lower Intermediate | Off-white (reddish shades, ultimately turning into traces of yellow) | 31% | none | | | | | |
| III | Intermediate | Yellow (solid with no traces of white) | 17% | none | | | | | |
| IV | Upper Intermediate | Dark Yellow (deep gold, ultimately turning into traces of blue) | 9% | Junior | | | | | |
| v | Advanced | Light Blue (with no traces of yellow, ultimately turning into traces of purple) | 1% | Senior | | | | | |
| VI | Highly Advanced | Dark Bluish Purple/Violet (surrounded by radiant light)* | 0% | Master | | | | | |
| *VII | Old Ones | Deep Purple (surrounded by radiant light) | 0% | Overseer | | | | | |

Source: Michael Newton, Journey of Souls, p. 103.

^{*}Linda Backman, Bringing Your Soul to Light (2009) had more experiences with advanced souls.

Following are my comments on this table:

- FIRST COLUMN: Note that there are seven stages, the same as for the Michaelian teachings and for others reviewed in this chapter. I did not see any indication in Newton's books that he was told that there are actually seven distinct stages; it appears he just found it convenient to categorize soul maturity using this number. His approach to his investigations seems empirical: "how can I sensibly organize what I am hearing from my clients?"
- SECOND COLUMN: Note that the names given to the stages are not like the names given by others that use the metaphor of chronological age: "Infant, Child", and so on. Instead, the metaphor is more like a course of instruction in school: Beginner, Intermediate, Advanced. Newton seems like a Scholar to me, and if that is accurate, then I think that the school metaphor would come naturally to him. It is easy enough to equate Beginner with Infant, Lower Intermediate with Baby, Intermediate with Young, Upper Intermediate with Mature, and Advanced with Old. The names Highly Advanced and Old Ones do not correlate with Transcendental and Infinite, nor do they correlate with Astral and Causal, but they do fit with the names proposed by Stevens, Taylor, and Byram for the Sixth and Seventh Ages. Newton's metaphorical 'curriculum' naming convention seems less potentially pejorative to me than Michael's Soul Age convention. The 'lesson plan' for each 'class' is not provided in Newton's books. I find it disappointing that Newton provided no qualitative description of what exactly or approximately the soul is learning at each stage.
- THIRD COLUMN: Note that there are colors associated with each soul stage, which in the books is said to be the color of the aura, energy, or emanation of the soul. Note that the color scheme does not fit exactly with the color spectrum given in other teachings. Although red is near the immature end and violet is at the mature end, the colors do not pass from red to orange to yellow to green to blue to indigo to violet as they do in the case of chakras, for instance. The fact that there are gradations of color within some of the stages indicates that Newton was aware that there are gradations of advancement within each stage, just as there are the Levels within each Age.
- FOURTH COLUMN: Note that the population percentage of each stage is nothing like the percentage given in the Michaelian teachings. Instead of the decreasing percentage shown on this table, in the Michaelian teachings there is a "bell curve" distribution: Infant = 10%, Baby = 23%, Young = 32%, Mature = 24%, Old = 11%. (These percentages are according to Yarbro; other channels have gotten slightly different percentages, but the bell curve distribution persists.) The discrepancy between Newton and the Michaels is perhaps explained by the fact that Newton's figures came from his client population, a self-selected group of people who needed counseling, hence probably younger souls. Newton said he rarely worked with advanced souls, but one of his students, Linda Backman, did work with advanced souls per the asterisk note on the slide. She has also written some books, which build on the foundational work of Newton.
- FIFTH COLUMN: Newton found that souls, when they had learned enough to arrive at the fourth stage, become qualified to begin guiding less-advanced souls. They do this as spirit guides to incarnate personalities, and/or between-life guides. This accelerates and expands their own learning. It makes sense to me that Newton's fourth stage equates with the Mature Soul, the stage when souls really begin to assume responsibility for the well-being of their fellow humans and the planet. It is said that in the sixth and seventh stages, the Master and Overseer stages, the soul almost never needs to, or has little desire to, reincarnate. This is at least vaguely similar to what is said about souls in the last two stages in some of the other sources discussed in this chapter.

In the Newton books, there are no definitive descriptions of each stage of soul learning like the extensive definitive descriptions of the characteristics of each Age in the Michaelian teachings and elsewhere. There is only said to be an improvement in understanding of life, a gaining of knowledge in 'classroom' earth, and a shift in the nature of the 'coursework' from beginner to intermediate to advanced.

Another Chart that I found on the internet tabulated Newton's stages in a more expanded way: >https://drakebearstephen.files.wordpress.com/2014/01/soullevelnewton1.jpg<.

| | Table 4Lc — NEWTON'S CLASSIFICATION MODEL with COLORS | | | | | | | | |
|----|---|--|----------------|--|--|--|--|--|--|
| # | LEVEL | COLOR | SOUL AGE? | | | | | | |
| 1 | Level I: Beginner | White | To form | | | | | | |
| 2 | Level I: Beginner | Off-white Gray / Grayish with tints of Pink | Infant | | | | | | |
| 3 | Level II: Lower Intermediate | White and Reddish Pink | D-l | | | | | | |
| 4 | Level II: Lower Intermediate | Light Orange Yellow with tints of White | Baby | | | | | | |
| 5 | Level III: Intermediate | Yellow | V | | | | | | |
| 6 | Level III and IV | Deep Gold / Gold with tints of Green | Young | | | | | | |
| 7 | Level IV: Upper Intermediate | Green or Brownish Green | Mataura | | | | | | |
| 8 | Level V: Advanced | Light Blue; Light Blue with Gold; Green or Brown | Mature | | | | | | |
| 9 | Level V and VI | Deep Blue | Old | | | | | | |
| 10 | Level VI: Highly Advanced | Deep Blue with tints of Purple | Old | | | | | | |
| 11 | Higher Levels | Purple | Transcendental | | | | | | |

In this table, the first three columns are from the website, and I added the fourth column to show how I understand the table, though it could be argued differently. To me it appears that this table shows the early and late Levels of each Age. This distinction between Ordinal and Cardinal Levels of an Age reminds me of Spiral Dynamics, which is reviewed in the next section. The color scheme, and the Roman numeral scheme, provide some ambiguity, but then there is often difficulty in discerning whether or not to categorize people in the late Levels of one Age versus the early Levels of the next Age. Just as the colors in the rainbow blend into each other, so they do in the spectrum of Age, as near as we can tell empirically, whatever the case may be actually.

So, overall, Newton's discoveries via hypnotherapy are a pretty solid independent confirmation of the Michaelian teachings and other teachings about the advancement of the soul during incarnations. In Michaelian terms, the information came from the second level of the Astral Plane, where souls are said to reside between lives. According to Newton, the stories that his many, many clients told painted a consistent picture.

There is another non-Michaelian teachings source to discuss in this section, but it is not an independent source; it is a distillation of information from various unnamed sources.

Lee Bladon and Five Degrees of Consciousness

Lee Bladon's website *Esoteric Science* contains the distillation of his spiritual philosophy. His teaching reminds me somewhat of Theosophy, but reading his site it becomes obvious that he has borrowed from many spiritual teachings, and come up with his own unique synthesis: >https://www.esotericscience.org/<. Theosophy and the works of Henry Laurency are mentioned as the primary sources.

One of the subjects he covers is reincarnation, and within that subject he covers the maturation process of the soul. He refers to the wholeness of the soul as the "greater causal body" (which he also refers to as the "monad"), and says it divides itself into "lower" causal bodies — the mental, the emotional, and the etheric bodies — for the purpose of incarnation into the physical body. We have already seen the 'higher causal body' mentioned in the original Michaelian group/MFM description of the Transcendental Soul. These "bodies" are also mentioned by Gurdjieff and Theosophy; refer to the chapter on "Subtle Bodies" in my book *The Tao of Cosmogony*.

Bladon divides the evolution of the souls into five categories, which he calls Primitive, Civilized, Developed, Humanistic, and Enlightened. He proposes that in the process of spiritual development, the incarnate personality becomes progressively more conscious of these higher aspects of soul, which reside in the higher "worlds", aka "planes". For a complete explanation, the reader should read the entire web page found at:

>https://www.esotericscience.org/article13a.htm<. For a graphical representation of that concept, refer to the table below, adapted from that web page.

| Table 4Ld — BLADON'S DEGREES of CONSCIOUSNESS in the SUBTLE WORLDS | | | | | | | | | |
|--|----------------|----------------|----------------|----------------|-----------|--|--|--|--|
| PRIMITIVE CIVILIZED DEVELOPED HUMANISTIC ENLIGHTE | | | | | | | | | |
| CAUSAL WORLD | Unconscious | Unconscious | Unconscious | Semi-conscious | Conscious | | | | |
| MENTAL WORLD | Unconscious | Semi-conscious | Semi-conscious | Conscious | Conscious | | | | |
| EMOTIONAL WORLD | Semi-conscious | Conscious | Conscious | Conscious | Conscious | | | | |
| PHYSICAL- ETHERIC WORLD | Conscious | Conscious | Conscious | Conscious | Conscious | | | | |

The basic premise shown in this table is that the high-causal monad first empties itself for the purpose of incarnation, then develops back into its fullness during successive incarnations. In the Primitive stage, it is only conscious of the Physical World; progressing to the Civilized stage it becomes conscious of the Emotional World; progressing to the Humanistic stage it becomes conscious of the Mental world; progressing to the Enlightened stage it becomes conscious of the Causal World. This notion is very similar to Gurdjieffian and Theosophical conceptualizations. The basic point is that the evolution of the soul is the revelation of successively wider and higher levels of consciousness. To put this in Michaelian terms, realization or enlightenment is like removing Physical Plane Overleaves, then Astral Plane overlays, then Causal Plane overlays, to finally reveal the Oneness out of which the manyness emerges.

In the table above, there is no difference between the Civilized and Developed stages in terms of consciousness. This might have been a mistake, and in any case it does not make sense to me, and I would like to see seven stages to go along with all the other septenarie, so I improvised the table below to see what that would look like, expanding on the idea of expanding consciousness introduced by Bladon. (Bladon lists seven "planes" in another web page: >https://esotericscience.org/article10a.htm<.) The table adds some "Worlds" that Bladon shows in other tables, and expands the stages of the development of consciousness to seven.

| TABLE 4Me — WITTMEYER'S DEGREES of CONSCIOUSNESS in the SUBTLE WORLDS | | | | | | | | | |
|---|----------------|----------------|----------------|----------------|----------------|----------------|-------------|--|--|
| SOUL AGE | 1-INFANT | 2-CHILD | 3-YOUNG | 4-MATURE | 5–SENIOR | 6-ELDER | 7-ANCIENT | | |
| STAGE | PRIMITIVE | "SOCIALIZED" | CIVILIZED | DEVELOPED | HUMANISTIC | "ADVANCED" | ENLIGHTENED | | |
| AKASHIC WORLD | Unconscious | Unconscious | Unconscious | Unconscious | Unconscious | Semi-conscious | Conscious | | |
| CAUSAL WORLD (3rd plane) | Unconscious | Unconscious | Unconscious | Unconscious | Semi-conscious | Conscious | Conscious | | |
| MENTAL WORLD | Unconscious | Unconscious | Unconscious | Semi-conscious | Conscious | Conscious | Conscious | | |
| ASTRAL WORLD (2nd plane) EMOTIONAL | Unconscious | Unconscious | Semi-conscious | Conscious | Conscious | Conscious | Conscious | | |
| WORLD | Unconscious | Semi-conscious | Conscious | Conscious | Conscious | Conscious | Conscious | | |
| ETHERIC WORLD (1st plane) PHYSICAL | Semi-conscious | Conscious | Conscious | Conscious | Conscious | Conscious | Conscious | | |
| WORLD | Conscious | Conscious | Conscious | Conscious | Conscious | Conscious | Conscious | | |

My comments on this table are as follows.

- SOUL AGE: In this table, in the first row below the title bar, the names of the Ages are the ones that I prefer.
- STAGE: In the second row down from the title bar, I add a couple of names (in "quotation marks") to the names that Bladon used, to make seven stages instead of Bladon's five.
- WORLDS: In this table, the names of the seven Worlds, in the leftmost column, are created by dividing the Planes into lower (Ordinal) and upper (Cardinal) Worlds. Thus, the Physical and Etheric Worlds are the first plane (Action), the Emotional and Astral Worlds are the second plane (Inspiration), the Mental and Causal Worlds are the third plane (Expression), and the Akashic World is the lower half of the Fourth Plane (Assimilation). This arrangement brings Bladon's principle of increasing consciousness in higher worlds more into alignment with a scheme that I present near the end of this chapter.

One salient quote from his website is the following; notice the use of the word "body", a word that is typical in esoteric lore for the composites of Fragments on planes beyond the Physical:

To the monad, each incarnation is like a day's work. Leaving the physical–etheric body behind can be compared to taking off our overcoat, leaving the emotional body behind is like taking off our clothing, and leaving the mental body behind is like taking off our underwear. We return to our causal body (soul) completely naked to sleep for a while before awakening the next morning to get dressed again for another day's work. We begin each new incarnation by putting on our underwear (mental body), our clothes (emotional body) and our overcoat (physical–etheric body).

That description sounds a lot like Overleaves or "overlays to Essence" in the Michaelian teachings. Note that Bladon uses a word here, "monad", that is also used in the Michaelian teachings, but in a different context. In Bladon's cosmology, the monad is the undivided soul or Self, prior to differentiation. What Bladon calls "monad", in the original Michaelian group was referred to as the 'upper causal Body', aka the Transcendental Soul, which in the original Michaelian group transcriptions and in MFM is said to reside on the upper Causal (third) Plane. This idea will figure into my analysis and synthesis toward the end of this chapter. My preference is to equate Bladon's "monad" with the Michaelian teachings' "Essence" in its ultimate manifestation, rather than the Transcendental Soul, but there are interesting similarities. That is, ultimately, all souls are Fragments of one Essence. In the next chapter, "Casting Concerns", I refer to the undifferentiated monad as the Oversoul.

Following are my comments on Bladon's scheme:

- 1. Bladon does not reveal his sources, but it looks a lot like Theosophy to me, which is the only widely-known source that I know of that has a teaching on Age; the Kabbalah, the Michaelian teachings, and Garfield are not as widely known.
- 2. Bladon's "worlds" are obviously the equivalent of what other esotericists refer to as "planes", but some other esotericists also refer to planes as worlds. The lowest is the Physical–Etheric, next up in the table is the Emotional, aka Astral, next up in the table is the Mental. (In the Michaelian teachings, the Mental Plane is mislabeled as "Causal" as explained elsewhere in my various books.) In the Michaelian teachings and elsewhere, each plane has seven subdivisions, or levels, and the same is the case with Bladon in some of his other tables. The reader might not be aware that the three higher levels of the Physical Plane are typically referred to as the Etheric levels in Theosophy and elsewhere; hence Bladon's hyphenated label, Physical–Etheric. Some esotericists refer to the three highest levels of the Mental (Third) Plane as the "causal" levels, including Bladon. That is, in Bladon's schema, the three highest levels of the Third Plane are referred to as Causal, whereas the four lower levels are labeled Mental.
- 3. One might think that Bladon's five stages are equivalent to the Michaelian teachings' five Ages. Thus: Primitive = Infant, Civilized = Baby, Developed = Young, Humanistic = Mature, Enlightened = Old. However, in the text that accompanied the table, Bladon's description of the Enlightened stage, his fifth stage, does not fit the Old Soul description; it fits better with Transcendental and/or Infinite and/or Bodhisattva.
- 4. Bladon's use of the words "semi-conscious" and "conscious" reminds me of some of the things that Gurdjieff said about the two highest Levels of Being, namely that the sixth was "subjectively conscious", and the seventh was "objectively conscious". That fits with the way I revised Bladon's original table.

- 5. Another way to perhaps understand Bladon's use of the word "semi-conscious" is to equate the next stage above one as one's "higher self", or as the residence of one's "soul", of which one is not normally fully aware. Except in the last stage, "Enlightenment", where one is fully "conscious" where one is fully a unitary "Monad", to use Bladon's term, and there is no "semi-conscious" aspect of being.
- 6. The basic idea of Bladon's tabulation is that, as a soul advances through the Ages, progressively more of the consciousness that resides in the highest Self becomes available to the incarnation. There is thus a correlation between the Age of an incarnate soul and its amount of access to consciousness on the planes beyond the Physical. This understanding is fleshed out in subsequent sections and subsections of this chapter.
- 7. Translating some of the things that Bladon says into Michaelese, we could say that the Infinite Soul fragments itself into the Transcendental Soul at its highest level (the high Causal Body of original Michaelian group/MFM), which in turn Fragments itself into Astral Bodies which Michaelian teachings calls Entities (= the Astral manifestation of the Transcendental Soul espoused in MMFM), which in turn Fragment themselves into incarnations that satisfy the need to experience all of life in all seven Ages. The consciousness of the Essence is too great to normally fit into a human, so it must be stepped down and/or broken down into Fragments in order to function on the Physical Plane in a human body.
- 8. According to Bladon's reincarnation cosmology, the "soul" is the high third plane body (what the Michaelian teachings calls Essence?), which is unfragmented. Bladon says that the older the Age, the more the personality while incarnate has access to successively higher planes. Bladon does not say this, but I suggest this phenomenon is thus because the incarnate personality actually has more of the Composites of Essence inhabiting and animating the incarnation. Composites are explained in detail further on.

The following two sources also regard the stages as a progression in the soul's maturation process.

Tessa Lynne and Seven Levels of Progression

Tessa Lynne is a psychotherapist who was counseling a person with Multiple Personality Disorder (MPD), otherwise known as Dissociative Identity Disorder (DID). Various personalities showed up as she was expecting, but then one of the personalities showed up that happened to be the spirit guide of the client. Over a long period of time it told her about what it is like in the spirit world, in the afterlife, and with regard to reincarnation. The story is recounted in her book *The Invisible Choir*. You can read samples of it on the Amazon web page for this book.

I found out about this in the following quotation from a >quora.com< comment in April 2018. The question was asked:

"Do you believe in the spiritual 'theory' that says that souls have ages like 'young souls', 'mature souls', 'old souls', or is it pure nonsense?" There was a reference to Barry McGuinness's Michaelian teachings site in the United Kingdom: >http://personalityspirituality.net/articles/the-michael-teachings/reincarnation-the-35-steps<.

Tessa Lynne gave this answer to the question:

I believe what I was told on this topic by my spirit world sources.* Their explanation differs from what the link suggests. While spirits (souls) do progress from young to mature, their progress is not reflected in their human selves to the extent described in the article. What I was told by my sources differs most strongly in how young spirits are described.

There are seven levels of progression before a spirit attains the level of Master. Those at the first two are referred to as junior or young spirits but it reflects their level of knowledge rather than their "age". Because the influence of a person's spirit is likely to be overshadowed by the personality and behavior of their human self, a young spirit cannot be easily identified by their human characteristics.

Though termed a "young" spirit, the equivalent in human terms of a spirit in their first lifetime would be a young adult rather than a child or teen, and certainly not an infant or baby. Before a spirit attaches to a human life for the first time, they will have existed in the spirit world for several to many decades and will have undergone a progressive, structured process of instruction that often includes shadowing one or more lifetimes. They will be guided to begin with easier lifetimes and then will be watched over and further guided by their mentors.

The other designations given in the article are not "pure nonsense" but they err in suggesting that spiritual progression is highly correlated with the stages of human development. Another error is in the claim that the

lessons of each lifetime correlate with specific human needs or accomplishments. Lessons are more intricate than that. Most are presented over a wide range of lifetimes under increasingly difficult circumstances.

*My sources are two spirits who spoke to me through another person (directly, not channeled). I have written of my experience, and more of what my sources revealed to me, in *The Invisible Choir.*

In the book itself, the spirit guide was quoted as follows:

There are seven levels of status before the Master level. Those at the first two levels are considered junior spirits; five more levels reflect increases in knowledge and ability. Each level requires proficiency in a number of competencies.

Beyond this, there is not much that was said about what we call Soul Age. There was no description of the nature or characteristics of each of the seven levels. Perhaps the "number of competencies" is equivalent to "completed Monads" in the Michaelian teachings.

So, this source confirms what we have seen in numerous other sources: there are seven Ages of the soul on the Physical Plane. But this source did not like the specific characterizations of the seven Ages provided by the Michaelian teachings, saying that what actually happens is a lot looser than that. My own observation is that it is indeed difficult to discern a person's Age — Age is obscured by many other factors as enumerated in previous sections of this chapter of this *History* book — but in the following sections I press on in my attempt to be definitive about what is going on with this significant subject.

There is one more source, independent of the Michaelian teachings, that I know about, that bears on this subject.

The John Christopher Daniels Channeling

There is another source for us to examine in this chapter, in this section, which is independent of the Michaelian teachings. If I had found more, I would have included them here. Please let me know if you know of others.

The following quotation is from the book, *Incarnation and Reincarnation*, compiled and edited by Roy C. Smith, published in 1975. The book consists of extracts of a body of channeled information that its students call the "Loehr-Daniels readings" accompanied by some commentary by the editor. The channeled personality gave itself the name "Dr. John Christopher Daniels", and it had this to say about Soul Age and its part in the reincarnation scheme:

Q.— Now the next question Bob would ask is: Are you and those working with you in giving these readings, are you at a higher state of development, a higher intelligence level, than the earth plane in general?

A.— Yes.

Q.— If so, how far advanced, or how many levels higher?

A.— Well, I could not give that to you in a number. It is a state of advancement. We are not completely out of earth circulation. I have been in earth-living. I have not been in it for some time, but I am returning to it. In the age of the soul as we give it in terms of one being a "young soul," a soul [1] "just beginning earth life," or a soul [2] "well started" or [3] "at the midpoint," [4] "well along," or [5] "nearing the end," one would say [6] I have completed earth-living, returning to earth-living by choice for service, not from any karmic pull or desire of self.

Q.— One of the older brothers among the human family?

A.— Yes, that is a good way to express it.

Q.— Not someone who is in the seventh plane of the seventh realm of the seventh heaven or something?

A.— No. I belong to the human family of souls.

This book as a whole, not just in the quoted text, provides information that is remarkably similar to the Michaelian teachings in its presentation about incarnation and reincarnation. It looks to me as if the source of the information is what we in the Michaelian teachings refer to as a Transcendental Soul, and that this Transcendental Soul is anticipating its reincarnation. This looks to me like evidence that after five Soul Ages, "karmic pulls" are not part of the impetus for reincarnation; rather, the call of "choice for service" is. The reader is reminded that this is a theme documented in several places in this chapter as a description of a Bodhisattva.

Before we get on with the story arc of this journey, let me insert a summary tabulation.

Table of Sixth Age and Seventh Age Personalities

The following table is presented as an easy reference tool regarding the discrepancies in the identification of Transcendental Souls (aka Bodhisattvas) and Infinite Souls (aka Avatars) from various sources. Most of them are Michaelian teachings sources. Those that were new compared to the previous lists are shown in **bold** text.

| | Table 4Mf — SIXTH AGE and SEVENTH AGE MANIFESTATIONS | | | | | | | |
|---------------------------|--|--|--|--|--|--|--|--|
| SOURCE | DESIGNATION | NAMED INDIVIDUALS | | | | | | |
| Meher Baba | Seventh: Avatar | Zoroaster, Rama, Krishna, Buddha, Jesus, Mohammad, Meher Baba | | | | | | |
| (original Michaelian | Transcendental | Ahkenaten, Zoroaster, Socrates, Mohammad, Mohandas Gandhi | | | | | | |
| group) MFM | Infinite | Krishna, Siddhartha Gautama (Buddha), Lao Tsu, Jesus (Christ) | | | | | | |
| José | Transcendental | Mohandas Gandhi | | | | | | |
| Stevens TMH | Infinite | (Amon-)Ra, Krishna, Lao Tsu, Jesus (Christ), Siddhartha Gautama (Buddha) | | | | | | |
| Van Hulle | Transcendental | Mohandas Gandhi, Paramahansa Yogananda , Meher Baba , Hazrat Inayat Khan , Mother Cabrini , Pope John XXIII , St. Francis of Assisi, John the Baptist | | | | | | |
| МТВТ | Infinite | Lao Tsu, Siddhartha Gautama (Buddha), Jesus (Christ) | | | | | | |
| Shepherd | Transcendental | Gandhi, Zoroaster, Mohammad, Socrates | | | | | | |
| Hoodwin JOYS | Infinite | Krishna, Siddhartha Gautama (Buddha), Lao Tsu, Jesus (Christ) | | | | | | |
| Troy | Transcendental | Socrates, Confucius, Mohamed, Zarathustra, Mohandas Gandhi | | | | | | |
| Tolley TLE | Infinite | Ra , Krishna, Lilith , Buddha, Lao Tzu, Jesus | | | | | | |
| José | Sixth: Elder | Gandhi, Mother Teresa, Saint Francis of Assisi, Rumi, Gurdjieff, Seneca, Chief Seattl and others | | | | | | |
| Stevens TYD | Seventh: Master | Jesus Christ, Buddha, Lao Tzu, avatars | | | | | | |
| Barbara | Sixth: Guru | Mohandas Gandhi, John the Baptist, Prophet Mohamed, Socrates, St. Francis of Assisi, Zarathustra | | | | | | |
| Taylor's itstime.com | Seventh: Master | Abraham , Amon-Ra (the Sun God), Siddhartha Gautama (Buddha), Jesus (Christ), Confucius | | | | | | |
| Larry Byram website | Personality Integration | Deepak Chopra, Oprah Winfrey, Andrew Harvey, Jack Kornfield, Corrie Ten Boom, Carlos Castaneda, Dorothy Day, Che Guevara, Dag Hjalmar Hammarskjöld, Herman Hesse, Nikola Tesla, Bertrand Russell, Assen Zlatarov, Daniel Berrigan, Starhawk, Desmond Tutu, Malcolm X, Abraham Maslow, Paul Tillich, Evelyn Underhill, Joseph Campbell, C. S. |--|--------------|--|
|--|--------------|--|

My comments on this table are as follows:

- Over the history of the Michaelian teachings, sources keep adding names to the list of manifestations of the Transcendental Soul and Infinite Soul, or their equivalents as Bodhisattvas and Avatars, or their equivalents as Sixth Age/stage and Seventh Age/stage luminaries. Make of this discrepancy what you will. What I make of it is that we cannot be dogmatic about this subject.
- Some sources omit Transcendental Soul and Infinite Soul manifestations that were mentioned by previous sources. Make of this discrepancy what you will. What I make of it is that we cannot be dogmatic about this subject.
- Some sources put Confucius in the Transcendental Soul category and some put him in the Infinite Soul category. There are other transpositions. Make of this discrepancy what you will. What I make of it is that we cannot be dogmatic about this subject.
- Byram is very much an outlier in his assignment of particular individuals to the Sixth Worldview and
 the Seventh Worldview. The vast majority of those people obviously do not fit the descriptions of
 Transcendental Soul or Infinite Soul, aka Bodhisattva or Avatar. However, one would need to examine
 the biography of each of them few of them are as well known as those identified as Transcendental
 Soul and Infinite Soul to see if they fit the description of Sixth Age Cardinal Inspiration and
 Seventh Age Cardinal Action. I have not performed that scholarly exercise; I would find it an
 interesting endeavor, but other projects are higher on my priority list.
- It interests me that known personages in the present time might be inhabiting the Sixth Age and the Seventh Age of the Ages Septenary. I have some speculation and some theory about how and why this might be the case; see following sections and subsections.

Before we move on to the next section, I have a little summary comment.

Some sources (Stevens, Taylor, Byram) gave names to the Ages that do not reveal their rank on a maturity spectrum, a time sequence. This made sense considering the intended readership. Some sources (Garfield, Newton, Bladon) gave names that do reveal their rank on a maturity spectrum. This made sense considering the intended readership. The point is, that empirical observation of people reveals that there are indeed differences in perception between people in the different categories, but I always keep in mind that it is a *supposition* that they can be arranged in a time sequence, which is based on the proposition that reincarnation is a real thing.

However, these same stages of Soul Age, when recast as levels of psychological maturity, have been discerned empirically by academic psychologists who did careful research over the last seventy years. You read about that in Part One; you can read about it some more in the next section.

Spiral Dynamics and Soul Age

In Chapter 1B in Part One, "Personality Typologies", there is a section that discusses Spiral Dynamics (SD). There you will read that SD, discovered and developed by psychologists and metaphysicians over the last

seventy years, is an analogue to Soul Age (SA). I have learned a lot about SA via a study of SD. Some of that is recorded in chapters in my books *The Tao of Cosmogony* and *The Tao of Relationships*.

How do I love thee? Let me count the ways.

- 1. Recall from the discussion in a previous section of this chapter that the Yarbro contingent often sees people to be as much as one entire SA younger than the non-Yarbro contingent sees the same people. After a study of both SD and SA, it looks to me as if it might be possible to understand that difference, and decide which is more accurate, using the empirically-base SD rather than using channeling (mischanneling?) of people's Overleaves.
- 2. That proposed project is fraught with difficulties, as documented in previous sections and subsections of this chapter on anomalies and ambiguities, but I press on with the following factors under consideration.
- 3. One clue of a possible path to the reconciliation of SD with SA is to note that SD alternates between "Me" and "We" stages all up and down the SD spectrum. In Michaelian teachings/SA terms, this fits nicely with the alternation of Ordinal and Cardinal Levels of each SA respectively. Another possible clue is to note that there are six Tier 1 stages in SD, two Tier 2 stages, then at least two Tier 3 stages. It is said in SD that there is a qualitative difference between the three Tiers according to their numbered divisions. This fits nicely with SA where Tier 1 correlates with the Ordinal Soul Ages, Tier 2 with the Neutral Soul Age, and Tier 3 with the Cardinal Soul Ages, although SD only recognizes the two Tier 3 stages, which fits nicely with the Old Soul Age. The six Tier 1 stages as a group are characterized as "subsistence" levels, the two Tier 2 stages are characterized as "being" levels, and Tier 3 stages are characterized as "global-renewal" levels. This fits nicely with Ordinal Ages, the Neutral Age, and the Cardinal Age respectively. I am somewhat amazed that Clare Graves, the original researcher, was able to sort this SA signal out of the noise of developmental psychology data that he amassed.
- 4. I have yet to see a clear acknowledgment and accounting of the Me/We swing found in SD in descriptions of SA in the Michaelian teachings literature, so I believe that SD adds to the understanding of SA in this case, at minimum. Therefore, it might be that we in the Michaelian teachings need to re-calibrate our perceptions of SA characteristic to conform to SD in a couple of ways. The following event might have been a step in the right direction:
- 5. In the original Michaelian group, Sally was said to be Mid-Cycle Old and Dick was said to be early Level Old. Some twenty three years later they were both "demoted" by a few Levels by the same channel, Sarah Chambers. I can see that, for the purpose of the accuracy of labeling, maybe we in the non-Yarbro branch should all "demote" ourselves to align better with the Yarbro branch.
- 6. With this demotion of label, I would suggest that the Michaelian teachings community in general might be manifesting a Mature Soul way of being for the most part, rather than us being a bunch of Old Souls. Look at all the people asking for channeling about their personal lives, rather than asking for channeling about transpersonal and philosophical and wisdom matters, which is the focus of Old Souls by all accounts.
- 7. The previous item is in keeping with some channeling that is not widely known because it is unpublished. Near the end of her life, Sarah Chambers, prompted by a question from Shepherd Hoodwin regarding the 11% of humanity being Old Souls, channeled on the popularity of the Levels of the Old Soul Ages as follows: "Within the old soul cycle: Fifty-five percent of these souls are first level old souls; thirty-five [percent] are second level. The other ten percent are third, fourth, fifth, sixth and seventh level old souls, with three percent being third level." [06 April 1996] That leaves two percent or less of the 11% of Old Souls on the planet for each of the remaining four Levels. That is a tiny fraction of the human population; not enough to have much if any impact on the masses. It just feels to me as if the Michaelian teachings community is not in such a rarefied class of almost-perfected, fully-formed, well-rounded humans. Just saying. Not insisting.
- 8. For a comparison of SD with SA, study the following table, read the descriptions of the Stages taken from SD literature, and see if it does not re-calibrate your perception of the SA categories just a little bit. Note that in this table, SD somewhat conflates beliefs, values, and behaviors as understood by anthropologists (in regard to social-cultural evolution over the span of human pre-history and history), with personality traits discovered by academic researchers in the field of developmental psychology. Graves said that his work covered "bio-psycho-social" development, thus "biology-

- personality-culture". SD does not address the evolution of the soul because that is not a part of its belief system. Even so, Michaelian students can see the parallels of SD stages with Michaelian teachings Soul Ages.
- 9. Note that, according to the Michaels, the younger the soul the more the personality can be imprinted by the culture it is born into and influenced by, but the older the soul, the more resistant the personality is to imprinting by externalities. This means that younger souls born into cultures more advanced than they are on the maturity spectrum will appear to be older souls than they actually are. Therefore, in my view, the Soul Ages should be described with words synonymous with the foundational, archetypal Septenarian Attributes, rather than with anthropological and cultural terminology as is done in SD. These pure descriptions of Soul Ages are thereby uncontaminated by intrusions, distortions from imprinting, aka False Personality.

| | Table 4Mg — SPIRAL DYNAMICS STAGES and SOUL AGES | | | | | | | | | |
|------|--|---|-------------------|---------------------|------------------|--|--|--|--|--|
| TIER | COLOR | DESCRIPTION | LEVEL | SOUL AC | GE | | | | | |
| | Teal | TRANSPERSONAL/COSMO-CENTRIC This level is anticipated to appear in humanity in cultures and societies in the distant future. At this time it is too rare in people and populations to characterize using Spiral Dynamics terms. Not surprising considering that channeling says there are so few late Old Souls. | Late "We" | OLD | C A R D | | | | | |
| 3 | Coral | POST-INTEGRAL/CONSOLIDATING/GLOBAL/UNIFIED The emergence of this stage, which is focused on personal considerations, is anticipated by forward-looking transpersonal psychologists/philosophers/metaphysicians who are familiar with SD thinking and wish to extend it a level or two, such as Ken Wilber. | Early "Me" | Holism | I N A L | | | | | |
| 2 | Turquoise | HOLISM/EXPERENTIALISM/COLLECTIVISM: "Life is an evolving interactive whole." Motivated to help everything connect together into a single, dynamic organism with its own collective mind. Self is both distinct and blended part of a larger, compassionate whole. Holistic, intuitive thinking and cooperative actions are expected and promoted. | Late "We" | | | | | | | |
| 2 | Yellow | INTEGRATIVE/SYSTEMIC/AUTONOMOUS: "Life is learning and continual change." Motivated to understand the complexities of life. Regards material possessions as less important than learning. Flexibility and functionality in the long term becomes highest priority. Weaknesses and differences are expected and integrated into independence. | Early "Me" | T R A L | | | | | | |
| | Green | RELATIVISTIC/SOCIO-CENTRIC/EGALITARIAN: "Life is community and precious." Motivated to free society from greed, dogma, selfishness, and divisiveness. Needs to prioritize feelings, sensitivity, and caring. Knows earth's resources are limited and precious and should be shared equally. Believes all decision should be made collectively. | Late "We" | YOUNG | | | | | | |
| | Orange | MATERIALIST/ACHIEVER/TECHNOLOGICAL/STRATEGIC: "Life is what we have and own." Motivated by risk-taking, competition, status and image. Self-reliant people deserve success. Societies prosper through strategy, technology, and competitiveness. Earth's resources should be used to create and spread the abundant good life. Manipulative. | Early "Me" | Mater- ialism | | | | | | |
| 1 | Blue | PURPOSEFUL/AUTHORITARIAN/ABSOLUTISTIC/SAINTLY: "Life is God's Will and Law." Sacrifices self to the Cause, the Truth, the Path. Motivated by following constitutions and commandments. Believes following statutes produces good society now and reward will be in the future. Impulsivity is controlled through guilt. Children should be taught obedience. | Late "We" BABY | | O R D I | | | | | |
| | Red | IMPULSIVE/EGOCENTRIC/EXPLOITIVE: "Life is a battleground and I need to win." Sees the world as a jungle full of threats and predators; Seeks to be free of domination or constraint. Expects everything but appreciates almost nothing. Enjoys self to the fullest right now without guilt or remorse. Keen to beat, conquer, out-fox, and dominate others. | Early "Me" | Tradition- alism | N A L | | | | | |
| | Purple | TRIBALISTIC/ANIMISTIC: "Life is in the lap of the gods." Obeys the inherited religion and superstitious signs. Shows blind allegiance to authority figures. Individual subsumed in group. Preserves sacred objects, places, events, and memories. Observes rites of passage, seasonal cycles, and tribal customs. | Late "We" | INFANT Primi- | | | | | | |
| | Beige | INSTINCTIVE/SURVIVALISTIC: "Life is a struggle for survival." Very limited self-awareness. Automatic existence. Uses instincts and habits to survive. Food, water, warmth, sex, and safety have priority. Forms into survival bands to perpetuate self. | Early "Me" | tivism | | | | | | |

My comments on this table are as follows:

- The table is arranged so that the most primitive stage and Age are on the bottom and the most advanced stage and Age are on the top. This direction of stratification is meant to graphically depict that "higher-later" stages or Ages are built on, and are inclusive of, the foundations of the "lower-earlier" stages and Ages. This factor is recognized and declared in both SD and the Michaelian teachings.
- TIER the first column: Pioneering SD researchers only recognized Tier 1 and Tier 2. Some time after the original formulation, some people who had a transpersonal perspective added Tier 3. There is a qualitative difference between the Tiers: Tier 1 is characterized by individualism and elitism; Tier 2 is characterized by humanitarianism and collectivism; Tier 3 is characterized by transcendentalism and

- cosmo-centrism. This makes for an obvious correlation with Ordinal Ages, the Neutral Age, and the Cardinal Ages that are shown in the right-most column.
- COLOR— the second column: These were assigned to the stages by SD formulators as shorthand appellations, to facilitate communicating efficiently with each other about this subject. There is an alternation of colors up the rainbow spectrum: Beige, Red, Orange, Yellow, and Coral are the "Me" colors; Purple, Blue, Green, Turquoise, and Teal are the "We" colors.
- DESCRIPTION the third column: The phrases most relevant to personality characteristics were borrowed from various SD sources. SD descriptions are typically far too dependent on observations of the evolution of cultures and societies over the course of pre-history and history. I believe they would do well to learn from the Michaelian teachings understanding of how the Soul Age of individuals is not determined on the culture in which they live.
- LEVEL the fourth column: These are the Levels within each Soul Age according to the Michaelian teachings, divided into "early", aka Ordinal, Levels and "late", aka Cardinal, Levels. This correlates with the "Me" and "We" stages of Spiral Dynamics. By now, this far into this book, the reader should understand the reason for this correlation of Me with Ordinality and We with Cardinality.
- SOUL AGE the fifth column: The customary names of the Soul Ages are shown in all-capital letters, and my names for the "Worldviews" are shown in lower case letters.

So, Spiral Dynamics is the next-to-last of the various teachings, that are analogous to Age, to be addressed in this chapter. With the next section, I begin to attempt a synthesis and a resolution of some of the various mysteries about Age that are extant in the Michaelian teachings.

Older Souls in Kabbalah

Sections on components of Jewish Kabbalah have appeared in two previous chapters in this book, Chapter 1A, "The Seven Planes", and Chapter 1E, "The Seven Soul Ages", both in Part One; review those if you need to refresh your memory of what Kabbalah is all about. In this section, I repeat a little bit of what was said in Chapter 1E because it is relevant to this chapter. The very short summary of Chapter 1E is that Kabbalah recognizes five levels of the soul for certain, and perhaps two levels above those can be identified, making a total of seven.

In the quotations below, the *italicized* words are Hebrew words transliterated into the Roman alphabet. <u>Underlined</u> words within the quotations are my emphasis, to call attention to correlates with features of the Michaelian teachings. Also included are some explanatory words or phrases in [brackets], and I have inserted some commentary, interspersed between quoted passages.

The following series of quotations is from the book, *Does the Soul Survive?* — A Jewish Journey to Belief in Afterlife, Past Lives, and Living With Purpose (DTSS), which I highly recommend. Written by Rabbi Elie Kaplan Spitz, it was first published in 2000 and a second edition, which I own, was published in 2015.

• *Ibbur* = "impregnation". In Lurianic kabbalah, the term for <u>visiting souls taking up residence in someone's body</u>. An *ibbur* may achieve <u>soul repair</u> through the deeds of the host person and may provide muse-like guidance to the host. [DTSS, p. 230]

Note that the relationship of an *ibbur* to its host is mutually beneficial. The reference to "soul repair" is explained in the book to refer to what we call "karma" and "monads". My correlation of *ibbur* with the Michaelian teachings is that kindred souls can more or less inhabit and augment the incarnation of a close kindred soul in the older Ages. This is not generally recognized in the Michaelian teachings community, but it was so stated in the transcriptions of the original Michaelian group; this will be reviewed in the section on "To Understand Composites" further on in this chapter. The Kabbalistic concept of *ibbur* is the most important point that I want to draw attention to in this section because it has a correlate in the Michaelian teachings that is relevant to this chapter; more is said about it below.

The *ibbur* takes up residence in not just anyone's body, it is the incarnate body of a kindred soul. Kabbalah teaches that souls come in families, just as is stated in the Michaelian teachings and other spiritual teachings:

<u>Souls divide themselves into families</u>, Luria emphasized, as if people travel across time in groups, which Brian Weiss has also found to be the case. At the same time, within a family unit soul sparks generally come from different <u>body parts</u> of *Adam HaRishon*, enabling complementary personal and spiritual qualities. Two or more

people could also simultaneously possess soul <u>sparks</u> that emerged from the same previous incarnation. [DTSS, p. 89]

As explained in Chapter 1E, Adam HaRishon is the Adam of the Bible. His body supposedly contained the "sparks" of all human souls that would ever live thereafter. In Michaelian terms, as we all know, different sizes of soul relatedness in "families" are referred to as Greater Cadres, Cadres, Entities, Sides, Greater Cadences, and Cadences. In my terminology, I equate Adam HaRishon with what I refer to as the Oversoul, which is the unfragmented primogenitor of all human souls. Each Fragment is metaphorically a 'cell' in the body of the Adam HaRishon, aka the Oversoul, and 'families' of cells are 'tissues' and 'organs' in the body. In metaphysical terms, successively larger 'tissue' and 'organ' systems are reassembled on successively higher levels of successively higher planes. In the next section, I introduce the notion that the reconstitution of soul families begins on the Physical Plane with ibburim, and is completed on the two planes beyond the Physical Plane.

There is special category of *ibbur*:

• Tzaddik = "righteous one". Used both as the term to describe a pious individual (often used in the Hasidic community as a term for their rabbi) and, in Lurianic kabbalah, a person whose soul is complete. [DTSS, pp. 229–233]

More is said about *tzaddiks* further on. They have a possible correlation with what is referred to as the Transcendental Soul in the Michaelian teachings, and with *Bodhisattva* in Buddhism. The concept of *tzaddik* is the second most important point that I want to draw attention to in this section because it has a correlate in the Michaelian teachings that is relevant to this chapter.

Now here is where the DTSS narrative gets especially relevant to the Soul Age perspective:

[Rabbi Isaac] Luria [1534–1572 CE, considered to be the greatest Kabbalist in history] offers a path other than reincarnation for a soul to return to the human plane. A soul from a previous life may return as a temporary visiting soul, in Hebrew an *ibbur*. An *ibbur* will choose to inhabit a person whose foundational sparks are derived from the <u>same body part</u> of *Adam HaRishon* as his or her own. The visiting soul may gain the merit of a specific *mitzvah* performed by the host body that is needed to complete the *ibbur's* soul. When the mission is completed, the visiting soul returns to his or her source in the spirit realm. [DTSS, p. 86]

There are two ideas to correlate here with the Michaelian teachings that are pertinent to a certain understanding or interpretation of Soul Age that I present further on: 1) There is a dominant Fragment in each incarnation, but more than one member of one's soul family can inhabit the same body as a subordinate fragment, an *ibbur*; 2) the completion of Monads (*mitzvah*) accomplished by the dominant Fragment can benefit the subordinate Fragment; 3) the arrangement is mutually beneficial because the subordinate Fragment provides inspiration and other assistance to the dominant Fragment; more on this phenomenon below

The visiting soul of a *tzaddik* (a spiritually complete person) is a second type of *ibbur* identified by Luria. The *tzaddik* is selfless and can return a thousand times. This is comparable to the Mahayana Buddhist concept of a *bodhisattva*. The *bodhisattva* is an enlightened being who is exempt from the laws of reincarnation and returns to the world to commiserate with others and to help them. A *tzaddik-ibbur* provides muse-like inspiration, aiding the host to elevate his or her soul, which facilitates the return of holy sparks to the body of *Adam HaRishon*. [DTSS, p. 86]

The *bodhisattva* is discussed in previous sections, and there it is identified as a potential equivalent of the Transcendental Soul of the Michaelian teachings. Kabbalists believe that Isaac Luria was a *tzaddik*, and in the enlarged definition of a Transcendental Soul that I present below, I would agree with them, based on descriptions of his psychic and mystic abilities.

So, if there is the functional equivalent of a Transcendental Soul in Kabbalah, is there a functional equivalent of the Infinite Soul? Yes there is; so far as I have been able to discern in my investigations, it is *mashiach*, based on descriptions such as found here: >https://en.wikipedia.org/wiki/Messiah<. It is a bit of a stretch from the description of the Messiah to the notion of the Avatar in oriental religions, a full embodiment of divinity in a human, but it is the closest that I have found in Kabbalah. Ideas similar to messianism are found in Hermeticism, Gnosticism, Christianity, and even in Greek philosophy.

There are components of the Michaelian teachings story that are not as clear as I would like them to be, and the Kabbalah story is an introduction to those unappreciated components. That is, the *ibbur* phenomenon and the *tzaddik* phenomenon and the *mashiach* phenomenon, or something like them, contribute to my suggested

clarifications and reconciliations of ambiguous and discordant components of Soul Age that have been documented in previous sections of this chapter.

For your convenience, here is a table showing the correlation of the soul stages of Kabbalah with components of the Michaelian teachings, including Soul Age:

| | Table 4Mh — KABBALAH CORRELATIONS with MICHAELIAN TEACHINGS | | | | | | | | | |
|-----------|---|-------------|------------|--------------|-------------------------------|----------------|------------|--|--|--|
| DIALECTIC | ORDINAL NEUTRAL CARDINAL | | | | | | | | | |
| AXIAL | ACTION | INSPIRATION | EXPRESSION | ASSIMILATION | EXPRESSION INSPIRATION ACTION | | | | | |
| SOUL AGE | Infant | Baby | Young | Mature | Old | Transcendental | Infinite | | | |
| GILGUL | Nefesh | Ruach | Neshama | Chaya | Yechida | Tzaddik | Mashiach | | | |
| GILGOL | "Life Force" | "Spirit" | "Soul" | "Living" | "Singular" | "Righteous" | "Anointed" | | | |

My comments on this table are as follows:

- DIALECTIC: The first row shows the Dialectic Attributes, a structural feature of the Overleaf System.
- AXIAL: The second row shows the Axial Attributes, a structural feature of the Overleaf System. Combine the Dialectic Attributes with the Axial Attributes and we get the Septenarian Attributes.
- SOUL AGE: The third row shows the names of the Soul Ages as they were originally given to the original Michaelian group. After the original Michaelian group, there has been a significant change in the names and natures of the sixth and seventh Ages; much of that is covered in this chapter.
- GILGUL: The fourth row shows the Hebrew names of the stages of the soul's development, and their English translations. Gilgul is the Hebrew word for reincarnation. In Kabbalistic thinking, these are both stages of the soul's psycho–social–spiritual development during a lifetime (called "Life-Stages" in my parlance), and the stages of the soul's development during many lifetimes (called Soul Age in the Michaelian teachings).

The next section begins to presents my resolution of many of the issues that have appeared in previous sections of this chapter.

Wittmeyer's Analysis and Synthesis

In previous sections we have covered the discrepancies among various sources in detail, and I have attempted to reconcile them as much as I can. In this section we will look at evidence and arguments from a different source. So far as I am concerned, the Process/Aspect System has become the interpretive tool that I apply to a certain class of issues that one encounters in the Michaelian teachings, namely Septenarian discrepancies, and Age is certainly in that realm. It is a tool for cutting out the dubious bits that we find in the systematic part of the Michaelian teachings, and for systematizing what remains into a coherent structure of broad and deep understanding. The Process/Aspect System tool cuts through the discrepancies and errors that presently encumber a number of the systematic components of the orthodox Michaelian teachings. All of my books are to some extent built on the Process/Aspect System framework of interpretation. In my view, the Process/Aspect System is not just a dogma–doctrine that replaces another dogma–doctrine; it is built from fundamental principles — logic and mathematics and physics — as explained in my other books. I did not invent this tool; I discovered it. Therefore I regard it as more authoritative than any channeling when it covers the same territory as channeling, because channeling has proven to be inadequate. Mathematics and science are *exoteric* sources for getting to the bottom of things.

Second to the Process/Aspect System as a tool for understanding, I have also looked to *esoteric* sources of information outside the Michaelian teachings, and so far I have found several that bear directly on the subject, as presented in previous sections and the chapter on Soul Age in Part One. I have taken them into consideration in my attempt to synthesize a reasonable solution to the issues.

Even after examining considerable exoteric and esoteric resources that bear on the subject of Age, I am left with a number of questions, as we see toward the end of this section.

From the time I first studied *Messages from Michael* beginning in 1981, I noticed that the alleged five Ages of soul evolution on the Physical Plane broke the tidy pattern of the other Overleaf categories, which consist of seven Overleaves. There were said to be these two anomalous categories, Transcendental Souls and Infinite

Souls, that were not a part of the soul's evolution, to fill out the pattern of sevens used in explaining the other Overleaves, but the Transcendental Soul and Infinite Soul are obviously anomalous. Apparently Yarbro thought the same thing, so in *More Messages from Michael* (1986), she declared that the Astral and Causal Planes were the final two stages of the soul's evolution; refer to the section above where we review her books. (She also moved to a slightly different presentation on the Transcendental Soul and the Infinite Soul.) At the time, I accepted this as an improvement and a clarification, and felt comfortable enough with it for the next decade or two that I did not question it. Others in the Michaelian teachings community — those who trace their Michaelian teachings community lineage from the original Michaelian group through Briggs and Van Hulle — did not adopt it; they retained the original understanding, as shown on their Overleaf Charts.

Starting in the late 1990s, I became aware of some of the work of Stevens, Taylor, and Byram regarding their presentations of Age; you read about their views in previous sections. In making presentations to non-Michaelian students, they had incentive to depart from the Michaelian teachings orthodoxy; otherwise they would have had to explain the departure from the pattern of sevenness that exists in the other personality factors, and there was no other reasonable explanation except "Michael says", which is not an explanation; it is just a dogma–doctrine that most take on "faith". Then as more years went by, I also discovered that several sources outside the Michaelian teachings — Bailey, Baba, Garfield, Newton, Lynne — also proposed seven Ages of evolution on the Physical Plane. Pushed by the accumulation of this evidence, I finally, in the 2000s, tipped over to the understanding presented in this section. That understanding is: generally speaking, that all seven Ages are experienced on the Physical Plane in one way or another. The question yet remaining in my mind has to do with the details of the ways this is accomplished, because of the defects and deficiencies in the sources of information.

Personally, I do not have a strong feeling about this Age subject as I do about some other realms where I have departed from the Michaelian teachings mainstream or settled on a particular variation, but I am leaning in the same direction as these other sources. That is to say, evidence and arguments favor the notion that in most cases all seven Ages are experienced on the Physical Plane before a soul can totally "graduate" from the Physical Plane to the Astral Plane. The evidence and arguments are presented in the following subsections.

The Consistency Argument

My argument with regard to Age is based on the idea that consistency is to be preferred over inconsistency. If something is not consistent, then it begs an explanation; if Age is not consistent with Life-Stage and Level and plane, then I believe that we should ask why. I have not been able to come up with a reason, nor have I seen someone else who has a reason why Age should not be consistent with the other Overleaf Septenaries. If someone were to claim that the compelling desirability to incarnate ended with the fifth Age, my preference is that that person should provide an explanation for the assertion; it should not be accepted as an arbitrary dogma–doctrine.

On the matter of the Levels within the Ages, we have an explicit assertion in MFM, p. 218:

It should be noted here that if this process [of going through all seven Life-Stages] is interrupted during a lifetime, for instance by violent or early death from illness, the fragment rarely advances a level. A fragment can usually advance through a level of experience only by going through the entire process [of a full lifetime]. Because of this, a fragment will sometimes require two lives of a very similar nature to complete the [seven Internal] Monads [aka Life-Stages].

This passage is generally interpreted to mean that a soul normally transits all seven Life-Stages in one lifetime before it advances to the next Level in the next lifetime; "acceleration" — where a person advances a Level or Age within a lifetime, as discussed in a previous section — is a rare phenomenon. Based on this principle, it would make sense that a soul normally transits all seven Levels before it graduates to the next Age. This is in fact the undisputed understanding in the Michaelian teachings community. For consistency's sake, it would make sense that a soul normally transit all seven Ages before it graduates from the Physical Plane, and also experience all seven Levels within all Seven Ages, and all seven Life-Stages within each of those Levels. I have not (yet) seen a good explanation why this consistency would not be the case.

It was stated above that a lifetime is not complete unless all seven Life-Stages are experienced and assimilated. It would be consistent if the same were true with progress through the Levels and Ages and planes. The reason for this is the nested fractal structure of all of creation. That is, planes are a subset of the creation, Ages are a subset of planes, Levels are a subset of Ages, and Life-Stages are a subset of Levels. They all have

the same Septenarian structure, and therefore it makes sense to say that the soul cycles through all of them in sequence during its experience.

With respect to planes, the Ages are said to be a subset of the seven planes, and the planes themselves are structured per the Septenary; refer to chapters on planes in this book, one in Part One and one in Part Four. For the same reason that one must allegedly complete a Grand Cycle through all of the planes before starting another Grand Cycle, for the sake of consistency, it makes sense that a soul must complete the seven Ages before graduating to the next plane.

The consistency argument leads naturally to the completion argument:

The Completion Argument

It is said in the Michaelian teachings that the purpose of reincarnation is to come to a complete understanding of the Physical Plane. The channeled information reviewed in sections above all seems to agree on the necessity to complete all seven Ages, but there are disagreements about *where* and *how*. Here are some quotations from the original Michaelian group transcriptions that seem to confirm the necessity to complete the reincarnation Cycle, one way or another:

Do we change sex upon reincarnation?

[Yes.] You <u>must</u> experience the Fragments of your Entity from all dimensions. [*SJC*, 12 August 1973] Notice the use of the word "must" here, and in the next answer.

Someone asked whether it was necessary for us to experience life in all of the various Body Types.

Yes, you <u>must</u> complete the Cycle. It is important that you experience life from all of the vantage points. [SJC, 22 September 1973]

Can we assume then when the Entity is reintegrated, it has experienced everything there is on the Physical Plane?

It has experienced all of life, yes. Each Fragment does not need all experiences, but most Fragments choose to experience all of life. [S/C, 06 October 1973]

Notice the "choice" exception to the general rule.

We can live over and over the same type of vocation in many cycles.

It is not necessary to change the particular vocation as much as the location in order to experience all of life. For instance, being a physician on mainland China does in no way resemble being in practice in Vallejo, California. [SJC, 06 October 1973]

Entire Entities are cast from the Tao. They Fragment into physically trapped souls for <u>as long as is necessary for them to experience all of life through the Cycles</u>. [S/C, 08 October 1973]

Here and there in the Michaelian teachings it is said that there are rare exceptions to the normal regular and systematic progress through a lifetime and all lifetimes on the Physical Plane, such as in the cases of "acceleration" mentioned in a previous section, or a soul completing some karma or Agreement or Monad on the Astral Plane, also in a previous section. According to that channeling, the cases of acceleration and of completing the curriculum as 'GED', so to speak, are rare cases. To my way of thinking, the complete understanding of the Physical Plane would not normally be complete without fully experiencing the perspectives of Cardinal Inspiration and Cardinal Action, the Sixth and Seventh Ages, while on the Physical Plane. Yarbro's proposal that the sixth and seventh Ages are experienced on the Astral and Causal Planes — beyond the Physical Plane — complies with the principle that souls must complete the full Septenary of seven Ages in order to 'graduate', but, as we have seen, in the opinion of others inside and outside the Michaelian teachings community, this may not be the correct or the complete solution.

The essence of the completion argument is that, yes, we are evolving Fragments in terms of the Physical Plane and our experiences here are partial, but in terms of the planes beyond the Physical, our wholeness is already complete in what I refer to as the Oversoul, and that some refer to as the Monad. It is said, and it makes sense to me, that most Fragments chose to come to a complete understanding of the Physical Plane while incarnate on the Physical Plane; *how* they do that is what I am trying to figure out.

The completion argument leads naturally to the symmetry argument:

The Symmetry Argument

The Levels and the Ages and the planes have the same Septenarian structure as the Life-Stages. That is, they all have three Ordinal stages, a Neutral stage, and three Cardinal stages. Refer to the chapters on those subjects in my book *The Tao of Cosmogony*.

The symmetry between the Ordinal and Cardinal Ages is itself a type of Monad. For a more detailed explanation of the Dialectic Principle, refer to the chapter on Monads in my book *Study Papers on the Original Michaelian Group*. The Monads are created in the primordial fragmentation of Tao into polarized components of Ordinal and Cardinal. An example of this is the Axial pairs in the three dimensions of Expression, Inspiration, and Action, thus: Sage and Artisan, Priest and Server, King and Warrior. Completing Monads is said to be the "purpose of life":

Is the number seven important, as important as has been implied through automatic writing?

Yes, but so are other odd numbers. These point to the yin and the yang, and the completed Monad in the center. Seven is important to those on the Physical Plane. [S/C, Mid-September 1973]

There must also be an antithesis [to the thesis] to complete the Monad. [S/C, 18 September 1973] If the Personality can take leave long enough to consider the task of the soul, then this will be clear. The task on the Physical Plane is to experience "all of life." Many Monads are not completed for many centuries. Others must be completed before the soul can perceive at a higher Level of Being. [Completing] The Monads are the only 'reason to be' that we know of. [S/C, 17 March 1974]

The phrase most often connected with the word Monad in the original Michaelian group transcriptions was some variation of "complete the Monad"; refer to the previous subsection, "The Completion Argument". It is when the soul experiences the Cardinal Ages that the Ordinal Ages are completed — Assimilated. Without the experience of these Cardinal Ages during incarnation on the Physical Plane, the experiences of the Ordinal Ages would not be "balanced"; that is, understood mentally, transcended emotionally, and unified behaviorally; the Monad of Cardinal and Ordinal Ages would not be completed unless all seven stages of the Ages Septenary were experienced. This is commonly understood in the Michaelian teachings community to be the case with the Septenarian subset of the Ages called Levels, and the Septenarian subset of the Levels called Life-Stages, and the Septenarian superset of the Ages called planes in the Grand Cycle. Therefore, it makes sense to apply that principle to the Ages. If it is otherwise — if reincarnation ends with the Fifth Age — then we have yet to see an actual *explanation* from any source that I know of.

As discussed elsewhere in this book (in chapters on the seven planes), it appears that in the original Michaelian group, the three higher (Cardinal) planes were referred to collectively as "Buddhaic". In subsequent Michaelian teachings communities, this was subdivided into three Cardinal planes. It was obviously not the intention in the original Michaelian group that the "Old Soul" Age be regarded as a conflation of the three final stages of incarnation on the Physical Plane, but I suggest that we should seriously consider doing so now. I use "Senior" as the name of the Fifth Age, "Elder" as the name of the Sixth Age, and "Ancient" as the name of the Seventh Age. Others have chosen other names, but the Attributes of these Ages are still Cardinal Expression, Cardinal Inspiration, and Cardinal Action respectively.

If this division of "Old Soul" into three Cardinal Ages is an accurate perception on my part, then I suspect that this understanding could be potentially used to unify the divergence of opinion among contingents of the Michaelian teachings on what constitutes and characterizes "Mature" and "Old" souls. There has been a difference of perception between the Yarbro contingent and the non-Yarbro contingent: the Yarbro contingent consistently maintains that the non-Yarbro contingent "inflates" soul Age, identifying many "Mature" souls as "Old" souls. A lot of this might be semantic: perceiving and labeling. It may be that a lot of "Old" souls according to the non-Yarbro contingent are actually "Senior" souls, and a lot of the "Mature" souls according to the Yarbro contingent may be "Senior" souls. (In this scheme there still are not that many Sixth Age "Elder" souls, or Seventh Age "Ancient" souls, as has been said of "Transcendental" and "Infinite" souls.) This semantic distinction actually affects me, in the sense that a couple of members of the Yarbro contingent perceived me as "Mature" (another two members of the Yarbro contingent perceived me as "Old"), and the non-Yarbro contingent sees me as "Old". I would say that I am "Senior", along with a lot of other Michaelian students. In this scheme, Sixth Age "Elder" souls are more advanced and more otherworldly than the typical Michaelian student, corresponding as they do to the Priest Role. In this scheme, Seventh Age "Ancient" souls are even more advanced because they have finally mastered the Physical Plane, corresponding as they do to the King Role.

Let me put this another way.

If in fact all seven Ages are normally conducted on the Physical Plane as part of the usual soul maturation process, it would perhaps solve what I perceive as another problem: what the non-Yarbro contingent perceives as "Old" Souls the Yarbro contingent apparently perceives as "Mature" Souls. I think this discrepancy could potentially be reconciled if what we call the "Old" Age was a conflation of the three Cardinal Ages. Garfield names these Cardinal Ages "Mature — Old — Volunteer". Stevens names them "Philosopher — Elder — Master". I name them "Senior — Elder — Ancient". Michaelian students are typically in the "Senior" (philosophical) category, correlating with the #5-Sage. The "Elder" souls, correlating with #6-Priest-ish, are those who are much more intense about their own, and other-self, enlightenment and transcendence than the typical Senior Soul. In the extreme case this could include the spiritual elders and genuine gurus on the planet, perhaps still working out some karma, Monads, and Agreements, but mostly they serve as teachers who inspire changes in large groups of spiritual aspirants. So far as I can tell, there are not any of these Elder souls in the Michaelian teachings; their reach is much larger than our little coterie. Garfield names the last Age in her system "Volunteers", and this might equate with Bodhisattva in her system, those who have actually mastered the Physical Plane but come back anyway. This is not my preference, however. As I said above, I don't have a strong conviction that the scheme presented in this subsection is correct, but I prefer that the Seventh Age (#7-King-ish) be the abode of souls still learning about the Physical Plane — as a matter of expedience to complete the 'curriculum' even if reincarnation is not a necessity in that Age. And they are very much energized to be teachers, leaders, and activists; they provoke changes in behavior in large groups of

Let's look at each of these proposed last three Ages in more detail.

The Cardinal Ages

Because the Ages are a Septenary, for a theoretical understanding of the Cardinal Ages, we should look at their Septenarian Attributes: Fifth Age = Cardinal Expression, Sixth Age = Cardinal Inspiration, and Seventh Age = Cardinal Action. To understand them from this angle should inform us about the story arc of reincarnation at least as much as empirical observations of people who might fit into these categories, and at least as much as Michaelian teachings dogma–doctrine, considering the ambiguities in the former and the contradictions in the latter.

There are two ways of naming the Ages. The first way is what could be called the "maturity spectrum", which is the common way it has been done in the mainstream Michaelian teachings. Each Age has a name that characterizes where it is on the spectrum. I refer to this as the *relative* convention; this is the Ordinal way of the job. The second way was used by Stevens, Taylor, and Byram when they tailored their presentation for the purpose of mainstreaming the ideas to a non-metaphysical audience; that way is to name the categories after their primary characteristic. I refer to this as the *absolute* convention; this is the Cardinal way of doing the job. I do it both ways. I have two versions of the Overleaf Chart, one I call Time Structure and one I call Space Structure. In the former I show the Ages in the maturity spectrum, with the names Infant, Child, Young, Mature, Senior, Elder, Ancient. In the latter I show the main characteristic of the Worldviews without implications of placement on a maturity spectrum: Primitivism, Traditionalism, Materialism, Collectivism, Holism, Transpersonalism, Messianism. There is a thorough description of all seven Worldviews in my book *The Tao of Personality*, but following is a brief introduction to how the three Cardinal Ages might manifest if my scheme is accurate:

The Fifth Age, a manifestation of Cardinal Expression, is an Aspect of the Synthesis Process. It is about developing an integrated, philosophical overview of life in the world. It builds on the Scholarly data-collecting of the Fourth Age, aka Mature Soul, which is an Aspect of the Neutral Assimilation, Combination Process. As I see it, the Fifth Age is not necessarily a completion of the reincarnation Cycle; it is just another stage/phase on the way to completion as the first stage in the Cardinal Ages. Part of it is looking in the rearview mirror to see where one came from, and then coming to a philosophical understanding of the whys and wherefores — what did it all mean? It counterbalances the wild and woolly worldly experiences of the Young Age, which is a manifestation of Ordinal Expression, an Aspect of the Analysis Process. The Fifth Age is about tying up loose ends of what may be called Expression Karma, the unfinished business created in the Young Age. Like the Fifth Life-Stage and the Fifth Level, the Fifth Age is about burning Ribbons of a mental nature, therefore seeing the big picture, and about acceptance of self and other. The Fifth Age is "Three-dimensional" (like the Sage with its three "Inputs") in that there is a dichotomy between inside and outside, interiority and exteriority. Whereas

Third Age people are all about living in the world, the externalities of life, Fifth Age people are interiorizing all their previous lifetimes. The emanation of souls at this level is Truth.

The Sixth Age, a manifestation of Cardinal Inspiration, is an Aspect of the Evolution Process. It is a stage in the process of disentangling from the Physical Plane in the sense that it burns Ribbons of what may be called Inspiration Karma, but it does not really step outside of the Physical Plane. Rather, it is about the development of compassion for self and other — empathetic engagement. This Age does give one a transcendent overview of life in the world, a higher perspective, above it all, beginning to look beyond, but not yet disengaged. It is "Two-dimensional" (like the Priest with its two "Inputs") in that there is still the duality of higher versus lower that is being experienced, and ultimately assimilated. The emanation of souls at this level is Love for all. I liken this to singing in harmony with all others, as a heavenly choir of angels is said to do. This is similar to what is said about Sixth Level Old "Magnetic" Fragments, only far more so. The "magnetism" of Sixth Age souls draws other souls to them; they naturally tend to attract a following. Spiritual aspirants, who are seeking a quru to empathetically emulate, do well to find someone who is in the Sixth Age.

The Seventh Age, an Aspect of the Origination Process, is Cardinal and One-dimensional Action. It is all about uniting all of the dualities into a unity; hence burning all karmic Ribbons, completing all Monads, fulfilling all Agreements with others, experiencing all of life. This is the final burning of what may be called Action Karma Ribbons. In less Michaelese language, this Age is about tying up all the loose ends of "self"karma (the stuff one needs to experience in order to be a whole and complete person) as well as negative karma with other souls. This is a type of assimilation and inculcation which is not the same as the Assimilation of the Neutral Process (Fourth Age), or the integration of the Synthesis Process (Fifth Age), or the harmonization of the Evolution Process (Sixth Age); it is just the taking of the final steps on the path. It makes sense that most souls would do this on the Physical Plane before graduating from the Physical Plane, but if the channeling on the subject has any merit, then perhaps some if not all of it can be accomplished on the Astral and Causal Planes without incarnation; it just takes 'longer' and is more difficult. Or perhaps it can be accomplished en masse, as the manifestation/incarnation of a Composite Body (see below). The emanation of souls at this level is Energy, so when Seventh Age souls are in their emanation mode, they give others a strong 'booster shot in the arm' to help them 'get their act together'. Whereas a Sixth Age person's effect on others is 'magnetic', a seventh Age person's effect on others is 'electric'. If one were to encounter a Seventh Age person, they would be 'shaken to the core', and 'galvanized' to take action.

These descriptions of the Cardinal Ages are informed and bolstered by the several other sources mentioned in previous sections, that agree with this thesis to some extent or another.

General Comments

If the Michaelian teachings community had been given this understanding — that the Sixth Age and the Seventh Age are experienced on the Physical Plane — from the beginning, all these years we would have interpreted what we see in the world according to that scheme. Yes, this involves what is called "confirmation bias" — you see what you are looking for — but the converse is that we have not seen what we have not been looking for, because we were not told that it exists. However, Stevens, Taylor, and Byram found the five-Age idea inadequate, then looked for, and have seen, the Sixth and Seventh Ages but not necessarily as Transcendental and Infinite Souls. You could start looking now if you have become convinced there might be something to this idea. The arguments presented above indicate that the idea makes sense on theoretical grounds; I suggest that the Michaelian teachings community in general could choose to Validate it on empirical grounds; that is, by observation, and then by assimilation of the observations, and thereby confirm or dis-confirm the hypothesis to their own satisfaction.

It has been said in the Michaelian teachings that Old Souls are less visible in the world because they are not a part of the mainstream culture and society on this planet at this time in history, which is primarily Young Soul and secondarily Mature Soul and tertiarily Baby Soul. The same thing that is said about Fifth Age Souls could be said for the Sixth and Seventh Ages, only more so. That is, many more of them live in the world than the few listed as Transcendental Souls and Infinite Souls, but most of them 'fly under the radar' and do not become famous. You might not realize what you were dealing with if you encountered one personally, but I suspect that you would feel their radiant energy; you would sense their noble emanations. In fact, reports are that enlightened gurus who have achieved some notoriety — enough to attract a large and public following — are surrounded by a palpable aura or energy field of "love", which corresponds to Sixth Age, and some enlightened gurus have parapsychological or magical powers, which would put them in the Seventh Age. If

the bell curve distribution attributed to the Ages continues to apply to the Sixth and Seventh Ages, then they are indeed few in number, significantly less than the 11% or so attributed to the Fifth Age, and confirmed by observation. If the lists of Sixth and Seventh Age people provided by Stevens, Taylor, and Byram are at least sort of accurate, then this is indicative of the contribution they can make to humanity if/when they do come 'out of the closet', and radiate their Sixth Age encouragement and their Seventh Age empowerment out into the world. Souls in both ages are very catalytic and provocative in person and in groups.

In terms of practical utility, the Michaelian teachings has gotten along pretty well with just five Ages, leaving the Sixth and Seventh Ages somewhat ambiguous and arguable, and perhaps even safe to ignore. Personally, I like the theoretical elegance of simply appending the Sixth and Seventh Ages onto the five, as I have done in this section. However, there are "more things in heaven and earth than are being dreamed of" in the Michaelian teachings philosophy, stuff that is beyond practical utility, and these are covered in the next section. There I integrate the multifarious descriptions of the Cardinal Ages; I examine where they get their unusual, even super-normal, power; I examine explanations for what makes them special and catalytic.

Just so you have a preview of where I am going in the next section, the question to be answered is: to what extent does each Fragment or "dominant thread" (see below) experience "All of Life", and to what extent does each Fragment experience All of Life *vicariously* via kindred souls that are part of a Composite. By "vicariously", I mean via the integration of lifetimes of experience with kindred souls who are "subordinate threads" to a dominant thread. It looks to me as if the Sixth Age and the Seventh Age are where the dominant and subordinate threads 'weave the tapestry' of All of Life. Sometimes this is as incarnations of Transcendental Souls in all of their glory and Infinite Souls in all of their power. From the point of view of the Oversoul, the largest Composite, it probably does not matter how it happens. When all is said and done, it takes the completion of all seven Ages during incarnation on the Physical Plane to complete the understanding of what the Physical Plane provides for us humans.

To Understand Composites

In the "Analysis and Synthesis" section, where I present my understanding of the Cardinal Ages, I argued for sticking to what we can sort of Validate empirically about the Ages Septenary (considering all of the uncertainties of actually discerning a person's Age) with the help of the Process/Aspect System tool, which simply applies the Septenarian Attributes to each Age. This is what I did in my *Tao of Personality book*, when I named and described the seven Worldviews. Stevens and Taylor named the Ages Perspectives, Byram named them Worldviews, Newton named them Stages, and Garfield named them Mansions, but they all ended up with seven Ages, and the last two Ages were not as qualitatively different from the first five Ages as the Michaelian teachings descriptions of the Transcendental Soul and the Infinite Soul imply. I call this the "practical narrative", and I prefer it to the "channeled narrative" about the last two Ages because the latter has not fared as well subsequent to the original Michaelian group revelation.

In this section, I go beyond this practical exercise in discernment and Validation; I attempt to assemble the various dogma–doctrines of the Michaelian teachings and other teachings into a coherent narrative. This narrative is rather speculative — based as it is on something other than empirical observation, but it serves two purposes. First, it provides a fresh perspective on what is involved in progression through the Ages, especially the Cardinal Ages. Second, it provides an alternative narrative for what the Sixth and Seventh Ages encompass — and that includes various descriptions of the Transcendental Soul and the Infinite Soul. That is, if the following speculative narrative has merit, then the Sixth and Seventh Ages can legitimately be seen as qualitatively different from the previous five; they are more than the standard Septenarian extension of the first five Ages mentioned in the previous paragraph. I do not have as much confidence in this speculative narrative as I do in the practical narrative because it includes information from the channeled narrative.

Beginning the Speculative Narrative

The Michaelian teachings has typically conceptualized the fragmentation and reintegration of Tao as if it all happens in space/time. In reality, that is not what is actually going on, according to many accounts, both in physics and in metaphysics. Over the past century, physicists have come to realize that our reality system, space/time, emerges out of a more fundamental structure (this is the "reductionist" perspective), and/or is emanated from a more abstract structure (this is the "holistic" perspective). Those structures, whatever they are, between which space/time exists/functions have a structure different from space/time, and the space/time structure is a 'projection' from that 'infrastructure', and/or a 'reduction' from that 'superstructure'; physicists

and philosophers have ideas but are not settled on what is truly going on. This basic idea is called the "holographic principle", but I am not going to explain that further in this book; it is explained in my book *The Tao of Cosmology*.

Anyway, meta-physicists typically refer to the infrastructure/superstructure as the planes beyond the Physical Plane, beyond space/time. In the realm of metaphysics, some channeling says the same thing, particularly Seth. In the matter that is pertinent to this chapter in this *History* book, Seth says that the soul and oversoul exist and function in a realm outside of space/time, commonly called the spirit realm, and they project a portion of their consciousness into physical bodies that exist and function within space/time. It is said that a single soul or oversoul can oversee and operate several lifetimes, either concurrently or successively. The Michaels say the same thing, but it seems to me that the implications of this way of looking at reincarnation has not been fully appreciated when it comes to the phenomenon of Age, accustomed as we Michaelian students are to the sequential-time narrative for the Tao > Essence > Cadre Group > Cadre > Entity > Side > Greater Cadence > Cadence > Fragment > Cadence > Greater Cadence > Side > Entity > Cadre > Cadre Group > Essence > Tao story arc. This is the "sequential-time" narrative. I am going to call another narrative the "simultaneous-time" narrative. There is a point of view in which Tao 'never' fragmented and reintegrated, and the same could be said for the Essence, the Greater Cadre, the Cadre, the Entity, the Side, the Greater Cadence, the Cadence, and the Fragment. My proposal is that the simultaneous-time narrative provides a different perspective, or tells a different story, with regard to Age than the sequential-time narrative.

Here are some things that we will examine as we expand into the simultaneous-time narrative.

Maybe it is just me and not the Michaelian teachings community as a whole, but heretofore I have conceptualized that the progressive reuniting of one's kindred souls, the Fragments of one's Entity on the Astral Plane, was not directly related to one's own progress through the Ages on the Physical Plane. My supposition was that, for an ensouled personality, there was little more than "influence" and "inspiration" from one's discarnate kindred souls on the Astral Plane — particularly the so-called Essence Twin. My understanding was that it was mostly irrelevant to the incarnate soul how many of its kindred souls had reunited with their Entity. However, I am going to show you in this section that transcriptions of the original Michaelian group channeling sessions indicate that the effect of discarnate kindred souls on the incarnate personality is far more intimate than that. So far as I know, this has not been generally understood and appreciated in the Michaelian teachings community heretofore.

It is said in the Michaelian teachings that, generally speaking, after a Fragment finishes incarnating on the Physical Plane (having completed all of the required Monads, burned the karmic Ribbons, fulfilled its Agreements, experienced "all of life", and so on), the "growth of the soul" on the Astral Plane consists of progressively reuniting Fragments back into their Bodies. By "Bodies", I mean the ever–larger groups of souls that consist of multiples of seven. The Michaels use this very word, as we see further on in this section; therefore henceforth I capitalize it as I do other Michaelian jargon terms. The use of the term Bodies in the Michaelian teachings community in this way did not generally continue beyond original Michaelian group and MFM, but I want to reintroduce it here. The description of these groups of souls, multiples of seven, was first presented in the "Michael Math" chapter of More Messages from Michael in 1986: Cadence, Greater Cadence, (Side), Entity, Cadre. (Side) is in parentheses because it was not a part of the Michael Math revelation; it was introduced by JP Van Hulle in the late 1990s. Even larger Bodies were introduced in subsequent channeling: Greater Cadre, Energy Ring, Pod, Node, whatever, but I will not get into that here.

Further on in this chapter, it is suggested that the growth of the soul on the Physical Plane through the Ages and the growth of the soul on the Astral Plane through the Bodies is not exclusively *successive* as I formerly conceptualized; rather, both processes are somewhat *concurrent* starting with the Mature Soul. Thus, the Physical Plane development is concomitant or simultaneous with the Astral Plane development. At least, that is one way to make sense of some original Michaelian group transcriptions quoted further on.

It is also suggested that — in sequential-time terms — reassembly of an Entity starts with the Cadence, then proceeds to the reassembly of the Greater Cadence, then proceeds to the reassembly of the Side, then proceeds to the reassembly of the Entity, then proceeds to the reassembly of the Cadre. The actual process of reintegration might not be that tidy, but the general trend seems like a reasonable supposition. All of these are successively larger Bodies in that they consist of increasing numbers of what were formerly singular Fragments; the definition of Bodies is that they are *composites* of Fragments.

It is also suggested in what follows that the Age of an incarnation is directly related to the size (quantity of Fragments) of the Body to which it corresponds. The original Michaelian group transcriptions, which we will examine in the next subsection, say that the reassembled Body Casts only a part of its energy into an incarnation, to cohabit with the original singular Fragment. I am guessing when I say that this phenomenon starts in the Neutral Age (Mature Soul), and for certain it happens in the Cardinal Ages, per channeling quoted further on.

There is direct and indirect support for these propositions here and there in the Michaelian teachings and elsewhere. I build my case in subsequent subsections. It starts with some Q&A exchanges found in the transcriptions of the original Michaelian group. If my interpretation has merit, then it just means that my propositions have heretofore been unrecognized in the Michaelian teachings communities.

The story unfolds, starting with some background information, and some definitions.

Integration of Ages and Bodies

The word Fragment is used in the original Michaelian group transcriptions, and in the Michaelian teachings in general, to refer to a piece of an Entity; an Entity was said to consist of about one thousand Fragments, though the number is a bit variable from Entity to Entity.

Near as I can tell, the word Body is used in the original Michaelian group transcriptions to refer to a composite group of Fragments, the Entity being one size of a Body. The metaphor seems to be that a physical body is made up of cells, and likewise a spiritual Body is made up of Fragments. Physical, Astral, and Causal Bodies are all mentioned in the original Michaelian group transcriptions and in *MFM*. My new idea is to apply the name Body collectively to all of the other groupings of kindred souls of whatever size, because for me that makes sense of some original Michaelian group statements quoted further on.

My understanding, based on the "Michael Math" chapter of *MMFM*, is that Fragment is the term that applies to the Position in a Cadence of seven Fragments. The first thing to know — in my line of argumentation and explanation — is that the Fragment only identifies a *portion* of its consciousness with an incarnation; the remainder resides on the Astral Plane and serves as the "higher self" of the incarnate Personality. This was revealed explicitly in Michael Newton's book about between-lives experiences. It is also a well-known part of the Michaelian teachings, if you consider the ideas of concurrent lifetimes and parallel lives to be valid.

The second thing to know in my line of argumentation and explanation is that Fragments don't always remain singular Fragments; they are said (in the sequential-time narrative) to progressively unite into Bodies on the middle and upper levels of the Astral Plane:

Can you tell us about the Astral Plane and its levels?

The first level of the Astral Plane is populated by living [incarnate] Fragments adept at astral travel and those souls who penetrate this plane accidentally through drugs. The second level of the Astral Plane is inhabited by all those between [physical] bodies. The third level attracts Old Souls who are trying to burn final karma without being reborn [= reincarnated in a physical body]. The mid-Astral [fourth level] bodies are partially reunited [thousand Fragment] Entities.... The three higher levels [fifth, sixth, seventh] are progressively integrated [bodies]. Access to the high planes [beyond Astral] is through these [high astral] levels. [SJC, 08 October 1973]

Notice the use of the word Bodies in this quotation. My speculation is that it is the Cadence that integrates into a Body on the mid-Astral level, the Greater Cadence that integrates on the fifth Astral, the Side that integrates on the sixth Astral, and the Entity that integrates on the seventh Astral — or something like that; you get the idea. It is probably not all that tidy. I suggest that Bodies are an instantiation of a completed Monad such as described in the following Q&A exchange found in the original Michaelian group transcriptions:

Is the number seven important, as important as has been implied through automatic writing?

Yes, but so are other odd numbers. These point to the yin [Ordinal] and the yang [Cardinal], and the completed [Neutral] Monad in the center... [S/C, mid-September 1973]

A careful reading of the original Michaelian group transcriptions supports this interpretation: Monad is the name given to any unit that consists of Ordinal and Cardinal parts that combine into a Neutral. Michaelian students are familiar with the term Monads when applied to experiences that consist of Ordinal and Cardinal parts that become united into a completed Neutral experience. Here and now I propose that, in this sense, Cadences, Greater Cadences, Sides, Entities, and Cadres are also all Monads, aka Bodies, because they also

consist of conjoined Ordinal and Cardinal parts, in their case multiples of seven, with three Ordinal, three Cardinal, and a Neutral. Even as our Soul Age consists of experiential Monads completed in this and previous lifetimes, so we as humans are pieces of smaller and larger Bodies — in what has been called "The Great Chain of Being". The difference between a Monad and a Body is that a Monad is metaphorically like a unit in time, and a Body is a metaphorically like unit in space. Both are "fractal" in the sense that they are nested within each other all up and down this Great Chain of Being, which exists and functions in space/time.

With that background information in mind, we can begin to make sense of some original Michaelian group transcriptions. My proposal, revealed henceforth, is that incarnations in the Neutral and Cardinal Ages contain more than the original singular Fragment. This appears to have support from numerous passages from the early months of the original Michaelian group transcriptions, shortly after the teaching about Soul Age was introduced in late August of 1973. These statements had been puzzling to me ever since I first read them in the mid-1990s. I did not study them until I set about to finish this chapter of this *History* book in 2018. Now they do not seem like such a puzzle, and perhaps they are the solution to other puzzles discussed elsewhere in this chapter of this *History* book, as we shall see further on.

Take a look at these Q&A exchanges found in the original Michaelian group transcriptions:

It seems that the unification of Fragments goes on inter-life [between incarnations]. You can't do it here, can you?

You can, but it is difficult. It requires <u>psychic union</u>, and that by definition requires that you be an Adept. That [union] is always polar [Ordinal+Cardinal=Neutral, hence Dialectic Bodies]. It is usually done between lives. [S/C, 06 October 1973]

According to Chart #3, during the original Michaelian group, an Adept was a person who had achieved the fifth stage of spiritual development. Another label for that was the Integrated Man. The sixth stage was labeled Conscious Man, and the seventh stage was the Master, aka Perfected Man. (The fourth stage was Balanced Man.) Refer to the chapter on "Adept and Master" in my book *Study Papers on the Original Michaelian Group.* To the extent that the fifth stage correlates with the Fifth Age, then perhaps one can say, based on this line of inference, that the Old Soul Age participates to some extent or another in the incarnation of a multi-Fragment composite Body.

There is more than inference in the answers to some follow-up questions. The above Q&A exchange prompted another series of questions and answers in the next channeling session a couple of days later, 08 October 1973, asking for clarification and elaboration.

Gene remarked that he felt that he was probably already at least one hundred reintegrated Fragments.

Eugene is essentially correct. There are approximately twenty separate Fragments of that Entity extant [incarnating] on the Physical Plane. All of you are <u>Composites</u> of completed Monads [aka Bodies].

Henceforth I am going to use the word Composite in this way: the Composite is the incarnate avatar of consciousness from a discarnate Body, aka Monad. My suggestion is that this instance of the word Monad is not the same as its use in intra-life cases where it refers to integrated experiences that we do not need to repeat (we have learned that lesson); rather, I propose that Monad here refers to full Cadences (7 Fragments), or full Greater Cadences (49 Fragments), or full Sides (343 Fragments), or full Entities (1029 Fragments). There are intra-life Monads that a soul accumulates as whole-life Physical Plane experiences, and then there are Monads that are Astral Plane Bodies. There is some support for this interpretation in follow-up Q&A exchanges:

Dick: How many Fragments are in my Composite?

Approximately one hundred and fifty. All of you now have <u>Fragments that are a part of the mid-astral</u> [reintegration] sequence.

There were some Mature souls as well as Old souls in the original Michaelian group. Recall that the Mid-Astral sub-Plane is where the reintegration of Fragments is said in the original Michaelian group transcriptions to begin; recall my speculation that the Cadences integrate on the Mid-Astral sub-Plane. The question is, are these Fragments, spoken of in this answer, of a Monad or of the Fragment? My tidy speculation is that Mature Souls receive a full infusion of consciousness from their Fragment, a portion of their Cadence, rather than portions of their Fragment, whereas Old Souls receive ensoulment from a portion of a Greater Cadence.

There are some more clues in subsequent Q&A exchanges.

Richard: I have past lives and so do the other Fragments [of my Composite]. When you come together [in an incarnation], do you remember the other lives of the other Fragments?

You do experience the flashes from all of the <u>Composite</u> Fragments [aka Bodies]. This is why Sarah is so confused right now.

Per statements further on, these other Fragments in one's Composite show up as "super-personalities" that complexify the "dominant" Fragment in an incarnation. (The notion of *super*-personalities are distinct from the notion of *sub*-personalities, which are derived from past lifetimes.) A takeaway message to this information is that if one does not know what is going on and deal with one's sub- and super-personalities in a healthy way, it can lead to confusion rather than enrichment, disintegration rather than integration.

Richard: Is this something like micro-Akashic records?

Yes, but you must remember that all of the Fragments [of past lives] are not in the physical body at the same time. Georges Gurdjieff glimpsed this in part when he presented his theory of recurrence.

Gurdjieff did not believe in reincarnation the same way we do, as successive lifetimes. Rather, his belief was somewhat like the premise of the movie *Groundhog Day*, where a day was lived over and over successively until the protagonist of the movie (played by Bill Murray) figured it out and then lived it well and right. The idea of concurrent lifetimes in the Michaelian teachings is somewhat like the idea of recurrence per Gurdjieff, but the former is time-as-simultaneity and the latter is time-as-succession. The point is that our concurrent and parallel lifetimes are enriching our own lives right 'now', not just when the reunion of the alternative threads of Fragments occurs 'later' on the Astral Plane.

Time is a tricky phenomenon, and to understand what is really going on, the trick is to stop seeing it as a succession of events. Among the philosophers of time, there are Presentists and there are Eternalists. The former suggest that only the present moment is ultimately real; past and future are illusory. The latter suggest that eternity is ultimately real; the present moment is illusory. I suggest that both are correct from different points of view and/or in different domains; for our purposes in this discussion, the former applies more to the Physical Plane and the latter applies more to the Astral Plane. In other words, what looks like evolution of the soul on the Astral Plane is concurrent with what looks like evolution of the soul on the Physical Plane. That is, we can say that they enrich each other concurrently, simultaneously; we can say that they are *not* successive events, as if the growth of the Monad/Body/Composite on the Astral Plane all happens 'after' the growth of the Fragment on the Physical Plane is complete. At least, that is the way I make sense of these transcriptions; I could be wrong.

Continuing with the Q&A exchanges in this original Michaelian group session:

I see some parallels between the unconscious and the process of the soul, although we've been told the relationship of the ego to the others. I wonder if I can get some information as to where the unconscious falls in the psychological terms we just discussed?

When Carl Jung described the collective consciousness, he was describing his own apprehension of the collective [Composite] Fragments residing in his [physical] body. He was describing a direct confrontation with his own soul. This has become known popularly as the subconscious, simply through misunderstanding. Through the ages, there have been Old Souls making this confrontation and attempting to describe it. He came closer than most Westerners. Mysticism has never been a compelling force in Western philosophy.

My interpretation of this answer is that the parts of us that act as our so-called unconscious are actually conscious at their own level of reality, the Astral Plane. One of the goals of a spiritual path is to access and assimilate the larger self. With this quotation, we see another way, Jung's way, of conceptualizing what are called sub-personalities and super-personalities. More is said about that further on.

Continuing with the Q&A exchanges in this original Michaelian group session:

Dick: Internally, I have, and I assume others have also, a great deal of pulling and shoving, sometimes like I'm <u>composed</u> of many different people. Some are in charge at one time and others are in charge at other times. Up until now, I had always assumed that this was the many "I's" in False Personality [as taught by Gurdjieff]. Is it this or is it the many [Composite] Fragments or is it a mixture?

It is an admixture of both.

One of the major features of Gurdjieff's spiritual path was to integrate the many "I's" of a disintegrated personality into a single consciousness integrity in three stages that correspond to the higher Centers and the three highest Levels of Being, referred to as the Deputy Steward, the Steward, and the Master respectively. For instance, refer to this URL: >http://fourthwaytoday.org/articles/the-development-of-real-i/<. The fifth Level of Being was also called Integrated Man. At the sixth Level of Being a person was said to be subjectively conscious, and at the seventh Level of Being a person was said to be objectively conscious. One could correlate the last two with Sixth and Seventh Ages respectively. The challenge of the Fifth Age is to integrate one's sub-and super-personalities (past lives, Composites) into a coherent consciousness; the challenge of the Sixth Age is to live in transcendence of the Physical Plane; the challenge of the Seventh Age is to channel the universal

energy. This is comparable to the teaching in Theosophy, that the sixth stage of reincarnation was referred to as integrated personality and the seventh stage was referred to as master and adept.

Dick: Is this why, when you see an Infant or Baby Soul, you see simplicity there? It is just one Fragment? And then with Old Souls, you sense a <u>complexity</u>, and then in between [these two Soul Ages] you see mixtures. Is this because the Fragments are [progressively] unified all along the line, beginning with the Infant Souls?

That is valid to a point. Not much uniting occurs in [the] Infancy [Soul Age]. [S/C, 08 October 1973]

Like so many statements in this thread of inquiry, this statement implies that the uniting, merging, integrating of Fragments into the Entity on the Astral Plane concurrently and simultaneously affects the simplicity-complexity ratio of the incarnate soul. Other statements, further on, indicate that this is due to more Composites actually inhabiting an incarnate personality.

Dick: Is Yorgos a part of the Fragments of the man Robert [Burton]?

The man Robert is a final Level Old Soul. All but ... five Fragments of the Entity have reintegrated. [SJC, 13 October 1973]

Robert Burton was the leader of a Fourth Way (Gurdjieff) group, a charismatic King as well as a very old soul. This gave him a guru status in the minds of his followers. Obviously, the fewer the Fragments still incarnating on the Physical Plane, the more that have reintegrated on the Astral Plane, from the sequential-time perspective. The more Fragments of a person's Entity that have reintegrated on the Astral Plane, the more power available to energize an incarnate personality. Others, not so far along the integration spectrum, could perhaps sense the innate capacity of the more-integrated person, and be drawn to it.

Dick: Is it possible to identify how many Fragments are united, and can we begin to identify them?

Under hypnosis, very advanced students can identify their own Fragments. You can sometimes identify Fragments in others by <u>diversity</u> [sub- and super-personalities].

Perhaps the reason that hypnosis was mentioned is that a member of the original Michaelian group used hypnosis before and during the original Michaelian group. The word <u>diversity</u> is somewhat synonymous with the word <u>complexity</u> used in a previous statement. The more integrated the Entity that casts a part of its consciousness to inhabit the body, the more diverse and complex the person, because of the multiplicity of the Body, aka Composite.

Dick: Must mean, by the diversity of the person. It seems like Howard is many Fragments <u>united</u>. Could we have a comment on that? Howard's Entity now has only fourteen Fragments extant [incarnate] on the Physical Plane [not yet cycled off]. [S/C, 17 October 1973]

These statement imply that the (partially) reunited Entity shares habitation on both the Astral and Physical Planes, so that the partially or wholly integrated Entity sends a part of its consciousness into incarnation; the case with souls older than Infant is that it is no longer just part of a singular Fragment that inhabits the body.

Dick: How many Fragments are united in him already?

In him, there are fifty <u>united</u> Fragments. The others form low Astral entities [Bodies, Composites]. [SJC, 08 October 1973]

Comparing this answer with the previous answer, we see a distinction between the quantity of Fragments still incarnating, and the quantity of Fragments in a Body. Both apparently affect the diversity—complexity component of an incarnation. Fifty united Fragments would be a Greater Cadence plus one Wild Card Fragment that is not part of the multiple of seven. (The information about Wild Cards originated with JP Van Hulle in the late 1990s, to explain why not all Entities were said to consist of a multiple of seven Fragments.) The phrase, "low astral entities", is not found elsewhere, but "low astral body" is, as in the following Q&A exchange from 22 September 1973:

What happens to the Old Soul when it is displaced by the manifestation of the Transcendental Soul?

He [the Old Soul] remains as a part of the low Astral Body.

My understanding of this statement is that the "low astral Body" is another name for the singular Fragment which only sends a part of its consciousness into an incarnation. This is the way I reconcile it with a previous quote that reintegration of Fragments into Bodies (Cadences, Greater Cadences, and so on) starts on the Mid-Astral sub-Plane.

The next Q&A exchange followed immediately upon the previous quotation:

Then he doesn't automatically become a Transcendental Soul?

Not until he burns the remaining [karmic] Ribbons or chooses to be reborn.

This statement seems obscure to me, but as I understand it, it indicates two things: 1) an Old Soul displaced by a Transcendental Soul can still have karma to burn which usually necessitates reincarnation; 2) a cycled-off Old Soul automatically becomes a "Transcendental Soul" by definition, and then it becomes a choice to reincarnate, not a necessity.

Dick: If a person has Fragments [of his Entity] on the Astral Plane, do they try to influence Fragments [of their Entity] on the Physical Plane?

Yes. Tomas is a part of the Entity that includes Lorraine. [S/C, 17 October 1973]

Lorraine channeled Tomas in some of the earliest original Michaelian group sessions, so that is one type of influence.

Edgar: How many Fragments are united in me?

There are now five hundred united Fragments. The <u>dominant thread</u> that is Edgar has been male most of the time, the same as Sarah.

With this statement, the Michaels introduced a new concept: even though an older soul incarnation might be ensouled by a *Composite*, not a *simple* Fragment, there is a "dominant thread". Elsewhere in these early original Michaelian group sessions, it is said that karmic Ribbons follow the dominant thread from incarnation. More was said about the dominant thread further on in this session. Subpersonalities consist of bleed-through from both past life personalities of the dominant thread, and influence from non-dominant threads that are in the Composite of super-personalities.

Elsewhere the Michaels made use of the word Tapestry, which referred to the metaphorical 'weaving together' of lifetimes into a pattern. Tapestries are made of threads. This word could also be applied — in the sequential-time conceptualization — to the function of the 'past' life sub-personalities and the 'future' integration of the super-personalities of the Composite. But if you conceptualize that your 'past' and 'future' are all with and within you right now, you get a different perspective: the formation of Astral Bodies takes place on the Physical Plane in addition to its formation on the Astral Plane.

Sue: How many Fragments do I have?

There are one hundred and twenty Fragments <u>united</u> [in Sue's Entity].

Richard: How many Fragments are united in me?

In you, there are now one hundred and thirty five Fragments.

All the quantities appear to be rounded-off numbers, multiples of five, rather than what they *should* be in my hypothesis, multiples of seven. The groupings of multiples of seven were not known until a decade or so later, as revealed in the "Michael Math" chapter of *MMFM*.

Dick: Am I correct in assuming in my Role, I have lived 5,000 previous lives? (One hundred fifty Fragments, each Fifth Level Old Soul = 4,800 lives.)

This is not completely valid. The <u>dominant</u> Fragment, in other words, the <u>thread</u> that is still drawn to the Physical Plane, remembers only those lives that pertained to it exclusively. It only has <u>indirect</u> access to the integrated Fragments [of its Entity].

Dick: Does the dominant Fragment have indirect access to my previous lives?

The integrated Fragments of your Entity, which are a part of the low [should be 'high'?] Astral Body, have a tremendous pull on you; it is almost as though they are calling you home. You are right though, Dick, it will be curtains for those [threads] who integrate. The others [threads] will continue as long as they are earthbound by karmic Ribbons and have incomplete Monads.

This means that the two planes are intimately interactive.

It will be "curtains" for the Fragments themselves — which means they lose their individuality as singular Fragments when they integrate into a Body — but they still reincarnate in the older soul Ages as Composites influencing a dominant thread. If we go with the idea that the Sixth and Seventh Ages are also experienced on the Physical Plane, then in this sense, from the sequential-time perspective, Yarbro is correct that the Astral and Causal Planes are the Sixth and Seventh Ages of the Essence. From the simultaneous-time perspective, the evolution and integration takes place concurrently on both Planes.

Recall the original Michaelian group transcription that said that the integration of an Entity starts on the Mid-Astral sub-Plane and continues on the high Astral levels, so I suspect that there was an error in transmission here where it says "low Astral body". The fact that it uses the word Body indicates to me that it refers to partially integrated Entities. The implication of this answer is that it is 'curtains' for a dominant

thread when it has completed the necessary Monads: it will lose its individual perceptions during the process of "psychic union", as quoted previously.

Dick: Who will be the dominant Fragment between [my Entity mates] Phyllis, Gene, and me?

This will depend on the evolution. Right now, it would appear that Eugene has a few more [Ribbons and Monads] incomplete [so his thread has longer to go before it becomes dominant]. The Fragments you hold in common with Eugene and Phyllis are the same [Composite]. These Fragments did not fall by the wayside; they experienced all of life.

This "fall by the wayside" apparently refers to some Fragments that do not complete their earth-school 'curriculum' to become dominant Fragments; probably they eventually experience "all of life", but do some of it vicariously, via their kindred souls, as they integrate into a Body. An analogy is that various forms of the theatrical arts give us vicarious experiences that we will never have personally, and we learn by this means. Anyway, from the sequential-time perspective, after a Fragment "experiences all of life", it "cycles off" the Physical Plane and eventually reintegrates with its Entity.

Dick: You mean my 150 Fragments are the same as Phyllis's and Gene's?

That is valid.

Dick: How can I have the same Fragments as Gene and Phyllis?

The strength comes from those Fragments that have already integrated [to become Bodies] and are no longer subjected to karma. You are a part of this Entity, not separate from it, but there is now a <u>partition</u> between you and those Fragments [that are potentially] available [to be accessed], so to speak. It is up to you whether [or not] you can draw upon the <u>conglomerate</u> knowledge. You must first be able to perceive that a large part of your time is now being spent off the Physical Plane [during sleep, and you are accessing the conglomerate there], and this time grows longer as more and more of the original Entity becomes integrated. The pull is almost irresistible now. More than half of the time allotted [to] sleep you now spend on the Astral Plane; Phyllis, too.

Dick: Are 150 Fragments incarnate in me on this Physical Plane?

No. There are more than one hundred Fragments integrated [on the Astral Plane]. It really amounts to the same thing. Dick, stop thinking of the Astral Plane as 'up there'; it is 'down there' — reach out and touch it.

"Touch it" by letting down the "partitions" of apparent separation in your consciousness — see previous and next exchange. The passage above says that it is a mistake to conceptualize the Astral Plane as *only* "up there" and not *also* "down here" — the Composites are "really the same thing" — the two overlap both planes. Based on this whole series of Q&A exchanges, I suggest it is also a mistake to conceptualize the Astral Plane as "out there" rather than "in here". Whichever way we conceptualize the relationship of the two planes — in/out, up/down — we should see that the two are intimately interactive. Perhaps we are accustomed to thinking of influence from our kindred souls as coming in from the *outside*; according to these passages, it would be helpful to regard influence from our kindred souls as coming from the *inside*, and that we just need to 'lift the veil' in our consciousness. This is more or less what it says in the following Q&A exchange:

Dick: Is my incarnate soul a single Fragment?

In your physical body, there is a single dominant thread, but you must understand that <u>you are no longer separated from your integrated Fragments</u>; they are very much a part of you. When the Entity first Fragments and all of it [the Entity] is on the Physical Plane [in various Infant Souls], there is wide separation [between Fragments], then [in subsequent Ages] there is progressive integration. All of the Fragments still incarnate have the pull exerted on them by their [integrated] Astral Fragments. There is no "real" separation, merely a physical barrier that is easily scaled.

This passage plainly says that in successively higher Ages, more of the artificial partitions between the dominant thread and the Composite are dissolved; to me this means that there is a direct correlation between Age and integration of Composites. One of the goals of a spiritual path is to help dissolve the separation between self and Higher Self.

Dick: 150 Fragments are [integrated into a Composite] on the Astral Plane then. (The body [dominant thread] is a container working on its karma.) Gene, Phyllis and I are <u>sharing</u> the 150 Astral Fragments.

That is valid.

Dick: Who would be the dominant [incarnate] Fragment if Gene, Phyllis, and I are united?

It will be a Fragment that has not experienced all of life [and thus has not cycled off]. [S/C, 22 November 1973]

This whole Q&A series indicates that the original Michaelian group members had a hard time 'wrapping their heads' around this idea, and they repeatedly asked for clarification. However, I am not sure that they got it, and I am not sure that I have it.

And I suspect that Yarbro did not grasp it, so did not include it in *MFM*. Yarbro ignored most of the passages quoted above when she wrote *MFM* in the late 1970s. The original Michaelian group transcriptions did not escape into the Michaelian teachings community at large until the mid-1990s, and so far as I know, no one has analyzed and synthesized this particular body of information, until now. In my opinion, the most reasonable interpretation of these passages is that incarnations for very young souls consist of influences from a singular, simple Fragment, but through successive incarnations, the Fragment, as a "dominant thread", completes the 'earth school curriculum' until it 'graduates'. I think of these as the Ordinal Poles of the Monad phenomenon. Simultaneously, so to speak, the Cardinal Poles of the Monads are completed on the Astral Plane. That is, a person's Cadence, Greater Cadence, Side, and Entity reunite on the upper levels of the Astral Plane, to form successively larger Bodies. The Body sends a complex, integrated Composite of itself into incarnations to enrich a kindred soul, dominant-thread, Fragment. That this applies to the Sixth and Seventh Ages in increasing proportions is an idea that I like a lot, as argued in the previous subsection.

This tabulation shows how I tentatively and speculatively correlate the sub-planes of the Astral with composite Bodies with the Ages:

| Table 4Mi — CORRELATION of SUB-PLANES and BODIES and AGES | | | | | | | | | |
|---|--|----------|----------|---------|-----------------|-------|---------|--|--|
| ASTRAL | ASTRAL first second third fourth fifth sixth seventh | | | | | | | | |
| BODY | Fragment | Fragment | Fragment | Cadence | Greater Cadence | Side | Entity | | |
| AGE | Infant | Child | Young | Mature | Senior | Elder | Ancient | | |

Summary of Speculative Narrative

Following is summary of my rationale presented in a numbered list. All of it is somewhat speculative, but it is based on my analysis and synthesis of information provided by various teachings discussed in this chapter, and some original Michaelian group channeling. The story is told in the sequential-time perspective, not the simultaneous-time perspective.

- 1. It is said in Newton's books *Journey of Souls* and *Destiny of Souls* that only a portion of the "soul" is cast into an incarnation on the Physical Plane; much, if not most, of it is said to remain on the Astral Plane, where it functions as one's "higher self", and/or as the "Witness". This seems reasonable enough to me, so I would say, using Michaelian teachings terms, that the consciousness that incarnates is only a portion of the Fragment, the Fragment being defined as what *MMFM* called the Position in Casting in a Cadence, which has seven Positions. (These names are from the "Michael Math" chapter of *MMFM*.)
- 2. It is not the singular Fragment soul that is evolving on the Astral and Causal Planes after reincarnation has run its course for that Fragment. Rather, there/then it is mostly about the reuniting of Fragments into Cadences, Greater Cadences, Sides, Entities, Cadres, Cadre Groups, and so on. (This subject is covered in detail in the next chapter, "Casting Concerns".)
- 3. My speculation is that during the Ordinal Ages, only the singular Fragment is involved in Casting part of its consciousness into incarnations. The Fragment gains complexity via the addition of past lifetimes as *sub*-personalities. The Fragment itself is not a Monad, because a Monad always involves Ordinal and Cardinal and Neutral factors. Younger souls increasingly complexify as they add the subpersonalities of more and more incarnations 'under their belt', so to speak, but they do not complexify by adding *super*-personalities, their kindred souls, like Mature and older souls do. Souls of all Ages complexify by completing Monads, karmas, and Agreements.
- 4. The original Michaelian group quotation above says that the Entity (about a thousand souls) is integrated on the Astral Plane, starting at the middle level and increasing in the upper, aka Cardinal, levels, until at the very top, so to speak, of the Astral Plane, the entire Entity is reassembled. The following speculation does not affect this argument one way or another, but I am going to propose that the Cadence (7 Fragments) is united on the Mid-Astral sub-Plane, that the Greater Cadence (7

- Cadences = 49 Fragments) is united on the fifth level, that the Side (seven Greater Cadences = 343 Fragments) is united on the sixth level, and that the Entity (3 Sides = 1029 Fragments) is united on the seventh level. That is all very tidy, and I like tidy, but of course it might not be that tidy in reality, and the truth or falsity of this conceptualization does not affect the gist of my arguments.
- 5. My further speculation is that the Physical Plane Ages reflect the Astral Plane levels in terms of integration. That is, an incarnation during the Mature Age the middle of Physical Plane reincarnation cycle gets a Composite of their merged Cadence from the Mid-Astral sub-Plane; the Fifth Age incarnation gets a Composite of their merged Greater Cadence from the fifth level of the Astral Plane; the Sixth Age incarnation gets a Composite of their merged Side from the sixth level of the Astral Plane, the Seventh Age incarnation gets a Composite of their merged Entity from the seventh level of the Astral Plane. This idea is predicated on the simultaneous-time conceptualization.
- 6. In this way, souls normally and typically do eventually experience all seven Ages on the Physical Plane, but not as pieces of a singular Fragment. Rather, incarnations in the Neutral and Cardinal Ages are of Composites of Bodies, not portions of singular Fragments. Therefore, there are very few lifetimes at the Sixth and Seventh Ages, because they are Composites the collective consciousness of many reunited Fragments are packed into one incarnation. That gives people in the Sixth and Seventh Ages their extraordinary energy and comprehensive competence.
- 7. Another speculation based on putting various sources together about how this works is that after the Fourth (Mature) or Fifth (Senior) Age of the soul is completed, the Composite has *options* about how it completes the experience of the Sixth and Seventh Ages before graduating to the Cardinal planes. It might chose to do so on the Physical (First) Plane or the Astral (Second) Plane or the Third (Mental) Plane or the lower Fourth (Akashic) Plane.
- 8. The point of view that all of your 'past' lives, and your 'future' lives are 'inside' you right now, gives a new meaning to the Michaelian teachings phrase, Essence Contact. This experience is increasingly accessible, the 'older' the Age. The extreme mystical experience is where all barriers dissolve, and there is realization that All is One. In non-dual consciousness, Tao is inside as much as it is outside; or rather, there is no inside or outside.
- 9. It might be helpful to think of Age from the simultaneous-time point of view more than the sequential-time point of view. That is, it is good to conceptualize Aging as partly about the personality gaining access to successively higher levels of the Astral Plane. There is a feedback loop between Personality and Essence that enriches them both: as one develops, so does the other, and *vice versa*. Enrichment is the word I use to describe the translation among different time scales, the nested time Septenaries (Life-Stages, Levels, Ages, Planes). From the Bible: "With God one day is a thousand years and a thousand years is one day." From the simultaneous-time point of view, time is expanding in all dimensions, so to speak, rather than progressing sequentially, which is the way we usually conceptualize the passage of time.
- 10. Rather than thinking of Age as a vertical ascent, I believe it is more accurate to see each Age as a wider, larger circle of understanding, each including the smaller circle. It can be thought of as a hierarchy, but it can also be thought of as an expansion of size of realm of interest and competence and focus of attention. The Infant Soul is most comfortable in the family environment, where people are working out the behavior system hierarchy; the Baby Soul is most comfortable in a tribal environment, where people are working out the value system hierarchy; the Young Soul is most comfortable in the civic environment, where people are working out the belief system hierarchy; the Mature Soul is most comfortable in the comprehensive environment, were people are working out the greater good; the Old Soul is most comfortable in the philosophical environment, where people are working out their wisdom, their holistic overview of it all. These widening circles of concern in the successive Ages on the Physical Plane are the reflections of the enlarging sizes of Bodies on the Astral and Causal Planes.
- 11. "Soul-searching" introspective self-awareness is not a forte of younger souls, perhaps because there are not many sub- and super-personalities inhabiting them, running around in their consciousness, prompting them to examine themselves. The opposite is true of older souls; sometimes they are too introspective; they are trying to make sense of all the sub- and super-personalities clamoring for attention in their consciousness.

- 12. Another attempt at reconciliation with previous information is that it might be accurate to say that karma, Monads, and Agreements which are thought to more or less *necessitate* a return to incarnation might end at Fifth Age, or Sixth Age, depending on who you ask. If that were so, then the Seventh Age and perhaps the Sixth Age are Bodhisattva Ages. The learning process more or less completed in the first five Ages continues, but without the compelling factors of karma, Monads, Agreements, and such. Recall that Garfield referred to the seventh Mansion as Volunteer. The descriptions of Stevens, Taylor, and Byram fit somewhat with this proposal, although they do not assert that the latter Age(s) are karma-free. There are apparently souls on the planet who are more advanced than is covered by the typical Michaelian teachings description of Old Souls.
- 13. The boundary between the lower self and the higher self begins to break down when the soul metaphorically 'turns the corner' from involution to evolution in the late-Mature Levels, and changes course away from self-absorption toward Self-absorption. The process accelerates in the Fifth Age, and even more so in the Sixth Age. In the Seventh Age the soul is filled with all that it can be on the Physical Plane.

That's my story for the time being. Comments and questions are welcomed.

Concluding Remarks on the Seven Soul Ages

- 1. It is notoriously difficult to discern a person's Age, even with channeling; Level even more so. One contingent of the Michaelian teachings can guesstimate people celebrities and students as being an entire Age different from the guesstimate of another contingent; the same difference in guesstimate can be said of different channels even when within the same contingent. These facts are not relevant to the subject of this chapter except to the extent that they might make one wonder if something is wrong with the way the subject is commonly understood. Upon examination, we find out that there are issues in understanding both the Ordinal and the Cardinal sides of the Septenary of seven Ages.
- 2. The Michaelian teachings community as a whole has failed to realize that the Ordinal Ages follow the Natural Sequence rather than the Michael Math Sequence. That is, the correct understanding is that the Infant Age corresponds to Ordinal Action (Warriorish) rather than Ordinal Inspiration (Serverish), that the Baby Age corresponds to Ordinal Inspiration (Serverish) rather than Ordinal Expression (Artisanish), and that the Young Age corresponds to Ordinal Expression (Artisanish) rather than Ordinal Action (Warriorish). The arguments and evidences for this are presented in my book *The Tao of Cosmogony*.
- 3. Given the lack of understanding in the Michaelian teachings community revealed by Item #2, it should be no surprise that the Cardinal Ages also need a critical examination. Yarbro realized that the original Michaelian group presentation lacked accuracy, and proposed a correction in *MMFM*. Unfortunately, in the same book, she created the issue indicated in Item #2. Her corrective measures appear to be incomplete, if one takes into account subsequent proposed corrections and additions to her presentation.
- 4. Regarding the Cardinal Ages, if one were to stick to the original original Michaelian group/MFM revelation about the Sixth Age Transcendental Soul and the Seventh Age Infinite Soul, one would have a very incomplete and distorted picture of what is actually happening. Over the decades within the Michaelian teachings, there has been a progressive revelation on the subject; the picture has become clearer and more complete. And it might get even clearer and yet more complete in the future, beyond my analysis and synthesis in this chapter.
- 5. In the original Michaelian group transcriptions, and in *MFM*, the Transcendental Soul and the Infinite Soul were placed in the Sixth and Seventh Ages. This is anomalous, considering that the other five Ages are said to be about the soul experiencing the Physical Plane thoroughly and that is nothing like what the Transcendental Soul and the Infinite Soul were said to be about. This placement of the Transcendental Soul and the Infinite Soul in the Ages Septenary, rather than outside it, also spoils the symmetry between the Ordinal and Cardinal Ages. The arguments and evidences for this symmetry of the Ages Septenary are presented in two of my books, *The Tao of Personality* and *The Tao of Cosmogony*.
- 6. Yarbro in my opinion rightly perceived that the original Michaelian group/MFM presentation regarding the Sixth and Seventh Ages was defective and deficient. Yarbro proposed in MMFM that the Astral and Causal Planes were the Sixth and Seventh Ages of the soul's experience. This does not fully

solve the deficiency, because this is still anomalous, since the Astral and Causal Planes are not about fully experiencing the Physical Plane, as the other five Ages are said to be. Therefore, it makes sense to add information from the original Michaelian group transcriptions, that combined Fragments, Composites, from partially or fully integrated Entities incarnate in older Souls along with the "dominant thread". My theory is that Sixth and Seventh Age incarnations continue the pattern established for the previous five Ages, and thereby complete the Ages Septenary in a consistent manner.

- 7. It is confusing for Yarbro to relate the Priest-ish quality of the sixth stage of soul development with the Second Plane, and to relate the King-ish quality of the seventh stage of soul development with the Third Plane the 'numerology' of the two is incompatible. I perceive this as a misunderstanding of what is really happening. My integral theory puts it this way: the Sixth Age Physical Plane soul experience is enhanced by the incarnation of Composite Astral Bodies, and Seventh Age Physical Plane soul experience is enhanced by the incarnation of Composite Causal Bodies. The Sixth Age is Priest-ish per se, and the Seventh Age is King-ish per se; not because of the enhancement by Composites from the Astral and Causal Planes. This idea about the Sixth and Seventh Ages is a reasonable extension of the original Michaelian group transcriptions that talk about Composites of Bodies incarnating in the Fifth "Old Soul" Age.
- 8. Not all of the things that are said about the Transcendental Soul and the Infinite Soul can be synthesized into a coherent picture. One of the apparent irreconcilabilities is that everything about the Transcendental Soul is of Sixness, and that everything about the Infinite Soul is of Sevenness. The original revelation is what led to this misconception and mischaracterization. In my view, that Sixness and Sevenness numerology only applies when they fill those slots on the Age Chart during manifestations. In my view, the Transcendental Soul is the avatar of the Ordinal Planes, where experience is quantitative (fragmentary), and the Infinite Soul is the avatar of the Cardinal Planes, where experience is qualitative (unitary). Rather than their 'numerology' (Sixness, Sevenness) determining their nature, their origin and their mission is more indicative of their nature.
- 9. The disagreement in the channeling about how much of a Composite's collective consciousness gets cast into a Transcendental Soul or Infinite Soul incarnation can be reconciled if we suppose that it varies according to the situation and circumstances, both of the physical body getting the infusion, and of the human society needing the infusion. For Fifth Age incarnations, perhaps only a part of the consciousness of the Entity is infused; for Sixth Age incarnations, perhaps all of an Entity is infused; for Seventh Age incarnations, perhaps all of a Cadre or more is infused.
- 10. I believe the Yarbro books were correct to bump the Transcendental Soul and Infinite Soul off of the Overleaf Chart entirely they are not part of the natural evolution of the soul during incarnations on the Physical Plane, what with its karma and Agreements and Monads and learning all there is to learn about the Physical Plane and so on. I believe that other anomalous incarnation types Bodhisattvas and Avatars should also not appear on the Chart, and for the same reason: they do not fit the pattern of soul evolution through the Physical Plane. These types of incarnation are all iffy, contentious, rare, and otherwise non-validatable manifestations aka dogma–doctrines. Let's stick with what we can discover by empirical evidence. Thus in my view, it is a mere convenience to include the (various types of) Transcendental Soul in the sixth box on the Overleaf Chart, and the (various types of) Infinite Soul in the seventh box on the Overleaf Chart.
- 11. Instead of only thinking that the Transcendental Soul and the Infinite Soul step *down* their consciousness into an incarnation, think of it also as a human soul stepping *up* their consciousness to access higher and higher levels of Composites and Bodies as the artificial barriers/partitions are dissolved. Consequent to the fact that the Universe is One, it is best to conceptualize it this way. More is said about this in my book *Study Papers on the Original Michaelian Group*, in the chapter on "Fragmentation and Integration, Identification and Disidentification".
- 12. Three sources within the Michaelian teachings (besides myself) propose that the Sixth and Seventh Ages are not an anomaly; they are a natural continuation of the soul's necessity and desire to experience all that the Physical Plane has to offer. Six sources outside the Michaelian teachings (that I have found so far) posit the same idea. All of these sources can be more or less reconciled if one is flexible enough and inclusive enough in the descriptions, guided by the pure abstract nature of the

- archetypes of Sixth Age Cardinal Inspiration and Seventh Age Cardinal Action as understood with the help of the Process/Aspect System.
- 13. To the extent that Transcendental Souls fulfill the Sixth Age Pathos (Love), and that Infinite Souls fulfill the Seventh Age Ethos (Energy), then the majority report is that in the Sixth and Seventh Ages there is no self-karma. There is an egoless response to the summons of suffering humanity for help, for some leadership out of the crisis humanity got itself into. In the case of the Transcendental Soul, much of the magnitude of the response depends on how many Fragments of a Body bring the Pathos to bear; in the case of the Infinite Soul, much of the magnitude of the response depends on how much energy of the Ethos is brought to bear.
- 14. Ages are a Septenary, the same as Life-Stages, Levels, and Planes. The idea that the Sixth Age and the Seventh Age are like the other five Ages does make sense in terms of consistency with the other Septenaries, in terms of completion of all Septenaries before one moves on to the next Septenary, and in terms of completing Monads in regard to the Ordinal/Cardinal symmetry within each Septenary.
- 15. The idea of the Sixth and Seventh Ages as a natural extension of the previous five Ages makes good sense, and it might seem more natural if we had all grown up in the Michaelian teachings believing in seven Ages on the Physical Plane, and consequently/subsequently interpreted observations within that framework rather than in the five-Age framework. One wonders if there would be less misunderstanding and disagreement in the Michaelian teachings communities if we had properly understood the seven-Age framework from the beginning.
- 16. It may be that the Fifth Age is the last Age where a single "dominant" Fragment is usually the show-runner for an incarnation, together with any number of subordinate kindred souls. It may be that in the Sixth and Seventh Ages, the incarnation is inhabited by a Composite with no single dominant Fragment. That way, many Fragments, now united in a Composite of some size, can experience the Sixth and Seventh Ages as part of experiencing all that the Physical Plane has to offer. To me, this interpretation of the nature of the Sixth and Seventh Ages is different from any interpretation of the nature of the Transcendental and Infinite Soul manifestations.
- 17. The progression of understanding in the Michaelian teachings has been in the direction of saying that there is a wide range of Transcendental Soul incarnations. It can be much less exalted, and much more common, than the original channeling let on. The same can be said for the Infinite Soul.
- 18. Another major question in my mind is this: when in the Ages Septenary does reincarnation become more or less voluntary? Sources differ. It is channeled that karmic Ribbons can be burned on the Astral Plane. The Michaels, on the Mid-Causal sub-Plane are still finishing up a Teacher/Student Monad. It might be that the Fifth Age is the end of the line for karma/Monad for a majority of Fragments, yet not the end of the line of karma/Monad for a minority. Perhaps the Sixth and Seventh Ages are, metaphorically, 'post-graduate degrees' in 'earth school'. Could this idea use some more channeling?
- 19. The older the soul, the more past-life sub-personalities and Composite super-personalities are there influencing the life. The Sixth and Seventh Ages might not have any more bad karma to deal with, but they still have a lot of "personality integration" and "mastery" to use Theosophical terms to deal with, and a soul can either do this during incarnation during Sixth or Seventh Ages, or on the Astral and Causal Planes, or both, for all we know.

This chapter is not an exhaustive review of the data at our disposal inside and outside the Michaelian teachings, but it is the most comprehensive examination of the subject that I know of. I am open to suggestions from the Michaelian teachings community to help figure this out. Heck, I am open to more channeling on the subject if it actually clarifies, rather than further confuses, the subject.

Chapter 4N

CASTING CONCERNS

This chapter about Casting might not seem fitting for this book on the Overleaf System, but in this chapter I point out the similarities of the two components of the Michaelian teachings. It so happens that the structure of the Casting "Underleaves" — to coin a new word — of the Oversoul (to be defined later, in the section "Introduction to Casting") has a lot of similarity to the structure of the "Overleaves" of the Personality, based as they both are on the common features and the fundamental principles of Oneness and Twoness and Threeness and Sevenness found in Tao's Template (as defined throughout this book and my other books). The fragmentation of the Oversoul as it chooses its seven aspects of Underleaves (Greater Cadre, Cadre, Entity, Side, Greater Cadence, Cadence, Position) during Casting is analogous to the Soul, between incarnations, choosing its seven Aspects of Overleaves (Goal, Shadow, Attitude, Age/Level, Center, Role, Mode) for an incarnation. The subject of Casting also has some relevance to the subject of Validating the Michaelian teachings, per my motto in my books, "The unexamined teaching is not worth believing". There is not a better place in my hexology of books to put this chapter on Casting Concerns.

Science Fact and Science Theory and Science Fiction

Some of the ideas that are embodied in the emanationist cosmogony (to be discussed further on), which the Michaelian teachings calls Casting, are to be found in modern science (such as "top-down" emergence and the simulation hypothesis and the holographic principle) and modern science fiction (such as the Matrix trilogy). Therefore, before we delve deeply into the subject of Casting, let's take a look at these sciency ideas, because I believe it will make the whole concept of Casting clearer in some ways, ways that the typical Michaelian student might not have thought of before, even if they knew about the sciency stuff.

Emergence and Emanation

The basic premise of this scientific idea called "emergence" is that the reality system in which our consciousness is embedded exists and functions in *layers/levels/strata/stages* that are more or less distinct in the way they exist and function. A dozen or two such layers have been identified (Harold Morowitz, *The Emergence of Everything*). Beyond those, according to esoteric cosmology, the seven planes are the highest category of layering.

On the Physical Plane, "causality" runs back and forth within each layer according to the known "laws of physics", but how the layers "above" and "below" influence adjacent layers is generally mysterious. In the metaphysical presupposition called *reductionism*, it is believed that each layer is built on the lower layer(s): each higher layer somehow apparently "emerges" from a lower layer — however "higher" and "lower" may be defined. The idea that each higher layer can be completely "explained" by what is happening at a lower layer is called *reductionism*. The bottom layer is not explained; *it just is*. Scientists assume that the bottom layer has a logical and/or mathematical structure (which has no deeper possible explanation), from which space/time emerges.

But reductionism is not the only principle in regard to layering that is observed in nature: somehow, apparently, each lower layer is also influenced from a higher layer. This is called *supervenience* in science, but myself and others refer to it as *holism*, and it is also referred to as *emanationism* in esoteric circles. Emanationists claim that emergence from the top down, from "God" as it were, is just as true as emergence from the bottom up, from logic and mathematics as it were, although it may not seem so here on the Physical Plane. An example known to all of you of both reductionism (often called "bottom-up" influence from the concrete to the abstract) and emanationism (often called "top-down" influence or *realization* from the abstract

to the concrete) is the feedback loop between your "mind" and your "body"; there is the somato > psychic direction of influence, and there is the psycho > somatic direction of influence.

Both space (being) and time (doing) are involved in these phenomena of emergence and emanation: from the smaller to the larger and from the larger to the smaller; and from the earlier to the later and from the later to the earlier. Influential feedback systems are present within all layers and among all layers.

The science of emergence seeks to understand the nature of each level and the relationships of all of the levels to each other: the subatomic level >< the atomic level >< the molecular level >< the polymer level >< the single-celled biological level >< the multi-celled biological level >< the psychological level >< the sociological level >< the sociological level >< the galactic level >< the cosmos. The juxtaposition of the greater-than and the less-than characters, "><", is meant to indicate the influence of each level on adjacent levels, whether "lower/before" or "higher/after" it in the Great Chain of Being (to be discussed further on). In this view, the influential arrows do not just point in the after/higher direction, as in reductionism; the causal arrows also point in the before/lower direction, as in holism. Thus, the influential arrows point both ways; there are feedback loops between any two adjacent layers and among all levels of existence, of Being/Doing. I like to say that the universe, built as it is in the Mind of Tao, has an imagination as well as a memory. You may wish to refer to my favorite go-to source of introductory information and check out this website: >https://en.wikipedia.org/wiki/Emergence<.

The best book that I have read on the subject is *The Re-Emergence of Emergence*, so named because emergence was popular among scientists and naturalists around the turn of the 19th–20th Century, but then fell out of favor, but is now returning to favor. It is an anthology, a collection of many chapters written by various writers, edited by Clayton and Davies. It is obvious to scientists that each layer appears to be built up from layers below, but also down from layers above: each layer is influenced by adjacent layers. However, each layer has its own identity that distinguishes it from other layers; it has its own rules that are not the same as the rules that are followed by the layers above and below it. How this happens is often puzzling and mysterious to researchers — the rules of a layer cannot easily be inferred as obvious in terms of correspondence with, or influence from, the rules of adjacent layers. Coming to understand emergence several years ago was one of the breakthroughs in my journey of learning how the cosmos works.

So what is the relevance of the science of emergence to the Michaelian teachings? Casting on the Planes is where the principles of bottom-up and top-down influence of level-to-level relationships are seen; there is a feedback loop between Essence and Personality, soul and body. Another point to understand about Casting in the light of the general phenomenon of emergence and emanation is that layering, stratification, and stages are found in all seven planes of creation, and within each of the seven planes as levels, and within the levels, ad infinitum, ad æternum, in a fractal pattern.

And there are other sciency thingies that bear on the subject of emergence and emanation as they apply to Casting:

The Simulation Hypothesis

The "simulation hypothesis" is a conjecture proposed by a philosopher of science, Nick Bostrom a few decades ago. At least that is the modern version of an ancient idea. The modern idea is that our physical universe is a simulation being run on a super-computer by super-beings, probably our ancestors in the far future. Of course, Wikipedia has a discussion of the idea and its ramifications, with plenty of arguments from various thinkers: >https://en.wikipedia.org/wiki/Simulation_hypothesis<. There are many other internet resources available for exploration. This hypothesis has been argued pro and con by serious philosophers and scientists.

Its relevance to my Casting chapter is that one can regard the Physical Plane as a "virtual reality" (VR) of the Astral Plane, and the Astral Plane as a VR of the Mental (third) Plane, and so on "up" the seven planes all the way to the Tao, which is the ultimate reality, the final synthesis. The simulation hypothesis proposes that our universe is somewhat like a product of VR technology. Here is the obligatory Wikipedia link to that subject: >https://en.wikipedia.org/wiki/Virtual_reality<. The technology of VR gear, physical and electronic (for direct brain stimulation), is improving all the time, and the presumption and the aspiration is that VR will eventually evolve to provide a subjective experience (almost) as real as "real" life.

Why did I put "real" in quotation marks? People who have Near Death Experiences typically report that the Astral Plane is "more real" than the Physical Plane, so that is why I suggest that the Physical Plane is somewhat like a VR subset of the Astral Plane. One does not need to have an NDE to get a feel for this; people

who have lucid dreams typically report that the dream is at least as real as "real" life. So, the question is: is your brain simulating the lucid dream world, or is your mind/soul/consciousness actually temporarily inhabiting a reality system different from, or adjacent to (in the sense of above or below), the Physical Plane?

Near Death Experiencers also claim that, in their out-of-body consciousness, concepts that make perfect sense there do not make sense after they come back; they are unable to explain things that are perfectly self-evident there; although the other world is perfectly effable while you are there, the other world is ineffable — incomprehensible, indescribable — in terms of this world. They try to explain, but often fall silent as they attempt to recall and relate what the other world is like. This reminds me of the inability of reductionistic scientists to always explain the influence that one level has on an adjacent level in the Great Chain/Nest of Being.

How far up and how far down does the simulation go? According to Oriental mysticism, less than Tao it is all Maya (usually translated as "illusion"), which I take to be their perception that "reality" is *all* a fake, a simulation in the Mind of Tao. They say that we live as phantasms of Tao's "dream" in a universe that is all a dream in the Mind of Tao. Thus, we are said to be living in a Matrix-like world. This is not an uncommon sci-fi trope, in books as well as movies. The point about the simulation hypothesis in regard to Casting is that each higher plane is more "real" than the lower plane because each higher plane is less virtual, less simulated, than the plane below. Whatever plane the soul resides on, it regards the lower planes as less real, more illusory, more of a simulation, more virtual.

We human scientists will not truly understand this reality system in which we find our consciousness embedded until we know about the *infra/hypo* reality system that underlies it and from which it emerges, and the *supra/hyper* reality system that overlays it and from which it is emanated.

The Holographic Principle

Space/time is generally regarded as three-dimensional, geometrically speaking. The idea that the cosmos is a superset of a hypo-dimensional reality system, and a subset of a hyper-dimensional reality system, is now mainstream in physics and cosmology. Experimental evidence and theoretical physics has led to the realization that the space/time reality system in which our physical universe exists and functions is not fundamental; it emerges from some other structured information system. Apparently, almost irrefutably, there are reality systems "below" it and "above" it in terms of geometric dimensionality. Several teams of physicists are working to figure out how this substrate is organized, string theory being the most famous, but there are others.

Thus, what we in the Michaelian teachings refer to as the Physical Plane is sandwiched between other layers of other reality systems, as I introduced you to in the subsections above, on Emergence and the Simulation Hypothesis. What this subsection on the holographic principle adds to the Casting conversation is to suggest that the layering is caused by dimensionality of the geometric sort; refer to >https://en.wikipedia.org/wiki/Holographic_principle< for an introductory description.

There you will read that the cosmology of black holes and certain tenets of string theory have a principle in common, namely the holographic principle. It states that the information of a higher-dimensional reality system can be "encoded" in a lower-dimensional reality system, similar to the image of a three-dimensional object encoded in a two-dimensional hologram. Cosmologists believe that all of the information about the matter and light that gets sucked into a three-dimensional spherical black hole is permanently preserved on its two-dimensional surface. Not to be outdone in the strangeness department, string theorist physicists propose that the fundamental "strings" of their theoretical framework move in seven (or so) dimensions beyond the three dimensions of physical-universe space/time, and this gives rise to phenomena within three-dimensional space/time. There you have it: there are hypo-dimensional and hyper-dimensional layers below and above the three-dimensional universe that we all know and love.

In my mind, the premise of the holographic principle, as hypo- and hyper-dimensionality in geometric terms, can be borrowed to explain the relationships among the Planes of the Michaelian teachings and esoteric cosmology. Perhaps the holographic principle could conceivably explain, in geometric terms, the Casting of beings *hypo/infra* to the Oversoul, and *hyper/supra* to the soul (mixing Greek and Latin roots that mean the same thing: below and above respectively). It is as if the 3-D Physical Plane *is* a "shadow", or is *like* a "shadow" of a hyper-dimensional reality. The allegory of Plato's Cave is well known; I won't repeat it here, but you may read about it here: >https://en.wikipedia.org/wiki/Allegory_of_the_cave<. I understand this allegory to be an early presentation of the holographic principle, among other interpretations.

An example of a simulation technology that uses the holographic principle that is familiar to everyone is the computer game. A transistor on a computer CPU chip has only two states: on and off, which I think of as a one-dimensional phenomenon. However, by arranging the pattern of on and off states in the CPU with software programming (an example of top-down emanation), one can build an entire simulated three-dimensional world in the CPU, and then project that simulation of a three-dimensional world onto a two-dimensional screen (an example of bottom-up emergence). That computer-generated world is all an illusion of a sort. VR technology aspires to improve the illusion to be ever more realistic. As stated above, ancient wisdom regards all experience and phenomena as Maya. I am suggesting that the simulation hypothesis and the holographic principle have captured some of this idea in modern conceptualizations.

The point about the holographic principle in connection with Casting is that geometric dimensions might be the mathematical foundation of distinctions between the planes. Each plane is a "reality system", complete with its own distinct laws of physics. The Astral Plane is hyper-dimensional with respect to the Physical Plane. The Astral Plane is not just an upward step in the evolution of the soul. Rather, it is radically richer in its being/doing the same way that a molecule at its level is way more complex in its being/doing than an atom is at its level. And so on up the Great Chain/Nest of Being.

The modern term for the Source of existence/function, aka space/time, is called Consciousness, with a capital "C". My definition of Consciousness is: that ineffable mysterious Being/Doing which makes and breaks distinctions. Note: that process works in two directions, called emanation and emergence in this chapter on Casting: emanation = Fragmentation; emergence = Reintegration. The emergence direction is from the minimum quantum to the maximum Quantum, and the emanation direction is from the maximum Quantum to the minimum quantum. Phenomena/experience is the *interface* of the two, the Taijitu Tango Principle (to be explained further on) of the two, that produces space/time and every other phenomenon or experience. There is the consciousness, with a lowercase "c", that emerges from the evolution and combination of subatomic particles > atomic particles > molecules > polymers > proteins > cells > multicellular organisms > plants > animals > humans; there is the Consciousness that emanates the Oversoul > Greater Cadre > Cadre > Entity > Side > Greater Cadence > Cadence > Fragment > Soul. The interface of consciousness and Consciousness is where we move and live and have our being.

The speculations in this section are elaborated in some detail in my books *The Tao of Cosmology* and *The Tao of Cosmogony*, but for here and now, in this chapter on Casting, let's move on to the subject of Casting as it is understood in the Michaelian teachings rather than in my perhaps delusional imagination.

Definitions of Casting

Near as I can tell, the word "Casting" has three meanings in the Michaelian teachings. As it so happens, this situation is the same as with the dictionary, in this case, the online Merriam-Webster dictionary:

1: something (such as the excrement of an earthworm) that is cast out or off

My examples of this meaning: "the die is cast" out of one's hand onto the table, and, "the coat was cast off" after coming in from the cold and entering the warm house.

- 2: the act of one that casts: such as
 - a: the throwing of a fishing line by means of a rod and reel
- b: the <u>assignment of parts and duties to actors or performers</u>
- 3: something cast in a mold; something made from material that hardens in a mold [>https://www.merriam-webster.com/dictionary/casting< retrieved 26 March 2024]

One wonders if the Michaels intended all three meanings when they chose that word for the phenomenon of differentiating individuality from the undifferentiated Tao. Let's look at the evidence for these three uses in the Michaelian teachings published documents.

Meaning #1: something cast "from" or "out"

Searching the original Michaelian group transcriptions, we find these descriptions of Casting:

Souls Cast <u>from</u> the Tao at the beginning When the being you speak of as Moses spoke of his people being cast <u>from</u> their homeland, he spoke of souls becoming Earth-bound for the Cycle. [SJC, mid-September 1973]

The continuous creative force that is universal Casts <u>out</u> Entities into physical lifetimes. These Entities Fragment and become many different Personalities. [S/C, 06 October 1973]

Entire Entities are Cast <u>from</u> the Tao. They Fragment into physically-trapped souls for as long as is necessary for them to experience all of life through the [reincarnation] Cycles. [S/C, 08 October 1973]

There are seven major Roles in Essence. These are chosen at the time the Entity is first born or Cast <u>from</u> the Tao and followed throughout. [SJC, late October 1973]

The Entities were Cast from the Tao at the same moment in time. [S/C, 08 November 1973]

This man was Cast from the Tao almost twenty thousand years prior to yours.... [SJC, 06 February 1974]

The hive soul is truly ancient and was here [on Earth] long before individual souls were Cast <u>from</u> the Tao. [*SIC*, 03 April 1974]

The Entity as Cast <u>from</u> the Tao contained 100 Priests, 400 Slaves and 350 Sages.... Twinning occurs often at the moment the Entity is Cast <u>from</u> the Tao.... Essence Twinning occurs at the moment the Entities are Cast <u>from</u> the Tao. [*SJC*, 23 June 1974]

In almost every instance, the phrase is worded "Cast from the Tao". (There are cases not quoted where the phrase "from the Tao" was omitted from the sentence that mentioned Casting.) In the English language, the word "from" is ambiguous; it could mean "Cast out from" (as it was in one case quoted above), or it could mean "Cast [in a mold] from [using the substance of] the Tao". This ambiguity is discussed after Meaning #3 is presented further on.

In the Michaelian teachings and elsewhere in esoteric, mystical cosmogonies (creation stories), the essence or soul is often compared to a "Spark" that is cast *out* of the source. For instance, José Stevens said it this way:

When pure essence, the Spark or soul of consciousness, is cast <u>out</u> from the Tao so that it can have its own unique experience, it adopts a role. [*TMH*, p. 74]

That a Spark is cast *out* of the Tao is one way of looking at it. Here is a description of Sparks from a chapter, "Personality, Essence, and Sparks" in Hoodwin's book *JOYS* (2013 edition):

Our Spark animates our essence. It is our eternal core, the part of us that is a unit of consciousness of the Tao, the "All That Is" or the ground of being. Our Spark develops from what we learn in all our grand cycles The Tao consists of an infinite number of Sparks that are at once wholly unified and individual, like the cells of our body. [JOYS, pp. 107–109.]

That entire chapter is worth reading for the clarity of presentation on the subject of Casting as it is presently understood in the Michaelian teachings community. Further on, I present my way of visualizing how a Spark can be "unified and individual": it is all a matter of perspective, aka point of view, aka semantics.

At this point, I need to point out a distinction that neither Hoodwin nor Stevens made, and it has not been made within the Michaelian teachings generally, so far as I know. The basic idea is that existence/phenomena are a cascade of *distinctions* in Consciousness. The cascade is traced as follows.

- 1. What is sometimes referred to as the Absolute Absolute is described as indescribable: ineffable, incomprehensible, insubstantial, undefined, beyond all form, and so on. It cannot be compared or contrasted to anything; it cannot even be said that it exists or does not exist; it is neither everything nor nothing; it is and is not conscious, or subconscious, or superconscious, or preconscious. Technically speaking, it cannot even be referred to, let alone described as indescribable, and thus to name it as it often is the "Absolute Absolute" is wrongheaded. Perhaps I should not even have mentioned the unmentionable
- 2. Anyway, what we Michaelian students call Tao has a "transcendent" aspect and an "immanent" aspect. This is a distinction that is well known in Theology. The first distinction we should make in our consciousness is to understand the difference between these two aspects of Tao. Transcendent Tao is usually conceived of as existing *outside* its creation, as if "creation" is cast *out* of Tao. The transcendent Tao is sometimes referred to as the Absolute. From our point of view, as creatures, the Absolute has no distinctive, definable, characteristics; it just *Infinite Soul*. It is *pure* consciousness; it is "aware", but not of self or no self or another self. In mathematical terms, it could be compared to both zero and infinity. It has no being/doing; being/doing exists/happens with the next step in the cascade of distinctions.
- 3. Immanent Tao is usually conceived of as existing *inside* the creation. This can also be referred to as Absolute, but it is the Relative Absolute, because this Absolute is that which is distinct from, is in

contrast to, the Relative. The Relative Absolute, the immanent aspect of Tao, is "substantial", you might say, and it is what Hoodwin (and Seth) refer to as All That Is. It is the immanent Tao that is the Source of self-awareness and other-awareness in the cascade of distinctions subsequent/consequent to Tao's "mental breakdown", aka "multiple personality disorder". The Absolute > Relative breakdown is pure consciousness developing impure consciousness, and this is what we in the Michaelian teachings refer to as Casting. The immanent Tao, the Relative Absolute, is playing "hide and seek" with itself. I like to say that "it is smoke and mirrors all the way down", as the immanent Tao experiences itself as if it were not itself. From the point of view of conscious/aware creatures, such as ourselves, who have our being/doing within the immanent Tao, the creation is within Tao, not outside of Tao. Thus, from this point of view, Sparks are not Cast out of Tao, they are Cast in or of Tao, as in a mold that gives the undefined substance of Tao some definition.

- 4. From the point of view of *both* the Spark and All That Is (aka immanent Tao), they have both been cast *out* of the transcendent Tao. From the point of view of All That Is, the Spark is made of Tao substance that has been cast *into* a mold that makes it a unique individual. This is my understanding of the Hoodwin quotation above regarding cells in a body being wholly unified and individual.
- 5. I am reminded of the statement, "The created becomes the creator and the Cycle repeats itself ad infinitum." (SJC, 08 October 1973) That statement is from our human point of view, as if we humans are evolving from being a primordial, primitive Spark to being All That Is. From the point of view of Tao in its transcendent aspect, beyond space/time, the Spark and All That Is are identical ad infinitum, ad æternum.
- 6. I regard the Spark (the minimum One) and All That Is (the maximum One) as the Ordinal and the Cardinal Poles of a Monad, respectively. That is, from the point of view of the undifferentiated One, they are identical. What we refer to as spiritual evolution is the process of switching these two for each other, as in "the created becomes the creator". Creation is enriching itself by turning itself end-forend, top-for-bottom, and inside-out in terms of Dimensionality: 1-D Action, 2-D Inspiration, and 3-D Expression respectively. We will explore Dimensionality further on.

This cascade of distinctions made by consciousness is explained in more detail and in more ways elsewhere in my books. The point to be made here in this chapter is that Cast *out* and Cast *in* are a semantic distinction, meaning in this case, something based on the point of view of the perceiver. In a creation derived from consciousness (All That Is), point of view is all there is. (Get it?) Being-doing is all about making and breaking distinctions in consciousness; when a distinction is made, the consciousness splits, then a thereby-limited part of itself *identifies* with one side of the split, and then from the point of view of that self, the other side of the distinction becomes the unconscious or subconscious or super-conscious not-self.

Meaning #2: assigned roles in theatrical plays

Returning to the original Michaelian group transcriptions, we find this:

You may think of it [the Physical Plane] as an enormous theater with continuous performances, if you wish. The analogy is a good one, for that is precisely what happens. On the Astral Plane, the actors [as souls] agree to perform certain roles, only they are cast loose on a booby-trapped stage [where anything can happen], so to speak — it makes for livelier action, more experiences that way. [SJC, 12 June 1974]

Although this passage does not declare it explicitly — and I do not believe this use of "role" here refers to Role — this theatrical metaphor might be the reason the Michaels chose "Role" as the name of that Overleaf category. This second meaning and understanding of Casting, particularly in regard to the Role, is not lost on the Michaelian teachings community. For instance, there is this from José Stevens:

Just as an actor plays a role on stage, so the essence acts out the role during a particular [grand] cycle. Once the role is played out (fully mastered), it is discarded — just as an actor who has mastered a particular role will want to move on to a new, more challenging role. [TMH, p. 75]

The original Michaelian group quotation beginning this subsection was more about souls Cast into an incarnation than it was about souls Cast from the Tao (Meaning #1); more will be said about that further on in this section. Therefore, it would seem that Meaning #2 is not the preferred meaning of Casting in general.

Meaning #3: cast in a mold

Returning to the original Michaelian group transcriptions, we find this:

The casting is not casting out, but rather casting into. [my emphasis; S/C, 08 November 1974]

What does this mean? It is not explained in the original Michaelian group transcriptions that have become widely available, but it is explained in *Messages from Michael;* it means what the third dictionary definition of Casting means:

Imagine the Atlantic Ocean as the whole; imagine filling ten test tubes, then sealing them so that they are both airtight and watertight, then imagine dropping them back into the ocean. They are a part of the whole, yes, but unless some outside force liberates them, they are remote from the source and trapped in an effective prison. [MFM, p. 64]

From the point of view of the ocean, the test tube filled with ocean water is ocean; from the point of view of the water in the test tube, it is not ocean. So it is with Tao, All That Is, and Sparks, per the Hoodwin channeling quoted above in the "Meaning #2" subsection. From the point of view of the transcendent Tao (beyond creation), the Spark and All That Is (within creation) have all of the same characteristics: the created is the creator. Refer to the next section for more explanation about Meaning #3, which is my preferred meaning for the word Casting, because it is consistent with emanationist cosmogony.

This understanding is somewhat confirmed in the following quote from channeling by Shepherd Hoodwin:

To cast means "to form in a mold," as in casting bronze. Being cast from the Tao could be seen as being made from the Tao's mold. It also means "to throw" and could be seen as the Tao throwing or, more precisely, extending parts of itself into the dimensional universe, as you might extend your hand. Essence does not actually leave the Tao, since all is included in the Tao, so it would be less accurate to think of the Tao as throwing essences out of itself into the universe, as though they were separate. [/OYS, p. 368]

Consider this a minimal introduction to the cosmogony that is elaborated in my books *The Tao of Cosmology* and *The Tao of Cosmogony*.

The next sections relate the same cosmogony of Casting in a way different from the approach in this subsection.

Ensoulment Casting

In addition to the quotation in Meaning #2, there are other instances in the original Michaelian group transcriptions where Cast was the word used to refer to the *ensoulment* process, rather than the *Fragmentation* process of Casting from the Tao. For instance:

Life on this planet [Earth] is evolving to the point where there will be no more Infant Soul Entities Cast [ensouled] into this frame. [S/C, 15 November 1973]

We would say a few words on a subject that has not been broached. We feel that you need to know about [it], and perhaps it will give rise to some questions. When the life Cycle is thrown in motion on any given world, it is left alone for many centuries to evolve unmolested and undisturbed. When a dominant species finally stabilizes, we begin to monitor this species. When the animal becomes sufficiently domesticated and is taught basic survival techniques, Infant Souls are Cast [into incarnation, not as Fragments]. The dinosaur did not emerge as the dominant species. Instead, a carnivore, a mammalian, upright ape did. The Infant Souls were not initially Cast [into incarnation] until the dominant creature had evolved into one where the cerebral capacity was sufficient for learning. [SIC, 24 January 1974]

That was a view of prehistory before souls were Cast [into incarnation]. This was the dominant emerging species from which your [human] race arose. [S/C, 18 February 1974]

You are correct in assuming that most of the souls Cast [into incarnation] on this world [planet Earth] are now alive or just have been or will still live within this present century. [SJC, 19 November 1974]

When souls are first Cast [into incarnation] into a dominant species, some, or rather many, of the instinctive drives of the creatures-of-no-reason still remained embedded with the bio-computer.... Before souls were Cast [into incarnation], the creatures-of-no-reason from which you [humans] have ascended were largely governed by fear, and their lives were taken up in many ceaseless battles for survival. [SJC, 21 December 1973]

Therefore, note that Casting souls into animal bodies is perhaps not unlike Casting the Tao into the Rays and into the Oversouls (described further on) and so on down the stages of greater and greater Fragmentation of Consciousness. It is said in Michael Newton's books and in Roy Smith's book, *Incarnation and Reincarnation*, that Astral Plane Fragments only focus a portion of their consciousness into a physical body; the majority of the soul's consciousness stays on the Astral Plane, acting as the "higher self" to inspire the incarnate Personality self to fulfill the Fragment's plans. My working hypothesis is that the Astral Plane Fragment forms

(Casts) its chosen Overleaves in the soul, the etheric body (which inhabits the higher levels, the nonmaterial levels, of the Physical Plane) for the duration of an incarnation.

This process of selecting and configuring Overleaves in the etheric body is another type of Casting, and this type was discussed in two early chapters in this Part Four, Chapter 4C, "Which Trait Septenaries are Overleaves?", and in Chapter 4D, "Body Types". The gist of those chapters is that the Casting process is not only of the planes beyond the Physical; it is of the Physical Plane also. My working hypothesis is that the Casting on the Physical Plane happens in three steps. The process of Casting proceeds from Position in Cadence (aka the Fragment), to (1) Casting the Soul with a portion of its consciousness, then to (2) configuring (Casting) the Overleaves in the etheric body, then to (3) the configuration (Casting) of the Body Type, the brain-body (per Rupert Sheldrake's "morphogenetic field" — google it) for the duration of the incarnation. (The etheric body and the physical brain-body are presumably connected via the chakra energies for the duration of the incarnation.) If my hypothesis is true, this would mean that Overleaves as well as Underleaves are different manifestations of the same general cascading Casting (Fragmentation) process — of "test tubes within test tubes within test tubes in the ocean" ad infinitum, ad æternum — all the more reason to include this chapter on Casting in this book about the Overleaf System.

An analogy for Casting is this: as the physical body is made up of organs, which are made up of specialized cells, which are made up of organelles, which are made up of molecules, which are made up of atoms, which are made up of subatomic particles, so is the Oversoul made up of Cadre Groups, Cadres, Entities, Sides, and so on down to the level of incarnate Personalities within Body Types. This is the meaning of the terms Body and Composite as I use them, and these are further defined and discussed in subsequent sections.

All of the sections and subsections above in this chapter were just a Prelude, setting the stage for the following Introduction.

Introduction to Casting

In the previous chapter, Chapter 4M, "The Seven Soul Ages", I quoted passages from the transcriptions of the original Michaelian group channeling sessions that mentioned Composites — related groups of souls of different sizes. In other channeled teachings, such as the Seth material, the individual soul is a piece of an "Oversoul". An Oversoul oversees the existence (Cardinal–Aspect–space–being–noun) and function (Ordinal–Process–time–doing–verb) of all of its Fragments. In the following exposition, I apply the term Oversoul to the largest Composite or set made up of individual Fragments or subsets. It would make sense to me that there would maybe be one Oversoul for all humans on Earth through the entirety of the history of humans on this planet. According to the Michaelian teachings, the Oversoul is broken up into smaller and smaller size Composites, down to the Fragment. The Fragment continues the Casting process, and sends a part or portion of its consciousness into a Physical Plane incarnation, first to the etheric body (which I refer to as the Soul) where the Overleaves are configured (aka Cast), and then to the brain-body where the Overleaves and all other influences are instantiated (aka Cast) for the duration of the incarnation. The Composites, as Underleaves, are the "super-personalities" of our individual Souls, even as past lifetimes are the "subpersonalities" of our Souls.

As we Michaelian students all know, per the Michaelian teachings, Casting refers to the process of the breaking up of the Oversoul into many individual souls. This process of dividing up is called Fragmentation in the Michaelian teachings. The Michaelian teachings is not the only teaching that has something to say about the subject. In fact, it is common knowledge in esoteric teachings; what we refer to as Fragmentation is generally referred to as "emanation" in other teachings. When this doctrine is part of a mythological creation story — a "cosmogony" — it is called "emanationism". The Michaelian teachings is therefore an emanationist cosmogony, one among many others in cultures both ancient and modern.

You might recall from previous chapters in this book and my other books that my favorite emanationist cosmogony is found in the 42^{nd} chapter of the Tao Te Ching:

<u>Tao</u> produced the <u>One</u>; the One produced the <u>Two</u>; the Two produced the <u>Three</u>; the Three produced <u>all</u> things. All things carry the <u>Yin</u> and embrace the <u>Yang</u>; through the blending of the <u>Chi</u> they achieve harmony.

I refer to this as "Tao's Template". I suggest that it might be the fundamental organizational structure of all that Tao produces.

With this brief passage, the alleged Infinite Soul, Lao Tzu, revealed that the fundamental principles of Taoness, Oneness, Twoness, Threeness, All, Yin, Yang, and Chi are components of the existence and function

of the cosmos. My entire books, The Tao of Cosmology; Tao's Template of First Principles, and The Tao Of Cosmogony: The Natural Sequence of the Cosmic Septenary, are commentaries on Chapter 42. Part One of my book, The Tao of Personality: The Process Aspect System of Personality Traits, presents a condensed recapitulation of the The Tao of Cosmology book as it pertains to the Overleaf System. This introductory section to this Casting chapter presents an even more condensed reprise of the emanationist cosmogony, this time as it pertains to the Casting of the Oversoul into lesser and lesser Composites down to the level of the Fragment.

The following numbered list presents an explanation of Casting that uses words familiar to Michaelian students, but the presentation might be a bit different from what you have seen before in Michaelian teachings publications — unless you have read my books. Much of the information in the list is a refresher review of other chapters in this *History* book. So here we go.

- 1. To use theological terms, Tao is both transcendent and immanent: it is both transcendent insubstantial beyond creation and the creation is made of immanent Tao's substance. The term Casting refers to the undifferentiated substance of Tao metaphorically being 'poured into different molds' that give it various forms, aka individual identities, aka personality:
 - The Casting is not casting out, but rather casting into.... Imagine the Atlantic Ocean as the whole; imagine filling ten test tubes, then sealing them so that they are both airtight and watertight, then imagine dropping them back into the ocean. They are a part of the whole, yes, but unless some outside force liberates them, they are remote from the source and trapped in an effective prison. [MFM, pp. 43, 64]
 - With this ocean/test tube metaphor of casting, Casting is not casting out, as in Sparks flying out of a fire and carrying some of the fireness with them. Nor is Casting similar to the process of picking the right person to play a part in some theatrical presentation. These two explanations of the meaning of Casting have been put forward in the Michaelian teachings community, but I believe they do not adequately and accurately convey the real meaning of the word and why it was chosen; the real meaning is found in the passage quoted above.
- 2. Transcendent Tao is insubstantial, ineffable, undefinable, undifferentiated.
- 3. Immanent Tao is substantial but chaotic and unstructured; this Tao produces orderliness from its substance in a series of emanations or distinctions, as follows.
- 4. The first emanation, aka Casting, is Tao producing the One. Michaelian students are familiar with the One as the Akashic Plane, which is said in the Michaelian teachings (*SJC*, 29 November 1973) to be the "photographic record of all history" and of all creation, I might add. As such, the Akashic Plane encompasses all of Tao's productions; therefore it is the embodiment of the principle of Oneness.
- 5. The second emanation, aka Casting, is the One producing the Two. Michaelian students are familiar with the Two as the lower, aka Ordinal planes, plus the higher, aka Cardinal planes.
- 6. The third emanation, aka Casting, is the Two producing the Three. Michaelian students are familiar with the Three as the three Ordinal planes and the three Cardinal planes. With the Neutral Akashic Plane plus the three Cardinal planes plus the three Ordinal planes we have a total of seven planes. (There are two chapters on planes in this *History* book, one chapter in Part One and another in Part Four.)
- 7. The word "septenary" applies to any group of seven items. The cosmology (orderly, patterned, systematic component) of the Michaelian teachings is fundamentally septenarian, and many other esoteric teachings are also septenarian. This means that they subscribe to the Taoist *The Tao of Cosmology* cosmogony. The resemblance of the structure of Casting to the structure of the Overleaf System also structured around the septenary should start to be apparent at this point in the presentation. It will become abundantly clear in the following sections of this chapter.
- 8. What I refer to as the Natural Sequence has the (Dialectic + Axial =) Septenarian Attributes arranged in what I refer to as the Natural Sequence. It is mentioned and discussed several times in this *History* book; I have written an entire book about it, *The Tao of Cosmogony*. Basically, the book explains that the Natural Sequence applies to *developmental* sequences such as the Life-Stages within Levels (see Chapter 4Q.), Levels within Ages (see Chapter 4K), and Soul Ages (see Chapter 4M). Per the Michaelian teachings and other esoteric teachings, the planes and the sub-planes exist and function per the Natural Sequence.
- 9. An older-sibling teaching similar to the Michaelian teachings, Theosophy, has an emanationist cosmogony and cosmology that is very similar to the Michaelian teachings. In Theosophy, the

- differentiation of the One into seven so-called Rays of emanation establishes a particular fundamental characteristic or nature for each plane. In Theosophy, the Rays and planes exist and function per the Natural Sequence pattern.
- 10. In the Michaelian teachings community, these seven Rays and seven planes are often personified or characterized by the names of the seven Roles. Therefore, it is appropriate and convenient to refer to the seven qualities of the seven Rays and seven planes as "Role-ish" in this chapter. Composites can have a Role-ish attribute, and usually do up to the Oneness of the undifferentiated, unemanated Oversoul. The Natural Sequence has the septenarian Ray-plane components sequenced as follows: Warrior-ish, Server-ish, Artisan-ish, Scholar-ish, Sage-ish, Priest-ish, King-ish. Notice that the sequence is symmetrical in terms of the Axial Attributes of Action Inspiration Expression Assimilation Expression Inspiration Action. The seven Rays-planes follow the Natural Sequence from most Ordinal to most Cardinal in terms of characteristics, and from most Cardinal to most Ordinal in terms of energetics. This is explained in two chapters on planes in this *History* book, and in sections or subsections explaining the "Taijitu Tango Principle", such as the subsection further on.
- 11. In this chapter, "Casting Concerns", we are only concerned with the Ordinal Planes. The sequence advanced in the "Michael Math" (MM) chapter of *More Messages from Michael (MMFM)* is slightly different. The Michael Math Sequence is: Server-ish, Artisan-ish, Warrior-ish, Scholar-ish, Sage-ish, Priest-ish, King-ish. Notice that the sequence is not symmetrical. More is said about that in the following sections.
- 12. The Michael Math Sequence is said to apply to the Casting of Composites and Fragments on the Ordinal Planes; my book *The Tao of Cosmogony* explains in detail that this is a *deployment* sequence, not a *developmental* sequence. A subsequent section discusses the Natural Sequence and the Michael Math Sequence briefly it is one of the "concerns" that I have about Casting as usually understood in the Michaelian teachings community.
- 13. The three Cardinal planes have a *qualitative* nature to them, the 'ocean' as it were, to use the Michaels' metaphor quoted above; there is a quality gradient that distinguishes differences within Cardinal planes and between Cardinal planes. Evolution on the Cardinal planes is qualitative, meaning that the Spark or Essence ascends the quality gradient there, as it is gradually reabsorbed into the immanent Tao. Contrary to this, the three Ordinal planes have a *quantitative* nature to them experience there is *fragmentary*; it involves differentiated pieces of Tao interacting with each other as if they were separated from each other, 'test tubes in the ocean' as it were. This is where the Fragmentation phase of the quantitative Casting process (before reincarnation), and the quantitative Reintegration phase of the Casting process (after reincarnation) happens. Thus, One → Two → Three → Seven is Fragmentation, whereas Seven → Three → Two → One is Reintegration. Fragmentation and Reintegration are the reverse of each other.
- 14. There are different types of *bonds* associated with these different stages of Fragmentation and Reintegration. These are described and discussed at length in this chapter. Bonds are broken in the Fragmentation process; bonds are healed in the Reintegration process. Just as there is "chemistry" between personalities, there is 'chemistry' between Composites within the Oversoul.
- 15. The similarity of the Overleaf System structure to the Casting structure is that they both have the principles of Oneness, Twoness, Threeness, Sevenness, All, Yin, Yang, Chi in their framework and pattern; that is to say, they have Axial and Dialectic Attributes. Although there are some differences in their arrangements, the similarities in these numerical principles, aka Septenarian Attributes, exist and function in both of them. One could say that the spiritual realms and the physical realms are metaphorically 'mirrored', even though there is some 'distortion in the mirror'; there is some asymmetry in the structure, even though the same numerical principles and types of bonds apply.
- 16. As mentioned in several places in this book, the Septenarian Attributes provide and apply basic descriptors to the Roles/Role-ishes/Rays.

Some of the above information is tabulated a little further on, but before I present that table, an explanation of a fundamental concept needs to be presented.

At this point in the development of my explanation of Casting, it should be noted that nothing "exists" *per se*; in primordial undifferentiated "Consciousness", everything "exists" in *contrast to its opposite*. What seems "real" is the "difference". This concept of "seeming existence" is the essential meaning of the word "produced"

in Chapter 42 of the *Tao teh Ching*. It is not that One exists and Two exists and Three exists; it is that the distinction between them is what "exists" in the production of the distinction. Only Tao *really* exists; all that Tao produces "seemingly exists".

The easiest way to understand this concept is to contemplate the pure abstract distinction between the concepts of "yes" and "no" in your consciousness. These two concepts have no existence apart from each other, but they are distinct from each other; they define each other. The cascade of yes/no distinctions in Consciousness is equivalent to the Casting process. Making and breaking distinctions in Consciousness is equivalent to Fragmentation and Reintegration in Casting. Consciousness makes a distinction (no-ness) and "identifies" with one side or the other of the distinction (yes-ness), taking the point of view (state of consciousness) that the "other" is "not-self". It is misleading to have names for "things" as if those "things" existed per se; as I said above, the producer of "things" is the concept of "distinction" itself. For example, Sages per se and Artisans per se do not "exist" except in relation to each other as opposites. Thus, when Artisan-ness reintegrates with Sage-ness on planes beyond the Physical, then we have an Expression Composite; and so on for the other Role-ish complementary pairs.

This is difficult to explain because people are "substantivalists" by nature (things exist per se), but this side of the Tao, cosmogony/Casting is "relationalist". Tao is the only thing with substance; only Tao exists per se; every thing less than Tao, a part of Tao, seemingly exists as due to relation of self to not-self. You may want to refer to a Wikipedia article for a start on understanding this distinction between two philosophical ontologies: >https://en.wikipedia.org/wiki/Relationalism<. (If that web page does not make the distinction between substantivalism and relationalism clear to you, then do an internet search on those two terms together.)

In philosophy, there is "ontology" and there is "epistemology". Ontology is about what is real, and epistemology is how we know what is real — look them up via your favorite internet search engine. In Casting cosmogony, there is no ontology (substantivalism; thing-in-itself) other than Tao; there is only epistemology (relationalism; what one seeming thing knows or does not know about another seeming thing or other seeming things) as Tao makes and breaks artificial distinctions. In Oriental cosmogony, these artificial distinctions in Tao are illusory, and are referred to as Maya; the Michaels have used that very word. *Casting is all about Maya*. It is Consciousness experiencing itself *as if* it were not itself. It (Casting) is 'smoke and mirrors' all the way 'down' (Fragmentation) and all the way back 'up' (Reintegration), as Tao metaphorically 'forgets and remembers' Itself, as Tao 'plays hide and seek' with Itself *ad infinitum* and *ad æternum*, and in the Grand Cycle it grows to become more than 'before'.

In the table below, it can be confusing if you understand the names of things in the boxes as if those were things per se. What they are, they are by virtue of being in contrast to the things in other boxes in the table. Just remember that the Casting doctrine posits that the Whole (All That Is) only exists because of the Parts (Sparks), and the Parts (Sparks) only exist because of the Whole.

So, study the table with this concept of the meaning of Casting in mind, and then study the bullet points below the table.

| Table 4Na — CASTING COSMOGONY COSMOLOGY | | | | | | | | | | | |
|---|--|--------------|-------------|--------------|-------------------|-------------|----------|--|--|--|--|
| BLANK | ABSOLUTE ABSOLUTE | | | | | | | | | | |
| UNDEFINED | ABSOLUTE = TRANSCENDENT TAO, INSUBSTANTIAL | | | | | | | | | | |
| CHAOS | RELATIVE ABSOLUTE = IMMANENT TAO, LATENT POTENTIAL UNSTRUCTURED INFINITE SUBSTANCE | | | | | | | | | | |
| COSMOS (one) | STRUCTURED FINITE REALIZATION | | | | | | | | | | |
| DIALECTIC (two) | Yin-ORDINAL-no | | | Chi-NEUTRAL | Yang-CARDINAL-yes | | | | | | |
| AXIAL (three) | ACTION | INSPIRATION | EXPRESSION | ASSIMILATION | EXPRESSION | INSPIRATION | ACTION | | | | |
| NUMERICS | First | Second | Third | All | Threeness | Twoness | Oneness | | | | |
| PLANE | Physical | Astral | Mental | Buddhic | Spiritual | Divine | Logoic | | | | |
| RAY | Physicality | Emotionality | Mentality | Beauty | Truth | Love | Energy | | | | |
| ROLE-ISH | Warrior-ish | Server-ish | Artisan-ish | Scholar-ish | Sage-ish | Priest-ish | King-ish | | | | |

My comments on this table are as follows.

- Zeroth Row: The number of words in the title of the table indicates that it covers a lot of concepts.
- First Row BLANK: The name "Absolute Absolute" refers to the concept of inconceivability, to which
 nothing can be compared and contrasted. It is not logical or mathematical in any way; it neither
 exists nor does not exist. Technically, one cannot actually 'point' to the Absolute Absolute and 'name'
 it.
- Second Row UNDEFINED: The Transcendent Tao, the Absolute, has no distinguishing characteristics of itself. One might say that it "exists", but not in any substantial or logical or mathematical way per se. It does not participate in the Casting process of making and breaking distinctions in consciousness, in terms of being and doing. It does not produce anything; it serves only as an abstraction in contrast to the concrete, the Immanent Tao, which does have "substance" of the Maya sort, in that the Immanent Tao (see next bullet point) is what participates in the Casting processes of Fragmentation and Reintegration. The Absolute is pure Consciousness without Self-consciousness or Otherconsciousness.
- Third Row CHAOS: This refers to the Immanent Tao, which is the undifferentiated, unstructured, infinite, formless, chaotic "substance" from which all creation is Cast as a product. It exists by virtue of being in contrast to the Transcendent Tao, and it is the source of Casting as normally understood in the Michaelian teachings and other cosmogonies; Chaos has no unity (Oneness), duality (Twoness), or triality (Threeness). As such, the Immanent Tao precedes yes and no and logic and mathematics and being and doing and space and time; as such, it is pre-Casting. (So far as I know, the Michaels have not made explicit this distinction between the Transcendent Tao and the Immanent Tao, but theologians and mystics both ancient and modern do make the distinction. It is discussed at length in Ken Wilber's book *The Spectrum of Consciousness*.) The Immanent Tao has Self-consciousness, and it produces Other-consciousness.
- Fourth row COSMOS (one): This row represents the phrase, "The Tao produced the One". Cosmos refers to that aspect of creation which is orderly, as distinct from the Immanent Tao, Chaos, which is not orderly. This row of the table is where the structure of logic and mathematics begins, aka Casting.
- Fifth Row DIALECTIC (two): This row represents the phrase, "the One produced the Two", Yin and Yang. Chi-Neutral in the middle column hearkens back to the more primitive principle, One. Dialectic Attributes are words from the Michaelian teachings: Ordinal and Cardinal and Neutral; these are functionally equivalent to Yin and Yang and Chi. Yin (no), Yang (yes) and Chi (Gestalt) are the foundation of logic.
- Sixth Row AXIAL (three): This row represents the phrase, "The Two produced the Three". This is where Yin–Ordinal is divided into Three, which is a concept fundamentally different from Two. In the

Michaelian teachings we know the Three as Action, Inspiration, and Expression. Assimilation, in the middle between the Ordinal and Cardinal triads, hearkens back to the Chi–Neutral One of previous rows in the table. Numbers are the foundation of mathematics, which is built on the foundation of logic shown in the previous row.

- Seventh Row NUMERICS: This row represents the two ways that numeration is understood in mathematics. The "ordinality" of a number shows its place in a sequence, such as First, Second, Third. The "cardinality" of a number shows its quality, such as the principles of Threeness, Twoness, Oneness.
- Eighth Row PLANE: In this row, these are the names of the seven planes that I have settled on, as documented in Chapter 4E above, "The Seven Planes". The planes are a component of emanationism, and hence Casting, but there is not much discussion of the individual planes in this chapter other than to say that the planes have the Septenarian Attributes; hence they partake of Oneness, Twoness, Threeness, and Sevenness as shown in this table.
- Ninth Row RAY: In this row, these are the names of the seven Rays that I have settled on, as documented in Chapter 1F in Part One, "The Seven Human Temperaments". The Rays are a component of emanationism, and hence Casting, but there is not much discussion of the individual Rays in this chapter other than to say that the Rays have the Septenarian Attributes; hence they partake of Oneness, Twoness, Threeness, and Sevenness as shown in this table.
- Tenth Row ROLE-ISH: In the Michaelian teachings community, the names of the Roles are often used as personifications and characterizations of the seven components of a standard septenary. We see a lot of Role-ish in the Michaelian teachings schema when it comes to Casting considerations, when the Oversoul Fragments itself step wise into the seven Role-ishes in various size Composites, containing various quantities of Fragments. Role-ish is a qualitative property (Cardinal) in Casting; Composite is a quantitative property (Ordinal) in Casting.

I present variations of this table in other chapters of this book, and in my other books. Its message is fundamental to an understanding of the Michaels' cosmogony/cosmology, including the Overleaf System and the Underleaf System, aka Casting. I present it in different places in my books, in different contexts, in different ways, and with different commentary — because the philosophical foundation of the Michaelian teachings is found within this abstract structure. This table and the others like it provide the *context* in which the *content* of the Overleaf System is framed and organized. The specifics of the content of the Michaelian teachings cannot be fully understood and appreciated unless these generalities are first understood and appreciated.

With that introduction to emanationism and Casting behind us, we are ready to delve into the part of emanation that deals specifically with Casting on the Ordinal planes according to the Michaelian teachings.

Casting per the Michael Math Chapter and Other Sources

This section is a quick overview of the infamous "Michael Math" (MM) chapter of *More Messages from Michael MMFM*, 1986), pages 188 to 215. (Henceforth I refer to this as *MMFM*–MM.) Therein is some of the most dense information found in the Michaelian teachings. Many students find it to be difficult, so let's review it.

- 1. In the previous chapter here in Part Four, Chapter 4M, "The Seven Soul Ages", there is discussion of "Composites". This is a generic term for conglomerations of various quantities of Fragments on planes, usually beyond the Physical. These Composites first came to light in the original Michaelian group transcriptions, but there was very little description of them, other than that the Entity consisted of about a thousand Fragments, and there was a larger group of souls that were Cast at the same time as whatever Entity was under discussion. This information was published in *MFM* in 1979.
- 2. This original Michaelian group/MFM revelation was expanded considerably when MMFM was published in 1986. In that book, much more was said about these Composites and their nature and their structural relationships to each other; they were given names and quantities and descriptions, as follows:
 - POSITION: This is the word used to indicate one individual Fragment in a Cadence (see below); there are seven Positions in a Cadence; each Position is said to have one of the seven Role-ish natures. All of the Positions in a Cadence were said to have the same Role in addition to their Role-ish nature.

- ESSENCE TWIN: This is a minimum size Composite in that it consists of only two Fragments. In MMFM—MM, Essence Twins were said to be always in different Entities (see below) in the same Cadre (see below), usually (6/7) of the same Role. (In other channeling, Essence Twins were said to be usually of different Roles, and sometimes in the same Entity; more will be said about these discrepancies further on.) This is what I refer to as a "structural" Composite, based as it is on the relationship of Entities Cast in a Cadre at the same time, aka simultaneously. This is in addition to the structural bond that I call identicality = the same Role (or Role-ish). Identicality is a manifestation of the Oneness principle in Tao's Template.
- TASK COMPANION: This is another minimal Composite consisting of two Fragments. It was said in MMFM–MM that Task Companions are usually (6/7) in the same Entity, always a Cardinal/Ordinal pairing of some kind (the remaining 1/7 possibly including a Neutral Scholar), which could include complementary Roles on an Action, Inspiration, or Expression Axis. (I wonder if it also includes Role-ish pairings.) This is another structural Composite, based as it is on Cardinal/Ordinal complementarity. Complementarity is a manifestation of the Twoness principle in Tao's Template.
- CONFIGURATION MEMBER (CM): These are almost minimal Composites. They consist of from three to nine Fragments in various Entities, usually in the same Cadre. The confederation is looser than the other Composites, and it is mostly about sharing work projects on the Physical Plane. Apparently, this is not primarily a structural Composite, because it was said to be based on the choices of the Fragments during incarnations.
- CADENCE: This is another small Composite, in this case consisting of seven Fragments; each Fragment has a Position (see above) in the Cadence; each Fragment has a Role-ish (Septenarian Attribute or Ray) nature to it consequent to its Position; every Cadence member is said to have the same Role. A metaphor for the Cadence is seven soldiers marching in a row, side-by-side. The bonds here result from *identicality* (Oneness) of Role, and *complementarity* (Twoness) of Role-ish and *triality* (Threeness) as explained further on. These structural bonds in a Cadence make for a tightly-knit group of Fragments.
- GREATER CADENCE (GC): This is a Composite consisting of 49 Fragments in seven closely-related Cadences. The Role-ish pattern of the Cadence is repeated in the Greater Cadence. The metaphor here is of seven Cadences of side-by-side soldiers marching in ranks, front-to-back. This structure leads to the phrase, 'the rank and file' to describe a square-shaped group of soldiers with seven soldiers on a side. Each Cadence in the Greater Cadence has a Role-ish nature. As with the Cadence, the bonds within the Greater Cadence are of identicality, complementarity, and triality. (If it is stated in MMFM—MM that the entire GC is of one Role, I missed it. The diagram on page 193 of Hoodwin's book JOYS depicts it this way.)
- SIDE: This is a Composite consisting of 343 Fragments. This size Composite is not spoken of in MMFM, but it surfaced in the late 1990s in channeling by JP Van Hulle. It is the logical progression of Cadences (7) and Greater Cadences ($7^2 = 49$) in multiples of 7; thus $7 \times 7 \times 7 = 7^3 = 49$ 343. Returning to the metaphor of soldiers marching, the soldiers are in files (Cadences) and ranks (Greater Cadences) and now columns (Sides) stacked on top of each other if it were possible; they would form a cube of 7 soldiers on a side, looking somewhat like a Rubik's Cube, which is 3 on a side, but with many more blocks. The metaphor of soldiers marching in files and ranks breaks down at this stage of increasingly larger Composites, so the visual image recommended by Van Hulle was of a toblerone — an extruded triangle with three sides, hence the name of this Composite: Sides, the Side being 49 Positions (a Greater Cadence) long, in 7 columns. Three Sides, visualized as attached end-to-end, add up to an Entity (see below). (There are other alleged subtleties and complexities about the structure of Sides that I do not care to get into, because these details are iffy and irrelevant to the concerns discussed in this chapter.) The three Sides of each Entity each have a name expressing a characteristic of their identity: "Truth", "Love", or "Energy". You may think of these as alternative names for the Axes of Expression, Inspiration, and Action respectively. You may also think of this situation as the Cardinal and Ordinal Poles of the Axes having a merged meaning: Expression = Sage-ish + Artisan-ish; Inspiration = Priest-ish + Server-ish, Action = Kinq-ish + Warrior-ish. I call this structural component triality. The Tao's Template principle of Threeness is the bonding element with Sides. This is different from Role-ish

- when Sevenness is the governing structural element. If you don't grasp this yet, it will all make more sense as this chapter continues.
- ROLE-IN-ENTITY: This is another type and size of Composite, but the size is of widely varying quantities of Fragments. In *MMFM*–MM they are said to be blocks of the same Role within the Entity, and the entirety of the block is always in the same Entity. Apparently the bonds here are of *choice* and *identicality* and perhaps *simultaneity* (aka Cast at the same time).
- Positions/Fragments. There can be more than 1029 Fragments because it is possible to add "Wild Cards" in the ideal structure, and there can be fewer than 1029 when "holes" result in subtraction from the ideal structure. This particular irregularity is not addressed by me in this chapter. There is disagreement among channeled sources about how many different Roles are Composites in the Entity some say all Roles, some say two or four but this particular discrepancy in channeling is not addressed by me in this chapter because it is irrelevant to the points that I want to make.
- CADRES: These are the Composites that consist of 7 Entities. Entities in a Cadre are said (in original Michaelian group and MFM and MMFM) to be Cast at the same time, aka simultaneously. The 7 Entities each have a Role-ish nature, the same as the nature of the 7 Rays, the same as the Role-ish Positions in a Cadence, the same as the Role-ish Cadences in the Greater Cadence. The metaphor of soldiers marching broke down with the Side, and the toblerone metaphor took over at that point to visualize the Entity. You may visualize the Cadre as seven toblerones side-by-side because Entities in a Cadre are Cast simultaneously.
- CADRE GROUPS: These are the Composites that consist of 7 or 12 Cadres, depending on which channel is talking. (This particular discrepancy is not addressed by me in this chapter, but Hoodwin does so in *JOYS*, p. 188.) Altogether this makes seven sizes of Composites based in some way on the Sevenness principle; this might or might not be coincidental. Collectively, I refer to the seven levels of Composites as Underleaves of the Oversoul. This is a device to compare and contrast Casting factors of the Oversoul with the seven Overleaf categories of the Personality.
- There might be other Composites larger than Cadre Groups on the Ordinal Planes. These are mentioned in JOYS on page 188, but they are not of interest to me in this chapter. The nature of the Cardinal Planes has nothing to do with the sizes of Composites so far as I know, because, in my conceptualization, there are no Composites on the Cardinal Planes; differentiation there is qualitative rather than quantitative. Evolution there involves progress in the quality gradient. (Evolution on the Ordinal side of the Akashic Plane involves progress in the quantitative arena, from the completion of Monads to the integration of Composites.) In my schema and terminology, the ultimate Composite, the final synthesis of Fragments on this side of the Akashic Plane, is the Oversoul.
- Each of these Composites are described and discussed with further detail in the continuation of this numbered list below.
- 3. MMFM–MM, p. 190, implies that not all Roles are found in each Entity, and Hoodwin, JOYS, p. 182, says explicitly that "A cadre contains essences of all seven roles, but within an individual entity, two to four roles are usually represented. There are, however, unconventional cadres in which each entity contains all the Roles, and which have more than the usual number of members." However, Sarah Chambers had this to say in a channeling session on 14 January 1996: "All Entities have all seven of the Roles." This is another discrepancy in the channeling, but it is one that I do not care to try to reconcile because it is irrelevant to the points that I want to make in this chapter. How the Role Composites are distributed inside the Entity allegedly varies from Entity to Entity, according to MMFM–MM.
- 4. Casting of blocks of Role Composites within Entities makes the situation with Entities not as rigidly structured or archetypal as things could have been. MMFM—MM goes on and on about how a Fragment in an Entity is subject to all of these various Role-ish influences related to its location in the various sizes of Composites listed above. This makes for a huge number of different possibilities for blended Role-ish identities when it comes to Underleaves; each Fragment can be metaphorically 'colored' and 'flavored' with numerous Role-ish influences. Take note of that word "blended", because it is important in discussions further on.

- 5. The descriptions of the various components of Casting make it clear that the components of Casting are all mixed up blended, as it were. When we look at people, we see a lot of blending of a person's Role with Role-ish Casting Underleaves. We also see a lot of blending of Personality Overleaves. This is so much the case that it is sometimes almost impossible to discern a person's Overleaves and Underleaves; we have to rely on channeling. However, that has not gone well because channeling has proven itself to be very unreliable. Ultimately, each of us is left to fend for ourselves when it comes to Validating our Overleaves and Underleaves.
- 6. When you blend a Warrior and a King you get an Action/Energy Composite; when you blend a Server and a Priest, you get an Inspiration/Love Composite; when you blend an Artisan and a Sage, you get an Expression/Truth Composite. This type of blending is the opposite of the unblending that happens during the Fragmentation process 'before' incarnation, and the same as the Reintegration of Fragments with their kindred souls, aka Composites, 'after' incarnation. I put 'before' and 'after' in quote marks because of the 'simultaneity' factor mentioned in the previous section. More will be said about this in a subsequent section.
- 7. All of the above factors mean that Casting is not entirely rigid; there are elements of *choice* as well as elements of *structure* in the Tao's Template mold; there is both chaos and cosmos involved. And besides that, there are various sorts of blending of Role-ishes.
- 8. The ratio "six times out of seven" (6/7) mentioned in *MMFM*–MM is almost surely a structural thing, and it probably has something to do with the fact that Scholars are allegedly 1/7 (14%) of the total population of all seven Roles; therefore bonds of Complementarity are nonexistent with them; therefore *choice* is more likely to drive their bonds.

MFM introduced the subject of Casting in 1979; the MM chapter of MMFM, published in 1986, enlarged the flow of information about Casting; the subject has evolved over the decades since 1986. For documentation on the current thinking in the Michaelian teachings community other than the Yarbro books, refer to chapters in Hoodwin's encyclopedic book JOYS (2013), especially the chapter "Cadres and Entities", the chapter "Cadences and Numbers", and the chapter "Essence Twins and Task Companions".

If you want a reminder of how Casting looks as a graphic representation, refer to page 193 of Hoodwin's *JOYS* and pages 100–101 of Stevens's *TTE*.

One of the most detailed resources on the subject of Casting was written by Troy Tolley, found here: >https://our.truthloveenergy.com/articles.html/library/sentience/sentient-structure/cadres-and-entities-101-r143/<. On that website, you will find where he has difficulties reconciling what various channels say about Casting. Hoodwin also mentions some of these discrepancies. I mention some of these discrepancies; that is the subject of this chapter. Some of them can sorta kinda be resolved; others, not so much, as of the time of writing of this chapter.

Various channels say things about some aspects of Casting that do not now and never have interested me. Typically, these are things that are even more unvalidatable and useless than usual in the dogma-doctrine category of the Michaelian teachings. In the following sections, I am only going to talk about Casting features that have caught my attention over the decades because the information is either: 1) useful for understanding some broad structural components of the workings of the cosmos; 2) it deals in some way with some of the principles mentioned previously, namely Taoness, Oneness, Twoness, Threeness, Sevenness, All, Yin, Yang, and Chi (I am really keen on principles); 3) there are some aspects of these Casting concerns that are interesting intellectual puzzles created by ambiguous and discordant channeling that an Artisan such as myself finds it fun to play with and try to figure out if they seem to have the potential to be solved.

That said, let's delve into those Casting concerns that I find interesting. It took many pages of introduction just to get to the discussion of the subject of this chapter.

Casting Concerns — Enumerated and Labeled and Introduced

Here is my list of concerns in regard to the Michaelian teachings dogmas—doctrines on Casting; my label for the issue is capitalized after the number. Each of these issues is examined in subsequent sections of this chapter.

1. SEQUENCE: Natural Sequence versus Michael Math Sequence versus Vibration Sequence: Is the Casting of septenarian Composites on the Ordinal Planes per the Natural Sequence or per the Michael Math Sequence of the Vibration Sequence?

- 2. ROLES: When are Roles Cast? Early in the Casting process, beyond the Causal Plane as *MMFM*–MM states? Or just before the reincarnation cycle begins on the Physical Plane per the original Michaelian group transcriptions that say that Roles are only a factor on the Physical Plane?
- 3. ESSENCE TWIN TYPES: The Yarbro contingent of the Michaelian teachings community says that Essence Twin Composites are usually (6/7) of the same Role, whereas the non-Yarbro contingent says that Essence Twins are usually composed of different Roles. Which one is right, or are they both right, or are they both wrong?
- 4. TASK COMPANION TYPES: Per Michael Math, Task Companion Composites are complementary Roles 6/7 of the time. Per Michael Math, Task Companions are 6/7 of the time in the same Entity. Others say that there are multiple levels and multiple types of Task Companions. Which description is correct, or are they both correct, or are they both incorrect or incomplete?
- 5. CADENCE TYPES: Yarbro books only mention one type of Cadence. Hoodwin says there are multiple types of Cadences. Which one is right, or are they both right, or are they both wrong?

As is typical for the subjects of these chapters here in Part Four of this *History* book, these issues were created by discrepant channeling. The subject of Casting in the Michaelian teachings is messy; the discussion of the subject of Casting in this chapter is therefore messy. Apologies that the arguments and the evidences in my attempts to untangle the mess are convoluted and tedious; it is not my fault; I did not create the mess; blame the channels.

So let's get started on the attempt to resolve the issues. Sometimes I hate it when I have to resort to tortured mental contortions and gymnastics in an effort to resolve discrepant channeling, and it is not as though I have not already done this in regard to other Michaelian teachings subjects, but here we are again. Sometimes I like it when I succeed at solving the puzzle. Casting is not a subject where much success is possible, because the discrepancies are not resolvable with tools of Validation, whether academic or experiential.

Concern #1 — Natural Sequence vs Vibration Sequence vs Michael Math Sequence

Several places in this *History* book I mention the Natural Sequence. This is a certain specific arrangement of the Septenarian Attributes. These Attributes and this sequence are/is shown in the Table 4Nb following.

Several places in this *History* book I mention the Vibration Sequence. This is a different arrangement of the Septenarian Attributes, attributed to José Stevens in his book *The Michael Handbook*. These Attributes and this sequence are/is shown in the Table 4Nb following.

For your convenience, and to aid in understanding, I have correlated the Septenarian Attributes with the Role-ishes (explained further on) in this table. Also in this table, I show the Michael Math Sequence and the Vibration Sequence, so that you can easily see how they differ from the Natural Sequence. The reason that I show the Natural Sequence and the Michael Math Sequence and the Vibration Sequence in this table is because in the "Michael Math" (MM) chapter of *More Messages from Michael*, Casting was said to happen per the Michael Math Sequence, not the Natural Sequence., and on page 78 of *The Michael Handbook* it was said that Casting happened per the Vibration Sequence, which is different from the Natural Sequence and the Vibration Sequence. However, one might reasonably have expected the Natural Sequence to govern Casting because the seven planes and the seven sub-planes themselves follow the Natural Sequence. Just guessing, one might have presumed that Casting septenaries should be a subset of the sub-planes septenary which is a subset of the planes septenary. However, the dogma–doctrine of the Michaelian teachings community is that this reasonable expectation is misguided in this case, and a rationale has been put forward to explain why the Michael Math Sequence or the Vibration Sequence was *chosen* for Casting, rather than have the Casting process simply follow the more-fundamental *structural* pattern of the Natural Sequence by default. That rationale is provided further on, in a subsection of this section.

Anyway, here is the table:

| Table 4Nb — NATURAL SEQUENCE — VIBRATION SEQUENCE — MICHAEL MATH SEQUENCE | | | | | | | | | | | |
|---|--------------------------------------|--------------------------------------|--|--|------------------------------------|---------------------------------------|---------------------------------------|--|--|--|--|
| RANK | FIRST | SECOND | THIRD | FOURTH | FIFTH | SIXTH | SEVENTH | | | | |
| PLANE | Physical | Astral | Causal | Akashic | Mental | Messianic | Buddhaic | | | | |
| ROLE-ISH | Warrior-ish | Server-ish | Artisan-ish | Scholar-ish | Sage-ish | Priest-ish | King-ish | | | | |
| NATURAL SEQUENCE | Ordinal Action Warrior-ish | Ordinal Inspiration Server-ish | Ordinal Expression Artisan-ish | Neutral Assimilation Scholar-ish | Cardinal Expression Sage-ish | Cardinal Inspiration Priest-ish | Cardinal Action King-ish | | | | |
| VIBRATION SEQUENCE | Ordinal Action Warrior-ish | Cardinal Action King-ish | Neutral Assimilation Scholar-ish | Ordinal Inspiration Server-ish | Cardinal Expression Sage-ish | Ordinal Expression Artisan-ish | Cardinal Inspiration Priest-ish | | | | |
| MICHAEL MATH SEQUENCE | Ordinal Inspiration Server-ish | Ordinal Expression Artisan-ish | Ordinal Action Warrior-ish | Neutral Assimilation Scholar-ish | Cardinal Expression Sage-ish | Cardinal Inspiration Priest-ish | Cardinal Action King-ish | | | | |

My comments on this table are as follows:

- RANK: The first row of this table shows the numerical rank of all the rows in the column from top to bottom. Rows below this row are instantiations of the rank order sequence.
- PLANE: The second row shows the names of the seven planes as generally given in the Michaelian teachings. Refer to Chapter 4E above, "The Seven Planes", for more information. The qualities and nature of the planes are characterized by the Septenarian Attributes, which are shown in the fourth row. Recall that Septenarian Attributes are the combination of Dialectic and Axial Attributes.
- ROLE-ISH: The third row applies the Role-ish characterization or personification to the Planes named
 in the row above. Another way of characterizing the Septenarian Attributes other than with the
 Dialectic and Axial Attributes is to apply the corresponding Role-ish nature to them, thus Warrior-ish,
 Server-ish, and so on. For your convenience in understanding the points that I want to make in the
 remainder of this chapter, I will use the Role-ish attribution often.
- NATURAL SEQUENCE: The fourth row shows the Septenarian Attributes in two lines (Dialectic Attribute in the first line; Axial Attribute in the second line) and the corresponding Role-ish in the third line. As explained in detail in my book *The Tao of Cosmogony*, the Natural Sequence applies to developmental sequences, such as Life-Stages, Soul Ages, and Levels within Soul Ages. These developmental sequences are not shown in this table, but the seven planes are shown because they are mentioned in this chapter and because they have a connection with Casting; the planes exist and function according to the Natural Sequence, not the Michael Math Sequence that is shown in the sixth row.
- VIBRATION SEQUENCE: The fifth row shows the Septenarian Attributes in two lines (Dialectic Attribute in the first line; Axial Attribute in the second line) and the corresponding Role-ish in the third line. The prism analogy for Casting was introduced on page 74 of José Stevens's book *The Michael* Handbook, and then this sequence was presented on page 78. Notice that the Vibration Sequence only correlates with the Natural Sequence in two of the seven instances. Stevens provides no rationale for the Vibration Sequence, nor do I; he simply declares it as a dogma–doctrine. Stevens's concept reminds me of the Rays of Theosophy and other esoteric teachings, but the Rays are said in Theosophy to follow what I call the Natural Sequence. So far as I know, there has been no recognition in the Michaelian teachings community that the Vibration Sequence also refers to Casting, but Stevens does use the word "cast" in his description of it. Because of this lack of recognition, there is no need to discuss it further in this chapter.
- MICHAEL MATH SEQUENCE: Notice that the Michael Math Sequence correlates with the Natural Sequence in four of the seven instances. According to *MMFM*–MM, the Casting of Fragments was, for the most part, according to the Michael Math Sequence. (The Casting of Blocks of Roles is not septenarian and it did not follow the Michael Math Sequence or the Vibration Sequence or the

Natural Sequence; see section further on.) Whereas the Natural Sequence governs *development*, the Michael Math Sequence is a *deployment* strategy, presumably chosen by a Composite of some size, to accommodate certain situations or accomplish certain ends. This is all explained in the Epilogue to this *History* book, Chapter E-2, "The Natural Sequence of the Cosmic Septenary", so I will not elaborate here beyond what is said in the next subsection, "Taijitu Tango Principle".

For nearly six years after MMFM was published in early 1986, I tried to believe that the Michael Math Sequence had validity in regard to Casting, thereby going 'against my better judgment' that the Natural Sequence was valid in this case. I relented to my better judgment in late 1991 and rejected the Michael Math Sequence completely, but then relented back again in 1998 when I came to understand how they both could be correct: sometimes the Natural Sequence applies and sometimes the Michael Math Sequence applies: it depends on circumstances and situations. There is no dissension in the Michaelian teachings or elsewhere that the Natural Sequence applies to the planes and sub-planes, but if the channeling is to be believed, then the Michael Math Sequence applies to Casting.

Personally, I regard this Natural Sequence versus Michael Math Sequence issue in regard to Casting as unresolved because there is no independent — outside the Michaelian teachings — corroboration of the Michael Math Sequence in *any* realm of knowledge and understanding that I have so far encountered. We simply cannot Validate the Michael Math Sequence in the way that the Natural Sequence has been extensively validated in realms of knowledge and understanding as documented in my book *The Tao of Cosmogony.* It is true that Theosophy teaches that Rays follow what I call the Natural Sequence, but here again, that dogma-doctrine cannot be validated by scientific or philosophical or academic or experiential means.

So, there is no *evidence* for the Michael Math Sequence (channeling is not evidence, even if/when more than one channel says the same thing; it is just dogma–doctrine), but there is a *rationale* about why it is possible or plausible to depart from the Natural Sequence in matters of *deployment* by *choice*, rather than *development* by *structure*, and that is documented in the Epilogue to this *History* book, Chapter E-2, and summarized in the next paragraph.

Acknowledging, as I do, that the Michael Math Sequence has an apparently legitimate rationale for why it might be true does not mean that it is true. For me, the Michael Math Sequence is just another one of many unprovable dogma–doctrines in the Michaelian teachings that we live with as best we can. In the following sections, I go along with the Michael Math Sequence dogma–doctrine, although I still do not feel good about it, mainly because the Michael Math Sequence has hijacked the meaning usually ascribed to the numbers in the numerical sequence attached to the Planes and hence to the Natural Sequence with their Septenarian Attributes; see next paragraph. The whole point of my argument and evidence is that, even if the Michael Math Sequence is valid regarding deployment, as in casting or ensoulment, it is not valid regarding development in terms of correlation with the numerical sequence.

MMFM-MM applied the Role-ish attributes to the numbers of the Michael Math Sequence:

These can also be expressed entirely mathematically: the Overleaves given as a Third-Level Mature King in the Caution Mode with a Goal of Submission, a Skeptic in the Emotional Part of Intellectual Center with a Chief Feature of Arrogance can instead be expressed in these terms: three/four/seven/two/three/one of two/six." (MMFM, p. 192.)

This is how the Michael Math Sequence has illegitimately hijacked meaning from the Natural Sequence enumeration. That is, #1 fundamentally belongs to Warrior-ish, not to Server-ish; #2 fundamentally belongs to Server-ish, not to Artisan-ish; #3 fundamentally belongs to Artisan-ish, not to Warrior-ish. Structurally, you cannot get any more fundamental than the Planes, which have a logical (Ordinal, Neutral, Cardnal) and mathematical (Oneness, Twoness, Threeness) relationship to each other. Casting is not fundamental; if the Michael Math Sequence has any validity, it is because it exists as a matter of *choice*, not as a matter of *structure*. This distinction between *choice* and *structure* figures in to a number of Casting concerns discussed in this chapter.

So here is the proposed rationale for why the Michael Math Sequence is appropriate for Casting:

In MMFM—MM, it is said that Casting deployment happens per the Michael Math Sequence (rather than per the Natural Sequence development). So what does this mean in a practical sense? The Michael Math Sequence is another instance, among several others, of the blending of Role-ishes. That is to say, if/when a naturally-occurring #1 Warrior-ish (in terms of Natural Sequence development) is Cast, aka deployed, in an unnatural location for it, say the #3 position (per the Michael Math Sequence), it thereby acquires some of the "flavor" or

"color" or "undercurrent" (these are words used in MMFM–MM, p. 191) of the naturally-occurring #3 Artisan-ish Ray per the Natural Sequence. You might call this a Warrior-Artisan blend. The same coloring–flavoring happens when the natural #2 Server-ish (per the Natural Sequence) is Cast in the unnatural #1 Warrior-ish placement (per the Michael Math Sequence), and when the natural #3 Artisan-ish (per the Natural Sequence) is Cast in the unnatural #2 Server-ish placement (per the Michael Math Sequence). The rationale is that Casting out of the Natural Sequence is a choice, perhaps by the humanoid Oversoul of this planet, to suit the circumstances of incarnation and evolution, or perhaps just to run an experiment to see what happens, or perhaps just to do something weird to provide a nonstructural richness to the experiential 'stew'.

In the next section, we will see another *specific* example of this kind of metaphorical 'flavoring–coloring' found in the *MMFM*–MM chapter. The entire *general* thing about Casting is that a Fragment is a *blend* of Ray/Role-ish/Role influences from various size Composites all up and down the Great Chain of Being between Fragment and Oversoul.

But before we get to that section, there are a few more relevant details to discuss in the following subsection.

The Taijitu Tango Principle

The subject of the "Taijitu Tango Principle" has appeared in other chapters of this *History* book, but it is also appropriate to this chapter on Casting concerns. Many of my concerns about Casting are driven by statements in *MMFM*–MM, and this is no exception. Let's take a close look at the relevant passages.

You can perceive that while [the number] one is ordinal and [the number] seven is Cardinal, that the first half [of the septenary] is cardinal and the last half [of the septenary] is ordinal — in other words, the pattern "doubles back on itself". This is what is implied by the "yin–yang" symbol, and it would probably be of use to keep the "yin–yang" in mind while considering what we tell you of the function of levels and numbers.

As the levels and numbers reveal functions, let us discuss this in terms of a cadre. The first-cast entity [in a Cadre] is of course the cardinal-most [location in the septenary] while also of the most ordinal number [in the septenary]. The seventh-cast entity is the most ordinal [location in the septenary] in casting yet is also the most cardinal — that is, number seven — in number. [MMFM, pp. 189–190]

In the Chinese language, the yin-yang symbol has the name "Taijitu". The symbol is so well known in the Western world that there is hardly any need to reproduce it here, but I do it anyway. Notice the perfect symmetry of the figure, the balance and equality in the opposition of white and black. The concern that I have about the statement above is that the Michaels did not themselves "keep the yin-yang in mind" as they explained the "function of levels and numbers". My concerns about "the function of Levels" were addressed in Chapter 4K above, "The Names of the Levels". My concerns about "the function of numbers" are expressed in this chapter, in this subsection. The situation is that I agree with both of the paragraphs quoted above; my question is, why did the Michaels not adhere to those pronouncements in the MMFM-MM chapter? Why did the Michaels espouse the Michael Math Sequence, which does not conform to the Taijitu Tango Principle, rather than the Natural Sequence, which does conform to the Taijitu Tango Principle? Yes, it might be that Casting actually happened per the Michael Math Sequence, so that is why the Michael's said what they did. But, what concerns me is that these assertions contradict each other.

To begin to sort out the contradiction, let's carefully parse the statements about the concept of what I refer to as the "Cardinality-Ordinality Ratio" principle embodied in the septenary and introduced in MMFM–MM. (Previously I have said that everything this side of the immanent Tao exists and functions as a Cardinality-Ordinality Ratio, as discussed in my book The Tao of Cosmology: Space and Time are a Cardinality-Ordinality Ratio; Subjectivity and Objectivity are a Cardinality-Ordinality Ratio; all other complementarities are a Cardinality-Ordinality Ratio. In fact, all that exists and functions this side of the One is ratio, a fraction, because manifestation is of Twoness, which is a ratio where the denominator and the numerator of the fraction must add up to Oneness. In this chapter, recall from prior statements that Spark versus Tao is a Cardinality-Ordinality Ratio: spiritual development grows from the Spark to Tao.) The Cardinality-Ordinality Ratio is just another way of expressing the Taijitu Tango Principle.

In both of the paragraphs of the quotation above, the Cardinality-Ordinality Ratio of each step of the septenary is said to be *reciprocal*. By "reciprocal" I mean that as Cardinality increases, Ordinality decreases, and *vice versa*. If we list the Cardinality-Ordinality Ratio as fractions, the Cardinality-Ordinality Ratio of the septenarian sequence is this: 1/7 > 2/6 > 3/5 > 4/4 > 5/3 > 2/6 > 7/1; add the numerator to the denominator and you get the number 8 in every case. I refer to this principle of reciprocity as the Taijitu Tango Principle

because of this metaphorical 'dance' of yin and yang, of Ordinality and Cardinality — 'it takes two to tango'. You can see this reciprocity principle depicted graphically in the Taijitu symbol: scan from left to right in seven steps and notice that as the black increases the white decreases, and *vice versa*.

The Natural Sequence 'dances' the Taijitu Tango Principle; the Michael Math Sequence does not, by its own admission. Take a look at this paragraph, which alleges to explain the Michael Math Sequence, also found in the *MMFM*–MM chapter:

In most instances [2 out of 3] the numbers of the polarities [Axes] add up to seven, which in the positive pole brings +Inculcation [the alleged name of the Positive Pole of Level Seven]; the exception, that of the Action polarity [Axis], is compensated for with the interaction of Warrior and Scholar — three and four — essences, and the nature of the mid-cycle [an alleged zone between Levels Three and Four], which is reflected in this interaction. [MMFM, p. 212]

So here we are presented with a situation where a clumsy dance step was invented that discombobulates the Taijitu Tango Principle. Instead of the Cardinality-Ordinality Ratio adding up to 8 as in the Natural Sequence, two out of four ratios in the Michael Math Sequence are said to add up to seven as in 1\6 (Inspiration Axis) and 2\5 (Expression Axis). This rule has two exceptions, namely 3\4 (sorta Action Axis) and 7\7 (kinda Assimilation Axis). This specious numerology is put forward as a rationale for the Michael Math Sequence. By this means, MMFM—MM would have you believe that the Michael Math Sequence is a structural matter in Casting, rather than what I perceive it to be, a matter of choice. If there is any validity to the Michael Math Sequence, to me it means that the humanoid Oversoul, chose to deploy its lesser Composites according to the Michael Math Sequence rather than the normal, default, symmetrical, reciprocal Taijitu Tango Principle—Natural Sequence. I suggest that the alleged numerical, structural considerations for the Michael Math Sequence found in this quoted passage are boqus.

And why might the Oversoul have chosen to Cast per the Michael Math Sequence? The following rationale was presented in detail in the Epilogue to this *History* book, Chapter E-2, but I summarize it here in the context of the Casting of Roles in the unnatural Michael Math Sequence rather than the natural Natural Sequence:

- 1. The Natural Sequence position of Warrior is *numero uno*, #1. If Warriors were also Cast in the #1 position, that would make them even more insufferably controlling and combative than they are by nature. How about let's Cast them in the #3 natural Artisan position, thus mellowing them out a bit and channeling their energy into creative and productive endeavors.
- 2. The Natural Sequence position of Server is *numero dos*, #2. How about let's Cast them in the #1 natural Warrior position, thus giving them more influence and impact in the world, which presumably will make the world a better place, considering that the Server is the "heart" of humanity.
- 3. The Natural Sequence position of Artisan is *numero tres*, #3. If Artisans were also Cast in the #3 position, that would make them even more insufferably intellectual and calculating than they are by nature. How about let's Cast them in the #2 naturally Server position, thus melting their hearts and making them more warm and fuzzy, which is a good thing for humanity. By combining head and heart, they might even be more creative.

The above numbered points seem to me like a better rationale for the Michael Math Sequence than the anti-Taijitu Tango Principle numerology is, and it was not I who thought it up. The gist of this rationale for the Michael Math Sequence versus the Natural Sequence was proposed on page 185 of Hoodwin's book *TJOYS* (1995), but it was removed in the second edition (*JOYS*, 2013).

I can sort of accept the Casting of Roles per the Michael Math Sequence, but I am reluctant to accept the Casting of Rays in other than the Natural Sequence because the spectrum of Rays is an unalterable, fundamental *structure*, the same as the Taijitu Tango Principle ratio, whereas the Casting of a Role somewhere on the spectrum — to tweak its Cardinality or Ordinality into an unnatural place for incarnational purposes on the Physical Plane — is a matter of *choice*. This means that I doubt that, on the Astral Plane, the Positions in Cadences follow the Michael Math Sequence rather than the Natural Sequence; it means that I doubt that the Cadences in the Greater Cadences follow the Michael Math Sequence rather than the Natural Sequence; and so on up the sizes of Composites to the Oversoul. It means that I solidly reject the notion espoused in MM-MMFM that all of the Ordinal Overleaves were skewed out of alignment with their Natural Sequence Attributes.

The issue regarding Natural Sequence vs Michael Math Sequence was the first of my concerns about Casting that I discovered in my study of the *MMFM*–MM chapter. There are others, as listed above; I review those in the following sections.

Concern #2 — Roles on the Higher Planes

Another issue that I perceive in the general subject of Casting has to do with when/where Roles are Cast. In Chapter 4C above, "Which Trait Septenaries are Overleaves?", I made the case that in the transcriptions of the original Michaelian group, Roles were said to be a factor only on the Physical Plane and to a small extent on the lower levels of the Astral Plane while the Soul of whatever Role is still reincarnating. However, it would seem that in subsequent channeling, the Casting process, including Roles, appears to begin and end somewhere "beyond the Causal Plane".

My understanding is that Fragmentation exists in the Ordinal half of the planes, on the Ordinal side of the middle of the Akashic Plane, the fourth plane, which is beyond what in the Michaelian teachings is called the Causal Plane, the third plane. My understanding of this is based on theoretical considerations about the nature of the Ordinal planes versus the nature of the Cardinal planes, but there is also this statement from *MMFM*–MM, p. 200:

This bond [of Essence Twins], as we have indicated many times, endures for all time and continues until the Cadres have reunited beyond the Causal Plane.

Per Yarbro, Essence Twin's are of the same Role. Therefore, per *MMFM*–MM, the differentiation and merger of Roles happens not too far from the Fragmentation and Reintegration of the Oversoul this side of the mid-Akashic Plane. This is not the understanding that we find in the original Michaelian group transcriptions as documented in Chapter 4C above.

What are we to do about this apparent discrepancy?

One could assume that the later channeling is correct and the earlier is incorrect, but I am loath to assume such a thing about channeling because it has proven itself to be defective and deficient in so many ways and at so many times on so many subjects. On the other hand, I would like to respect the channeling as much as is reasonable within the context of all realms of knowledge, and as much as it can be corroborated by extraneous sources. Is there some way to reconcile these two apparently contradictory statements, a way that does not make one right and the other wrong, a way that makes them both sorta right? My present sentiment is that to do so requires some metaphorical 'mental contortions and gymnastics', with which I am uncomfortable, but here goes. (I am comfortable with numbered lists, as you surely know by now.)

- 1. I make the case in Chapter 4C that, according to original Michaelian group channeling, Roles are almost completely a factor of the Physical Plane experience of a Fragment, and to a small extent a factor of the lower levels of the Astral Plane, while the Fragment is still reincarnating. What if we said that, before the reincarnation cycle the Role component of the Oversoul is *potential*, and after the reincarnation cycle, the Role component of the Oversoul is *latent*. This makes the Role to be only *actualized* or *realized* while it is on the Physical Plane doing its reincarnation cycle. As stated, this looks like a semantic solution, I know, but it does not feel just plain wrong to me at this time. But if it does feel wrong to you, is there yet another possibility for reconciling the divergent channeling? The following solution was inspired in my mind by the semantic solution just given.
- 2. A second attempt at reconciliation of the channeling discrepancy goes like this: If we substituted "Ray" or "Role-ish" for "Role" in the statements in the MMFM—MM channeling about Roles on the planes beyond the physical, it would still sorta make some sense. It would allow the limitation of Role to the Physical Plane as stated in the original Michaelian group transcriptions, but it would allow the word "Role" to be used as a shorthand for similar phenomena on the Astral and Causal planes, the "Role-ish". This is another semantic solution: it reinterprets the meanings of the words used. More will be said about this idea in subsequent sections where it is relevant, and where it might resolve some other issues.
- 3. A third attempt at reconciliation of the discrepancy goes like this: Physical Plane "time" is not the same thing as Astral Plane "time" is not the same thing as Causal Plane "time". Each plane is in some geometric hyper-dimensional way perpendicular to the others. You have no doubt heard of "parallel universes"; what I am suggesting is "perpendicular planes". Happenings on each plane are sequential in what passes for time on that plane; this internal consistency is referred to as a "reference

frame" (to use a term borrowed from Galilean and Einsteinian relativity); each plane is in its own reference frame where whatever passes for time on that plane makes causal sense. Each plane's reference frame does have a mathematical relationship to the other planes, but "time" on one plane is not the same "time" as on another plane. We ran into this same problem in Chapter 4M, "The Seven Soul Ages", and the resolution of this translation between frames/planes was called "simultaneity". What this means, as far as reconciliation of disparate channeling is concerned, is that while the Roles are extant on the Physical Plane, they are also extant on the Astral and Causal planes under the principle of simultaneity. That is, Fragmentation does not happen "before" the reincarnation cycle, and Reintegration does not happen "after" the reincarnation cycle under this principle; it is all happening "now" on all three Ordinal planes, from the reference frame, aka point of view, of the unfragmented Oversoul. In the Physical Plane reference frame, there exists a "before" reincarnation and there exists an "after" reincarnation, but in the Astral Plane reference frame, perpendicular to the Physical Plane, not so much. I am not the first one to think of this; mystics and philosophers and physicists have said something similar in regard to other matters; it is called the "block universe cosmology". In the case under discussion here, the block universe idea ultimately applies to all three Ordinal planes, not just the Physical Plane in cosmology as understood by modern science. Those matters are documented in my book *The Tao of Cosmology*. More will be said about simultaneity in sections further on.

There is some indirect support for Item #3 in the original Michaelian group transcriptions:

Can we hear more about planes?

You understand that this is an extensive subject. The time [element] in planes is presently misunderstood. The planes are different levels, as in ladders, though your time concepts are being misinterpreted. You are now living in your time, and yesterday and tomorrow are all the same, going on now, as with today [from the point of view of a higher plane]. Planes are ladders, steps, graduations. This is unclear because you cannot see above you. As you see yesterday, it is somewhat clearer to you how you are misusing energies. And yet, if in the right place, you can see tomorrow, as it is all happening now. The planes are a way to step up and see better — a reward, as such, for growth. You can be where you are or in yesterday or in tomorrow, all at the same time. Your growth and work places you where you can understand. There is much difficulty seeing even today and yet the truth is that to grow and learn, you must stop seeing today and be able to see yesterday, now and tomorrow all as one, and develop yourself according to your needs. On the higher planes, you can see yesterday and today and tomorrow, and yet cannot see higher than you are. [SJC, 17 July 1973 — Tomas, not Michael]

Time, or all time, does exist, though not in your frame of reference. The sensation of time "passing" is very real on your plane. You cannot transcend the time frames in the physical body.

If time as we know it does not exist, is there an absolute?

I have the feeling that space is just standing still and we're just moving through it — space and time.

Dick is saying the correct words without complete understanding. There is a time axis about which parallel universes of physical reality revolve. The play is eternal [beyond time].

Is there time on the Astral Plane?

Not as you know it. [S/C, 02 October 1973]

As with the Natural Sequence-versus-Michael Math Sequence discrepancy, the Role-on-the-planes issue has not come to a completely satisfactory resolution in my own mind, but I prefer the third explanation. Thus, having metaphorically registered my 'formal protest' with the Michaelian teachings community, I am going to 'resume the game'. In what follows in this chapter, I am just going to go along with the channeling that says that Roles are a factor of the planes beyond the Physical as well as of the Physical Plane, rather than the channeling that says that Roles are a factor of the Physical Plane only.

Let's note that the alleged Casting of blocks of Roles within the Entity is another example, like the Natural Sequence-versus-Michael Math Sequence example, of *deployment* by choice, rather than some aspect of a rigid structure such as septenarian Casting in general. This mixing and blending has the effect of diluting the pure qualities of each Ray/Role-ish/Role. Casting per the Michael Math Sequence rather than the Natural Sequence has the same effect. Both metaphorically 'mix up' the 'recipe' in an experiential 'stew', so to speak. Ingredients that would normally have one 'flavor' have a bit of another 'flavor' mixed in, as an expression of *choice* rather than rigid structure.

There is a little bit more that should be said about the casting of Role-in-Entity:

Within the entities the essences [Roles] are cast, and they are cast in sequence. Therefore, let us assume that the second-cast entity has priests cast first, Scholars cast second, Artisans cast third, and Sages cast fourth. That casting order will influence function of the essences within the entity. The priests would be the most cardinal and of most ordinal numerical position. [MMFM, p. 190]

The intention with this system seems to be to allow Roles to choose where they want to be on a Cardinal–Ordinal spectrum relative to other Roles within the Entity. Cardinal Roles can be very Ordinal, and Ordinal Roles can be very Cardinal, if they want. It is a *choice* to use a *structural* component of Casting, namely placement on a Cardinal–Ordinal spectrum, in order to satisfy these desires. Personally, I believe that the same type of skewing of Role and Role-ish "energies" can be accomplished by other means, but I suspect that there is no way for us to know for certain how or even if this is done one way or another way.

Leaving the answer to Concern #2 somewhat ambiguous, let's now move on to the next issue.

Concern #3 — Types of Essence Twins

The idea that souls come in pairs is an ancient one, and the alleged phenomenon has been given different names by different sources and expositors. In the Michaelian teachings the alleged phenomenon is called "Essence Twins". As noted further on, the twinning is variously said to exist before, and/or during, and/or after the cycles of incarnation of the souls on the Physical Plane. It is said to be the strongest bond between souls that exists. Students of the Michaelian teachings are familiar with the idea because it is explained in many of the published books, and explained on Michaelian teachings websites. Therefore I will not elaborate on it further.

However, not unlike the other concepts covered here in Part Four — "Essays on Issues" — there are discrepancies in the description in different contingents of the Michaelian teachings: one contingent says that Essence Twins are usually the same Role; another contingent says that Essence Twins usually are not the same Role. As usual, I believe that there are things to learn by examining the discrepancies, and lessons to learn about the Validation process — a process that the Michaels repeatedly enjoin us to pursue as an essential part of our intellectual discernment and spiritual development. The subject of Essence Twins is not relevant to the Overleaf System — the primary subject of this book — in any way that I understand, but it is relevant to this book in this other way: Validation of the Michaelian teachings in general. The discrepancy in the Michaelian teachings regarding alleged Essence Twin Roles has bugged me for decades, so now I address it in writing. If you the reader have any better ideas than I do regarding sorting out this discrepancy, please let me know.

The story of Essence Twins in the Michaelian teachings is long and convoluted and difficult to sort out. Please buckle up your seat belts for a bumpy ride, and put on your thinking caps (or crash helmets?) now. Even though it has been channeled that I do not have an Essence Twin, the subject has interested me for decades because of the blatant apparent discrepancy between two contingents of Michaelian students. I first read the Yarbro version in 1980 in *MFM*, then a decade later in 1990 in *MTBT* I read the non-Yarbro version. And naturally I wondered: How did that contradiction happen? Why did that contradiction happen? What is the truth of the matter? Can we know the truth? Is there a reconciliation? I present speculative resolutions in the following subsections, but I am not satisfied with them. Now I am wondering if you have asked the same questions that I have, and I am wondering if you have a satisfactory resolution. I invite readers and channels to suggest solutions to these issues that I have not thought of.

Twin Souls in Non-Michaelian Teachings Sources

When I did an internet search for "twin souls twin flames" I got 6,840,000 hits in 0.59 seconds. To me this means that this is not an obscure or rare subject. If you are interested in researching the topic as understood outside of the Michaelian teachings, then I suggest that you start your research with >https://lonerwolf.com/twin-flame/<. The two people who created the Loner Wolf website — "Sol" and "Luna" — say that they are twin flames, and their description of their own experience fits with the published Michaelian teachings descriptions. It so happens that they are familiar with the Michaelian teachings, and they often incorporate ideas from the Michaelian teachings into their presentations, as well as borrowing ideas from many other esoteric teachings. Their synthesis of practical esotericism looks pretty good to me. The following was extracted from the Loner Wolf website linked above:

The Origins of Twin Flames: "So ancient is the desire of one another which is implanted in us, reuniting our original nature, seeking to make one of two, and to heal the state of man." — Plato, Symposium

The concept of having a "Twin Flame" originated in Plato's mythic dialogue entitled "The Symposium" which wrote that human beings originally had two faces, four arms, and four legs. Under the threat of being overpowered, the gods split them in half, creating the humans we see today. Hence, it is thought that we all have one "twin" soul out there in the world. [Retrieved 03 June 2019]

Consider this also:

What if you were to discover that you were not entirely you, but rather one half of a whole, that you had, in other words, a divine double? In the second and third centuries CE, this idea gripped the religious imagination of the Eastern Mediterranean, providing a distinctive understanding of the self that has survived in various forms throughout the centuries, down to the present. *Our Divine Double* traces the rise of this ancient idea that each person has a divine counterpart, twin, or alter-ego, and the eventual eclipse of this idea with the rise of Christian conciliar orthodoxy.

Charles Stang marshals an array of ancient sources: from early Christianity, especially texts associated with the apostle Thomas "the twin"; from Manichaeism, a missionary religion based on the teachings of the "apostle of light" that had spread from Mesopotamia to the Mediterranean; and from Neoplatonism, a name given to the renaissance of Platonism associated with the third-century philosopher Plotinus. Each of these traditions offers an understanding of the self as an irreducible unity-in-duality. To encounter one's divine double is to embark on a path of deification that closes the gap between image and archetype, human and divine. [Back cover blurb for the book *Our Divine Double* by Charles M. Stang]

And that is not all. According to Kabbalists — a Jewish mysticism that was firmed up mostly during the second millennium CE (or more than a millennium later, depending on the scholar) — twin souls are always male and female (Charles Ponce, *Kabbalah*, pp. 208–209). The belief seems to be that souls always reincarnate in a physical body of the soul's gender. I am disinclined to take this doctrine literally. If it has any validity — and this is completely speculation on my part — it might refer to Essence Twins having complementary "malefemale" (aka focused–creative, aka convergent–divergent) energy ratios. Another idea is that this Kabbalistic notion is a distorted understanding of the process of the One producing the Two, each half of the Two always regarding self as Cardinal (masculine) and not-self as Ordinal (feminine).

In my research on websites, I saw that the descriptions of Twin Soul/Flame encounters and relationships are very similar to the descriptions of Essence Twins that one finds in Michaelian teachings sources. In this chapter, I am not concerned with those descriptions; I am mostly concerned about the alleged *Roles* of the Twins as stated in various Michaelian teachings sources, because there is a difference of opinion about that, and you know how I like to examine discrepancies in order to extract maximum learning from them. In fact, in the Michaelian teachings, there are two *opposite* teachings about the Roles of Essence Twins, and what is taught depends on which contingent of the Michaelian teachings is doing the teaching. One contingent says that Essence Twins are almost always the same Role; another contingent says that Essence Twins are almost always a different Role. Superficially, this certainly looks like a discrepancy, but let's withhold judgment until after we take a close look at the issue in the next few sections.

Entity and Cadre Twins per the Original Michaelian Group

Refer to the chapter on "Twinning" in my book *Study Papers on the Original Michaelian Group* for a complete account of that subject. It has a discussion of physical twinning as well as soul twinning. In the original Michaelian group transcriptions, there is only one series of Q&A exchanges that mentions the Roles of Twins; the underlined words are my emphasis; words in [brackets] were added for clarity, but my sensibilities might be incorrect:

We hear so much about <u>Twin souls</u>, and I would like to know about that.

<u>Dyadic union</u> occasionally occurs while the principals are still on the Physical Plane. This is exceedingly rare and happens <u>only among Fragments of the same Entity</u>. These unions are always [gender] <u>polar</u>, and it is a devastating experience. Souls so united are truly one flesh.

Why is this devastating? What do you mean by "polar"?

There is complete <u>psychic union</u>. There are no longer any individual perceptions. There is a total loss of identity. All of you will escape this fate in this lifetime, for your strongest attractions within the [original Michaelian group] group are for those of the same sex. [*SJC*, 08 October 1973]

This man is bound to you both by karma and by the fact that you are <u>Fragments of the same Entity</u>. This has given [rise to] the so-called "<u>Twin Soul</u>" phenomenon. [*SJC*, 13 December 1973]

Although it does not explicitly say so, these two passages say that there is a type of Twinning — *Twin Souls* — *within* an Entity that is functionally similar to that described for *Essence Twins* as described further on, which allegedly happens between souls in *different* Entities in the same Cadre. (Recall that there are said to be seven Entities in a Cadre.) The question arises: are Twin Souls and Essence Twins two different phenomena or two names for the same phenomenon? Superficially, it would seem to be that there are two types of Twins.

Let's read on about this subject in the transcription from another original Michaelian group session:

Michael said before that they had something to say about "Twinning". Could they comment now?

[Physical] Twinning is, of course, the closest possible of Physical [Plane] relationships. This goes for the other planes also, and this [different types of twins on different planes] is where the confusion regarding the so-called "Twin Souls" arises. For instance, the question was asked of us some time ago concerning the possibility that souls could not change sex, or rather gender, between lives because of some Twin Soul feature. It is true that most souls do search for their soul mate, but they err in assuming that that Twin [Soul] is of the opposite gender, and consequently lose out on an exceptionally close and rewarding relationship [when both are of the same gender on the Physical Plane]. [Soul] Twinning occurs often at the moment the Entity is cast from the Tao, and can occur between Entities cast at the same time. In other words, there is sometimes a 'crossover' [of Twinning between Entities in the same Cadre], and these Twin Souls [of both types] do go through many, usually all lives together. [S/C, 23 June 1974]

In the original Michaelian group transcriptions, it is sometimes difficult to discern when the Michaels are referring to physical twinning or soul Twinning. The paragraph above apparently starts off talking about physical twinning, but immediately moves on to soul Twinning, as is obvious because it mentions Twinning in Entities and Cadres. From this channeling, we gather that male–female gender is irrelevant to Twin Souls, but there are substitutes for human gender attraction within the bonds of Twin Souls.

However, the paragraph below appears to be referring to physical twinning because it is dealing with Roles; recall from discussion in a previous section that, during the original Michaelian group, Roles were understood to be mostly limited to the Physical Plane. When it seems that Twin Souls are the subject, in the quotations and in my comments, I capitalize the word Twin; when physical twins seem to be the subject, I do not capitalize the word twin. Your discernment might differ from mine.

[Physical] [t]winning is rare between some Roles, frequent in others. Scholars rarely twin and usually [do so] with Warriors. Priests and Sages twin most of the time, Artisans and Slaves frequently, Kings rarely. Physical [identical and fraternal] twinning can also strike an unerasable bond that continues throughout the remainder of the Physical [Plane] cycle, driving these souls together again and again. The closeness of twinning is a very special relationship. You choose to play out Sequences with the former [physical] twin. [SJC, 23 June 1974]

So far in this investigation we see that there are physical twins and there are Twin Souls. The phrase Essence Twins occurs further on in this same session. Is this something different from Twin Souls in the previous paragraphs? Maybe so, maybe not; I cannot say for certain; can you? Perhaps this is a 'distinction without a difference', as the saying goes, but it looks to me as if soul Twinning can happen between Cadre mates not in the same Entity as well as actual Entity mates, because the Michaels referred to the Cadre-mate Twinning as a "crossover":

Some physical twins are not drawn as strongly to their [physical] twins as are the <u>Essence Twins</u>. <u>Essence Twinning occurs at the moment the Entities are cast from the Tao</u>.

Are IH and RC Essence Twins?

These Entities were <u>cast at the same time</u> [therefore they are in the same Cadre]. There was a 'crossover' [between Entities in the same Cadre] and these are [another type of] <u>Essence Twins</u> [than Essence Twins in the same Entity]. [S/C, 23 June 1974]

Physical triplets and other multiple births do strike close bonds the same as physical twins. <u>There are no Essence Triplets</u>. [S/C, 25 June 1974]

Do Warriors twin with Roles other than Scholars? Please elaborate.

Yes they do; it is just that Scholars seldom twin [physically] with other than Warriors. Warriors often twin [physically] with other Warriors, with Kings, and with many others also. Scholars do not often [physically] twin with other than Warriors. [SJC, 22 October 1974]

This passage could conceivably be interpreted to refer to soul Twins, but I prefer to interpret it as referring to physical twins, because the passage of 23 June 1974 quoted above apparently refers to physical twins.

How do we recognize a Fragment of our Entity?

The recognition of a Fragment of one's Entity is usually a casual one. Sometimes the one who recognizes is startled at first, but this normally is not a relationship fraught with much tension. In fact, it is usually marked with ease, as these are old friends [from other lifetimes], and you would not expect fireworks. With [Entity? Cadre? Both?] Twins there is normally a desire for closeness of an immediate nature, and barring social constraints, this proceeds rapidly, and is usually fixed from that point on. This bond is by far the strongest on the Physical Plane, and not much can come between Twins. Karma of an adverse nature can pull Twins apart, and sometimes the Goal of Rejection will repel a Twin even though it does not wish to be repelled. [SJC, 09 November 1974]

Following are some comments about this original Michaelian group channeling:

- 1. Although this channeling does not say that Essence Twins are of the same Role, it would be very natural to assume that they were, because of the way the word Essence is often used as synonymous with the word Role in the original Michaelian group. Recall sections in previous chapters here in Part Four where I point out the ambiguous use of both words, Essence and Role, in the Michaelian teachings. That ambiguity makes it difficult to sort out the matter of Essence Twins, and I believe that that ambiguity has led to some misunderstandings in the Michaelian teachings communities. Yarbro may have understood Essence = Role in the context of Essence Twins, but she was not a member of the original Michaelian group.
- 2. It is interesting to me that Leslie Briggs introduced in a subsequent subsection of this section was a member of the original Michaelian group, and she channeled that Essence Twins are usually of different Roles. Did she get that understanding from the original Michaelian group? A review of Sarah Chambers channeling from the 1990s indicates that her version of Michael espoused the different-Role version of Essence Twins.
- 3. Allegedly, Twinning can happen between both Entity mates and Cadre mates, the latter being referred to as a "crossover" situation that sometimes occurs, Roles unspecified. These were referred to as Soul Twins, and these might or might not be different from the current prevailing orthodoxy in the subsequent Michaelian teachings communities, where Essence Twins are alleged to almost always be in different Entities in the same Cadre. That history is documented further on in this chapter.
- 4. It was said that there are no Essence Triplets. If there were, would they be of the same Role or of different Roles? For instance, would one Essence Triplet be on the Action Axis, another one be on the Inspiration Axis, and another one be on the Expression Axis? Is there a standard way for three Ordinal Fragments on the three Axes to merge, and likewise with Cardinal Fragments. I will propose a suggested answer to this question further on, in the context of the Threeness principle, aka triality. Channeling from Troy Tolley supports the idea that there are Triplets of some kind, even if not "Essence" Triplets.
- 5. The only mention of the Roles of Essence Twins in the original Michaelian group transcriptions is the case of Scholars rarely twinning physically, but preferring to do so with Warriors. There is no mention in the original Michaelian group transcriptions of the Roles of Soul Twins or Essence Twins.

So, the question is, are we to accept the original Michaelian group channeling as canonical, ambiguous though it be, or shall we go with subsequent channeling that apparently contradicts that channeling? Answers to that question will be pursued in the following subsections.

Essence Twins per Yarbro

There is a chapter in my book *Study Papers on the Original Michaelian Group* that covers the meaning of the word Essence as understood in the Gurdjieffian teaching, and the meaning it has in the Michaelian teachings, which was different from Gurdjieff's meaning. There is also a chapter in that book on the subject of twinning, as mentioned above. The chapter covers physical twins, Soul Twins, and Essence Twins per the previous subsection of this section. Nowhere in the original Michaelian group transcriptions from the 1970s that have become generally available to us is there a definitive discussion of the *Roles* of the Soul Twins or Essence Twins, either as usually being different Roles or usually being the same Role.

However, in Chelsea Quinn Yarbro's books *MFM* and *MMFM*, the subject of the Roles of Essence Twins was discussed, as follows (underline for emphasis is my own):

Essence Twins, though <u>almost always the same Essence Role</u>, are <u>not often part of the same Entity</u>, but are part of <u>different Entities that were Cast at the same time</u> [therefore in the same Cadre]. The Twinning <u>lasts for all the cycles [of reincarnation]</u>... [MFM, p. 193]

In *MFM*, the Twinning is said to apply to the Physical Plane at least, and it is said that that Twinning happens during the Casting process. Seven years later, in *MMFM*, the description of Essence Twins was expanded:

Essence Twin: one of the two Fragments [the other being Task Companions; see further on] to whom a Fragment is "bound" from the time of Casting until the Entities and Cadres reunite in their evolution back to the Tao. The Essence Twin is the most intimate bond that is possible. The Fragments are truly twins, that is, equals. They are six times out of seven the same Essence [Role], and they are never in the same entity. [MMFM, p. 42]
Essence Twins are each other's true equals. We have said this before, and we will now explain how this occurs. Each Twin is in the same, precisely the same, position in its Entity as the other Twin [in another Entity in the same Cadre]. Six out of seven of them have the same Essence [Role]... The [Essence Twin] bond, as we have indicated

many times, endures for all time and continues until the Cadres have reunited beyond the Causal [third] Plane

[therefore on the lower levels of the fourth plane]. [MMFM, p. 199] Following are the comments that I have on the MFM and MMFM channeling:

- 1. Although it is not always the case in Michaelian teachings channeling, the word Essence here appears to be synonymous with the word Role, based on their use in the same phrase, "Essence Role".
- 2. Notice that there was a clarification of the information about Essence Twins given in *MFM* ("almost always") to the information given in *MMFM* ("six times out of seven").
- 3. The MMFM description of Essence Twins continues, on pages 199 and 200 of the "Michael Math" chapter, to describe the Twinning as happening mostly straight across the Casting positions between Entities in a Cadre. In other words, if we could stand the seven Entities in a Cadre side by side in seven parallel lines according to Casting sequence, usually a Twin would be standing perpendicular to its Twin in one of the six adjacent Entities. There is some scrambling (1/7) with some Essence Twins that do not match this pattern, but that is the basic idea. Presumably the Role lineup would not need to be nearly the same (6/7) in two Entities; the pairing of Roles could jump around from Entity to Entity in the Cadre.
- 4. Factor in that each Cadre is alleged to have all Roles in it, in the proportion alleged for the Roles in the population: 25% Servers, 22% Artisans, 17% Warriors, 14% Scholars, 10% Sages, 8% Priests, 4% Kings. It boggles my mind to consider how the Roles would be distributed in different Entities with these alleged constraints: two or four Roles in each Entity, with the same Role in the same position in two of those Entities. It might take a computer program to figure out what a typical Cadre built this way would actually look like.
- 5. What I refer to as the "Yarbro contingent of the Michaelian teachings" has kept itself independent of what I refer to as the "non-Yarbro contingent of the Michaelian teachings". We only know as much about the Yarbro contingent as is revealed in Yarbro's books. The non-Yarbro contingent has a different dogma-doctrine, as we see in the next section.

The Yarbro dogma-doctrine about the Roles of Essence Twins would have spread and prevailed in the Michaelian teachings community if there had not been another group, meeting in a different part of the Bay Area at about the same time in the early 1980s, each group unbeknownst to the other, with a different channel that apparently said the opposite of what was said in the Yarbro group. Because that group's influence eventually became much larger than the Yarbro contingent, its dogma-doctrine on the subject of Essence Twins has prevailed in the Michaelian teachings community outside the Yarbro contingent. That group was led by Louise Briggs, with her daughter Leslie Briggs as the channel. Louise and Leslie had been members of the original Michaelian group during its second year. Let's take a look at what she had to say.

Essence Twins per Briggs

In the group where Leslie Briggs was the primary channel, in the early 1980s — at about the same time the Yarbro group was getting information about Essence Twins and their Roles — a different view of Essence Twins and their Roles appeared in some channeling. The following quotations were extracted from *Michael Speaks* —

the Legacy of Leslie [Susan] Briggs [LSB]. The comments in [brackets] are my interpretations of the meaning of the text, in an effort to make sense of the channeling as a whole based on all of the passages quoted here. After the quotations, I share my reasoning with you. Near as I can tell, Briggs conflated Essence with Role the same as Yarbro did, but Briggs thought of Essence Role as being only a factor of the Physical Plane, whereas Yarbro thought of Essence Role as also a factor of the planes beyond the Physical; I addressed this discrepancy in the previous section.

I don't understand what Essence Twins are.

When Tao Casts Essence [aka 'souls' into incarnation], occasionally an <u>accident</u> happens, and upon Casting the Essence it Twins [with a different soul, see below]. Not everyone has an Essence Twin. It [an un-twinned soul] is indeed quite rare in comparison to all other Essences [with Twins] that are around. Essence Twins rarely spend lifetimes not having something to do with each other. Their lives touch when on the Physical Plane in one way or another. Sometimes they're just friends, sisters, brothers, husbands, wives, enemies. Twins merge prior to getting off the Cycles of the Physical Plane. Sometime in late Mature or Old Cycle, Essence Twins merge into one Essence [choosing one Role or the other, see below], and then once cycling off the Physical Plane they then merge with their [other] Entity [mates] as one Essence. There are lifetimes spent without their lives touching also. [LSB, 17 December 1980]

We will get back to that word "accident" further on. My understanding of its use here is that it refers to an acausal, spontaneous, nonstructural phenomenon; it has no 'rhyme or reason'. Most soul bonds discussed in this chapter do have 'rhyme or reason', namely Oneness, Twoness, Threeness, Yin, Yang. Other types of Essence Twins are alleged to have 'rhyme or reason'.

Someone must have found the passage above to be confusing (as I do, without the bracketed words), so they asked about it:

When Twins are Cast from Tao, is it that an Essence split in two?

No. An Essence [of some Role or another] does not split in two; it just Twins [pairs up with a different Essence of some Role or another]. If it split in two, it would always have to be the same Role, and that is not the case. [LSB, 12 January 1981]

Here again, someone must have found this second answer to be ambiguous, so another question was asked: In our case it just happened [accidentally] to work out that way [that we are the same Role]?

Yes, and [Essence] <u>Twins in [the same] Role are rare</u>. When on the Physical [Plane], Twins' lives always touch. <u>They usually merge before leaving the Physical Plane</u>. <u>Roles are important only on [the] Physical Plane</u>, so they [merged Twins] will <u>use one Role or the other [thereafter during incarnation]</u>. They [merged Twins] won't 'color' each other any more than they already do [as unmerged Twins]. The relationships are often more volatile — [there is] more at stake from ego's point of view — very over-Identified. [LSB, 12 January 1981]

Notice the statement about Essence Twins merging before reincarnation is finished. This seems to contradict the Yarbro statement about Essence Twins apparently continuing their individualities until Entities reunite into their Cadre beyond the Causal Plane. Are the two sources talking about the same Essence Twin phenomenon, or two different types of Essence Twin phenomena? It seems likely to me that the reconciliation of Yarbro and Briggs is that these are two different types of Essence Twins, if we are to impute validity to both accounts. This factor (on which planes are Roles operative) is in addition to the Roles of Essence Twins (same or different).

Summary so far, and preliminary working hypothesis so far: there might be at least three types of Essence Twins mentioned in three different sources, and confusion has resulted because the three types got the same or similar names. Following are my comments on this mess.

- 1. The original Michaelian group type of Essence Twin is where Twinning typically occurs between Entity mates but can also occur between Cadre mates; Roles are not specified in this type. This type is explicitly named Soul Twins but the term Essence Twin appears in the same context, so I assume these are synonymous.
- 2. The Yarbro type of Essence Twin is where Twinning almost always occurs between Cadre mates and they are almost always of the same Role, and the Twinning lasts from the time of Casting beyond the third plane to the end of Casting beyond the third plane. This is (also) named Essence Twins.
- 3. The Briggs type of Essence Twin is where Twins are usually of different Roles, and usually the twinning ends before reincarnation ceases, but Twinning can sometimes continue into the Astral Plane where the merging happens. This was also named Essence Twins, but this is obviously a different type from the Yarbro type, so therein lies the semantic confusion.

JP Van Hulle was a member of the Briggs group, and when she led her own group after the demise of the Briggs group, she continued with the idea that Essence Twins were generally of different Roles, even though she must have been aware of what was said about Essence Twins in MFM and MMFM. Very little is said about Essence Twins in Michael Speaks — the Legacy of JP Van Hulle [JPVH], but what is said most often discusses the "bleed-through" of one Role by a different Role in the case of Essence Twins. There are two instances where Essence Twins are explicitly said to be of different Roles:

So is Larry a Priest with King Essence Twin?

Yes....

About another person it was said that:

He's a Scholar with King Essence Twin, like you. [JPVH, 11 April 1983]

So far as I know, this channeling in the Briggs group in the early 1980s — and perhaps other channeling in that group or Van Hulle's group that we do not have record of — is the origin of the dogma–doctrine in the non-Yarbro contingent of the Michaelian teachings that Essence Twins are rarely of the same Role. We find this dogma–doctrine in books published later on, starting in 1985, as we see in the next subsection.

Essence Twins Subsequent to the Original Michaelian Group, Yarbro, and Briggs

Heretofore we have seen what the three primary, original sources had to say about Essence Twins. We have seen that there are contradictions unless we assume that there are three different kinds of Essence Twins. So, can we clear this up by looking at what subsequent thinkers and teachers in the Michaelian teachings have to say about the subject? Let's take a look.

José Stevens said nothing about the Roles of Essence Twins in his first book, *The Michael Handbook* (Second Edition, December 1986) even though that book was published after *MFM* was published in 1979 and *MMFM* was published in February 1986, wherein the Roles of Essence Twins was first proffered. Stevens was a member of both the Briggs group and the Van Hulle group. Therefore, he was almost surely aware of the apparent contradiction between the Yarbro channeling and the Briggs channeling in regard to the Roles of Essence Twins.

In Stevens's second book, *Tao to Earth* (1988), there was a full description of Essence Twins on pages 95–97. The passage regarding the Roles of Essence Twins is this one:

Essence Twins can be so closely related that they manifest each other's Roles to some degree. For example, if a Sage and Scholar are Essence Twins, the Sage may appear quite Scholarly for a Sage, and the Scholar may manifest the strongly expressive characteristics of the Sage. In short, they generically influence each other heavily. [TTE, p. 98]

He does not explicitly say that Essence Twins are usually different Roles, but in the example given that was the case. It was also the case in another example about Servers and Priests in another paragraph, and it was also the case in yet another paragraph about Warriors and Kings — all examples that Stevens gave in that book are Essence Twins of different Roles. In those cases where Essence Twins are not the same Role, the quality of the Composite is as if the two different Roles are a blended Role, somewhat like the way two colors mixed together produces a color that is half way between the two colors.

Essence Twins were not discussed in Stevens's third book, Earth to Tao (1989).

The section on Essence Twins in the book *Michael: The Basic Teachings [MTBT]* has apparently become the standard dogma–doctrine in the non-Yarbro contingent of the Michaelian teachings. There are three pages on the subject, 182–184, in the Second Edition (1990). There is only one sentence that bears on the Roles of Essence Twins (my emphasis):

<u>Usually you are not in the same Entity</u> [you are in the same Cadre], and <u>usually you are not the same Role</u>. [MTBT, p. 182]

Unless this is a different kind of Essence Twin, this contradicts the original Michaelian group channeling quoted earlier that only "sometimes" is the Twin in a different Entity. Let's set aside the original Michaelian group-type Essence Twin for the time being. The above quotation appears after the clear statements in *MMFM*, published four years earlier, indicated that six times out of seven the Essence Twins *are* the same Role. What are we to make of this? Is there a reconciliation of these two seemingly contradictory dogma–doctrines in two separate contingents of the Michaelian teachings? Are they talking about two different types of Essence Twins? Shepherd Hoodwin does not think so.

Shepherd Hoodwin in the Second Edition (2013) of his book *Journey of Your Soul,* had this to say about Essence Twins:

In *Messages from Michael*, it was stated that six times out of seven, our essence twin is of the same role. In the experience of several other channels, including me, the reverse seems to be true. My channeling indicates that neither view is actually wrong. Those with fewer previous [grand] cycles usually like to have a relatively <u>pure</u> experience of a role. Being a scholar with a scholar essence twin, for instance, gives one concentrated scholar energy to work with. Since the average human being has had about four previous [grand] cycles, it is probably true on the whole that six out of seven times, a person's essence twin has the same role as she does. However, once we have done a planetary [grand] cycle as a scholar with a scholar essence twin, we might like to try being a scholar with a king essence twin, for example, to vary the energy. [JOYS, pp. 225–226]

It is said elsewhere (*TJOYS*, Chapter 14) that rarely are there humans alive today whose souls have had more than a dozen Grand Cycles of Fragmentation and Reintegration. If I understand Hoodwin's assertion in the quoted paragraph correctly, then perhaps in the early Grand Cycles what Yarbro's Michael said was true about Essence Twins being of the same Role — and this gives them a "pure" experience of the Role — and in the late Grand Cycles, what non-Yarbro's Michael said was true about Essence Twins not being the same Role. Perhaps here I am making too much of Hoodwin's use of the word "pure", but that word could be put in opposition to the blended or merged Roles spoken of by Stevens. Our actual observation and experience of Roles in people is that there are no clear boundaries between the Roles; people typically manifest the Roles in mixtures, some of which seem to be equal parts of one and equal parts of another — or 60–40, or 70–30, or whatever.

That is one way to explain — or explain away — the apparent contradiction between two contingents of the Michaelian teachings community. It does not feel satisfactory to me, so are there other explanations?

When there is a contradiction between two or more sources, there are three possibilities for a resolution:

- 1. One is right and the other one is wrong.
- 2. They are both right at a higher level of understanding.
- 3. They are both wrong at any level of understanding, and a third option is correct.

Apparently Hoodwin's Michael prefers option #2. I have proffered all three of these explanations here in Part Four of this book, in other chapters about other subjects, so it is not as if I prefer one or the other; I follow where the evidence and the arguments lead on any particular issue. I have also seen these three types of resolution proffered in Hoodwin's book *JOYS* and in other channeling within the Michaelian teachings, so it is not as though any one of us is stuck on one of the options.

Here is an enumerated list of proposed solutions to the Essence Twin–Role issue:

- 1. Blended Roles make the whole issue so ambiguous that it is undecidable. By this I mean that Roles might not actually exist until the seventh level down the chain of Casting, at the Physical Plane level per the original Michaelian group view that Roles are relevant only on the Physical Plane. At levels closer to the Oversoul on the Astral and the Causal Planes, the Role-ish distinction might be more similar to muddled, blended Roles than the actual distinctive Roles. If this is the case, then we are wasting our time and energy trying to figure this apparent contradiction out. (Sometimes I have this feeling of futility in my attempts to make sense of the nonsense found in the structured and systematic part of Michaelian teachings.)
- 2. The semantic solution is that there is more than one type of Essence Twin, even though the phenomenon was given the same name: one type is comprised of the same Role (Yarbro); another type is comprised of different Roles (Briggs, et al); another type is not concerned about Roles (original Michaelian group). Even though I have not seen this proposed elsewhere, there might be primary and secondary and tertiary Essence Twins; I have heard of "surrogate Essence Twins". Essence Twin might just be a "principle" or an archetype for a certain kind of relationship, although this would contradict channeling that says words to the effect that "there can be only one Essence Twin".
- 3. Somebody is wrong and somebody is right but we do not know which one because historical precedent indicates that we cannot explicitly trust any particular channel or channeling. That is to say, it seems unlikely to me that further channeling on the subject would be more authoritative. Simply stated, whatever an Essence Twin relationships might, or might not, be in reality, it is a dogma-doctrine that is not Validatable.

All of these solutions are uncomfortable and/or unsatisfactory to me. The channeling is too ambiguous and too contradictory to come to an agreement, to a resolution, or to a definite conclusion. Ambiguity is one type

of problem blocking the way forward, but in addition to that roadblock, I do not at this time have a tool in my toolbox that can sort it out to my satisfaction as I do for some other issues addressed in this book. A computer program would respond to this input with the output, "insufficient data; cannot compute". Another appropriate phrase from computer science is, "GIGO: Garbage in; garbage out".

In other chapters I proposed and used some tools for resolving discrepancies, such as the logical and mathematical structure of Tao's Template, the Process/Aspect System, and the Natural Sequence, and other esoteric teachings and scientific disciplines that bear on the same subject; recall that this is called "consilience". In this chapter, I have no such bases for resolving the issues to my satisfaction. Philosophically, I prefer to reconcile discrepancies at a higher level of understanding. In regard to the Essence Twin–Role discrepancy, I prefer the "semantic" resolution, meaning that there are probably at least three types of Essence Twins — they have been erroneously given the same name, but they are not the same thing. It never made sense to me that the "Essence" Twin would not normally be of the same Role as stated by the Yarbro contingent, since Essence is often used in the original Michaelian group transcriptions and in MFM and elsewhere in the Michaelian teachings community as a substitute for Role. It would make sense in this case if there is another type of Twin that should have a different name in the situation where Twining is between different Roles, such as the name from the original Michaelian group, Twin Souls. However I have no arguments or evidences to support that bias. Esoteric traditions other than the Michaelian teachings do not talk about the Roles of kindred souls that I have discovered, so there is no help there as there is with some other issues addressed in this History book.

For the time being, I am going to go with what I regard as the least objectionable solution, namely that there are different types of Essence Twins:

- 1. There is a Yarbro-type Essence Twin (ET-Y) usually of the same Role and usually in different Entities created at the same time beyond the Causal Plane, and that will be unmerged until beyond the Causal Plane.
- 2. There is a Briggs-type Essence Twin (ET-B) usually of different Roles in different Entities, an Essence Twin pair that often merges before cycling off the Physical Plane.
- 3. There is an OMG type (ET-OMG) of unspecified Roles, an Essence Twin pair that is usually in the same Entity rather than different Entities as the other two types. This type has the name "Soul Twin".

How does that sit with you? Are you happy with this? What is your preference?

Before I move on to the next concern, in the next subsection I interject a little philosophical–sociological–biological commentary. It is relevant to this section, to this Part, and to this book.

Memes

The fact that there is a contingent of the Michaelian teachings that teaches one thing and there is another contingent that apparently teaches the opposite thing — as in the case of the Roles of Essence Twins — got me to thinking about how "memes" might be functioning in the Michaelian teachings. Memes are a socio—cultural phenomenon that is perhaps partially responsible for the lack of consensus on issues examined in this Part of this *History* book, so that is why I am bringing the concept of memes into the discussion here.

If you have not learned that term, there is a Wikipedia article on it at >https://en.wikipedia.org/wiki/Meme<: A meme is an idea, behavior, or style that spreads from person to person within a culture — often with the aim of conveying a particular phenomenon, theme, or meaning represented by the meme. A meme acts as a unit for carrying cultural ideas, symbols, or practices, that can be transmitted from one mind to another through writing, speech, gestures, rituals, or other imitable phenomena with a mimicked theme. Supporters of the concept regard memes as cultural analogues to genes in that they self-replicate, mutate, and respond to selective pressures. Proponents theorize that memes are a viral phenomenon that may evolve by natural selection in a manner analogous to that of biological evolution. Memes do this through the processes of variation, mutation, competition, and inheritance, each of which influences a meme's reproductive success. Memes spread through the behavior that they generate in their hosts. Memes that propagate less prolifically may become extinct, while others may survive, spread, and (for better or for worse) mutate. Memes that replicate most effectively enjoy more success, and some may replicate effectively even when they prove to be detrimental to the welfare of their hosts. [retrieved 06 May 2019]

So, "memes" are the sociological equivalent of biological "genes" and/or viruses that are subject to the Darwinian phenomena of mutation, reproduction, natural selection, and speciation. Among other things, the

concept of memes tells us how an orthodoxy in teachings and groups and movements sometimes mutates and produces a heterodoxy that leads to a schism. I think the idea is instructive for understanding some of the history of the divergent ideas that have appeared in various contingents of the greater Michaelian teachings community. I believe that the understanding of memes is relevant to a number of issues that are discussed in this book; I believe that knowing about memes is especially appropriate for this whole chapter, which covers the topic of Casting in general. The point is that discrepancies in dogma–doctrines can potentially divide contingents of the Michaelian teachings into factions that separate them into 'species' that can no longer have 'intercourse' or 'breeding'.

This meme phenomenon seems to be the case in regard to the alleged Roles of the so-called Essence Twins: is it almost always the same Role as one branch of the Michaelian teachings claims? Or is it almost always a different Role as another branch of the Michaelian teachings claims? Two sources, in two groups unbeknownst to each other, channeled those two different and seemingly contradictory answers. The former idea first appeared in the closed Yarbro group (which has no downstream meme perpetuated in other groups so far as we know), and the latter answer first appeared in the open Briggs group (which has its downstream memes perpetuated in spin-off groups). This has resulted in two different 'data streams' in two different and somewhat disconnected branches of the Michaelian teachings.

Another example of the appearance of memes in the Michaelian teachings is the use of the word "Cardinal" in the Yarbro contingent of the Michaelian teachings, and the use of the word "Exalted" in the non-Yarbro contingent of the Michaelian teachings; both refer to the opposite of "Ordinal", as you know. This is another result of the appearance of two divergent Michaelian teachings groups in the late 1970s, after the original Michaelian group disbanded. This is another 'wound' that has not (yet) been 'healed', partly because of inertia in the history of the two groups (it's not easy to change longstanding habits of thought, feeling, and action), and partly because of an unwillingness in members of the two groups to work together for the greater good.

One point I want to make here is that the non-Yarbro memes are more likely to survive and thrive, not necessarily because they are true, but because they are perpetuated in a more open contingent, and in a larger environment in which to operate. This is an instance of the Darwinian 'survival of the fittest' principle. My preference is that we actually attempt to reconcile divergent memes; I find this preferable to just letting divergent memes propagate willy-nilly in separate branches of the Michaelian teachings. Some readers might cast my examination of this (and other) issues in a negative light, as if my criticism is destructive. That is not my intention. What I want is a better Michaelian teachings, a more adaptable Michaelian teachings, a more 'fit' Michaelian teachings. But even here, I wonder if the Michaels allow different contingents to arise and continue so that they fill different 'ecological niches', so that they reach different types of students.

The lesson that I draw from this tedious review of the various channeled sources about Essence Twins is that, 1) I cannot implicitly trust channeling; 2) there are some Michaelian dogma-doctrines that cannot be empirically or academically Validated; 3) what I cannot Validate I can still play with, just for the fun of it — this section, and this chapter, is mostly an intellectual exercise in solving puzzles caused by discrepant channeling. Not everything has a clear-cut answer; life is messy; bla bla bla. Whatever the structural truth about Essence Twins may be, if any, it matters not at all in my lived experience.

Anyway, let's move on to yet another type of Twin that is not normally presented as such, the so-called Task Companion.

Concern #4 — Types of Task Companions

There is a type of soul bonding between two souls that is called "Essence Twin" in the Michaelian teachings, and this was described in the previous section. There is another type of soul bonding described in the Michaelian teachings which is also between two souls. That is the so-called "Task Companion". The soul bond of Task Companions is said to be second only in strength to the soul bond of Essence Twins, according to MMFM, p. 42.

Underlined words and phrases in the following quotations are my emphasis. Pay special attention to them, because that will make it easier for you to follow the arguments in this section.

Task Companions were defined this way:

Task Companion: The other Fragment to whom a Fragment is "bound" from the time of Casting until the Entities and Cadres reunite in the evolution back to the Tao.... Six times out of seven Task Companions are in

the same Entity. They are never the same Essence [Role]. One Fragment is in a Cardinal position in Casting, the other in an Ordinal one. [MMFM, p. 42]

This passage is ambiguous about what Cardinal and Ordinal "position in Casting" refers to. As we will see below, it cannot possibly refer to Roles because Cardinal Roles allegedly add up to 22% of the population and Ordinal Roles allegedly add up to 64% — about three times as many. There are several types of Cardinality and Ordinality discussed in the "Michael Math" chapter. Essence Role is mentioned, but the passage does not explicitly say that Task Companions are of complementary (Cardinal versus Ordinal) Roles (Warrior–King, Server–Priest, Artisan–Sage). It could be referring to other Cardinal/Ordinal polarities between larger Casting Composites, such as complementary Positions in a Cadence, or complementary Cadences in a Greater Cadence, or complementary Entities in a Cadre — in terms of Role-ish Rays as well as in terms of Roles.

The following passage expands on the information about Task Companions, but there is still some ambiguity.

As we have said, Task Companions are six times out of seven in the same Entity and are never — and we emphasize this — never the same Role In Essence.... One Fragment is always Cardinal, one always Ordinal.... [As an example,] One was a Mature Sage, the other a Mature Artisan, with the Sage [a Cardinal Fragment, but] in the Ordinal position [in the Task Companion Composite]. [MMFM, p. 93]

This passage is also ambiguous because we cannot be certain what Cardinal and Ordinal refer to in this context. Even though the Task Companions are of complementary Roles on the Expression Axis (Sage and Artisan), the Cardinal Fragment, the Sage was said to be in the Ordinal position in the Task Companion Composite. At this point in our investigation, we still do not know if, 1) the alleged Cardinal/Ordinal polarity of Task Companion pairs applies only to the nature of the interaction (one active, one passive) within the Task Companion relationship; 2) the alleged Ordinal/Cardinal polarity of Task Companion pairs applies to Roles; 3) the alleged Cardinal/Ordinal polarity of Task Companion pairs applies to other Role-ish polarities in the Casting of "Composites" (groups of seven and multiples thereof) in sizes larger than the Task Companion pair Composite; 4) one or more of the above applies to Task Companion pairs. That Task Companions appear in the context of explanations about Casting implies that more than one of these options is part of the description of Task Companions.

Let's take a look at another passage and see if the situation with the Roles of Task Companions gets any clearer.

As to Task Companions, as we have already indicated, they are <u>always</u> Cardinal and Ordinal, and <u>generally on the same [Axial] polarity</u> where possible. Scholars, lacking the [Axial] polarity, can become Task Companions with any other Essence [Role], but most often with Warriors. Six times out of seven, the <u>Task Companions are in the same Entity</u>, the seventh is out of Entity, but still in the Cardinal/Ordinal [Axial] position. [*MMFM*, p. 200]

Pondering this passage, it is much more difficult to conclude that Role polarities are not excluded from Task Companion Composites. In fact, the passage above almost surely indicates that with Task Companions, *Role polarities are the norm, the "general" condition*. I assume this means that, in terms of Role, a Cardinal Priest and an Ordinal Artisan (which are not on the same Axis) could be Task Companions, but that is not the "general" case. I also assume that it means that any type of Cardinal/Ordinal pairing other than Roles on the same Axis (Action, Inspiration, Expression) can have a Task Companion bond.

However, if we look at other Michael Math information, it would seem to exclude Role polarities as being the "general" bond between Task Companions. The explanation is multistep; let's start with this:

Within the Entities, the Essences [Roles] are Cast, and they are Cast in sequence. Therefore, let us assume that the second-Cast Entity has Priests Cast first, Scholars Cast second, Artisans Cast third, and Sages Cast fourth. [MMFM, p. 190]

Yarbro's example had four Role blocks Cast in an Entity. Shepherd Hoodwin says this about that:

A cadre contains essences of all seven roles, but within an individual entity, two to four roles are usually represented. There are, however, unconventional cadres in which each entity contains all the roles, and which have more than the usual number of members. [JOYS, p. 182]

Therefore the information about quantity of Role blocks in an Entity are consistent with Yarbro. Now factor in this bit of information about the different percentages of Roles:

Servers constitute roughly 25% if the population, both on this planet and throughout the cosmos. Artisans constitute roughly 22% of the population. Warriors constitute roughly 17% of the population. Scholars constitute roughly 14% of the population. Sages constitute roughly 10% of the population. Priests constitute roughly 8% of the population. Kings constitute roughly 4% of the population. [MMFM, pp. 25–26]

These numbers are not disputed in the Michaelian teachings community, including not by me, contrarian though I am sometimes. Cardinal Roles add up to 22% of the population, and Ordinal Roles add up to 64% — almost three times as many. As I have argued elsewhere, the desirability and suitability of this distribution of Roles on the Physical Plane does not apply to the desirability and suitability of Role-ishes on the Astral and Mental (aka Causal) Planes. In other words, there are just as many Artisan-ish Fragments as Sage-ish Fragments in a Cadence, and the same goes for Server-ish and Priest-ish Fragments, and Warrior-ish and King-ish Fragments. It makes plenty of sense to me to have Task Companion relationships based on Role-ish (Astral Plane) complementarity as well as Role (Physical Plane) complementarity. That is to say, complementary Role-ishes on the Astral Plane busy themselves with projects that result in their reunification before they graduate from the Astral Plane as a reconstituted Entity.

Another type of complementarity mentioned in the "Michael Math" chapter of *MMFM* is between Fragments or Composites in the "early" part of the Casting sequence, which are characterized as Cardinal, and the Fragments or Composites in the "late" part of the Casting sequence, which are characterized as Ordinal. This and the Role and Role-ish complementarities gives incarnate souls a number of types of soul complementarity to choose from in selecting intimate and/or intense working relationships.

So, if we put all this channeling together, it means that each Entity normally consists of two or four or six — even numbers — blocks of Roles (Composites) in order for each Role to "generally" (6/7) have a Task Companion of the complementary Role in that Entity. But this does not compute because it is said that there are about four times as many Warriors as Kings, about three times as many Servers as Priests, and more than twice as many Artisans as Sages in existence. So how are we to reconcile this discrepancy while doing minimal violence to the channeling?

- 1. One possibility is that the complementarity of Cardinal and Ordinal is not necessarily or even usually driven by Roles or Role-ishes, as hinted at in one of the Yarbro quotes above. Rather, the situation is just that, with respect to each other, one is the active or dominant Fragment and the other is the passive or subordinate Fragment. Or there is some other kind of dynamic oppositeness at work between them.
- 2. Another possibility is that each Cardinal Role Fragment can Task Companion with more than one Ordinal Role Fragment. This would be like polygamy rather than like monogamy. I do not see a problem with that solution, except that if this were true it seems likely that it would have been stated. Therefore, I prefer another possible solution.
- 3. Per previous arguments about Roles only being relevant on the Physical Plane, I have my doubts that Composites not on the Physical Plane are composed of blocks of Roles as it says in MMFM-MM. Rather, it makes more sense to me that Composites of various sizes, multiples of seven, are composed of equal numbers of Cardinal and Ordinal Role-ishes. Unlike the unequal percentages of Roles on the Physical Plane, on the planes beyond the Physical, there are an equal number of Role-ishes in each septenarian Composite, no matter how large or small. Therefore, for instance, there are an equal number of Sage-ishes and Artisan-ishes in each Greater Cadre, each Cadre, each Entity, each Side, each Greater Cadence, and each Cadence. If the Task Companion bond was a principle of Cardinal/Ordinal Twoness generally, instead of something limited to Entity mates, then this makes sense. I suggest that those passages above where it seems to be talking about Cardinal and Ordinal Roles, it might really be talking about Cardinal and Ordinal Role-ishes. All three of these are plausible explanations, but #3 is my preferred explanation.

It was alleged (*MMFM*, p. 44) that the merging of Task Companions reunites Entities. Because Roles are not equal in percentages of the incarnate population, I see this claim as an argument that Task Companions are Composites of complementary Role-ishes, not Roles. If this complementarity of Task Companions applies to all six sizes of septenarian Composites, then this would also mean that there are perhaps different types or degrees of Task Companions, such as primary, secondary, and so on. For instance, the primary Task Companion would be in the same Cadence since that is a stronger bond, the secondary Task Companion in the same Greater Cadence, the tertiary Task Companion on the same Side, the quaternary Task Companion in

the same Entity, and so on up the sizes of septenarian Composites. There is some support for this multiple type of Task Companion phenomenon in other channeling; see next paragraph.

Even though the Yarbro books do not mention that there might be more than one Task Companion for each of us, other contingents of the Michaelian teachings community indicate that more than one Task Companion is the norm. For instance, *Michael: The Basic Teachings*, p. 181, says "... task companion(s)", and the Glossary on page 231 says that "Everyone has at least one task companion." Hoodwin, *JOYS* (2013), p. 226, says "Sometimes people have more than one task companion. One is <u>chosen</u> at the beginning of the grand cycle, as with our essence twin, and up to three others can be <u>added along the way</u>, usually during the infant soul cycle."

Apparently, one of the differences between Essence Twins and Task Companions is that the bond of Yarbrotype Essence Twins is *structural* — exact position in Casting — whereas the same is not said about the bond of Task Companions. Hoodwin said the bond of Task Companions is partly of *choice*. The *structural* component of the Task Companion bond is the complementarity of Cardinality and Ordinality. More is said about these and other types of soul bonding further on.

Maybe I am missing something, but the best solution for the Task Companion conundrum that I see is that we should understand the Task Companion bond to be a general *principle*, the principle of *Twoness*, the bond between Cardinal and Ordinal in general. This would do some violence to the *particulars* of the descriptions of Task Companions in various sources, but we salvage the general idea with the *principle* of Twoness.

In summary, my view is that so-called Task Companions exemplify what I call the Complementarity Principle — a manifestation of Twoness — when it comes to soul bonds that are made in the Fragmentation and the Reintegration processes of the Casting of Fragments and Composites. These bonds are exemplified in the complementary Roles on the Physical Plane, and the complementary Role-ishes on the other Ordinal Planes. How this Complementarity Principle is implemented in the various types and/or levels of Task Companions is in some dispute in the Michaelian teachings community, but the fact of its existence is not in dispute.

In conclusion, the definition of Task Companions in various contingents of the Michaelian teachings community is every bit as confused as the definition of Essence Twins. Perhaps then, we can say the same thing about Task Companions as we say about Essence Twins: everything that is said about Task Companions is true because all of these different kinds or types of Task Companions exist and function. The solution of the discrepancies boils down to semantics: the same name has been applied to phenomena that are distinct, but related through the principle of Complementarity. This ambiguity of definition should not keep us from managing a "Task Companion" or "Essence Twin" relationship effectively if we find ourselves engaged in a situation that even vaguely resembles the general description. It works best for us to focus on the functional aspects of these special relationships, if/when they exist for us while on the Physical Plane, rather than to get hung up on their alleged structural relationships on the Astral and Causal Planes, which are not Validatable.

So I conclude that it would seem that Task Companions are a type of "soul mate", that soul mates come in different types — and that we Michaelian students might or might not have a complete picture of all of the soul mate types that are existent.

Concern #5 — Types of Cadences

Heretofore there has been discussion of the seven-member Composite first revealed by Yarbro in *MMFM*, which is referred to as the Cadence. So far as I know, this type of Cadence has not been disputed by anyone in the Michaelian teachings community. Shepherd Hoodwin has a section on this type of Cadence, and then he revealed that there are other types of Cadences. Here is the quotation from his channeling of the Michaels. As usual, the underlines are my emphasis; pay special attention to them:

<u>Primary cadences</u> consist of seven essences of the same role within an entity. <u>Another type</u> of cadence within an entity includes more than one role, and, preferably, each role represented in that entity. <u>A third type</u> spans the cadre, and other than that, it is like the second type: it contains a member of each entity and, preferably, someone of each role. <u>A fourth type</u> is like a primary cadence in that it consists of only one role but it spans the cadre, including one representative from each entity where possible. The purpose of the various secondary cadences is to bring together those who share certain mathematical commonalities. That take advantage of the unique configurations they provide. They are like a branch of consciousness within the entities and cadres that reflect on experience, like a corner of your mind of which you may not be fully

conscious. Cadences do not necessarily convene meetings, although they can; even without such meetings, they still function as units of consciousness that share mathematical resonances. [/OYS, p. 200]

The "primary" Cadence is the one described in the Yarbro books, but here three more types are enumerated and described. This was news to me; I have not seen it elsewhere in the Michaelian teachings community. It does not not [sic] make sense to me, since, as I point out in this chapter of this *History* book, that it is generally acknowledged that there are multiple types of Task Companions. And it is I who has suggested that there might be more than one type of Essence Twin. These descriptions of the non-primary Cadences are bonds of *structure*, but perhaps *choice* could also figure in.

Do you see a pattern here? Just as there might be different types of heretofore undeclared Essence Twins, there might be different types of Cadences — if the channeling above is accurate. The conclusion that I draw from this pattern is that the whole teaching about Casting is kinda sorta iffy. We have no way of knowing if the channeling is accurate. And even if it is, would we be able to discern what is being discussed here, and use that discernment to improve our understanding of some actual relationship here in our actual lives? I have my doubts that we could discern the true situation, and I have my doubts that channeling could reveal the situation accurately. I suggest that it would be adequate if we stuck to some basic principles in regard to bonds of soul mates and let go of the disputed details.

Let's get back down to earth, shall we? In my book *The Tao of Relationships* I have elaborate and detailed descriptions of the chemistry and alchemy of service and intimacy as it relates to bodies and Personalities and souls. In Part Three of my book *The Tao of Personality* there is discussion of the "Meaningful Transaction" types, and to some of those I attached the same names as I attached to the types of soul bonds such as Identicality and Complementarity — see section further on. To some extent, that information about meaningful transactions is actually Validatable in real human relationships. In the next sections of this chapter I identify the *principles* that apply to soul bonding, and they are the same *principles* that apply to Personality bonding: Choice, Oneness, Twoness, Threeness, and Sevenness. Don't let the mathematics make your head spin; there is a simplicity behind the complexity. There are things about the Casting System — the Underleaf System — that have equivalents in the Overleaf System. There is a difference in the *feel* of the chemistry of Personality bonding versus the *feel* of the alchemy of soul bonding, but the same principles apply. It is Good Work to learn to distinguish the *feel*, and this chapter on Casting might aid you in that discernment.

Another way to say this is: my analysis points out that there are various issues with the descriptions; my synthesis points out that those issues have a pattern. That synthesis boils down to variations on underlying principles. My conclusion is that we should pay attention to the concordant principles and let the discordant details go.

So ... those were my Casting concerns enumerated and defined and discussed; now let's do some more sorting out of those concerns.

Configurations by Choice

Just for the record — not because I have "concerns" about it — let me mention in passing that there is yet another type of Composite, although its role in the narrative of this chapter is not significant.

In the Michaelian teachings, Configurations are small Composites of 3, 4, 5, 6, 7, 8, or 9 members. These are described in *MFM* on pages 239–240, and 242–243, and in *MMFM* on pages 42, 83, and 84–87. Configurations are said to come together by *choice* to work on projects during incarnations. (Task Companions are also task-oriented, but apparently Configuration projects are different from Task Companion projects.) It is said that Configurations and their projects can last for many lifetimes; Configurations can even span many Soul Ages.

Choice is a factor different from the *structural* considerations that govern most other Composites, such as complementary Roles or Role-ishes of Task Companions, and such as the identicality and simultaneity of Roles of Yarbro-type Essence Twins. Apparently the bonds of Configurations, as well as the bonds of physical twins — both types made by choice — are not nearly so strong as the structural bonds that exist and function in Casting. Configurations have bonds forged during incarnations rather than as a factor in Casting, and therefore bonds by choice do not have as much strength as structural bonds.

Speaking of types of Composites and their bonds, let's review and elaborate on and summarize them in the next two sections.

Bonds Within and Between Composites

In emanationist cosmogony, any discussion about Casting and Composites includes a discussion about bonding. In the various channeled sources reviewed in previous sections of this chapter, I discerned and discussed the types of bonds that are related to principles of emanationist cosmogony, such as Taoness, Oneness, Twoness, and Threeness. These principles and others are listed and described and applied in the numbered list below. You know how I love numbered lists to organize my presentations.

- 1. TAONESS: Recall the channeling from Leslie Briggs where it was said that "When Tao Casts Essence, occasionally an accident happens, and upon Casting the Essence, it Twins." One of the attributes ascribed to God in theology is that It is the "first cause", the "unmoved mover", and other such descriptions; the causal chain starts and stops There. In other words, in God, aka Tao, stuff exists and happens for absolutely no reason; pure unfettered spontaneity is a factor in Taoness. (Experiments have verified that in quantum mechanics randomness appears to be a fundamental feature of existence.) The essence of Taoness is that there is a nonstructural component of being and doing; Taoness is different from Oneness, Twoness, Threeness; it is infinite and undefined. To me this means that acausal, nonstructural soul bonds of the Taoness type are just as valid as the structural bonds mentioned in the other numbered items below, the items that have a '[structural] rhyme or [chosen] reason'. It does not not [sic] make sense to me if that makes sense that crazy stuff happens. I refer to this as the 'Taoness Principle'. In Greek mythology, Chaos and Cosmos, disorder and order, are the opposite of each other. The opposite of the Chaos of Taoness is the orderly structure of Cosmos. The next four numbered items are of Cosmos.
- 2. SIMULTANEITY: This is an instantiation of the *Oneness* Principle when it comes to Casting of Composites. In the Michaelian teachings, the seven Entities of a Cadre are said to be born "at the same time". Also mentioned in the Michaelian teachings is another type of twinning: identical and fraternal physical twins; these are also obviously born at the same time. In both cases, soul and body, there are said to be strong and lasting kinship bonds created by Simultaneity. Although it has not been explicitly stated to be the case, one wonders if Simultaneity applies to Composites of sizes in the range between physical twinning and soul Twinning in the Cadre Group. Perhaps all Composites in Casting have a Simultaneous component, not just Entity—in—Cadre.
- 3. IDENTICALITY: This is said to be the strongest bond. This is another instantiation of the *Oneness* Principle when it comes to Casting of Composites. (I conceptualize Simultaneity as of Ordinal *time* and Identicality as of Cardinal *space*.) When some factor of Casting identity is the same such as Role, Role-ish, and Ray then the bond of Identicality is in operation. This type of bonding has been alleged to apply to Roles in the Yarbro type of Essence Twin, which is said to bond Entities of the same Cadre together. The bonds of Identicality exist within and among other Composites smaller than the Cadre, but perhaps at lesser strength.
- 4. COMPLEMENTARITY: This is said to be the second strongest bond. This is an instantiation of the *Twoness* Principle when it comes to Casting of Composites. When the One produces the Two in the Fragmentation process, the result is always a *Cardinal-Ordinal* bonded pair. This type of bonding works between Cardinal and Ordinal Role pairs, and Cardinal and Ordinal Role-ish pairs. Complementarity is alleged to apply to Task Companions. (Even though Task Companions are not labeled "Twins", they are in fact Twins; it is just that they are not Identical Twins.) The bonds of Complementarity exist within and among Composites of all sizes smaller than the Oversoul, but perhaps the Yarbro type of Task Companion has the strongest Complementarity bond.
- 5. TRIALITY: This is the third strongest bond. This is an instantiation of the *Threeness* Principle when it comes to Casting of Composites. When the Two produces the Three in the Fragmentation process, the result is always the three Axes of Action, Inspiration, and Expression. The three Sides of an Entity (Energy, Love, Truth) are an instantiation of Threeness. The bonds of Triality exist within and among Composites smaller and larger than the Side, but perhaps at lesser strength. According to channeling by Troy Tolley (referenced further on), the "Tri-bond" is due to the numerical position on the Side. To me, this speaks of Simultaneity; I suspect there is more to Triality than that, as described in the next section.
- 6. CHOICE: This is the fourth strongest bond. I refer to the first four items in this numbered list as numerical-structural factors in Casting. There is a nonstructural Casting factor spoken of in several

sources and applied to various cases, and I call this factor *Choice*. It could also be called the Spontaneity Principle, there being no structural considerations. Choice is a variation of the Taoness Principle, aka Chaos, so it is distinct from the orderliness of Cosmos, which manifests in the numerical-structural bonds. Per original Michaelian group channeling quoted above, in the case of physical twins, the soul's pre-incarnate Choices seemed to be a factor for why there is a difference between Roles that prefer to, and Roles that prefer not to, twin. This is distinct from the four types of Structural bonding. In the case of Yarbro type Essence Twins, Structural Twinning is the norm ("six times out of seven"); perhaps nonstructural bonding would be of Choice. Choice might be a factor in the one-time-in-seven when the Yarbro-type Essence Twin Roles that are *not* Identical, and the instances where Briggs-type Essence Twin Roles *are* Identical. Bonds of Choice would work well for Scholars and Scholar-ish Fragments and Scholar-ish Composites because they do not have Role or Role-ish Complementarity as a bonding factor; in this case it may be that Choice can override the Simultaneity bond. Bonding by Choice applies to Composites other than those specifically mentioned.

Because of the channeling discrepancies, we do not actually know for certain about the *particulars* of bonding within and between Composites of sizes between few Fragments and many Fragments. However, the bonding *principles* listed above are not in doubt. I suggest that we do Good Work if/when we ignore the discrepant channeling about the unValidatable particulars and focus on the Validatable principles of bonding in our daily lives when interacting with other people.

Reintegration of Composites

As a summary for the convenience of Michaelian students, I provide the following list of Fragmentation–Reintegration processes as they apply to various sizes of Composites. It seems likely to me that the interrelationships of Composites are much richer than described in various Michaelian teachings sources.

- PERSONALITY-IN-POSITION: This is where physical identical and fraternal twinning happens with humans. The bond here is of Simultaneity, at minimum, in that they are born at the same time. According to the original Michaelian group channeling, this physical twinning can form strong bonds that last lifetimes, and beyond. One wonders if or how much the bonds of physical twinning factor into the Reintegration of Composites.
- 2. POSITION-IN-CADENCE: Recall that Cadences have seven Positions, each Position having the nature of one of the seven Roles, therefore Role-ish, therefore participating in Sevenness. In addition, all seven members of a Cadence are alleged to be of the same Role, so the bond of Identicality is at work here. Here the soul Twinning is between the Cardinal and Ordinal sides of the Action, Inspiration, and Expression Axes, therefore Complementarity is a bonding force. This type of bond is similar to Task Companions, but presumably weaker. Nevertheless, perhaps the merging within Cadences (Positions 1 → 7) would be the first step toward the Reintegration of the Entity on the upper levels of the Astral Plane after the last Fragment in the Cadence has "cycled off" the Physical Plane.
- 3. CADENCE-IN-GREATER CADENCE: The process of Reintegration of a Cadence with its Greater Cadence (8 → 49) is similar to the Reintegration of Positions within a Cadence. Not only could Role-ish Complementarity similar to Task Companions be involved, but presumably Role-ish Identicality, as with Yarbro-type Essence Twins.
- 4. GREATER CADENCE-IN-SIDE: That which has been said about Positions and Cadences applies to this Composite of 50 → 343 Fragments in terms of Role-ish Complementarity and Identicality being the driving factors in reintegration. The principles of Choice and Simultaneity play a part in the reintegration of this and every other Composite.
- 5. SIDE-IN-ENTITY: So how does the Reintegration process work with Sides? Because the Sides manifest the principle of Threeness, there can be no Identicality (Oneness) or Complementarity (Twoness) at work here, at least not directly, so that leaves Simultaneity and Choice and Threeness to drive the merging. Tolley has channeled that Sides share a "Tri-bond" type of bonding between the Energy (Action), Love (Inspiration), and Truth (Expression) Sides of the Entity, based on numerical location: >https://our.truthloveenergy.com/blogs/entry/3267-tri-bonds-91919-channel-troy-tolley/<. This is a way to reverse the process of "The Two produced the Three" in Tao's Template. Besides the numerical equivalency of the Tri-bond, I suspect that there is another bond of Triality that exists and functions thus: there is a weak bond among the three Ordinal Roles and Role-ishes, and there is a weak bond

among the three Cardinal Roles and Role-ishes. Perhaps this is how the Triality of Axes is merged into the Complementarity of Monads. I suggest that the Threeness Principle is a component of bonding in all of the septenarian Composites, from Cadences to Cadres, even if it is a weak bond compared to the other types. It is alleged that the merger of Task Companions is part of the reintegration process of an Entity, so that must somehow factor in with the reintegration of Sides.

- 6. ENTITY-IN-CADRE: In Entity-sized Composites we find the Yarbro-type of Task Companions, where the Twins partake of the Complementary (Cardinal/Ordinal) Principle; it was said that the Task Companion pairs are usually (6/7) in the same Entity. The description by Yarbro is ambiguous, but I would include Roles and Role-ishes in the Twinning. Also, here is the Yarbro type of Essence Twin, where the Twins are of the same Role, usually in different Entities in a Cadre.
- 7. CADRE-IN-CADRE GROUP: The nature of the bonds between Cadre Groups and larger Composites has not been explored in channeling in the Michaelian teachings so far as I know. One could reasonably assume that the same bonding principles apply. In my terminology, the Oversoul, introduced in the introduction to this chapter, is the largest Composite, and there must be some Composites with sizes in between the Oversoul and the Cadre Group if we include the principle of structure to that range.

One way or another, the reintegration of Fragments into larger and larger Composites reverses the process revealed in the Tao Te Ching: Tao > One > Two > Three > All. Maybe it is tidy, as in All > Three > Two > One > Tao, but perhaps it is untidy, who knows. However it happens, the Dialectic "principle" — no experience is complete until *both* sides of it have been experienced — applies to all Axes of the *entire* septenary in the same way that it applies to Cardinal and Ordinal experiences.

Had enough of this mind-numbing and mind-boggling discussion? Perhaps a quick review will help.

Concluding Remarks on Casting Concerns

The Casting concerns discussed in this chapter are metaphorically a 'can of worms' because of discrepant and ambiguous channeling. In previous chapters, we have examined issues that are similar to the issues examined in this chapter, at least in the sense that the issues were created by discrepant and ambiguous channeling. At minimum, this lack of reliability means to me that one should not be credulous about "channeling" — I have said this over and over.

Whenever the channeling is contradictory, and I cannot find corroboration that decides which channeling is as right as we can determine, then my strategy is to look for a resolution that does the least amount of violence to the corpus of channeling. Also, when the channeling is discrepant, then the question becomes, how untethered from the channeling can one reasonably get in attempts to reconcile and/or make sense of the channeling? As you know from reading other chapters, I do not assume that later channeling is better than earlier channeling; I evaluate plausibility based on other criteria such as bringing evidence and argument to bear from sources outside of the Michaelian teachings. The Casting issues are especially frustrating to me because I do not have recourse to the usual methods for sorting it out and coming to a definite conclusion. Other esoteric teachings that I know of do not have a structured teaching about kindred souls. Therefore, my usual methods are unsatisfactory when it comes to sorting out the Casting concerns. The best I can do is to extract some principles from the data, or apply some principles to the proposed solutions. That is what I did in this chapter.

As is my custom, a numbered list organizes my thoughts on any subject; hope it works for you too.

- 1. The subject of Casting is complicated; it is not tidy. Most Michaelian students find the "Michael Math" chapter of *More Messages from Michael* to be daunting. I wonder if this chapter of my *History* book cleared some things up for you. Perhaps it only confused you more. I am still confused.
- 2. One could look at the contradictions of Casting as presented by various sources in the Michaelian teachings and dismiss it all as nonsense, or dismiss parts of it as nonsense. My preference and my overall solution is to make sense of the divergent accounts by reducing the various types of soul bonds to the principles that I see in Tao's Template.
- 3. Because of the numerous discrepancies and ambiguities in the channeling, decades ago I gave up on lending much credence to the information about Casting. The thing about Natural Sequence versus Michael Math Sequence was the first sign that something was probably wrong; the second thing was

- the Essence Twin–Roles discrepancy. The more one reads about Casting, the more contradictions and ambiguities one finds.
- 4. These issues regarding Casting are an instance in my study of the Michaelian teachings where my Goal of Acceptance has tied itself in knots trying to reconcile discrepant and ambiguous channeling. As much as the Artisan component of my Personality likes the challenge of solving intellectual puzzles, it can be frustrating when this is just not possible, such as appears to be the case here. All conclusions are tentative at best.
- 5. In the first channeling that we know about on the subject of Casting, the transcriptions of the original Michaelian group, it was said that there are Soul Twins or Essence Twins in the same Entity, and sometimes also "crossover" cases where the Essence Twins were in different Entities in the same Cadre. In the original Michaelian group, the channeling about the Roles of twins applied to physical twins, not Soul/Essence Twins.
- 6. Let's move forward in the history of the subject. According to two Yarbro books, *MFM* and *MMFM*, Essence Twins are created in the Casting process, and Roles of Essence Twins are usually the *same*, and usually (6/7) they are in different Entities in the same Cadre. The Twinning was said to last from the beginning of Casting, through all incarnations, to the end of Casting.
- 7. At about the same time as the Yarbro information regarding Essence Twins, according to Briggs, unbeknownst to the Yarbro group, Essence Twins were also said to be created by the Casting process, but they are usually of *different* Roles, and it was said that the Twinning usually did not even last the entirety of the Physical Plane reincarnation cycle. Subsequent non-Yarbro Michaelian students have gone along with the latter scenario, except that nothing that I know of is said about Twins merging on the Physical Plane.
- 8. The discrepancy in descriptions of Twins has a semantic resolution: "Essence Twins" referred to one thing in the original Michaelian group, to another thing in the Yarbro contingent, to another thing in the Briggs contingent, and to maybe even another thing in the non-Yarbro contingent. Could this possibly be correct? Or should we just jettison all of these and apply the Identicality–Oneness Principle of soul bonding to some unnamed Composites?
- 9. Perhaps the discrepancy was fostered because of the various meanings of three ambiguous words, Essence and Twin and Role. So here is the rub or the nub of the semantics, as I see it: if one attaches the word Essence to the word Role, and the Role is only pertinent to the Physical Plane, then you have the type of Essence Twins spoken of in Briggs, where Essence Twins are allegedly rarely of the same Role. However, if one attaches the word Essence to the word Role, and the word Role is a personification of Ray, which is pertinent to all seven planes, then you have the type of Essence Twins spoken of in Yarbro, where Essence Twins are allegedly usually of the same Role = Role-ish/Ray.
- 10. Considering all of this blending of Rays and Roles and Role-ish going on, I want to emphasize the point that we humans and our Personalities are very far away from the fundamental Archetypes; so far indeed that it is difficult to discern the nature of the pure archetypes in any of us. Perhaps we could make a principle out of this, the Blending Principle we are not *pure* Role/Role-ish/Ray at any discernible level of our being. Whatever we *are* at any particular level of our being, it is never clearly distinguished from all the other levels of our being.
- 11. So far as I can tell, there is no way that we can Validate which of the proposed solutions for these Casting discrepancies is correct. If this is true, then they will all continue to be mere dogma-doctrines in the limbo land of the Michaelian teachings community, the same as many other issues that exist within the Michaelian teachings community.
- 12. It doesn't really matter in our daily lives which of these variations on Casting concerns are correct. Knowing the answers to the issues does not accelerate our spiritual development; for the most part, these are "academic" questions. For me and for you, this is really all just an intellectual exercise in parsing ambiguous and insufficient data to discern and tell the most plausible story. Many Scholars do this sort of thing for a living in academic institutions. Not that there is anything wrong with intellectual exercise; that is what the Michaels are doing on the fourth (Scholar) level of the third (Artisan) plane; they attempt to get the knowledge of how things work to us through various channels, some better than others.

- 13. So why do I care to examine the issue in this book, in this chapter? Because it speaks to the process of Validation in general, which is a fitting ending chapter of Part Four, "Essays on Issues". One point that I want to make about Casting issues is that there are some things that can be Validated, and there are some things that cannot.
- 14. Even among the issues that can perhaps be resolved or Validated, there does not seem, at this time in the history of the Michaelian teachings community, to be an interest in resolving issues other than my own books so far as I know.
- 15. The more one thinks about it, the more it seems that amorphous Casting is a result of the 'flavoring' and 'coloring' of every Composite with every other Composite. This is not unlike the ambiguous personalities that we see among humans; so why should it be different with Composites? As discussed in the chapter on Soul Ages, we have sub-personalities from past lives, and we have superpersonalities from Composites of our kindred souls all operating within us. As one gets older in Soul Age, the thinner the veil between Ego and Essence the more ambiguous the categories; the more inclusive of others, the more we express the undivided wholeness of the Oversoul.
- 16. Besides Casting considerations, these emanationist bonding principles also make sense in regard to other aspects of the Michaelian teachings; for instance, the interaction of Personality Traits in the Overleaf System. These are explained in detail in Part Three of my book *The Tao of Personality*.
- 17. Some idea gets started in one contingent of the Michaelian teachings, and the opposite idea gets started in another contingent of the Michaelian teachings community, and 'never the twain shall meet'. I would like for the twain to meet. Is more channeling in order? Would more channeling provide real answers, or only more questions? Inquiring minds want to know.
- 18. We appear to be "imprisoned" in our individuality; one of the metaphors for enlightenment is "liberation" from prison. The veil is thick, but it can be thinned, the separation is only apparent, not real. Psychedelics can dissolve the boundaries between self and environment, and they can help us to get outside of whatever psychological 'box' wherein we might be trapped at the moment. Certain spiritual practices are intended to do the same. Furthermore, meeting a close kindred soul can reveal how tenuous the dividing line between self and other can be.
- 19. The boxes on the Overleaf System Chart are definitive and distinct; it is a joy to meditate on these archetypal categories in their abstract elegance and beauty. But in our human lives we actually experience them with fuzzy boundaries. Likewise with the Composites of Casting. The Overleaves and Underleaves as we actually experience them are indistinct. This is the central problem of categorization, what to put in the boxes of categorization, and where to draw the lines between the categories as we understand them, even though the Michaels have provided the structure of the categories. Consider how far we humans are from the seven primordial Rays. We humans are so far from the pure abstract fundamental archetypes that it is almost impossible to distinguish the archetypes that we are composed of.
- 20. Per MMFM-MM page 190: "As some of you have recognized, all the overleaves can in fact be expressed as numbers." I would apply this to the Underleaves of Casting as well as the Overleaves of Personality. Let's take myself for an example. (I am a good example in this case; I usually serve as a bad example.) For instance, in terms of Overleaves, my #3 Artisan Role is diluted by the #5 Acceptance Goal, the #5 Concept Center, #5 Fifth Level, and the #5 Old, which are on the opposite side of the Expression Axis from the Artisan Role; my #3 Role is also diluted by my #6 Spiritualist Attitude and #6 Arrogance Shadow. My #4 Scholar Position is influenced by Underleaves as follows: I am in a #4 Scholar Cadence so that reinforces the #4 Scholar Position; but I am allegedly in a #6 Priest Greater Cadence, on the #3–5 Truth or #1–7 Energy Side of the Entity (depending on who is channeling), in a #1 Server Entity, in a #2 Artisan Cadre. The Traits that are reinforced by multiple other Traits are easier to see than the Traits that are diluted by multiple Traits.
- 21. In Part Three of my *Tao of Personality book*, I explain how the Traits of the Overleaf System interact with each other in relationships. I derive a factor that I refer to as the "Meaningful Transaction Index" (MTI), which quantifies the significance of the 'chemistry' between the Personalities of two people. The same procedure could be done for the Underleaf system, derived from two people's Casting numbers; this would quantify the significance of the 'alchemy' between those two people's souls, or Essences. The more "Clarity" in the Personalities of those two people the more that Personalities are

set aside so that the people are "in Essence" — the more that 'alchemy' will govern the interactions between those two people, and the less the relationship will be governed by the 'chemistry' between Personality Traits. This is one of the main goals of the so-called "spiritual path" as found in the Michaelian teachings: to live according to the Underleaves more than the Overleaves, especially when dealing with one's kindred souls. Personality/Overleaves are temporary, just for a lifetime; Casting/Underleaves are much more enduring, through all lifetimes.

- 22. I see the whole interplay of Casting and our attempts to understand it as a manifestation of the struggle between the ambiguation of blending/reintegrating and the disambiguation of Fragmentation into archetypes.
- 23. The types of bonds between souls discussed in this chapter in regard to Casting are similar to the types of bonds between Personalities in regard to the Overleaf System. Both types are based on the principles of Taoness (Spontaneous Choice), Oneness (Identicality in 'space' and Simultaneity in 'time'), Twoness (Complementarity of Cardinal/Ordinal), Threeness (Triality of Axes), and Sevenness (sequence). The principles of meaningful relationship types in the Overleaf System are discussed in Part Three of my book *The Tao of Personality*. However ...
- 24. The Overleaf System is a three-dimensional (3-D) geometric structure, as explained in my book *The Tao of Personality*. The structures that the Oversoul differentiates itself into are probably built from hyper-dimensional (beyond 3-D) inter-connections that we cannot visualize in the classic Casting scenario presented in *MMFM*–MM and elsewhere. This is because the planes beyond the Physical are built on hyper-dimensional mathematical structures, beyond the 3-D geometric structure of space/time. Hyper-dimensionality is usually not something a non-mathematician can visualize. Perhaps some of the Casting concerns that I have discussed in this chapter are the result of the difficulty of translating between hyper-dimensional structures and 3-D structures.
- 25. People who are new to the Michaelian teachings often take a look at the people in their lives and ask such questions as, "Is this person my Task Companion", or, "Do I have bad karma with that person?" I did that when I was a newbie, but not so much anymore. Rather than trying to apply specific Michaelian teachings terminology to relationships, I just let budding relationships unfold however they will, in their own ambiguous way. This seems better to me now than putting a definitive Michaelian teachings name on a relationship. It helps to know that there are these extraordinary relationships based on various kinds of Casting of one's kindred souls, but it might not help to get too rigid about it. The word "Tapestry" is used in the Michaelian teachings to describe the weaving together of our reincarnating lifetimes (MMFM, p. 114–115, 133, 208, 272), but I think it also applies to our Reintegration processes. There is the Tapestry of Agreements and Monads and Karma on the Physical Plane that our soul is weaving with other souls, and there is also the Tapestry of the structure of the Oversoul that will factor in to the Reintegration process on planes beyond the Physical. My advice is to be vigilant, but mitigate your expectations about what the relationship is, or should be, or can be ... and just go with the flow.
- 26. Finally, I would like to end this subject with some recent channeling by Troy Tolley:

As we have explained many times to many students, this system is flawed and unwieldy but we work with it as a step toward understanding resonance among fragments. It was never meant to be the final "map" or remain a static structure. We are working on how to help move our students understanding beyond this structure, but until then, we work with it. In addition to the errors that can happen on our end, they can also happen in transmission. There is more to the structure and dynamics of the Entity and Cadre, and Sentient organization as a whole, that we have yet to teach. A sequential number (raw) and a Position (relative to other fragments) will always remain the same, but there are other factors to consider when "mapping" an entity and identifying where one is in the entity.

Correction: Position (relative to other fragments at Casting)

Imagine a bus that has organized and assigned seating. Now imagine that as soon as the bus begins moving, no one stays in their seat. Imagine further that when the bus parks in the parking lot of the Amusement Park of Earth, there is a constant flow of fragments exiting and returning to the bus and sitting in different seats. Imagine further that over time, new bonds are created that shift preferences among fragments for whom they sit with most often. Now imagine that we attempt to describe the original seating assignments. Now imagine that after 6 million years we are asked to locate and identify a

fragment's position. There are no numbers stamped on an individual. We have to retrace millions of years of evolution among members of an entity to identify that first assigned seat.

We enjoy this challenge and it adds to our own understanding of Sentient Structure, but we are learning, as well. It is not that it is faulty so much as incomplete. There is greater context that needs to be added to account for the evolution and dynamic movement that is a part of every Entity. We do our best. The static structures that you use now as a reference are not maps that we had on hand and delivered. They are structures that are being fleshed out over time among students as they ask for more information on Entities. So while the static structure is useful, and while we can deliver a snapshot as clearly as we can, we do discover along the way, along with you, discrepancies. Raw Numbers are fairly meaningless compared to Position. Entities are Cast in a rhythmic and mathematical process, but that process is not linear. Raw Numbers are a way to translate that process into something understandable. In reality, it could be said that Entities actually "explode" into existence. Raw Numbers is that explosion in slow motion, so to speak. We will continue to work with our students to clarify and expand on the structure of Sentience. It is difficult to convey multidimensional structures into 2 dimensional structures.

[>https://our.truthloveenergy.com/blogs/entry/3850-the-totally-simple-and-straightforward-entity-structure-model-related-fun-stuff/?tab=comments#comment-23627< — retrieved 15 October 2020]

For a similar reason that I skipped the letter "I" in the designation of chapters in this Part (it looks too much like the number 1), the next chapter of this Part is not designated "O" because it looks too much like the number 0; instead, the chapter designation skipped from N to P.

Chapter 4P

COLOR ASSIGNMENTS

In a previous chapter, Chapter 4J, "The Seven Chakras", the focus was on correlating Centers with chakras. As you may recall, in the esoteric community, chakras are typically assigned ranks (first \rightarrow second \rightarrow third \rightarrow fourth \rightarrow fifth \rightarrow sixth \rightarrow seventh) and colors, specifically the rainbow spectrum sequence of colors (red \rightarrow orange \rightarrow yellow \rightarrow green \rightarrow blue \rightarrow indigo \rightarrow violet); this pattern is consistent throughout the esoteric community. It did not start out that way, but over the 20th Century, the esoteric community converged on the pattern of ranks and colors that we see today.

It so happens that various sources in the Michaelian teachings community have assigned ranks and colors to the Roles — but they have never converged on a single pattern. These variations were noted in passing in Part Three, where various Overleaf Charts were introduced and reviewed. Here in this chapter we will compare and contrast the Charts and other resources in more detail, and see what we can learn. One thing that we learn is that, not only is the correlation of Centers and chakras confused in the Michaelian teachings, but the correlation of Roles and colors and ranks is also confused. And as we will see, the Michaelian teachings community does not even agree on the names of the colors to assign to the Roles. My aim in this chapter is to arrive at a pattern that will supersede the confusion that we see today. My apologies that the following exposition might be so tedious to you that it becomes tiresome. However, it cannot be any other way ... if the discrepancies are to be sorted out and straightened out. Please do not kill the messenger.

By now, if you have read the previous thirteen chapters, you will not be surprised that there is not a universal consensus on the color and rank assignments. Instead, what has happened in this case is what generally happens in similar cases, namely that when a Chart–maker knows of the color and rank assignments made by a trusted predecessor, the precedent is usually copied, and when a Chart–maker does not know about, or does not care about, the color assignments made by others, the assignment is different. Then there is the case where a Chart–maker knows about their predecessors, and attempts to reconcile the contradictory color assignments that they found.

In order to untangle the mess — which is my purpose for this chapter as well as for other chapters in Part Four — it is helpful to understand how the mess was created in the first place, and then embellished along the way. Thus, the convoluted history of these color assignments is traced and documented in the following sections, then they are combined in a single table near the end of this chapter.

To a large extent, this chapter is a review of, and reworking of, information found in previous chapters, especially the chakra chapter, which document discrepancies in that realm. Slicing and dicing the information from the color–assignments perspective helps to untangle the other messes as well.

But before we get to that, I believe that it is appropriate and helpful to interject a bit of psychologizing and philosophizing at this location in this chapter.

The Urge to Categorize and Systematize

Ranks and colors are typically coupled together in the Overleaf System, as they are in the chakra system that preceded it. Both of these are the product of the need in the human mind to systematize knowledge, in order to understand, and then control, the reality system in which we find our consciousness embedded. This philosophical endeavor and scientific project is successful because the reality system in which our consciousness is embedded is actually rather systematic at the foundation, at the level of archetypes, unlike the ambiguous mix of archetypes that confront us all the time.

During the original Michaelian group, the Michaels revealed the Overleaf categories, and the Michaelian teachings community has been occupied ever since with trying to understand and apply it. As part of that process, eight people, whose Charts were reviewed in Part Three, are known to have assigned colors to the seven Overleaf categories. I use the word "assign" because, of course, each Overleaf category does not actually have a color as an inherent property. The colors assigned are usually the seven standardized colors of the Rainbow Spectrum Sequence. My guess is that this idea was borrowed from the chakra system. In the original Michaelian group and ever since, it was recognized that the chakras correlate with the Centers, and the Centers correlate with all of the other Overleaves. These assignments are "artificial" in the sense that the chakras and Overleaves do not literally have colors, but these assignments are not arbitrary in a metaphorical sense, namely that they reflect a space-like hierarchy and a time-like progression from 'lower/slower vibration' to 'higher/faster vibration' in both systems. The Rainbow Spectrum Sequence colors provide an analogy for, or representation of, the "sequenciality", if I may coin a word, for chakras — and Overleaves.

Something similar can be said for the sequential numbers that have also been assigned to Overleaf categories.

It is as convenient to assign numbers and colors to the Overleaf categories as it is to do the same with the chakras: numbers and colors are mnemonic devices; the numbers/colors may not necessarily be intrinsic to what they are assigned to, but they help us to see a pattern and remember it. Numbers and Rainbow Spectrum Sequence S colors both have an intrinsic sequenciality, which makes them good mnemonic devices toward understanding some things about septenaries in general.

With that discussion behind us, let's trace the history of color assignments in the Overleaf System of the Michaelian teachings.

Chart #9 — José Stevens

The first source of the mess being reviewed in this chapter is José Stevens. He presented three different sequences that say something about color assignments.

The Vibration Sequence

So far as I know, José Stevens was the first Michaelian student to assign colors to the Roles, and several of his successors followed one or another of his leads. His Role–color assignments are found in a graphic labeled "Essence Vibration" on page 78 of his 1986 book *The Michael Handbook;* the assignments are shown below this paragraph. Stevens used the standard rainbow spectrum sequence of colors that are assigned to the chakras. He did not indicate ranks; I added the rank numbers shown in [brackets] in order to facilitate comparisons that I make with other sequences discussed further on in this chapter. Thus, Stevens did not number the ranks, but the rainbow spectrum sequence of colors implies them.

[1] WARRIOR = RED; [2] KING = ORANGE; [3] SCHOLAR = YELLOW; [4] SERVER = GREEN, [5] SAGE = BLUE; [6] ARTISAN = INDIGO; [7] PRIEST = VIOLET.

Refer to Chapter 2C in Part Two, "Proposed Sequences of Overleaves" where I refer to Stevens's Role–color correlation as the "Vibration Sequence", and I discuss it in more detail. You may view this sequence in graphic form, in the compilation table, 4Pf, near the end of this chapter.

How this Role-color correlation was originated is not stated, whether by channeling or intuition or via some other source. The colors are per the usual rainbow spectrum sequence from red at one end to violet at the other end, but the Roles are not in a sequence that is found (in regard to any other alleged phenomenon) anywhere else in the *Handbook*, or in Stevens's other books (where he discusses many septenaries). However, as we will see below, some others have adopted this sequence.

By the way, there are 7! = 5040 possible variations (permutations) in the sequence of the components of the septenary, and dozens of the possible variations are found in the Michaelian teachings literature. Refer to the Prologue of my book *The Tao of Cosmogony*, where I compare and contrast many of these variations. According to my research, the modern chakra–rank–color pop cosmology follows the Natural Sequence. But I digress.

Stevens provided an explanatory comment in the margins of the graphic (the underlined word is my emphasis):

Each role has a vibrational rate of its essence. That primary vibrational rate accounts for the differences in roles. Fragments are <u>cast</u> off from the Tao like white light. When white light passes through a prism it refracts

into seven frequencies, the seven colors of the spectrum. Similarly, the seven roles are created, each of a different frequency.

You will recognize the word "cast" in this quotation if you read about the concept of "Casting" discussed in the previous chapter of this *History* book. An alternative Casting sequence to the Vibration Sequence is discussed in a subsection below.

By the way, in my book *The Tao of Personality* I offer, for consideration by Michaelian students, a dimensional geometrical explanation for the differences in the Roles. It is an actual *explanation* from "first principles" — logic, mathematics, physics — not just an *analogy*, which the refractive prism is. But I digress.

I have found no evidence in his *Handbook* that Stevens applied his Role–color schema to the entire set of Overleaf categories, but it makes sense that he would, and some people who adopted his schema did just that. For instance, Stephen Cocconi (Chart #13) shows those Vibration colors on his "Michael Motivation Cards", a Tarot-like divination card deck that comprises the entire Overleaf System; see section below. Barbara Taylor (Chart #17), with her online color-coded Overleaf Chart, also adopted the Role–color schema of the Vibration Sequence for the entire Overleaf System; see section below.

Center - Chakra - Role Sequence

If the history of Role–color assignments had ended there, it would be simple, but Stevens himself complicated it. In the *Handbook*, on page 214, he presented a table that showed a ranking of Roles that is almost completely different from the Vibration Sequence of Roles, and it happens to be relevant to this chapter because it includes a correlation of Centers, ranked chakras (and by implication, colors), and Roles — all of which are discussed in subsequent sections of this chapter. Henceforth I will refer to this as Stevens's Center–chakra–Role Sequence, to distinguish it from his Vibration Sequence.

Stevens's Center-chakra-Role table is redrawn below, but I added three columns in order to facilitate comparisons with the correlations made by Steven's successors: 1) the Roles that correlate with the Centers shown in the second column are shown in the first column; 2) the colors that are commonly assigned to the chakras are shown in the column immediately to the right of the column that shows the ranks of the chakras; 3) to the right of the Role column are the Vibration Sequence colors that correlate with the Roles shown in the Role column. To distinguish the columns that I added to Stevens's table, I enclosed the words in them in [brackets]. I also filled cells in the table with colors to make it easy to see what is going on.

As with the Vibration Sequence, Stevens provided no origin/source (channeling, intuition, tradition, whatever) or rationale/explanation (structure and meaning) for the information in this table; it was simply delivered as a dogma-doctrine. Other people have other dogma-doctrine schemas, as we will see further on, and they disagree with this dogma-doctrine.

| - | Table 4Pa — VIBRATION SEQUENCE versus CENTER-CHAKRA-ROLE SEQUENCE | | | | | | | | | | |
|-----------|---|---------|-------------------|---------------------|---------|----------------------|--|--|--|--|--|
| [ROLE] | CENTER | CHAKRA | [CHAKRA COLOR] | LOCATION | ROLE | [VIBRATION COLOR] | | | | | |
| [SCHOLAR] | INSTINCTIVE | FIRST | RED | BASE OF SPINE | KING | [ORANGE] | | | | | |
| [KING] | HIGHER MOVING | SECOND | ORANGE | ABOVE SEX ORGANS | ARTISAN | [INDIGO] | | | | | |
| [WARRIOR] | MOVING | THIRD | YELLOW | SOLAR PLEXUS | WARRIOR | [RED] | | | | | |
| [SERVER] | EMOTIONAL | FOURTH | GREEN | HEART | SERVER | [GREEN] | | | | | |
| [ARTISAN] | INTELLECTUAL | FIFTH | BLUE | THROAT | SAGE | [BLUE] | | | | | |
| [SAGE] | HIGHER INTELLECTUAL | SIXTH | INDIGO | THIRD EYE | SCHOLAR | [YELLOW] | | | | | |
| [PRIEST] | HIGHER EMOTIONAL | SEVENTH | VIOLET | CROWN | PRIEST | [VIOLET] | | | | | |

My comments on this table are as follows:

- The columns labeled CENTER, CHAKRA, LOCATION, and ROLE are as shown in the table on page 214 of the *Handbook;* the columns labeled [ROLE], [CHAKRA COLOR] and [VIBRATION COLOR] are my addition to that table. The [VIBRATION COLOR] column is derived from the graphic on page 78 of the *Handbook.*
- The CHAKRA, [CHAKRA COLOR], and LOCATION columns are per the usual understanding of the chakra system that is found in the modern Occidental esoteric community; refer to two chapters on chakras in this *History* book for documentation. There you will see that, according to my research, the modern chakra–rank–color pop cosmology follows the Natural Sequence, as shown in this table.
- The column labeled [VIBRATION COLOR] shows the colors that Stevens correlates with the ROLE column. In the graphic on page 78 of the *Handbook*, the colors are arranged in the rainbow spectrum sequence, but the ROLES column in this table is out of sequence with the Vibration Sequence. This discombobulation in the two Stevens schemas makes the [CHAKRA COLORS] only correlate with the [VIBRATION COLORS] in three places: Fourth = green, Fifth = blue, and Seventh = violet.
- Regarding the [CHAKRA COLOR] column, I do not see in any of Stevens's four books where he
 discusses chakras in numerous places that he explicitly associates and correlates all seven Rainbow
 Spectrum Sequence colors with all seven chakras. His mentee Barbara Taylor in her published
 material colored the chakras per the Vibration Sequence rather than the standard chakra-color
 assignments; see below. From this we can say that Stevens appears not to abide by the colors
 commonly applied to the chakras. Except maybe sorta kinda; see the next subsection.
- Regarding the CENTER and CHAKRA columns, the two chapters on chakras in this *History* book
 present enough evidence and argument to demonstrate that none of the correlations between the two
 columns is correct. Some subsequent Michaelian students incorporated Stevens's misunderstanding
 into their own schema. For instance, the CENTER, CHAKRA, and LOCATION columns are reproduced
 in a table on page 112 of *Michael: The Basic Teachings* (1988, 1990), authored by Christeaan, Van
 Hulle, and Clark. More instances of copying are noted in the course of this chapter, and in Chapter 4J,
 "The Seven Chakras".
- The second column, the CENTER column, shows the names of the Centers, of course, but to the left of it is the [ROLE] column that shows the names of the Roles that correspond to those Centers per all Overleaf Charts, including Stevens's own. Comparing the [ROLE] column to the ROLE column, we see that they correlate with each other only with respect to Warrior, Server, and Priest; the remaining four Roles are scrambled out of proper alignment according to every Overleaf Chart reviewed in this *History* book. My guess is that the CENTER-ROLE correlation disconnect found in this table was prompted by Stevens's erroneous Center-chakra correlations.
- Notice that in the CENTER column, the last two are Higher Intellectual and Higher Emotional. Three years after the *Handbook* was published came Stevens's book *Earth to Tao* (1989). On page 157 of that book, in a chapter on chakras, Stevens switched the two, but this update only makes HIGHER EMOTIONAL = THIRD EYE = PRIEST correct per my research. Three people who copied Stevens's correlation of Centers and chakras did not notice the update (Taylor, Cocconi, Basic Teachings), but apparently one of them did (Tolley) documentation presented below.
- I credit/debit/blame Stevens for most of the confusion regarding Center-chakra-Role assignments that followed in the wake of the publication of this table. Some of his successors credulously mistook it as valid, as we will see below. In other words, Stevens was the first to introduce the notion that (mis-)correlating chakras with Centers was powerful enough to throw the Centers out of alignment with the other Overleaves, but he was not the last; Benning and Tolley went along with it.

Healing Colors Sequence

There is evidence, albeit scant, that Stevens may have known about the colors that are commonly associated with the chakras. One place that Stevens assigns colors to some chakras and some Centers is on pages 169 and 170 of his book *Earth to Tao*. The context is the use of colors as a healing technology. As with other assertions in his books, the source of the information is not given; it is presented as a dogma–doctrine, without evidence or explanation or argument or documentation of consilience with other sources. The information is presented in a table. I quote from his table below, and I underline words that indicate Centers and/or chakras that are correlated with a particular color. My explanatory comments, which are shown in serif font, are interspersed

between the quotations, which are shown in sans serif font. Let's call this Stevens's "Healing Colors Sequence" to distinguish it from the Vibration Sequence and the Center–Chakra–Role Sequence. At the end of this subsection I have a table of my own, 4Pb; it summarizes the following information.

REDS are effective for organs, endodermal tissues, and those parts of the body involved in supply and maintenance. Great for <u>instinctive center</u> and the <u>first chakra</u>.

The color red is assigned to the first chakra in modern times, so here Stevens agrees. However, in Table 4Pa above, the Instinctive Center is correlated, via the King Role of the Vibration Sequence, with orange. One could see this as a self-contradiction. Per Table 4Pa, Stevens correlates Instinctive Center with first chakra, but I do not. As I explained in Chapter 4J on "The Seven Chakras", I correlate the Instinctive ("Physiology") Center with the zeroth chakra (Root, Base) and the first chakra (Gonadic, Groin) with physical activity, hence the Moving Center.

ORANGES are good for healing sexual imbalances and energetic conditions.

This is in agreement with Table 4Pa where Stevens correlates the Higher Moving, aka Sexual Center, with the second chakra, which is orange in modern chakra lore, so that is where I show it in Table 4Pb below. However, in modern times, the second chakra (Navel, Spleen) is associated with emotional functions, which is in disagreement with Stevens's correlation.

YELLOWS are effective for mental confusion and difficulty with the intellectual center.

This would seem to contradict Stevens's assignment of blue to the Intellectual Center per Table 4Pa above. In modern times, the third chakra (Solar Plexus) is yellow and is associated with mental functions, so the Healing Colors Sequence of Stevens is in agreement in this way, and that is where I show it in Table 4Pb below.

GOLD and SILVER generate energy and raise frequency. Gold is more soothing. Good as a healing agent for <u>all chakras</u>. Silver is more glitzy, can be good in the <u>third</u> and <u>fifth</u> chakra.

Gold is sorta yellow which would be consistent with the third chakra = Intellectual Center in modern chakra lore. Silver is sorta blue which would be consistent with the fifth chakra = Higher Intellectual Center = blue in modern chakra lore. This is such a stretch that I do not take it seriously, but I still show it in Table 4Pb below.

GREENS are effective for muscle, bone, blood, and rebuilding damaged areas. Greens help those areas of the body engaged in supply and distribution.

If there is any connection in this description of green to any Center or chakra, I have not yet discerned it. In modern chakra lore, green is assigned to the fourth chakra, the Heart Chakra, rather than the following:

PINKS and ROSES are <u>healing</u> for <u>emotions</u>. Excellent for the fourth or <u>heart chakra</u>.

The Heart Chakra is typically regarded as the comprehensive healing chakra, not just for emotions. Part of Stevens's assertion here might be based on his mis-correlation of Emotional Center with the fourth chakra per Table 4Pa. However, there the color is green in both the Vibration Sequence and in chakra lore, so this mismatch could be regarded as a self-contradiction.

PURPLES and LAVENDERS are good for spiritual crises. Use these on the upper four chakras. The lower chakras will find this frequency too esoteric. They need the more basic colors. Reds, oranges, yellows.

This assertion is in alignment with the color assignments of the modern chakra system where red = first chakra, orange = second chakra, yellow = third chakra, (green = fourth chakra, blue = fifth chakra), indigo (= lavender?) = sixth chakra, and violet (= purple?) = seventh chakra. However, one cannot conclude that Stevens subscribes to the entire modern chakra color system; indeed the expanded scope of Table 4Pa argues against that.

Other colors (brown, white, clear, black, gray) are mentioned in the healing colors paragraphs, but they are not associated with anything that looks like a Center or a chakra, so I omit quoting them here.

The following table graphically represents Stevens's Healing Colors Sequence. It shows that the standard chakra colors are somewhat compatible with Stevens's assignments. Stevens does not tell us where he got his information — channels can usually get away with that with many Michaelian students (but not with me).

Color therapy as a healing modality is not a new idea in esoteric lore, as an internet search on "chakra color healing" will reveal. In those internet resources you will see that the application of the color of the chakra allegedly heals whatever negativity or dysfunction there might be in that chakra. However, I would suggest that if no double-blind, placebo-controlled, peer-reviewed clinical study of hundreds of therapy sessions for numerous conditions has been done, then one should put a disclaimer on this or any other alleged color therapy system, saying that the statements have not been approved by the FDA and/or the AMA. In other

words, if there is any validity to this notion, then one had better get the colors right, lest one do more harm than good, and violate the Hippocratic Oath.

| | Table 4Pb — CHAKRA HEALING COLORS per JOSÉ STEVENS | | | | | | | | | | | |
|------------|--|-----------|----------------|--------------|-----------------|-----------|-----------|--|--|--|--|--|
| CLASS | LC | OWER CHAK | RAS | | HIGHER CHAKRAS | | | | | | | |

| STEVENS | Red | Orange | Yellow, (Gold) | Pink, Rose | (Blue) (Silver) | Lavender | Purple | | | | | |
| ETT p. 169 | First Chakra | Sexual | Mental | Heart Chakra | Spiritual | Spiritual | Spiritual | | | | | |
| Επ. μ. 109 | Instinctive | Energetic | Intellectual | Emotions | ~Higher | ~Higher | ~Higher | | | | | |

So, some of what Stevens says about chakra healing colors is in agreement with some chakra colors, and some is in agreement with some Centers, but other colors are in some disagreement. Certainly, there is not enough here to say that Stevens is in agreement with the entire modern chakra system, but we can say that some of what is said here is not in agreement with what Stevens says elsewhere. So, this section is ambiguous and inconclusive, but I included it mostly to be complete.

An Alternative Casting Sequence

Steven's uses the word "cast" in the description of the Vibration Sequence: it is a "Casting" sequence for the seven archetypal "energies". However, a different Casting sequence appeared in the same year as Stevens's Handbook. Yarbro's book More Messages from Michael (MMFM) was published in March of 1986. Therein the Michael Math Sequence was revealed: 1-Server, 2-Artisan, 3-Warrior, 4-Scholar, 5-Sage, 6-Priest, 7-King. Much of the "Michael Math" chapter is about the Casting of the seven archetypal "energies", personified as Roles. The idea is similar to Stevens, but, as we will see below, the two Casting sequences are different in five out of seven components.

The *Handbook* was released later that same year, 1986, but it was probably written before *MMFM* was published. Whatever the case, the *Handbook* makes no mention of the Michael Math Sequence. Nor did Stevens use the Michael Math Sequence anywhere among the numerous septenaries in three of his subsequent books, *Tao to Earth* (1988), *Earth to Tao* (1989), and *Transforming Your Dragons* (1994). This leads me to ask if Stevens ever accepted the validity of the Michael Math Sequence. The work of his student Barbara Taylor suggests that he probably did; see section further on about her correlation of chakras and Centers.

Yarbro's Michael Math Sequence as revealed in *MMFM* set the stage for yet another discrepancy in Role–color assignments, which complicated the situation for subsequent Michaelian students who were paying attention to the correlation landscape, as we will see further on. Thus, that year, 1986, was a turning point year; it 'set heads spinning' in attempts to reconcile Yarbro and Stevens.

Before we return to Yarbro and the Michael Math Sequence, let's take a look at one of the people who copied Stevens.

Chart #13 — Steven Cocconi

Stephen Cocconi is a California channel who was first active in the 1980s and has been every since. Rolecolors assignments are not shown on his Overleaf Chart, #13, but they are on his deck of "Michael Motivation Cards". An image of the Role cards in that deck can be found on his website at this location: >https://www.themichaelteaching.com/tarot/<. Notice that the colors are per Stevens's Vibration Sequence. These colors are ascribed to all of the other Overleaf cards, as one would naturally expect.

Here again, before we get to the Michael Math Sequence variation, we will take a look at yet yet another Role–color assignment schema, this one from a source independent of Stevens and Yarbro. If we accept the following schema as valid, it further complicates any attempts at reconciliation of proposed schemas:

Chart #14 — Varda Hasselmann/Die Quelle

Moving down the list of Charts and/or sources that assign colors to Roles/Overleaves we find this one. It is the product of channel Varda Hasselmann, who channels an Entity that calls itself "Die Quelle" in German, aka "The Source" in English. Die Quelle claims to be a sibling Entity to the Michaels, in the same so-called "Cadre" or group of so-called "Entities". The information appeared in a book first published in the German language in 1993, and then in an English translation, *Archetypes of the Soul*, in about the year 2004. Unlike with Stevens where the color assignments are found in a book but not on a Chart, the Role–color assignments by Hasselmann are shown in the book, on the Chart in the book, over a two-page spread, on pages 16-17. They are:

1-SERVER = <u>SKY</u> BLUE; 2-ARTISAN = <u>BUTTERFLY</u> YELLOW [= orange?]; 3-WARRIOR = BLOOD <u>RED</u>; 4-SCHOLAR = GRASS <u>GREEN</u>; 5-SAGE = <u>SUNNY</u> YELLOW, 6-PRIEST = <u>OCEAN</u> BLUE [= indigo?]; 7-KING = <u>PURPLE</u> [= violet].

The rank assignments are from the Chart, not my addition. Notice that the Roles are listed from left to right in the Michael Math Sequence. Hasselmann got the Michael Math Sequence from her encounter with the Michaelian teachings via Messages from Michael and More Messages from Michael.

The summary tabulation, Table 4Pf, at the end of this chapter, shows that the Die Quelle version of the rank, color, chakra, and Role correlations is very discombobulated with respect to most of the other correlations reviewed in this chapter. This is what one typically finds, but may not prefer to see, with a channel who is not aware of the work of other channels.

Notice from the above that the standard rainbow chakra colors are all used, sort of, but they do not align with the ranks of the rainbow spectrum color sequence from one end (red) to the other (violet), which the Vibration Sequence does. Apparently, Hasselmann/Die Quelle was not influenced by either Stevens or the common chakra color assignments, although chakras are mentioned repeatedly in her book *Archetypes of the Soul*; refer to a section on the Die Quelle correlation of chakras with Centers in Chapter 4J in Part Four, "The Seven Chakras".

Because we are discussing chakras as well as Overleaves in this chapter, I might as well include the Die Quelle correlation of chakras with Roles. It is different from every other source, and it is different in every case with the standard correlation of colors with chakras.

| | Table 4Pc — ROLE COLORS and CHAKRA CORRELATIONS per DIE QUELLE | | | | | | | | | | | |
|--------|--|--|----------------|---------------|------------|--------------|----------|--|--|--|--|--|
| RANK | K FIRST SECOND THIRD FOURTH FIFTH SIXTH SEVENTI | | | | | | | | | | | |
| CHAKRA | "SURVIVAL" | NAVEL | "PLEXUS" | "HEART" | THROAT | "THIRD EYE" | "CROWN" | | | | | |
| COLOR | RED | RED ORANGE YELLOW GREEN BLUE INDIGO VIOLET | | | | | | | | | | |
| ROLE | "Blood Red" | "Butterfly Yellow" | "Sunny Yellow" | "Grass Green" | "Sky Blue" | "Ocean Blue" | "Purple" | | | | | |
| KOLE | WARRIOR | ARTISAN | SAGE | SCHOLAR | SERVER | PRIEST | KING | | | | | |
| CHAKRA | NAVEL | THROAT | BROW | GROIN | HEART | CROWN | PLEXUS | | | | | |

My comments on this table are as follows:

- 1. The top row shows, following the modern chakra system, the ranks, the locations, and the colors that are assigned to the chakras. The numbers increment from left to right; the chakras are located on the center line of the body from the pubic area to the top of the head; the colors are per the rainbow spectrum sequence from left to right. All of these represent a sequence in space and time.
- 2. The middle row shows the names of the colors that Die Quelle assigned to the Roles in the same table cell. This sequence of Roles is unlike any other sequence of Roles in the Michaelian teachings; it is one of those 1054 possible permutations which the septenary may take.
- 3. The bottom row shows the names of the chakras that Die Quelle assigned to the colors and Roles in the middle row. Note that there is not a single match with the chakras shown in the top row.

Because the Die Quelle teaching is of German origin, and only recently translated into English, and even more recently come to the attention of the Michaelian teachings community, it really has had no influence on the evolution of the Role–color assignments in the Michaelian teachings community; Die Quelle came to the party too late to make a difference. And one wonders if Michaelian students would have noticed the

differences, and if they had, would they have had enough concern about the differences to raise a stink about it, as I do, concerned as I am about the accuracy, perhaps even the validity, of channeling. My aphorism, "The unexamined teaching is not worth believing" applies to Die Quelle as well as to the Michaels.

Chart #17 — Barbara Taylor

Barbara Taylor considers José Stevens to be her mentor. She has participated in Stevens's "Power Path Seminars". Based on her published work, we can say that her understanding of the structure of the Overleaf System is apparently entirely derived from Stevens, rather than one of the available alternatives. Furthermore, to look at her work answers some of my questions that were left unresolved in the examination of Stevens's work in a previous section of this chapter.

Please take a close look at the following table, give it some thought in the light of what you already know from previous sections of this chapter, and then read the comments below the table.

| | Table 4Pd — ROLE/ENERGY RELATIONSHIPS per BARBARA TAYLOR | | | | | | | | | | | |
|------------------------------|--|--|-------------------------------------|---------------------------------------|--------------------------------|--|--------------------------------------|--|--|--|--|--|
| [AXIAL] | [EXPRE | SSION] | [INSPIR | ATION] | [ACT | [ASSIMILAT'N] | | | | | | |
| [DIALECTIC] | INTERNAL (2) EXTERNAL (5) (ORDINAL) (EXALTED) | | INTERNAL (1) (ORDINAL) | EXTERNAL (6) (EXALTED) | INTERNAL (3) (ORDINAL) | EXTERNAL (7) (EXALTED) | NEUTRAL (4) | | | | | |
| ROLE | Artisan | Sage | Server | Priest | Warrior | King | Scholar | | | | | |
| LIGHT/COLOR SPECTRUM | Indigo | Blue | Green | Violet | Red | Orange (or Gold) | Yellow | | | | | |
| RELATED CHAKRA [COLOR] | 2 Sexuality Abdomen [ORANGE] | 5 Throat [BLUE] | 4 Heart [GREEN] | 7 Crown [VIOLET] | 3 Solar Plexus [YELLOW] | 1 Root [RED] | 6 Third Eye, Forehead [INDIGO] | | | | | |
| FUNCTION OF CHAKRA | Sex, Vitality, Creativity | Self-Expression, Communi- cation | Compassion, Agape, Acceptance | Spiritual Wisdom, Connectedness | Power, Control, Competition | Survival, Instinct, Past Life Information | Perceptivity, Intuition | | | | | |
| RELATED CENTER | Higher Moving | Intellectual | Emotional | Higher Emotional | Moving | Instinctive | Higher Intellectual | | | | | |

My comments on this table are as follows:

- TITLE: The title of this table, "Role/Energy Relationships", is Taylor's. This table is redrawn from a PDF that is downloadable from >www.itstime.com%2Fdownload%2FGameBoard_wNeeds_Color_BW_12-10-2011.pdf<, which is Barbara Taylor's website.
- [AXIAL]: The first row shows the Axial Attributes. This table on Taylor's website is an appendage to a table showing all of the Overleaves, and the Overleaves table showed the Axial row. I include it here to make the point that this arrangement of Axes is per the Natural Sequence (Expression → Inspiration → Action), whereas many Overleaf Charts follow the Michael Math Sequence (Inspiration → Expression → Action) in their arrangement.
- [DIALECTIC]: Taylor does not use the word "Dialectic" in her work, so it is shown in brackets. The second row shows pairs of Dialectic Attributes, Ordinal and Exalted (aka Cardinal) that apply to the columns all the way to the bottom. In Taylor's thinking, the words "Internal" and "External" are synonyms for Ordinal and Exalted, respectively. The numbers in parentheses are rank sequence numbers assigned to the septenary per the Michael Math Sequence. Assuming that Taylor derived this table from Stevens's work, this is the only evidence that I have seen, in my research, that Stevens regarded the Michael Math Sequence as valid.
- ROLE: The third row shows the names of the Roles that are the personifications of the Axial + Dialectic = Septenarian Attributes that are shown in the first two rows.
- LIGHT/COLOR SPECTRUM: The fourth row shows the names of the seven standard colors of the rainbow. If you are looking at a black-and-white printout, you will not see that the columns are colored, but they are in the original document and in this reproduction, per their names in this row. Obviously, the colors are of the rainbow spectrum sequence, but they are not arranged in the rainbow

- spectrum sequence: Red \rightarrow Orange \rightarrow Yellow \rightarrow Green \rightarrow Blue \rightarrow Indigo \rightarrow Violet. Instead, the colors assigned to these columns are correlated with the Role row per Stevens's Vibration Sequence.
- RELATED CHAKRA: The fifth row shows the numbers that are commonly correlated with the chakras, and their names. Notice that the numbers in this fifth row dis-correlate with the numbers in the second row in four out of seven cases. The colors commonly assigned to the chakras are shown enclosed in [brackets], and the cell is shown with that background color even though Taylor did not do that. This makes it easy to see that the colors that Stevens and Taylor assign to the chakras disagrees with the colors commonly assigned to the chakras in four out of seven cases. It is true that the colors assigned to the Roles/chakras by Stevens and to the chakras by everyone else are mere mnemonic devices, and have no intrinsic validity, so this disconnection is permitted.
- FUNCTION OF CHAKRA: The sixth row is irrelevant to the function of this chapter on color assignments.
- RELATED CENTER: The seventh row correlates Centers with chakras and Roles per Stevens's Center– Chakra–Role sequence. Refer to the two chapters on chakras in this *History* book for a thorough refutation of this correlation.

Stevens's Vibration Sequence and his Center–Chakra–Role Sequence have had an influence on the Michaelian teachings community because he published his ideas in a book, which Taylor and Cocconi then copied from. However, the following source did not have any influence, because it was late to the party. In fact, it has never really joined the party, by which I mean the Michaelian teachings community as a whole. I am referring to the closed Yarbro contingent of the Michaelian teachings community. And it has never published the following information in a book.

Chart #18 — Quinn Yarbro

Remember Stevens's use of the word "cast" in his description of the Vibration Sequence? Remember the comparison of Stevens's Vibration Sequence to Yarbro's Michael Math Sequence for "Casting" in that same section? The two versions of Casting were revealed in the same year, 1986. However, the Vibration Sequence had color assignments from the beginning, but the Michael Math Sequence did not, so far as we know. Well, in this section, it does, revealed to the world two decades after its original introduction.

How so? A fellow by the name of Steve was a member of the closed Yarbro group, so the information is from them, not from him individually. He posted the information on a Yahoo! discussion group during the 2007–2010 time frame, where I was a lurker, but we do not know when the information originated within the Yarbro group. Steve published two Yarbro versions of the Overleaf Chart, which I combined into Chart #18.

Near the bottom of the Chart is a row headed "Chakra Color". As you see there and below, these are not exactly the names of the colors assigned to chakras in the modern mainstream chakra tradition; the names of colors that I underlined are the exact match. Rather, the chakra color assignments appear to be information channeled by someone in the Yarbro group. The Roles that correspond to these chakra colors are in the same column, in a row further up the Chart. Therefore, the Role–color assignments are as follows:

1-SERVER = <u>RED</u> AND VIOLET; 2-ARTISAN = RED AND <u>ORANGE</u>; 3-WARRIOR = <u>YELLOW</u> GOLD AND YELLOW GREEN; 4-SCHOLAR = <u>GREEN</u> TO TURQUOISE; 5-SAGE = TURQUOISE TO <u>BLUE</u>; 6-PRIEST = ALL PSYCHOLOGICAL COLORS; 7-KING = ALL IMPOSSIBLE AND POSSIBLE COLORS.

Notice that this list is not in the same order as the left-to-right order shown on Chart #18. Rather, I showed it in the Michael Math Sequence because the Yarbro contingent are a big believer in that sequence, having originated it. The rank numbers attached to the Role names are from the Level row near the top of Chart #18; that is per the Michael Math Sequence. Showing it per the Michael Math Sequence also makes comparison with the Hasselmann (above), Benning (below), and Tolley (further below) Charts more convenient.

So let's compare and contrast the Stevens's Vibration Casting Sequence with Yarbro's Michael Math Casting Sequence, shown in the table below.

| | Table 4Pe — MICHAEL MATH SEQUENCE versus VIBRATION SEQUENCE | | | | | | | | | | |
|---|---|----------|------------------|------------|------------|----------------|--------------------|--|--|--|--|
| RANK FIRST SECOND THIRD FOURTH FIFTH SIXTH SEVEN COLOR RED ORANGE YELLOW GREEN BLUE INDIGO VIOL | | | | | | | | | | | |
| Yarbro's | "red and | "red and | "yellow gold and | | "turquoise | "all psycho- | "all possible and | | | | |
| MICHAEL | violet" | orange" | yellow green" | turquoise" | to blue" | logical colors | impossible colors" | | | | |
| MATH | SERVER | ARTISAN | WARRIOR | SCHOLAR | SAGE | PRIEST | KING | | | | |
| Stevens's VIBRATION | WARRIOR | KING | SCHOLAR | SERVER | SAGE | ARTISAN | PRIEST | | | | |

My comments on this table are as follows:

- RANK COLOR: These are the standard ranks and colors applied to many septenaries, including but
 not limited to the chakras, according to the modern esoteric community. It is appropriate to include
 these as a header to this table because all of the sources reviewed in this chapter on color assignments
 refer to the chakras, and some of them use these colors and ranks. I have adopted these attributes for
 the Natural Sequence. Chart #18 does not name or locate the chakras, so I do not show that
 information in this table.
- MICHAEL MATH: These are the names of the Roles in rank order, per Yarbro's Michael Math Casting Sequence. Yarbro sorta subscribes to the usual rainbow spectrum colors.
- VIBRATION: These are the names of the Roles in rank order and color assignment, per Stevens's
 Vibration Casting Sequence. Recall that Stevens does not fully subscribe to the standard chakra colors,
 so far as we know.
- Notice that there is agreement between the two Casting sequences in only one case, Sage. That is
 about what one may reasonably expect by chance. That is not what one would hope to see with
 Michaelian teachings channels who allegedly get downloads from the same source, but that lack of
 consistency is what we typically see when channels do not know or care about what the other channel
 has said.

Obviously, the Yarbro contingent did not borrow the Michael Math Sequence from the non-Yarbro contingent of the Michaelian teachings in its Role-chakra-color assignments. Obviously Stevens did not borrow anything from the Yarbro contingent of the Michaelian teachings in its Role-color assignments. Because the Yarbro group is closed to the non-Yarbro contingent of the Michaelian teachings, I have no other published information/explanation about these Role-color assignments.

Chart #19 — Terri Benning

The time frame of information in this section is the last couple of decades, according to Benning's website, >michaelmosaics.com<.

The second-to-last row of Chart #19 shows the colors assigned to the chakras named in the third-to-last row. The basic layout of this Chart is the same as the previous Chart, #18, so comparison is easy. What that comparison reveals is that there is a complete lack of agreement between the two Charts. Benning assigns colors to the Roles thus:

1-SERVER = GREEN; 2-ARTISAN = ORANGE; 3-WARRIOR = YELLOW; 4-SCHOLAR = RED; 5-SAGE = BLUE; 6-PRIEST = INDIGO; 7-KING = VIOLET.

Benning showed the rank numbers that are affiliated with Roles per the Michael Math Sequence. She also switched green for red, which moves these two colors out of the rainbow spectrum sequence.

Chart #19 is not actually a complete accounting of the correlations that Benning shows on her website. As I said, the third-to-last and the second-to-last rows on the Chart show a correlation of colors and chakras. This information is found on her web page, >http://michaelmosaics.com/sevens/7sacredcenters.html<, which is dedicated to a description and correlation of the chakras and colors. That color–chakra correlation is per the modern Western esoteric pop cosmology schema.

On another web page >http://michaelmosaics.com/sevens/essentialsevens.html<, Benning has two tables, both with the rank numbers and the colors per the rainbow spectrum sequence. There are differences between

the two tables. To save you the trouble of looking this up, and because it is so awkward to describe and follow the situation in words, I insert her actual tables below, and I provide comments below the tables:

| | 7 Roles | 7 Chakras | 7 Colors | 7 Affirmations | 7 Centers | | | 7 Modes | 7 Goals | 7 Attitudes | 7 NCFs | 7 Body Types |
|-------|---------|-----------------|-----------------|----------------|---------------------|---------|---------|--------------|----------------|--------------|-----------------------|-----------------|
| 1. | Scholar | Root | Red | I Am! | Instinctive | | Server | Reserved | Re-Evaluation | Stoic | Self- | Lunar |
| 2. | Artisan | Navel | Orange | I Create! | Intellectual | lectual | | Keserveu | Ne-E valuation | atolo | Deprecation | Lunar |
| 3. | Warrior | Solar Plexus | Yellow | l Act! | Moving | 2. | Artisan | Caution | Discrimination | Skeptic | Self- Destruction | Jupiter |
| 4. | Server | Heart | Green | I Love! | Emotional | 3. | Warrior | Perseverance | Submission | Cynic | Martyrdom | Venus |
| /8/3- | | 100000 | AND THE RESERVE | . 1.000.000 | | 4. | Scholar | Observation | Flow | Pragmatist | Stubbomness | Solar |
| 5. | Sage | Throat | Blue | I Speak! | Higher Intellectual | 5. | Sage | Power | Acceptance | Idealist | Greed | Mercury |
| 6. | Priest | Brow | Indigo | l See! | Higher Emotional | 6. | Priest | Passion | Growth | Spiritualist | and the second second | Satum |
| 7. | King | Crown | Violet | I Know! | Higher Moving | 7. | King | Aggression | Dominance | Realist | Impatience | Mars |

If these tables are not reproduced in color in the book manuscript that you are looking at, then notice that the colors are named in the fourth column of the left table; these colors are the same in the right table, and the schema is the rainbow spectrum sequence from red in the top row to violet in the bottom row.

Notice that the right-hand table is arranged with the Roles and Overleaves, excluding Centers, per the Michael Math Sequence, which was first promulgated by Yarbro. The left-hand table shows the Scholar and Server switched from their sequence on the right-hand table. The arrangement shown in the left-hand table is reminiscent of Stevens's Center–Chakra–Role Sequence, shown in Table 4Pa above. There you will see that Instinctive Center is first and Emotional Center is fourth in the septenary, and these correspond to Scholar and Server respectively. However, Benning does not adopt the other Center–Chakra–Role correlations shown in Stevens's table. So, it is more probable that Benning's understanding of the nature of chakras prompted her to sequence the left-hand table differently from the right-hand table. This is what happens when one disconnects the Centers from the other Overleaves because one's Center–chakra correlations are wonky; Stevens did the same thing.

What this comparison of tables obviously means is that Benning contradicts herself with regard to the colors assigned to these two Roles and their corresponding Overleaves. Her explanation for this contradiction is as follows:

Please note that there are minor correlations within the Chakra system and the System of Sevens that don't quite come together, such as the centering placements of the scholar and the server positions. They are reversed in the Chakra – Centers chart, for instance, however are consistent in their respective placements within the other two charts. For the moment, I am choosing to attribute this inconsistency to the Laws of Random Chaos. ;-) "We" are looking into the dynamics of involution and evolution as a potential route to greater understanding of their appropriate placements and correlations. ~ Terri

"We" (Phil and his homunculus) claim to have that greater understanding: Random Chaos is not the cause of the problem; contradictory unValidated sources are the cause of the problem. There is a place for Random Chaos to exist and function in the cosmos, but this is not one of them, based on the comprehensive evidence and argument that I have presented for a consistent understanding of Role–Center–chakra–color correlations. There is also a place for departures from the foundational structure of the cosmos, the Natural Sequence, but this is not one of them, based on the comprehensive evidence and argument that I have presented for a consistent understanding of Role–Center–chakra–color correlations.

My research has concluded that neither Stevens nor Yarbro are valid, therefore neither of Benning's tables is completely valid — or completely invalid, because the bottom three rows of both tables follow the Natural Sequence. The Natural Sequence is tabulated in the next section.

Charts #23 & #24 — Philip Wittmeyer

Colors are not shown on my own Charts, those that are shown in this *History* book, but my correlation of colors and Overleaf categories is drop-dead simple. The colors follow the rainbow spectrum sequence from red at the low/slow end to violet at the high/fast end; the Roles and all of the corresponding six Overleaf categories follow the Natural Sequence with Warrior at the low end to King at the high end, thus:

1 = RED = WARRIOR; 2 = ORANGE = SERVER; 3 = YELLOW = ARTISAN; 4 = GREEN = SCHOLAR; 5 = BLUE = SAGE; 6 = INDIGO = PRIEST = INDIGO; 7 = VIOLET = KING.

Evidence and argument for these correlations are found in various places in my various books, but the pinnacle of evidence and argument is found in my book *The Tao of Cosmogony*.

The next fellow did not come up with his own unique Role–color assignments, as Stevens, Yarbro, Hasselmann, and Benning did. Rather, he attempted to reconcile three different correlations (Stevens, Yarbro, Benning). This makes his attempt the most convoluted, and that is why I saved it for last.

Chart #21 — Troy Tolley

Take a long hard look at the table below; think about what you see there. If it is reproduced in color in some printings of my book manuscript, you will see that, from the Chief Feature column leftward, the colors follow the rainbow spectrum sequence with red at the top to violet in the bottom row (the same as Benning), whereas from the Axis column rightward the colors are mostly scrambled, in two different ways, with respect to the rainbow spectrum sequence. Near as I can tell, this is Tolley's attempt to reconcile Stevens and Yarbro and the Natural Sequence, reviewed in previous sections of this chapter. He does it by postulating the existence of the "Characteristics" of "Quality", of "Sequence", and of "Resonation" which are rather fluid — you can see those words in the top row of the table. Somewhat is said about this in the commentary on Chart #21, and more is said about this in Chapter 4J in Part Four, "The Seven Chakras", so I will not belabor it here, except to add comments after the table, for your consideration.

| Characteristics | Numerical Quality | Essence Role | Soul Age | Goal | Mode | Attitude | Chief Feature | Axis | Center | Center/Chakra Sequence | Chakra/Role Resonation | Plane & | - |
|-----------------|----------------------|-----------------|----------------|----------------|--------------|--------------|------------------|------------------------|------------------------|---------------------------|---------------------------|-----------|---|
| | 1 | Server | infant | Re-evaluation | Reserve | | Self-deprecation | Ordinal Inspiration | Emotional | 4 | Heart/Scholar | Astrai | 2 |
| | 2 | Artisan | Baby | Discrimination | Caution | Skeptic | Self-destruction | Ordinal Expression | Intellectual | 5 | Throat/Sage | Causal | 3 |
| | 3 | Warrior | Young | Submission | Perseverance | Cynic | Martyrdom | Ordinal Action | Moving | 3 | Solar Plexus/Warrior | Physical | + |
| | 4 | Scholar | Mature | Flow | Observation | Pragmatist | Stubbornness | Assimilation | Instinctive | | Root/Server | Akashic | 4 |
| | 5 | Sage | Old | Acceptance | Power | Idealist | Greed | Exalted Expression | Higher Intellectual | 7 | Crown/King | Mental | 5 |
| | 6 | Priest | Transcendental | Growth | Passion | Spiritualist | Arrogance | Examed Inspiration | Higher Emotional | 6 | Brow/Priest | Messianic | 6 |
| | 7 | King | infinite | Dominance | Aggression | Realist | Impatience | Exalted Action | Higher Moving | 2 | Sacral/Artisan | Buddhic | 7 |

My comments on this table are as follows:

- The so-called "Numerical Quality" (upper left cell) and the color assignments are correlated across all columns; e.g., rank 4 is always color green, even though rank 4 appears in different rows in the two major halves of the table.
- Notice that the Overleaves in the left half of the table follow Yarbro's Michael Math Sequence from top to bottom of the table.
- Notice that Center in the right half of the table is separated from the other six Overleaf categories in the left half of the table. To the right of the Center column are two columns with "Chakra" in the title cells. This is a clue that the Center = chakra correlation with its number/color Quality rules the right half of the table. Compare the Center, Center/Chakra Sequence, and Chakra/Role Resonation columns in Tolley's table with Table 4Pa, Stevens's Center-Chakra-Role Sequence (CCRS), and you will see where Tolley got this part of his attempted reconciliation. Tolley went along with the notion, introduced by Stevens and continued by Benning, that the Centers can be separated from the other Overleaves, due to the supposed power of chakras (mis)correlated with Centers to add a characteristic to the Centers that they would not otherwise have.

- Compare the Overleaves and Attributes shown on the left half with Overleaves and Attributes on the right half in each row and you will see some continuity, even though the number/color Qualities are mostly scrambled; there is both connection and disconnection between the two halves of the table.
- The number/color Qualities in all columns follow the conventional rainbow spectrum sequence: 1/Red, 2/Orange, 3/Yellow, 4/Green, 5/Blue, 6/Indigo, 7/Violet. I do not have a problem with this because over the last century it has become a convenient conventional standard in esoteric pop cosmology.
- What I do have a problem with is the assumption that the number/color sequencing follows Yarbro's
 Michael Math Sequence, or Stevens's CCRS, rather than the Tao's Natural Sequence; neither the
 Michael Math Sequence nor the CCRS are the fundamental septenarian structure of the cosmos from
 which 5040 variations/permutations may emanate; the Natural Sequence is.
- The Natural Sequence only makes its appearance in this table, with proper number/color assignments, in the numbered/colored cells in the narrow column at the right edge of the table. These are the seven Planes; the Planes follow the Natural Sequence Planes are the fundamental structure of the cosmos from which variations emanate, not the Michael Math Sequence or the CCRS; refer to the two chapters on Planes in this *History* book. The only thing in this table that I regard as valid is the Natural Sequence, which include the four rows (4-Green-Scholar, 5-Blue-Sage, 6-Indigo-Priest, 7-Violet-King) that conform to the Natural Sequence in the left half of the table.
- The central problem with the Tolley method of reconciling the Michael Math Sequence, the CCRS, and the Natural Sequence is that, as documented in sections above and the combination table below, five people have other correlations, and they did not always agree with each other. Those five people are Stevens, Taylor, Cocconi (Vibration Sequence), Benning (her own thing), and Hasselmann (her own thing). If Tolley were to add those sequences and correlations to his attempt to reconcile the differences between them, then the result would be even more absurd than what it already is.

This is Tolley's extraordinarily clever attempt to salvage seemingly contradictory channeling. I suggest that it is more reasonable to regard the contradictory channeling as bogus. It might not be easy for some Michaelian students to accept the notion that channeling leaves a lot to be desired, but this entire Part of this *History* book makes it abundantly clear that such is the case.

Combined Tabulation of Role-Color Assignments

For your convenience, the information shown above is summarized and tabulated below. In this table, I use Role as a personification of all seven of the Overleaf categories. I do not show some of the Role-color assignments that were discussed above, because they followed an indirect route through some mismatched Center-chakra-color correlation that disconnected Center colors from Role colors. Furthermore, some of the sources did not know about or use the standard chakra colors anyway.

| | Table | e 4Pf — COL | OR ASSIGNM | 1ENTS of RO | LES/OVERLE | AVES | |
|----------------------------|-------------------------------|----------------------------------|--|------------------------------------|--------------------------------|--|--|
| RANK COLOR | FIRST RED | SECOND ORANGE | THIRD YELLOW | FOURTH GREEN | FIFTH BLUE | SIXTH INDIGO | SEVENTH VIOLET |
| STEVENS | WARRIOR | KING | SCHOLAR | SERVER | SAGE | ARTISAN | PRIEST |
| TAYLOR | WARRIOR | KING | SCHOLAR | SERVER | SAGE | ARTISAN | PRIEST |
| COCCONI | WARRIOR | KING | SCHOLAR | SERVER | SAGE | ARTISAN | PRIEST |
| VARDA HASSEL- MANN | "Blood Red" WARRIOR | "Butterfly Yellow" ARTISAN | "Sunny Yellow" SAGE | "Grass Green" SCHOLAR | "Sky Blue" SERVER | "Ocean Blue" PRIEST | "Purple" KING |
| CHELSEA QUINN YARBRO | "Red and Violet" SERVER | "Red and Orange" ARTISAN | "Yellow Gold to Yellow Green" WARRIOR | "Green to Turquoise" SCHOLAR | "Turquoise to Blue" SAGE | "All Psychological Colors" PRIEST | "All Possible & Impossible Colors" KING |
| BENNING1 | SERVER | ARTISAN | WARRIOR | SCHOLAR | SAGE | PRIEST | KING |
| BENNING2 | SCHOLAR | ARTISAN | WARRIOR | SERVER | SAGE | PRIEST | KING |
| TOLLEY | SERVER | ARTISAN | WARRIOR | SCHOLAR | SAGE | PRIEST | KING |
| WITTMEYER | WARRIOR | SERVER | ARTISAN | SCHOLAR | SAGE | PRIEST | KING |

My comments on this table are as follows:

- RANK: This row shows the rank of the colors of the rainbow spectrum sequence, which are shown in the next row.
- COLOR: This row shows the names of the colors in the rainbow spectrum sequence that seem to have become the standard in metaphysical circles. It has become assigned to chakras in specific and other septenaries in general. Some Michaelian students have attempted to adopt it and adapt it to Michaelian septenaries.
- STEVENS: This row shows the lineup of Roles, in the column of their assigned color, per José Stevens in his book *The Michael Handbook* on page 74. I refer to this as the Vibration Sequence. This is the earliest such attempt that I know of, published in 1986. A perusal of Stevens's three books did not reveal to me that these colors were assigned to the other six Overleaf categories that correspond to these Roles.
- TAYLOR: This row shows the lineup of Roles, in the column of their assigned color, per Barbara Taylor's Overleaf Chart downloadable from her website, >itstime.com<. Notice that this schema is identical to Stevens's Vibration Sequence. She regards Stevens as her mentor, so she copied his Rolecolor schema. She applies the Vibration Sequence to the entire Overleaf System, not just the Roles, presumably at Stevens's behest.
- COCCONI: This row shows the lineup of Roles, in the column of their assigned color, as shown on Cocconi's website, >themichaelteaching.com/tarot/<. Notice that this schema is identical to Stevens's Vibration Sequence. Undoubtedly Cocconi copied it and applied it to the entire Overleaf System, not just the Roles as Stevens had done.
- HASSELMANN: This row shows the unique names of the colors assigned to the Roles (and other Overleaves) according the table "Archetypes of the Soul" on the two-page spread 16-17 in her book by the same name. The names of the colors are not exactly the same as the rainbow spectrum colors shown in the first row of this table, but the sequence of Roles that I show seems to be the best match of her color names with the names of the rainbow colors. Note that, by sequencing her colors this way, it somewhat scrambles most of the Roles out of any other sequence found in Michaelian teachings sources that I have seen. Other than in this matter of Role-color assignments, Hasselmann prefers the Michael Math Sequence for Overleaf categories, including Roles, as do the next three sources.

- YARBRO: This row shows the unique names of the colors assigned to the Roles (and all corresponding Overleaves) per the Yarbro contingent of the Michaelian teachings community. The Roles are shown per the Michael Math Sequence, as one would suppose because she originated it. The names of the colors are not exactly the same as the rainbow spectrum colors shown in the third row of this table, but the sequence that I show seems to be the best match of her color names with the names of the rainbow colors. Reading from left to right, the colors more-or-less match the rainbow spectrum in the first five colors, but then in the last two columns, things go off-pattern. No explanation for any of this is available because we do not have access to the closed Yarbro group.
- BENNING1: This row shows the Roles per the Michael Math Sequence correlated with the colors per the rainbow spectrum sequence. We saw this in the Yarbro row above, and we will see it again in the Tolley row below. According the Benning (and others), Overleaf categories other than Role share the same color assignments.
- BENNING2: This row shows two Roles (Scholar and Server) with positions switched from the positions shown in the previous row. The rationale for this switch is uncertain to me; I presume it is per Benning's Center-chakra-color schema. Benning attributed the contradiction to "random chaos", but in my opinion the real reason is her attempt to reconcile two or more sources to which she granted unearned credence that they were legitimate. She is not the only one to succumb to this lapse in Validation.
- TOLLEY: This row shows the Roles per Yarbro's Michael Math Sequence correlated with the colors per
 the rainbow spectrum chakra sequence. This is one of the popular Casting schemas with Michaelian
 students who have attempted the correlation, but that is not the same thing as Validation. Stevens's
 Vibration Sequence is the other popular Role-color schema, but that does not appear in Tolley's
 schema.
- WITTMEYER: This row shows the Roles (and all Overleaf categories) per the Natural Sequence and per the rainbow spectrum sequence. Arguments and evidence for this schema are found throughout all of my books.
- Notice that Roles get assigned different colors by different sources, as follows:
 - RED = Warrior, Server, Scholar
 - ORANGE = King, Artisan, Server
 - YELLOW = Scholar, Sage, Warrior, Artisan
 - GREEN = Server, Scholar
 - BLUE = Sage, Server
 - o INDIGO = Artisan, Priest
 - VIOLET = Priest, King

No Roles have been assigned one color; most Roles have been assigned two colors; some Roles have been assigned three or four colors. This is the sort of discrepancy that I object to and propose to eliminate. Otherwise, the whole notion of color assignments is worthless and meaningless. We don't want that, do we?

Concluding Comments on Color Assignments

One may draw the following conclusions from this lack of consistency in the realm of color assignments:

- 1. This matter of color-coding the Roles (and other Overleaf categories) is one of several components of the Michaelian teachings that has not converged on consistency over the decades; in fact, the proposals have proliferated. One of my purposes in this *History* book is to show how and where these contradictions originated, and then to demonstrate that they are unnecessary.
- 2. What one needs to do is to stop accepting what channels say as credible in this realm, which we do anyway in other realms. What one also needs to do is find a source that is more credible than channels. That is the Natural Sequence, because there is so much evidence for it.
- 3. Obviously, the sources that agree with each other copied from each other. Obviously, the sources that do not agree with each other did not communicate/coordinate with each other. One wonders if any of them are communicating with the Michaels in this realm. Apologies if that sounds too harsh.

- 4. Some of these color assignments have gone awry because some people have ignored the Role–Center correlation at the same time as erroneously correlating Centers with chakras.
- 5. Some of these color assignment have gone awry because people have departed from the standard rainbow spectrum sequence that has been applied to the chakras. It surprises me that so many channels can be aware of the modern chakra-color assignments, and yet ignore that in their own assignments.
- 6. Some of these color assignments have gone awry because of attempts to accommodate the variations presented by different sources.
- 7. It appears to me that the channels have not done their own Validation process. Rather, they just say, in effect, this is what the Michaels said through me; it is not up to me, it is up to you to Validate what is said. To outsource to other people one's personal responsibility to do Validation is not Good Work; those others tend to to trust authority figures, and they don't do their Validation either. This lack of internal and external Validation seems to be the primary reason for these discrepancies. And not just in this matter of color assignments, but in all of those issues discussed here in Part Four.
- 8. To discuss such color assignment discrepancies as these might be merely an "academic" endeavor. Obviously, color assignments have no significance or importance in our real lives. Perhaps the only reason to sort them out is "intellectual exercise". Perhaps one reason that the Michaels have allowed this particular mess to arise and continue is that it does not really matter in the grand scheme of the cosmos. Yes, these technical structural details are mostly irrelevant to our daily lives, including mine, but Hey! I am an engineer by nature and by occupation, so I enjoy the intellectual exercise.
- 9. My counter argument to Item #8 is that one finds fundamental structural elements and principles in all manner of political, theological, philosophical, scientific, technical, social, psychological, and physical fields of endeavor. Therefore, there must be something significant about coming to properly understand the 'trunk of the tree' and the 'major branches' out of which 'sprout' the bewildering variety of the 'twigs and leaves' of our everyday experience. My books are aimed at those who might be interested in 'regrowing' an internally—consistent Michaelian teachings from the 'ground up'. These color assignments are just another instance, along with the dozen other issues in Part Four of this History book, where the Michaelian teachings community as a whole has 'not gotten its story straight'. The Priest-ish component of my personality says "We can do better than this".
- 10. This entire confused subject of color assignments is one of the most obvious proofs of my contention that the Michaelian teachings as presently configured are inconsistent (self-contradictory), are incoherent (lack understanding of the underlying pattern that pervades the teaching when properly understood), and are inconsilient with some other teachings that discuss the same subject.

Chapter 4Q

THE SEVEN LIFE-STAGES

In the Michaelian teachings there are said to be seven major transitions that typically happen during a full lifetime as steps in a maturation process. These were first revealed in *Messages from Michael (MFM,* 1979) on page 217, and then described again in *More Messages from Michael (MMFM,* 1986) on page 32. There are also some comments about these seven transitions scattered throughout *Michael's People (MP,* 1988). These three book originated with Chelsea Quinn Yarbro, so hereinafter I refer to this as "the original revelation". In the original revelation, these seven transitions were given two names: Milestones and Internal Monads. Over the decades since the original revelation, yet other terms (Rites of Passage, Turning Points) and descriptions have been revealed; Michaelian sources other than Yarbro have published their revelations in their books and/or on their websites. These additional revelations have clarified and elaborated on this phenomenon. Even so, in my opinion, the understanding of the phenomenon is still inaccurate and incomplete. The purpose of this chapter is to increase the accuracy and move toward completion by pointing out the issues that I see, and then proposing solutions to the problems for other Michaelian students to consider, if they are so inclined.

Henceforth in this chapter, the various names "Milestone/Internal Monad/Rite of Passage/Turning Point" are reduced to "Milestone" where I am not quoting a source. This name emphasizes that the original Michaelian revelation, and subsequent revelations, mostly characterized the phenomenon in terms of the *transition* between intervals. However, my studies and thoughts have resulted in an understanding of this phenomenon that differs in some respects from the prevailing Michaelian teachings orthodoxy; it acknowledges the transitions but it focuses on the *intervals* between transitions, and that is why I have chosen to name this phenomenon "Life-Stages" to distinguish it from Milestones. Sorting out the revelation was complicated for me because the progressive revelation over the decades has been ambiguous; it has not made as clear a distinction between the attributes of the transitions and the attributes of the intervals as seems desirable to my way of thinking.

Let's take a look at my way of thinking, beginning in the next section.

Introduction to the Issues

I first read about the Milestones in *MFM*, cursorily in 1980, and seriously in 1981. Personally, I did not feel comfortable with the information as given; it seemed as if something was missing and/or something was amiss. The following bullet points are a record of what I was seeing, and what I was thinking about what I was seeing, at that time.

- It was said in MFM on page 42 that "There are, of course, seven planes in all, each with seven levels.... We remind you that our cycles [on the Causal Plane] consist of seven levels, just as yours do [in terms of levels? Soul Ages?]." I understood this to mean that there is a self-similarity between the seven Soul Ages, the seven levels within the Planes (sub-Planes), and the seven Planes. (So far as I know, this information has not been disputed subsequently.) I was already familiar with the concept of nested septenaries in the realm of Bible chronology (about which I had written a book manuscript in the previous decade): a week of seven days with one of them a rest day, a 'week' of seven years of agricultural use with one of them a fallow year, and a 'week' of seven times seven years with a fiftieth rest year, the Jubilee cycle regarding forgiveness of debt.
- It was said in MFM on page 81 that "Within each [soul] age there are seven levels." I understood the Levels to be yet another nested septenary on an even shorter time scale than Soul Ages, which was shorter than sub-Planes, which was shorter than Planes.

- It was said in *MFM* on pages 217-218 that "The *first* [Milestone] is birth, when the body is ensouled.... The *seventh*, of course, is the exit itself [death]." So, obviously, the Milestones were yet another septenary. But, how did this septenary relate to the other septenaries on longer time scales that had been revealed previously? Answer:
- It was said in *MFM* on page 218 that "It should be noted here that if this process [of going through all seven Milestones] is interrupted during a lifetime, for instance by violent or early death from illness, the fragment rarely advances a level [within a Soul Age]. A fragment can usually advance through a level of experience only by going through the entire [Milestone] process." I understood this to mean that the Milestones were a subset of the Levels (as Levels were a subset of Soul Ages, as Soul Ages were a subset of sub-Planes, as sub-Planes were a subset of Planes).
- From the description of the Milestones in *MFM* it was obvious that the first one, birth, marked the beginning of infancy, the second marked the beginning of childhood, the third marked the beginning of adulthood, the fourth marked the beginning of middle age, the fifth marked the beginning of old age, the sixth marked the beginning of dying. And the seventh marked the beginning of ... the afterlife? It seemed quite obvious to me that there was a correlation of these intervals between Milestones with the Soul Ages (Infant, Baby, Young, Mature, Old). Is the absence of an explicit statement of this correlation a reason to believe that there is not a correlation? To me it made sense that that correlation was implied.
- At the time, I extrapolated to an even shorter septenarian time cycle by supposing that each of the
 intervals between Milestones consisted of seven stages. As I have lived through subsequent decades, I
 have noted the transitions between these stages between Milestones they were significant enough
 as internal/external 'course corrections' to be obvious. (Only recently, as I was researching this
 chapter, did I find channeling by Troy Tolley [see below] that confirmed my surmise.) In this chapter, I
 refer to these as Sub-stages of the Life-Stages.
- That there was a nested septenarian pattern to the time cycles (Milestones, Levels, Soul Ages, sub-Planes, Planes) was explicitly stated. Beyond that, it was obvious to me that all of these nested septenaries had to do with the evolution of the personality, then the evolution of the Fragment, and then the evolution of the Entity. It stood to reason that subsequent stages of evolution are built on top of previous stages of evolution in some necessary logical pattern or system, which is the way that learning always happens: understanding of how the cosmos works is cumulative. As such, the nature of each of the intervals should be *similar* in terms of what I later called the Septenarian Attributes of the Overleaf System (Ordinal Action, Ordinal Inspiration, Ordinal Expression, Neutral Assimilation, Cardinal Expression, Cardinal Inspiration, Cardinal Action), but they should also be *different* because the size and characteristics of the realm of evolution is different with each instantiation of the developmental septenary.

That trail of investigation and thought led me to, and left me with, two concerns:

- 1. The first unresolved problem that I see even now in the Michaelian revelation (other than Tolley; see below) is this: if there are indeed seven Milestones with the *event* of birth being number one and the *event* of death being number seven, then that means there are six *intervals* between events. So how do we map six intervals of the Milestones onto the longer septenarian cycles (Levels, Soul Ages, sub-Planes, Planes) that always consist of seven intervals?
- 2. The second unresolved problem that I see even now in the Michaelian revelation is this: over the decades subsequent to the *MFM* revelation, the Septenarian Attributes have been applied to longer time cycles (Levels, Soul Ages, sub-Planes, Planes) than the time cycle that Milestones cover, but it is not generally understood that the Septenarian Attributes also apply to the intervals between the Milestones; there are hints of it in terms of Centers (Tolley; see below) and in terms of Soul Ages (Gregg; see below), but not in terms of the Septenarian Attributes.

Even after all of the subsequent channeling on the subject, I find that the combined Michaelian revelation as it stands now still seems deficient and defective to me in some ways; although some revelations have hinted at solutions to these two problems, it has not thoroughly and explicitly addressed them. Thus, the Michaelian revelations about Milestones even in its current state is more nonsensical in some ways than my personality can tolerate or accommodate. However, I myself did not work out the details of, to me, a more complete and more sensible schema until recently. In the years 2020 and 2021 I researched and wrote a lengthy (~180 pages)

analysis and synthesis of developmental psychology models for my book *The Tao of Cosmogony*. Therein I reviewed the academic research of more than a dozen clinical psychologists who have studied this very phenomenon (that we call Milestones) during their academic careers, mostly subsequent to WWII. (Henceforth I refer to this as my DevPsy Thesis.) I was thereby able to arrive at an understanding of the phenomenon that was both consistent with the academic research and that also worked for me, and yet accommodated as much of the Michaelian revelation as I reasonably could. If some Michaelian students agree that what I have to add to the discussion — in this chapter and in my DevPsy Thesis — improves on the Michaelian revelation, then so much the better for us.

The Milestones appear in only one of the Overleaf Charts (#18); I show Life-Stages on my own two Charts (#23, #24). Therefore it is appropriate for me to share the results of my research on them in this *History* book about the Overleaf Chart. And because I have issues with the way the subject is presented and currently understood in the Michaelian student communities, it is appropriate that I include my research in a chapter here in Part Four, "Essays on Issues".

Introduction to Life-Stages

Before I launch into the story of the revelation of Milestones in subsequent sections of this chapter, it is useful to you that I discuss two fundamental features of the Overleaf System, to which, as we will see, the Life-Stages conform. Those are the Dialectic Attributes (Ordinal, Neutral, Cardinal) and the Axial Attributes (Action, Inspiration, Expression, Assimilation), which added together make the Septenarian Attributes. I have mentioned a particular arrangement of the Septenarian Attributes numerous times, in other chapters in this *History* book where appropriate, and it is appropriate in this chapter: I refer to it as the Natural Sequence. In terms of the Septenarian Attributes, the Natural Sequence is this: Ordinal Action > Ordinal Inspiration > Ordinal Expression > Neutral Assimilation > Cardinal Expression > Cardinal Inspiration > Cardinal Action. In terms of Roles, the Natural Sequence is this: Warrior > Server > Artisan > Scholar > Sage > Priest > King. It is my informed belief that archetypal, standard, ideal developmental septenaries such as Life-Stages, Levels, Soul Ages, sub-Planes, and Planes follow the Natural Sequence.

Regarding the Dialectic Attributes, the reason that the Michaels used the alternative name *Internal* Monads for the Milestones was only made clear decades into the progressive revelation. However, from the description of the so-called "External" Monads, beginning with the publication of MFM in 1979, it is obvious that both involve a so-called "dialectical" process. Using the names of the Dialectic Attributes, the dialectical process involves reconciling Cardinal and Ordinal opposites such that a Neutral synthesis is the result, with the Neutral being a gestalt that transcends the Cardinal/Ordinal complementarity. This dialectical process is discussed in the next section. As we will see further on, it was decades after the original revelation about the seven Milestones that channeling by Tolley (see below) stated explicitly how the dialectical process applied to them.

Regarding the Natural Sequence of the Septenarian Attributes, the septenaries of Planes, sub-Planes, Soul Ages, and Levels are discussed in previous chapters of this Part. What we read therein is that evidence in the Michaelian teachings literature is firm that the Planes follow the Natural Sequence schema (see Table 4Qa below), but the evidence is soft that the Levels and Soul Ages follow the Natural Sequence schema. This is in stark contrast to the evidence outside of the Michaelian teachings that the Soul Ages and Levels follow the Natural Sequence schema, as documented in my book *The Tao of Cosmogony*. Relatively recent channeling by Troy Tolley (see below) states explicitly that the Milestones are a septenary that correlates with the Levels and the Soul Ages. This correlation is obvious in the case of the names of the Soul Ages (names that I prefer are Infant, Child, Young, Mature, Senior, Elder, Ancient); one would not necessarily infer this by comparing the names and descriptions of the Milestones with the descriptions of Levels and Planes, but it certainly seems to me that they should, for the following reasons:

• The fact that the Milestones are a septenary (collection of seven items) introduces the possibility that they follow the Natural Sequence schema. The fact that the Milestones are a subset of a cosmic developmental septenary that includes Levels and Soul Ages and sub-Planes and Planes, rather than components of an ad hoc deploymental septenary, reinforces the notion. For a person such as myself who is looking for the Natural Sequence schema in developmental septenaries, there is enough evidence in the Michaelian descriptions to support a weak case that the Milestones follow the Natural Sequence schema. On the other hand, the Michaelian descriptions do not make the case so obvious that Michaelian students should be faulted for overlooking the skimpy evidence. This is the

same as the situation with Levels and Soul Ages as described in the Michaelian revelations: the correlation with the Natural Sequence schema can easily be overlooked unless one, such as myself, is convinced of the correlation. My conviction about the validity of the Natural Sequence schema in regard to *development* (but not *deployment*) is fostered by the research documented throughout my book *The Tao of Cosmogony*. In short: the longest developmental septenary, Planes, follows the Natural Sequence, as acknowledged in the Michaelian teachings; my claim is that therefore its subsets should also, all the way down the Great Chain/Nest of Being to the Sub-stages within Life-Stages.

- Channeling in the Yarbro group (years after the original Michaelian group) gave names to the Milestones and to their Negative and Positive Poles; these are shown on Chart #18 and in tables further on in this chapter. I take this revelation to be an implicit acknowledgment that the Milestones have the Septenarian Attributes of the Overleaf System; they are not just a collection of seven items that might or might not follow some other pattern. The problem with placing the Monads on the Overleaf Chart with the descriptions and names and Poles as given is that they do not fit well, for two reasons:
 - The names given to the Milestones emphasize the *transition* from one stage to the next. Notice that this is the case: Birth, Ego-recognition, Out of Nest, Mid-life Crisis, Life Review, Prepare Exit, and Exit. Doing it that way obscures the correlation of the Milestones with the other septenaries (Levels, Soul Ages, sub-Planes, Planes). My suggestion is that it would be better to use descriptive names for the intervals themselves (not the Milestones/transitions between them), such as what I propose, namely "Infancy, Childhood, Youth, Middle Age, Seniority, Elderhood, Dying"; this makes the correlation of Life-Stages with Soul Ages obvious. Refer to the summary correlation table, Table 4Qg near the end of this chapter, and the advantage of this naming convention should become obvious, if it is not already.
 - O Having seven proposed Milestones (understood as transitions) during a lifetime would mean that there are six intervals or stages. So how does that make a septenary that is consistent with the other developmental septenaries (Levels, Soul Ages, sub-Planes, Planes), which consist of seven intervals? As I have said previously, this bothered me from the beginning. Apparently it bothered others also, because explanations appeared in later revelations, as we will see below. Briefly, each of the seven Milestones were said to consist of seven sub-stages, and seven sub-stages were said to happen before and after the so-called "Birth" Milestone, and seven sub-stages were said to happen after the so-called "Death" Milestone. My Life-Stage schema proposes a different solution: it divides the interval after the fourth Milestone, which in the Michaelian teachings is said to span from about age 35 to about age 65, into two equal-length Life-Stages. My solution is based on the empirical research of those developmental psychologists who found a significant transition at about age 50. And my solution makes my Life-Stage schema consistent with the other developmental septenaries, namely Levels, Soul Ages, sub-Planes, and Planes.
- To my own satisfaction, I confirmed the correlation of Life-Stages with the Septenarian Attributes with the help of developmental psychology, as documented in my DevPsy Thesis; please read that and see if the correlation satisfies you. That field of research was active for decades before the Michaelian revelation about Milestones. If the original channel for this information, probably Sarah Chambers, had any knowledge of developmental psychology, I do not know about it, but obviously the Michaels did have knowledge of developmental psychology. And perhaps Yarbro had knowledge of developmental psychology, and that is why she asked the Michaels about it, thereby eliciting the original revelation about the Milestones.
- Considering the bullet points above, my assertion is that the Life-Stages follow the Natural Sequence schema with its Septenarian Attributes, even if this is not generally recognized in the Michaelian student communities. In making this assertion, I proposed a change from the Michaelian orthodoxy in the latter three Milestones. In my first reading about them in MFM, I was puzzled by, and uncomfortable with, the information as given. Now in my old age, when I researched the academic field of developmental psychology, I found a schema that is both more consistent with the Natural Sequence schema and also more consistent with the professional academic findings. I mention this where appropriate in what follows.

Having arrived at the above correlation of Life-Stages with the Natural Sequence schema, one of the things I looked for in my review of Michaelian channeling on the subject, was clues and assertions about what are the best names for the Milestones and their Positive and Negative Poles; it so happens that the proposals in the revelations vary. I looked for the names that best fit both the Michaelian revelation and the research findings of academic developmental psychologists, and the names that show respect for their correlation with the longer developmental septenaries, Level, Soul Age, level within Plane, and Plane.

At this point in the narrative of this chapter, I feel that I must apologize to readers: because the Michaelian revelation seems muddled to me — filtered as it has been through various channels over several decades — my attempt to untangle the mess might also seem muddled to the reader. Please bear with me.

Principles of the Life-Stage Septenary

Before we dive into a review of the various channeled revelations about the Milestones, I must present another preliminary discussion. It would be helpful for you to know about what I refer to as Natural Sequence Principles, because these show up in the discussion of Milestones and Life-Stages and Sub-stages that follow. Actually, these Principles apply to all of the developmental septenaries of the Michaelian teachings: Levels, Soul Ages, sub-Planes, and Planes. I regard these as "principles" because they can be discerned in many if not most of the staged developmental septenaries reviewed in this *History* book and my other books. It seems expedient, and potentially helpful, to review the Principles here because they are especially relevant to Life-Stages, and because we actually experience Life-Stages over the course of our lifetime. The Principles are abstract and general, but the experience of them is not; it is concrete and particular.

The following table provides a graphic representation for the Natural Sequence Principles, which are discussed in some detail after the table. The top five rows of the table below the title row show the Attributes of the Natural Sequence: Rank, Dialectic, Axial, Dimension, Direction. The row below the five Attributes rows shows the Roles arranged per the Natural Sequence; the Roles can be regarded as personifications of their Attributes, meaning that the Roles embody the abstract Attributes in a concrete expression. (Note that Michaelian students typically rank the Roles in their alleged Casting (deploymental) sequence (Server > Artisan > Warrior), per the "Michael Math" chapter of More Messages from Michael. This is not the same thing as their natural developmental sequence.) The row below the Role row, Center, shows the names of the seven Centers as I prefer to name them. As you might recall from Chapter 1J, "Gurdjieff's Levels of Being", the Centers can be arranged in a developmental sequence. As we will see in subsequent discussions, during each Life-Stage the person is focused on developing the general characteristics of the corresponding Center. Besides myself, one revelation reviewed below (Tolley) has made a correlation of Centers with Life-Stages, so it is appropriate to include Centers in this table. The bottom four rows show the four instantiations of the Natural Sequence at increasing time scales: Life-Stages > Levels > Soul Ages > sub-Planes > Planes. The names of these four developmental septenaries are as I prefer them, as explained in chapters on them in this History book.

| | Table 4Qa — THE NATURAL SEQUENCE SCHEMA | | | | | | | | | | |
|------------|---|----------------|------------|--------------|-------------|-----------------|------------|--|--|--|--|
| RANK | FIRST | SECOND | THIRD | FOURTH | FIFTH | SIXTH | SEVENTH | | | | |
| DIALECTIC | | -ORDINAL- (ME) | | =NEUTRAL= | | +CARDINAL+ (WE) | | | | | |
| AXIAL | ACTION | INSPIRATION | EXPRESSION | ASSIMILATION | EXPRESSION | INSPIRATION | ACTION | | | | |
| DIMENSION | -1-D- | -2-D- | -3-D- | =P-D= | +3-D+ | +2-D+ | +1-D+ | | | | |
| DIRECTION | BACKWARD | DOWNWARD | OUTWARD | COMPLEX | INWARD | INWARD UPWARD | | | | | |
| ROLE | WARRIOR | SERVER | ARTISAN | SCHOLAR | SAGE | PRIEST | KING | | | | |
| CENTER | MOTION | EMOTION | INTELLECT | IMPULSE | CONCEPT | SYMPATHY | EXCITATION | | | | |
| LIFE-STAGE | INFANCY | CHILDHOOD | YOUTH | MIDDLE AGE | SENIORITY | ELDERHOOD | DYING | | | | |
| LEVEL | RESOLUTION | IMMANENCE | SEPARATION | EXPERIENCE | UNIFICATION | TRANSCENDENCE | ACTIVATION | | | | |
| SOUL AGE | INFANT | CHILD | YOUNG | MATURE | SENIOR | ELDER | ANCIENT | | | | |
| PLANE | PHYSICAL | ASTRAL | MENTAL | BUDDHIC | SPIRITUAL | DIVINE | LOGOIC | | | | |

Comments about the Natural Sequence Principles as they refer to this table are as follows:

- SEPTENARY: The Natural Sequence is not just a random collection of seven elements. There is a logic and a mathematics to it, the logic being yes, no, both, neither, and the math being zero > one > two > three > all. Combine these two and we have an algorithm for generating what I call the Natural Sequence. The explanation is lengthy so I will not repeat here what is said in Part One of my book *The Tao of Personality*, in Chapter 1C, "Derivation of the System". Basically and briefly, the logic of the Septenary shows up in the Dialectic Attributes (row two of Table 4Qa), and the math of the Septenary shows up in the Dimensionality Attributes (row four of Table 4Qa). The logic and the math requires the Septenary to be arranged as shown in the table; it cannot be any other way.
- HIERARCHY: The first row shows the RANKS of the Natural Sequence; the practice of assigning a rank is per se a kind of so-called "hierarchy". Regarding the Life-Stages, it is said that the perceptions and the perspective in each stage between birth and death are built on the foundation of the experiences had during previous stage(s), such that each stage includes the previous stage(s), but transcends it or them. This means that, at each stage, there are additional and different characteristics and qualities; specifically, each stage provides a more encompassing perspective and a more mature perception. I often use the hyphenated phrases "higher-later" and "lower-earlier" to refer to the relative position of stages in the spectrum of the hierarchy. This Principle has other names, such as: development, evolution, advancement, and emergence.
- TRANSITION: In the table, there are vertical lines that separate each rank in the hierarchy. As we will see in the sections that follow, each Life-Stage is said to be separated from preceding and subsequent Life-Stages by a troubled, turbulent, traumatic, tortured transition phases, a Milestone. This is a so-called "transition", when a person is said to have an "identity crisis", when they "do not know who they are any more", but then they make the required course correction and end up in the next rank or stage of the hierarchy. Typically and normally, there is a relatively stable Life-Stage between the Milestones. If a person emerges from a Milestone in a healthy way, then the following Life-Stage is relatively stable and productive; if a person does not emerge from a Milestone in a healthy way, then the trauma continues. These transitions can be compared to "phase transitions", e.g., as changes of state from solid to liquid to gas. The person metaphorically remains as the same basic 'substance' or 'essence', but the personality undergoes substantial behavioral system, value system, and belief system changes during the transition from one Life-Stage to the following Life-Stage. In the original revelation, the Michaels referred to the Transition Principle as 'cliffs to climb' on our journey through life.
- PLATEAU: Between the transitions in the hierarchy, there are relatively stable phases that I (and the Michaels in the original revelation) refer to metaphorically as the 'plateau'. During the plateau, there is progress, but it is evolutionary rather than revolutionary, which the transition phase is. In my schema, the Life-Stages are named after the character or nature of the plateaus, whereas in the Michaelian revelations the Milestones are typically named after the character or nature of the metamorphoses. It is not as if the 'plateaus' are metaphorically 'flat'; they have an 'incline', and those inclines lead up to the next 'cliff' to climb, aka the metamorphoses.
- ATTRIBUTION: The seven Life-Stages have so-called "Attributes" as shown in the table: the Dialectic Attributes are named Ordinal, Neutral, Cardinal; the Axial Attributes are named Action, Inspiration, Expression, Assimilation. The combination of Dialectic and Axial Attributes are called Septenarian Attributes. As explained in my book *The Tao of Personality*, personality phenomena in the time/space (subjective) realm are analogous to the geometry of physics phenomena in the space/time (objective) realm. The Septenarian Attributes have both so-called "Dimensions" (space-like being-noun) and so-called "Directions" (time-like doing-verb) in terms of geometry, as shown in the table. The change in Attributes from Life-Stage to Life-Stage causes the so-called "identity crisis" of a Milestone/transition: the personality makes quantitative and qualitative changes in both space-like being-noun (Dimension) and time-like doing-verb (Direction) by successfully passing through the Milestone from Life-Stage to Life-Stage.
- DIALECTIC: A corollary to the Attribution Principle is the so-called "Dialectic" Principle, which is a consequence of the Dialectic Attributes, not the Axial Attributes. Dialectic refers to the struggle between complementary contraries that moves an interacting system forward to a resolution or reconciliation. This word "dialectic" hearkens back to the work of Fichte and Hegel, two German philosophers from a couple hundred years ago. You might have heard of "thesis, antithesis,

- synthesis". This is the notion that progress is made in the universe as well as in human life through the ranks of hierarchy from Life-Stage to Life-Stage by the reconciliation of contradictions, meaning that they work through their issues with each other until they arrive at at neutrality with each other, but the system as a whole then ends up at a higher level and later stage. In the Life-Stage schema, in terms of the Dialectic Attributes, "thesis" is a Cardinal assertion that is countered by its "antithesis", an Ordinal assertion; the two interact both during a Milestone and during a Life-Stage, and eventually the contraries combine into a Neutral state at the next higher-later Life-Stage … until evolutionary progress through that plateau gets disrupted with the initiation of the next Milestone.
- FEEDBACK: Besides the notion that progress through the Life-Stages is driven by internal changes in Septenarian Attributes from Life-Stage to Life-Stage as described above, there are also changes driven by interaction between internal conditions and external conditions; I refer to this interaction as the "Feedback Principle". The feedback loop between internal "nature" and external "nurture" influences the characteristics of each Life-Stage. Sometimes this Principle is referred to as "agent/arena" catalyst. The basic idea is that "it takes two to tango", meaning that without the interaction of self and not-self, no progress is made. (The Feedback Principle is a specific variation of the more general Dialectic Principle.) This Principle embodies a deep philosophical insight about how the universe 'dances' through cycles of time. That is, as a person develops over the course of a lifetime from birth to death, different internal systems come 'on line', so to speak. At the same time, the developing person changes and enlarges their environment, and this external system provides feedback to the internal system. Thus, back and forth and round and round we go in an ascending spiral of perceptual-behavioral, emotional-social, mental-cognitive, and consciousness-ego development as the inner world processes and assimilates the outer world ... and vice versa.
- FRACTALICITY: In the channeling that we will review further on, the seven Life-Stages are said to consist of seven Sub-stages. We have already seen above, and will see again below, that the seven Life-Stages are said to be a subset of the seven Levels, the seven Levels are said to be a subset of the seven Soul Ages, and the seven Soul Ages are said to be a subset of the seven sub-Planes, and the seven sub-Planes are said to be a subset of the seven Planes. "Fractalicity" is my word for this phenomenon; it is the combination of "fractal" with "cyclicity". The span of a full human lifetime is just one time-cycle that correlates with the septenarian (seven-step) Natural Sequence schema. There are septenarian times-cycles that are longer, and there are septenarian time-cycles that are shorter, than the span of a full human lifetime. The entire spectrum from the shortest to the longest septenarian time-cycle is commonly referred to as the "Great Chain/Nest of Being" in esoteric lore. Each instantiation of the septenarian time-cycle in the GC/NB has different qualities and characteristics because of differing circumstances and situations at that time scale, but there is a similarity from one time cycle to another (per the Septenarian Attributes), which is what one sees in a fractal. Fractalicity is really just an extension of the Hierarchy Principle into septenaries 'above' and 'below' whatever septenary in the GC/NB is under discussion.
- ME-WE: In the table, in the Dialectic row, notice the -ORDINAL- (ME) and the +CARDINAL+ (WE) cells. Each Life-Stage has two phases separated by an intermediate zone. The first three Sub-stages are the ego-centric so-called "ME" phase of the Life-Stage; in these three Ordinal Sub-stages the person is focused on developing the internal world. The last three Sub-stages are the socio-centric so-called "WE" phase of the Life-Stage; in these three Cardinal Sub-stages the person is focused on developing the external world. The middle Sub-stage is the pivotal phase between Ordinal/Me and Cardinal/We phases within the Life-Stage; it has the Septenarian Attributes of Neutral Assimilation, so it is a combination of the early and late phases. The Me-We Principle applies to each Life-Stage, but it also applies to the entire septenary of Life-Stages, the "ME" phase correlates with the Ordinal Life-Stages, and the "WE" phase correlates with the Cardinal Life-Stages. And, of course, the ME-WE Principle also applies to the longer developmental time-cycle septenaries: the Levels, the Soul Ages, the sub-Planes, and the Planes. (I borrowed this Principle and this terminology from sources reviewed in my DevPsy Thesis.)
- TAIJITU TANGO: This Natural Sequence Principle is a corollary to the Septenarian Principle at the beginning of this accounting of Natural Sequence Principles. As Chapter 42 of the Tao teh Ching says, "Tao produced the One, the One produced the Two, the Two produced the Three, the Three produced all things. All things carry the Yin and embrace the Yang, and through the blending of the Chi they achieve

harmony." The cosmos as a whole (Oneness) is balanced or symmetrical, but then it is divided (Twoness) into an unbalanced, asymmetrical yin and yang, and then both the yin and the yang are split three ways (Threeness). Add this all up and you have the Natural Sequence. According to the Taijitu Tango Principle, there is a yin/yang and a yang/yin balance or symmetry in the Septenary as a whole. Recall from discussion in other chapters of this History book that the Taijitu Tango Principle refers to a paragraph in the "Michael Math" chapter of More Messages from Michael: "You can perceive that [from the point of view of space, being, noun] while one is ordinal and seven is cardinal, that [from the point of view of time, doing, verb] the first half is cardinal and the last half is ordinal — in other words, the pattern 'doubles back on itself'. This is what is implied by the 'yin-yang' symbol, and it would probably be of use to keep the 'yin-yang' in mind while considering what we tell you of the function of levels and numbers." [MMFM, p. 189] One way to explain what this means in terms of the Natural Sequence schema in regard to Life-Stages is that the lifetime starts out with the most vitality and ends with the least vitality and is therefore *entropic*, thus Cardinal Action and Origination Process (Birth Milestone) progresses to Ordinal Action and Termination Process (Death Milestone), but on the other hand the Life-Stages are also the opposite — syntropic — in that they start out with an emphasis on the earlierlower-outer Moving Center and end with an emphasis on the later-higher-inner Excitation Center.

• The last three rows of the table show the other developmental septenaries known to the Michaelian teachings (Level, Soul Age, Plane), with the names that I prefer, as explained in the relevant chapters here in Part Four of this *History* book.

Sub-stages are not shown in this table, as I do not (yet) have names for them; maybe some day.

Note that, in terms of their significance during a lifetime, Milestones can be regarded as primary metamorphoses, the Neutral zones can be regarded as secondary metamorphoses, and the metamorphoses between Sub-stages can be regarded as tertiary.

The sections that follow this section present the work of eight channels who have somewhat to say about this phenomenon. In my comments on their work, the relevant Natural Sequence Principle will be pointed out where appropriate. Holding these Principles in mind will presumably make the following discussion of the progressive revelation of Life-Stages much more understandable and meaningful for you.

Like many other aspects of the Michaelian teachings, there has been a progressive revelation about this phenomenon. By "progressive revelation" I mean that subsequent channeling has added depth and breadth of information to this subject, above and beyond what was given in the original revelation in the 1970s. In the sections that follow, I trace the progressive revelation in chronological order, and I conclude this chapter with a section that covers my own proposed contribution above and beyond the revelations.

One of the ways that the revelation has progressed is that it started out being only about the Milestones as transitions, but subsequent revelations stumbled toward discussion of the intervals between transitions. My review comments will point out this progress in the revelations.

It is important to me to be careful in my analysis and synthesis so as to accurately represent the work of others such that I do not misrepresent the work of others. If those others should read what I have to say, and if they find that my representation is inaccurate, then I invite them to please inform me so that I can correct it. Perhaps I have misunderstood you, or perhaps I have overlooked something, or perhaps your understanding has progressed beyond your previous understanding.

Original Revelation about Milestones (1979 — 1988)

In this section, we review the original revelation about Milestones, and in subsequent sections, we review the embellishments to the original revelation that are found in subsequent revelations.

During the original Michaelian group, someone asked about something Shakespeare said:

Dick: Are the 'Ages of Man', as put forth by William Shakespeare, another Overleaf?

Not completely. Shakespeare, like Carl Jung, did not become aware of this teaching [on Soul Age] until very late in life.

Dick: I'm glad that is not another Overleaf, because it is something that we already knew. [03 April 1974]

The seven Milestones or Life-Stages, by whatever name they are called, are not an Overleaf category. (When Modes were revealed in early April 1974, that was said to be the "seventh" and "final" Overleaf category.) However, the question that is posed in the original Michaelian group, and here in this chapter, is, do they nevertheless fit into or correlate with the Overleaf System pattern of Septenarian Attributes, and if so, how?

Refer to >https://en.wikipedia.org/wiki/All_the_world's_a_stage< if you want to read about Shakespeare's exposition of the "seven ages of man". Shakespeare preceded the Michaels by several hundred years in his division of a full human lifetime into seven stages:

All the world's a stage, > And all the men and women merely Players; > They have their exits and their entrances, > And one man in his time plays many parts, > His Acts being <u>seven ages</u>. At first, the infant, > Mewling and puking in the nurse's arms. > Then the whining schoolboy, with his satchel > And shining morning face, creeping like snail > Unwillingly to school. And then the lover, > Sighing like furnace, with a woeful ballad > Made to his mistress' eyebrow. Then a soldier, > Full of strange oaths and bearded like the pard, > Jealous in honor, sudden and quick in quarrel, > Seeking the bubble reputation > Even in the cannon's mouth. And then the justice, > In fair round belly with good capon lined, > With eyes severe and beard of formal cut, > Full of wise saws and modern instances; > And so he plays his part. The sixth age shifts > Into the lean and slippered pantaloon, > With spectacles on nose and pouch on side; > His youthful hose, well saved, a world too wide > For his shrunk shank, and his big manly voice, > Turning again toward childish treble, pipes > And whistles in his sound. Last scene of all, > That ends this strange eventful history, > Is second childishness and mere oblivion, > Sans teeth, sans eyes, sans taste, sans everything. [As You Like It, Act II Scene VII Line 139]

The Wikipedia article continues:

... the division of human life into a series of ages was a commonplace of art and literature, which Shakespeare would have expected his audiences to recognize. The number of ages varied: three and four being the most common among ancient writers such as Aristotle. The concept of seven ages derives from medieval philosophy, which constructed groups of seven, as in the seven deadly sins, for theological reasons. The seven ages model dates from the 12th century. King Henry V had a tapestry illustrating the seven ages of man. According to T. W. Baldwin, Shakespeare's version of the concept of the ages of man is based primarily upon Pier Angelo Manzolli's book *Zodiacus Vitae*, a school text he might have studied at the Stratford Grammar School, which also enumerates stages of human life. He also takes elements from Ovid and other sources known to him. [>https://en.wikipedia.org/wiki/All the world's a stage< — retrieved 04 July 2022]

Refer to >https://theosophy.wiki/en/Septenary_Principle< for a brief introduction to the penchant for theologians to "construct groups of seven". (Evidently, the Michaels are a theologian.) That article links to another article in the theosophy wiki universe: >https://en.wikipedia.org/wiki/Symbolism_of_the_number_7<.

Text of the Original Revelation

Turning our attention away from Shakespeare and onto the Michaels, when the subject of "seven ages of man" was first broached, according to *Messages from Michael*, we find three of the Principles of the Life-Stages septenary (and other septenaries that consist of stages of development) that I introduced above, namely the Plateau Principle, which is the relatively stable stage itself, and the Transition Principle, which refers to the relatively unstable transition from one plateau to the next plateau, and the Hierarchy Principle, which is the notion that each stage includes and transcends the previous stage(s).

Messages from Michael was based primarily on the transcriptions of the channeling sessions of the original Michaelian group, but the information about Milestones found therein is not found in the original Michaelian group transcriptions that have become publicly available. Therefore we can reasonably surmise that it was probably Yarbro who elicited the information during the channeling sessions that she had with Sarah Chambers for the purpose of fleshing out that book.

In the quotation that follows, sometimes I interject clarifying words or phrases in [brackets], <u>underlined</u> words are my emphasis, and my comments are interspersed between paragraphs of quoted material.

What about occasional disturbances, life-crises as differentiated from continuing disturbances?

Very definitely in each life there are <u>plateaus</u> to be reached and new <u>cliffs</u> to climb. The <u>climb</u> to achieve new experience is chosen for the particular lifetime and is marked by <u>resting places</u> where it appears that not much is happening, then all of a sudden the soul is <u>galvanized</u> into action. This always heralds the approach of a major <u>monad</u> in the soul's life, and is many times marked by a <u>change</u> that can be seen by friends, often negatively as the fragment enters into a new <u>phase</u> of life and readies itself for the next experience. [*MFM*, p. 216]

The metaphor of 'climbing cliffs' is appropriate for the Milestones between Life-Stages, because the 'journey' is 'rough going' at those times. The metaphor of 'plateau' is appropriate for the Life-Stages between Milestones, because the 'journey' is relatively easy at those times. Sometimes psychologists and philosophers

use the words "revolutionary" and "evolutionary" to distinguish between these two phases of a staged developmental process: revolution happens during the 'cliffs' and evolution happens during the 'plateaus'.

This seminal passage makes a clear distinction between Milestones as "cliffs to climb" and Life-Stages as "resting place plateaus". This distinction is not always as unambiguous in the original and subsequent revelations as I believe it should be if one is to have an accurate and complete understanding of what is going on. I have been vigilant to point out where the descriptions in subsequent revelations are ambiguous, but the reader also needs to be vigilant to sort it out as they are transiting their own Milestones and Life-Stages.

Besides the Transition and Plateau Principles, this passage indicates that the phenomenon abides by the Hierarchy Principle. Briefly, this is the notion that each Life-Stage is built upon the foundation of the previous Life-Stage(s). This means that each Life-Stage includes what is learned in the previous Life-Stage(s) because they are necessary precursors, but each Life-Stage transcends the previous Life-Stage(s) and is qualitatively different.

Subsequently, the Michaels usually referred to these transitions as "Internal Monads" to distinguish them from "External Monads". However:

... if you would prefer to identify it in another way, we will call it a milestone.... [MFM, p. 217]

The alternative term for this phenomenon, Milestone, was not adopted by the Michaelian teachings communities. Rather, the term "Internal" Monad (because it is an *intra*-personal identity-crisis) was adopted, to distinguish the phenomenon from so-called "External" Monads (which are *inter*-personal crises). Both types of Monad are instantiations of the Dialectic Principle (Cardinal + Ordinal = Neutral). Personally, I prefer the term "Life-Stages", which alerts the readers of my books that my understanding of this phenomenon differs from the majority report of the Michaelian revelations in that it focuses on the nature of the 'plateaus', whereas the Michaelian revelations have usually focused on the 'cliffs'. By saying this I alert the reader that the answers to the questions presented above about the quantity of transitions and intervals are resolved by that change in focus. However, in the following quotations I retain whatever term was used in order to remain faithful to the text as given. Also, because the phenomenon has a special meaning in the Michaelian teachings, I capitalize Milestone as a jargon word in my comments interspersed between the quotations.

The seven internal monads: these are experienced in various degrees of <u>success</u> by all fragments who live long enough to accomplish them. [MMFM, p. 32]

This passage about the success, or not, of climbing a 'cliff' hints that there are Positive and Negative Poles to the Monads, with "+Success" being the Positive Pole and "-Failure" being the Negative Pole, generically speaking. The proposed non-generic names and descriptions of these Poles came much later; see further on.

Those who will not accept the <u>transits</u> of the internal monads are often caught in behavior that is diagnosed as seriously <u>disturbed</u>. Of course, many fragments undergoing <u>difficult</u> transits through the internal monads tend to experience behavior <u>shifts</u> that are viewed as <u>neurotic</u>, but in most instances the behavior alters to more 'normal' limits <u>once the transit [into the 'plateau'] has been completed</u> and the lessons brought to bear in the life. [MP, p. 39]

The fragment who has self-awareness is more able to move through the internal monads without the high degree of <u>stress</u> experienced by so many fragments. That does not mean that such monads are therefore entirely without stress, but that with self-awareness the stress and <u>upheaval</u> is reduced. [MP, p. 106]

Taking note of the underlined words, we see that these two passages are referring to the Transition Principle. The use of the word "neurotic" provides a hint that the nature of transition is a "cognitive dissonance", where the person is of 'two minds'. This is what one would expect during the transition from one of the Life-Stages to the next Life-Stage, because every Life-Stage is qualitatively different from all of the others. This difference is experienced subjectively as either an ambiguous 'superposition' of the two Life-Stages, or as vacillating between the two Life-Stages. When a person has successfully transited the Milestone, then they find that the Life-Stage 'plateau' is relatively 'smooth sailing', to mix a couple of metaphors. Again I say that this phenomenon is due to the Attribution Principle and the Dialectic Principle, which are the notions that progress is made by resolving differences and reconciling contraries respectively.

With those generalities kept in mind, we can now take a look at each specific Milestone as discussed in the first three Yarbro books. Unlike other sections in this chapter that review other revelations, I cannot attribute this revelation to a specific person, so I just refer to it as "the original revelation". In each case, the Milestone is numbered but not named, and only the 'cliff' is described; missing in the revelation is any explicit description of the nature of the 'plateau' which would allow us to understand the 'plateau' in terms of Septenarian

Attributes. (At this early time in the progressive revelation of the Michaelian teachings, the Septenarian Attributes of Levels and Soul Ages and sub-Planes and Planes were not known either.)

THE FIRST MILESTONE

The first [Milestone] is birth, when the body is ensouled.

The body is ensouled at birth? Not before?

No, not before. The behavior in utero is a function of body type [not of Soul type]. [MFM, p. 217]

The first [Milestone], obviously, is birth, or more precisely, taking the first breath, which is when the soul enters the body in almost all cases. [MMFM, p. 32]

In this revelation, this Milestone is a sudden event, not a prolonged process. Some subsequent revelations prefer to regard it as a prolonged process, or as an interval between sudden events.

So as to have a name for this Milestone to put in the summarizing table at the end of this chapter, I am going to name it "BIRTH" in the row that pertains to the original revelation. Because my focus is on the 'plateaus' rather than on the 'cliffs', I prefer to name the Life-Stage that follows this Milestone as "INFANCY".

THE SECOND MILESTONE

The second monad ... occurs when the fragment realizes that it is <u>surrounded by others</u> who are <u>distinct</u> and <u>different</u> from itself and that those others can <u>influence</u> it <u>emotionally</u> and intellectually as well as instinctively. This milestone usually takes place at about <u>age two</u>. Obviously, in very young souls this recognition is less realized than in older souls. [MFM, p. 217]

The second internal monad is the <u>individualization</u> of self, the <u>point</u> when the infant recognizes that it is a <u>separate</u> being. This usually occurs before the <u>age of two</u> [years], although there are cases when it can take longer. [MMFM, p. 32]

In this revelation, this Milestone is a sudden event, not a prolonged process. Some subsequent revelations prefer to regard it as a prolonged process, or as an interval between sudden events.

So as to have a name for this Milestone to put in the table at the end of this chapter, I am going to name it "INDIVIDUATION" in the row that pertains to the original revelation. Because my focus is on the 'plateaus' rather than on the 'cliffs', I prefer to name the Life-Stage that follows this Milestone as "CHILDHOOD"; see next quotation.

The "influence" of self on not-self and of not-self on self is the first mention of the Feedback Principle in the quotations that are reviewed in this section and other sections.

THE THIRD MILESTONE

The third milestone occurs at the <u>onset of young adulthood</u> when the fragment is out of "the nest". All of <u>childhood</u> occurs between the second and the third Milestone. [MFM, p. 217]

The third internal monad is the 'out of the nest' monad, when the fragment <u>differentiates</u> itself from the family at the <u>onset</u> of young adulthood. This is marked by the <u>emergence</u> of the chief feature [Martyrdom, Lowliness, Renunciation, Stubbornness, Greed, Arrogance, Impatience] and usually takes place <u>between the ages of eighteen and twenty</u>, at least in Occidental civilizations, and is more easily accomplished by males than females due to various social expectations. [MMFM, p. 32]

In this revelation, this Milestone is a sudden event, not a prolonged process. Some subsequent revelations prefer to regard it as a prolonged process, or as an interval between sudden events.

As we will see in subsequent sections, other revelations say that this Milestone begins with adolescence or puberty, therefore at the beginning of the teen years rather than at the end as in this revelation. The latter is my preference also, based on the work of developmental psychologists and personal experience and observations. Therefore, I say that the Ordinal/Me Sub-stages of the third Life-stage occur during the teen years, the Neutral zone happens around age twenty, and the Cardinal/We Sub-stages occur during one's twenties. (Where appropriate in subsequent revelations, I will point out the Ordinal, Neutral, and Cardinal phases of Life-Stages.)

Often the first sign of the start of the third internal monad is the fragment's tendency not to have meals with the family. [MP, p. 149]

Occasionally <u>teenagers</u> are so labeled [as antisocial] when they begin to <u>break away</u> from the imprinting of their parents but have not yet manifested in essence [at the fourth Milestone]. This culture makes that

transition unnecessarily difficult, so the transition is more <u>disruptive</u> than in some other cultures. [MFM, p. 215]

Most fragments are willing to let their culture decide for them until the third internal monad, when the fragment <u>separates</u> itself from the full identity of the family and sets out on its own. Certain societies make a great occasion of this with <u>rites of passage</u> to mark the <u>emergence</u> from childhood into adulthood. Others do everything they can to ignore or deny it. This society often denies the status of adulthood to those reaching the third internal monad. In most instances it is the females who are most pressed to deny the third internal monad, but it is the males who are the most blind to its implications. After the third internal monad, there is much new material in the life to attract the attention of the fragments, and this leads to new perceptions that are part of the validation of the third internal monad. When the third internal monad has been avoided, the fourth internal monad becomes more difficult than usual, if not impossible. [MP, pp. 38–39]

The word "emergence" is appropriate for the Hierarchy Principle, because it indicates that each Life-Stage grows out of previous Life-Stages. That is why one must successfully complete a Life-Stage before one can truly 'graduate' to the next Life-Stage.

So as to have a name for this Milestone to put in the table at the end of this chapter, I am going to name it "DIFFERENTIATION" in the row that pertains to the original revelation. Because my focus is on the 'plateaus' rather than on the 'cliffs', I prefer to name the Life-Stage that follows this Milestone as "YOUTH".

THE FOURTH MILESTONE

The major monad most frequently written about would be the one which occurs around <u>age thirty-five</u> and causes the soul level to <u>manifest</u> clearly. At this time most of those observing do see the change and are often horrified by the consequences as "that nice little girl" often goes off the deep end.

Would the manifestation be regarded as neurotic?

If you consider the number of women receiving therapy compared to the number of men, you will know the answer to that. What is considered maturing in men is often thought to be neurotic in women and there are formidable pressures to stamp it out. [MFM, p. 216]

The fourth milestone is the so-called <u>mid-life</u> crisis that occurs around age thirty-five at the <u>manifestation</u> of the essence. [MFM, p. 217]

Some break through much earlier, particularly if they go their own way early in life. Loners break through far more easily than those attached to large 'close' families. These take much longer. If you do not manifest at this stage, it is unlikely that you will later. However, we know of a few souls who have. Having your soul manifest and searching for enlightenment are quite different. Baby warriors do not search, but they do manifest. [MFM, p. 231]

This is a time of real <u>upheaval</u> for all who are achievers and who, at this point, must pause to <u>reassess</u> their lives in terms of goals that have and have not been reached. Momentary <u>setbacks</u> and many <u>doubts</u> are the hallmark of this <u>transition</u> period. Even though you may not realize the <u>staggering</u> impact of this transition [during it], you will recognize your passage through it when you come out the other side. [*MFM*, p. 277]

The fourth internal monad takes place generally in the mid-thirties, and is similar to what has been called the 'mid-life <u>crisis</u>'. In this monad, the overleaves will either <u>manifest</u> themselves and the true personality emerge from what has been learned, copied, programmed, and taught, or the false personality will take over entirely. This monad is a particularly <u>difficult</u> one and it is not unusual to require two or three years to pass through it. [MMFM, p. 32]

Every fragment living in a society and shaped by a culture will at one time or another "have" to define for itself where the parameters of "self" and "society" lie, a process that is most often part of the fourth internal monad or what is sometimes identified as the mid-life crisis. Those fragments who choose to avoid or abdicate the fourth internal monad are shaped entirely by the cultural and societal program through the entire course of that life. [MP, p. 12]

In this revelation, this Milestone is a sudden event, not a prolonged process. Some subsequent revelations prefer to regard it as a prolonged process, or as an interval between sudden events.

So as to have a name for this Milestone to put in the table at the end of this chapter, I am going to name it "MANIFESTATION" in the row that pertains to the original revelation. Because my focus is on the 'plateaus' rather than on the 'cliffs', I prefer to name the Life-Stage that follows this Milestone as "MIDDLE AGE".

People going through this period often find that many of their behaviors, values, beliefs, relationships, interests, and even occupations no longer seem valid; they seem like encumbrances and limitations.

In the quotations to follow, the description of this Milestone seems to be more about the 'plateau' than it seems to be about the 'cliff'. This is somewhat of a departure from the description of the three previous Milestones:

True personality is the manifestation of the overleaves in the life, and the progress toward the completion of the life-task, that overall goal that is established for any given life. True personality is what is expressed after the successful passage through the fourth internal monad, and gives the fragment the opportunity for true work on the life-task. [MMFM, p. 48]

Relationships fare better, of course, when both fragments have successfully completed the fourth internal monad and have manifested the essence and overleaves in their lives. [MMFM, p. 72]

[You will see] more clearly when the fourth internal monad has been successfully completed and the overleaves are manifested rather than disguised under false personality. [MMFM, p. 206]

With so much hindering recognition and validation, it is not uncommon for fragments to avoid such insights throughout life, or to postpone them until after the fourth internal monad, when the overleaves come to grips with the false personality. [MMFM, p. 258]

"Out with the old and in with the new" is one motto for this monad. It can seem as if one's life is coming apart completely, but if the transition is successful, and the false personality is overthrown, there is optimism and a sense of freedom. At this stage of life, there [is] a casting off of chains, accomplished through the completion of the fourth internal monad. [When] true personality [is] established, there is every chance for clearer and more precise perceptions as well as greater chances for intimacy, should that be what you choose to accept. [MMFM, p. 273]

Before the fourth Milestone there may be some contradiction between True Personality and False Personality, causing irregular or inconsistent behavior, but it must now be confronted, or else one may be stuck in Negative Poles (see below) for the remainder of the lifetime. If the 'cliff' is 'climbed' successfully, then during the 'plateau' of the fourth Life-Stage, those people are more likely to operate from the Positive Poles of their Traits than those who do not transit successfully. Developmental psychologists often refer to this as the process of so-called "individuation"; it spans the entire lifetime, but it is especially noticeable in middle-age: the person becomes more and more who they truly are, meaning, who they were born to be. Counseling psychologists often work to enhance this process with their clients.

In the original revelation, the fourth Milestone is said to typically happen in one's mid-thirties, and the fifth Milestone is said to typically happen in one's mid-sixties. In this scenario, we can reasonably expect that the Neutral Sub-stage will happen about halfway between these two Milestones, at about age fifty; the three Ordinal/Me Sub-stages will happen before this pivotal secondary transition, and the three Cardinal/We Sub-stages will happen after this pivotal secondary transition. In my DevPsy Thesis, age fifty is noted as the pivotal phase of an entire lifetime; this is when a person's awareness of the "temporal horizon" flips from focus on distance from the Birth Milestone to focus on distance to the Death Milestone.

THE FIFTH MILESTONE

The fifth milestone occurs in life when the fragment is a "<u>senior</u> citizen", and has to do in part with the <u>reconciliation</u> of the aspirations with the accomplishments of the particular life. [MFM, p. 217]

The fifth internal monad we would wish to call the "senior citizen's monad", when the life is reviewed in terms of what the Fragment set out to do as compared to what was actually done. The [Monad] has to do in part with the reconciliation of the aspirations with the accomplishments of the particular life. This tends to occur between the ages of sixty-five and seventy-five, depending on the nature of the activity that has taken up the Fragment's life, which does not necessarily have anything to do with the fragment's employment. [MMFM, p. 32]

The fifth internal monad brought retrospective perceptions to bear in the life. [MP, p. 9]

This description seems to me to be more ambiguous with regard to 'cliff' versus 'plateau' than descriptions of previous Milestones. In subsequent revelations we will see a similar ambiguity.

So as to have a name for this Milestone to put in the table at the end of this chapter, I am going to name it "RECONCILIATION" in the row that pertains to the original revelation. I do this rather than name it SENIOR so as to be consistent with the names of other Milestones, which refer to events rather than to time spans.

Because my focus is on the 'plateaus' rather than on the 'cliffs', I prefer to name the Life-Stage that follows this Milestone as "ELDERHOOD".

THE SIXTH MILESTONE

The sixth [Milestone] occurs at the time of the <u>onset</u> of the final physical <u>deterioration</u> and it is concerned with the dynamics of the <u>dying</u> process. [MFM, p. 218]

The sixth internal monad is the <u>onset</u> of whatever it is that will be fatal to the fragment. This need not be unpleasant ... but the more attached the fragment is to the body and the physical plane, the more difficult such a monad is likely to be. [MMFM, pp. 32–33]

In this revelation, this Milestone is more of a sudden event ("onset") than it is of a prolonged deteriorating and dying "process". Some subsequent revelations prefer to regard it as a prolonged process, or as an interval between sudden events.

So as to have a name for this Milestone to put in the table at the end of this chapter, I am going to name it "DYING" in the row that pertains to the original revelation. Because my focus is on the 'plateaus' rather than on the 'cliffs', I prefer to name the Life-Stage that follows this Milestone as "DYING".

THE SEVENTH MILESTONE

The seventh [Milestone], of course, is the exit itself. [MFM, p. 218

The seventh internal monad is, of course, <u>death</u>. [MMFM, p. 33]

In this revelation, this Milestone is a sudden event, not a prolonged process. Some subsequent revelations prefer to regard it as a prolonged process, or as an interval between sudden events.

So as to have a name for this Milestone to put in the table at the end of this chapter, I am going to name it "DEATH" in the row that pertains to the original revelation. Because my focus is on the 'plateaus' rather than on the 'cliffs', there is no Life-Stage that follows this Milestone.

There was a final comment about this life-long phenomenon:

It should be noted here that if this process [of going through all seven Milestones] is interrupted during a lifetime, for instance by violent or early death from illness, the fragment rarely <u>advances a level</u> [within a Soul Age]. A fragment can usually advance through a level of experience only by going through the entire [Milestone] process. Because of this a fragment will sometimes require two lives of a very similar nature to complete the [Milestones]. [MFM, p. 218]

This last component of this particular revelation is a clue for answering the questions I have about how to relate the Life-Stages to the Levels (and Soul Ages and sub-Planes and Planes). The fact that the Life-Stages have this relationship with the Levels hints that the Life-Stages can be considered to be a subset of the Levels in the same sense that the Levels are a subset of the Soul Ages and the Soul Ages are a subset of the sub-Planes and the sub-Planes are a subset of Planes. This is per the Fractalicity Principle discussed above, and it means to me that the Life-Stages should be similar to those other developmental septenaries in terms of Septenarian Attributes.

Concluding Comments on the Original Revelation

Before we move on to another revelation about the Milestones, a few comments about the original revelation are in order:

- The original revelation assigned ranks (First through Seventh) to the Milestones, but it did not assign
 names that happened with subsequent revelations. From the description, I extracted a word that
 provided an appropriate name for the Milestone, and I put that name in a compilation table, Table
 4Qg, at the end of this chapter.
- The Soul Ages have names that make a metaphor with Life-Stages (Infant, Baby, Young, Mature, Old), and some revelations do adopt that naming convention for the Milestones, but neither this nor most other subsequent revelations pursue the correlation of the two time cycles. I regard this as an incompleteness in the current understanding of the Milestones, and my self-appointed job in this chapter is to fit the Milestones into the pattern of the other developmental septenaries of the Michaelian teachings.
- Based only on the descriptions in *MFM, MMFM, MP* (the three Yarbro books) we sees no firm evidence that the alleged septenary of Milestones has the Septenarian Attributes, as the Levels, the Soul Ages, the sub-Planes, and the Planes do, as shown on numerous Overleaf Charts. However, we will keep

looking, because there are seven other sources to consider, and they supplement the original revelation considerably.

Milestones (Rites of Passage) per José Stevens (1988)

Another early Michaelian channel who had something to say about the Milestones was José Stevens. The following lengthy quotation was extracted verbatim from his book *Tao to Earth,* pages 12–17, published in 1988. He refers to the phenomenon as either Internal Monads or Rites of Passage. Stevens was a PhD counseling psychologist and university professor, so I expect that he would have some knowledge of developmental psychology that he could draw from, in addition to channeling the Michaels. Let's take a look.

The Revelation via Stevens

In the quotation that follows, sometimes I interject clarifying words or phrases in [brackets], <u>underlined</u> words are my emphasis, and my comments are interspersed between paragraphs of quoted material.

THE SEVEN INTERNAL MONADS OR RITES OF PASSAGE

These are the seven major rites of passage that constitute a complete lifetime. In order for you to evolve from one level [within a Soul Age] to the next you must have experienced all seven rites of passage. Therefore if you die young and fail to complete all of them, you return for a complete lifetime before transiting to the next level [within a Soul Age]. You may already have ... completed the seven [internal] monads however, and return briefly as an infant to complete an unfinished lesson.

The use of the word "major" might imply that there are "minor" metamorphoses. If Stevens intended this, I have seen no evidence of it. The fact that the Milestones have the stated relationship with the Levels hints that the Milestones can be considered to be a subset of the Levels in the same sense that the Levels are a subset of the Soul Ages and the Soul Ages are a subset of sub-Planes and sub-Planes are a subset of Planes. In other words, the Milestone septenary is nested within the Levels septenary and the Levels septenary is nested within the Soul Age septenary and the Soul Age septenary is a subset of the Planes septenary. This is per the Fractalicity Principle discussed above. This being the case, one might reasonably ask if the Septenarian Attributes apply to the Milestones, the same as they do to all of these other developmental time cycles. Stevens does not say (and neither do any of the other revelations).

Each of these steps is an intense rite of passage that marks a major transition [Transition Principle] from one [relatively stable] state of awareness to another [Hierarchy and Plateau Principles]. Each [internal] monad is a time of great energy as well as a time of vulnerability. Events surrounding the transition can have a major influence on the outcome. For example the trauma surrounding birth or the lack thereof can have lifelong repercussions. It is important to remember that these variables are chosen to produce specific results. The [internal] monads usually have a quality of tension to them and can be experienced by you and those close to you as times of great difficulty. They can nevertheless be experienced joyfully on occasion.

The words "transition" and "state" are equivalent to the words "cliff" and "plateau" used in the original revelation. These and other words in this paragraph reinforce the notion presented in the original revelation that there is a qualitative difference between the Milestone as "transition" and the Life-Stage as "state". I see clues in this passage that Stevens was indeed familiar with the work of developmental psychologists as I have supposed he was, namely Erik Erikson who invented the term "identity crisis". I also see in this passage a hint that Stevens understood what I refer to as the Dialectic Principle as it applies to the Milestones, what with the mention of "tension": "energy" versus "vulnerability", and "difficulty" versus "joy".

As we will see below, rather than number the Milestones as Yarbro did (first, second, etc.), Stevens preferred to give each of them a name, but the naming convention is not consistent: sometimes the name refers to the chronology of the event, and sometimes it refers to his characterization of the event. To my way of thinking, this is an inconsistency and an incompleteness that detracts from the exposition. Ideally, one would provide all three attributes to each transition: the rank, the descriptive name, and the chronology.

1. BIRTH: Essence uses the <u>gestation</u> period as an opportunity to get used to the new body you will inhabit. There is no standard pattern to this process. Sometimes essence occupies the developing body from conception onward. In other situations essence does not actually enter the new body until the moment of birth. Mostly essence gets used to the new body by degrees and focuses into the body more at birth. The birth of course marks the beginning life outside the protection of the mother's body.

This description differs somewhat from the original revelation, which regards ensoulment as a sudden event at the moment of birth, and it says nothing about the soul gradually acclimating to the body before birth. As we will see further on, Tolley states explicitly that the nine-month gestation of the fetus *in utero* and *ex utero* that culminates before age three contains the seven Sub-stages of the first Milestone; see further on. Stevens's description says nothing about the nature of infancy during the first year or two of life during infancy, after the 'cliff' of birth; it does not provide the characteristics and qualities of the 'plateau' phase of this particular Life-Stage that would allow us to correlate it with the Septenarian Attributes of the Natural Sequence schema.

Reading this description of gestation, one might get the impression that Stevens regards the Birth Milestone as a lengthy process, but in the description of the next Milestone, he says that it is a sudden event, birth. In this understanding, there is a 'cliff' but no 'plateau'.

2. AUTONOMY: This second internal monad is not transited in a few minutes or hours as is the birth monad. It may take place over a period of days, weeks, or even months. The monad is complete when the child fully recognizes himself as functioning independently of mother. Generally this [internal] monad occurs between two and two and one half years of age.

This description indicates that the Birth and Autonomy Milestones are relatively brief 'cliffs' compared to the 'plateaus' until the next Milestones. Stevens's description here says nothing about the nature of childhood during the decade of childhood, after the 'cliff' of self-recognition; it does not provide the characteristics and qualities of the 'plateau' phase of this particular Life-Stage that would allow us to correlate it with the Septenarian Attributes of the Natural Sequence schema.

The original revelation placed the third Milestone in the late teens; Stevens places it in the early teens:

3. PUBERTY-ADOLESCENCE: As with autonomy, the onset of puberty is not an overnight event but is a gradual process marked by massive hormonal releases. The discharge of hormones signals the onset of adult sexual activity and thrusts you into a time of intense karma. The physical changes in your body facilitate the forming of karmic ribbons and their resolution. Valuable lessons in the art of living can be the result. This is the time when all chief negative features [Martyrdom, Lowliness, Renunciation, Stubbornness, Greed, Arrogance, Impatience] are sampled and one is finally chosen. The [internal] monad is over when the hormonal activity has achieved homeostasis and you have identified yourself as having left childhood behind.

This description indicates that the Puberty Milestone is a relatively brief 'cliff' compared to the 'plateau' until the next Milestones. Here again, Stevens's description says nothing about the nature of young adulthood during the next two decades of youth, after the 'cliff' of differentiation from family; it does not provide the characteristics and qualities of the 'plateau' phase of this particular Life-Stage that would allow us to correlate it with the Septenarian Attributes of the Natural Sequence schema.

4. MANIFESTATION of Essence: The fourth [internal] monad occurs much later in life and is <u>usually complete by age forty</u>. Age <u>thirty-five</u> is the most probable year for older souls to manifest their soul age. When this monad is accomplished you look and act like your true soul age as opposed to manifesting your imprinting or conditioning. In order for this to be accomplished you must drop enough parental and cultural conditioning so that your true overleaves can manifest. Until you do this your overleaves are overshadowed by those of your parents, relatives, and so on.... Not everyone successfully accomplishes this [internal] monad and some delay it for many years so that a person might be in their sixties before they truly manifest if at all.

Here again, the description is of the Milestone 'cliff' that takes up a mere fraction of the Life-Stage (five years out of twenty is suggested), and it does not provide the characteristics and qualities of the 'plateau' phase of this particular Life-Stage that would allow us to correlate it with the Septenarian Attributes of the Natural Sequence schema.

5. [RETIREMENT:] Realization that your life task is mostly accomplished: There is no set year when this fifth internal monad is normally completed: however it usually occurs after age fifty six. To accomplish this [internal] monad you must review your life's work, what you consider to be your successes and failures, and make peace with yourself. You evaluate the relative success you have had in completing your life task and you develop a strategy for the rest of your life. That is, you decide for yourself what you have left to do, and you decide how you are going to do it. In addition, you begin to shift into a state of being rather than the intense doing state that you have used most of your adult life. For many people who have been driven to accomplish all their lives, this can be a difficult task. In general the older the soul, the easier this transition is to make.

In a graphic on page 14 of *Tao to Earth*, this Milestone is named "Retirement", so that is why I named it that in the quotation above. Here again, the description is of the Milestone 'cliff' that takes up a mere fraction of

the Life-Stage. However, with this description we are given a subtle clue about the characteristics and qualities of this particular Life-Stage, which is the first of the Cardinal Life-Stages in the Michaelian schema. All of the Cardinal Life-Stages are said to have to do with manifesting one's inner *being*, whereas the Ordinal Life-Stages are said to be more about manifesting *doing* in the outer world.

6. Realization that death is **IMMINENT**: You begin this monad the <u>moment</u> you know for sure that you are about to die. During this [internal] monad you must come to terms with your death and how to handle whatever fear you have about it. Now this can take place only a few seconds, minutes, hours, or days before your death, or on the other hand up to a year before the event. Sometimes you select lingering, disabling illnesses that give you plenty of time to accomplish this.

The description of the duration of this Milestone is more ambiguous than previous Milestones: it refers to both the "moment" and to the "coming to terms", thus the 'cliff' and the 'plateau'. However, here again, the description does not provide the characteristics and qualities of the 'plateau' phase of this particular Life-Stage that would allow us to correlate it with the Septenarian Attributes of the Natural Sequence schema.

7. DEATH itself: The seventh internal monad is like the first (birth) in reverse. It is the actual transition from physical reality to the astral plane and the life review that accompanies this shift. Your essence leaves the body either by degrees or all at once depending on the circumstances of your death. Your experiences of the moment of death is reflective of the life you have led. If you have confronted your fears in life and have gained a measure of detachment about death, the transition can be ecstatic. If your fears have run you and you have resisted death, the event can be terrifying.

This description hints that, as with all of the other Milestones, there is a 'plateau' after the 'cliff'; in this case the 'cliff' is of the death of the physical body, and the 'plateau' is the transition of the soul from the Physical Plane to the Astral Plane. This hint provides a potential answer to one of my original concerns, that seven Milestones from Birth to Death would bracket six intervals. However, here again, the description does not provide the characteristics and qualities of the plateau phase of this particular Life-Stage that would allow us to correlate it with the Septenarian Attributes of the Natural Sequence schema.

About this Milestone I have little to say except that it makes sense to me to regard Death as described here: as a transition that might take a short while, and that it also has a plateau, which is the same as the case with the other developmental septenaries, Level, Soul Age, and Planes. In the Michaelian revelation, the general idea is that there is a plateau after the transition of death, namely a life review in which the experiences of the life of the Personality-self are examined in retrospect so that the lessons of the lifetime are inculcated on the way to the Astral Plane, before the experiences of that life are absorbed into the Fragment-self on the Astral Plane.

The final quotation I share from this book is a repetition of a statement made in my first quotation from this book:

When you have accomplished all seven internal monads in one lifetime or in several, you are ready to go on to the <u>next level within your soul age</u>. [José Stevens, *Tao to Earth*, 1988, pp. 12–17]

The implication of this statement is that Life-Stages are a subset of Levels as Levels are a subset of Soul Ages as Soul Ages are a subset of sub-Planes as sub-Planes are a subset of Planes. This notion is not developed by Stevens, but it is developed by other sources that are documented in subsequent sections of this chapter.

Concluding Comments on Stevens's Revelation

Before we move on to another revelation about the Milestones, a few comments about Stevens's contribution are in order:

- For your convenience, I showed the names that Stevens applied to each Milestone in a compilation table, Table 4Qg, near the end of this chapter.
- Stevens's descriptions only embellish the original revelation discussed in the previous section a
 little bit. Thus his descriptions do not add significantly to our understanding of the phenomenon.
 Other sources do add significant information to the original revelation, and they are reviewed in
 subsequent sections.
- Stevens used the word "monad", the same as other sources. I perceived a hint in his descriptions that he might possibly have understood the meaning of the word the same as I do, namely as referring to the experience of the Dialectic Principle (thesis + antithesis = synthesis, aka Cardinal + Ordinal = Neutral).

- Although Stevens described each 'cliff', he said little or nothing about the nature of each 'plateau'. If he had said more, this might have allowed us to correlate them with the Septenarian Attributes of the Natural Sequence schema. I do not see any evidence that Stevens understood that the Milestones are more than a subset of Levels in that they actually correlate with Levels (and Soul Ages and sub-Planes and Planes) in terms of having (some of) the same Septenarian Attributes. However, we do see this understanding presented in subsequent revelations, as documented further on in this chapter. I regard this lack of concern for the plateaus after the metamorphoses as a common incompleteness of the Michaelian descriptions, not only with Stevens but also with the other Michaelian revelations reviewed in this chapter.
- Stevens is a PhD-level counseling psychologist. As such, it seems likely to me that he would have been familiar with academic developmental psychology models such as are discussed in my DevPsy Thesis, but I see only a little evidence of a familiarity in his descriptions of the Life-Stages. Rather, what I see most of all is that Stevens seems to have embellished the Yarbro material with his own thinking and experience and perhaps channeling.

The next discussion of Milestones appeared almost a decade later than that given by Stevens. As it so happens, it was the product of the original Michaelian channel, who probably channeled the original revelation published in *MFM*.

Pathfinders per Sarah Chambers (1996)

In Sarah Chambers's 1990s channeling (which is unpublished but some of which is in my possession), some information about Milestones appeared in channeling on a related topic, the so-called "Pathfinders". The following is from the channeling session of 18 March 1996. Here, seven types of Pathfinders are somewhat correlated with the seven Milestones. The Pathfinders were said to be leaders or helpers of humankind through the present-day traumatic transition from pervasive Young Soul perceptivity to pervasive Mature Soul perceptivity. Various types of Pathfinders were said to specialize in helping people through one or another of the Milestone 'cliffs' that initiate each Life-Stage 'plateau' — the descriptions that follow are not of the Life-Stages themselves; they are always of the Milestones between Life-Stages, because this is when Pathfinders can be most helpful.

In the descriptions that follow, there are references to the chronological age of people in a particular Milestone, but there is no hint that the descriptions represent a development or hierarchy of the jobs of Pathfinders beyond the use of the word "stages". More so than seen in the two previous sections, the descriptions of some Life-Stages provide some clues for correlating them with the Septenarian Attributes — in general, and specifically the Centers and the Soul Ages and the Roles — of the Natural Sequence schema; I will note these where appropriate.

The Revelation via Chambers

The transcription begins after this introductory paragraph. <u>Underlined</u> words are my emphasis, sometimes I interject clarifying words or phrases in [brackets], and my comments are interspersed between paragraphs of quoted material.

I asked what the categories of Pathfinders were.

The seven stages of Pathfinding are:

[First] INITIATION: This can include midwifery and shamanism. It can be <u>birth</u> or rebirth at any stage. This has long been a neglected rite in your society. <u>Rites</u> must be carefully designed so that <u>transformation</u> occurs if initiation is to be successful. <u>Birth</u> is the <u>first</u> initiation, but others occur at each [internal] <u>monad</u>. Shamans, Wiccans, and Druids will work in this area. These fragments can also be licensed professional health workers, but their primary calling will be in the area of healing arts.

That there are "stages" implies the Hierarchy Principle. That there is a "transformation" implies the Transition Principle. The word "healing" is just another way of framing the Dialectic Principle: getting from one Life-Stage to the next is about becoming whole and healthy by stages over the story arc of a lifetime. That "birth" is the "first" "[internal] monad" connects the Pathfinders to the Milestones. One can reasonably infer from the description that this first Milestone, birth, correlates with the initiation of the so-called "Infant" Soul Age. The description of this first Milestone in terms of "rites" (rituals, ceremonies) fits somewhat with the Septenarian Attributes of Ordinal Action, and is therefore Warrior-ish. Infancy is the Life-Stage focused on the

development of the Motion Center. Or at least I see no better choice than that correlation, considering this particular revelation as a whole. A "baby shower" is the Rite of Passage for this first Milestone.

[Second] NURTURE: Young <u>children</u> (second [internal] monad) nurturing or the <u>nurturing</u> of fragments who received little or no nurturing as children. Psychologists who are also <u>healers</u> can work in this area as pathfinders for <u>childhood</u>. It is necessary for all fragments to experience being a child, but the chronologically older fragment must be shepherded through this process carefully, so that he/she does not become fixated here.

Although it does not say it explicitly here, one can reasonably infer from the description that this second Milestone fits well with the Septenarian Attributes of Ordinal Inspiration. Nurturing and healing are in Essence for the Server Role. Childhood is the Life-Stage focused on the development of the Emotion Center. One can also reasonably infer from the description that this second Milestone correlates with the initiation of the so-called "Baby" Soul Age (I prefer the name "Child").

[Third] SUPPORT: The hormonal storm that occurs with the onset of <u>adolescence</u> can only be supported. Similar storms can occur at any time during the lifetime of a fragment. Grief is one example; the death of a loved one. Political upheaval and terrorism can also cause emotional storms. Members of minority races, women, and homoerotic men can rightfully experience terror at the thought of someone like the fragment who is now Patrick Buchanan, which will, at times, throw them into a flurry of activity that is not always productive. This is very similar to the behavior exhibited by adolescents who are in the thrall of hormonal changes. They can only be supported and gently led to alternative behaviors. Teaching fragments to become leaders or activists who use persuasion rather than violence is one form this pathfinding can take.

The adolescent transition is the transition between childhood and young adulthood, so obviously the third Milestone could be correlated with the so-called "Young" Soul Age. However, I do not see how a case can be made from this description alone that the third Life-Stage is an instantiation of the Septenarian Attributes of Ordinal Expression, which includes the Artisan Role and the Intellect Center; this is what one would expect from a developmental septenary, but neither does Ordinal Expression seem to fit with any other specific Milestone in this discussion of Pathfinders, meaning that descriptions of other Milestones provide better correlations with components of the Natural Sequence schema.

[Fourth] CHANGE and BALANCE: A fragment who is transiting the <u>fourth</u> [internal] monad [in middle age] will often be seen by those close to him/her as changing in ways that are mystifying. But change occurs in all stages of life, and the pathfinder for change and <u>balance</u> must learn to work with fragments who are experiencing other life <u>transitions</u>, such as loss of a loved one, loss of livelihood, loss of self-esteem, dismemberment. This is also the <u>neutral</u> or <u>fourth</u> position, and represents the <u>balancing</u> out of all accounts, so this pathfinder will often work with others in creating right work and with other pathfinders of the healing arts.

The use of the words "neutral" and "balance" are obviously references to the Septenarian Attributes of Neutral Assimilation, and this is in its proper location, the fourth place, in the Natural Sequence schema. This is a major hint that the other six Milestones should be correlated with Septenarian Attributes of the Natural Sequence schema. However, here with this revelation as with previous revelations, the implications of the correlations were not understood and pursued at the time. For some of the Milestones in this particular revelation about pathfinders, their description tells me that the correlation was understood, but for some of them the correlation is not indicated.

Because in this section I find clues that correlate the Milestones with my idiosyncratic understanding of Life-Stages, it is expedient to let the reader know that I interpolate a Life-Stage between the fourth Milestone and the fifth Milestone. My so-called "SENIOR" Life-Stage spans from about age fifty to about age sixty-five. It correlates with the Old Soul Age and the Concept Center, and it has the Septenarian Attributes of Cardinal Expression. More will, of course, be said about this in the section that fully describes the Life-Stages.

[Fifth] MATURATION: The <u>onset of old age</u> means very different things to different fragments. A loss of beauty or a gain of <u>wisdom</u>; time for true <u>leisure</u> or time on one's hands; <u>freedom</u> or <u>boredom</u>. In the Aquarian age, people will be expected to <u>contribute</u> to society as long as they are physically able, but by using their innate gifts and by doing right (or true) work. The pathfinders who work with those transiting their fifth [internal] monad will have to be ready to help these fragments make safe passage through this [internal] monad, coming out on the other side with wisdom, <u>dignity</u>, and <u>integrity</u>, plus the desire to <u>continue contributing</u> all

of their accumulated knowledge for the good of the community. These pathfinders can also help fragments of all ages who are having difficulty moving from one stage to another because of a fear of loss.

For the first time in these descriptions of the Milestones in the context of Pathfinders, this paragraph contains numerous candidates for the possible names of Positive and Negative Poles. This is what one would expect if, as I claim, the Milestones are instantiations of the Dialectic Principle. The words +Dignity and +Freedom for the Positive Pole and -Boredom for the Negative Pole seem appropriate. In subsequent Michaelian revelations, the notion that Milestones have Positive and Negative Poles is made explicit.

In my schema, the Life-Stage initiated by this MATURATION Milestone has the Septenarian Attribute of Cardinal Inspiration, which correlates with the Priest Role and the Sympathy Center. The underlined words in this description fits that notion well. More will, of course, be said about this in the section that fully describes the Life-Stages.

[Sixth] END OF LIFE: As the time of transition approaches, fragments begin to effect closure with their loved ones, their families and friends, their place in the community. This cannot happen if the fragment denies that the end of life is near. Many times, the pathfinder will be called upon to suggest this to a fragment who is in obvious denial. Children and young people do die, both by accident and by design, and these pathfinders will work with them also. They will work closely with the pathfinders for change and balance and the pathfinders for joyous transition. Children will almost always effect closure by instinct, especially older souls. The mature soul pathfinder will need to learn to recognize this instinct and work with it. Most elderly fragments can feel "death" approaching, but many are terrified. Helping them recognize their terror and transform it into joy will be the task of these pathfinders.

I like the word "+Closure" for the name of the Positive Pole of this Milestone. More will be said about the names of the Positive and Negative Poles of the Milestones and Life-Stages in subsequent sections.

In my schema, the Life-Stages initiated by the END OF LIFE Milestone, has the Septenarian Attributes of Cardinal Action, which correlates with King Role and the Excitation Center. More will, of course, be said about this in the section that fully describes the Life-Stages.

[Seventh] JOYOUS TRANSITION: These pathfinders will serve as the midwife for the transition. Many will be trained health professionals, but all will have knowledge of the occult arts, such as Wicca and Shamanism. It will be their calling, and make no mistake, this is a spiritual calling, to transform the deathscape into a joyous, terror-free experience. If there is severe pain, there will be amelioration. The soul learns nothing from a physical body wracked with pain. We wish to emphasize this once more. There is no lesson to be learned from pain so severe that the mind cannot concentrate on anything but the pain. Pathfinders for the transition will also work with the loved ones who are present. The seventh [internal] monad can be assisted by many modalities: chanting, singing, drumming, aroma-therapy, to name a few. Pathfinders must experiment.

We asked if these represented specialties for pathfinders.

That is true, there will be <u>seven</u> different specialties for pathfinders. As we have said, many of these pathfinders will also be trained healers (as opposed to instinctive) and will be qualified to work with many conditions arising from the <u>transiting</u> of these life monads. Instinctive healers will be allowed more latitude and freedom during this age you are approaching. [18 March 1996]

Because a Milestone typically precedes a Life-Stage, one might wonder if there is a seven-step evolutionary process that happens after the revolutionary "Death" Milestone. If so, this provides a method for solving one of my initial problems, namely that seven events enclose six intervals. In a session that preceded the session that revealed the seven types of Pathfinders, namely the 09 March 1996 session, we find this:

Assuming that, since there are seven stages of everything else, what are the seven stages of assimilation after death before rebirth?

The stages that most fragments experience are denial, questioning, self-realization, remembering, integrating, choosing, rebirth.

Those seven steps make sense to me if I think about them; perhaps you will think about them also. This situation could potentially be an instance or example where *development* made sense, but I do not see how to make this choice of seven descriptive words fit the Natural Sequence, the default developmental sequence in the Natural Sequence. If these one-word descriptions are actually appropriate, then I take this between-lives situation to be an example of a septenary, a collection of seven elements, that does not *require* it be per the Natural Sequence, as the Life-Stages appear to be when we assemble all of the Michaelian revelations.

As we will see further on, Troy Tolley's Michaelian revelation gave names to seven Stages that follow the Death Milestone, complete with Positive and Negative Poles, and these were:

- (1) -Attachment =INITIATION +Transition
- (2) -Denial =INTROSPECTION +Grief
- (3) -Return = REALIZATION + Detachment
- (4) -Devastation =MANIFESTATION +Review
- (5) -Haunting =CONTENTMENT +Reunion
- (6) -Fragmentation =MAGNETIZATION +Integration
- (7) Dependence = EMANATION + Transcendence

Assuming that the Chambers and Tolley revelations are accurate communications, my reconciliation of these two seemingly disparate accounts is that the Chambers channeling refers to the entire Astral Plane interval from physical death to physical rebirth, and the Tolley channeling refers to the immediate afterlife, which spans the time from the death of the physical body to the death of the etheric body — which happens when the 'payload' of the Personality-self is delivered to the Fragment-self on the Astral Plane — that event fully completes that lifetime.

Concluding Comments on Chambers's Revelation

Before we move on to another Michaelian revelation about the Milestones, a few comments about Chambers's contribution are in order:

- This revelation adds a little bit to the previous revelations reviewed in the two previous sections, the
 sections about the Yarbro books and the Stevens book. That is, some vague clues in the meager
 descriptions allowed me to tease out correlations with aspects of the Septenarian Attributes in the
 Natural Sequence schema.
- As with the previous revelations, the descriptions of the Milestones via Chambers are of the 'cliffs' more than they are of the 'plateaus'. The fact that seven 'plateaus' are not thoroughly described here and elsewhere perhaps explains why Michaelian students have not noticed that there might be a correlation with the other developmental septenaries of Level, Soul Age, and Plane.
- At this point in the progressive revelation, there are still no indubitable clues that there is a correspondence of Soul Ages with the 'plateaus' that follow Milestones, even though the analogy is obvious because of the names that are applied to both septenaries. The fact that there are seven Milestones is one clue that they correlate with the other developmental septenaries (Level, Soul Age, Plane), but there are other subtle clues in the descriptions that look like Septenarian Attributes.

The next Michaelian revelation is approximately on a par with the Chambers revelation, which is to say that it is evolutionary rather than revolutionary. It advances the story of the story of our lives a little bit, but it does not provide definitive answers to my issues, which I have been looking for since the original revelation.

Milestones per Stephen Cocconi

Another Michaelian channel who has somewhat to say on the subject of the Milestones is Stephen Cocconi, and he says it on his website at >www.themichaelteaching.com<. The following quotation is the entirety of what he has to say on that website. Unlike the work of other channels that are reviewed in this chapter, I do not have a date for the release of this information. However, I place it between Chambers in 1996 and Yarbro in 2009 because this is likely the time frame when Cocconi established and populated his website, and this is where the information seems to fit in the story arc of the progressive Michaelian revelation on this subject. In addition to descriptions of each Milestone, he provides the numerical rank and a name. There are clues in what follows that this information was channeled or semi-channeled. Also to be found in this revelation, more so than found in previous revelations, are clues that allow me to apply Septenarian Attributes to the Milestones; this is progress.

The Revelation via Cocconi

The transcription begins after this introductory paragraph. <u>Underlined</u> words are my emphasis, sometimes I interject clarifying words or phrases in [brackets], and my comments are interspersed between paragraphs of quoted material.

Internal Monads — Stages of a Life

Understanding the Connection between Essence's Influence on a Maturing Personality.

Life operates in only one direction. From the moment of our birth we begin to grow old. It is the course of living everyone travels regardless whether they like the process or not. However, just because one physically ages, it does not mean that one advances in maturity nor emerges into their innate nature. In the Michael teachings we call that innate nature of Overleaves tempered by the effect of Soul Age — True Personality. In common parlance we might call it the authentic Self of that person.

Only by grasping the subtleties and the conclusions that each stage promises may guarantee a successful refinement of their character and the furtherance of their conscious growth and development. Just to re-cap, just because someone is physically a "grown-up", it does not make them an emotionally-mature adult.

Our awareness of self and the body, becomes a series of events that we exaggerate and delete. From the moment of birth to the last breath of death, each is recorded by the mind and the Essence. The process spanning the duration of an individual's existence are the stages referred to in the Michael teaching as the Internal Monads (IM).

In the quoted descriptions that follow, the rank and a name for each Milestone were given. The names are shown in the Cocconi row of the compilation table, Table 4Qq, near the end of this chapter.

There are 7 Internal Monads. They are:

First IM — *Birth* — The first experience of conscious life and death separation. Since there is never a guarantee of how well a birthing process might succeed, the being must make the leap from the Astral into the Physical. <u>Metaphorical</u> equivalence within the Essence's evolution process of this teaching would be lessons of survival incurred at the Infant Soul phase.

This is the first and only correlation of a Milestone to a Soul Age that we see in the Cocconi revelation. It is obvious from the names of the Soul Ages (Infant > Baby > Young > Mature > Old) that the Soul Ages are analogous to Life-Stages, but until this revelation, so far as I know, it was not stated explicitly. This lack of development of the idea seems to be typical among the various sources reviewed in this chapter: the correlation of Milestones with Soul Ages was sorta kinda acknowledged by some sources (because it is totally obvious), but it was never fully embraced and embellished — until my explicit proposal in this chapter.

Second IM — **Separation** — Characterized by the first sense of 'otherness', meaning not connected to Mom but separate. The Will begins to emerge. The characteristic meme about this phase is thought of as the "terrible two's" when a person asserts the first phases of independence: they say "NO". But [at] a deeper level, there is a sense of first steps toward self-control....

In the Natural Sequence schema, the second Life-Stage correlates with the Septenarian Attribute of Ordinal Inspiration, of which the Emotion Center is an aspect. With that correlation in mind, we can understand the "terrible two's" as the phase of life where negative emotions first emerge in social situations; the role of parents, ideally, would be to transmute them into positive emotions as part of the socialization process. Typically, a 'cliff' (and its 'plateau') begins in the Negative Pole, and, ideally, ends in the Positive Pole, meaning that the child learns to be less self-willed; it learns to "play well with others".

Third IM — *Individuation* — Often the most active and karmically-driven, this stage begins approximately at <u>adolescence</u>; somewhere around 10 – 13 years of age. Individual physical development and the experience of the culture one grows up in, either accelerate or decelerate this initiation. More often than not, it is in this phase we see the beginning influence of the chosen Chief Features. In response, it coincides with the emergence of both the Rebel and the Conformist Sub-Personalities. They both develop to varying degrees. A person tends to display most of their Ego's expression of Personality but largely in negative poles, motivated to create a <u>persona</u> that will gain them status or protection against vulnerability. There are many factors which might cause one specific <u>persona</u> (sub-personality) to appear more noticeably than another. They include:

- Overleaves
- Soul Age The older the Soul the more likely they will proceed through the IM's
- Life Plan including Karma and key agreements
- Imprinting Parental or social (or lack thereof)
- · Childhood trauma

In the Natural Sequence schema, the third Life-Stage correlates with the Septenarian Attribute of Ordinal Expression. In terms of what I call "Processes", this Life-Stage is an instantiation of what I call the "Analysis" Process. The similarity of Analysis to the name here given to this Milestone, "Individuation", should be self-evident. The Center that correlates with this Life-Stage is the Intellect Center, which is geared for making

distinctions between this and that. This Life-Stage is about developing and defining one's "personality" or "ego" or "persona" as distinct from the family of origin. As noted here, this Life-Stage often starts out in the Negative Pole, but, ideally, it will end up on the Positive Pole, meaning that the young adult will become fully responsible for what it is, as distinct from what it was shaped to be by parental and educational influences.

Fourth IM — *Selfhood* — Up to this point, the first three IM's are not optional. That is to say that once a person becomes a "grown-up" there is no guarantee that the person that is there projected for the world is the same one that motivates the person from within. Thus, the Fourth IM, while often starting around age 30, may go on as a struggle within the person for their own identity for many years. The many layers of consequence, both beneficial and detrimental, accrued by a person may lock them into a persona that they identify with. At this stage, sometimes called "the midlife crisis", the Essence pressures the Personality to examine, and in many cases shed, elements it has learned from other sources (conformed to) and redirect its attention to internal emanations of one's chosen Overleaves. Only when this process has completed do we say of a person that they are operating from "true personality". It simply means that the frictions of having to suppress <u>innate</u> qualities and urges lessens and the courage to <u>reveal</u> yourself more authentically to your deepest realizations increases. A movement into this place does not mean everything will be rosy and bitchin [good, amazing]. It just means you know who you are and what your inner resources are.

In the Natural Sequence schema, the fourth Life-Stage correlates with the Septenarian Attribute of Neutral Assimilation. The aspect of Neutral Assimilation that best fits with the description above is what I call the "Impulse" Center, with a Positive Pole of +Intuition and a Negative Pole of -Instinct. This is the bridge Center between the so-called "lower" Centers and the so-called "higher" Centers. In other words, the transpersonal self seriously begins to leak 'down' into the personal self through this Center, during this Life-Stage. Beside the metaphor of transitioning from 'lower' to 'higher' Centers, another way to describe this Life-stage is as stated above: the metaphor of transitioning from 'outer' to 'inner' resources.

Because in this section I find clues that correlate the Milestones with my idiosyncratic understanding of Life-Stages, it is expedient to let the reader know that I interpolate a Life-Stage between the fourth Milestone and the fifth Milestone. My so-called "SENIOR" Life-Stage spans from about age fifty to about age sixty-five. It correlates with the Old Soul Age and the Concept Center, and it has the Septenarian Attributes of Cardinal Expression. More will, of course, be said about this in the section that fully describes the Life-Stages.

Fifth IM — *Fulfillment* — Here an aware person (one who has passed 4th IM) begins at least the sub-conscious process of "what have I done with my life?" In terms of this teaching we call it <u>review</u> of Life Task.

In my schema, this is the sixth Life-Stage, and it correlates with the Septenarian Attribute of Cardinal Inspiration. The Center involved here is primarily the Sympathy Center. The process of this Life-Stage and of this Center is to become –Sensitive, =Sympathetic, and +Empathetic to the life that one has lived. Ideally, this Life-Stage is about coming to a higher emotional intimacy with oneself. It is the counterpart or complement to the second or "Separation" Life-Stage, which was, among other things, somewhat about developing one's emotional independence from one's mother. One could think of this sixth Life-Stage as learning to feel an unconditional 'motherly' love toward oneself.

Sixth IM — Review — Some channels consider this process a mere clean-up or summation of the living process achieve[d] through the previous five. For [from] we the Consortium's point-of-view, it allows for the Personality to make some peace with itself, no matter if it served Life Task for Essence or not. This culminating experience may not be pleasant and prolonged or it may be satisfying and virtually unnoticed. It does however put a person in position to enter the final exit...the experience of dying and transition.

In my schema, this is the seventh Life-Stage, and it correlates with the Septenarian Attributes of Cardinal Action. The Center involved here is primarily the Excitation Center. Maybe I should think of a better name than DYING, a name that would convey the notion that, ideally and in the Positive Pole, this review stage is ultimately about the release of the life as lived, an experience that is exhilarating for the soul, even if the body and/or the mind is in steep decline. In the Positive Pole, the person will be energized in their expectation and anticipation of the afterlife. That name and this correlation with Cardinal Action/Excitation Center is paradoxical for a person who is stuck in the Negative Pole of this Life-Stage, who merely disengages from life before they exit the life. In either Pole, this Life-Stage is the final preparation to launch the soul into the afterlife. This Life-Stage is the counterpart or complement to the first Life-Stage. Whereas the first Life-Stage was about 'getting a grip' on the life to be lived, this last Life-Stage is about 'letting go of one's grip' on the life that was lived. Think of the beginning and ending Life-Stages as the actions of 'grasping' and 'ungrasping' respectively.

Seventh IM — *Death* — A person may face death in terror or transcendence. Conscious or unconscious. Mournful and lost or enchanted and found. At the moment of death, the Personality's <u>last grasp</u> of its identity comes to a reckoning. On the other side, Essence awaits it in whatever form that individual may have been imprinted to perceive, or something completely different.

The release of the last grasp comes at the release of the last gasp.

Internal Monads have phases which they pass through. Channel Troy Tolley has outlined these 7 phases of the 7 stages on his Truth, Love and Energy site. [>https://www.themichaelteaching.com/michael/internal-monads/< — retrieved 27 April 2022]

Tolley's channeling is reviewed after the next section, which is about Yarbro's Michaelian revelation. The notion that there are Sub-stages of the Life-Stages reinforces my notion that these septenaries at different time scales (Sub-Stages, Life-Stages, Levels, Ages, Planes) provides reason to believe that they should all follow the same pattern, which I believe is the Natural Sequence schema.

Concluding Comments on Cocconi's Revelation

Before we move on to another Michaelian revelation about the Milestones, a couple of comments about Cocconi's contribution are in order:

- Cocconi's presentation provides an alternative set of descriptions and some variations in some names for the Milestones. Otherwise, this revelation does not significantly advance the understanding in ways that solve the problems that I introduced in sections near the beginning of this chapter.
- The original revelation said that there are metaphorical 'cliffs' and that there are 'plateaus' in this phenomenon. Cocconi does not make a clear distinction between the description of each Milestone ('cliff') and the description of each Life-Stage ('plateau'). This is typical for the Michaelian revelations. I believe that this muddles our understanding of what is happening with this phenomenon. In the section that follows, I emphasize that distinction, because it is key to understanding why I prefer to focus on this phenomenon as Life-Stages rather than focus on the Milestones that separate the Life-Stages.

The discussions of Milestones by Yarbro, Stevens, Chambers, and Cocconi as documented above do not describe each Life-Stage in enough detail that it would probably convince readers of my assertion that the Life-Stages fit into the Overleaf System schema; the following discussions of the work of Quinn Yarbro, Troy Tolley, and Victoria Marina-Tompkins will perhaps be more convincing.

Milestones per Quinn Yarbro (2009)

Information in Table 4Qb below was extracted from an Overleaf Chart, Chart #18, reviewed in Part Three of this *History* book. In addition to the Milestones — which were referred to as Internal Monads in that Chart — Chart #18 includes all seven of the Overleaf categories plus some other septenaries. This Chart was posted on a Yahoo group list named >messagesfrommichael@yahoogroups.com<, which was active for more than three years, from 2007 to 2010; it is now defunct. The chart was revealed by a member of the Yarbro group named Steve; preferring to remain anonymous, he never revealed his last name on a public-facing website. He also referred to himself as "Mature Scholar". The Chart was dated August 2009.

| Table 4Qb — INTERNAL MONADS per YARBRO | | | | | | | |
|--|-----------------------------|--------------------------------------|--|---|---------------------------------------|---------------------------------------|--|
| SEPTENARIAN ATTRIBUTES | Ordinal Inspiration | Ordinal Expression | Ordinal Action | Neutral Assimilation | Cardinal Expression | Cardinal Inspiration | Cardinal Action |
| RANK | First | Second | Third | Fourth | Fifth | Sixth | Seventh |
| INTERNAL MONAD | +Vitality BIRTH –Life | +Identity EGO RECOGNITI'N -Solipsism | +Differentiation OUT OF NEST -Separation | +Self-realization MID-LIFE CRISIS -Acquiescence | +Appreciation LIFE REVIEW -Evaluation | +Catharsis PREPARE EXIT -Capitulation | +Transcendence EXIT THE LIFE -Fatalism |

My comments on this table are as follows:

1. SEPTENARIAN ATTRIBUTES: The first row below the title row shows the Septenarian Attributes as they were shown on Chart #18. That Chart also showed Roles and Centers and Soul Ages, of course. No

Chart, other than #18 and my own, shows the Internal Monads aka Life-Stages, and no other Michaelian book or website explicitly makes a correlation between Internal Monads and the Septenarian Attributes/Roles/Centers/Soul Ages. (Tolley makes a correlation with Centers; Gregg makes a correlation with Soul Ages — see sections further on.) In my view, this absence of correlation in the revelations is a major oversight because it limits or obscures our understanding of this phenomenon.

- 2. Notice that the lineup of Septenarian Attributes is per what I refer to as the "Michael Math Sequence", not the Natural Sequence as it should be in a developmental septenary. I say "should" because I have not been able to find any corroboration of the Michael Math Sequence outside of the Michaelian teachings. However, I have found an abundance of corroboration for the Natural Sequence outside of the Michaelian teachings, as documented in my book *The Tao of Cosmogony*. This scrambling of the Septenarian Attributes in the Ordinal triad per the Michael Math Sequence obscures the nature of the three Ordinal Life-Stages. My DevPsy Thesis provides documentation that during the first three decades of life, what we Michaelian students refer to as the "Centers" are emphasized and developed per the Natural Sequence Motion > Emotion > Intellect not per the Michael Math Sequence: Emotion > Intellect > Motion. The Centers show up repeatedly in discussions of the Life-Stages in this chapter.
- 3. RANK: The second row shows the order or sequence of the seven Internal Monads. As we see throughout this chapter, oftentimes the Rank is used as the name of the Internal Monad.
- 4. INTERNAL MONAD: The third row shows the names and the Poles of the Internal Monads as given in Chart #18. Note that the names here are consistent with the notion that the Internal Monads are brief transitions Birth and Death being the most obvious examples rather than consistent with the notion that the Internal Monads are 'plateaus' between 'cliffs'. The former is the notion that is most common in the revelations, from the first to the last, and that is why I prefer to call them Milestones rather than Internal Monads.
- 5. The names given here are descriptive of the Milestones, and thus they do not allude to the chronological time-span covered by the Life-Stage, as does the naming convention of some other Michaelian revelations. As we see in this chapter, some sources prefer the descriptive naming convention and some prefer the time-span naming convention; ideally, a naming convention would include all three parameters: rank, time-span, and description. The advantage of the time-span naming convention is that it makes it obvious that the Life-Stages correlate with the other developmental septenaries of the Michaelian teachings Levels and Soul Ages and sub-Planes and Planes but most obviously with the names that have been given to the Soul Ages. For instance, the Infancy Life-Stage correlates with the Infant Soul Age.

Concluding Comments on Yarbro's Revelation

Before we move on to another revelation about the Milestones, a few comments about Yarbro's contribution are in order:

- The existence of Chart #18 is not widely known in the non-Yarbo Michaelian teachings communities, so therefore its significance is also unknown to the non-Yarbro communities. The significance is that the Life-Stages have the Septenarian Attributes. Even if the chart were widely known, I doubt that Michaelian students would recognize its implication; they would need to have it explicitly pointed out to them, and that is what I am doing here in this chapter.
- Chambers may have channeled the original revelation that was published in *Messages from Michael* in 1979, but probably someone else, someone in the secretive Yarbro group, channeled the revelations that were published in *More Messages from Michael* and in *Michael's People*. We do not know when or how the revelation that is shown on Chart #18 and documented in this section was produced.
- Previous revelations provided clues and hints, but this revelation makes some real progress toward integrating and correlating the Life-Stages with four other instantiations of the developmental septenary, namely Levels, Soul Ages, sub-Planes, and Planes. Chart #18 shows that integration and correlation, but unfortunately it is incorrect in the Ordinal triad. The correlation is via the Septenarian Attributes that all five developmental septenaries have in common.

- This table highlights the issue introduced at the beginning of this chapter: it is nonsensical to have seven intervals (Life-Stages) during a full lifetime, each headed up with the Septenarian Attributes, while also having seven transitions (Milestones) with the first being Birth and the last being Death. How does one reconcile this table with itself? Revelations from Chambers (above) and Tolley (below) suggest that the Death Milestone has a 'plateau' afterward, a notion that is consistent with the notion that all Milestones ('cliffs') are followed by a Life-Stage ('plateau').
- Although one can find hints in previous Michaelian revelations that such is the case, this is the first time that the Milestones were said to have Positive and Negative Poles, with names applied. However, as we will see when I present my notions about the Life-Stages, the names and the descriptions of the Poles of a Life-Stage are not necessarily synonyms of the Poles of the Milestone that precedes the Life-Stage. In fact, one can reasonably expect them to be different, because the Milestones inhabit the transition zone between two contiguous Life-Stages; the attributes of the "cliff" are different from the attributes of the "plateau". Chart #18, showing the Internal Monads correlated with the Septenarian Attributes, hints that this phenomenon is not just about the Milestones; it is also about the Life-Stages, and it is the Life-Stages that are concrete instantiations of the abstract Septenarian Attributes, more so than the Milestones that divide the Life-Stages. This is the same as the situation with other developmental septenaries: Levels, Soul Ages, sub-Planes, and Planes.

For the first time in public, names of Milestones complete with their Poles were revealed in 2009. This is not the last time that this information appears in public. After the next section, we see similar information from another member of the Yarbro contingent; she wrote a book about the Milestones.

So far as I know, Troy Tolley, reviewed in the next section, did not know about this Yarbro information. The reason I say this is because Tolley's names for the Positive and Negative Poles of each Milestone are entirely different from the names provided by Yarbro. This is typical of the Michaelian teachings channels: when they know of each other's work, they generally agree, but when they do not know of each other's work, they generally disagree. What this tells me is that some people are not really channeling the Michaels, whom I assume would be consistent:

Dick: I just wonder if there is any jealousy, rivalry. If I listen to what Soleal says, will Tomas be put out — you know?

If there is synthesis, there should be <u>no conflict</u>. If there is not <u>The Synthesis</u>, then one of us is not telling the <u>truth</u>, and as in all previous situations [with various teachings], it will be up to you in the end to <u>verify</u>. [SJC: 03 July 1973]

Milestones per Troy Tolley (2010)

Troy Tolley is yet another channel who has somewhat to say about this phenomenon. The following quotation was copied from >https://our.truthloveenergy.com/topic/426-20100912-michael-speaks-internal-monads<. Here again the preferred name for this phenomenon used by this channel was "Internal Monad", but he also used "Rite of Passage". Unlike what we have seen heretofore, with this revelation an actual explicit explanation for the choice of the name "Monad" was provided by the Michaels; there is no longer any need to infer its meaning by comparison with the explanation for the name "External" Monad.

The Revelation via Tolley

Whereas in previous sections, I have quoted the entirety of the Michaelian revelation of a channel on this subject, in this section on the Tolley revelation, only a portion of the complete revelation is quoted. One can use the Search function on the >our.truthloveenergy.com< website to get the entire revelation.

The transcription begins after this introductory paragraph. <u>Underlined</u> words are my emphasis, sometimes I interject clarifying words or phrases in [brackets], and my comments are interspersed between paragraphs of quoted material.

September 12, 2010 Troy Tolley, Channel Internal Monads

We have been asked to speak about the processes we have named "The seven Internal Monads." We can define "Internal Monads" in many ways, but here we will describe it as "the natural process toward wholeness," or "the structure provided for two parts of a whole to eventually manifest even greater than the

sum of those parts." An Internal Monad will always have two parts that are vital to the whole, but are eventually <u>resolved</u>, or comprehended, so that those two parts ARE the whole, and not divided.

So far as I know, this was the first time that the reason this phenomenon was referred to as Monads was provided, whereas in previous revelations the reason was not explicitly explained. The paragraph above is a description of the meaning of the Dialectic Principle: thesis + antithesis = synthesis. In the Michaelian teachings, the words for this are Cardinal + Ordinal = Neutral. When two complementary phenomena are resolved, then a whole, a Monad, is formed. For a thorough exposition on this subject, refer to the chapter "Monads" in my book *Study Papers on the Original Michaelian Group*.

There are Internal and External Monads: the External Monads are variations on relationships between fragments; whereas Internal Monads are variations on relationships with the self, or within the self. These Monads are ALWAYS about "manifesting", or generating a material counterpart as representation for that structure, process, and eventual wholeness. The External Monads are obvious in that they deal with the space and time between two incarnated fragments, but the Internal Monads are not often understood as having physical/manifested counterparts or representations, because they are often more abstract. However, these Internal Monads' physical/manifested counterparts are THE LIFE, ITSELF. As we describe each Monad, this may become more clarified and obvious....

My understanding of this quoted paragraph is that it is a reference to what I call the Feedback Principle. What this Principle means is that, even though the so-called "internal" monad involves processes that provoke changes within the personal self, the internal changes have repercussions in the external life of that person, so, of course, the environment of the person must be affected in response to the personal changes.

There are <u>seven</u> Rites of Passages/Internal Monads, and we will briefly describe each now. Each Internal Monad has <u>seven Stages within it</u>. Each Stage has a Positive and Negative Pole. Every process through an Internal Monad will mean entering the Negative Pole, then exiting from the Positive Pole for each Stage. This means that a "successful" Internal Monad would be completing the Seventh Stage in the Positive Pole, leaving the entire [Internal] Monad in the Positive Pole.

The alternative name for this phenomenon, Rites of Passage, originated with José Stevens, as documented in a previous section. The fact that it appears here tells me that Tolley read Stevens's book.

This revelation is different from previous revelations in two ways. First, the name "Internal Monad" is apparently referring to the 'plateau' (aka Life-Stage), as well as the 'cliff' (aka Milestone) that separates the 'plateaus'. It does not say so here, but it does not make sense to me to cram the seven Stages into a brief transition between Monads. That is not the way I experienced the Stages, and that is not the way it is described further on. Second, although it may have been hinted at in previous revelations, and although it could have been inferred from the fact that each Soul Age is made up of seven Levels, this is the first time in the progression of the Michaelian revelation, so far as I know, that it was stated explicitly that each Monad has seven Stages. That the seven Monads are said to have seven Stages is, of course, an instantiation of the Fractalicity Principle. That the Monads and Stages are said to have Positive and Negative Poles further reinforces my understanding that the Monads are a septenary that has the Septenarian Attributes, the same as the other developmental septenaries: Levels, Soul Ages, sub-Planes, and Planes. The Poles of the Stages are listed in the revelation that follows, but the Poles of the Monads are not explicitly named in the channeling that follows.

Because this revelation explicitly discusses the 'plateaus' rather than the 'cliffs', in this section I use the word that the revelation uses, namely Monad, to refer to 'plateau', thereby limiting the word Milestone to refer to 'cliff'. That the previous revelations have not clearly differentiated 'cliffs' and 'plateaus' makes the clarification by Tolley (and myself) seem awkward, unfortunately.

The seven Internal Monads are: BIRTH, AUTONOMY, INDEPENDENCE, MANIFESTATION, RECREATION, COMPREHENSION, and DEATH.

These may be called by different names through our various channels, but the basic information should remain consistent. Although each Rite of Passage is associated with various time frames represented by the ages of the Body, they are not specifically tied to those time frames. Different cultures and different societies and different Body Types will affect how the process of these Passages go. For certain cultures where life spans are only 20 years, versus other cultures where a lifespan may be 100 years, one can see how the Monads may play out differently. Those cultures and societies where life is more condensed tend to attract those who are working through Infant, Baby, and Young Levels [Ages], whereas Late Young, Mature and Older Souls tend

toward cultures, societies, and bodies that emphasize length of life. We include in these differentiations the reference to "society" because social constructs, even within the same culture, may emphasize life at different paces, and thus have different time frames relative to the Passages.

The paragraph quoted above seems to me to be a description of what I call the Feedback Principle, where there is interaction of internal and external worlds, where influences flow both ways, where both external and internal worlds are changed as a result of the interaction.

That being said, in general: [1] BIRTH is obviously at Birth, where [2] AUTONOMY is usually relative to the individual taking his or her first steps, and [3] INDEPENDENCE is relative to an individual separating his or her identity and primary resources from the influences of his or her caretakers (parents); [4] MANIFESTATION is relative to an individual returning to a sense of innocence and personal meaning about the self and life; [5] RECREATION is relative to an individual freeing himself or herself from the momentum of "purpose" and shifts into an emphasis on "enjoying life," or re-creating it; [6] COMPREHENSION is relative to the onset of whatever will end the life, and the individual's ability to come to terms with his or her mortality; and [7] DEATH, of course, is exiting the Physical Plane.

Many of our students <u>presume</u> that Birth and Death are Internal Monads that are a given [brief transition event], but that is not accurate. The successful completion of Birth is indicated by "staying alive". For the most part, this is marked by good health. If a body dies before the age of three, it did not successfully complete the Birth Monad. The successful completion of Death is indicated by the impact one's death has on those who remain physical. If those who remain are left devastated, deeply attached, and profoundly tied to the physical version of oneself, then one has not successfully "died". The death, itself, is only the beginning, and the [seven] stages involved are done post-death, by working with those still incarnated in processing the grief.....

This revelation explicitly extended the Death Monad past the death of the physical body. In channeling reviewed below, this revelation also extended the "Birth" Life-Stage backward to conception.

The paragraph above was key to my understanding of the entirety of the Tolley revelation about this phenomenon. Whereas previous revelations were ambiguous in their descriptions of 'cliffs' and 'plateaus', making it easy to "presume" that only the 'cliffs' were being described, this revelation explicitly indicates that the Monads are 'plateaus' filled with seven Stages that span the interval between 'cliffs'. (In my thinking, this revelation does not negate the original notion of Milestones as 'cliffs' between 'plateaus'.) Furthermore, this revelation solves one of the issues that troubled me from the beginning (there are six 'plateaus' between seven 'cliffs') by explicitly stating that physical death is the 'cliff' that precedes a 'plateau' consisting of seven Stages in the immediate afterlife.

Two long paragraphs that are irrelevant to my presentation of this subject are skipped here.

We have covered Birth and Death in terms of successful or unsuccessful completion, and we will now quickly describe the other five Internal Monads in terms of the same.

Positive and Negative Poles were not given in this channeling session for the first and last Monads, Birth and Death, other than to say that one is either "successful" in the case of birth and lives, or "unsuccessful" in the case of death when one dies and leaves 'unfinished business' in one's wake. That word "success" is appropriate for the Action Axis Septenarian Attributes, Ordinal Action in the case of Birth and Cardinal Action in the case of Death. The descriptions of the remaining five Monads provide clues for Positive and Negative Poles, but they are not explicitly named, as they are by two other channels as documented in the previous section (Yarbro) and in the following section (Marina-Tompkins).

The 2nd Rite of Passage, which is AUTONOMY and is initiated by the capacity to walk on one's own, is often tied to one's sense of [+]confidence. To the degree that one is confident is the degree to which this Internal Monad was completed. When we speak of "confidence" here, we are not speaking in terms of your being able to speak well in front of a crowd, but in terms of how willing one is in trying anything at all that is unfamiliar. This is not a matter of trying what one has no interest in trying, but in anything unfamiliar to you that you may have even the slightest interest in trying. This would extend into even those areas one must do for oneself because it is known that it is Good Work, even when one does not want to do them. For instance, going to an interview for a job that is important to you, even as you hate the interview process. A successful 2nd Internal Monad would mean that you do it anyway, even as you acknowledge the discomfort. That is Confidence in this context. An unsuccessful completion of a 2nd Internal Monad is often marked by classic [-]co-dependence, the inability to do much of anything without a reference to someone else. It is the inability

to walk on one's own. We do not refer to those who have physical disabilities, but anyone, regardless of mobility.

It does not explicitly say so there, but the description is consistent with other revelations that the second Monad spans all of childhood. The Positive and Negative Poles are not actually designated as such in the quotation, but I have designated them so, as shown in brackets, namely +Self-confidence and –Co-dependence. I see both of those Poles as having an emotional feel to them, which is consistent with my notion that the second Milestone correlates with the Septenarian Attributes of Ordinal Inspiration.

The **3rd** Rite of Passage, which is INDEPENDENCE, is initiated by the process of <u>separation</u> of identity from one's caretakers, and establishing the <u>self</u> as its own authority. The successful completion of the 3rd Internal Monad is marked by the capacity to provide for oneself. Providing for oneself does not mean <u>isolating</u> oneself as the only resource, but would include knowing when to ask for help, and how to receive that. The unsuccessful completion of this Internal Monad is marked by either having constant <u>combat</u> with anyone suggesting Authority, and/or resigning from the [+]<u>responsibility</u> of caring for oneself.

It does not explicitly say so there, but the description is consistent with other revelations that the third Monad spans the teens and twenties. Based on the description in the paragraph quoted above, I suggest that we can responsibly refer to the Positive Pole as +Responsibility and the Negative Pole as -Irresponsibility. You might have noticed this struggle in yourself or other people as they went through this Monad. Notice the underlined words, "separation" and "isolation". In the Yarbro revelation discussed in the previous section, the Poles were said to be +Differentiation and -Separation. These words are all consistent with my correlation of this Milestone with the "Analysis Process", which has the Septenarian Attributes of Ordinal Expression.

The **4th** Internal Monad, or Rite of Passage, which is MANIFESTATION, is initiated by one's <u>mid-life</u> <u>assessment</u> as a means to determine the <u>meaning</u> of the life lived so far, and then calibrating the life to an updated course or path so that <u>Essence</u> may manifest. Part of that process and assessment means looking into the past as far back as childhood, and in that looking, finding all of the things that you determined have defined you, made you happy, that have fulfilled you as a <u>child</u> or <u>teen</u>, and then nurturing that same innocence in your life as an <u>adult</u>. A successful completion means truly liking who you are, and embracing the playfulness of your life as you move deeper into it as an embodiment of your <u>Essence</u>, or core Being. An incompleted 4th Internal Monad is often marked by an attempt to replicate the life that was once seen as so innocent, locking the person into a state that desperately seeks <u>meaning</u>, importance, and purpose.

It does not say so there, but the description is consistent with other revelations that the fourth Monad spans the thirties through the fifties. Because of the lack of clear clues in this quotation as to the Positive and Negative Poles of this Monad, I propose +Meaningfulness and -Meaninglessness because they are consistent enough with the correlation of this Monad with the Septenarian Attributes of Neutral Assimilation. The manifestation of a person's Essence and the concomitant implementation of the so-called "Life Task" at the time of the fourth Monad imbues the life with its true meaning as distinct from the artificial meaning provided by family and culture during one's formative years. If a person does not successfully transit this Monad in the Positive Pole and move on to a higher meaning to their lives, then they either continue to be captured by the prevailing socio-cultural meaning of life, or they are cast adrift without any particular meaning to their lives, so that they are always searching, searching, searching. From this description we could perhaps surmise other names for the Poles, such as +Essence and -Personality.

The **5th** Internal Monad of RECREATION is marked by a realization of relief from the need for purpose, meaning, and <u>importance</u>, but finds the emphasis being upon those little things that make the life <u>worth</u> living (on your terms). The life is literally "re-created" in a way that is a new paradigm, [+] free from the burdens of navigation and direction, but entirely embracing of wandering, coasting, and [+] enjoying the view," so to speak. The successful completion would often show up as a new [+] enthusiasm for a layer of life that was once cluttered and clouded by over-eagerness and over-anticipation. There is a softness to the life in a way that was never experienced before, and a true [+] joy in many things that would otherwise be dismissed. An incompleted 5th Rite of Passage might show up as [-] bitterness, regret, anger, resentment, and disgust, sometimes concluding that life has no meaning or point, and therefore condemning anyone or anything to pointlessness and meaninglessness.

Based on the description, I would say that "Recreation" is best understand as "re-creation", with a meaning somewhat like the "re-invention" of who one is, now that one is, or should be, unencumbered in many ways from the stuff of one's youth. Based on the description, I suggest that we refer to the Positive Pole as +Rejoicing and the Negative Pole as -Regretting, positive emotions and negative emotions respectively. The emotional

tenor of the underlined words used in the description of this Milestone is entirely consistent with my correlation of this Milestone with the Septenarian Attributes of Cardinal Inspiration, and therefore the Higher Emotional Center. In the Natural Sequence schema, Cardinal Inspiration — exemplified by these words and this description — belongs to the sixth stage of the Natural Sequence, and that is what I do in in my Life-Stages reformulation of the Michaelian revelation.

And finally, the **6th** Rite of Passage, COMPREHENSION, is marked by the onset of that which will be the cause of death. This is the only Rite of Passage that can most-often be processed in a matter of seconds. A successful completion would show up as a [+]surrender to the reality of mortality, and a full [+]review of the life in a way that brings comprehension to the fact that one has lived and one is now dying. This can happen in a car crash, or in a long-term illness, etc. Time takes on a completely new dimension in this Passage. The incomplete Internal Monad here would show up as anything representing a rejection of mortality, ranging between [–]resignation, apathy, to delusion, dementia, and denial. In instances such as a car crash, the individual may actually "re-live" the entire life in new ways that account for corrections of betrayals, missed opportunities, etc., before actually exiting. That experience can be a means of review, or as a means of denial. [>https://our.truthloveenergy.com/topic/426-20100912-michael-speaks-internal-monads<]

My search for an understanding of why that name "Comprehension" was chosen led me to the Latin root, which refers to seizing or grasping something, which is an action, not a mentation. Perhaps you have heard of a "prehensile" tail, so called because it has the ability to hold onto something, such as a monkey's tail grabbing a tree branch. In the context of Milestones, I suggest that it does not allude only to mental understanding; I suggest that this word means that all dimensions of the entirety of the life, as it is ending, are fully seized or grasped. In my Life-Stages reformulation of the Michaelian revelation, this alleged "Sixth Rite of Passage" is actually the seventh and final stage of a Natural Sequence, and therefore has to do with Cardinal/Ordinal Action. As such, this Life-Stage is the sum total, the summing up, of the lifetime, 'as seen in the rear-view mirror', so to speak. Some of the words in the above description, such as "surrender" and "resignation", fit with my reformulation.

Based on that interpretation of Comprehension, and the description in that passage, I would say that +Surrender and +Review seem like good names for the Positive Pole of this Internal Monad, and that the word –Disengagement seems like a good name for the Negative Pole. What this means to me is that, in the Positive Pole, the person totally accepts the life as lived in the past, and is ready to launch into the future afterlife. In the Negative Pole, the opposite is the case.

Someone has conveniently gathered additional information about Tolley's revelation about Milestones in one place: >https://our.truthloveenergy.com/articles.html/library/personality-dynamics/internal-monads/<. It is so extensive that I do not wish to quote it and comment on it it here and now. The above analysis and synthesis is adequate to make the points that are most relevant to this chapter of this *History* book ... except for what is said in the next subsection.

Stages of the Monads

A previous revelation in 2003 states the following:

The 7 Internal Monads are the 7 Stages of each Soul Level within the Soul Ages. As a SOUL, we pass through a Soul Age having 7 Levels. On each of those Levels, we may take several lives to pass through that single Level. The 7 Internal Monads are the SUB-levels of each LEVEL within a Soul Age, and, of course, each Internal Monad has its own 7 phases. [>https://our.truthloveenergy.com/articles.html/library/personality-dynamics/internal-monads/internal-monads-general/the-seven-internal-monads-r416/<]

This is a partial acknowledgment of the Fractalicity Principle; it does not go further and say that the seven Soul Ages are a subset of the seven sub-Planes and sub-Planes are a subset of Planes. I have known of this Principle since 1981 because it was intuitively obvious that this was the case. It is acknowledged throughout the Michaelian teachings that the Planes follow the Natural Sequence, but it is not acknowledged that its subsets (Soul Ages) and sub-subsets (Levels) and sub-sub-subsets (Internal Monads) and its sub-sub-subsets (Stages) also follow the Natural Sequence; see below.

The following table provides information about the Positive and Negative Poles of the Stages extracted from a page of Tolley's website: >https://our.truthloveenergy.com/articles.html/library/personality-dynamics/internal-monads/first-internal-monad/the-7-stages-of-the-1st-internal-monad-r78/<. After the table, I provide commentary on the table. The fact that I provide commentary should not prevent the reader from studying the table on their own, for there own unique benefit, to increase their own unique understanding.

| Table 4Qc — MONADS and their STAGES per TOLLEY | | | | | | | |
|--|---|--|---|---|--|---|---|
| INTERNAL MONADS → STAGES ↓ | [–Failure] BIRTH [+Success] (Instinctive) | [-Co-dependence] AUTONOMY [+Self-confidence] (Higher Moving) | [-Irrespon- sibility] -Separation ADOLESCENCE INDEPENDENC' +Differentiation [+Responsibility] (Moving) | [+Meaning-fulness] -Acquiescence STABILIZAT'N +Self-realization [-Meaning-lessness] (Emotional) | [-Regretting] RECREATION [+Rejoicing] (Intellectual) | [-Disen- gagement] REVIEWING COMPRE- HENSION [+Surrender] (Higher Emotional) | [-Failure] DEATH [+Success] (Higher Intellectual) |
| INITIATION | -Orchestration | -Division | - Rebellion | -Indifference | -Anxiety | - <u>Grief</u> | -Attachment |
| (Instinctive) | +Conception | +Differentiation | +Exploration | +Enthusiasm | +Awareness | +Nostalgia | +Transition |
| INTROSPECTION (Emotional) | -Invasion +Formation | -Agitation +Observation | -Self-conscious' +Consciousness | -Brooding +Awareness | -Regret +Reflection +Appreciation | -Negotiation +Meaning | -Denial |
| REALIZATION | -Disruption | -Mimic | –Demands | -Separation | -Resentment | -Grudging | –Return |
| (Intellectual) | + <u>Awareness</u> | +Consonance | +Ideals | +Freedom | + <u>Acceptance</u> | +Acceptance | +Detachment |
| MANIFESTATION | -Division | -Activity | –Anger | -Otiose | -Punishment | –Panic | -Devastation |
| (Moving) | +Presence | +Mobility | +Choice | +Purpose | +Revitalization | +Dying | +Review |
| CONTENTMENT | -Development | -Provocation | -Resentment | -Contention | –Overwhelm | -Resignation | –Haunting |
| (Hi'r Emotional) | +Mutualism | +Curiosity | +Responsibility | +Satisfaction | +Vividry | +Surrender | +Reunion |
| MAGNETIZATION | -Cooperation | –Demanding | –Aloneness | -Repulsion | –Burden | -Suffering | -Fragmentation |
| (Hi'r Intellectual) | +Agreements | +Asking | +Support | +Attraction | –Bonding | +Hospice | +Integration |
| EMANATION | -Disintegration | -Violence | -Conclusivity | -Incongruity | -Collapse | -Numbness | -Dependence |
| (Higher Moving) | +Vitality | +Coordination | +Confidence | +Alignment | +Transcendenc | +Peace | + <u>Transcendenc</u> |

My comments on this table are as follows:

- The first row shows the names of the Monads and their Positive and Negative Poles to the extent that I could find them on the TLE website (not shown in brackets), or infer them from the descriptions of the Monad (shown in brackets). Only two Monads were explicitly given Positive and Negative Poles that I could find. If one were to show the ranks of the Monads in this table, from left to right they would be FIRST to SEVENTH.
- 2. The columns below each of the seven Monads show the Negative and Positive Poles of the seven Stages within that Monad. If one were to show the ranks of the Stages in this table, from top to bottom they would be FIRST to SEVENTH.
- 3. Regarding the Positive and the Negative Poles of every Monad and Stage, Tolley's channeling says that a person enters at the Negative Pole, and that it is hoped that the person exits at the Positive Pole. Therefore, the way to follow the timeline in this table is to start at –Orchestration in the upper left cell of the INITIATION Stage of the first Monad, proceed down that column ending at +Vitality in the EMANATION Stage, then go to –Division in the top cell of the INITIATION Stage in the second Monad, and so on until one arrives at the +Transcendence Pole of the seventh Stage of the seventh Monad, shown in the lower right cell of the table.
- 4. I **bolded** the names of the Negative Pole of the first Stage and the Positive Poles of the seventh Stage because it was suggested to me by another student that these names could be used as the Poles of each Monad. Take a look and see what you think.
- 5. I <u>underlined</u> names for Poles that appear more than once: Transcendence, Grief, Acceptance, and Awareness. These are scattered around the table in no discernible pattern. Some people might be okay with that repetition, but it is an ambiguity that I find troublesome. When first giving these names, it was said that: "As we are sharing these through Troy now, we may find the words to require refinement at

- some point, but these are quite acceptable." Take a look and see what you think. These repetitions underscore the difficulty of finding just the right word for some names of some components of the Overleaf System. I agree with the channeling itself, that the repetition of words indicate that this offering is primitive and preliminary; it needs more work if it were ever to reach a mature formulation. Not that there is anything wrong with that; maturity and optimization of conceptualization is something that many of us aspire to.
- 6. In parentheses in the first column and in the first row, the table shows the Centers that Tolley's channeling correlated with the Monads and the Stages respectively. Tolley's channeling correlated Centers with Monads one way and correlated Centers with Stages within Monads another way, such that the two ways only match in one Center, namely the first Monad/Stage as being allegedly correlated with Instinctive Center. No explanation is given for these correlations, and no explanation is given for this difference between Monads and Stages so far as I have been able to discover by reviewing the channeling on the TLE website. My preference, of course, is to correlate the Centers of both Monad and Stages with the Natural Sequence schema, which I regard as the canonical developmental septenary. Recall that the Natural Sequence schema ranks the Centers this way:

 Moving > Emotional > Intellectual > Instinctive > Higher Intellectual > Higher Emotional > Higher Moving. It bothers me when we are given information unaccompanied by explanation and of which I can make no sense on my own. Therefore, I do not default to credence about this particular channeling about the Negative and Positive Poles of the Stages within Monads. Nor do I lend credence to other channeling not supported by evidence or argument; that is what Validation means to me.
- 7. When I first read about the 'cliffs' and 'plateaus' when I was in my mid-thirties, although I already assumed that the 'plateaus' were subdivided into what Tolley referred to as Stages, I did not pay enough attention to the nature of the Stages to validate what their nature was. I did not have a clear notion of the Natural Sequence until my mid-forties, so did not know what to look for. Even now, I wonder if these names for Stages and their Poles can be Validated by personal experience.

Concluding Comments on Tolley's Revelation

Before we move on to another Michaelian revelation about the Internal Monads, a few comments about Tolley's contribution are in order.

- Tolley's revelation is the only revelation focused on the 'plateaus'; all seven of the others that are reviewed in this chapter are focused on the 'cliffs'.
- Tolley's revelation provides *an* answer to my two issues that I revealed near the beginning of this chapter. My Life-Stages schema provides *another* answer; please continue reading.
- Tolley's channeling says the Stages are a subset of the Monads, and that the Monads are a subset of the Levels, and that the Levels are a subset of the Soul Ages. Tolley's channeling says (documented elsewhere in this *History* book) that Levels and Soul Ages follow the Michael Math Sequence (refer to Chapter 2C in Part Two, "Proposed Sequences of Overleaves"), which is the repetition of a claim made without evidence in the "Michael Math" chapter of *MMFM*. My research indicates that development through seven archetypal stages actually follows the Natural Sequence, not the Michael Math Sequence, and this is documented in my book *The Tao of Cosmogony*. Monads and their Stages (and Levels and Soul Ages and sub-Planes and Planes) are developmental sequences; therefore they follow the Natural Sequence.
- Furthermore, according to Tolley's channeling, the Centers are said to correlate with the Monads and with the Stages within the Monads, but the two sequences of Centers are not in the same order, and neither sequence follows the Michael Math Sequence or the Natural Sequence. Unless there is a damn good explanation for this, this discrepancy seems like an actual contradiction to me within Tolley's own channeling, as well as being at variance with the evidence external to the Michaelian teachings. Here again I say that there is an abundance of evidence that development through archetypal stages follows the Natural Sequence in instantiations that can be Validated, so we should do so with the Monads and their Stages, which might not be so easy to Validate.
- Tolley channeling correlates the Instinctive Center with the first Monad (and the first Stage), and I
 could go along with that if it were indicated that Monads and Stages require a preliminary
 foundation, namely the foundation of physiology, which is a pre-stage to the psychology of Monads

- and Stages. I understand the so-called "Instinctive" Center to be about physiology, as documented in this *History* book, in Chapter 4F, "The Instinctive Center". More will be said about correlation of Centers with Monads in the section on my so-called "Life-Stages" further on.
- Personally, I learned about the Monads at age 34 and started to notice my progress through them at that time. Even though the existence of Stages within Monads (per the Fractalicity Principle) was not revealed in those early days of the Michaelian teachings, I noticed myself going through Stages. That is, my life would be cruising along the 'plateau' of a Life-Stage, then at some point I came up against a minor 'cliff'. At that time, my trajectory ceased to be meaningful, and I entered a limbo zone or mild identity crisis in my consciousness and way of being, where the previous way of doing/being did not work any more, and I had to 'take a break' until a new identity emerged. When I came out of the limbo zone, I made whatever 'course correction' was appropriate for the next Stage or Monad, and life seemed meaningful again. I could trace these Stages throughout my fourth Monad, but then lost interest in tracking them, even though I still went through them in my fifth Monad starting at about age fifty.
- Regarding the seven Stages of the seven Monads, another channel who recognizes and acknowledges and describes this is David Gregg; see further on.

A year after Tolley channeled the above description of the Milestones and their Stages in 2010, a member of the Yarbro group published a book that provided names for the Milestones and their Positive and Negative Poles.

Milestones (Turning Points) per Victoria Marina-Tompkins (2011)

About two years after Mature Scholar Steve revealed proposed names and Poles for the Internal Monads, and a year after Tolley published some of his more recent channeling on the Internal Monads, a Michaelian channel named Victoria Marina-Tompkins published an entire book on the subject, *Spiritual Turning Points: A Metaphysical Perspective of the Seven Life Transitions* (2011). Note that the name, "Turning Points", is different from what we have seen previously for the same phenomenon. She had been a member of the Yarbro contingent of the Michaelian teachings during the 1980s and 1990s, but she affiliated herself with the non-Yarbro contingent when Sarah Chambers emerged from anonymity in the mid-1990s. She is also a channel, but she did not present the book as if it were channeled, and when reading it one can tell that it obviously was not. However, it does provide names for the Turning Points, and names for their Positive and Negative Poles. Some of these differ to some degree or another from the names given by Yarbro. Such differences are not uncommon when channels do not know of, or exactly abide by, each other's work. This is not to say that one is right and one is wrong; we can learn from both, as we do when different sources prefer different names for Overleaves and their Poles. What is obvious is that Marina-Tompkins duplicated the information that Mature Scholar Steve revealed as coming from the closed Yarbro group, even though she substituted some of the names, mostly with synonyms.

The Revelation via Marina-Tompkins

Marina-Tompkins defines an Internal Monad:

An Internal Monad is a process that is self-contained and experienced by one fragment as a result of a necessary and pivotal developmental phase. The monads are a process through which maturation occurs....

Anthropologist Vic Turner defined the concept of *liminality*, a threshold state where what has been known is fading away and what will be does not yet exist. In his seminal book, *Transitions*, William Bridges introduced the concept of three transitional segments, including a beginning, limbo or neutral state, and an end. Modern psychology includes Jean <u>Piaget</u>'s stage theory, Erik <u>Erikson</u>'s eight stages of human development, and B. F. Skinner's studies in child development. All recognize progressive natural stages of human development.

The addition of the spiritual or soul perspective is a key element in understanding these life transitions and helps us to validate the higher truths of reincarnation that are not considered in traditional psychological theories. The combination of higher spiritual perspectives with the aforementioned psychological studies provides a well-rounded understanding of the nature of human evolution. [Spiritual Turning Points, pp. 19-20]

Piaget and Erikson are featured in my DevPsy Thesis. My suggestion is that it would be Good Work for Michaelian students to supplement their knowledge of the Milestones by reading that document.

Beyond that, I chose to not quote extensively from her book. Instead, I suggest that you purchase it for yourself, from its on-demand publisher, at >https://www.xlibris.com/en/bookstore/bookdetails/589033-spiritual-turning-points<. It is also available from Amazon, of course, at >https://www.amazon.com/Spiritual-Turning-Points-Metaphysical-Perspective-ebook/dp/B079K7W8M6/ref=sr_1_1<. On Marina-Tompkins's website, >http://flightofthehawk.com/Articles/index_michael_basics.html<, she has provided some discussion of the Turning Points.

Rather than quote material from the book or the website, in this section I only provide the names and the Poles of the Turning Points as given in her book, and they are shown in the following table:

| Table 4Qd — TURNING POINTS per MARINA-TOMPKINS | | | | | | |
|--|----------------------|-------------------|---------------|-------------|--|--|
| RANK | NAME | POSITIVE POLE | NEGATIVE POLE | BOOK PAGE | | |
| First | BIRTH | +Vitality | –Life | p. 23 | | |
| Second | IDENTITY | +Self-identity | -Narcissism | p. 38 | | |
| Third | INDEPENDENCE | +Independence | -Separation | p. 57 | | |
| Fourth | CRISIS/MANIFESTATION | +Self-realization | -Acquiescence | pp. 77–78 | | |
| Fifth | REVIEW | +Appreciation | –Evaluation | pp. 132–133 | | |
| Sixth | FATALITY | +Catharsis | -Capitulation | p. 138 | | |
| Seventh | DEATH | +Transcendence | –Fatalism | p. 160 | | |

Some of the names of the Turning Points and their Poles are different from what Mature Scholar Steve said, but it is obvious to me that both Mature Scholar Steve and Marina-Tompkins got their information from the same source, perhaps Yarbro herself or some other channel in her orbit. This is not surprising, because Marina-Tompkins was affiliated with one of the channels who was affiliated with Yarbro. For your convenience in making the comparison of the above with the work of others, I provide a table further on, Table 4Qg, that shows these names and Poles as given by Marina-Tompkins along with those names given by Mature Scholar Steve and by Troy Tolley and by myself.

Interestingly enough, Marina-Tompkins divides the fourth Turning Point into two chapters, the first chapter concerned with the "Crisis", and the second chapter concerned with the "Manifestation". This implies to me that she was aware that there is a 'cliff' and that there is a subsequent 'plateau'. However, this is not to say that she perceives the situation as I do, namely that the alleged Crisis/Manifestation Turning Point (age ~35 to ~65) is actually two Life-Stages (age ~35 to ~50 and age ~50 to ~65).

Concluding Comments on Marina-Tompkins Revelation

Before we move on to the next Michaelian revelation about this phenomenon, a couple of comments about Marina-Tompkins's contribution are in order:

- As part of the discussion of the Death Turning point, the book had somewhat to say about the afterlife. Thus, this revelation is in agreement with some other revelations that the seventh Milestone is the beginning of the afterlife, that Death is the 'cliff' and there is a 'plateau' afterwards.
- This revelation does not add anything of significance to our understanding of the abstract structural framework or pattern of this phenomenon; in that regard, it does not progress beyond what was previously revealed. Per my way of understanding things, it is vitally important to understand not just the content of the phenomenon, but also to understand the context that a repeated pattern provides all up and down the fractal of time cycles at various scales. When one knows that there is a correlation between repetitions of the fractilic cycle in the Great Chain/Nest of Being at its various time scales, one can compare and contrast the information given about one cycle and apply it to the other cycles.
- However, the *Turning Points* book is nearly two hundred pages long, so, by reading it, Michaelian students might glean some useful, practical insights about the phenomenon. In other words, the information provided in this book could enhance their actual lived experience as they transit the Turning Points, regardless of my concerns about theoretical and structural matters. And the

knowledge provided in that book could help readers to tolerate and accommodate and even value the lived experience of other people who are transiting the Turning Points. Even though I must say that I personally enjoy solving interesting intellectual puzzles presented by contradictions between various Michaelian channels, I must also say that it is more important for students to apply the information that we get from the Michaels in our lived experiences.

There is only one more Michaelian revelation to review before I launch into a discussion of my Life-Stage schema.

Milestones per David Gregg (~2020)

A lengthy exposition about this phenomenon can be found at the following internet Michaelian teachings website: >https://www.michaelteachings.com/stages-of-life.html<. The website is maintained by David Gregg. I would say that it is very informative and useful in terms of our practical lived experiences. Read it and you will see what I see, namely that he has given the phenomenon a lot of thought and done considerable channeling. In Table 4Qg, I show the names that Gregg gave to the Monads; they are identical to those given by the Yarbro contingent and published by Mature Scholar Steve.

The Revelation via Gregg

There is little that I need to say about Gregg's revelation. For the most part, the information is all good in terms of its conformity with the Michaelian revelations of other channels. However, I do have a few quibbles that I deem to be worth discussing. In the following relevant quotations, I <u>underline</u> some key words for emphasis, calling attention to what I am commenting on, I put some clarifying comments in [brackets], and I provide commentary between blocks of quoted text.

The internal monads, as described by Michael, do not encompass an entire <u>life stage</u> as depicted in Western psychology. In fact, much of the life is not spent in a monad at all. The monads are <u>thresholds</u> to pass through; <u>transitional</u> periods that after they end the life continues on.

So, 'right off the bat', we see that Gregg defines a "Monad" differently than Tolley does; Gregg uses the same word for the 'cliff' that Tolley uses for the 'plateau'. I prefer to attribute this difference to semantics rather than to regard it as an actual contradiction, because, as we will see further on, their descriptions of the 'cliffs' and the 'plateaus' do not substantially differ. One of my purposes in this chapter is to clarify the muddle that we see in the Michaelian teachings regarding this phenomenon; muddles naturally arise when the teaching is filtered through different channels. (In fact, the entirety of Part Four of this *History* book exists to clarify muddles created by various channels when they discourse on the structural components of the Michaelian teachings cosmology.) In the remainder of this section, I will use the words 'cliff' and 'plateau' to make a distinction that I regard as important, a distinction that was made in the original revelation, but that has not been made by all revelations.

Note in passing that I prefer to refer to this phenomenon as "Life-Stages". I chose this term, partly because that is an alternate name that Gregg uses, and partly because it is a name that "Western psychology" uses — I happen to like what Western psychology has to say about the phenomenon; refer to my DevPsy Thesis. It is a Good ThingTM when empirical science cnfirms valid channeled revelations. (It is also a Good ThingTM when empirical science dis-confirms bogus channeled revelations.)

These cycles found in the Michael teachings that seemingly <u>repeat themselves</u> on <u>all levels</u> show the unlimited expression of <u>how growth works</u> in the Universe. Similar to being cast from the Tao, the internal monads portray a mini <u>reenactment</u> of a <u>grand cycle</u>, where we are flung from the wholeness of all that is, find ourselves reduced to a fragmented state, and then journey back again to the grandeur of oneness. All of life <u>follows this pattern</u>, from a micro level to macro.

Obviously, that is a restatement of what I refer to as the Fractalicity Principle. I find it to be troublesome — and I say so, troublemaker that I am — that the implication of this Fractalicity Principle is not fully understood and fully appreciated and fully elaborated. The implication — my elaborate discourse on what is said in that paragraph — is that all iterations or instantiations of the nested fractal follow the Natural Sequence, just as the Planes do, the Planes being the longest *developmental* ("how growth works") *cycle* (the so-called "grand cycle") in the fragmentation and the reintegration of the Tao.

The Internal Monads are the seven stages of an individual Soul Age Level. To expand on the idea, there are five soul age stages in a reincarnational cycle; Infant, Baby, Young, Mature, and Old. In each of these [Soul

Age] stages, there are seven levels that must be passed before moving up to the next soul age.... Narrowing it down further, the internal monads represent the seven sub-stages of each soul age level....

That correlation of the "Monads" with the Soul Ages is a start, but it does not go far enough; it is deficient in two ways. First of all, Gregg regards the Monads as the 'cliffs' between 'plateaus' but the Soul Ages are all about 'plateaus', so how does that work? I perceive the need for a distinction as part of a clarification, but apparently Gregg does not. Second of all, Gregg does not explain any of these various septenaries in terms of the Septenarian Attributes that are common to them all; he says that there is a universal "pattern" of the nested fractal from 'top to bottom' and from 'beginning to end', but he does not explain here, or even describe, the pattern. The entirety of my book *The Tao of Cosmogony* does that.

Because each monad <u>builds on the previous</u> one, you <u>must</u> finish each stage <u>in order</u>. The lessons are sequential, and not mastering them would be like taking trigonometry before learning algebra. This <u>progression</u> of monads augments the earlier lessons, and they energetically ascend like a staircase. Jumping ahead is akin to removing a tread and riser from a segment of the stairs and leaving a gap that prevents climbing further.

Obviously, that is a restatement of what I refer to as the Hierarchy Principle, which is the notion that experience is cumulative in some way. For instance, the understanding of mathematics must progress from simple to complex, to use the analogy that Gregg used. This Principle provides an argument that all of the developmental septenaries must of necessity follow the same "pattern", aka sequence, as the Planes do; some things are not a matter of choice or contingency; the Tao has made some decisions about how the universe is structured, and that is that. Thus, the Natural Sequence is metaphorically like a 'law' of physics.

Before graduating to a new soul age level, the seven monads must be completed in the positive pole.... The complication is that the internal monads often begin in the negative pole, which explains the inner turmoil that occurs.... A monad is finished when the challenges have been addressed, the lessons learned and any issues properly resolved in the positive pole. Leaving a monad from the negative pole can result in staying there in all subsequent monads, or not completing them in that lifetime.

Obviously, this is a restatement of what I refer to as the Dialectic Principle (Negative + Positive = Neutral, Ordinal + Cardinal = Assimilation). Here again, I see some possible confusion in that Gregg has not made a distinction between a Monad as a 'cliff' and a Level as a 'plateau'. What I say next is theoretical guesswork, but my suggestion is that the Dialectic Principle applies to both the 'cliff' and the 'plateau', but it happens in two different ways, the 'cliff' way and the 'plateau' way. My suggestion is that the 'cliff' is a chaotic zone between two 'plateaus'; passing through it goes from the Negative Pole to the Positive Pole as stated above; so far as I can tell, the 'cliff' does not consist of stages. Several revelations mention the Poles of the 'cliffs', so my supposition is defensible on that account. However, in the case of all 'plateaus', they have an ordered (not chaotic) structure, so the passage is through three Ordinal, a Neutral, and three Cardinal phases. A couple of revelations (Tolley and Gregg) mention the Stages of the 'plateaus', so that notion is defensible on that account. How the individual transits the chaotic 'cliffs' is more idiosyncratic and creative than how the individual transits the predictable 'plateaus'.

Gregg has more to say about the Poles of the 'cliffs':

With their inherent duality, the internal monads are like two sides of a coin. They are almost Dr. Jekyll and Mr. Hyde in nature, where the positive pole represents the true personality of the soul, and the negative pole reveals a shadowy side that lives in fear and illusion. Much anxiety and internal conflict is created by this tug-of-war, and it is not resolved until the lessons of transition are accepted and peace made with them. Learning to manifest essence at a higher percentage should be an obvious way to complete more monads in the positive pole. Think of essence as similar to the life-affirming radiance of the sun. If one has a vitamin D deficiency (which can lead to depression) the suggestion is normally to get more sunlight. Hence, false personality is a symptom of not receiving enough light from essence. The lower the manifestation of essence, the higher the likelihood of struggling with the internal monads.

On this account, one could refer to the generic Positive Pole of all 'cliffs' as +Essence and the generic Negative Pole of all 'cliffs' as -Personality. Recall that, from Tolley's description of 'cliffs', I derived the generic Positive and Negative Poles as +Success and -Failure. Another suggestion, my own (see further on), is to name them +Chaos and -Void.

The time between each monad ['cliff'] is called the inter-monadal period ['plateau']. When a monad is completed, many years may go by before the arrival of the next monad. The internal monads are never a

non-stop progression from one monad to the other. A passage of time exists in-between where no work is being done on a monad. An internal landscape of peaks and valleys exists, with long stretches of plateaus, followed by occasional obstacles that hinder passage.

However, further down this lengthy web page, there is discussion of the so-called "monadal phase", apparently another name for this "inter-monadal period", and it is said to have seven stages. It is not as if there is no structured progress, as seems to be implied here. I have said it before and I say it again: there is revolution ('cliff') and there is evolution ('plateau').

Do the Internal Monads give a taste of all the Soul Age Lessons in each lifetime?

To a limited degree, this is true. Our caveat is that while the internal monads survey [recapitulate] these perspectives [Soul Ages] in each lifetime, they are not burned into the psyche as intrinsic values. The third monad, for instance, will mimic the young soul's need to come into one's own during that period, to create financial stability through a career, to lay a foundation for the life ahead, both through individual agency and alliances with others on a similar path. Young soul objectives then flavor the 3rd monad. And this goes for a baby soul entering the third monad or a 7th level old. Remember, though, these are ephemeral tastes only; not lifelong perspectives that shape the entire incarnation. The primary soul age and level are the overriding value system that guides the soul. But to a limited degree, as we said, the first monad conveys a taste of the infant soul perspective, the second monad, the baby soul, the third monad, young soul, the fourth monad, mature soul, the fifth monad, old soul, and the last two monads, a brief peek at what is yet to come.

What was said there is consistent with the notion espoused in this entire chapter on Life-Stages, namely that when we focus our discernment onto the 'plateaus' between 'cliffs', we find that the Monads can be mapped onto the other developmental septenaries that are components of the Overleaf System, namely Levels, Soul Ages, sub-Planes, and Planes. Thus, it is reasonable to expect that all four sizes of time-cycle would have the same Septenarian Attributes arranged in the Natural Sequence. What Gregg said here affirms that there is a correlation in terms of Soul Age; what Tolley said in a previous section affirms that there is a correlation in terms of Centers. What neither of them affirms is that the correlation of 'plateaus' with the other developmental septenaries is per the Natural Sequence; it seems that that affirmation task has fallen to me.

Not only do the 'cliffs' have Positive and Negative Poles, there is the Neutral option also:

.... Even the internal monads are subject to the eternal dance of duality on your plane. A monad may be completed in the positive or negative pole, with an alternative choice of abdicating the monad altogether, a neutral decision. In occurrences of <u>abdication</u>, indifference marks the process and the life moves forward without addressing the pivotal life lesson. The choice to abdicate is a valid one and may occur during lifetimes when a fragment does not want to feel overwhelmed by too many growth–inducing experiences....

That makes sense to me, it fits the pattern of the Dialectic Attributes (Cardinal, Ordinal, Neutral), I like mutually-supportive patterns, so I include this little revelation in my Life-Stages chapter.

Gregg had a lot more to say about abdicating Monads and completing Monads, and then his web page moved on to a description of each Monad. These are well worth reading, but they do not contribute very much to my purposes with my Life-Stages chapter, which is to provide an analysis and synthesis of the structural components of the Life-Stages septenary within the context of the other developmental septenaries revealed in the Michaelian teachings.

I will say this: Gregg's description of the Fifth Monad (Life Review) is excellent (I went through it in my sixties). In my Life-Stages schema, this 'plateau' has the Cardinal Inspiration Attributes, which belong to the sixth stage in the Natural Sequence schema; this shows up in Gregg's and the Michaels' choice of such words as: "+Appreciation, –Evaluation, assessment, joyful/painful, regret, overwhelm, depression, humility, playful, healing, letting go, downsizing, kindness, gratitude." Recall from the discussion of Tolley's work that this same discrepancy occurred there.

However, I will also say this: Gregg's description of the seventh Monad, the Death Monad, speaks of the transition to the Astral Plane as the 'plateau' that follows the 'cliff'. This revelation is consistent with several other revelations reviewed in this chapter, but it is inconsistent with the description of the Fifth Monad as having sixth stage qualities, aka Cardinal Inspiration Attributes.

"The Seven Stages Within Each Monad"

That is the title of a section on the web page that discusses Gregg's understanding of this phenomenon.

In addition to the channeling about Monads correlating with Soul Ages, Gregg's channeling agrees with Tolley's channeling that each "monadal phase" has seven Stages. I understand this to refer to each long 'plateau' after each short 'cliff' having seven subdivisions:

Beginning with each monadal phase, from one through seven, the incarnating soul is gradually opening itself to new perspectives that challenge the fragment to expand the sum of self-knowledge about itself and how the life journey relates to the rest of the world. Each monadal phase, therefore, is a crucial marker in how to assess the progress of the journey and evaluate any divergent paths that result from following a particular fork in the road. Indeed, the monadal phases represent forks in the road, and there is much to be learned from the road not taken. To clarify further, envision each phase as a checkpoint where the map that charts the possibilities of your life has run off the edges of a map and the next monad represents a new map. A new monadal phase then presents an opportunity to reinvent your life, to discover new ways of doing things, to make choices that break free from the shackles of routine, and renew the flow of life when it becomes stagnant. The individual function of each monadal phase [Stage] closely coincides with [recapitulates] the developmental progress [Monad] of the personality as it ages from birth to death. Certain psychological changes, often linked to cultural rites of passage, are obvious markers that loosely coincide with the advent of a particular monadal phase; however, it is important to acknowledge that these designations are not set in stone.

The underlined sentence is yet another restatement of the Fractalicity Principle: the seven Stages are a subset of the seven Monads are a subset of the seven Levels are a subset of the seven Soul Ages are a subset of the sub-Planes are a subset of the seven Planes. This means to me that all developmental septenaries have the same Septenarian Attributes arranged in the Natural Sequence.

The revelation provided names for the "monadal phases": INITIATION, INTEGRATION, PRODUCTION, CONSOLIDATION, EXPANSION, APPRECIATION, and COMPLETION. These mostly make sense if you compare them with the descriptions of the Monads. The name are also sometimes reminiscent of the descriptions of the Levels within the Soul Ages; they *should*, if one accepts the validity of the Fractalicity Principle and the Natural Sequence schema applied to canonical developmental septenaries.

After this paragraph of introduction to the notion, they provide a description of each Stage — see Table 4Qe below. Compare these names with the names given in Tolley's revelation: INITIATION, INTROSPECTION, REALIZATION, MANIFESTATION, CONTENTMENT, MAGNETIZATION, and EMANATION. Note that Gregg's names agrees with Tolley's names in only the first Stage, INITIATION. To make the two revelations fit with each other seems like a stretch to me, but readers should check Gregg's and Tolley's websites and draw their own conclusions about how compatible or incompatible these two revelations are. To facilitate that comparison and contrast, I provide the following Table 4Qe, which you can refer to while you read what they have to say. Text in the Tolley column applies to the Stages of the Fourth 'plateau', and was extracted from >https://our.truthloveenergy.com/articles.html/library/personality-dynamics/internal-monads/fourth-internal-monad/the-7-stages-of-the-4th-internal-monad-r74/<; I was unable to find a generic description of Stages that applied to all seven Stages, maybe there isn't one. Text in the Gregg column was extracted from the website linked at the beginning of this section.

| Table 4Qe — STAGES within MONADS | | | | | |
|--|---|--|--|--|--|
| Stages per Tolley | Stages per Gregg | | | | |
| Stage 1 — INITIATION (+Enthusiasm –Indifference) This stage is hardly noticeable since you have only just placed your consciousness into the new context. This stage relates to the <i>Instinctive Center</i> , therefore "kicking in" the Monad without the individual being particularly conscious of this. Indications of the initial stage are usually marked by enthusiasm and anticipation. A simple delight in your potential future or accomplishments. Since this is simply a technical reference, and not really measurable enough to recognize, we suggest using the signs of the Second Stage as a starting point, possibly "working back" to a point where you might have seen the initial stages begin to manifest. Most will find there was a point when there was either a sudden enthusiasm that "something" was different, or a definitive point wherein the fragment feels further removed from its own life. This Stage, then, evaluates your sense of Trust. | The task of the <i>first</i> level is INITIATION . As the new monad is activated, an energetic framework gets established, creating the scaffolding, so to speak, from which the necessary work on each successive level of the monads can be built on. Since this means, on an energetic level, structures from previous monads must come down, the abrupt change from the old to the new can be distressing and cause considerable stress. Change, especially when it involves the inner world of an incarnated soul, can be a daunting challenge, with the shock of the transition exacerbated further by the necessity of something ending to make room for something new. | | | | |
| Stage 2 — INTROSPECTION (+Awareness –Brooding) This stage is heavily marked by dread, anxiety, and intense Introspection. Depending on your resistance and your Overleaves, you may experience anything from a realization of your personal worth and a positive realization of your life's impact, or virtual self-implosion and self-degradation. Different cultures will respond to this Stage depending on parental upbringing and definitions of Authority. This is an introspective stage in the context of a Monad to evaluate accomplishments and plans, so there may be a processing of a Scary Parent or issues with Authority you have carried around being belittled for your "mistakes", decisions and choices and expression. In that processing, you may experience a new sense of connection to "something" more like a Supportive Parent or Authority from within to gently nudge and concur with you through the life. This Stage evaluates your perceptions of Authority and your reaction to your sense of self-importance and self-value. Stage 2 brings up energy from the <i>Emotional Center</i> . | The task of the <i>second</i> level is INTEGRATION , learning the rules of the road. At the second monadal phase, the incarnating soul begins to integrate the lessons of the monad on a conceptual level, comparing old ways of doing things against a growing urge to test out a new paradigm for how to approach life. The inherent balancing act should be obvious, with the soul frequently feeling out of kilter or off-balance during this phase. Successfully integrating the new paradigm is the goal necessary for completing this phase. | | | | |
| Stage 3 — REALIZATION (+Freedom –Separation) This Intellectually-centered Stage begins to release the ideas of the past as a source for the future. New ideas and identities will emerge here. Most realizations will be reserved for inner exploration, but, nonetheless, a change has taken place in how the individual views its expression as a part of a larger picture. On the more expansive side, one knows what must begin to be done, and starts to anticipate a general plan, not always with clarity, but with a certainty that "something must be done". On the more constricting side, one begins to pull back from the future and "hide within", or away from external reflections. This stage evaluates your perception of Responsibility. This Stage usually lasts the longest, especially in the Fourth Internal Monad, as you probe your beliefs. | The task of the <i>third</i> level is PRODUCTION . At this monadal phase, the soul has integrated the rudiments of the monad — although considerably more fine-tuning will be needed — with an attempt to make the most productive use of the lessons in the world. The new paradigm is now fully developed, creating a template that the soul may model themselves on as they live their new way of being and test it against the world around them. This can be a difficult phase, with a push/pull effect as the soul expands their boundaries causing reactions and friction with others, with the result that the world may push back every time the frustrated explorer attempts to push forward. The key to getting productive during this phase is to express the new way of being without infringing on the boundaries of others. | | | | |

| Table 4Qe — STAGES within MONADS | | | | | |
|---|---|--|--|--|--|
| Stages per Tolley | Stages per Gregg | | | | |
| Stage 4 — MANIFESTATION (+Purpose –Otiose) This Stage brings energy out through the <i>Moving Center</i> as you begin now to express to yourself, and others, more confidently what/who you are. In the context of the Fourth Monad, it is where you begin doing or, at least, pursuing/discovering what you are pulled to do as a reflection of your "contribution" and original Tasks. Successful movement through this is seen as a comfortable expression of your daily activities and endeavors. Resisting this Stage and remaining here would result in sluggishness, ineffective portrayals of self, and sometimes rage/anger in place of empowerment. This stage explores your concepts of Purpose. | The task of the <i>fourth</i> level is CONSOLIDATION. At this phase the incarnating soul has begun to consolidate the lessons required to complete the monad and must now take stock of what stands in the way, specifically internal challenges, some of them hidden in recesses so deeply entrenched that they had never encountered them before. A period of sorting things out exists during this phase, mostly at an internal level, and not as much attention on external activities. Much reflection is given to what has transpired in the earlier phases, and preparation, based on the accumulated data, is carefully collated to make plans for the final half of the monad. The fourth phase could be thought of as a way station where the cargo carried gets assessed and evaluated before continuing on to the next part of the journey. While considerable work gets done at this level, the sense of internal strife is considerably less, and for that reason some souls are content to remain at this phase and not continue further. This is a valid choice and work not completed during this monad will be readdressed in the next lifetime. In metaphoric imagery, the fourth could be seen as the eye of the hurricane. | | | | |
| Stage 5 — CONTENTMENT (+Satisfaction –Contention) Finally you begin to feel/see some satisfaction from your progress through the Internal Monad. In the context of the Fourth Internal Monad, whether you have completed or accomplished a Task becomes irrelevant against the contentment of what you choose to do. In this Stage, you realize the amount of density you have been containing and you begin to "lighten up" about your movement. In the positive pole you will see personal happiness now becoming a factor in your decisions, and in this Fourth Monad, you've released treasured securities found in the oppressive/elusive "big plan or PURPOSE", and find this more appropriate guide. Otherwise, the negative pole finds an individual always at odds with their environment, always in a state of contention and debate about their worth/purpose. This stage evaluates your perceptions of Love. The Higher Emotional Center is highlighted here. | At the <i>fifth</i> phase of EXPANSION , the preliminary studies and testing are complete and the incarnated soul is ready to ramp things up, as it were. The work is now about expanding the outward reach of the new perspective, and the change within is now an external reality at all levels of expression. This phase is about getting the bigger picture of what the monad entails and putting it into practice in an expanded way. | | | | |
| Stage 6 — MAGNETIZATION (+Attraction –Repulsion) In this Stage, you now begin to draw in your agreements, Karma, and Support for new perspectives, or reconnect/stabilize existing ones. The positive pole maintains clear communication, acknowledgment of Traveling Companions, and a more accurate view of the future. You now see with clarity the long-term impact of your efforts alongside the current "demands". Those who find themselves in a state of rejection, isolation, and depression, have chosen to experience the negative pole. A sense of deep longing begins to unfold in the negative pole of Stage 6, since so much has been deemed "unacceptable". This stage opens you to your perceptions of Truth. [Higher Intellectual Center] | At the sixth phase, a level of APPRECIATION for the new perspective that helps lead the soul to attain ever-increasing levels of awareness. The soul continues to grow in his level of awareness, and now seems to incorporate his new understanding in ways that impact the people around him. Finding the greater good and using his new perceptivity to enrich and elevate the lives of those around him becomes part of a mission to make the lessons learned from the monad more meaningful and profound. We hesitate to say this is a state of evangelism, but one of the prerequisites for completing this phase in the positive pole is that the gifts of the internal lessons are used to help others, thus validating his comprehension of the monad and putting it to use. | | | | |

| Table 4Qe — STAGES within MONADS | | | | |
|---|--|--|--|--|
| Stages per Tolley | Stages per Gregg | | | |
| Stage 7 — EMANATION (+Alignment –Incongruity) In this stage you find the peace of routine that becomes you. A sense of wholeness returns and "getting back" to your life. In the positive pole, alignment occurs with Essence; in the negative pole, life becomes incongruous and sporadic in nature, with no bearing. Regardless of the pole, you will emanate your sense of self at that point with no resistance. This stage engages your Higher Moving Center, and examines Beauty, or Energy. It is important here to note that a completion of the Monad does not necessarily mean a "positive" completion. In most cases where the negative pole becomes emphasized, completion is not reached due to the internal degradation and combustion that occurs along the way. Many do complete the Monad, however, within parameters acceptable to them that would technically be regarded as the negative pole. This is the choice of the individual and has no bearing on their being a "good" or "bad" person; we do not say this, nor do we imply this. We merely state the differentiation between what is expansive and self aware, and what is not. The negative completion is not expansive or self-aware, relatively speaking. | At the <i>seventh</i> phase a satisfying sense of COMPLETION awakens. The remaining task involves tying up loose ends and anything learned before. More specifically, the monad is now considered mastered to the extent that the new way of being may be fully expressed and carried forward into the world where the insights are tested in the pageantry of life — a life that now seems considerably different than before, but ripe with possibilities for new choices and new opportunities for growth. | | | |

My comments on this table are as follows:

- 1. Although I do not expect any two channels to bring through the exact same wording, it seems to me that there should be some similarity in the general ideas regarding the same subject. Here with this subject, the same as with other subjects reviewed in other chapters (e.g. Body Types, Chakras, Colors) here in Part Four, where the channels may not have known about the work of other channels, the differences are more than I can reasonably reconcile; the mental gymnastics required are beyond my sensibilities. Discrepancies of that magnitude impel me to question if one is right and one is wrong or if both are wrong, so I look for Validation outside of the channeling.
- 2. My suggestion is that there are a couple of reasons for these differences. Besides the unreliable nature of channeling itself, there is the problem that the Septenarian Attributes of the developmental septenaries are inconsistently correlated with Sub-stages, Life-Stages, Levels, Soul Ages, sub-Planes, and Planes. And my suggestion is that the reason for that is the lack of awareness of the universal applicability of the Natural Sequence, from the shortest developmental time-cycle to the longest developmental time-cycle. I believe that the solution is as simple as coming to realize and acknowledge the fundamentality of the Natural Sequence in developmental septenaries.
- 3. So, obviously, Gregg's channeling explicitly confirms the notion that the pattern of the Milestones is the same as the pattern of the other developmental septenaries, namely Levels and Soul Ages, but in my estimation the exposition could have developed the notion much further. It seems unfortunate to me that the revelation only begins to fit the 'plateaus' into the Overleaf System; it does not go all the way; it does not describe in detail how the Septenarian Attributes apply to the 'plateaus'. I suggest that to do so would further edify the Michaelian student body. I regard it as my main contribution to the understanding of this phenomenon that I have done exactly that.

Life-Stages per Shepherd Hoodwin (2013)

Shepherd Hoodwin in his book *Journey of Your Soul* (2013) briefly describes the seven Milestones over a couple of pages (239-240), but this contribution does not actually contribute anything of significance to what is reviewed elsewhere in this chapter. Therefore I will not quote it or comment on it further.

Eight channels who provide information about this phenomenon have been reviewed in this section and previous sections. In the next section, though not as a channel but as a thoughtful student of the Michaelian teachings, I add to all that I said above, and provide even more analysis and synthesis of the phenomenon, for your thoughtful consideration.

Life-Stages per Philip Wittmeyer (2022)

Here and now is the place and time to review what got us to where we are, and announce where we are going, in this chapter about the phenomenon of Life-Stages.

- 1. When I see that there are discrepancies in what two others have to say, I see three possibilities: that one is right and the other one is wrong or *vice versa*; that they are both wrong; that they are both right when understood from a more integrated level of understanding. My preference is that I arrive at the last of these possibilities, but often I find that the truth is one of the other possibilities. Consequently, as you read my presentation in this section, you will see that I retain and synthesize as much of the revelation as I can, but that I also reject the pieces of the revelation that either 1) do not fit with other revelations, and/or 2) do not make sense in one way or another, and/or 3) that do not fit with the empirical evidence that academic DevPsy researchers have seen. For the most part I have accepted the revelation as given, but I have also added to it; it is hoped that readers will likewise add what I offer to their understanding.
- 2. In addition to the revelations about this phenomenon within the Michaelian teachings, there is an enormous amount of academic research about it outside of the Michaelian teachings. There it is called developmental psychology, and I have documented my research in my DevPsy Thesis, which can be found in my book *The Tao of Cosmogony*. In the Michaelian teachings communities, awareness of DevPsy seems to be minimal, and my DevPsy Thesis is intended to remedy that.
- 3. The research documented in my DevPsy Thesis allowed me to resolve some of the defects and deficiencies that I discerned in the Michaelian teachings revelations about the Life-Stage phenomenon. For instance, the Michaelian revelations mention that the Planes have the Septenarian Attributes arranged in the Natural Sequence, but do not mention that the Life-Stages (and Levels and Soul Ages) do likewise. As with all other aspects of personality, understanding the Life-Stages is augmented when one knows their Septenarian Attributes, and when one knows their context within the entire range of development, from the shortest to the longest septenarian time cycles in the Great Chain/Nest of Being.
- 4. Based on what I learned in my study of DevPsy, I regard it as useful to the Michaelian student body that I propose a schema that varies somewhat from the composite of the eight revelations reviewed above. The revelations provide an answer to the issues raised at the beginning of this chapter, but then they introduce other issues in the form of contradictions and ambiguities. As we will see further on, my schema conforms more to the DevPsy research, which deals only with psychological development; it ignores physiological development before birth, and it ignores soul development after death. My proposed schema has seven 'plateaus' bracketed by eight 'cliffs', with physical birth as the beginning 'cliff' and physical death as the ending 'cliff'. Therefore, I suggest that this schema might work better in terms of our lived experience. This schema requires me to divide one of the Internal Monads of the Michaelian revelation into two Life-Stages; I make that division within the fourth 'plateau'.
- 5. It is at that location in the septenary of Milestones that my septenary of Life-Stages parted ways with the revelation. I did so because 1) I focus on the 'plateaus' whereas the revelations typically focus on the 'cliffs'; 2) many developmental psychologists have identified a significant 'cliff' at about age fifty, halfway through the fourth Milestone; 3) I personally had a 'cliff' at that age. I refer to this interpolated Life-Stage as "SENIORITY". Thus, the 'plateau' following the fourth Milestone does not span from age 35 to age 65; rather, it ends at about age 50. My proposed fifth Life-Stage spans from about age 50 to about age 65 and has a description not found in the Michaelian revelations. This interpolation shifts the ranks (and the descriptions) of the Cardinal Life-Stage one rank higher: what is referred to in the revelation as the 'plateau' after the fifth Milestone is my sixth Life-Stage ("ELDERHOOD"), and what is referred to in the revelation as the 'plateau' after the sixth Milestone is my seventh Life-Stage ("DYING"). The seventh Milestone in the revelation, DEATH, is the eighth 'cliff' in my schema, and the 'plateau' afterwards is not mentioned.
- 6. In several chapters in this *History* book it has been useful to note how the so-called "Taijitu Tango Principle" applies to the subject of that chapter. This was often done where some instantiation of the Natural Sequence was being discussed. One of my claims is that the Life-Stages are a Natural Sequence, and therefore the Taijitu Tango Principle applies to it. Recall that the Taijitu Tango

Principle refers to a paragraph in the "Michael Math" chapter of *More Messages from Michael:* "You can perceive that [from the point of view of space, being, noun] while one is ordinal and seven is cardinal, that [from the point of view of time, doing, verb] the first half is cardinal and the last half is ordinal — in other words, the pattern 'doubles back on itself'. This is what is implied by the 'yin-yang' symbol, and it would probably be of use to keep the 'yin-yang' in mind while considering what we tell you of the function of levels and numbers." [MMFM, p. 189] One way to explain what this means in regard to Life-Stages is that the lifetime starts out with the most vitality and ends with the least vitality and is therefore entropic, thus Cardinal Action and Origination Process (Birth Milestone) progresses to Ordinal Action and Termination Process (Death Milestone), but on the other hand the Life-Stages are also syntropic in that they start out with an emphasis on the earlier-lower-outer Moving Center and end with an emphasis on the later-higher-inner Excitation Center.

7. More will be said about all of these additions and modifications where appropriate in this section.

In summary, this section is 1) a synthesis of what we learned about Life-Stages from the Michaelian revelation reviewed in previous sections; 2) a synthesis of the Life-Stages into the theoretical framework of the Septenarian Attributes, a pattern that is found in the other developmental septenaries of the Michaelian revelation, namely Levels, Soul Ages, sub-Planes, and Planes; 3) a synthesis of what we learn from empirical research in the realm of developmental psychology, as documented in my DevPsy Thesis. Obviously, Michaelian students can learn from all three of these resources.

Reviewing Natural Sequence Principles in the Life-Stages

Most of the Natural Sequence principles are found in the descriptions of the Milestones and Life-Stages when we consider the body of channeled work on the subject as a whole, as well as my alleged contribution. These principles may not be explicitly mentioned as such in all sources, but they are implied in the various descriptions here and there, so if one knows what to look for they become obvious.

- HIERARCHY PRINCIPLE: The Life-Stages are obviously a developmental psychology consisting of stages, with each stage built on the foundation of the previous stage(s), over the story arc of an entire lifetime. What we learn in one Life-Stage is predicated on what we learned in the previous Life-Stage(s).
- TRANSITION PRINCIPLE: The Life-Stages are all circumscribed and delineated by 'cliffs' that signal the troubled tumultuous traumatic transition from one Life-Stage to the next. The 'cliffs' are followed by 'plateaus'.
- ATTRIBUTION PRINCIPLE: The Life-Stages fit into the system of Attributes just as the Overleaf System does. The Dialectic Attributes are Ordinal, Neutral and Cardinal; the Axial Attributes are Action, Inspiration, Expression, and Assimilation; together these constitute the Septenarian Attributes. The descriptions of the 'cliffs' in the Michaelian revelations do not make their Attributes obvious, but the descriptions of the 'plateaus' in some of the revelations declare that there are correlations with *some* of the Septenarian Attributes (Centers and Soul Ages). My schema of Life-Stages makes the correlation explicit. It is only if one accepts the notion that the Life-Stages are a standard Septenary per the Natural Sequence schema, as the Levels and Soul Ages and sub-Planes and Planes are found to be, that one can impute the Attribution Principle to the Life-Stages. I regard this information as one of my most significant contributions to the discussion of this phenomenon.
- DIALECTIC PRINCIPLE: The most typical name given to this phenomenon, "(Internal) Monad", signifies that a transition is a so-called "dialectical" process, because in the Michaelian teachings a Monad is said to consist of an Ordinal experience and its complement, a Cardinal experience; they resolve and balance into a unified experience that provides complete understanding of the experience after being seen from both sides. And not only does the 'cliff' between Life-Stages involve the Dialectic Principle, so does the 'plateau'. As stated at the beginning of this chapter on Life-Stages, one of my goals with the study of their descriptions was to find the best names for them and for their Positive and Negative Poles. Michaelian students and teachers have been doing this for the Traits of the Overleaf System from the beginning of their revelation, and various names have been given to the Levels (which are a subset of the Soul Ages) and their Poles; names have been given to the Levels (which are a subset of the Soul Ages) and their Poles, so naturally the same procedure would be applied to the Life-Stages, which are a subset of the Levels as recognized by some of the Michaelian sources, and according to the Fractalicity Principle.

- FRACTALICITY PRINCIPLE: It is obvious, and is even stated explicitly by several revelations, that the Life-Stages septenary is nested within the Levels septenary, which is nested within the Soul Ages septenary. I add the notion that the Soul Ages are nested within the Planes septenary. More than one revelation has said that the 'plateaus' themselves are divided into seven sub-plateaus.
- FEEDBACK PRINCIPLE: The interactions of self and environment are mentioned numerous times in the descriptions of the Life-Stages. Besides that, the Personality self and the Essence self are continually involved in a metaphorical 'dance' with each other and with the environment, actively and passively. These feedback interactions are what propel people forward in life; this is one of the ways that we learn.
- ME-WE PRINCIPLE: The notion of a swing between ego-centric and socio-centric phases of each Life-Stage is not found in any of the Michaelian revelations. This is another instance where some of the developmental psychology researchers that are reviewed in my DevPsy Thesis have noticed something in their empirical research that the revelations do not mention explicitly. Specifically, I call attention to the "Emergent Cyclical Theory" of Clare Graves and the "Spiral Dynamics" theory of Don Beck and the "Ego Development Theory" of Suzanne Cook-Greuter. Even though this Me-We swing was not noted explicitly in the revelations, it exists implicitly in the Sub-stages of each Life-Stage in the form of three Ordinal Sub-stages and three Cardinal Sub-stages. I regard the information about this Me-We Principle as one of my significant contributions to this discussion of the Life-Stages.

More About 'Cliffs'

You might recognize that the Transition Principle is the same as the so-called "Mid-Cycle Principle" that is discussed in chapter 4L, "The Mid-Cycle Discrepancy". Briefly, Yarbro proposed that there was a special transition Level between the Third Level and the Fourth Level within each Soul Age, and it was said to have characteristics of both of those Levels. This notion was contradicted by Chambers's channeling, so my suggestion was to somewhat reconcile the two channels, salvaging the specific idea by elevating it to a general principle, that being the notion that there are transitions between *all* of the Levels, not just the third and the fourth. Thus, the Mid-Cycle Principle that was applied to the Levels becomes the Transition Principle as applied to the 'cliffs' between the Life-Stages. In fact, I suggest that there is an awkward transition zone between all developmental stages in the Michaelian cosmology. That would include Planes, sub-Planes, Soul Ages, and Life-Stages, not just Levels.

To further describe these 'cliffs', I cannot do better than to quote what I said in that chapter about the Mid-Cycle Principle:

... in this section I propose an understanding of the Mid-Cycle that salvages as much of the original description as seems reasonable to me. Then it goes beyond merely salvaging the concept as much as possible; it uplifts it to the status of a general principle, and that is why I capitalize the phrase as the Mid-Cycle Principle.

Looked at from a practical and functional point of view rather than as an "excruciating exegetical exercise" or a "doctrinal disputation dissertation" (such as I often indulge in in this book), even if the Level Overlap (LO) as Yarbro described it is a real phenomenon, its value seems insignificant and therefore negligible. Often we can hardly discern and validate via dueling channels and personal perceptions what a person's Soul Age is, let alone a person's Level, let alone this alleged LO.

What good then is the notion of the LO? I suggest that the LO should be elevated to a *general* principle, the Mid-Cycle Principle, if you will. This principle would be applied to the transition between all steps in various manifestations of the Natural Sequence during a lifetime — and transcending lifetimes — not just the transition between Third and Fourth Levels. In other words, in any major life transition, behavior, feelings, and thoughts can blend ("overlap") between old and new ways of being, or alternate ("inconsistent or contradictory") between old and new ways of being, during the transition from one relatively stable and well-defined stage to the next relatively stable and well-defined stage. We may call this an "identity crisis" — because that is the common name for this common phenomenon. One might vacillate between old and new identities, or go blended for a while, until it all gets sorted out and stabilized in the new stage. There are many self-help psychology books devoted to methods for successfully traversing traumatic transitions. By understanding that one is going through a rough or empty phase, one can better deal with the "slings and arrows of outrageous fortune" (Shakespeare) between more stable periods in life. Whereas the original understanding of the Mid-Cycle is fairly useless, this understanding — of the many transitions and transformations from stage to stage that we go through many times in our lifetimes — is genuinely beneficial.

There is even a mythic and psychological name associated with this phenomenon, namely "metamorphosis". Wikipedia has an article on it: >https://en.wikipedia.org/wiki/Metamorphosis<. The archetypal example of this process is that the caterpillar spins a cocoon around itself, the contents of the cocoon turns into mush, a butterfly forms in the cocoon, and then this new, very different form emerges, nothing like its former self. This biological phenomenon is often adopted as a metaphor for the similar psychological phenomenon of 'death' and 'transition' and 'rebirth' into a higher state of consciousness, a transformation so significant that the person feels like a new and different person; the old person has metaphorically 'died' and the new person has been 'born anew'. If this has not happened to you, to some degree/extent or other, at some time or at some times in your life, you are a rare individual.

I suspect that what I am calling the Mid-Cycle Principle goes deeper than ordinary phenomena in the psychological and biological worlds; there is perhaps also a physics instantiation that is more than metaphorical. And that is why I want to elevate the mid-cycle to the status of being a general *principle*, the Mid-Cycle.

A physics analogy is the well-known Schrodinger's cat, a stand-in for what is called a superposition of two opposite states. You know the story: the cat is said to be alive and dead at the same time, until the "state vector collapses" when an "observation" or "measurement" requires a definite state to appear. Perhaps we exist in a state of 'quantum superposition' when we are going through a big change, metaphorically equivalent to what was called "overlap" in the channeling. When one is in a transition phase, one does well to take a good hard look at one's life, and notice what needs to change, so that one can be stabilized in a different and definite state. I have another analogy to share with you.

The science of information theory is about signal versus noise. There is a reciprocal relationship of signal versus noise, which simply means, the more of one the less of the other. In information theory, there are two states where there is no discernible information content in a data stream; I call these the –Void state and the +Chaos state. If there is no signal/noise at all, that can be called –Void; if there is only noise and no signal, that can be called +Chaos. You are familiar with these opposite, information-free states in a television set, first as a television turned off, such that there is nothing on the screen, and then as a television tuned to no station, such that there is only 'snow' on the screen and 'static' in the audio. We could liken these two states of a physical system to two states of a psychological system and also call them "+Chaos" and "–Void". Both states represent an absence of what is called "information"; the person is feeling "I don't know who I am anymore". This approach might also provide an answer to the question above about the Positive and Negative Poles of the mid-cycle. In regard to the Mid-Cycle Principle let us say that the "inconsistent" type of transition is +Chaos and the "overlap" type of transition is –Void.

There are other ways to explain the Poles of a transition. In the –Void condition of the transition, one is in *neither* the prior nor the following state; in the +Chaos condition of the transition, one is in *both* the prior and the following state. In the –Void condition, one is passive, 'adrift at sea in the doldrums', waiting for an inner signal about where to go from here. In the +Chaos condition, one is active, restlessly searching and experimenting, 'scanning the horizon', looking for an outer signal about where to go from here. My guess is that introverts experience more of the –Void condition, and that extroverts experience more of the +Chaos condition. In either Pole, the future life of the person is metaphorically in 'incubation' or 'gestation'; it is 'pregnant' with possibilities. What the outer-world objective state of 'noise' and the inner-world subjective state of the Mid-Cycle transition lack is a 'signal' — a distinct and stable identity. Oftentimes we are metaphorically sailing through life 'merrily rowing our boat gently down the stream', and then we come upon some rapids with rocks and waterfalls buffeting us about — "Shift Happens", as the bumper sticker says. Perhaps we vacillate/oscillate/teeter between stages as speculated above — metaphorically equivalent to what was called "inconsistent or contradictory" behavior, feelings, and thoughts in the channeling. I suggest that if you find yourself in one of these vacillating +Chaotic or ambiguous –Void states, take it easy for a while: center yourself, don't make any big decisions, and 'take a break' until the craziness passes.

Personally, I have found that the Mid-Cycle Principle has shown up unmistakably during my lifetime. There has always been a –Void and a +Chaos at the transition between Life-Stage, and at the seven Sub-stages within each Life-Stage. During those times, I just have to 'bide my time' while the psyche does its thing getting from one Life-Stage or Sub-stage to the next Life-Stage or Sub-stage. During the metamorphoses, the past seems meaningless, the present seems directionless, and the future seems amorphous. Therefore, I do not make any life-changing decisions or major course corrections during the transition. So far, I have never failed to emerge out of the +Chaos and/or the –Void, and so when that happens I just get on with the next 'chapter' of my life 'story' because it again has meaning, direction, and form.

As I understand it, per the discussion of the Mid-Cycle Principle discussed above, the Milestones as a group have the Positive and Negative Poles of +Chaos and -Void, but individually they have the Positive and Negative Poles as indicated in the various revelations; the names given to them are various, but to me they seem correct enough for all practical purposes.

Another process that happens during a 'cliff' is a repudiation of the previous Life-Stage and an embrace of the subsequent Life-Stage. By this I mean that one first realizes that the old being/doing is not working any more and should be rejected, and then this evolves into an attraction to a new way of being/doing. This rejection/acceptance process might emphasize thoughts and/or emotions and/or behaviors.

Not all 'cliffs' are created equal; they can be categorized into major, medium, and minor transitions (or primary, secondary, and tertiary). You might have already surmised this from the descriptions given above. The major 'cliffs' are between Life-Stages, the medium 'cliffs' are in the middle of the Life-stages (in the fourth Sub-stage, in the phase between the Ordinal/Me triad and Cardinal/We triad of Sub-stages), the minor 'cliffs' are between Sub-stages.

Tabulation of Life-Stages

After much consideration and much pondering, I have come up with the following table. Take a look, compare this with what is said in this chapter and my DevPsy Thesis, and see if my insights add to your insights. If you do not like some or all of my suggested improvements, then, of course, since the Michaelian teachings community has not arrived at a consistent orthodoxy, you are free to come up with your own. (You are free, as I am, to have your own ideas even if/when the Michaelian teachings community does have a consistent orthodoxy.)

| Table 4Qf — LIFE-STAGES per WITTMEYER | | | | | | | | | |
|---------------------------------------|---|---|---|---|--|------------------------------------|--|--|--|
| DIALECTIC | -ORDINAL- (ME) | | | =NEUTRAL= | +CARDINAL+ (WE) | | | | |
| AXIAL | ACTION | INSPIRATION | EXPRESSION | ASSIMILATION | EXPRESSION | INSPIRATION | ACTION | | |
| DIMENSION | -1-D- | -2-D- | -3-D- | =P-D= | +3-D+ | +2-D+ | +1-D+ | | |
| DIRECTION | BACKWARD | DOWNWARD | OUTWARD | COMPLEX | INWARD | UPWARD | FORWARD | | |
| RANK | FIRST | SECOND | THIRD | FOURTH | FIFTH | SIXTH | SEVENTH | | |
| CENTER | мотіон | EMOTION | INTELLECT | IMPULSE | CONCEPT | SYMPATHY | EXCITATION | | |
| LIFE-STAGE | +Coordination INFANCY -Clumsiness | +Socialization CHILDHOOD -Co-dependence | +Independence YOUTH -Irresponsibility | +Authenticity MIDDLE-AGE -Falseness | +Legacy SENIORITY -Self-indulgence | +Gratitude ELDERHOOD -Regret | +Anticipation DYING -Disengagement | | |
| AGE RANGE | 0 > 2 | 2 >13 | 13 > 35 | 35 > 50 | 50 > 65 | 65 > 75 | 75 > 80 | | |

My comments on this table are as follows:

- 1. Because Life-Stages are a developmental septenary, it is appropriate to here remind the reader how the Taijitu Tango Principle applies to it. This Principle was discussed in several previous chapters, but it is convenient for the reader if I provide a brief and basic review. This Principle means that, in terms of Being (noun), the first triad (First, Second Third ranks) is Ordinal and the second triad (Fifth, Sixth, Seventh ranks) is Cardinal, but in terms of Doing (verb), the first triad is Cardinal and the second triad is Ordinal. One can get a feel for that inversion of Dialectic Attributes if one reverses the left-to-right sequence of the septenaries shown in the top six rows of this table (except for Rank), and then thinks deeply about what it means.
- 2. Michaelian sources other than myself in Charts #23 and #24 and Yarbro in Chart #18 have not explicitly correlated Septenarian Attributes with the Life-Stage phenomenon. Tolley correlates them with Centers and Gregg correlates them with Soul Ages, but this is not the same as going all the way to the full acknowledgment that the Life-Stages are an instantiation of the Septenarian Attributes arranged in the Natural Sequence. It is my informed opinion that this reflects a deficiency in their understanding. This chapter is dedicated to an improvement of that understanding.

- 3. DIALECTIC: The first row shows the names and the Signs (-, =, +) of the Dialectic Attributes that apply to the columns below this row.
- 4. AXIAL: The second row shows the names of the Axial Attributes that apply to the columns below this row.
- 5. The combination of Dialectic and Axial Attributes yields the Septenarian Attributes. Septenarian Attributes apply to the Life-Stages in the same column. The Septenarian Attributes can be codified and understood in terms of a couple of mathematical concepts having to do with the structure of space and time, specifically geometric Dimensions and vectorial Directions:
- 6. DIMENSION: Dimensionality with Signs (-, = , +) is another way to express the nature of the Septenarian Attributes. The meaning and implication of Dimensionality as it applies to the Natural Sequence is explained in detail in my book *The Tao of Personality*. Briefly, Dimensionality has to do with space/time geometry in physics and time/space 'geometry' in personality. The difficulties of climbing the 'cliffs' (metamorphoses) between Life-Stages ('plateaus') are caused by the change in Septenarian Attributes (aka Dimensions and Directions and Signs) in the transition from Life-Stage to Life-Stage.
- 7. DIRECTION: Directionality is also explained in detail in my book *The Tao of Personality*. Briefly, this has to do with the mathematical framework called the Cartesian coordinate system, which is typically applied to motions in objective physical space/time, but can also be applied analogically to 'motions' in subjective psychological time/space. The names of the directional vectors shown in the table are so self-evident and intuitively obvious that they are commonly used as metaphors in our language when referring to 'where we are headed' in our lives.
- 8. RANK: In Michaelian revelations, the Milestones are often times ranked 'first' through 'seventh' rather than named. The ranking sequences are consistent even though the names are not consistent from revelation to revelation.
- 9. CENTER: My preferred names for the Centers are shown in the sixth row, and they are arranged per the Natural Sequence. Tolley's revelation correlated the Life-Stages with Centers (in an erroneous way), and I agree that it is useful to understand the Life-Stages as those intervals where/when a person is emphasizing the development of the corresponding Center. This is especially apparent in the first three Life-Stages, and the progression has not gone unnoticed by DevPsy researchers even though they are unaware of the notion of Centers as understood in the Gurdjieff and Michaelian teachings.
- 10. LIFE-STAGE: This row shows my names for the Life-Stages and their Positive and Negative Poles. These names and Poles take into consideration developmental psychology models more than they do Michaelian sources, because the Michaelian sources have been more focused on the 'cliffs' and I am more focused on the 'plateaus', as should be the case when correlating them with the Septenarian Attributes. I have not chosen names and Poles for the 'cliffs' that bracket the Life-Stages; for that, you should refer to the work of those other sources who are reviewed in this chapter, and to the work of developmental psychologists reviewed in my DevPsy Thesis.
- 11. AGE RANGE: The last row of this table shows how many years old a typical or average person is during each Life-Stage, assuming that a full lifetime is eighty years, which is about average in first-world countries at the present time in the history of humankind.

The Life-Stages, as I have come to understand them based on extensive research, are described in the next sub-section.

Brief Descriptions of Life-Stages

In my DevPsy Thesis, I review the work of more than a dozen academic researchers who have spent their professional careers studying human lifespans and looking for a standard or typical pattern in the stages of those lifetimes and the transitions from stage to stage. I have taken account of this research in arriving at the names and descriptions in this subsection. This adds significantly to the Michaelian revelations about the subject, because Michaelian sources were focused on the 'cliffs' rather than on the 'plateaus', which is what I am focused on.

Of course, there is no single lifetime that follows the idealized pattern perfectly as described below, but the agreement of channeling with professional observations provides reason to believe that there is a general pattern that sorta kinda fits the majority of people as they go through their lives. It is impossible to do justice

to this phenomenon because of the diversity and uniqueness of individual experiences of this phenomenon, both in terms of their 'cliffs' and in terms of their 'plateaus', but we researchers do the best that we can in the space and time allotted to us.

Immediately after the name of the Life-Stage, I show the Sign and the Dimension ascribed to that Life-Stage.

GESTATION (-0D-): It makes sense to me to regard the nine months of development of the physical body in the womb as the Zeroth Life-Stage. This fits with at least three other developmental septenaries reviewed in this *History* book: 1) in the Gurdjieffian teaching, the so-called "Instinctive" Center had to do with physiology (not psychology or personality), so I refer to it as the zeroth Center; refer to Chapter 4F, "The Instinctive Center"; 2) in Chapter 4J,"The Seven Chakras", I noted differences of opinion about the locations of three lower chakras, thereby counting four of them, so I proposed a reconciliation by referring to the so-called "Root" chakra as the zeroth chakra, ascribing physiology to its function, whereas the first through seventh chakras are related to functions higher than physiology; 3) Maslow's Hierarchy of Needs was discussed in Chapter 4F, and his lowest of eight Needs also had to do with physiology, so I numbered it as the zeroth Need to bring its rank numbers into alignment with numerous other instantiations of the Natural Sequence schema. Perhaps with some study, one could discern a division of this Gestation stage into seven sub-stages of the development of the fetus *in utero* per the Fractalicity Principle.

INFANCY (-1D-): This Life-Stage has the Septenarian Attribute of Ordinal Action. Overleaves that correspond to this Life-Stage are Submission, Martyrdom, Cynic, *Infant, Motion*, Warrior, and Perseverance.

The first transition occurs at birth; the transition being from *in utero* to in the world. Newborns operate entirely from awareness of the body and its instinct for survival — sleeping, eating, eliminating, crying, and so on. The plateau lasts just one to two years, during which there is much sensing of the body as it moves around (a "ME" Ordinal function) and much sensing of the environment (a "WE" Cardinal function), in addition to experiencing physiological bodily functions. It is important that infants receive much stimulation of the five senses in order to nurture their developing body/brain system. If this does not happen, then the infant will not thrive; severe physical problems will likely result. In the extreme case, an infant can even die of "sensory deprivation". You cannot "spoil" the infant with "too much love (physical care)" at this stage. It is also essential for a healthy infant that they be allowed to experiment with their bodily movements at first, during the Ordinal/Me phase, and then explore their environment second, during the Cardinal/We phase, while they are being protected from physical harm. If this does not happen, the remainder of their lives could be stunted in many ways, because the foundation of self-competence and self-trust has not been established.

As an instantiation of Ordinal Action, during the Infancy Life-Stage, it is the Motion Center that is undergoing the most development. The development of the infant's Emotion Center and Intellect Center are near minimal during this Life-Stage; the Centers higher than Moving are not required for physical survival in infancy. I suggest that an appropriate name for the Positive Pole is +Coordination, which means that the infant learns to operate the physical body well, and learns to operate the body well within the environment. I suggest that an appropriate name for the Negative Poles is -Clumsiness, which is obviously the opposite of +Coordination. An infant that gets stuck in the Negative Pole is likely to continue to act awkwardly within themselves and outwardly toward others and the environment for the remainder of the life. Infancy is by nature a time of clumsiness, but the positive function of allowing -Clumsiness to run its full course is, of course, for the infant to learn by 'falling down' and learn by 'getting back up' repeatedly, until the basic task of operating the physical body rebounds to +Coordination.

CHILDHOOD (-2D-): This Life-Stage has the Septenarian Attribute of Ordinal Inspiration. Overleaves that correspond to this Life-Stage are Reduction, Lowliness, Stoic, *Child, Emotion*, Server, and Repression.

The second transition usually occurs sometime during the third year of life. Infants become aware that they are separate from the environment and from other individuals. They then realize that they are physically dependent upon those others, and that they are affected emotionally by them. The plateau of childhood lasts until adolescence. It is important that children receive emotional and social support, that they have a safe, fun, close, affectionate, and comforting family environment, and that they receive esteem from their playmates and classmates. They must come to realize that they are valued, or severe emotional problems will likely result, such that maladjustment and unhappiness

could potentially beset them during the rest of their lives.

It makes sense that after the first Life-Stage (when its physical needs are presumably taken care of by attentive parents) during the plateau of the second Life-Stage, which takes about a decade, the child finds that it is a member of a family and lives in a community of playmates and schoolmates. Therefore it needs to have its emotional and social needs taken care of by family and friends in order to thrive into adulthood, and this fits with the Septenarian Attribute of Ordinal Inspiration in the Natural Sequence schema. It is the Emotion Center that is front and center for development at this Life-Stage. This is the time when the child is "socialized", when it learns the rules about how to get along well with its associates. Typically, the child is more self-centered in the first half of childhood, the ME (Ordinal) phase, and gradually learns to share its toys with others during the second half of childhood, the WE (Cardinal) phase, especially after entering the formal educational system, which is the turning point in the Childhood Life-Stage.

Regarding the Positive and Negative Poles of this Life-Stage, I suggest that +Socialization and –Codependence are appropriate. The Positive Pole means that the child feels nurtured by family, friends, and classmates, and has in fact learned to "play well with others". The Negative Pole manifests as a child who is whiny, clingy, and needy with respect to others, perhaps because they are not getting nurtured and 'nourished' by the other people in their lives during this critical phase of their development. The positive function of allowing –Co-dependence to run its full course is, of course, to learn how bad it feels to interact malevolently with others, and then to let go of it, and that rebounds to +Socialization, an acknowledgment of the desire, even need, for *inter*dependence with others in a well-functioning society full of happy people.

YOUTH (-3D-): This Life-Stage has the Septenarian Attribute of Ordinal Expression. Overleaves that correspond to this Life-Stage are Rejection, Renunciation, Skeptic, *Young, Intellect*, Artisan, and Caution.

The third transition occurs at the onset of the teenage years, at puberty. Some cultures mark this transition with a ceremony of "coming of age". Many physiological changes happen at this time, and that can take a few years. At the same time, adolescents experience cognitive, psychological, and mental changes. During the plateau of this Life-Stage, the adolescent typically starts to separate themselves from the family psychologically, and that process eventuates in physically moving out of the family home, and that leads to the young adult 'carving out their niche' in the wider world. If adolescents are treated as developing adults rather than as dependent children then there is less tendency for them to rebel to prove their individuality. It is important that adolescents be prepared (by parents, teachers, and peers) to take a place in society, or severe problems may result when confronted with the world outside of the family home. The young adult must become intellectually competent, at least enough to make their way in the world on their own. The more self-responsibility they learn, and the more irresponsibility they reject, the more prepared they are to distinguish themselves with success in their adult life. However, even in the best scenario, at least some of the familial imprinting is likely to continue through the plateau phase of this Life-Stage, lasting into middle age, when the fourth Life-Stage is typically initiated.

Per the Hierarchy Principle, during the plateau of the third Life-Stage, the Motion Center development of the Infancy Life-Stage and the Emotion Center development of the Childhood Life-Stage continue, but in the Youth Life-Stage, the development of the Intellect Center is front and center. Developmental psychologists comment on the explosion of mental development and organization that happens in the teen years. The gradual individuation of teenager from family is also reminiscent of the other Overleaves in the Ordinal Expression ("Analysis") Process — particularly Rejection, Skeptic, and Self-destruction. Typically, during adolescence, as the teenager distinguishes themselves while still living with their family, the individual is more encumbered by personal adjustments because this is the Ordinal (ME) phase of the Life-Stage, and then, after the turning point of this Life-Stage at about age twenty-one, in the young adult phase, the individual becomes more concerned about distinguishing themselves in the world outside the family environment; they find their self-sufficient and self-governed place in the business world because they are now in the Cardinal (WE) phase.

Regarding the Positive and Negative Poles of this Life-Stage, I suggest that appropriate names are +Independence and -Irresponsibility. The Positive Pole is the culmination of the successful and healthy individuation process that happens during this Life-Stage. The Negative Pole means that the youth does not take responsibility for themselves; they become anti-social, perhaps even alienated, from both

family and society. The positive function of allowing –Irresponsibility to run its full course is, of course, to acknowledge the proper place of alienation at this time in one's life as part of defining oneself, and then one rejects that separation, so that one rebounds into self-sufficient +Independence.

MIDDLE-AGE (=PD=): This Life-Stage has the Septenarian Attribute of Neutral Assimilation. Overleaves that correspond to this Life-Stage are Equilibrium, Stubbornness, Pragmatist, *Mature, Impulse*, Scholar, and Observation.

Although there often are early signs that something is impending, the fourth Life-Stage usually begins in earnest in the mid-thirties. If prior Life-Stages were not completed in the Positive Poles, this can be a traumatic transition, and can last as long as a decade. It is commonly called "the mid-life crisis". In the previous Life-Stage, progress was made as the young adult shed the imprinting of family, but this Life-Stage is more about shedding acculturation, thereby becoming more fully individuated, not just separated from the family. This allows the inborn nature, or the "true" self, or the soul, or the essence (or whatever you want to call it) to begin to make its presence felt. The "lower self" must begin to take a back seat to the "higher self", or the person will remain merely a product of their family and their environment — the person will be spiritually 'retarded', so to speak. Dramatic changes often occur as the personality seeks to express the emerging influence of its true nature. A successful assimilation is usually completed in the early forties, and it catapults the person into the higher self's primary project for the lifetime.

This Life-Stage correlates with what I refer to as the Impulse Center (which others refer to as the Instinctive Center). This Center prefers to manifest the +Intuitive and the -Instinctive faculty of the individual rather than manifest the dictates and preferences of associates in particular and of society in general. Consequently, it is not always easy for friends, family, and coworkers to adapt to the changes of the person going through the transition. The changes can be quite drastic at times, if the cultural or family programming has been very different from the innate personality of the individual. Marriages fail, careers change, friends and religions and political persuasions are dropped or changed. As usual, the person is focused on reorienting and reorganizing their inner world during the first half, the ME phase, of the Life-Stage, and then the person focuses more on reorienting and reorganizing themselves in the outer world during the second half, the WE phase.

I suggest that an appropriate name for the Positive Pole is +Authenticity, meaning that the true nature of the person is revealed and accepted and implemented henceforth in the life. I suggest that an appropriate name for the Negative Pole is –Falseness, which means that the person will likely remain stuck in their imprinting and acculturation for the rest of their lives, never having discovered and actualized 'who they really are' in the core of their being. The positive function of allowing –Falseness to run its full course is, of course, to acknowledge the proper place of the socialization and acculturation in one's early life, and then to let go of it, and that rebounds to +Authenticity, an experience of integrity with the inborn nature.

(By the way, in order to have seven Life-stages between the first and seventh Milestones, Birth and Death, at this location in my Life-Stages schema, I diverge from the Michaelian revelation, in which the 'plateau' of the fourth Milestone spans from about age 35 to about age 65. In my schema, the fourth Life-Stage, Middle Age, spans from about age 35 to about age 50, and the fifth Life-Stage, which I call "Seniority", spans from about age 50 to about age 65. The empirical academic evidence for this reformulation in presented in my DevPsy Thesis.)

SENIORITY (+3D+): This Life-Stage has the Septenarian Attribute of Cardinal Expression. Overleaves that correspond to this Life-Stage are Acceptance, Greed, Idealist, *Old, Concept,* Sage, and Power.

At the beginning of the fifth Life-Stage, as the fifth transition is initiated, the person notices that their physical and mental faculties have begun to noticeably decline as part of the normal aging process. Furthermore, the temporal horizon flips, meaning that the person begins to deeply realize that their life is probably more than half over; they realize that they are 'over the hump' and they are now on the 'downhill' side of life; they realize that they have perhaps reached the peak of their career, and there is no more 'ladder' to climb. They might even find themselves saying, "I am getting too old for this." This transition usually begins to take hold at about age fifty. What to do now? How they respond to the realization of decline determines what they do during the plateau phase, which lasts until about the typical age of retirement, say 65. As I see it, there are two ways to go: either the person can graciously and gracefully let go of the ambitions of youth while continuing to make qualitative

improvement in their lives and in the lives of those in their orbit, or the person can try to hang on to the things of youth with a self-centered grasping or clinging, in an attempt to keep the 'sands of time' from 'slipping through their fingers'. In other words — during the retrospection that starts in this Life-Stage and continues for the remainder of the lifetime — there is acceptance or there is denial of the reality of the inevitability of the aging process.

This Life-Stage is when the person begins to develop a 'philosophy of life', if they ever do. If a person has forethought, and they live through this Life-Stage in the Positive Pole of +Legacy, then they make and implement long-terms plans for retirement from their career occupation. They might also change their focus away from competing with younger people and toward mentoring younger people, passing on their accumulated knowledge and skills and wisdom. On the other hand, some people might express the Negative Pole of –Self-indulgence, which means that they fear, rather than embrace, the loss of their youth; they seek to hold on to youthfulness by "acting out" in ways that are inappropriate for their actual age. As usual, there are two fundamental phases to this Life-Stage, the Ordinal ME phase where the person is focused more on making adjustments in their inner life, and then the Cardinal WE phase where the person is focused more on making adjustments in their outer life. The positive function of allowing –Self-indulgence to run its full course is, of course, to acknowledge the proper place of the excessive self-love in one's life, and then to let go of it, and that rebounds to +Legacy, an expression of love for others

ELDERHOOD (+2D+): This Life-Stage has the Septenarian Attribute of Cardinal Inspiration. Overleaves that correspond to this Life-Stage are Growth, Arrogance, Spiritualist, *Elder, Sympathy*, Priest, and Passion.

The sixth Life-Stage begins at about the time that most people retire from their career profession, in their mid-sixties. The transition typically consists of making the adjustment from a working life to a not-working life. This is an especially difficult transition for those people who identified strongly with their career, such that it provided the central meaning to their lives ... and now that phase is over. This is also when most "senior citizens" begin to seriously review the lifetime 'in the rear-view mirror', so to speak. They ask themselves: Were their aspirations and expectations met or not? Did they accomplish what they set out to do? This does not necessarily have anything to do with their career; more often it has to do with their self-appraisal, their satisfaction about their life in general. In a successful transition, the person accepts the lifetime as lived, regardless of whether they achieved the ambitions of their youth or not, or even the goal of their true self. They come to appreciate themselves, and they are generous to others as well. The plateau of this Life-Stage typically lasts a few years, the so-called "qolden years".

The ME (Ordinal) phase of this Life-Stage is the process of coming to terms with the life as lived, and the WE (Cardinal) phase of this Life-Stage is the process of sharing the blessings of a life well lived with others. A natural continuation of +Legacy, left over from the previous Life-Stage, is if the person gets involved in volunteer or charity work after retirement from a career occupation.

I suggest that an appropriate name for the Positive Pole is +Gratitude, which means that the person feels thankful for a life lived well; they focus on self-improvement; they are likely to volunteer for endeavors that make the world better. The Negative Pole is –Regret, which means that the person feels apologetic for the stupid, hurtful, foolish things that they did during the preceding decades. Or they might feel nostalgic for 'the good old days', when they were not encumbered by the limitations of old age. Or they might feel bad about the opportunities that they missed and will never experience. The positive function of allowing any –Regret to run its full course is, of course, to acknowledge the proper place of the "shadow", the "dark side" in one's life, and then to let go of it, and that rebounds to +Gratitude.

DYING (+1D+): This Life-Stage has the Septenarian Attribute of Cardinal Action. Overleaves that correspond to this Life-Stage are Dominance, Impatience, Realist, *Ancient, Excitation*, King, and Aggression. This might seem counterintuitive, and I will address that concern below.

The seventh Life-Stage occurs in advanced old age, during the final physical deterioration. The transition begins when the person becomes aware of the terminal illness. It largely concerns the psychological response to the physical dying process. This does not have to be an unpleasant process, but the more attached the person is to their physical or emotional or mental life, the more difficult it is. Perhaps you have heard of the stages of dying: disbelief or denial of mortality, anger that it should

happen now, bargaining with God for more time, depression and despair, acceptance of the inevitable, and making preparations for the passing. Obviously, dying rarely lasts for more than a few years, so the plateau is brief. A person who has lived in their true nature subsequent to the successful completion of the Middle-Age Life-Stage, and who has completed their aspirations and ambitions, who has liberated their defects and deficiencies, and who is aware of their immortal essence, might actually find this to be a psychologically and spiritually energizing plateau, even while the body is de-energizing.

Regarding the ME/WE dichotomy, I would say that during the ME (Ordinal) sub-stages, the person is likely to have become mostly useless to themselves and others. Thus, the person is consumed by concern about how their deterioration is affecting themselves. But if the person gets through that phase successfully, then the person in the WE (Cardinal) phase becomes more concerned about how their inevitable demise will affect their loved ones. In both phases, there is the de-vitalization of the physical and the vitalization of the spiritual, which I regard as an instantiation of Cardinal Action.

Seemingly ironically, the Dying Life-Stage correlates with Cardinal Action, and the explanation for this is that people who are near death and who have completed all previous Life-Stages in the Positive Poles and who believe in an afterlife actually look forward to death as a new beginning. Some spiritual traditions recommend that, for best results, one should seriously contemplate one's mortality on an ongoing basis rather than wait until this Life-Stage; the sooner you start the better.

Regarding the Positive and Negative Poles of this Life-Stage, based on what I have read about developmental psychology, I suggest that the names +Anticipation and -Disengagement are appropriate. If a dying person looks forward to the transition to the afterlife with excitement, then this is the Positive Pole. However, if the person shrinks and shrivels into themselves as they withdraw from every aspect of life, then this is the Negative Pole.

(By the way, the reason that I chose +Anticipation as the name of the Positive Pole of the Dying Life-Stage is that it is quite common for dying people to have premonitions of the afterlife. For more information, refer to the website of a hospice worker who has written a book about it: >www.drchristopherkerr.com>. "Death Is But a Dream, based on Dr. Kerr's extensive research with hospice patients and their families in Buffalo, NY, highlights and validates the powerful dreams and visions often experienced at end of life that bring comfort and meaning to the dying process." Paradoxically, even though the body is nearing the end of its decline, the soul eagerly +Anticipates its launch into the afterlife.)

ETHERIC: This is the name that I have given to an interval between the death of the physical body and the death of the so-called "etheric body". The Fragment on the Astral Plane first Casts a portion of itself into the etheric levels of the Physical Plane, and the etheric body provides the morphogenetic field to guide the development of the physical body during Gestation, Stage Zero. Presumably, this process is reversed after the death of the physical body; the etheric body is dissolved. At this stage in the development of my own thinking about this phenomenon, I am uncertain as to how to characterize the etheric interval in terms of the Natural Sequence schema. It makes sense to me to consider it either as 1) an eighth Life-Stage, the antithesis of the zeroth Life-Stage (Gestation), or as 2) the zeroth stage of the next higher octave in the Great Chain/Nest of Being, which consists of the seven levels of the Astral Plane, or as 3) yet another 'cliff' between two 'plateaus': the Physical Plane and dthe Astral Plane. Whatever its status, I do not show it on my version of the Overleaf Chart where I show the other developmental septenaries of Levels, Soul Ages, sub-Planes, and Planes.

Summary Comments on Life-Stages

The following numbered list summarizes my present understanding of the Life-Stages. I present it to the Michaelian teachings community for their consideration.

- 1. In the Michaelian teachings, there is a channeled revelation about seven predictable identity crises, aka transition phases, that people typically go through during the course of a full lifetime from birth to death. These appear in Michaelian books and websites and on some of the Overleaf Charts reviewed in Part Three; these are discussed in this chapter. One of the purposes of this *History* book is to present and examine variations in the understanding of the Overleaf System. As such, the revelation about this phenomenon is appropriate.
- 2. Various names have been given to this phenomenon by various Michaelian sources: Milestones, Internal Monads, Rites of Passage, and Turning Points. For brevity and consistency in this chapter, the name that I prefer is "Milestones". In addition to that difference in names for the phenomenon in

- general, each of the seven specific Milestones has been given various names by the various Michaelian sources. In addition to that, various names have been given by the various Michaelian sources to the Positive and Negative Poles of each Milestone. This is okay; it need not be considered a contradiction (Michaelian students do this sort of thing in other realms of the teachings); one can update and improve one's own understanding by reviewing the varieties of understanding of others.
- 3. The original revelation used the metaphor of 'cliffs' and 'plateaus', indicating that there was a qualitative difference between the revolutionary and the evolutionary phases of the Milestones. This distinction was not always made clear in subsequent revelations, but it is important if one is to have an unambiguous understanding of how the phenomenon of Milestones is structured in time.
- 4. The revelation, as given originally and affirmed subsequently, declares that there are seven Milestones, with Birth being first and Death being last. If this is correct, it would mean that there are only six 'plateaus' between the seven 'cliffs', and that makes the 'plateaus' not fit within the usual pattern of Septenarian Attributes that are applied to the other developmental time scales of the Michaelian teachings cosmology, namely Levels and Soul Ages and sub-Planes and Planes. Some revelations solve this conundrum by proposing that the 'plateau' of the Death Milestone is the beginning of the afterlife.
- 5. There is a close equivalent of Milestones that is studied in a branch of empirical academic research called developmental psychology (DevPsy). This research is discussed at length in what amounts to a treatise in my book *The Tao of Cosmogony*, in Part V, "Developmental Psychology". Unlike the other developmental septenaries, Levels and Soul Ages and sub-Planes and Planes, that are not all experienced in one lifetime, we transit the Milestones during a full lifetime. This personal experience gives us an opportunity to Validate what the Michaels say about the longer time-cycles of reality.
- 6. There has been an obvious development of the revelation about Milestones in the Michaelian teachings; it is much richer now than it was in the beginning. My suggestion is that it would be much richer still if Michaelian students became aware of the work that DevPsy researchers have done over the last century. We can compare and contrast what the Michaels say with what academic researchers who have followed the lives of thousands of people have to say about the process. That research was instrumental in clarifying and augmenting my understanding of the Michaelian teachings revelation.
- 7. In one Michaelian revelation there is acknowledgment that Milestones correlate with Centers, and in another revelation there is acknowledgment that Milestones correlate with Soul Ages. The Michaelian revelation in general acknowledges that the Planes have the Septenarian Attributes and follow the Natural Sequence. Some of the revelations about Soul Ages and Levels claim that they have the Septenarian Attributes but also claim that they do not follow the Natural Sequence. However, none of the revelations about Milestones are explicit that they have the Septenarian Attributes in general, and none of them acknowledge that the Milestones are a developmental septenary arranged per the Natural Sequence. My claim is that all four cycles have the Septenarian Attributes and that they follow the Natural Sequence.
- 8. In my DevPsy Thesis, the correlation of DevPsy stages with the Natural Sequence schema is actually more obvious than the Michaelian teachings revelation is, even though the DevPsy researchers did not know about the Natural Sequence schema. (The reason that Michaelian students do not see what is obvious to DevPsy researchers is that they have been misdirected from the Natural Sequence schema by the "Michael Math" chapter of *MMFM*.)
- 9. One of the reasons that one can see the Septenarian Attributes of the Natural Sequence schema in the lives of people is that DevPsy researchers have paid as much attention to the 'plateaus' as they have to the 'cliffs'. Because I also pay attention to the 'plateaus', and because I see this strategy as a way to integrate and correlate the Michaelian Milestones with the other developmental septenaries (Level, Soul Age, sub-Plane, and Plane) and the DevPsy models, and because I interpolate a new Milestone between two Michaelian Milestones, I prefer to name my presentation of this phenomenon "Life-Stages". My Life-Stages schema should be considered as a *supplement* to the Michaelian revelation about the Milestones schema. They are not the same thing, and my intention is not to *supplant* the Michaelian revelations.

- 10. The 'foundation' of Life-Stages is the physical body itself with its *physiology*, without which there would be no *psychology* to develop after the Birth Milestone. Upon this 'foundation', the Life-Stages are 'built' in seven successive 'stories' in the 'building'. The foundation is gestated *in utero*. This notion is consistent with Gurdjieff's notion of the "Instinctive Center" as having to do with physiology (refer to Chapter 4F); this notion is consistent with my notion that the Root Chakra has to do with physiology (refer to Chapters 1C and 4J); this notion is consistent with Maslow's notion that physiology is at the foundation of his so-called "Hierarchy of Needs" (refer to my book *The Tao of Cosmogony*).
- 11. Per DevPsy models, the interval between the first Milestone, Birth, and the second Milestone at about age two, is ruled by learning to operate the body. Thus, the Septenarian Attributes of this Life-Stage are Ordinal Action in general, and the Moving Center specifically. Of course this learning continues from birth to adulthood, because the body grows and changes all of that time and beyond if you learn new physical skills for the Moving Center. Without this first 'story', the Moving Center maturation, no other 'stories' could be built.
- 12. The "emotions" expressed by infants during the first Life-Stage are extraordinarily primitive, and they do not dominate the development of the infant. The emotions begin to predominate and are developed and refined only after the infant learns to move the body in the environment, and tumbles to the realization that it is separate from the environment and can interact with it, including people, in pleasant and unpleasant ways; that is when the second Life-Stage kicks in. According to DevPsy models, the time between age two and school is ruled by "play" time in the body that has learned to move in the environment. Thus the Emotion Center begins to mature, and this emotional development, concomitant with social development, continues for the rest of the lifetime. With most people, the Intellect Center is too primitive for school work until about age six, at which time it can seriously start to mature. Even then, the time from the beginning of school to adolescence (the start of the third Life-Stage) is also very much about Ordinal Inspiration when you consider all of the socialization with family and classmates that occurs then. During the second Life-Stage, life is as much about learning to get along with others — the common good — as learning anything else. Yes, the brain is always "learning", but "learning" is not just intellectual activity — there is the Motion and the Emotion Center learning as well, and that must precede the maturation of the Intellect Center that kicks into 'full gear' at puberty.
- 13. Per the Natural Sequence schema, the third Life-Stage has the Ordinal Expression Attributes. This Life-Stage is about the development of a personal identity that is distinct from the identity that one absorbs from the family and the school during the previous Life-Stages. According to DevPsy models, adolescence is all about the personality developing its individuality, about differentiating from the family, and about striking out on its own within the cultural milieu. This process is very much in the same category as Ordinal Expression, or what I call the "Analysis Process". Incidentally, according to what I have read in the DevPsy literature, it is also a period of intense development of the Intellect Center.
- 14. Per the Natural Sequence schema, the fourth Life-Stage has the Neutral Assimilation Attributes. This Life-Stage is often characterized as a time of the shedding of False Personality and of the emergence of True Personality, and I am okay with that. Per the Natural Sequence schema, the reason for this is because this Life-Stage correlates with what I prefer to call the Impulse Center, which has a Positive Pole of +Intuition. Thus, a person in this Center and in this Life-Stage should begin to seriously tap into the so-called "higher self". However, there is another thing going on here: this Life-Stage correlates with the Mature Soul Age, about which it can be said that the person is metaphorically 'adrift at sea' because of the lack of Cardinal or Ordinal polarization. Likewise, a person transiting the fourth Life-Stage may not 'stand on firm ground' until they have successfully passed into the fifth Life-Stage, a Cardinal Life-Stage.
- 15. Based on DevPsy and other considerations, I found it expedient to propose a difference from the Michaelian revelations in terms of the numbering of the Cardinal Milestones and Life-Stages. Rather than have the fourth Life-Stage extend all the way from about one's mid-thirties to about one's mid-sixties, I propose that the fifth Life-Stage begins at about age fifty and ends in about one's mid-sixties. I suggest this amendment for three reasons: 1) it fits the Life-Stages pattern into the pattern of the other Michaelian developmental time-cycles of Levels and Soul Ages and sub-Planes and Planes; 2) some academic developmental psychologists in their empirical research find a significant transition at

- about age fifty; 3) I went through a significant transition at about age fifty, and then transited the mid-sixties Milestone on schedule. Thus, what the Michaels numbered as the Fifth Milestone is for me the Sixth Life-Stage; the description does not change. This procedure renumbers the Michaelian Sixth Milestone as the initiation of the Seventh Life-Stage without changing the description.
- 16. Some of the DevPsy researchers focused more on the 'cliffs' of the Life-Stages, and some focused more on the 'plateaus', just as is the case with Michaelian revelations. Additional study on my part of both DevPsy and Michaelian teachings would be required for me to sort out what I think might be the best names for the Poles of the 'cliffs', and to see how similar and how different those might be from the names of the Poles as given in Michaelian revelations, and to see how different those might be from the names that I have given to the 'plateaus'.
- 17. With the initial revelation we were not informed how the Milestones fit into the Overleaf System as a whole; it was not stated explicitly and it was not obvious. I would even say that the way it was presented was a bit misleading, and that it why, through a succession of revelations, it has taken us decades to get to the understanding presented in this chapter. So at last, now that we know how the Life-Stages fit into the Overleaf System as a whole, we can use this understanding to inform how to better understand the characteristics of other developmental septenaries: Levels and Soul Ages and sub-Planes and Planes. And we can use the understanding that we have of Levels and Soul Ages and Planes to better understand the characteristics of the Life-Stages.
- 18. Speaking of the Levels, if you read Chapter 4L, "The Mid-Cycle Discrepancy", you might recall what I referred to therein as the Mid-Cycle Principle. This is the notion that each stage in any developmental sequence whether it be Life-Stages or Levels or Ages or sub-Planes or Planes is separated by an ambiguous or self-contradictory transition phase. This means that the transition does not have the characteristics of either the preceding stage or the following stage; it is either a blend of the two or a vacillation between the two. This is the essence of the Transition Principle. In this chapter here, I want to note that the Mid-Cycle Principle, aka the Transition Principle, applies to the Life-Stages in our lived experience in one lifetime, not just in the transition between lifetimes in terms of the graduation from one Level to the next, and in the graduation from one Soul Age to the next, and in the graduation from one Plane to the next.
- 19. It is obvious to me on theoretical grounds and experiential grounds that the Life-Stages follow the Natural Sequence schema, and that means to me that the Sub-stages also follow the Natural Sequence schema per the Fractalicity Principle, but a question remains in my mind about whether or not the Milestones, the transitions between Life-Stages, also consist of stages that follow the Natural Sequence schema. It is my current understanding that the Milestones, when thought of as 'cliffs', are revolutionary and thus they do not have the Septenarian Attributes. However, the Life-Stages, when thought of as 'plateaus', are evolutionary or developmental, and thus they do have the Septenarian Attributes of the Natural Sequence schema.
- 20. Per the Hierarchy Principle, each Life-Stage is "meta" to the previous Life-Stage(s). That means that whatever the stage that one is now traversing is "subjective" in the sense that one does not (yet) have an objective, self-aware, meta-cognitive view of it, whereas one does have an objective, self-aware, meta-cognitive view of the previous Life-Stage(s). For a person to successfully traverse a Life-Stage and 'graduate' from it means that the person has 'learned the lesson' of that Life-Stage to such an extent that it has become 'automatic' or 'instinctive'. The person is thereby freed up to focus their attention on learning the lessons of the current Life-Stage.
- 21. Finally, all this heavy noodling about the structure and the Attributes of the Life-Stages is for the purpose of arriving at an accurate description of them, so that readers may have a better understanding of what they are going through when they transit a 'cliff' and when they transit a 'plateau'. This chapter is a scholarly academic exercise for sure, but it has practical implications in the lives of Michaelian students. The Michaelian teachings is worthless if does not improve the lives of its students. Students should study and ponder what is said in this chapter, and see if it explains what they have experienced in past and current transits. This is one of the ways that the lessons of a lifetime are driven home during the lifetime; this is Validation.

Tabulation of Septenaries Discussed in this Chapter

As a conclusion to this chapter on the Milestones of the Michaelian teachings and the Life-Stages of the Wittmeyer teaching, and for your convenience, in the following table I provide the names of various septenaries discussed in this chapter, as given by various Michaelian teachings sources. Some brief commentary on the meaning of the names in the rows and columns of the table are shown after the table. My suggestion is that readers not be intimidated by this table. Rather, relax and settle in. Look it over carefully; compare and contrast each cell with the other cells in the same row and the same column. Think about what your read. Consider if you can relate to what you see, not as an abstraction, but as it manifests in your life.

My comments on this table are as follows:

- 1. My books *The Tao of Personality* and *The Tao of Cosmogony* provide the evidence, the argument, the rationale, the explanation, the description of/for the structure of this table. The first six rows contain elements that are arranged in the Natural Sequence from left to right. The Natural Sequence is the archetypal developmental sequence; it is the fundamental cyclical time structure of the cosmos. This means that involution and evolution follow this sequence from the shortest time scale to the longest time scale. Life-Stages are a developmental sequence, the one that is at the scale of a full human lifetime, from birth to death in advanced old age.
- 2. RANK: The first row shows the rank order numbers of the various septenaries tabulated here.
- 3. ATTRIBUTES: The first five rows (Rank, Dialectic, Axial, Dimension, Direction) show the Attributes of the Process/Aspect System and Natural Sequence schema. These are briefly explained and described in the commentary on Table 4Qa and the commentary on Table 4Qf above.
- 4. PROCESS: The sixth row shows the names that I have given to the seven so-called "Processes" of the Process/Aspect System. These are one-word concrete descriptive names for the abstract Dialectic + Axial = Septenarian Attributes.
- 5. ASPECT: The names of five so-called "Aspects" of the Process/Aspect System (Center, Plane, Soul Age/Worldview, Level/Zone, Milestone/Life-Stage) are shown in the first column.
- 6. CENTER: The seven Centers shown in the seventh row can be regarded as a developmental sequence in the context of this table, the same as those Aspects shown in the rows below this row refer to Chapter 1J in Part One, "Gurdjieff's Levels of Being" for the explanation of this sequencing of the Centers. The Centers are also relevant to the subject of this chapter because, by other names, the Centers are found in many academic developmental psychology models, usually referred to as "dimensions" of personality. For instance, there is the sensorial-behavioral dimension (= the "Action" Centers in the Michaelian teachings), the emotional-social dimension (= the "Inspiration" Centers in the Michaelian teachings), the mental-cognitive dimension (= the "Expression" Centers in the Michaelian teachings), and experience in general (= the "Assimilation" Center in the Michaelian teachings). It is most obvious in the Ordinal (first three) Life-Stages that the Ordinal Centers are being developed during the first third of life, but ideally the last four Centers get successively developed in the last two-thirds of a full lifespan. Centers are discussed at length in Chapter 1D in Part One, "The Seven Centers".
- 7. The bottom sixteen rows tabulate developmental tracks that run on different time scales or schedules, all having to do with 'growing up' increasing "maturity". The longest time scale is Planes and the shortest time scale is Sub-stages within Life-Stages. The timescales are septenarian cycles that are nested within each other per the Fractalicity Principle.

- 8. MICHAELIAN PLANES: This row shows the names of the seven so-called "Planes" of the cosmos as given in the non-Yarbro contingent of the Michaelian teachings. (I have adopted a different naming scheme based on Theosophy; see table 4Qa near the beginning of this chapter.) The Planes can also be considered as a developmental sequence, the largest, because it is said in the Michaelian teachings that the so-called "spark" evolves through the Planes during a so-called "grand cycle". In the Michaelian teachings communities it is said that the Planes follow the Natural Sequence, and I agree. The other septenarian developmental sequences shown below this row are successively smaller subdivisions of this longest time cycle.
- 9. YARBRO SOUL AGE and YARBRO LEVEL: These two rows show the names that Yarbro gave to the Soul Ages and their Poles, and that Yarbro gave to the Levels and their Poles within the Soul Ages, as reported by Mature Scholar Steve. These were shown in Chart #18 in Part Three. They share the same Attributes as the Life-Stages. Soul Ages and Levels are discussed at length in Chapter 4K and Chapter 4M respectively.
- 10. WITTMEYER WORLDVIEW and WITTMEYER ZONE: The so-called "Worldviews" and "Zones" of the Process/Aspect System are equivalent to the Michaelian terminology, Soul Ages and Levels respectively. They share the same Attributes as the Life-Stages. Worldviews/Zones are discussed at length in Part Three of my book *The Tao of Personality*.
- 11. ORIGINAL MILESTONES: This row shows the names that I have chosen to give to the seven Milestones based on the descriptions found in the first three Yarbro books, *MFM*, *MMFM*, and *MP*. The names were implied from the description, so I show that. As you can see by looking down the columns below this row, these names are identical to or similar to the names given to the seven Milestones by subsequent Michaelian sources.
- 12. JOSÉ STEVENS MILESTONES: This row shows the names that José Stevens gave to the seven Milestones in his book *Tao to Earth*. Except that Stevens did not actually name the sixth Milestone, but only described it, so I provided a proposed name in [brackets].
- 13. CHAMBERS MILESTONES: This row shows the names that Sarah Chambers, channeling in 1996, gave to seven types of "Pathfinders". These people are said to have a specialized mission to shepherd people through the difficult transitions of each particular Milestone. This revelation provided another set of names for each Milestone.
- 14. COCCONI MILESTONES: This row shows the names of the Milestones as given by Stephen Cocconi on his website >www.themichaelteachings.com<. He provided names for the Milestones but he did not provide names or even descriptions for the Poles of the Milestones.
- 15. YARBRO MILESTONES: This row shows the names of the Milestones as found on an Overleaf Chart that was published by Mature Scholar Steve in 2009. I showed this on Chart #18 in Part Three.
- 16. TOLLEY MILESTONES: This row shows the names of Milestones as given by Troy Tolley's channeling and posted on his internet website >our.truthloveenergy.com<. The names of their Poles are not explicitly stated in the channeling, but the description of positive and negative expressions of each Monad prompted me to choose words that seemed to me to best fit those descriptions.
- 17. TOLLEY STAGES: This row shows the names of the seven Stages within each Milestone according to Tolley's channeling.
- 18. MARINA-TOMPKINS MILESTONES: This row shows the ranks and the Poles of the Milestones as given by Victoria Marina-Tompkins in her book *Spiritual Turning Points*. The book itself is not channeled, but apparently the names of the Poles were, apparently by someone in the Yarbro contingent; notice the similarity to the names and Poles of the Yarbro Milestones three rows up.
- 19. GREGG MILESTONES: This row shows the names of the Milestones and their Poles as given by David Gregg on his website >michaelteachings.com<. Notice that the Poles are identical to those given by Yarbro four rows up, whereas the names of the Milestones are a mixture of the time-span and the characterization.
- 20. GREGG STAGES: This row shows the names of the seven Stages within each Milestone according to Gregg's channeling. Compare these with the names of the Stages three rows up.
- 21. WITTMEYER LIFE-STAGES: Obviously, I have named the Life-Stages after obvious time spans of a full lifetime. My purpose in coming up with my own names for Life-Stages and their Poles was to show the

- greatest amount of respect for, and do the least amount of violence to, the work of other Michaelian students, and also show respect for developmental psychology models discussed in my DevPsy Thesis, as constrained by the theoretical framework of Septenarian Attributes as embodied in the Process/Aspect System and the Natural Sequence.
- 22. These three Aspects Life-Stage, Level/Zone, Soul Age/Worldview of the Natural Sequence septenary determine a person's overall psychological maturity. Each person is usually at a different stage of each of the three Aspects. Each Aspect influences how each of the other Aspects manifests, such that it is difficult to discern where exactly a person is "coming from" in general, and in specific instances. This is one of the facts of life that makes "pigeon-holing" people so difficult when assessing their psychological maturity. One might hope that information in this book and my other books will assist the reader with the task of understanding and tolerating the lack of psychological maturity in oneself and others, and show the way to greater psychological maturity where that is a possibility. In other words, this book and my other books need not be a mere academic exercise in understanding how the world works, even if that is its main function.
- 23. Besides what is said in list item #22, Life-Stages as experienced by any particular individual will be unique to that individual. The lived reality will be similar enough to the generalized descriptions (provided in the Michaelian teachings and by DevPsy researchers) such that one can say that there is validity to the schema, but the lived experience will also be different enough from the stereotypical such that one can say the there is a special value in each life story.

What does this particular defect and deficiency in the orthodox Michaelian teachings, and the others issues documented in this Part, all mean? What are we going to do about this? Anything? What does the future hold for the Michaelian teachings? Those are the subjects of the Conclusion of this Part, and the Conclusion of this *History* book.

Chapter 4R

CONCLUSION TO PART FOUR

Pretend that you are an academic and you are doing a research project for your Master's thesis or your Doctoral thesis. Pick a subject, any subject found in Michaelian teachings publications. *Read* everything you can find on the subject, in Michaelian teachings books, and on Michaelian teachings websites. Do a deep dig. Then *think* about what you have read. Scrutinize and analyze and synthesize, research and compare and contrast the information. Look at it microscopically and telescopically. Does it all hang together? Does it all make sense? What are the consistencies among different sources? What are the inconsistencies among different sources? Where do the consistencies come from — actual channeling or sources merely copying from each other? Where do the inconsistencies come from — actual channeling or sources not knowing what the other sources said? Has the subject evolved and/or clarified and/or expanded over the decades? Can the subject matter be elucidated and/or validated by credible non-Michaelian teachings sources? On the other hand, do credible non-Michaelian teachings sources *contradict* the Michaelian teachings subject matter? Then gather your evidence and marshal your arguments into a cogent and thorough narrative. Then write it up and present it to the Michaelian teachings community and see what happens.

That is what I have done, starting more than forty years ago. Some of the results are presented in this book, *A History of the Overleaf System*, all ~800 pages of it, particularly all ~400 pages in Part Four, "Essays on Issues". Add another hundred pages in two chapters in the Epiloque. Other results are published in my other books.

Review of Part Four Chapters

Following is a very brief overview of the chapters here in Part Four.

Chapter 4A, "INTRODUCTION": When we carefully examine and compare the Overleaf Charts reviewed in Part Three, we find that there are a number of discrepancies among them. What does this mean? Why does this bother me? Does it bother you? What could/should we as individuals and as a community do about this, if anything? If you and/or we decide to try to "fix" this situation, what tools and methods can we use to reconcile and/or transcend the discrepancies?

Chapter 4B, "VALIDATION": The Michaels have enjoined us to Validate their teaching in order to grow spiritually. This means that it is Good Work to confirm that their teaching is true and good, by whatever means, experientially and academically, in our hearts and minds and souls. My suggestion is that the Validation process also helps us to grow intellectually: the process has the goal of "separating the wheat from the chaff" — to use a Biblical aphorism; the process improves our faculty for discernment; the process increases our knowledge and understanding and wisdom. My personal value system hierarchy suggests that it is important, as individuals and as a community, to aspire, as much as possible, to achieve accuracy and consistency and thoroughness within the Michaelian teachings. What does your personal value system hierarchy tell you is important? I suggest that real progress cannot be made, individually and/or collectively, if we ignore or bypass the Validation process.

Chapter 4C, "WHICH TRAIT SEPTENARIES ARE OVERLEAVES?": There is not a universal agreement among Michaelian teachings sources — usually channels — about one of the defining features of the Michaelian teachings, namely: which personality trait septenaries belong in the Overleaf System. This is an instance where the sources have either not noticed that this is a problem, or they do not regard it as a problem that needs to be resolved to the satisfaction of the Michaelian teachings community as a whole. I regard it as a problem that is worth attempting to solve. After examining what various Michaelian teachings sources say about it, I make the case with evidence and argument in this chapter

- that there are seven Overleaf categories: Goal, Mode, Chief Feature, Role, Attitude, Center/Body Type, and Soul Age/Level.
- Chapter 4D, "BODY TYPES": There is no disagreement in the Michaelian teachings community about the physical and psychological characteristics of the Body Types the descriptions were borrowed uncritically from a pre-Michaelian teachings source but there is every disagreement among sources within the Michaelian teachings community mostly channels about which Body Type correlates with which Role as if a Body Type should correlate with a Role as a personification of the Overleaf System as a whole. It is known that some of the channels are aware of this disagreement. However, this is an instance where the channels have not collaborated in an effort to resolve the discrepancies, which I believe would be a benefit to the Michaelian teachings community as a whole. My conclusion in this chapter is that the Body Type System is not an Overleaf category, except to the extent that Body Types are an instantiation in the physical brain/body of the Centers configured by the soul in the etheric body. I propose what I regard as a better fit of Body Type to Role than others put forward in the Michaelian teachings community, one that makes sense to me, and I make arguments and present evidence for why it makes more sense than the proposed alternatives.
- Chapter 4E, "PLANES": There is no disagreement among Michaelian teachings sources that there are seven so-called "planes" in all of creation, six of them beyond the Physical Plane, the universe that we all know and love. However, there is some disagreement among Michaelian teachings sources usually channels on the names and the natures of the planes. I submit that it would be beneficial to the Michaelian teachings community for the channels to come to regard this as a problem, as I do, and come to some sort of agreement on this topic. In this chapter, I review the sources, both those inside the Michaelian teachings and those outside the Michaelian teachings, and present evidence and argument for a clarification of this muddled feature in the Michaelian teachings community.
- Chapter 4F, "THE INSTINCTIVE CENTER": There is wide disagreement among Michaelian teachings sources usually channels about the nature of the Neutral Assimilation Center. In the Yarbro contingent, the Instinctive Center is said to be the source of nuttiness, on a spectrum from insanity to weirdness. In the non-Yarbro contingents, the Instinctive Center is the source of balance and health and a door to access higher states of consciousness. I suggest that these discrepancies are a problem, and that it would be Good Work to resolve the discrepancies for the benefit of the Michaelian teachings community as a whole. After reviewing the situation, I present argument and evidence in favor of the latter understanding, with limitations on scope.
- Chapter 4G, "THE HIGHER CENTERS": The prevailing orthodoxy in the Michaelian teachings is that the so-called "higher" Centers are rarely accessible; there is not much disagreement among channels and within the Michaelian teachings community about this. However, free-thinker and original thinker that I am, I come along and make the case in this chapter that this idea is a holdover from the Gurdjieffian teaching, and the Michaelian teachings understanding should be updated in the following way: even though an *extraordinary* experience of the higher Centers is indeed rare per the orthodoxy, there is an *ordinary* experience of the higher Centers that is much more common and much more accessible. I suggest that these experiences have value in terms of progress on the spiritual path and should be sought. Facilitating the function of our higher Centers might even facilitate our physical path.
- Chapter 4H, "THE ACTION CENTERS": The placements of the Sexual/Physical/Excitation Center and the Moving Center on the Action Axis is one of the most flagrant and egregious contradictions between channels that is extant in the Michaelian teachings. Some say the Sexual/Physical/Excitation Center is the Ordinal Action Center and the Moving Center is the Cardinal Action Center, whereas other channels say exactly the opposite. I suggest that this is an instance where the channels and the community should work to resolve the discrepancies to the satisfaction of the Michaelian teachings community as a whole. I present argument and evidence to make a case for the Moving Center being Ordinal and the Sexual/Physical/Excitation Center being Cardinal.
- Chapter 4J, "THE CHAKRAS": Many spiritual teachings have knowledge and understanding of the chakras. Chakras are not officially a part of the Michaelian teachings, but many channels have commented that they correlate with the Centers of the Michaelian teachings. The problem is, there is no consistency among the channels. This is one of the most flagrant and egregious instances of inconsistency among channels. I suggest that the channels and the Michaelian teachings community should work together to resolve the discrepancies to the satisfaction of the Michaelian teachings community as a whole. I

- present argument and evidence to make the case for a correlation of chakras with Centers that agrees with the Natural Sequence.
- Chapter 4K, "THE NAMES OF THE LEVELS": In the "Michael Math" chapter of *More Messages from Michael*, the names of the Positive and Negative Poles of the seven Levels within the Soul Ages are given. Then the chapter states that these names have "resonance" with the other Overleaves that have the same Septenarian Attributes. However, when we compare and contrast the names of the Poles of the Levels with the other six Overleaves that correlate, you find that this is not true; there is not such resonance apparent. So here we have a contradiction within a single channel, not a contradiction among different channels. Nevertheless, the names of the Poles of the Levels have been accepted uncritically in the Michaelian teachings community. I propose names for Levels and Poles of Levels that *do* resonate with the names of the other of the Overleaves that have the same Septenarian Attributes. The same process of renaming Levels and Poles provides the same complementarity between Ordinal and Cardinal Levels on the Action, Inspiration, and Expression Axes that all of the other Overleaf categories have.
- Chapter 4L, "THE MID-CYCLE DISCREPANCY": One channel (Yarbro) says that there is a zone of reincarnation experience between the Third Level and the Fourth Level which goes by the name "Mid-Cycle". Another channel (Chambers) says that Mid-Cycle is just another name for Fourth Level. So here we have a contradiction between two channels. The Michaelian teachings community is divided into two contingents on this contradiction. This is one of the most flagrant and egregious instances of inconsistency among channels in the Michaelian teachings community. Here again, this seems to me like an opportunity for the channels and the Michaelian teachings community to work together to resolve the discrepancies to the satisfaction of the Michaelian teachings community as a whole. I make arguments and present evidence that the latter is technically correct, and the former is correct if the Mid-Cycle is elevated to a general principle that applies to all transitions between stages of development.
- Chapter 4M, "THE SEVEN SOUL AGES": In the original Michaelian group, and in *Messages from Michael*, five Soul Ages were said to be experienced on the Physical Plane; the sixth and seventh Soul Ages were named and described as Transcendental and Infinite. In *More Messages from Michael*, this was changed to Astral and Causal. Over the decades since then, other Michaelian teachings sources proposed that all seven Ages might be part of the normal evolution of the soul during reincarnation on the Physical Plane, one way or another. There are a number of inconsistencies among channels in the Michaelian teachings community, and a number of unanswered questions. This is another instance where it seems to me that the channels and the community would do well to resolve the discrepancies to the satisfaction of the Michaelian teachings community as a whole. In this chapter, I present my own ideas about how to clarify and/or resolve these discrepancies, even though I am not firm in my convictions about them.
- Chapter 4N, "CASTING CONCERNS": Here again, in the matter of the Casting of souls from the Oversoul, there is disagreement about numerous details. The most notable is the Roles of Essence Twins, whether almost always the same Role to almost always different Roles. There are also issues in regard to Task Companions and Cadences. This is an instance where further work could be done, both with channels and in the Michaelian teachings community, to resolve the discrepancies to the satisfaction of the Michaelian teachings community as a whole. I offer my philosophical overview of the principles involved in Casting, but I do not claim to resolve any or all of the discrepancies.
- Chapter 4P, "COLOR ASSIGNMENTS": Several color schemas have been proposed by different channels for the Overleaf System. Here again, when the channel knew of the prior work of some other channel, they often as not copied the prior schema. However, when the channel did not know of the prior work of another channel, they either dismissed it or, often as not, came up with their own schema. To me it seems correct that components of the Overleaf System do not have any intrinsic color, and that assigning colors is just a convenience to help distinguish categories, but this is yet another realm among many realms where it would be even more convenient if the Michaelian teachings communities agreed on the schema.
- Chapter 4Q, "THE SEVEN LIFE-STAGES": The Seven Milestones, aka Internal Monads, have consistently been said to be a subset of the seven Levels, which have been said to be a subset of the seven Ages, which have been said to be a subset of the seven Planes. However, the seven Milestones are typically not correlated with these supersets in that their descriptions do not seem to fit. I perceive this as yet another

defect and deficiency within the Michaelian teachings that has been created by defective and deficient channeling.

All of those chapters lend credence to my assertion that far too much unearned credence has been lent to channeling in the Michaelian teachings.

Questions About Accuracy of Channeling

Notice the theme here with most of the issues addressed in the chapters of Part Four: the channels are the sources of many of the issues because they say different things about the same subject, some of these being central subjects in the Overleaf System. I refer to this phenomenon as "dueling channels". What are we to make of this? I have some suggestions.

- 1. It has been channeled that channels are, at best, 80% accurate, which means that they are 20% inaccurate (*JOYS*, p. 39). Thus, they supposedly do more good than harm. Of course, this could mean that some channels might approach 100% most of the time, and some other channels might approach 60% most of the time. In any case, do we just have to put up with this as best we can and get on with truly important stuff in our real lives? Is there anything we can do to improve the accuracy? Is it worth considering a formal procedure in the hope that it will elicit more accuracy?
- 2. Does the alleged 80/20 accuracy/inaccuracy ratio account for the amount and types of discrepancies and inconsistencies that we reviewed here in Part Four? Other channeled teachings have the advantage/disadvantage that, unlike the Michaelian teachings, they have only one channel. This almost surely means that other channeled teachings have less of a problem than does the Michaelian teachings with discrepancies and inconsistencies. That is their advantage. The disadvantage of having only one channel is that there are no "fact-checkers" for the accuracy of their channeled teaching. The Michaelian teachings has the advantage/disadvantage of having multiple channels. The disadvantage is that, because of the 80/20 accuracy/inaccuracy ratio, contradictions are inevitable. The advantage is that different Michaelian teachings channels can fact-check each other ... if only they would, preferably, I imagine, in a coordinated procedure.
- 3. Besides discrepancies among channels, a few inconsistencies in a single channel have been noted in these essays on issues; perhaps some of this can be chalked up to the 80/20 ratio, and perhaps some of it can be chalked up to the evolution and clarification of the teaching. Perfection is impossible, of course, but we can aspire and strive for it, within channels and between channels as they fact-check each other and as students fact-check them.
- 4. Looking at the sources reviewed in Part Four, it is apparent that, often as not, when a channel does not know what another channel says, they can get different answers. When a channel does know what another channel says, often as not, they get the same answer. What does this tell us? It tells me that, in addition to the alleged 80/20 accuracy/inaccuracy ratio, some of the channeling is not really channeling; sometimes some channels are making stuff up and/or sometimes they are just copying from each other. I suggest that it would be Good Work if the Michaelian teachings community be open and honest about this situation, and pursue means and methods for mitigating the discrepancies.
- 5. Even though channeling created most of these issues, that does not preclude the possibility that more channeling could resolve them. There might be novel solutions that I have not thought of. In any case, more channeling would provide more grist for the mill of intellectual puzzle-solving, if the Michaelian teachings community is up for that.
- 6. I believe that several discrepancies that I have discussed in Part Four are like bad 'mutations'; they are like errors in the 'DNA' of the Michaelian teachings. I believe that they are the unfortunate results of some bogus channeling, which has subsequently been perpetuated as 'memes' by credulous well-meaning but uninformed and/or misinformed channels and students. My not unreasonable expectation is that these 'mutant' discrepancies should eventually get 'weeded out' of the Michaelian teachings 'gene pool' because, 1) they are inconsistent among the Michaelian teachings communities, and 2) because they are inconsistent with other esoteric and exoteric sciences. One of the aims of my books is to get Michaelian students out of their 'environmental niche', expose them to other teachings, and thereby demonstrate the lack of 'fitness' of these discrepancies: they do not deserve to survive. In the 'Darwinian' struggle for 'survival', both in terms of competition and cooperation, these

- discrepancies are proven to be 'unfit' in the 'ecosystem' of the Michaelian teachings itself, and the ecosystem of these other teachings. Even though the discrepancies are fairly well known, it seems that few channels and students have thought to examine the issues analytically and synthetically, then face them squarely. I am suggesting that it might be time to subject the discrepancies to scrutiny. The unexamined teaching is not worth believing.
- 7. So why do I focus so much on discrepancies and contradictions? One could dismiss me and my focus with this statement: "Self-Reliance is an 1841 essay written by American transcendentalist philosopher Ralph Waldo Emerson. ... It is the source of one of Emerson's most famous quotations: 'A foolish consistency is the hobgoblin of little minds, adored by little statesmen and philosophers and divines.'". So, is my little mind full of hobgoblins when I insist on consistency? I insist that it is not foolish consistency that I am after; it is wise consistency, and it is warranted.

It might seem that I am dissing the channels with what I say in this *History* book, especially Part Four, but that is not the case. I have personally met more than a dozen of them, and I have found them all to be honorable people who do their work with integrity and sincerity. It is just that channeling *per se* is an iffy proposition, subject to distortion and error, as we all know. In my presentation here and elsewhere, I am asking: Is there a way to introduce error-correction procedures into the process of Validation?

So, if we cannot rely on channeling for accuracy, what else can we do? I have some suggestions, starting with: I vote we put our collective heads together, as outlined below.

So Now What?

I want Michaelian students to understand that my concerns about the discrepancies and ambiguities in the Michaelian teachings are not coming from a negative place; they are coming from a positive place. When I point out the discrepancies and ambiguities, I am not dissing the Michaelian teachings. Rather, I am supportive of the Michaelian teachings in that I want it to progress upward and onward, and my perception is that these discrepancies and ambiguities are holding it back and holding it down.

The Michaelian teachings is, or at least should be, a way of life for its adherents, not a mere belief system. In the grand scheme of the Michaelian teachings as a whole, the belief-system discrepancies documented here in Part Four are relatively insignificant; they can perhaps be safely ignored; perhaps one's life will hardly be affected if one does so. Michaelian students have in fact ignored them for decades, and they seem to be no worse off for it, so far as we can tell. So, why do I care about the issue of discrepancies as much as I do? Answer: it is because I care about the integrity of this teaching that is the central focus of my life. Metaphorically speaking, I regard the Michaelian teachings as a beautiful and well-tended park, with a pebble path winding among the trees and the shrubs and the flower gardens and the fountains in pools of water. I walk along delighting in its practical utility and its æsthetic glory ... and then I step in a stinky slimy pile of dog shit on the path; some owner has not cleaned up after their pet took a dump where others tread. That is what the Michaelian teachings in its present form feels like to me. The Scholar component of my Personality has researched the problems, the Artisan component of my Personality has written about the problems, and now the Priest component of my Personality declares that we can do better than this.

In my books, I am pointing out where I believe the Michaelian teachings needs to improve, and then I make suggestions for improvements. I see my part in this process of improvement — my "systematic Meta-Michaelian teachings project" — as a "work in progress". I ask myself: Will the Michaelian teachings community pay attention to my suggestions and provide feedback to my work in progress? And there are 'bigger fish' in this 'puddle' than I am, so I ask, What could their efforts bring, if they decided to tackle the issues? And not only would it be good, in my opinion, for channels and other leaders in the Michaelian teachings community to do some housecleaning, but also, in the long run, I would like to see *real* academics with actual credentials examine the Michaelian teachings. In my estimations, the Michaelian teachings might be more attractive and appealing to them if it were not such a mess, if it were more tidy, if there were not little 'steaming' piles of 'dog shit' littered here and there.

Maybe you did not see or pay attention to these issues until you read about them in this book. Can you "unsee" the issues now that I have pointed them out in such detail and to such an extent? In the future, when you hear or read someone in the Michaelian teachings unwittingly espouse one or the other of the disputed issues addressed in this book, will you cringe and wince as I do, because *they* are uninformed but *you* no longer

are? Is it okay for individuals and/or the Michaelian teachings community as a whole to just continue on their oblivious, apathetic way, if that is what is going on here?

Once you, whoever you are, have seen the issues that I discuss in this book and my other books, will you ignore them? Or will you not ignore them? I naturally wonder what response or reaction, if any, individual Michaelian students or Michaelian teachings communities will have to my books. Are readers going to dismiss or accept my ideas? Are students going to discuss my ideas among themselves? Are more and more individuals going to read my books, agree with my ideas, until a "critical mass" reaches a "tipping point" that "overturns the balance" to such an extent that my heterodoxy becomes the new orthodoxy? Will my "righteous indignation" at the presence of egregious discrepancies be vindicated? Is my aspiration that the Michaelian teachings will come together at a higher level of integration and understanding just a "delusion of grandeur"? Or ... will the *status quo* of contradiction and confusion and ambiguity just continue?

The Michaels said this about their teachings: "Propagate the Logos. This isn't trite. We expect this teaching to reach others. We are not just hollering down the rain barrel." (31 December 1973) They expected their teaching to have some influence on their students. And I feel the same way about my stuff: I expect that there might be some impact on individuals and communities. It is not that I, the messenger, am important, but I believe that my message has importance, and I believe that it is worthy of serious consideration. For *me*, to clarify the Michaelian messages does not feel trite.

Regarding their teaching reaching others, the Michaels have said that they have Agreements with about 100,000 Fragments who will be their students. It seems to me that these students are willing to cut the channels a lot of slack; they focus on the great information they find in the Michaelian teachings, and they are willing to overlook the defects and deficiencies in the channeling process. However, there are many people who are spiritual seekers that are not Michaelian students, who, when they encounter the Michaelian teachings during their search, will notice the defects and deficiencies and perhaps turn away from the great information. I suggest that it is not good, for serious students or casual passers-by, that the defects and deficiencies be allowed to continue.

In "The Meta-Michaelian Project" at the beginning of this book, I likened the Michaelian teachings to a gemstone that has just been unearthed: it is dirty and it is rough but it has a lot of potential. I stated that my aim was to clean the Michaelian teachings gem and to polish it. I also said that I was metaphorically rebuilding the Michaelian teachings from the ground up. In my view, the Michaelian teachings has been built on an unreliable foundation (channeling), and it is in a ramshackle condition because it has been added to willy-nilly over the decades by various channels. It has come to us piecemeal through several sources, and they often do not agree with each other. Is it too much to reasonably expect that a reconstruction, mine or some one else's, should and could and would produce a coherent and elegant and substantial edifice?

Assuming that the leaders and the members of the Michaelian teachings community move to address the accuracy/inaccuracy situation that has resulted in numerous contradictions, then what can we do about these issues? Let's think about this.

When I was in a fundamentalist Christian church in my youth, I used to like to say "The Bible says thus and such". When I first got into metaphysics, after reading some Seth books, I found myself saying to others "Seth says thus and such." Then I read *Messages from Michael* and I found myself saying to others, "Michael says thus and such." Now in my maturity as a student of the Michaelian teachings, I regard this kind of credulity as immature and undesirable. Now my concern is, "What do I say because I have Validated it?", either experientially or academically. Sometimes I hear Michaelian students say "Michael says thus and such." Now when I hear that I generally think to myself, "Which Michael?" because Quinn's Michael might say something different from Sarah's Michael, might say something different from Troy's Michael, might say something different from Shepherd's Michael. May I suggest that mature spiritual aspirants do well to outgrow their enchantment with channeling, and then outgrow their enchantment with external teachers and teachings.

Some instances of disagreement are documented in this book, and when we examine them we often find, as mentioned in point 4 above, that where one channel comes up with something, and other channels know about it, then the latter copies the former as often as not; where one channel does not know what another channel says, the information often as not differs. This phenomenon is most egregious when it comes to getting the Overleaves on someone. The entirety of Part I, pages 3 to 103, of Hoodwin's 2013 book *Journey of Your Soul* is about channeling and the problems with channeling. This does not speak well for the accuracy of

channeling — channeling leaves a lot to be desired, and should not be trusted explicitly. Is this present state of affairs desirable? Are these differences sustainable? Are these differences healthy?

Like Fox Mulder in the X-Files television show who said, "I want to believe", channels want to believe that they are in contact with a knowledgeable source of accurate information, and so do the students who pay for the channeling. Like the "presumption of innocence" in our legal system, students have a "presumption of accuracy" about channeling. However, I suggest that the proper attitude toward channeling is to have a "presumption of investigation": *check it out*. I have said this repeatedly in my books, and the motto of my books is this: *The Unexamined Teaching is Not Worth Believing*.

Most of the problems identified in Part Four were created by the channels, and one wonders if the discrepancies can be resolved by more channeling. Because I am not a channel, I have chosen to figure them out to the best of my ability, using my innate scholarly aptitude and other talents, and using the academic research tools at my disposal. I have sought to bring in arguments and evidences from outside the Michaelian teachings community. There are other channeled teachings and esoteric traditions; there is scientific (psychological, sociological) evidence for some of these subjects. In each case, I looked for an authority "higher" than channeling, such as derivatives of First Principles, or as a consensus in the esoteric teachings outside of the Michaelian teachings. These are all methods used by academic researchers. I have come to refer to this academic process as messages from Meta–Michael, "meta" being Greek for "above and beyond". I believe and feel that it is high time to understand messages from the Michaels from a higher, larger level of integration, to look at the Michaelian teachings from the viewpoint of the historical and esoteric context in which it is contained.

Another point that I want to make is exemplified in a south Asian parable that is well known: several blind men feel different parts of an elephant and report on what they feel. One feels the legs and says the elephant is like a tree; another feels the tail and says the elephant is like a rope; another feels the ears and says the elephant is like paper; another feels the trunk and says the elephant is like a snake; another feels a tusk and says the elephant is like a spear; another feels the torso and says the elephant is like a wall. Different channels have different strengths (and weaknesses) for palpating different parts of the entire body of the Michaelian teachings. Isn't it time to compare and contrast all of their accounts, in order to get the whole picture? It may be that what looks like a contradiction is just an incomplete understanding of the entire 'elephant'.

This de-contradiction disambiguation project might just be *my* thing and no one else's thing; perhaps it is just pretentiousness on my part to think that my Meta-Michaelian project would matter to others in the Michaelian teachings community, but my feeling is that *I should not be the only one inside the Michaelian teachings who works on this project*.

So, just perhaps, maybe, possibly this book *could* be a 'wake-up call' to the Michaelian teachings community. It is my perception that we have a problem in regard to the sloppiness of this teaching, in regard to the contradictions within this teaching. If I present 'ideas whose time has come', and if they take hold in the zeitgeist of the Michaelian teachings community, then perhaps the Michaelian teachings community will be aroused and become engaged enough to at least discuss the issues openly and frankly, with a view to resolving them. We as individuals and as a community could metaphorically (as in the *Matrix* movie) take the 'blue pill' and 'go back to sleep', or we could take the 'red pill' and 'wake up' to confront the greater reality that might await us if we seek and work to resolve the issues pointed out in this *History* book.

It is relatively easy for individuals to wake up; it is much more difficult for entire communities to wake up. It seems as though there is a Stevens contingent, a Yarbro contingent, a Tolley contingent, and a Michael Educational Foundation contingent of the Michaelian teachings. Some of these contingents are more exclusive than others; I am looking at you, Yarbro. Some contingents of the Michaelian teachings community have recently made contact with the German "Die Quelle" (The Source) group, and it looks as though there might be a cross-fertilization there. (I have pointed out some of the differences in this book.) Each group has come up with portions of the Michaelian teachings, some of which appear to be in disagreement. My burning question is: is it time for the Michaelian teachings community to stop ignoring this phenomenon of inaccuracy, and do something about it, such as applying the tools of Validation outlined and used in my books?

I acknowledge the difficulty of changing people's belief systems. Perhaps you have heard the saying: S/He has a mind like concrete: all mixed up and permanently set. Other people's brains are 'wired' differently from mine; other people access a different 'database' of personal experience and knowledge than I do. Once a person's cerebral connectome (>https://en.wikipedia.org/wiki/Connectome<) is established, it is extremely

difficult to modify it. Considering how much I have invested in researching and writing my books, I have a clue about how hard it would be to change my mind on certain subjects; it would take an even bigger mountain of evidence. There is research in the use of psychedelics for mitigating unhealthy thought patterns and even psychological traumas. There are also techniques for 'deprogramming' the 'indoctrination' and 'brainwashing' of former cult members. But, of course, I am not seriously suggesting anything that serious.

Here in the conclusion to Part Four, I presume to make some suggestions about how the community might foster an openness to methods to change some of its beliefs. I suggest that there are two potential procedures at our disposal: 'bottom up' and 'top down'. Of course, there is no reason not to do both.

Book Study Groups

In all of the churches where I have been a member there was a book–reading club of some kind, where a book was proposed, agreed upon, read, and discussed by people in the club in a group setting. In the Worldwide Church of God the book of choice was, of course, the Bible; in many Christian churches there is a Bible Study meeting every Wednesday to supplement the Sunday service. In the Unity Church various "New Thought" books of a general spiritual or self-improvement theme were selected and read and discussed. In the Unitarian Church the selection of books was much broader because they included books about various contemporary political, social, and cultural issues. In Boulder Colorado near where I live there is a "Cosmology Group" that selects books or videos about theoretical physics and cosmology to read and discuss.

For Michaelian students to do something like that, either in local groups such as are found in various geographical areas that have an abundance of students, or in online "Zoom" gatherings, would be the 'bottom up' "grassroots" approach to coming to a greater consensus on issues.

The other way to foster consensus on disputable issues is more of a 'top down' procedure. The plethora of contradictions indicate that Michaelian channels are obviously not being coordinated by the Michaels themselves from the top down. Therefore, may I suggest that the channels could coordinate and collaborate with each other here on the Physical Plane. The following procedure might be appropriate and effective.

A Formal Procedure

Based on the history of predecessor teachings such as Theosophy and the Fourth Way, it seems to me more likely that the Michaelian teachings will splinter than coalesce. This saddens me. I feel that it would be a miracle if the channels stopped 'pooping out' yet more 'dog shit', saw the desirability of self-correction, and then set themselves the task of cleaning up the mess that themselves created in prior years and decades. The only way I can see coalescence happening is if a process of coming together is orchestrated by the Michaels themselves. The Michaels had an agenda to reveal the Overleaf System from the outset of the original Michaelian group. What agenda do they have now, if any? Do they have plans for the future development of the Michaelian teachings and its communities? Or have they become entirely passive, waiting for questions to be asked? Well, here I am; I am asking questions. Because I believe that these issues are a concern to community cohesion, I suggest that others, who share these questions and concerns, initiate a formal process for addressing and resolving them: let's ask the Michaels, and see what they have to say. How do we do that?

Does it make any sense to create a committee to examine the issues I have raised in this and my other books? Does it make any sense to convene a convention to hash out the differences and have a vote to see what has been Validated — or not — after careful consideration? Of course this would result in a non-binding resolution, not a dogma–doctrine to which the community swears allegiance, as is the case in cultish organizations. Many organizations as they grow and mature do this sort of thing at a certain stage in their development: mission statements become guidelines become bylaws become a charter become a constitution. Thus the organization becomes institutionalized. Frankly, I have misgivings about this sort of thing. Frankly, I am not actually looking forward to a time if/when this happens, if it ever happens, in the Michaelian teachings community. Frankly, I would rather individuals come to their own conclusions by applying whatever tools they have, and, of course, I hope that they convey their conclusions to me and others so that myself and others and the Michaelian teachings community make progress. In my opinion, it is best if an organization develops and evolves 'from the ground up', that it has a so-called 'grass-roots' evolution and revolution.

Nevertheless, one would hope that the channels and other leading lights in the community have a part in the evolution of the community into a more coherent and consistent community.

The following numbered list does have a point, but it is not a serious suggestion, because I do not believe that either the students or the channels would stand (or sit) for it; this is just not the way Old Souls work, even when it is a perfectly reasonable way to handle a sticky situation in a group that seeks to resolve an issue.

- 1. Hoodwin and Tolley and perhaps some others, in their writings, have presented, and then compared and contrasted what other channels have said on various Michaelian teachings subjects, and then they presented their own view of those subjects. This process could perhaps be formalized.
- 2. Pick one of the chapters in Part Four of this *History* book that discusses a disputed subject, such as Body Types or Chakras.
- 3. Assemble a Committee of smart, knowledgeable, mature Michaelian students (not channels), and have them put their heads together and write a document that thoroughly presents the discordant information. My chapters are a start, but much more information could be gathered and analyzed and synthesized; what we see in this *History* book just might not be merely my penchant for overthinking stuff; I might have raised some legitimate issues in the minds of other students.
- 4. List specific unresolved issues at the end of the document, and pose specific questions to be answered.
- 5. Present the document to various channels, and have them study it, and then channel about it while not in physical communication with each other. Besides channeling, the channels can provide extra evidence and argument in support of the answers, if available. This is not unlike law-enforcement investigators interrogating, in different rooms, several suspected criminals from a gang, only in this case it is the Michaels being interrogated by channels. (You might not like this analogy, but the method is one time-tested way of teasing out the truth.)
- 6. So that no implicit or explicit bias for or against particular channels distorts the next phase of the overall process, the channels should somehow be anonymized with respect to the answers, perhaps by an intermediary between the channels and the Committee.
- 7. Have the Committee collate the anonymous data, accept the answers that are consistent, then prepare a second document that lists the answers that are consistent, and the answers that are inconsistent, and present that document to the channels for a second go-around.
- 8. Repeat until the Committee is satisfied that the issues are resolved, at least in terms of consistency in what the channels are saying. The Committee then writes up the results, and presents it to the Michaelian teachings community. Individuals in the community are free, of course, to believe whatever they want in spite of the consistency of channeling, so maybe nothing really changes here.

Anyway, the point of my suggesting this procedure is to now ask you: How did you feel about that suggestion? Does it make you uncomfortable? Angry? Frightened? Delighted? Is it that you do not like that the issues exist? Is it that you do not like confronting the issues? Do you regard consistency and/or definitiveness as undesirable? Do you regard the issues as irrelevant to our daily lives, so why bother? Do you regard the discrepancies as unresolvable? Is it that there should be no "doctrinal committee" looking for answers because you believe the burden is on the individual to sort out the issues, if they choose to do so? Should there be no meritocracy of doctrinal deciders in the Michaelian teachings? Who among you is willing to go to the lengths and depths and heights that I have gone to in an attempt to sort out the issues? Collectively, we *could* do better, but *should* we? *Shall* we? Or should I just be regarded as a curmudgeonly old crank and a troublemaker who should be ignored and/or dismissed and/or shunned?

Whatever your answers to these questions may be, at minimum, with my books, I am metaphorically 'planting seeds' into the minds of individual Michaelian students, of a greater awareness of what the Michaelian teachings *could* be; we will see if any of the ideas 'sprout and take root and grow'.

Bottom line: For the most part, researching and writing Part Four of this History book has been a satisfying and fulfilling intellectual exercise for me. As an academic endeavor to solve puzzles created by discrepant, defective, deficient, ambiguous, and inadequate channeling, it has been fun for me to write.

What about for you to read?

Conclusion to the Book

WHERE DO WE GO FROM HERE?

Every chapter in this book could have an entire book written about it. At least, that was my feeling about them as I was writing them. There is so much information external to the Michaelian teachings, and there is so much information internal to the Michaelian teachings (much of which is unpublished) on these subjects. I just know that this *History* book only 'scratches the surface'. What I would like to see is other Scholars who are willing and able to take the 'baton' that I am handing to them, and continue the 'race', of which there is no 'finish line'. Because I do not have access to all of the unpublished material, and even what we have is too much for one person to process, my presentations in this book are incomplete and distorted. My hope and suggestion is that Michaelian teachings channels and teachers and students review this book, and get back to me with feedback to make it more complete and accurate. Please let us all put our heads and hearts together and work through the inadequacies and issues and contradictions at the foundations of the Michaelian teachings. My perception is that the Michaelian teachings has gone just a little bit astray in a few areas, and it would be Good Work if we brought it back on track. May I also suggest that new stuff could perhaps lead further astray unless we set the old stuff aright?

One of the things that philosophers aspire to do is define and use language ever more accurately and skillfully. Certainly more work needs to be done in the Michaelian teachings in regard to the ambiguities. A mess has been created heretofore; can the mess be made to go in the direction of clarification? I am doing what I can. There is an eternal struggle between being and becoming, the true and the false, the inner and the outer realities, the ambiguation and the disambiguation, the orderly and the chaotic. While acknowledging these dichotomies, we who are of a philosophical persuasion press on in our own intellectual development, to understand a deeper and broader view of ourselves and the world that we find ourselves participating in.

The Michaelian teachings is not just about individuals learning about their own journey in life; it is also about the journey of humankind. Even though I have focused on some pretty petty discrepancies in the Michaelian teachings in this *History* book, I want to end with a view of the Michaelian teachings as part of a bigger picture, as a piece in the biggest puzzle, both in time and in space.

One of my goals in this book and my other books has been to give the Michaelian teachings an academic treatment. By that I mean that I researched the published Michaelian teachings material, examined that material in a scholarly fashion, and compared and contrasted it with other teachings. This is somewhat like what happens in a Master's thesis or in a Doctoral thesis for the purpose of advancing the base of knowledge on some subject. Having done this, I see how shallow and superficial most Michaelian students are in their study of the Michaelian teachings, but I also see how much more there is to do that I am not capable of, because I am not an actual academic, and because I am just getting too old for this kind of thing. In my opinion, people who have academic acumen and tools as used by actual scholars should evaluate the evidence and apply sound arguments to the Michaelian teachings. So far as I know, my books are the first time that this academic treatment has happened to, or in, the Michaelian teachings. However, I hope that it will not be the *last* such effort; my hope is that more academic treatments will be given to the Michaelian teachings by people who have actual academic credentials, which I do not; I am just pretending to be an academic; my only credentials are that I am a fairly smart Scholar Soul, Artisan Role, Fragment who likes to study and write, and I have been involved in the Michaelian teachings for more than 40 years at the time of this writing, ~2023. This book is just the beginning of research that could be done by others on the subjects and issues addressed in this book and in my other books.

The Michaelian teachings has a history, and it has a future, and it has a place among other esoteric teachings. It has been in existence long enough now that we can begin to see where it fits into the larger landscape of channeled teachings at this critical transition phase in the history of humankind on this planet. Many other channeled teachings, past and future, are extant in the world today; each provides a piece of the puzzle from a higher viewpoint, informing us about what is 'really happening behind the scenes'. The Michaelian teachings has its place among these other teachings.

Speaking of other teachings, one could apply the Darwinian notion of "survival of the fittest" to the Michaelian teachings and these other teachings and to their interactions with each other. In Part Four of this book, I pointed out that the Michaelian teachings leaves a lot to be desired in terms of consistency, coherence, and consilience. One might reasonably wonder how well it can compete and cooperate with the other spiritual movements extant in the world today considering these defects and deficiencies. This means that, if the Michaelian teachings were an organism in an ecosystem, it would have some mental and physical health issues that would make it vulnerable to harm by healthier organisms in the environment. My suggestion here in Part Four is that the Michaelian teachings would survive and thrive better if the defects and deficiencies were systematically and intentionally addressed by the leaders, the channels.

In this book, I have traced the history of the Overleaf Chart from the original Michaelian group to the present. This overall review made it abundantly clear that the Overleaf System has always been a 'work in progress'; the Overleaf System did *not* 'fall from the sky', so to speak, fully formed and perfect. It has metaphorically taken some 'twists and turns' along a 'winding road' as it finds its way to its proper place in the world. It is still in the process of getting there, and it is still relatively obscure as spiritual teachings go. Even after five decades of channeling sessions in the Michaelian teachings communities, there are many holes in the information, discrepancies in the information, and ambiguities in the information. Part Four of this book in particular, "Essays on Issues", points out where I think some of the problems are, and provides movement toward answers and solutions. I have applied tools, I have pointed to some sources, I have provided some evidence and many arguments with a view to solving what I see as impediments to progress. That is not nothing, but is it enough to effect some changes in the trajectories of the Michaelian teachings communities, provoke changes in the understanding of Michaelian teachings dogma–doctrines, and elevate the minds and hearts of Michaelian students?

Before we speculate about the future of the Michaelian teachings, it would be appropriate to briefly review the predecessors of the Michaelian teachings and the history of the Michaelian teachings. I have looked at some of the 'trees' of the Michaelian teachings in this *History* book; now let's zoom out, pull back, and look at the entire 'forest' of the Michaelian teachings over the course of its history, and after that I will compare it with what has happened with other movements.

Where Have We Come From and Where Have We Been?

Regarding the history of the Michaelian teachings in general, one might think that because several of the founding members of the original Michaelian group had attended some meetings of a local Gurdjieffian teachings "Fourth Way" group before founding the original Michaelian group, and because some of the Gurdjieffian teachings ideas were adopted into and adapted in the Michaelian teachings, that the Michaelian teachings should be regarded as a successor to the Gurdjieffian teachings. However, I see the Michaelian teachings as a natural extension of Neo-Theosophy (Alice Bailey channeling), which was a natural extension of Theosophy (Helena Blavatsky and Annie Besant channeling). That is to say, the Michaelian teachings has more in common with Theosophy and Neo-Theosophy than it does with the Gurdjieffian teachings: the Michaelian teachings "thinks, feels, and acts" more like Theosophy than any other esoteric system that I have encountered. To my way of thinking, this means that the Michaelian teachings as a whole is a 'work in progress' in a long lineage of spiritual revelations and traditions. Theosophy might be the primary precursor to the Michaelian teachings, but I see Kabbalah, the ancient mystical wing of the Jewish tradition, as the secondary precursor to the Michaelian teachings.

When the Michaels appeared to the original Michaelian group on 12 August 1973, they started out with what was obviously an agenda, namely, to reveal the Overleaf System, among other things. They even said that their intention was for their teaching to be published (e.g.: "PROPAGATE THE LOGOS. THIS IS NOT TRITE. WE EXPECT THIS TEACHING TO REACH OTHERS. WE ARE NOT JUST HOLLERING DOWN THE RAIN BARREL" — 31 December 1973), and that a "school", a "church", a "religion" was to be started. (e.g.: "Are we starting a church? WE WOULD AGREE WITH THAT." — 10 January 1974) In the Greek language of the New Testament, the word

used for "church" was "ekklesia", which meant "assembly". The quoted passage indicates to me that it is possible to be a solitary Michaelian student, but it works best when their teaching is applied in a group setting. The original Michaelian group members laid the foundation to formalize this intention by incorporating as "The Fellowship of Souls". They collated and organized the channeling and they started a newsletter.

Then the original Michaelian group fell apart, and the subsequent Michaelian teachings groups have been somewhat disparate ever since. Quinn Yarbro went her own way in a closed group after publishing *Messages* from Michael in 1979. Louise Briggs led, and her daughter Leslie Briggs channeled for, a Michaelian teachings group in the early 1980s that did not even know that the Yarbro group existed. In the mid-1980s, the Michael Educational Foundation, Inc., was incorporated by one of the successor groups to the original Michaelian group and the Briggs groups. A sibling-channeled teaching to the Michaelian teachings, Die Quelle, originated in Germany in the 1980s and has been going strong ever since. About a dozen books have been published since MFM. About a dozen websites dedicated to the Michaelian teachings have been established. For a while, the Yarbro contingent had the Causal Messenger Service as part of their outreach to the world. The Center for Michael Teachings, Inc., was formed in 2011 to publish Michaelian teachings channeling wherever it could find it. Dave Gregg manages the active website >michaelteachings.com<, and Troy Tolley has a very active website at >truthloveenergy.com<, and a very active membership. The East Coast Michael Gathering has met every year, beginning in 2004 (except for 2020), in person and/or via Zoom. And so on with their little attempts to form organizations and institutions. A bit more of this history is recounted below. The question is, is the continuation of this past and present story arc all there is? What will come of these activities and organizations in the long run?

It is appropriate in this *History* book, where the fifty+ year history of the Overleaf System has been reviewed, to look ahead and speculate where the Michaelian teachings might go in the future. I have already been where I want the Michaelian teachings to go, so the real question is: "Where do *you* want to go from here?" — "you" being an individual, or a group, or a contingent of the Michaelian teachings community, or the Michaelian teachings community as a whole.

As part of this exploration, I also ask: What would it look like for the Michaelian teachings contingents to collaborate toward a consistent and coherent and consilient teaching? More investigation of other sources? More channeling? Are we as a community going anywhere at all? Is there a bigger picture, a better picture, for the Michaelian teachings that we do not yet see? Subsequent to their original agenda, do the Michaels have a long-range "plan" for their teaching?

I do not have the answer to where the Michaelian teachings *should* or *will* go from here, but I have some speculations about where it *could* go, based on historical precedents. Let's look at historical precedents.

Stages of Social Movements

The Michaelian teachings could be characterized as a spiritual "movement", for lack of a better word. For clues about the future of the Michaelian teachings, we could perhaps learn from a historical perspective on movements in general. As a start, let's consider the history of precursor spiritual teachings to the Michaelian teachings. In Theosophy, it started with Helena Blavatsky and William Judge, then after their deaths Annie Besant and Charles Leadbeater took over. After them, there were branches led by Rudolf Steiner and Alice Bailey, and there were others. In the case of the Fourth Way teaching, Georges Gurdjieff synthesized material from his predecessors, but others developed their own branches during and subsequent to Gurdjieff: Peter Ouspensky, Maurice Nicoll, Rodney Collin, Irmis Popoff, J. G. Bennett, Robert Burton/Fellowship of Friends, and others. And then there is the Michaelian teachings itself, which is a successor to both the Theosophy schools and the Fourth Way (Gurdjieffian Work) schools. At some point in the history of the Michaelian teachings, we might ask if the present Balkanization of the Michaelian teachings into a Yarbro contingent, a Stevens contingent, a Die Quelle contingent, a Tolley contingent, and so on, is a good thing or a not-so-good thing, for individuals and communities. The Michaelian teachings evolves or devolves, depending on how you look at factionalization.

When we look at the history of movements in general — whether economic or social or religious or intellectual or scientific or philosophical or spiritual or political — sociologists have found that they go through stages in their development, somewhat along the lines of the diagram below, which I borrowed from this Wikipedia article: >https://en.wikipedia.org/wiki/Social_movement<. The graphic presents a number of scenarios, showing how some movements play out over the long term.

Adapted from Blumer (1969), Mauss (1975), and Tilly (1978)

Let's look at each of these stages and try to discern where the Michaelian teachings has been, where it is now, and where it might go in the future. The graphic refers to "social" movements, but "spiritual" movements could be regarded as a subset of "social" movements; they both consist of collections of people who are involved in a common cause, with shared behaviors, values, and beliefs.

EMERGENCE: Obviously, this Stage is when a movement gets started, for whatever reason. In the case of the Michaelian teachings, it happened with the original Michaelian group starting in 1973. The Michaelian teachings was not exactly new and unique; it had precursors, as documented in Part One of this book. However, it did have a unique perspective that differentiated it from the precursors. The specific event that triggered the differentiation from the priors was the appearance of the Michaels on 12 August 1973. The Michaels provided a novel and unique perspective with their revelation of the Overleaf System. If it can be said that the Michaels had an agenda, this revelation of the Overleaf System was it; the revelation was the initiation of the "movement". The movement has developed from there, and I believe that we Michaelian students all realize that the Overleaf System is the central defining component of the Michaelian teachings; it distinguishes the Michaelian teachings from the precursors, and it distinguishes the Michaelian teachings from other concurrent movements. To a large extent, the Michaelian teachings is a commentary on the Overleaf System. My books are an extended commentary on the Overleaf System.

COALESCENCE: The original Michaelian group took steps in the direction of the Coalescence stage: they organized the material they were receiving from the Michaels into a couple of compilation documents; they formalized and legalized the group as the "Fellowship of Souls"; they started an outreach program via a magazine called "Dimensions"; they looked into purchasing property where they could start a commune that would be the center for outreach to the world. However, the original Michaelian group movement did not in fact coalesce; it went directly to the Failure Stage instead, bypassing the Bureaucratization Stage shown in the diagram above. It can be said that the task of Coalescence fell into the hands of Yarbro and Briggs, and I perceive that they advanced the Michaelian teachings considerably. In my view, however, neither Yarbro nor Briggs themselves achieved Coalescence. The Yarbro group is closed to the public, and even though they have published some books, they have evolved in secret, and nothing of wider significance has come of that group other than their influence from the publication of the Yarbro books, so far as I know. A wider significance has come of the Briggs group in the form of the successor group, the Michael Educational Foundation, Inc. (MEF), with JP Van Hulle in the leadership role: group meetings have been held, channels have been trained, books and a magazine have been published, conventions have been held. Other channels of the Michaels, such as Hoodwin and Tolley, have appeared independently of the MEF, and added their perspective to the mix. This could continue indefinitely. I prefer to regard my work of research and book-writing as a part of the Coalescence stage, or at least I see it as an attempt at fostering coalescence within the Michaelian teachings communities. Or, it could be regarded as part of the next phase, if my work is accepted en masse rather than ignored or rejected wholesale.

BUREAUCRATIZATION: Applied to the Michaelian teachings movement — and because "bureaucratization" has a pejorative connotation — I prefer the word "codification" to this word which is used in sociology. I wonder if the Michaelian teachings will ever reach this third Stage. It is not the type of movement that lends itself to institutionalization of some kind, where "managers" (other than the Michaels) run the show. As long as there are active channels, the Michaels will shepherd its development and the Michaelian teachings will not stagnate, but will it ever formally codify the teachings? My work could conceivably be the initiation of the codification phase, where we formalize a

body of understanding — if others take it seriously and do something about it. Is codification a necessary stage in the evolution of every movement for it to survive and thrive? Is it a fact that either we 'get our act together' collectively or the 'movement' will stagnate or regress? According to the graphic, those are future possibilities.

SUCCESS, FAILURE, COOPTATION, REPRESSION, MAINSTREAM: Of these alternative courses for a movement, the only two that to me seem likely for the future of the Michaelian teachings are Success and Mainstream. In the Michaelian teachings, Success means that individuals and groups and the teaching as a whole make people into better people on their spiritual path. In the Michaelian teachings, Mainstream means that the Michaelian teachings influences people and groups who are on similar developmental or spiritual tracks. For the most part, the Michaelian teachings books and websites exist for the purpose of Mainstreaming the Michaelian teachings; many more people are reached than become members of the Michaelian teachings community as true students. Sometime a person is strongly influenced; sometimes a person is weakly influenced. It has proven to be true that the Michaelian group, and the successor Michaelian teachings communities are not content to be in a self-serving echo-chamber. The Mainstreaming outreach is largely led by professional channels who are also usually Sages or Sage-Cast who just cannot be quiet about the Michaelian teachings. Not that there is anything wrong with that.

DECLINE: As recorded in the original Michaelian group transcription of the 08 September 1973 session, "When the teacher dies, the teaching passes into literature and should be regarded as such." If the Michaelian teachings ever runs out of active channels, then its existence as a well-defined movement will perhaps go into the Decline Stage, whatever other Stages it takes or misses along the story arc. Comparing the history of the Michaelian teachings with other spiritual movements, my surmise is that it will spread and diffuse into the mainstream culture, the way that Theosophy has generalized into the esoteric consciousness. The Theosophical Society still exists and functions, but its greater contribution is that its influence has diffused into other esoteric groups and spiritual seekers. The Michaelian teachings communities could conceivably actually cease, but the Michaelian teachings contributions could live on in other movements. Michaelian teachings ideas have already started to do that, especially with the help of the internet. For instance, if you google "soul age reincarnation", you will see that dozens of websites that are not Michaelian teachings websites are promulgating Michaelian teachings information on that subject. This is the "go mainstream" option in the group of boxes in the graphic. One of my goals is to help some Michaelian teachings ideas go mainstream via my books, there to be absorbed into other movements and further promulgated by them. Eventually the Michaelian teachings movement might be superseded by other spiritual movements with better ideas or more relevant ideas, even as the Michaelian teachings superseded its precursors with some, in my opinion, better ideas.

That last paragraph on the Decline Stage provides an introduction to further speculation about the future of the Michaelian teachings. To my way of thinking, considering the egregious defects and deficiencies with which it is encumbered, it is unlikely that the Michaelian teachings will thrive, but it will probably survive in some form, and some of its better ideas will diffuse into other esoteric communities. That is not to say that I believe the Michaelian teachings will for certain decline any time soon, but it will for certain change, especially after the retirement of the current crop of channels. In the following section, I flesh out my ideas about the possibilities and probabilities for the future of the Michaelian teachings. The Michaelian teachings will evolve — movements always do — we just do not know how; I have some speculations.

Possible Scenarios for the Future of the Michaelian Teachings

In keeping with a longstanding tradition with respect to the number seven, I have come up with seven possible scenarios for the future of the Michaelian teachings. Some are more likely than others.

Future Scenario #1: Further Fragmentation

The reality of the situation with the Michaelian teachings is that there is not just one cohesive Michaelian teachings community at this time; there are several Michaelian teachings communities. Only the original Michaelian group was a singular community, and you know what happened to it: it ran for a couple of years (1973–1975), then it failed in the sense that the large group was disbanded, and a core group continued on a very reduced schedule from late 1976 to early 1978. Then the Michaelian teachings was picked up by others and continued in two directions, the Briggs and Yarbro groups. In the early and mid-1980's the Briggs group evolved into two other branches, namely MEF and Stevens; as of this writing Yarbro might still be active in relative seclusion from the other Michaelian teachings communities; other channels with some distinctive characteristics have branched off from there, such as Hoodwin and Tolley and Cocconi. Die Quelle in Germany constitutes a separate branch, but with some contact with other Michaelian teachings communities. These groups don't always pay a lot of attention to each other. To some extent, they are each 'doing their own thing'; they do not always teach the same thing. I consider myself and my Meta-Michaelian project as a distinct branch, but I have no following at this time. It might be that li'l ol' me, who is not a channel, is just 'doing my own thing' also, and teaching my own unique view of the Michaelian teachings, and even fewer others than those in these various contingents will pay attention to what I have to say as I 'ride off into the sunset'.

Another metaphor that might bear on the current situation in the Michaelian teachings is that of the blind men feeling different parts of an elephant. Different channels are 'feeling' different parts of the metaphorical elephant that is the Michaelian teachings as a whole. My Meta-Michaelian project, in my books, includes attempts to describe the entire 'elephant'. Hoodwin does that also, others not so much. Perhaps we are never going to collectively assemble a picture of the entire elephant that we individually describe. Perhaps each of the contingents will continue to evolve in their own way and in their own time, and they will diverge even further apart than they already are in terms of quality, and in terms of dogma-doctrines. It might not be a reasonable expectation on my part that the contingents will, or even should, coordinate their teachings in the future. "Different strokes for different folks." This is a very common scenario in the history of other movements, as mentioned above. It is also very common in evolutionary biology; it even has a name, "speciation": environments change over the course of geological time — sometimes during cataclysms — and mutations create species that are best adapted to the changed environments. In the long run, species lose the ability to even breed with each other because they are too different to do that. Something like speciation appears to be happening in the Michaelian teachings, and it could continue to happen.

Besides 'playing its part' in the 'drama' of cataclysmic present times (the rapid transformation of humanity), the Michaelian teachings also faces Darwinian pressures from other teachings, some of which might be more adaptable than the Michaelian teachings. Will the Michaelian teachings survive and thrive in the long run? How well will it both compete and cooperate with the other teachings that are vying for the attention of humankind? — because that is what it takes to make it in this world: competence in both competition and cooperation. One Darwinian pressure that might be tested in future is, is the Michaelian teachings more adaptable as fragmented communities, or as a united community? As I have said, a major component of my books has to do with contrasting and comparing the Michaelian teachings with other teachings, borrowing 'genetic material', you might say, to engender and propagate a better teaching, one that will perhaps have a better chance to survive and thrive into future generations of students. One of my assertions is that a teaching as defective and deficient as the Michaelian teaching currently is, will likely be out-maneuvered by other teachings. Naturally, I hope that my books are good enough to 'stand the test of time', and that my contributions will adopted, thus strengthening the Michaelian teachings as a whole, even if fragmentation of the communities continues.

It is hard to predict whether integration or fragmentation will prevail in the Michaelian teachings as a whole; probably some of both will happen. I regard it as very unlikely that any of the Michaelian teachings communities will adopt my suggested improvements, but that does not stop me for making the suggestions.

Future Scenario #2: Unification and/or Bureaucratization

One wonders if a dynamic leader could come along and mitigate the current state of fragmentation, and unite the Michaelian teachings tribes. Members of the original Michaelian group hoped that an Old King would appear in their midst and supercharge the group; Gurdjieff and Robert Burton of the Fellowship of Friends had that kind of charisma; the Michaels confirmed that it would be a good idea for the members to learn directly

and personally from an enlightened Master. But it never happened; not then, not now, not yet anyway. And such scenarios often go astray with one sort of scandal or another, so there is a potential downside to the scenario of a charismatic dynamic leader.

If not a charismatic Master, is there another way to unite the Michaelian teachings communities? In Christianity in the 4th Century, the Council of Nicea was convened to settle on some dogma–doctrines for the sake of the unification of the Catholic Church. Some ideas were canonized as orthodoxy, and some ideas were condemned as heresy. A possible scenario, where the Michaelian teachings communities convene a doctrinal committee that determines and promulgates a creed is anothema to me and all other right-thinking individuals. However, am I the *only* one who would like to see a voluntary and collective settling of some issues, a convergence of the Michaelian teachings as a whole into a 'meeting of the minds and hearts'? I suppose it is not impossible that the Michaelian teachings could standardize on some or all of my ideas or someone else's ideas, but I also suppose that it is highly unlikely. This was a scenario that I proposed in the conclusion to Part Four; review that for the details if you like.

Future Scenario #3: Status Quo Plus

Extrapolating from present trends into the near future, we can almost surely expect more of the same in regard to the Michaelian teachings. In this scenario, the Michaelian teachings will continue to develop more or less along the same trajectory that it has been on for about fifty years now. That is, maybe a few more books will be published; maybe a few gatherings will be held; maybe websites will continue to nourish Michaelian teachings communities and reach out to the world population with the Michaelian messages; maybe other esoteric communities will see this public outreach and will borrow portions of the Michaelian teachings and incorporate them into their belief systems, value systems, and behavior systems. For all we know, perhaps more channels will appear from among the existing or future student population.

By the way, the Michaelian teachings is not just an English language movement now. Parts of the Michaelian teachings have been translated into other languages. For instance, some of Stevens's books have been translated into other languages. There are books and websites promulgating the Michaelian teachings in other countries. For instance, there is a Russian language website: >http://michaelteachings.ru/<. There is the German language website promulgating the work of Die Quelle, a sibling to the Michaels, mentioned previously: >http://www.septana.de<, and at least two of the Die Quelle books have been translated from German into English at the time of this writing. A Brazilian fellow by the name of José DeMelo has a Portuguese website: >http://www.michaelnobrasil.com/Michaelnobrasil.com/Mundo_do_Michael.html<. There might be other websites or books that I do not know about. Almost surely, as time goes on, the Michaelian teachings will be found in even more languages.

In this scenario, it is highly unlikely that any of the existing (or newly-arising, if any) contingents will prevail over all others. The various factions (Hasselmann, Hoodwin, Cocconi, MEF, Stevens, Tolley, Yarbro, Byram, Wittmeyer, whoever/whatever) will continue to do their thing, and there will be individual students and/or groups of students who prefer one or another of them, or mix with a number of them. My guess is that the Michaelian teachings as a whole will never sincerely have a Kumbaya moment while singing around a single campfire; each person and each group will go their own way to some extent or another, with some cross-pollination between them, but they will not, in the foreseeable future, arrive at a consistent consensus across all individuals or groups. I do not regard this as an unhealthy, contentious situation; it is just not cohesive, and, to my way of thinking, that lack of cohesion blunts its potential for influence in a mainstream outreach; see next scenario.

Anyway, in this scenario, the Michaelian teachings changes in terms of quantity, in that it reaches more and more people, but it does not really change in terms of quality; it is just the same message reaching more people.

Future Scenario #4: Mainstreaming

José Stevens, PhD., has academic credentials; he has been a university teacher. He might have been the first Michaelian student/teacher to take the Michaelian messages 'on the road' to a mainstream audience. He tailored his presentation for people who are not interested in reincarnation and the ramifications of reincarnation, but are interested in self-help psychology. For instance, his book *Taming Your Dragons* and his Personessence website >https://thepowerpath.com/product-category/personessence/< were aimed at that kind of readership. Barbara Taylor has done likewise with her website >http://www.itstime.com/michael.htm<.

The main reason we want to mainstream this information is because there are far more people outside the Michaelian teachings than inside the Michaelian teachings who we believe could be benefited by various subjects found within the Michaelian teachings. We might reach them if only we could get the message out into the world more effectively than we have. For instance, there are those who have a deep and broad interest in counseling psychology, physics—cosmology, and spiritual sexuality. I know they are out there, because I have seen plenty of them, not within the Michaelian teachings but in the wider world. There are interested laymen and big-name professionals at the Science and Non-duality (SAND) conference that I attended for five years. There is a huge plethora of essays hosted by a website — >https://www.academia.edu/< — that covers some of the same territory as the Michaelian teachings. And there are many more sources and resources in the virtual world of the internet that I have discovered as I researched the subjects written about in my books.

The reason I would push this mainstreaming agenda is because I believe that these particular Michaelian teachings topics have improvements over what the mainstream has now. However, I also believe that most prospective parties would not want to 'buy' the entire Michaelian teachings 'package'; they would never become full-fledged Michaelian students. That does not mean that they could not benefit greatly from certain portions of the Michaelian teachings, if the messages were adjusted and focused to suit their interests and beliefs. I want the Michaelian teachings to reach them eventually. I want to reach them eventually. It so happens that I am writing just the books that I think might interest some of them. A guy can hope.

I see the Michaelian teachings in its present state as an agglomeration of sometimes self-contradictory, ambiguous, poorly-developed, and unsubstantiated ideas. My perception is that the Michaelian teachings will not likely break into the mainstream while in its current inchoate and incoherent condition. My vision and aspiration is that my systematic and comprehensive reformulation of the Michaelian teachings from the ground up, my Meta-Michaelian project, will make it more palatable to a mainstream readership. With some editing, four of my books might be worth mainstreaming:

- 1. The Tao of Cosmology: Tao's Template of First Principles You might (or might not) be surprised at the number of people who are keenly interested in reconciling spirituality with physicality in the current era. The physics/metaphysics types could perhaps benefit from the The Tao of Cosmology book where I present my offering on that discussion. The book attempts to unify metaphysics, physics, cosmology, philosophy, spirituality, and psychology within the logical and mathematical framework presented in Chapter 42 of Lao Tzu's classic, Tao Teh Ching. I have seen plenty of evidence that the subject of my project might be of interest to other deep thinkers who enjoy exploring big ideas.
- 2. The Tao of Cosmogony: The Natural Sequence of the Cosmic Septenary As with the other three volumes in this list, this volume is also in the realm of reconciling spirituality and physicality. My book covers various realms of knowledge and understanding that are tied together in the logical and mathematical structure of the Natural Sequence, mentioned numerous times in this History book. Among discussions of these other realms of knowledge, this book has somewhat to say about developmental psychology. That subject has been around for only the last hundred years or so, but it is now used widely among practicing counselors. I see luminaries in this subject on the internet, and at the SAND conference every year. Wouldn't it be nice if they found the Michaels' perspective valuable and worthwhile?
- 3. The Tao of Personality: The Process/Aspect System of Personality Traits This book is about our own home—grown personality typology, the Overleaf System, which I believe is better than any of the other personality typologies extant in the psychology professions. I believe it deserves to be widely known in that profession, especially counseling psychologists who help people to better understand themselves and their interpersonal relationships. Of course, it would help us all, and humankind in general, if amateurs knew it and used it also. I saw luminaries in the Enneagram world at the SAND conference every year that I attended; I wonder if they could become interested in what I regard as the successor to the Enneagram.
- 4. The Tao of Relationships: The Chemistry and Alchemy of Service and Intimacy There is a small portion of humanity that is interested in the intersection and overlap of sexuality and spirituality. One of the members of the original Michaelian group asked the Michaels about this, and the gist of an understanding of the subject in the context of the Michaelian teachings was given to him, and to us. This book finishes the job that was started then. I believe that the "spiritual sexuality", tantra yoga enthusiasts could perhaps benefit from my Relationships book. It is not completely outside the realm of

possibility that I could introduce them to it, because I saw some of the luminaries in the spiritual sexuality world at the SAND conference every year that I attended.

Assuming that after my books are finished and published, and assuming I then attempt to mainstream them, will my ideas gain any traction there? What makes that scenario extremely unlikely for my work to have significant success is that I have no credentials of any kind, other than being a fairly smart and articulate and competent Michaelian student of long standing. What a real mainstreamer needs are actual formal academic credentials or academic training of the kind that would carry some weight with luminaries in other movements and/or organizations. T'is not I, but José Stevens, PhD., who has the kind of credentials that have worked for him to mainstream the Michaelian teachings in his own way, and that is Good Work. Varda Hasselmann, PhD., also has academic credentials, and her work in Germany has apparently achieved significant notoriety among other professionals and academics. Will someone else come along who can help the Michaelian teachings break into the mainstream? I have always hoped that this would happen eventually, and the Michaelian teachings would break out of the confines of its hard-core students, and gain the widespread notoriety and utility that I always thought it deserved.

Even if real academics do not further my work (or the Michaelian teachings work in general) my work could conceivably punch up the 'standard of excellence' of Michaelian teachings individuals and groups to a higher level, such that my work is the new 'low bar', not the new 'high bar' that I suggest in my books that it could be. All I am saying here is that we as individuals and as groups could do better when it comes to "academic" standards of excellence than we have heretofore manifested.

In any case, the Michaelian teachings as it is, is now spreading. For instance, if you do a search on the internet for the words "reincarnation soul age", you will find many hits that point to Michaelian teachings websites. However, there are many other websites that have adopted the five Soul Ages, "Infant Baby Young Mature Old", into their own teaching about Soul Age. I refer to these people as that 'dark matter' of Michaelian students: they never reveal themselves to the visible Michaelian students, those who participate in the online discussions or the occasional group gatherings. Thus, some components of the Michaelian teachings are being diffused among the spiritually-minded and the psychologically-minded populaces. This obviously means that the influence of the Michaelian teachings is being felt in many other spiritual communities, and I believe that this influence will most likely increase. Here again, a biological metaphor is appropriate, in the phenomenon of gene transfers, which one can read about on such websites as: >https://en.wikipedia.org/wiki/Horizontal_gene_transfer<. This biological phenomenon has played an important role in the evolution of life, and its analog in culture — syncretism of information — has played an important role in the evolution and spreading of religions and spiritual teachings. How about let's inject some fresh 'DNA' into these other 'organisms'.

Looking into the farther future of mainstreaming the Michaelian teachings — if the history of other movements is any indication of what will happen to the Michaelian teachings — I see that historians might show up to tell the story of the Michaelian teachings movement and the major players, and the story of how the Michaelian teachings has roots in other movements that preceded it, and the story of how the Michaelian teachings movement relates to other movements extant at the time they write. The Center for Michael Teachings, Inc., has gathered and archived a lot of that background historical information about the original Michaelian group. Some other publications of the Center for Michael Teachings, Inc. include information about Michaelian teachings groups subsequent to the original Michaelian group. This archived information might be valuable to academic historians if/when the Michaelian teachings proves its endurance and finds its place in history among other esoteric groups, particularly among other channeled teachings.

Future Scenario #5: Evolution

Following from my Christian background, the possibility that there might be some sort of evolutionary development in the Michaelian teachings reminds me of a couple of New Testament passages, I Corinthians 3:1–3 and Hebrews 5:11–12. There the Apostle Paul compared the "milk" of the Gospel to the "meat" of the Gospel. The metaphor referred to weaning an infant off of its mother's milk and onto eating solid food, the point of the metaphor being that there are basic principles for newbies to learn and there are deeper principles for graduate students to learn. Is that the case with the messages from the Michaels? Is it time for the Michaelian teachings community to be 'weaned' from 'milk' to 'consuming' solid 'food'?

Some existing channels are actually pushing the boundaries of the Michaelian teachings in new directions even now, and who knows where those directions will lead. For instance, Troy Tolley is constantly advancing

the Michaelian teachings with newish information. He both extrapolates new information beyond the periphery of the existing Michaelian teachings, and interpolates new information within the existing structure, but to me this is not of a different or revolutionary quality. Channel Susannah Redelfs promulgates a teaching, related to the Michaelian teachings, that she receives from the "Council of One". Varda Hasselmann in Germany was channeling a kindred Entity of the Michaels that refers to itself as the "Source". It is likely that more of Hasselmann's books will be translated into English over the years, thus spreading The Source's newish information more widely. She has trained twenty-four "apostles", professional people, who are spreading the word after her retirement. The English-speaking Michaelian students do not yet know if there are some significant and important advancements in the Michaelian teachings there. Channel Stephen Cocconi says that the Michaels themselves have actually moved on to the next level of their own evolution, and left behind the "Consortium" to continue contact with Michaelian students. Who knows where these 'branches', a little bit off the main 'trunk', will grow. Channel Michael North says that the Michaels are shifting their messages to him, and hence to his following, away from "truth" and toward "love".

Let's expand on the 'tree' metaphor. Historically, teachings develop 'branches' that 'split off' the 'trunk of the tree' when some of the people find that a new heterodoxy/heresy makes more sense to them or has more/better evidence than the old orthodoxy. This is equivalent to a Darwinian mutation, which results in the evolution of one species into another. After a 'mutation', in the process of 'reproduction', new teachings all evolve due to Darwinian pressures; this is called "survival of the fittest". Some teachings have lasted for millennia in the form of tradition, and in the form of holy books. They must have some good ideas, ideas that appeal to a large portion of humanity, or they would not have survived and thrived. Some newer, smaller teachings, such as Theosophy and the Fourth Way (Gurdjieffian Work), seem to be doing well even if they have not captured the hearts and minds of millions of people, as the major world religions have.

As stated above, all spiritual groups evolve (make changes over their history), and generate branches, where the beliefs and practices evolve in divergent groups. My History book chronicles some of the evolution of the Michaelian teachings as a whole, and it mentions some of the branches, aka contingents, of the Michaelian teachings, where some groups are sorta doing their own thing while remaining affiliated with the Michaelian teachings to a greater or lesser extent: Yarbro, MEF, Hoodwin, Stevens, Cocconi, Tolley, Die Quelle, and so on. This could lead to larger disagreements in the unprovable dogma–doctrine component of the Michaelian teachings, or ... new ideas, better ideas, bigger ideas, more coherent ideas could gradually take over in response to Darwinian influences of competition ... and cooperation, I might add, because symbiosis is an aid to surviving and thriving in the biosphere just as the integration of conceptual improvements is an aid to surviving and thriving in the "noosphere", aka the 'ecosphere' of ideas.

Historically, the way paradigm shifts have happened *en masse* is that, because the old generation is ossified in its belief/value/behavior system, it actually has to die off before the new generation with its revised and improved belief/value/behavior system takes over the movement. Although I think it unlikely, it may be that my suggestions for improvements to the Michaelian teachings will have more influence over a new generation that is not as encumbered with the present day prevailing dogma–doctrine, and are more open to a Meta–Michaelian perspective (see below). Books written, and websites established, over the last few decades are not likely going to be revised even if their authors find merit in my suggested improvements. It seems to me that new books and websites must supplant them, if this scenario is to happen. My devious scheme is to make the Michaelian teachings scheme, in its present form, obsolete by presenting a better scheme, the MMT, the Meta–Michaelian teaching. As Max Planck, the founder of quantum physics said:

A new scientific truth does not triumph by convincing its opponents and making them see the light, but rather because its opponents eventually die, and a new generation grows up that is familiar with it.

Presumptuous and pretentious of me to say this about my work? Yes. Realistic? Too early to say.

Future Scenario #6: Paradigm Shift

My rationale for this possible "Paradigm Shift" scenario goes something like this:

- 1. What does it take to rewire people's brains to see and/or to reinterpret things in a new way?
- 2. At the time of this writing, 2020, humanity is in the midst of the coronavirus pandemic. There is plenty of concern about the dangers of the disease, of course, but there is also a sense of heightened expectancy 'in the air'; there is a perception that humanity is on the verge of significant changes. As the bumper sticker says, "Shift happens"; it is not "business as usual" now, and it will not be business

as usual when this pandemic is over. I see this anticipation in many different places, with many different people, with hopes for many different improvements. The old world order is apparently being destroyed by a pandemic, and the new world order will presumably be built after the rubble of the old world order stops bouncing.

- 3. I wonder if the Michaelian teachings will change even as the world is being changed by the coronavirus pandemic. I would like to believe that, at minimum, Michaelian students as individuals, and the Michaelian teachings communities in general, would do some serious soul-searching even as we see humanity as a whole doing some serious soul-searching, each in their own way.
- 4. We Michaelian students believe that the majority of humanity in general, or at least the prevailing cultural paradigm, on this planet is making the transition from Young Soul Age to Mature Soul Age. Will Michaelian students, or the Michaelian teachings communities, or the Michaelian teachings as a whole escape this transition unscathed? If the Michaelian teachings is now also in its "Young—Soulish" phase, will it transition out of its Young—Soulish consciousness into "Mature—Soulish" consciousness in its way, as humanity is in its way?
- 5. Here is why I ask that question in Item #4: reviewing the history of the Michaelian teachings briefly again, I would say that the original Michaelian group, which functioned during the 1970s, was the Infant Soul phase of the movement. Next, I would say that the next two decades or so, the 1980s and the 1990s, were the Baby Soul phase of the Michaelian teachings. Next I would say that the last two decades, the 2000s and the 2010s, were the Young Soul phase of the Michaelian teachings; this last phase started with the rise of the internet and with subsequent national–international gatherings held in the Bay Area and elsewhere.
- 6. The Mature–Soulish phase of the Michaelian teachings story arc would be the Scholar-ish phase, a collectivist phase, a cooperative phase, a heart–centered phase rather than the head–centered emphasis during the Young–Soulish phase. The basic nature of the transition from Young–Soulish to Mature–Soulish is from a competitive mindset to a cooperative mindset, which gives me some hope, however faint, that the Michaelian teachings communities might coalesce rather than continue in their current fragmented condition, a condition that is typical of Young–Soulishness.

If my perception about the Michaelian teachings transitioning to Mature–Soulish in the aftermath of the pandemic is valid, then perhaps it would also be accurate to extrapolate to an Old–Soulish phase in the distant future. What would that look like? Let me heap some more speculations upon you in the next subsection.

Future Scenario #7: Revolution

The title of this subsection is an allusion to the book *The Structure of Scientific Revolutions*, by Thomas Kuhn. Wikipedia put it this way:

Thomas Samuel Kuhn (July 18, 1922 – June 17, 1996) was an American philosopher of science whose 1962 book *The Structure of Scientific Revolutions* was influential in both academic and popular circles, introducing the term "paradigm shift", which has since become an English–language idiom.

Kuhn made several claims concerning the progress of scientific knowledge: that scientific fields undergo periodic "paradigm shifts" rather than solely progressing in a linear and continuous way, and that these paradigm shifts open up new approaches to understanding what scientists would never have considered valid before; and that the notion of scientific truth, at any given moment, cannot be established solely by objective criteria but is defined by a consensus of a scientific community. Competing paradigms are frequently incommensurable; that is, they are competing and irreconcilable accounts of reality. Thus, our comprehension of science can never rely wholly upon "objectivity" alone. Science must account for subjective perspectives as well, since all objective conclusions are ultimately founded upon the subjective conditioning/worldview of its researchers and participants. [>https://en.wikipedia.org/wiki/Thomas_Kuhn< — retrieved 25 June 2020]

A possible source of a revolutionary Michaelian teachings, whether my version or some other version, is that there might be a Michael II, in the same way that there was a Seth II when Jane Roberts was channeling, teaching from a level of understanding and integration beyond Seth. Before the Michaels appeared, the original Michaelian group was in touch with Soleal, a very good teacher in his own right, and he introduced the original Michaelian group to his teacher, the Michaels. One can feel the difference in their capacities. Do the Michaels have a teacher, a "Meta–Michael"? If that is the case, then the emergence of a Meta–Michael

could certainly launch the Michaelian teachings in a new direction, and with or from a higher and larger and more active and energetic perspective that 1) explains *why* the Michaels have said what they said; 2) that separates the chaff from the wheat of the Michaelian teachings; 3) that puts the Michaelian teachings in their historical context, as yet another upgrade in the Perennialism lineage that goes back thousands of years. My perception of this scenario is that Meta–Michael would be *qualitatively* different, not just *quantitatively* different, as the Mature Soul is qualitatively different to the Young Soul. This scenario is more revolutionary than evolutionary.

Most of the 'cutting edge' of the Michaelian teachings scene these days takes place on the 'twigs' and the 'branches' of the 'tree' of description. In my opinion, this is done without realizing that the 'trunk' is in need of some basic repairs. Part Four of this *History* book makes some suggestions for repairs. However, there is more than basic repair to be desired, and I refer to that as this possible Meta–Michael phase of the Michaelian teachings. I regard Meta–Michael as the 'roots' of the tree. Meta–Michael can be analogized to a level of understanding 'below' the Michaelian teachings as presently configured, as well as a level of understanding and integration 'above' the Michaelian teachings. Using another metaphor, Meta–Michael is the ground itself, out of which the Michaelian teachings has grown. Using another metaphor, a mathematical metaphor, Meta–Michael contains the Michaelian teachings as a subset.

I submit my own work to the Michaelian teachings individuals and communities as a potential candidate for the Meta-Michaelian teaching that transcends the Michaelian teachings. My own work is not just on the foundations of the Michaelian teachings; it is on the frontiers, the fringes, of the Michaelian teachings. From the beginning of my study of the Michaelian teachings in 1981, it has seemed to me that the Overleaf System is a primitive or limited representation of a deeper and broader spiritual and cosmological and metaphysical system. It seems to me that there are hints of that deeper and broader system in my books. I have reformulated the Overleaf System in subsequent decades, on a foundation of logic, mathematics, and physics, into what I call the Process/Aspect System, which I regard as a subset of a yet deeper system that I call Tao's Template, which I regard as the core of the Meta-Michaelian teaching. By this means, I have extended the Overleaf System way beyond mere human personality and its reincarnations, all the way 'up/out' to the macrocosm, the entire cosmos, and all the way 'down/in' to the microcosm, the foundation of this reality system that we call the Physical Plane. It looks to me as if I am explaining the Michaelian teachings from a higher viewpoint, a broader perspective, a larger context, and in a more abstract and better-integrated, more consistent, more coherent, more consilient way.

If the Michaels are doing something similar via the current crop of channels, I do not know about it; the channels seem to be focused more on serving their clients with information about their mundane concerns. Not that there is anything wrong with that, but I want more, and have from the beginning. The Michaelian teachings were created by channels, and, as documented in Part Four of this *History* book, the contradictions therein were created by the fact that there are numerous channels. For this revolutionary scenario to happen, the crop of Michaelian channels, which appeared in the 1980s and is now at about retirement age, must retire or otherwise pass from the scene — and *not be replaced with more of the same*. I am reminded of the statement, "When the teacher dies, the teaching passes into literature and should be regarded as such." (*SJC*, 08 September 1973) Subsequently, the changes that I envision for this scenario would then be driven by a 'grass-roots' movement, a new 'crop' of students who read both the various Michaelian teachings and also the Meta-Michaelian teaching. My supposition is that they would find the latter to be superior.

As documented in the "Intuition" chapter of my book *Study Papers on the Original Michaelian Group*, even in the original Michaelian group the Michaels sometimes refused to provide an answer to a questioner, saying that the person should develop their intuition; they should learn to consult their own internal guidance system rather than always running to a channel for the answers. The whole notion of Validation depends on *not* consulting a channel outside of oneself. Rather, one becomes a conduit for higher inspiration; one becomes their own shaman. Just as with a person growing up and leaving their parents, the Michaelian teachings will, presumably 'grow up'. Children do eventually graduate from school; students no longer need teachers and they become autodidacts. In this scenario, the revelation will have been completed, and no new channels will appear, because at the fourth stage of development channels would be an impediment to further growth of the movement. Likening the Meta-Michaelian stage to the Protestant Reformation, the fourth phase of the movement will happen when students no longer have any need for a 'priesthood' in the form of channels. Returning to the parenting metaphor, to not graduate from the Michaelian teachings in its current form would be a 'failure to launch'.

Perhaps it is pretentious and presumptuous of me to present my work as a harbinger or herald of Meta–Michael. Meta–Michael, if there is such a teaching, might not appear within the Michaelian teachings itself via little old me; rather, it might appear as a side-effect of the manifestation of a Transcendental Soul/Bodhisattva and or an Infinite Soul/Avatar. My guess is that what the Manifestation says and does, if it happens, will surprise even Michaelian students, and the Michaelian teachings communities will need to make significant adjustments in the quality of their perceptions and beliefs and values and behaviors.

I know what a revolutionary paradigm shift feels like. Before I was a Meta-Michaelian student, I was a member of a fundamentalist quasi-Christian sect or cult. I found my way out of that at the beginning of my Fourth Life-Stage. On 12 July 1980 I read *Seth Speaks*. I regard that date as one of my spiritual birthdays; it was a metaphorical, spiritual "death" and "resurrection" experience for me. Seth turned my worldview front—to—back and upside—down and inside—out. I could palpably feel my behavior system, value system, and belief system turn to mush and then reorganize in a new structural configuration. It was very disorienting for a brief while, but the clarity that soon followed was exhilarating. Does the Michaelian teachings need a death of the old and a birth of the new? Frankly, I do believe that it does. But is it probable or even possible? I have serious doubts about that scenario, but a person can hope.

Some or All of the Above?

So, we really do not know where the Michaelian teachings is going to go from here, but it is going to go somewhere. Some of this progress is up to us as a community, up to the channels, up to others perceived as leaders, and up to us as individuals. Some of this might be up to academic types who find the Michaelian teachings and adopt the study and promulgation of it as a pet project. Some of it might be up to the Michaels themselves — if they stop being mere passive question—answerers and start being pro-active teachers as they were in the beginning of the original Michaelian group; maybe they could even dictate whole books, as Seth did. Maybe it is up to a postulated Meta–Michael to burst onto the scene. Maybe a Transcendental Soul or an Infinite Soul will light the way.

Whatever happens to the Michaelian teachings as a whole, it is a fitting end to this book about the Overleaf System that I suggest that you use the Overleaf System to get beyond the Overleaf System. I also suggest that you put the Overleaf System in the context of various other realms of knowledge, and Being. This book only just begins to provide a preview of vistas beyond the horizon of the Overleaf System. Thank you for reading it.

Epilogue

Prologues to The Tao of Personality &

THE TAO OF COSMOGONY

Chapter E-0

INTRODUCTION TO PROLOGUES

My books would be best understood by the typical Michaelian student if they were read in a certain order. My suggestion is that it would be best for them to start with this book, A History of the Overleaf Chart. This book ends up with a concluding chapter, titled "Where do we go from here?" The answer given in that chapter was that there are several possible tracks that the Michaelian communities could conceivably go on. These tracks were speculative on my part. What is not so speculative is that, if a student were to ask, "Where do I personally go from here", and they were inclined to explore the particularities and the peculiarities of the last two Overleaf Charts that are reviewed in Part Three of this History book — my Charts — then they will be delighted to read that I have another lengthy tome where they can do just that. However, that book has been written for, and tailored to, a general audience; it is not specifically intended for Michaelian students, but, of course, it is entirely appropriate for the Michaelian readership. That book is:

THE TAO OF PERSONALITY: THE PROCESS/ASPECT SYSTEM OF PERSONALITY TRAITS. What the Michaelian teachings refers to as the Overleaf System, I refer to as the Process/Aspect System matrix. I made this name change because I extensively remodeled and reformulated the Overleaf System according to a derivation from logic, mathematics, and physics, not channeling. That book consists of four parts: Part One, "The Pattern of the System", is about the structure and meaning of the 7x7 Process/Aspect System matrix of traits in terms of that reformulation in terms of logic, mathematics, and physics. That type of understanding is unknown in other Michaelian books about the Overleaf System. Part Two, "The Traits of Personality", is an extensive exposition on each of 42 traits. This presentation is more comprehensive

than most other Michaelian books, and done in a way that is unseen in those other books. Part Three, "The Seven Worldviews", is about the remaining seven traits that are not covered in Part Two. What the Michaelian teachings refers to as Soul Ages, I refer to as Worldviews. What the Michaelian teachings refers to as Levels within the Soul Ages, I refer to as Zones within the Worldviews. Part Four, "Personality in Relationships", describes in detail how the various types of traits interact with various other types of traits in the Process/Aspect System matrix. The specific types of interactions are named Rapport, Identicality, Compatibility, Complementarity, Opposition, or Indifference. Here again, that Part covers a topic that has been entirely neglected in other Michaelian books. Just from what I say here, one can easily see how this *Personality* book is a natural progression from what is said in this *History* book.

The *Personality* book is written for a mainstream readership, not just for a Michaelian readership, but I wrote a Prologue to it that is specifically addressed to Michaelian students. The reason I wrote that Prologue is because it explains many things about the *Personality* book that Michaelian students will find different, perhaps even strange. That Prologue is included in this *History* book because it is an expedient and helpful bridge between this *History* book and that *Personality* book. It is Chapter E-1 below.

If I were to recommend the next book for a Michaelian student — after the *History* book and after the *Personality* book — it would be my book *The Tao of Cosmogony*. This book is mentioned numerous times in this *History* book because it is central to understanding the structure and meaning of the Process/Aspect System matrix, and because it is central to resolving the numerous "Essays on Issues" discussed in Part Four of this *History* book. I am, of course, referring to what I call the Natural Sequence schema. In this *History* book, the Natural Sequence schema explains "The Seven Planes" (Chapter 1A), "The Seven Chakras" (Chapter 1C & 4J), "The Seven Centers" (Chapter 1D), "The Seven Soul Ages" (Chapter 1E), "The Seven Human Temperaments" (Chapter 1F), "The Names of the Levels" (Chapter 4K), and "Life-Stages" (Chapter 4Q) — and more. The Natural Sequence schema is itself explained in my *Cosmogony* book, so if you care to get to the bottom of explanations, you will want to read it.

THE TAO OF COSMOGONY: THE NATURAL SEQUENCE OF THE COSMIC SEPTENARY. Cosmogony is the science and mythology of the origin and evolution of the structured reality system in which we find our consciousness embedded. My Cosmogony book is built on my version of the Overleaf Chart, the one "Time Structure" version. Part One of this book, "Introduction to the Tao of Cosmogony", provides the derivation of the structure of the Natural Sequence from first principles, such as logic, mathematics, and physics. It also provides the scientific and philosophical basis for the schema. Part Two, "Modern-Day Spiritual Teachings" provides documentation of the Natural Sequence schema in that realm. Part Four, "Natural Evolution", provides documentation of the Natural Sequence schema in that realm. Part Four, "Developmental Psychology", provides documentation of the Natural Sequence schema in that realm. Part Five, "Developmental Psychology", provides documentation of the Natural Sequence schema in that realm. Part Six, "Stages of Enlightenment", provides documentation of the Natural Sequence schema in that realm. Thus we see that the Natural Sequence applies to the supernatural world as well as the natural world; the two worlds are governed by a common fundamental or archetypal schema.

As with the *Personality* book, my *Cosmogony* book is written for a mainstream readership, not just for a Michaelian readership, but I wrote a Prologue to it that is specifically addressed to Michaelian students. The reason I wrote that Prologue is because it points out many of the many inconsistencies in the Michaelian channeling, the incoherence of the structured component of the Michaelian teachings, and the lack of consilience of some of the Michaelian teachings with other spiritual teachings, and scientific and philosophical endeavors. The Prologue to my *Cosmogony* book is Chapter E-2, placed after the prologue to my *Personality* book, Chapter E-1.

Chapter E-1

Prologue for Michaelian Students to my Book:

THE TAO OF PERSONALITY:

THE PROCESS/ASPECT SYSTEM OF PERSONALITY TRAITS

The entirety of the *Tao of Personality* book is about the Overleaf system, except that it is my modified version of the Overleaf System, which I call the Process/Aspect System. This book is suitable for Michaelian students, but it is aimed more at the self-help psychology readership, at psychotherapists who use personality typology in their counseling, and at leaders of organizational development seminars, and so on.

As all Michaelian students know, the original source of the Overleaf system is some channeled material from a discarnate (spiritual) "entity" that came to be known as "Michael". One can find an enormous amount of information at this website, >http://www.michaelteachings.com/<, and a dozen other websites on the internet by searching for the phrase "michael teaching". There is even a brief introduction to this teaching in a Wikipedia article found on the internet, namely: >http://en.wikipedia.org/wiki/The_Michael_Teachings<. Here in this Prologue, this entity will be referred to as "the Michaels" — plural because it is alleged that the entity is a composite of more than a thousand individual souls, referred to as "fragments" of the "entity" considered as a whole. This is not an uncommon way to refer to them among students of this Michaelian teaching.

The *Tao of Personality* book is not actually aimed at Michaelian students. Rather, it is aimed at the self-help psychology readership. Furthermore, I have reformulated and rebuilt much of the systematic portion of the Michaelian teachings, including the Overleaf system from a foundation other than channeling — namely mathematics, mythology, and mysticism, and there is no need to reveal the metaphysical/supernatural sources to people who would not find that valid or interesting. Therefore, to Michaelian students, the book will seem so different from whatever else they may have read on the subject of the Overleaves that it behooves me to explain how it came about, so that they are somewhat prepared to appreciate the different perspective. It is partly self-indulgence to tell the story of the origin and development of this unique perspective, and partly an effort to minimize the amount of WTF!?!? they experience as they read it. Yes, it is that different. If I were simply regurgitating what I have learned from what other Michaelian channels and students have written and said, there would be no need for this Prologue, and indeed there would be no need for that book. However, in that book, and in my other books, I revise and enlarge the Michaelian teachings considerably, and this Prologue is intended to explain how, what, when, where, and why I did that.

Introduction

As I said, Michaelian students will notice as they read the *Tao of Personality* book that the information differs somewhat from the "orthodox" Michaelian teachings. What do I mean by orthodox? So far as I know, Chelsea Quinn Yarbro makes the strongest claim to an exclusive orthodoxy in the Michaelian teachings. She was the first to publish some of the original channeling, and she also claims that those associated with her are the only genuine Michaelian channels, except maybe some other closed groups in foreign lands (Yarbro, *Michael for the Millennium*, p. 4). Ms. Yarbro does not acknowledge the legitimacy of many other various alleged Michaelian channels. Some of these channels, such as JP Van Hulle, are associated with the *Michael Educational Foundation* (MEF) of Orinda, California, and some are independent. For instance, there are Shepherd Hoodwin, Stephen Cocconi, José Stevens, and Troy Tolley: they have developed their channeling and

their own slightly variant versions of the Michaelian teachings, influenced by the Yarbro and the MEF channeling. Mostly those who channel the Michaels have also published books or posted some of their work on their websites on the internet.

Perhaps one could say that I am independent of all of these, although I have had some contact in one way or another with all of them and been influenced by them. I do not claim to be a channel, but apparently I am some sort of teacher because I feel impelled to write books about the Michaelian teachings. This has been the case ever since 1981 when I first took seriously the original book that presented this material, *Messages from Michael (MFM)*. I learn from channels and other teachers, and interpret and add my perspective and my research to what they say. However, it so happened that over the decades I have come to find myself in a position of unorthodoxy with most of them about certain matters.

There are reasons for this.

First of all, unlike the orthodox Michaelian teachings, this book, *The Tao of Personality*, is not actually intended primarily for Michaelian students. It is intended for the general self-help psychology market, psychotherapists, psychology academics, life-coaches, and such. Almost from the beginning of my study of the information in 1981, I have felt that it deserved to be widely known, and that meant widely known not just among metaphysically inclined people. Other personality systems exist and are used in the psychological profession and among people in general. For instance, there are the Enneagram and Myers–Briggs and the so-called Big Five. If you are unfamiliar with them, you can, of course, look them up on the internet and get a free introduction. If you like what you see there, you can then go to a bookstore or go online and acquire a hard copy for a few dollars, study it, and use it to your heart's content, for your benefit and the benefit of those you come in contact with. As part of my introduction to the Process/Aspect System of personality traits, one of the early chapters in the *Tao of Personality* book is about various personality typologies.

I find it interesting that both the Enneagram and Myers-Briggs have their roots in metaphysical teachings: the Enneagram with a Russian mystic by the name of Georges Gurdjieff, and Myers-Briggs with the teachings of transpersonal psychologist Carl Jung (who had a metaphysical inclination) about personality archetypes. Wikipedia has an article on each of these systems. It is not necessary to agree with — or even know about — the alleged metaphysical source of those personality systems in order to derive benefit from them. The book, The Tao of Personality, also allegedly has as its original source a metaphysical teacher — the Michaels — with information allegedly about nonphysical realms, aimed at those people who are on a spiritual path. However, just like the other two personality systems mentioned, this information about the Process/Aspect System is useful not just to spiritual seekers, but to everyone who wants to understand themselves and other people and their relationships better.

I am not the only one who believes the personality system found in the Michaelian teachings could be "mainstreamed". During the forty plus years since its original presentation in *Messages from Michael*, in 1979, there has been some adjustment and accommodation in the Michaelian material for this wider, non-spiritual audience. For instance, José Stevens (>http://www.thepowerpath.com<) and Barbara Taylor (>http://www.itstime.com<) and Larry Byram (>http://www.haevents.com/<) have published and taught — without making reference to a metaphysical source — a modified version of the personality system that is intended to speak to a mainstream audience. This fact is known to most Michaelian students who have been around the Michaelian teachings for a while.

In order to make it palatable and suitable for non-metaphysical people, I have made a number of adjustments in my presentation in this book. For instance:

- The source of the information does not need to be concealed, but then neither does it need to be
 emphasized. With regard to the Enneagram and Myers-Briggs, the alleged metaphysical source is
 usually credited in the introduction to these systems, then not mentioned thereafter the
 information about their personality traits stands on its own. This is the way I handle it in this book.
- The Michaels have a lot to say about phenomena that are not necessarily a part of the personality system (the Overleaves) itself, such as the soul and reincarnation and all the ramifications thereof. Frankly, we do not even know for sure if this part of the Michaelian teachings is true or not. If it is true, we might know for sure after we die, but until then there is room for doubt. Therefore this extraneous and unnecessary information what I call the "dogma-doctrine" of the Michaelian teachings can be eliminated from a presentation about the personality system tailored to the non-metaphysical readership. This is the way I handle it in this book.

Regarding the personality trait system itself, the Michaels had a lot to say that cannot or has not really been validated; it is more of the dogma-doctrine that pervades the Michaelian teachings. It is this factor of validation that I will go into in depth further on in this book, because it is important to Michaelian students. It has been an important part of my development as a Michaelian student to begin with, then as a part of my development going beyond the orthodox Michaelian teachings. In this book I have sought to present only the information that I have been able to validate as true for me, and I emphasize that each reader should validate what works for them. Much more is said about validation in the next section.

Validation

My situation is that I have not been able to validate various dogma-doctrines of the orthodox Michaelian teachings, and therefore I cannot promote them in my own book to non-Michaelian students. If I were writing a book for Michaelian students I could say — as many Michaelian students do — "This is what Michael says plus my own understanding; it is up to you to validate in your own way." But when I write to non-Michaelian seekers, I feel I have to present what I actually *know*, which is not necessarily what the Michaels *say* — sometimes it is and sometimes it isn't. It took me about twenty years as a Michaelian student to get to this place where I am simply not comfortable to say "Michael says ..." about much of anything. If I am going to promulgate something, I want it to be my own knowledge and understanding, and then I will stand or fall by it. For whatever reason, I feel deeply that it is my responsibility to be conscientious about this: to tell the truth as I see it, not as someone or something else sees it.

Besides my conviction to only present the things that I personally have verified, the other major factor in my presentation in this book is my interest in mathematics and physics. Very early on in my attempts to understand the Overleaf System, it was intuitively obvious to me that this pattern of traits was not merely for human personality, but for the "personality" of the entire universe. There are hints of this in the Michaelian teachings; some mathematical terminology is present in various parts of the Michaelian teachings, not just the Overleaf System. From the beginning of my study of the Michaelian teachings, my instincts have indicated that the Overleaf System is actually the personality of the universe *more than* it is the personality of people.

I did not know what the correlations with mathematics and physics were at first, but about two years after first getting interested in the Michaelian teachings, I encountered the physics books of an engineer named Dewey Larson. Features of his system were uncannily similar to features of the Overleaf System. This began to allow me to validate certain portions of the Overleaf System with logic, mathematics, and physics, and thereby to delineate what I could not or what cannot be validated by any means presently available to me. I am saying that the *method* of validation I was drawn to was much deeper/higher than merely observing the Overleaves in myself and other people, which is a rather *subjective* and ambiguous method. Using logic, mathematics, and physics is a more *objective* and definitive technique for validating the Overleaf System. This latter method led to my divergences from Michaelian teachings orthodoxy as stated elsewhere in this Proloque.

Just to be clear, by saying "I do not believe" a lot of things that are espoused in the Michaelian teachings, I do not imply that I "disbelieve" them. Those things are simply in a category where I do not know them to be true or not true. Frankly, I do not like the word "believe", preferring to either know or not know, based on personal validation. So, I am not a Michael "atheist"; I am a Michael "agnostic" on a lot of the Michaelian teachings. I cannot credulously believe and espouse things I regard as the "dogmas" and "doctrines" of the Michaelian teachings — that information that is presented without evidence or explanation and that I have not been able to validate. This makes me a bit of a "heretic", I suppose, but I say this more with amusement than rancor because "heresy" is permitted within the Michaelian community. Belief in every little thing the Michaels are alleged to say via various channels is not required so long as one remains a "good citizen" in the "community". Michaelian students, including me, typically believe it is far more important to apply the spiritual principles of benevolence, kindness, compassion, understanding, tolerance, and so on, than to believe the dogma-doctrine component of the Michaelian teachings on "faith".

This last statement reminds me of the basic principles for membership in the Unitarian Universalist Church. That is, the basis for fellowship in that church is not adherence to some creed — a set of doctrines that one is enjoined to believe and espouse. Rather, the basis for fellowship in that church is adherence to a covenant between members. That covenant has seven principles (an interesting coincidence with the Michaelian teachings), but to sum them up, I would say: be good to yourself, be good to others, be good to the planet. This is behavioral more than it is intellectual or emotional — or spiritual. In this fundamental way, the purpose of the Michaelian teachings is completely consistent with Unitarian Universalist principles. And it is completely

consistent with my intentions for the *Tao of Personality* book: it is for you to use for your benefit and the benefit of those with whom you come in contact.

On the other hand, let me just add that I personally enjoy noodling about with my own "doctrinal disputations" — so long as my cogitations and expositions are "intellectual exercise" rather than self-righteous pontificating, and so long as the ideas do not tend to alienate others. I actually have some "pet theories" about certain aspects of the Michaelian teachings. (These are found in my other books.) This tendency simply comes naturally to a Scholar Soul, Artisan Role "fragment", and I do not deny myself the enjoyment of thinking and writing about certain "belief system" subjects. In these cases, it is desirable but not required if others are benefited by my idiosyncratic presentation of them.

The next several sections expound on the differences between my understanding and the orthodox presentation of the Michaelian teachings.

Departures from Orthodoxy

If you are a Michaelian student, as you read the *Tao of Personality* book, you will notice here and there that I have departed somewhat from what others have written about the Overleaf System. With this section I begin to explain my departures from Michaelian teachings orthodoxy. If you are a learned Michaelian student, the departures will be obvious as you read them. If you are a Michaelian student but maybe not a learned Michaelian student, this section will not make much sense to you. After you have read the *Personality* book, it will make sense, and you might even want to come back to this Prologue then, in order to further inculcate the understanding.

According to the prevailing orthodoxy, there are seven Overleaf categories: Goal, Mode, Chief Feature, Role, Attitude, Center, and Age/Level. I refer to these seven categories as the "Aspects" of personality.

There is actually some disagreement among students and teachers of the Michaelian teachings about whether or not Role and Age/Level are Overleaf categories; also, some people believe that Body Type is an Overleaf category. This discrepancy is thoroughly covered in my book A History of the Overleaf Chart (HOLC). Without going into detail here, let me say that, among other reasons, I accept the explicit statements in the original Michaelian group transcriptions that when the "final" Overleaf category was revealed, Mode, it was said to be the "seventh". I also accept the statement in the original Michaelian transcriptions that Body Types and Centers can be considered as two facets of one Overleaf category.

According to the prevailing orthodoxy, the Overleaf categories of Goal, Mode, and Attitude don't have anything special about them. That is, it is said that the spiritual soul, as it is planning its next lifetime from the so-called "Astral Plane", chooses just one of them for an entire incarnation, and it doesn't change until some other Overleaf is chosen in another lifetime. However, the other Overleaf categories are said to be "special" in some way or other, to wit:

- Role: This Overleaf category is alleged to be a permanent feature of the soul's identity, thus constant across all incarnations/lifetimes, whereas the other Overleaf categories (except Age and Level) are alleged to vary by the soul's choice from incarnation to incarnation. Because reincarnation is not necessarily a part of the belief system of the intended readership of this book, this particular dogmadoctrine about Role is not presented in this book.
- Age and Level: These Overleaf categories are alleged to be a product of reincarnation, instead of just another couple of traits that Souls can choose between lifetimes. That is, it is said that there are five Ages, with seven Levels each, that the soul advances through during its cycle of reincarnations. Because reincarnation is not necessarily a part of the belief system of the intended readership of this book, this particular dogma-doctrine about Age/Level is not presented in this book. The Michaelian teachings orthodoxy is that people allegedly only experience five not seven Ages on the so-called "Physical Plane" (the universe that we all know and love); the two last Ages, called "Astral" and "Causal", are experienced on the Astral Plane (where souls allegedly function between incarnations) and then the so-called "Causal Plane" (where souls allegedly function after completing all incarnations). Like other dogma-doctrines of the Michaelian teachings, no explanation or evidence that I have seen is given for this divergence from other categories of Overleaves, where all seven Traits in each Overleaf category are experienced on the Physical Plane. Because reincarnation is not necessarily a part of the belief system of the intended readership, this particular dogma-doctrine is not presented in this *Tao of Personality* book. Instead, I have done what others who departed from the

orthodox Michaelian teachings have done in order to mainstream the Overleaf System to the masses: Thus, I propose that all seven Ages are experienced by people here on this planet, and I identify people as operating from a "Worldview" without reference to reincarnation as a factor behind which Worldview one has.

- Chief Features: Unlike the other Overleaves that are said to be present and immutable from birth to death, the Chief Features are alleged to start later in life than birth (typically in the teens), and they can end early if you work hard enough to "extinguish" them during an incarnation, thus achieving the Michaels' version of "enlightenment". No explanation or evidence that I have seen is given for this divergence from other categories of Overleaves; it is just another dogma-doctrine. I have found by observation and personal experience that there is no reason to understand the Chief Features as being fundamentally different from the other categories of Overleaves. Also, in the original Michaelian group transcriptions, it was said that with sufficient effort one could change any Overleaf, not just the Chief Feature. This is not something I discuss in this *Tao of Personality* book, but it is discussed in my book *A History of the Overleaf Chart*.
- Centers: It is alleged that you normally only get to live in the three "lower" Centers; you don't get, normally, to live in the "higher" Centers; they are *extraordinary*. No explanation that I have seen is given for this divergence from other categories of personality traits; it is just another dogma-doctrine. I have found by observation and personal experience that there is in fact an *ordinary* version of the higher Centers, and this is the perspective that I present in this book. My unorthodox understanding regarding Centers deserve more discussion in the Proloque, and is found in the next section.

So, what part of the dogma-doctrine can I validate and therefore present to the general public? While incarnate we cannot validate that Role is a stable characteristic of a soul through all lifetimes. We can hope to be able to validate this between lifetimes. Looking at myself and my two children, I see that our Chief Features were a part of our personalities even in childhood. I certainly have not extinguished my Chief Feature in adult life, nor do I personally know of anyone who says they have. Therefore the validity of these particular dogma-doctrines can be challenged. In any case, I have found no need or reason to assert them in a book directed at other than Michaelian students.

Even within the original Michaelian group orthodoxy or the subsequent orthodoxy, there is another way to understand the "sub-real" (may not last the whole lifetime) description of the Chief Feature and the "superreal" (lasts through all lifetimes) description of the Role. In *The Tao of Personality* book, as explained in more detail in a subsequent section, I present the Chief Feature and Role in a way that makes no mention of the unvalidated and unvalidatable orthodoxies presented in the Michaelian teachings. Rather, I present the Chief Feature as the Ordinal Inspiration Aspect, and Role as the Cardinal Inspiration Aspect of the Overleaf categories. Neither is less nor more significant than the other Overleaf categories of Goal and Mode, Attitude and Center, and Soul Age/Level. At minimum, this makes for a consistency of interpretation, which in my opinion adds to understanding and clarity. At maximum, it might be the way things really are.

Departure from Orthodoxy: Centers

My heterodoxy started right after I first began to study the Overleaf System in August of 1981. My wife bought a used Ouija board at a garage sale, I drew the Overleaf Chart on the back, and then she and I asked for the Overleaves on ourselves, family, friends, coworkers, and acquaintances. Right away it told us things that were contrary to what I read in Messages from Michael in regard to Centers. I took a hint from the statement (MFM, p. 113) that "All fragments have all centers operative within themselves...." and asked the board to rank them. The MFM orthodoxy says you normally don't get to be in "higher" Centers because they are like altered states of consciousness: "The average soul glimpses the higher [Centers] only in moments of extreme stress or agony". (MFM, p. 198) The original MFM orthodoxy said that the Instinctive Center is where some crazy people function: "The Instinctive Center is not usually found in persons generally classified as sane." (MFM, p. 114) The board said that I was in the Higher Intellectual Center first and the Instinctive Center second. As a person able to function successfully and competently in normal society, of course these characterizations of those two Centers puzzled me, but since I did not really understand the Overleaves at the time, all I could do was reserve judgment. Over the years, the Ouija board continued to place numerous ordinary, not extraordinary, people in higher Centers, and sane people in the Instinctive Center. By observing them I came to understand what the Ouija board was hinting at, and my claim now is that the MFM presentation could benefit from some updating. So, my understanding is now in my descriptions of those Centers in the *Tao of Personality* book.

Let's look at each of my departures from the original presentations regarding the Centers.

- The Centers in General: The orthodoxy carried over from the Gurdjieffian teachings into the original Michaelian group (and beyond) says that people are typically primarily in an Ordinal Center and in a "Part" of an Ordinal Center, usually not the same Center, though you can be. The orthodoxy says your Part of Center (e.g. Emotional Part of Intellectual Center) can be a "trap" where you get stuck, and this keeps you from responding appropriately to situations, and the way out of the Trap is the third Ordinal Center; in this example it would be Moving Center. This has been found experientially to be a useful way to understand the function of Centers and a beneficial way to apply the understanding for psychotherapy. However, my current understanding is that, for the audience of my book and for the sake of consistency, Centers should be treated just like the other Overleaf categories and not differently. That is, you have a descending amount of "energy" in each Center, from strongest to weakest. There is more discussion about this strength "hierarchy" phenomenon in the next section.
- The Action Centers: There have been differences in the naming and understanding of the Action Centers: In the Gurdjieffian teachings and in the original Michaelian group, the "Moving" Center was a lower Center and the "Sexual Center" was a higher Center. However, Messages from Michael called the Ordinal Action Center "Sexual" (then changed the name to "Physical Excitation" in More Messages from Michael), and called the Cardinal Action Center "Moving". Some other Michaelian teachings books call the Ordinal Action Center "Moving" and the Cardinal Action Center "Higher Moving". In The Tao of Personality, I refer to the Ordinal Action Center as "Motion" and the Cardinal Action Center as "Excitation". The reason I changed from the adjective form to the noun form is discussed in a section further on.
- The Nature of the Higher Centers: Another departure from orthodoxy came precisely because I am in fact in the Higher Intellectual Center as the Ouija board said. I did not understand it at the time, but I do now. About this Center, it is said that it is about "understanding scientific principles" (~13 September 1973) I have that very inclination, to the point of compulsion have since I was a teenager; you will see it manifested throughout this book. The orthodoxy is that few people are in the Cardinal Centers, and that they can't stay there for long. I would agree that the Cardinal Centers are less common in the general population and that they are less appropriate for dealing with life in the outer world. The Ordinal Centers are more suited to extroverts, who make up the majority of the population (from what I have read), and this provides them with success in the world. The Cardinal Centers are more suitable for introverts, who are not in the majority, and this provides them with success in creative and artistic and spiritual and philosophical endeavors. My current understanding on this subject is that there is an ordinary manifestation of the Cardinal Centers, and I describe this extensively in the main body of *The Tao of Personality* book.

The renaming of some of the Centers is covered in a section further on. The subject of Centers is covered in detail in four chapters in my book *A History of the Overleaf Chart*.

In conclusion then, regarding the Centers, for the purposes of *The Tao of Personality* book, there is no speculation presented about where the Traits come from, whether from the genetics of the body or the "genetics" of the soul. They are simply a part of the "nature" of the personality without further elaboration or explanation. (The same is said about other personality typologies, and people do not question the cause of personality traits; I assume that they assume it has something to do with genetics, just as physical traits are genetically programmed.) For the sake of consistency with the other Aspects, I say that all Centers are capable of being the strongest, then second strongest, then third strongest, and so on.

Departure from Orthodoxy: Michael Math Sequence → Natural Sequence

Another one of my major departures from Michaelian teachings orthodoxy is the numerical sequence of the lineup of the Ordinal triad of Traits.

In the "Michael Math" chapter of *More Messages from Michael*, the Ordinal triad of Traits were said to follow this sequence:

One: Infant, Slave, Retardation, [Repression,] Stoic, Emotional Center, Self-Deprecation.

Two: Baby, Artisan, Caution, Rejection, Skeptic, Intellectual Center, Self-Destruction.

Three: Young, Warrior, Perseverance, Submission, Cynic, Sexual Center, Martyrdom. [MMFM, pp. 190–191]

Immediately upon reading this in February of 1986 when the book was first published, it struck me as being incorrect, and I perceived that the correct order of Traits was this:

One: Infant, Warrior, Perseverance, Submission, Cynic, Sexual Center, Martyrdom.

Two: Baby, Slave, Retardation, [Repression,] Stoic, Emotional Center, Self-Deprecation.

Three: Young, Artisan, Caution, Rejection, Skeptic, Intellectual Center, Self-Destruction.

Notice that in both lineups, One, Two, and Three are lined up with Infant, Baby, and Young — as one would certainly expect in the case of development in terms of Soul Age — but the remainder of the lineup has shifted around, with the Warrior lineup of Traits going to the beginning of the sequence instead of being at the end; this shifts the other two lineups ahead one number.

After that original perception that there was an error, I have come to refer to the MMFM schema as the "Michael Math Sequence". I have not been able to Validate it in any way. It might apply to Casting of Fragments on the Astral Plane and/or ensoulment of the hominid species on the Physical Plane (which I regard as occasions of "deployment" of resources to meet the specific situation or circumstance). However, so far as I have been able to determine, it does not apply to natural "development", of which Soul Age is just one instantiation. I have been able to Validate my reordering of the Ordinal Traits in many ways, because I have found numerous correlates of it in the natural and supernatural realms. There are so many examples of it that my book The Tao of Cosmogony has been written about it. I came to refer to this arrangement as the "Natural Sequence", hence the subtitle of that volume. Because there is an entire book available to the reader, I will not further discuss the matter in this Tao of Personality book, other than to say that the Michael Math Sequence is the most egregious error in the Michaelian teachings that I have discovered, and the Natural Sequence (as part of understanding the structure of the Overleaf System) is the most important key to unlocking a door of discovery to many realms of knowledge and understanding, such as anthropology, psychology, sociology, philosophy, theology, and cosmology.

There is one other major departure from Michaelian teachings orthodoxy that I espouse in this *Tao of Personality* book, namely what I call the "hierarchy" of strength.

Departure from Orthodoxy: The Hierarchy of Overleaf Influence

One of the features of the orthodox dogma-doctrine of the Michaelian teachings is that with some Overleaf categories, a person only gets one of them, and with others, a person gets two, three, or more of them in a strength hierarchy of primary, secondary, tertiary, and so on. It is said that a person, for the entire incarnation, only gets one Goal, one Mode, one Role, one Age, one Level, and one Attitude, whereas a person gets more than one Center and Chief Feature. This is an inconsistency for which no explanation is given; it is simply stated as a fact of the type "Michael says ...". This is yet another dogma-doctrine that is due for examination. Let's look at each of these cases, and also look at what has been found empirically in the decades since the original revelation.

Role

The original orthodoxy, during the original Michaelian group, was that a person has only one Role. In subsequent years in subsequent groups, the teaching about "Casting" was presented. These are alleged to be factors of the soul and its location in its family of souls. There were said to be Role-ish influences from these soul factors. An individual soul was said to be a "Fragment", a piece of an "Entity", which was said to be a composite formation of more than a thousand souls. It was said that the "Position" of the individual Fragment within the "Cadence" of seven Fragments could be every bit as strong — or stronger — an influence on the incarnate personality as the Role. There are some instances of the Role channeled to be the same as Casting Position, and one could reasonably suppose that there should be many such cases, but they seem to be rare. To my way of thinking, this is suspicious, and it calls into question the validity of channeling about this subject. Perhaps the kindest interpretation that could be given to this fact is to allege that the soul intentionally chooses a Role that is different from its Role-ish nature provided by its Position in its Cadence. Whatever the case, there are larger groupings of Fragments that also have Role-like influences on the incarnate Personality: the "Greater Cadence" consisting of seven Cadences (therefore 49 Fragments); the "Side" consisting of seven Greater Cadences (therefore 343 Fragments); the Entity consisting of three Sides. Furthermore, there are also said to be Role-like influences from the "Cadre", which consists of seven (or twelve) Entities. Thus there is said to be a descending Role-ish influence — in seven steps as it turns out. In the Tao of Personality book, nothing is

said about the soul, but diminishing Role-ish influences are mentioned. In my own case, the hierarchy of my Role-ish influences are: Scholar primary — Artisan secondary — Priest tertiary. That is about as far down the hierarchy as one can discern empirically by observation, meaning: without channeling. This method bypasses the questionable channeling that Role and Position are rarely the same.

Center

As indicated above, the orthodox teaching is that people tend to get fixated in a particular Center and a Part of a Center:

All Fragments have all Centers operative within themselves, but there is a strong tendency for the Personality to become fixed in one Center... Most of you will combine two Centers for your Centering; for instance, you will be in the Moving Part of Intellectual Center. [MFM, pp. 133–134]

The statement about Centers and Parts is a useful way to look at Centers. However, when I started to use the Ouija board to get Overleaves on people that I knew, including myself, rather than ask about only the primary Center and secondary Part, I asked it to rank the Centers from strongest to weakest, taking the idea from the statement quoted above that all Centers are present. The board did what I asked and ranked the Centers. It seemed to be a valid way of understanding some of what was going on with my acquaintances then, and in the decades since I have not seen a reason to change my understanding. In my case, the Ouija board ranked the hierarchy of my Centers as follows: Higher Intellectual — Instinctive — Sexual — Emotional — Intellectual — Moving — Higher Emotional. It revealed to me a lot about myself that the orthodox presentation would never have revealed.

Chief Feature

The orthodox dogma-doctrine about the Chief Features is that one has a primary, and often a secondary, and often a tertiary. This has been found to be the case empirically in the Micchaelian community over the decades. I have no problem with things that are discovered or confirmed empirically. In my case, the Ouija board said that the hierarchy of my Chief Features, in descending order of prevalence, were: Arrogance — Greed — Impatience. Self-observing these over the decades, I see that I "Slide" (see below) into *all* of the others on occasion. It all depends on my mood and on the nature of perceived internal and external threats to my ego.

Soul Age/Level

Soul maturity is typically presented in the Michaelian teachings in three parts: there is the major category called Soul Age, there is the minor category called Level within that Age, and then there is the so-called "manifested" Soul Age. The former two categories were presented to the original Michaelian group and subsequently published in MFM. The third category is a later addition, the history of which is unknown to me at this time. Manifested Soul Age is often said to be lower than the true Soul Age, and it is explained that the person just has not yet grown in that lifetime into the full soul maturity that he/she is potentially capable of. Regarding Level, I have found by observation that a person's Level seems to have about one third of the strength as their Age. Presumably the manifested Soul Age has less influence, although sometimes one wonders. I know I devolve into infantilism sometimes. There is also said to be the influence of imprinting from one's parents and one's culture — in the United States the culture is Young Soul. There is also said to be the influence from one's Essence Twin and perhaps other kindred souls. These are reasons why it has been found, empirically via observation, that it is almost impossible to discern a person's alleged one-and-only true Soul Age — it is so diluted and distorted by all of these other influences. The fact, in the *Tao of Personality* book, that Age/Level is said to be the "Neutral" Aspect of the seven Aspects, means that it is also especially subject to 'coloring' and 'flavoring' by the other Traits. That is, a predominance of Cardinal Traits might perhaps make one seem further along the maturity spectrum, and a predominance of Ordinal Traits might perhaps make one seem less far along. The best we can hope for empirically is to tentatively perceive a primary, a secondary, and a tertiary psychological maturity influence. The strength hierarchy of this Aspect, like the other six, is fully acknowledged in my book The Tao of Personality. In Personality, Age and Level (and any other psychological maturity influences) are conflated into one Aspect that I call "Worldview"; more on this in a section further on.

Sliding

The orthodox dogma-doctrine here is that a person has an Overleaf, but that they can easily "Slide" to the complementary Overleaf, such as Acceptance Sliding to Rejection, or Realist Sliding to Cynic, or Arrogance Sliding to Self-deprecation. This phenomenon has been observed empirically by myself and others. It is also orthodox in the Michaelian teachings to say that a self-aware person can consciously use any Overleaf where deemed appropriate for a special situation — the older the soul the easier this is. I have observed this in myself and others, so I have no problem with it *per se*; it is just another indication that the whole understanding of the manifestation of Traits can be generalized as I have suggested. Namely, one might just as well say, as I do in *The Tao of Personality*, that a person has all Traits within oneself in a hierarchy or spectrum from primary to secondary to tertiary, and so on for all seven.

All of these strength hierarchy manifestations, plus the fact that every Overleaf colors and flavors all of the other Overleaves in any particular Personality, sometimes make the accurate identification and Validation of a person's alleged one—and—only true Overleaf difficult, if not impossible. This is an argument for substituting the orthodoxy of the Michaelian teachings for the idea presented in *The Tao of Personality*, namely that one is doing very well indeed if one can accurately discern the primary, secondary, and tertiary Overleaf Trait in every Aspect of any particular person. Not surprisingly, I am not the only one in the Michaelian teachings who has noticed or who believes this. Troy Tolley, ostensibly channeling the Michaels, has said something similar: they propose that every person has their "true" Overleaves, their "self-image" Overleaves, and the Overleaves that they present to others. [[Quote chapter and verse if I ever find it.]]

If a Michaelian student were to adopt the *Tao of Personality* way of understanding the Traits — that they have all of the Traits operating in their Personality to one degree or another — then they might be more inclined to notice, or what the Michaelian teachings refers to as *Photograph*, when they are expressing a Negative Pole, and then mitigate it, this being one of the main recommendations that the Michaels make to us if we want to improve our lives and the lives of those with whom we interact.

Note that I used the words "Trait" and "Aspect" sometimes in previous paragraphs. The next section begins to explain my departures from some of the naming conventions of the orthodox Michaelian teachings.

Renaming Overleaves → Traits

In the mainstream body of *The Tao of Personality* book, the word "Overleaf" is not used. In the context of a spiritual soul taking on a physical personality for an incarnation, that name was appropriate for the original Michael group and for the subsequent Michaelian student body. However, it is not appropriate for the target readership of *The Tao of Personality* book, members of the general public, who might not have a belief system that includes souls and their incarnation. So, in *The Tao of Personality* book, the Overleaves are called "Traits".

In various places in *The Tao of Personality* book, the Traits are shown in a particular arrangement on various versions of a Chart. The Process/Aspect System Chart shows the Traits in a 7 x 7 matrix that has a pattern indicated with headings on the columns and rows. The seven columns are collectively headed up with the name "Processes"; the seven rows are collectively headed up with the name "Aspects". So far as I know, no other person has made an Overleaf Chart with exactly this convention. Five of the seven Aspects have names familiar to all Michaelian students: Goal, Mode, Role, Attitude, and Center. However, as described further on, in *The Tao of Personality* book Chief Feature becomes Shadow and Soul Age/Level becomes Worldview. The names of the Processes in the columns are headed up with names unfamiliar to Michaelian students in this context: Termination and Origination, Involution and Evolution, Analysis and Synthesis, and Assimilation. These features of the Process/Aspect System matrix will, of course, be explained in great detail in Part One of *The Tao of Personality* book.

The headings of the columns and rows on the Process/Aspect System Chart show what I call the "Attributes" of the Traits. Two of these are familiar to students of the Michaelian teachings: there are the Dialectic Attributes of Ordinal, Neutral, and Cardinal, and there are the Axial Attributes of Action, Inspiration, Expression, and Assimilation. Together these are combined into what I call the "Septenarian" Attributes: Ordinal Action, Ordinal Inspiration, Ordinal Expression, Neutral Assimilation, Cardinal Expression, Cardinal Inspiration, and Cardinal Action. Other Attributes shown in the headers of the columns and rows are explained in Part One of *The Tao of Personality* book.

At the level of the individual Traits on the Process/Aspect System Chart, many Michaelian students have sought to find names for some Overleaves/Traits better than those originally given in *Messages from Michael*.

One technique for discerning the fullest and most accurate meaning of each Trait, with a view to choosing the best name, is to understand the *context* of each particular Trait. The context is determined by both the Septenarian Attributes of the Trait's particular Process and Aspect, plus the other Attributes. There are three different types of context embodied in the Process/Aspect System structure. These three contexts are elaborated in Parts One, Two and Three of *The Tao of Personality* book; here in the Prologue they are introduced as follows.

- 1. Firstly, each trait is at the intersection of a particular Process and a particular Aspect. The meaning of the seven Aspects of personality (Goal and Mode, Shadow and Role, Attitude and Center, Worldview) is fairly well understood and presented in the published Michaelian teachings material. However, the nature of the seven Processes of personality (Ordinal and Cardinal Action, Ordinal and Cardinal Inspiration, Ordinal and Cardinal Expression, Assimilation) are not so well understood and presented in the published material. Consequently, the underlying similarity of the seven Aspects of each of the seven Processes has been neglected. To improve this situation, I have given descriptive names to each of these seven Processes, names that tell one something about what they mean, thus: Ordinal Action was named "Termination" versus Cardinal Action which was named "Origination"; Ordinal Inspiration was named "Involution" versus Cardinal Inspiration which was named, "Evolution"; Ordinal Expression was named "Analysis" versus Cardinal Expression which was named "Synthesis"; Neutral Assimilation was named "Combination". With the use of the word "versus" I call the reader's attention to the oppositeness of names of the Processes in each Axial (Action, Inspiration, Expression) pair. Descriptive naming of each Process helps improve one's understanding of each of the Aspects of that Process.
- 2. Before *The Tao of Personality* book book presented the idea, it has not been generally understood in the Michaelian teachings that the seven Aspects partake of the Dialectic and the Axial attributes, and therefore the Septenarian attributes. Thus, as elaborated in a subsequent section, Goal is attributed Ordinal Action, Shadow is Ordinal Inspiration, Attitude is Ordinal Expression, Worldview is Neutral Assimilation, Center is Cardinal Expression, Role is Cardinal Inspiration, and Mode is Cardinal Action. Understanding that the seven Aspects partake of the same Septenarian Attributes as the seven Processes leads to the understanding that the seven Processes and seven Aspects correlate with each other. That is, Termination and Goal are both Ordinal Action, Origination and Mode are both Cardinal Action, Involution and Shadow are both Ordinal Inspiration, Evolution and Role are both Cardinal Inspiration, Analysis and Attitude are both Ordinal Expression, Synthesis and Center are both Cardinal Expression, Combination and Worldview are both Neutral Assimilation. This context makes it possible to compare and contrast them, and to do so elicits even more understanding about what each Overleaf category and each Overleaf Trait means. For instance, when one realizes that the Attitude Aspect and the Analysis Process are both Ordinal Expression, this tells one something about both that one might not otherwise discern.
- 3. Thirdly, consequent to the two previous contextual understandings, each Trait (except in the Neutral Process and Aspect) is part of a "Quadrate" of four Traits. This context makes it possible to compare and contrast each of these four Traits, and to do so elicits even more understanding about what each Overleaf Trait means. For instance, Acceptance and Rejection and Power and Caution are all in the same Quadrate. Studying the Quadrate, and the other contexts mentioned above in regard to Septenarian Attributes, sometimes indicates that there is no single word that is best for an Overleaf Trait regarded as a pure abstract archetype, but the underlying meaning can be discerned even without a perfect word.

With that background information on the study of context, you now have some of the rationale for some of the changes that I have made to the names of some of the Traits, as indicated in the next section.

Renaming Traits

Ever since the Overleaf Traits were first revealed in the original Michaelian group and in *Messages from Michael*, some people have wanted to change some of the names from those originally given. I am among those, having done the work of understanding the Traits in the three contexts provided by the Attributes mentioned above. Following are some of the changes that I made for *The Tao of Personality* book and my other books, with a brief introduction to the reasons for them. Further elaboration can be found in later sections of this book, of course, and also in my other books.

Chief Feature → Shadow

The original name for this Aspect (aka Overleaf category) was carried over from the Gurdjieffian teaching. Many Michaelian students have found this term unsatisfactory over the decades. An alternative presented during the original Michaelian group itself was to call it Obstacle, and some students still like this name. Some have preferred to call it Dragon, as proposed by José Stevens. Being myself unsatisfied with the original name and those other proposed names, I bounced around in my own head the idea of calling it Image or Persona or Ego for a while. All of these tell us something about what this category of Traits is like, but I finally settled on the word Shadow. The Shadow can be understood as the shadow of the Role, the dark side of the Role, Role being Attributed Cardinal (positive) Inspiration and Shadow being Attributed Ordinal (negative) Inspiration. You are invited to read about Carl Jung's use of this word:

>https://en.wikipedia.org/wiki/Shadow_(psychology)<. My use of this word is similar to Jung's, but not exactly like it. My exact understanding is revealed in the body of *The Tao of Personality* book, of course.

Centers as Adjectives → Centers as Nouns

Of the seven Aspects, all of them except the Centers were revealed by the Michaels. The concept of Centers, and their names, was carried over from the Gurdjieffian teaching, and Gurdjieff presented those names in adjectival form, whereas the Michaels used nouns for the names of all of the Overleaf Traits that they revealed. For the sake of consistency in *The Tao of Personality* book, I have changed the names of all seven Centers from adjectives to nouns, thus: Moving \rightarrow Motion; Emotional \rightarrow Emotion; Intellectual \rightarrow Intellect; Instinctive \rightarrow Impulse (see below); Higher Intellectual \rightarrow Concept (see below); Higher Emotional \rightarrow Sympathy (see below); Higher Moving/Sexual \rightarrow Excitation (see below).

Slave → Server

The first record we have of a suggestion to change the name of an Overleaf Trait was during the original Michaelian group, namely to change the name of the Slave Role to Server. Notice the following from the original Michaelian group transcription of 10 January 1974, which was a few months after it was first revealed in October of 1973:

Would it not be a good idea to have a different name than "Slave" for this Role?

Do you approve of "Servers"? [10 January 1974]

The original Michaelian group never made the formal change from Slave to Server, nor did the Briggs group that followed the original Michaelian group (refer to a book published by the Center for Michael Teachings, Inc., *Michael Speaks* — the Legacy of Leslie Briggs) and the Yarbro contingent has not made the change either. However, this name Server has been universally adopted to replace the name Slave by the non-Yarbro contingent, and it is the name that I use. The reason for it must be obvious, namely, that in the ears of most people, Slave has only a demeaning and pejorative connotation. The description of the Slave/Server Role given in the Michaelian teachings is not pejorative, and their function in society is not demeaning; it is very worthwhile to themselves and to those that they serve. Personally, Servers are the only people that I admire, because I appreciate their built-in humanitarian goodness.

Retardation → Reduction

I and others came to regard the original name for this Goal as misleading and pejorative — the word Retardation is too easily associated with "mental retardation". The empirical discovery over the decades in the Michaelian community is that people with this Goal can be every bit as mentally (and otherwise) competent and advanced as those with any other Goal. As for renaming it, the most common preference is *Re-evaluation*. I have settled on *Reduction* because it is one of the most obvious antonyms for the word Growth, the complementary Goal. By all means, read my description in *The Tao of Personality* book to understand what I believe this Goal is really about.

Self-deprecation → Lowliness

My first reason for changing the name of this Shadow was because it was too long to fit comfortably in the box on the Chart page that I drew up in 1981, using a typewriter. Another reason for changing it was consistency of nomenclature: either call the others "Self-something" (i.e. Arrogance \rightarrow Self-aggrandizement, Greed \rightarrow Self-centeredness, Impatience \rightarrow Self-assertion, Martyrdom \rightarrow Self-sabotage, Stubbornness \rightarrow Self-containment), or do not call this one Self-deprecation. It is true that the Shadows are about self-image to some extent, but rather

than make them all too long to fit comfortably in the boxes on the Chart page, obviously I chose to change to a shorter name. Among Michaelian students this particular Shadow is commonly shortened to *Self-dep*. However, I eventually settled on the name *Lowliness*. Other synonyms are listed in the description in *The Tao of Personality* book

Self-destruction → Renunciation

The same rationale presented above for Self-deprecation regarding changing its name applies to this one also. No Michaelian student other than myself that I know of has seen fit to change the name of these two Shadows, but as an Artisan I am comfortable with the expression of creative uniqueness.

Stagnation → Equilibrium

In the original Michaelian group, when the name of the Neutral Assimilation Goal was first given (25 December 1973), the Michaels said, "There is an intermediate, neutral Goal, which for the time being we can call Stagnation." This name has not been changed by the Yarbro contingent in subsequent years so far as we know, but some members of the non-Yarbro contingent have looked for a better word. The rationale is that Stagnation seems to have a negative connotation rather than a neutral connotation. Some Michaelian students have settled on the word "Flow" while others prefer "Relaxation". My personal favorite is "Equilibrium", but other synonyms are listed in *The Tao of Personality* book.

Instinctive → *Impulse*

I have come to regard the original name for this Center as somewhat misleading. The name itself was borrowed from the Gurdjieffian teaching, and it was described in that teaching as referring to the physiology only, having nothing to do with the personality. In the first two Yarbro books, the Instinctive Center was described as the abode of crazy people. Other contingents of the Michaelian teachings have gotten away from both the physiology and the crazy imputations of this Center, but none have changed the name. However, I have settled on the name "Impulse" Center for the sake of accuracy to what it is really all about. The rationale for the change in name is covered at length in this *History* book in Chapter 4F, "Instinctive Center".

Exalted/Higher → Cardinal

Often in the original Michaelian group transcriptions, and as quoted in *Messages from Michael*, the term "exalted" was applied to the Sage, Priest, and King Roles. Furthermore, the term "higher" was applied to Higher Intellectual and Higher Emotional Centers. (Unlike in *MFM*, the Moving Center was a lower Center in Gurdjieff and in the original Michaelian group, and the Sexual Center was a higher Center — but that is a subject covered elsewhere in this Prelude.) In *More Messages from Michael*, the term "exalted" was simply dropped without explanation, and never was it used to refer to those Roles. Instead, the term "Cardinal" was introduced in referring to those Roles, but — inconsistently — the name "higher" was retained when referring to those Centers. In my opinion, Cardinal is a better term than either "exalted" or "higher" and should be consistently applied. It makes sense to me because Cardinal and Ordinal are both mathematical terms, and my bias is that mathematics is about as close to truth as one can get (mathematicians and physicists will tell you the same thing). I regard this as a significant (and meaningful) improvement, and have chosen to go the entire distance. That is, not only are the exalted Roles to be Attributed as Cardinal, but also the higher Centers are to be Attributed as Cardinal.

Higher Intellectual → Concept

Based on what is said in a previous paragraph, I chose a word that actually describes the nature of this Cardinal Center: thus Higher Intellectual Center became Concept Center.

Higher Emotional → Sympathy

Based on what is said in the previous paragraph, I chose a word that actually describes the nature of this Cardinal Center: thus Higher Emotional Center became Sympathy Center. The nature of this Center and the Higher Intellectual Center is discussed in this *History* book, in Chapter 4G, "The Higher Centers".

Higher Moving/Sexual → Excitation

Based on what is said in a previous paragraph, I chose a word that actually describes the nature of this Cardinal Center: thus Higher Moving Center became Excitation Center. This bears some more explanation in

that there is disagreement between two contingents of the Michaelian teachings about the Cardinal versus Ordinal placement of the Sexual versus Moving Center. This discrepancy is explained in detail in this *History* book, in Chapter 4H, "Action Centers", and will only be introduced here briefly: In the Gurdjieffian teachings and in the original Michaelian group, the Moving Center was a lower (Ordinal) Center and the Sexual Center was a higher (Cardinal) Center. In *Messages from Michael* (1979) this placement was reversed. In *More Messages from Michael* (1986), the name of the Sexual Center was changed to Physical Excitation Center. Among the non-Yarbro contingent of the Michaelian teachings, the preference (except for Shepherd Hoodwin) has been to stay with the Gurdjieffian and original Michaelian group placement. I am with the non-Yarbro contingent on this discrepancy, with arguments documented in Chapter 4H of this *History* book.

Age/Level → Worldview/Zone

In the orthodox Michaelian teachings, it is said that there are five Ages that manifest on the Physical Plane and two that normally manifest on the Astral and Causal Planes. It is also said that each Age has seven Levels within it. There are a number of reasons why it seemed expedient to me to combine Age and Level into one Aspect for t *The Tao of Personality* book book — refer to other sections of the Prologue. Other Michaelian students and teachers mentioned above, those who have departed from the orthodox Michaelian teachings in order to mainstream the Overleaf System, did the same thing. For instance, José Stevens and Barbara Taylor call them "Perspectives". The Michaels themselves said that Age mostly has to do with "perception". Larry Byram prefers to use the name "Worldview", as do I. I also chose "Zone" to replace Level.

Here are the reasons I avoided referring to their association with soul maturity in the theory of reincarnation.

- 1. There has been a significant amount of distress among Michaelian students because some people get the impression that older souls are in some senses better than younger souls. There are, of course, protestations to the contrary by the Michaels themselves and their students. Nevertheless, those Michaelian students who have been identified by channeling as Mature Souls have a hard time feeling equal to those who have been identified as Old Souls. This superiority/inferiority or resentment/pride is not generally felt as intensely with the other Overleaves, which are not arranged in a hierarchical sequence. My solution is to change the names of the Ages so as not to reveal anything about an alleged spectrum of psychological maturity in the way that they originally did Infant, Baby, Young, Mature, Old, Astral, Causal.
- 2. The comment above for the Ages regarding inferiority and superiority can be applied to the Levels for a similar reason Therefore I changed the name Level to Zone. Then, rather than name them First Zone, Second Zone, Third Zone, and so on, I chose to use a name for each Zone that expresses its nature rather than its location in a spectrum of soul maturity. I also described Zones as secondary Worldviews.
- 3. The same as with the other Traits in *The Tao of Personality* book, a person is then said to have a primary and a secondary Worldview: Age/Worldview is primary, and Level/Zone is secondary. I have given each of the seven Worldviews a name suitable for its nature, but the name does not necessarily indicate any kind of maturity spectrum. The other Traits cannot be arranged on a maturity spectrum, so for consistency's sake, I don't do it in this book. This will, of course, make the system more palatable to all Soul Ages and Levels, whether they know it or not. If Michaelian students were to accept this practice, it might expand their appreciation and understanding of all Ages and Levels. Furthermore, when the Age and Level Overleaf categories are conflated into the Worldview and Zone Aspects, and each is viewed as a Trait with an appropriate descriptive name just as the other Traits on the Chart have appropriate descriptive names, then there is no need to suppose or propose, in order to understand their meaning, that they are the result of the soul developing via reincarnation. This is consistent with my purpose in mainstreaming the Process/Aspect System to other than Michaelian studends, if some people prefer to use it that way.

Then, of course, since the names of the Ages and the names of the Levels had issues in my mind, there is the question of what to name each of the seven Worldviews. There were several considerations that led to the names that I settled on over the decades, and that I use in *The Tao of Personality* book. The considerations were these:

Other students/teachers of the Michaelian teachings — those who share my purpose of
mainstreaming the Overleaf System to the world in general — did something similar to what I
propose. José Stevens named his (five) Perspectives as follows: Survival—Oriented; Rule—Bound; Competing;

Relationship—Oriented; Philosophical. Larry Byram named his (seven) Worldviews as follows: Survival; Safety and Security; Outer Success; Relationship; Inner Success; Personality Integration; World Server. To the typical Michaelian student, the correlation with the Soul Ages is obvious; to the typical non-Michaelian student, not so much.

- 2. This point will be explained further below, but for here and now, know that all of the six Aspects of a Process have a similarity that is obvious if you think about it. For instance, all of the Traits in the Cardinal Action Process Dominance, Impatience, Realist, Excitation, King, Aggression have to do with making things happen. This similarity is embodied in the name of that Process, which I have named Origination. Considering my understanding that Worldview is the Neutral Assimilation Aspect, then it makes sense if the name of each Worldview is a synonym of the name I settled on for the Process. This will, of course, be explained in detail in Part One of *The Tao of Personality* book.
- 3. This factor that there is a similarity to all of the Aspects of a given Process was explicitly stated in *More Messages from Michael* (1986), p. 189, where the similarity was referred to as a *resonance*: "These polarities apply to casting order as well as to levels and, in fact, resonate through all the overleaves. Those resonances are what you in our little group call 'Michael–Math' and it is central to understanding the evolution of all fragments, on and off the physical plane."
- 4. The same as with the other Traits, the names of the Cardinal and Ordinal Worldviews on the same Axis should have a *complementarity* about them. For example: Acceptance and Rejection on the Expression Axis; Passion and Repression on the Inspiration Axis; Realist and Cynic on the Action Axis have an obvious complementarity. So should it be on the Neutral Assimilation Axis.
- 5. The names of the Positive and Negative Poles of the Levels provided in *MMFM* failed to meet the requirements for *resonance* and *complementarity*. Therefore I have come up with my own names, which you see in the Process/Aspect System Chart. This matter is discussed in detail in this *History* book, *in* Chapter 4K, "The Names of the Levels".

As you read Parts Two and Three of *The Tao of Personality* book, you will also notice that I have changed the names of some of the Positive and Negative Poles of the Traits. The reason for these changes will not be explained here, but they will be explained along with my description of each Trait and its Poles.

Evolution of the Process/Aspect System Chart

For the historical record (if a history of the Michaelian teachings is ever written, and if my contribution is recognized), and because it might give readers some preliminary insights into *The Tao of Personality* book, I am going to tell you the story of my "heresies". Much of this presentation explains in greater detail some of what was introduced in previous sections.

Michaelian students will understand it when I say that, being a typical Artisan, I am interested in understanding the *structure* of things — how things relate to each other and work together. Therefore, when I first began to study the personality Traits in 1981 after reading *Messages from Michael*, I was focused on how the Traits should be arranged in a pattern. Some of this was revealed, but not all of it. The derivation of the System in terms of logic, mathematics, and physics (explained in Part One of *The Tao of Personality*, and in my book *The Tao of Cosmology*) came about through a lengthy period of development, in fact over a period of two decades. It was intuitively obvious to me during the first few months of my study of the Overleaf System in 1981 that these fundamental personality traits of people were somehow equivalent to the "personality traits" of the universe, aka, the laws of physics. I have often wondered why the Michaels did not just declare this and explain what the common structure was, so that I would not have to do all that work (or have all that fun) of figuring it out. It could be that they did not declare it because the structure I see is defective or deficient, but I do not think so. In retrospect, the structure seems so obvious to me now. I understand the structure now, but I still do not have the equivalent physics phenomenon figured out for every Trait, if indeed there is a correspondence. But anyway, here is the story.

The Michaels told us about the three aspects of duality in *Messages from Michael*, on page 43:

Can you tell me what the significance of the number seven is?

Seven is the closest thing we know of to a universal number. It expresses not only *the three aspects of duality*, but the resolution of the dualities. It is thesis, antithesis, and synthesis. In the dualities, or polarities, there are those that are concerned with *expression*, *action*, *and inspiration*, and the seventh is *assimilation*. Consider expression, which makes things accessible, either through the act of creating things, building things, and

shaping things with its higher polarity, which is the realization of the thing built, created, or shaped. In action, there is the action itself, the exploration, the extension, and the cohesion of the results of the exploration and extension. In inspiration there is the lifting up, and the pursuit of that beyond what has been lifted up. And then, there is the contemplation and understanding of the dualities in a single experience. As we impart the teaching, we would urge you to keep this in mind, for there are many aspects of yourselves that are influenced by this rule of seven. Remember the interrelations of the polarities as well as their synthesis.

Frankly, when I first read it and for a few years afterward, I found this passage quite obscure. As far as I was concerned, it did not really explain anything at a deep level, and I wonder if the questioner was satisfied with this answer because I certainly wasn't. Beyond this initial offering there was not much information given information that would impart an understanding of what these "three aspects of duality" (Action, Inspiration, Expression) were all about. One could get a vaque idea of what the "three aspects of duality" mean in terms of personality from the description of each of the six Traits in each of the six categories, Ordinal and Cardinal Action, Ordinal and Cardinal Inspiration, and Ordinal and Cardinal Expression. (Not to overlook the seventh category, which the Michaels referred to as Assimilation.) For instance, in the Cardinal Action category, it was obvious to me that King, Dominance, Aggression, Realist, Moving, and Impatience all had a fundamental similarity of meaning that deserved a more descriptive name than "Cardinal Action". Very early on, within the first few months, I began to refer to that meaning as a "Process" but I couldn't really say why I chose that word at the time; only later did it became clear that Processes are functions of movements in subjective psychological 'time'; see below. I began to look for the best words for the names of the seven Processes, names that are opposites of each other within a duality. After all, it seemed reasonable to me that if the columns on the Chart (the way I had laid it out on an 8.5"x11" sheet in landscape orientation) had names (Role, Goal, etc.), then the rows should too. It only took me a few months to figure this part out, and I can retrace the evolution of my thinking by looking at how my Chart of the Overleaves evolved over the first year. This development in my naming scheme is tabulated below.

| DATE | The SEVEN PROCESSES of PERSONALITY | | | | | | | | |
|--------------------|--------------------------------------|---|---|---|--|--|--|--|--|
| August 1981 | ASSIMILATION (neutral) | ACTION INSPIRATION - + - (artsy) + | | EXPRESSION - (sciency) + | | | | | |
| ~September 1981 | ASSIMILATION (neutral) | influence ACTION authority - pull - + push + | INSPIRATION – (artsy) + | EXPRESSION – (sciency) + | | | | | |
| ~October 1981 | ASSIMILATION (neutral) colorless | – ACTION + (kinetic) passive active | - INSPIRATION + (art) pessimistic optimistic | EXPRESSION + (science)objective subjective | | | | | |
| ~November 1981 | ASSIMILATION (neutral) colorless | — ACTION ++ down ("I do") up passive active | — INSPIRATION ++ back ("I feel") forth pessimistic optimistic | EXPRESSION ++ out ("I make") in objective subjective | | | | | |
| ~December 1981 | ASSIMILATION (neutral) absorption | down — ACTION ++ up effect (kinetic) cause finish start passive active | Back— INSPIRATION ++forth mood (emote) feeling entropy evolution pessimistic optimistic | out — EXPRESSION ++ in science (symbolize) art analysis synthesis objective subjective | | | | | |
| ~Winter 1982 | ASSIMILATION (neutral) science | down — ACTION ++ up finish (kinetic) start effect cause passive active | Back— INSPIRATION ++forth mood (emote) feeling entropy evolution pessimistic optimistic | out — EXPRESSION ++ in engineering (symbolize) art analysis synthesis objective subjective | | | | | |
| ~Spring 1982 | ASSIMILATION (neutral) science | ACTION (strength) - Stopping - + Starting + accomplishment initiative | INSPIRATION (quality) -Involution- +Evolution+ pessimistic optimistic | EXPRESSION (quantity) -Analysis- +Synthesis+ objective subjective | | | | | |
| ~Summer 1982 | ASSIMILATION Summation P-D Science | 1-D ACTION (strength) -Consummation- +Origination+ accomplishment initiative | 2-D INSPIRATION (quality) -Involution- +Evolution+ pessimistic optimistic | 3-D EXPRESSION (quantity) -Analysis- +Synthesis+ objective subjective | | | | | |
| Eventually | ASSIMILATION =Combination= | 1-D ACTION -Termination- +Origination+ | 2-D INSPIRATION -Involution- +Evolution+ | 3-D EXPRESSION -Analysis- +Synthesis+ | | | | | |

As you can see in the bottom row of this table, it took me about a year to settle on names for the seven Processes that I still use.

These early versions of my Overleaf Chart also record that within the first few months I realized that the "three aspects of duality" applied to both axes on the Chart — the columns as well as the rows. I noticed that Goal and Mode seemed like an Action duality with Goal as Ordinal and Mode as Cardinal; Attitude and Center seemed like an Expression duality with Attitude as Ordinal and Center as Cardinal; Shadow and Role seemed like an Inspiration duality with Shadow as Ordinal and Role as Cardinal. That left Worldview-Zone to be attributed as on the Assimilation Axis, which also made perfect sense in that as the soul matured via reincarnation and experienced more of the Overleaves, it would total up as increments in Soul Age. It seemed that surely it was no coincidence that there were seven columns (if you conflate Age and Level) as there were seven rows. And if there were seven columns just as there were seven rows, then reasonably they would have the same three dualities with a neutral. It was all very symmetrical and it all made sense and it was beautiful. Anyway, I referred to the columns as the seven "Aspects" of personality, but I couldn't really say why I chose that name; only later did it become clear that Aspects are functions of different perspectives in subjective psychological 'space'; see below.

This was as far as my understanding took me, all within the first year of my study of the Overleaf System. Then in the middle of 1983, I discovered the Ra Material, another collection of channeled information. It referred to the physics theory of Dewey Larson, which proposed that: "The physical universe is composed entirely of one component, motion, existing in three dimensions, in discrete units, and with two reciprocal aspects, space and time." It seemed intuitively correct to me that there were three dimensions of time just as there are three dimensions of space — I appreciated the symmetry. Also I knew intuitively that somehow this was the physics equivalent of the Process/Aspect System of personality traits. In August of 1983 I began to read his books, and sure enough, my intuitions were proven correct. In retrospect it was amazing to me that I did not see that Processes on the Chart were equivalent to *time* in physics, and Aspects were equivalent to *space* in physics. I had intuitively picked the names "Process" and "Aspect" without understanding their significance.

This equivalence of Process/Aspect to time/space led to other insights. The only relationship that we know of between time and space is motion, and since each Trait partook of both "time" (Process) and "space" (Aspect), each Trait is therefore a different type of "motion" in "psychological time/space", so to speak — and that is the pure abstract essence of "personality". That insight led me to another insight, that these abstract psychological "motions" were responsible for the attraction and/or repulsion that various personality Traits experience relative to each other, and why there is often a mixture of both attraction and repulsion.

Furthermore, Larsonian physics led to yet another understanding in terms of sequencing the Axes: what the Michaelian teachings refers to as the *Action* Axis, Larson called *one*-dimensional *translation*; what the Michaelian teachings refers to as the *Expression* Axis, Larson called *two*-dimensional *vibration*; what the Michaelian teachings refers to as the *Expression* Axis, Larson called *three*-dimensional *rotation*; what the Michaelian teachings refers to as the *Assimilation* Axis, Larson called *pan*-dimensional *scalar* motion. Thereby I came to understand that the reason that the Michaels' chose the word "axis" was because of the derivation of the Overleaf System from a mathematical system, namely the Cartesian coordinate system: its one-dimensional "x" axis corresponds to the Action Axis; its two-dimensional "x + y" axes corresponds to the Inspiration Axis; its three-dimensional "x + y + z" axes corresponds to the Expression Axis. In the Cartesian coordinate system, its so-called "origin" point is at the intersection of those three axes. The origin thus corresponds to the so-called "Assimilation Axis", which could also be referred to as the "hub" or "center" of the Axes. If this abstraction seems like a leap of inference that is too far for you to follow at this time and place, then perhaps my lengthy explanation in appropriate places in the *Tao of Personality* book will make it easier.

Putting these correlations together, I saw that there is a correlation between the types of motion in objective physics space/time and the types of 'motion' in subjective psychological time/space. Thus, all of creation — physics and psychology, inanimate and animate — are products of the same thoughts in the mind of Tao.

A much more detailed explanation of the structure and the meaning of the personality system is provided in Part One of *Tao of Personality* book.

For your convenience, I show the final version of my Process/Aspect System Chart below, in the symmetrical (left/right, top/bottom, x-axis/y-axis) "time structure" version.

Me and Mathematics and Science and the Michaelian Teachings

When I was 12 years old I was drawn into a fundamentalist Christian church. I blame this on my Spiritualist Attitude — a need to find God *out there* somewhere. In that group, the Bible was considered God's Word. I found my way out of that cult at the beginning of my fourth Internal Monad, read *Seth Speaks*, and for a while there, I badgered my wife with "Seth says this and that". It was after a while of that that I read *Messages from Michael* and then changed to "Michael says this and that". I really just transferred some of my need to find God's Word in some book, from book to book, only now I called God "All That Is" per Seth or "Tao" per the Michaels.

Besides religiosity and spirituality, I had an interest in science beginning before adolescence. A test that I took in high school put mathematics and physics at the top of my interests, actually. (Because I also had talent for art and writing, I got detoured into those subjects in college, but that is another story.) It became obvious as time went by that ancient and modern spiritual traditions are too variable and contradictory to be regarded as God's Word, although they can be very helpful. As time goes by, it is more and more obvious that Nature is a better version of God's Word, and the language of Nature is mathematics. Now that I am retired, I can pursue my interest in reconciling my spiritual life with my scientific life, and write about it also. Luckily for me, this is a hot topic among scientists and philosophers and theologians at this time in history.

Immediately after putting the Overleaf System to paper, I perceived it as "Tao's Template", yet another version of God's Word. There seemed to be something mathematical about it, what with various categories of oneness and twoness and threeness and cardinal and ordinal and axes. Thus, it was apparent that the Overleaf System was based on a mathematical object; it was not just a model of personality traits. And it seemed to me that there was some physics in there also. Thus, logic and mathematics seems to be the basis of both physics and psychology. Maybe I was once again projecting my hopes and dreams to find Tao somewhere. Subsequent studies over four decades have not yet led me elsewhere, but I suppose I could be wrong again.

Anyway, the world is absolutely full of ambiguities and uncertainties. Much of the scientific enterprise over thousands of years is to know Nature by reducing the ambiguities and uncertainties. Being a scientist at heart (Artisan with double Scholar Casting), my personality also pushes to get beyond the chaos. Scientists look to the very fast and the very slow, the very large and the very small, the very young and the very old, the very specific and the very general, because at these extremes the fundamental and simple categories are found. The Overleaf System is a matrix of categories, all very tidily arranged, unlike the personalities we try to cram into those boxes. Michaelian students will recall that the Michaels said that there were three sizes of truth: Personal Truth, World Truth, and Universal Truth. The Michaels had a lot more to say about Personal Truth than Universal Truth, but I am going on my perception that they hinted at Universal Truths in their revelation of the Overleaf System. It turns out that I am much more interested in what those categories mean in terms of Universal and World Truth, than I am the Overleaf System in terms of Personal Truth.

The situation with me is this: that I want to lift the Overleaf System up to the level of at least World Truth, if not Universal Truth, in my presentation in *The Tao of Personality*. In other places in my writings I indicate that the Overleaf System (as Michaelian students typically understand it) is a crude and distorted manifestation, far removed from what I have come to call Tao's Template, which has its primary manifestation as a logical and mathematical structure, and a secondary or derivative manifestation in the laws of physics — hence Universal Truth and World Truth. As Tao "fragments" itself fractally (7 within 7 within 7 ad infinitum, ad æternum) in what *Michael for the Millennium* called "experiential differentiation", the basic logical and mathematical pattern of Tao's Template gets more and more dissimilar to the pure abstract ideal. Human personality is a long way down the "Great Chain of Being", as it is called in some metaphysical systems. Not only personality traits, but even such phenomena as "love" and "truth" — as experienced by humans — are way down the chain from Tao's Template. Not that there is anything wrong with the crude and distorted experience we humans have of Tao's Template and of love and truth; it is just a very, very long way from the Absolute.

My aspiration is to at least point students to Tao's Template objectively by explaining the logical and mathematical structure of the Overleaf System, even though our full experience of it subjectively will not happen until the culmination of our Essence's evolution. One of the few things that help convince a scientific mind such as mine of the reality of the Michaels and the authenticity of Sarah Chambers's channeling in the original Michael group is that the personality system has this profound, fundamental logical and mathematical structure that is consistent with other features of the Michaels' cosmology all the way up the Great Chain of Being to World Truth and Universal Truth, even though she and subsequent students are not consciously aware of it and have no understanding of it. As stated by the Michaels themselves, understanding the Overleaf System of Traits is just Class 101 in the curriculum toward understanding and inculcating The Synthesis, which includes World Truth and Universal Truth. It is one path toward experiences of "love" and "truth" to the best of our human ability, but human experience merely foreshadows Love and Truth as experienced by the Absolute, just as the Overleaf System foreshadows Tao's Template.

My Process for Understanding the Overleaves

In previous sections of this Prologue to *The Tao of Personality*, I recounted how I came to understand the structure of the Process/Aspect System from logic, mathematics, and physics, with the help of Dewey Larson. In this section, I recount how I came to understand the Traits within that overall structure. Some of this story repeats information from previous sections.

A. In August of 1981 I first sat down with *Messages from Michael* and drew up the personality system on a piece of paper, noting, of course, that it was a *system* with a pattern. On my Chart, I showed the Cardinal and Ordinal pairings and the three Axes of Action, Inspiration, and Expression, and the Neutral Assimilation that were mentioned in the book. I soon came to call these the seven Processes. In addition to that, I noticed something that Michael did not mention, namely that the seven (what I soon came to call) Aspects of Goal and Mode, Chief Feature and Role, Attitude and Center, and Age/Level, also fit the pattern of Cardinal, Ordinal, Neutral, Action, Inspiration, Expression, and Assimilation.

Having recognized the structure of the 7 x 7 matrix, I began to study the meaning of the Traits by various means and methods: First, I looked up the names of the Traits and their Poles in the dictionary and the thesaurus. Second, using an Ouija board with the help of my wife and others, I acquired personality Charts on my relatives, friends, coworkers, acquaintances, and a few celebrities. This amounted to scores of people to start, and eventually hundreds. By comparing and contrasting the people with their Charts, I could refine my understanding of the Traits beyond the dictionary definitions and thesaurus synonyms and antonyms. Third, I studied and pondered until I understood the meaning of Cardinal, Ordinal, Neutral, Action, Inspiration, Expression, and Assimilation in terms of the 7 x 7 matrix. Fourth, I compared and contrasted the descriptions of the Traits within that understanding of the structural pattern of the system in order to extract even more understanding of each Trait and the pattern itself. In other words, the Traits define the pattern and the pattern defines the Traits. Fifth, I found a theory of physics (in 1983) that led me to understand the Traits and the pattern in terms of logic, mathematics, and physics. Sixth, I took notes on what I learned as I learned it, and typed them up to share with others — I always learn something when I teach it. I did all this intensively for about five years. I called my book The Tao of Personality. Lastly, I led a Michaelian class, filled mostly with astrologers, for a few years in the late 1980s, and their insights gave me even more feedback about the Traits. It is perhaps exhausting for you just to read about my exhaustive study of the personality system.

B. My original *Process/Aspect System* manuscript from the early eighties was apparently the first effort to examine the Traits in detail. So far as I know, there are only a very few Michaelian students who have taken the time and energy to study the Traits and write about them in detail: me, José Stevens, perhaps his co-author Simon Warwick-Smith, the triad who wrote *Michael: the Basic Teachings* (JP Van Hulle, M. C. Clark, Aaron Christeaan), Joya Pope, Shepherd Hoodwin, Barbara Taylor, and Larry Byram. Somewhere along the way I acquired another short unpublished paper by a fellow named Mark Gerstein. In the late 2010s, the Michaelian teachings community made contact with a similar teaching in Germany called Die Quelle, which was transmitted through a channel named Varda Hasselmann, and which has published several books in the German language. This limited membership in the study/write club makes me an "unusual" Michaelian student, for whatever that is worth.

C. But I am even more unusual than that small group of book writers. Something that I found essential to understanding the personality system, no one else has found significant at all. So far as I know, no one other than myself has seriously attempted to understand the meaning of the structure of the system. Why is it based on the septenary? Why is seven a "Universal Truth" (More Messages from Michael, p. 44)? Why are there examples of the septenary in many areas of the Michaelian teachings and in many time scales? Where did Cardinal and Ordinal and Axis, and Action and Inspiration and Expression and Assimilation, come from? Do they have any significance beyond human personality? These elements are mentioned throughout the Michaelian books but barely described, let alone explained. Students and teachers typically simply accept the structure as a given ex cathedra, as a dogma-doctrine, without explanation. There was just something about me that could not let those elements exist without understanding them at a deep level, which I began to do from the very beginning of my study. This study continues, as I find examples of the septenary in various places in regard to various physical and metaphysical phenomena. I dare say that no one else has studied the personality system quite the way I have, and this gives me a unique perspective. But is it a valid perspective?

D. It is common knowledge in the Michaelian teachings that Artisans and Scholars have a specific problem with their Negative Poles. In the words of my friend and fellow Michaelian student, Ed Hamerstrom: "What

strikes me is the Negative Pole of Artisan, —Artifice, which I've seen my share of in Artisans, where they have some thought pass through their mind and assume automatically that it is good truth. It's not that different from the Negative Pole of Scholar, —Theory, where stuff gets made up into elaborate intellectual structures that get too far away from real +Knowledge." I find Ed's observation to be true. I am an Artisan Role, Scholar Soul personality type, and, practicing student that I am, I have for decades known that I need to be aware of and counteract these Negative Pole tendencies.

E. In this context, I have a comment on the meaning of the word "theory". It has two very different, almost opposite, meanings. The meaning of the word theory as used for the Negative Pole of Scholar is something like –Speculation or –Conjecture, or –Hypothesis, or –Guesswork, or –Opinion. The meaning of the word theory as used by scientists is more like a law; it is a broad, unified, integrated, comprehensive, coherent, elegant, explanation of regularities in nature. It is a type of +Knowledge that goes beyond mere data/facts/information. It is very like the Positive Pole of the Concept (aka Higher Intellectual) Center, +Integration. The Michaels specified the route to experiencing that Center as "understanding scientific principles" (Messages from Michael, p. 208). I enjoy doing that, and I approach the personality system as if it possibly reveals scientific principles. I also enjoy figuring out how things fit together, as is typical of Artisans; see next.

F. So now what about the tendency of the Artisan to just invent artificial relationships from the Negative Pole, —Artifice? "For the Artisan, the automatic trap is that of the total preoccupation with structure and the resultant tendency to attempt to interrelate everything with everything else, as in the case of those who seek to equate the laws of physics with the perceptions of sociology with the geometric philosophies of architecture. While *this is not an invalid Artisan perception*, carried to extremes it serves only to block Validation and to distort the functions of structure" (*Michael's People* [1988] p. 179). I understand that my innate tendency to see relationship patterns where they might not exist must be checked or verified by some external and objective means. For myself, it is to study the pros and cons, to not take what others think or even what I think "on faith". I gather scientific evidence — that is my double Scholar Casting at work and at play. The best quality evidence I have found is in mathematics and nature. I document my assertions in my book *The Tao of Cosmogony* with evidence from logic and mathematics. Thus, it looks to me as if I am not making this stuff up within –Artifice or –Theory; I am putting it together with +Integration. In addition to that, I am, with this book, submitting my ideas to others and soliciting feedback to discern if what I say is Phil's folly or Phil's philosophy.

G. Above I said that early in my study of the Overleaf System, I encountered a theory of physics that led me to understand the personality system in a very deep way, in terms of logic and mathematics, which is about as close to "Universal Truth" (the Michaels' term for natural laws that apply to all seven planes of creation) as we humans can get, short of a mystical realization of Tao. Thus I came to regard the logical/mathematical derivation of the Overleaf System as Tao's Template for all creation. In other words, the Overleaf System appeared to be just a tiny subset of the Process/Aspect System. Whereas the Overleaf System applies to human personality, the Process/Aspect System applies to Tao's "personality". The formless Tao "fragmented" Itself into form via a cascade of what physicists call "symmetry breaks". This includes the primordial distinctions of three-dimensional time–space–plane in which all experience takes place. I also found evidence for this from mysticism, which I present in Part One of *The Tao of Personality* for your consideration and evaluation.

H. Early in my metaphysical studies, I encountered other personality systems, such as astrology, Enneagram, Tarot, and Myers-Briggs. What struck me about these other systems was that they did not have the elegant, comprehensive framework of logic and mathematics that I found in the Process/Aspect System. They seemed contrived and artificial — *useful*, maybe, but definitely not in the class of Universal Truth that the Process/Aspect System seemed to be in. Therefore, there was no need to try to integrate them with the Process/Aspect System. It seemed to me that trying to integrate them would only muddy the Process/Aspect System, not clarify it. This is a subjective evaluation, and others might disagree with my assessment of various systems. If further study reveals correspondences, so much the better; but I do not insist on it.

I. I have learned that I must document my assertions in order to be taken seriously on controversial and arguable topics such as the Process/Aspect System. I do not expect you to take me "on faith", no matter how much I have studied the pattern of the personality system or the septenary. It is Good Work (a phrase familiar to Michaelian students) that you not regard me as authoritative "just because I say so". I regard it as Good Work that I not take the Michaelian teachings as authoritative either, just because "Michael says thus and such". Therefore I document my case as scientifically as I can, and ask others to do the same when they present an opinion that they feel strongly about. There are some things that seem intuitively obvious and self-

evident to me, but I have learned that others do not share my perceptions. So, I have come to accept that I have "a lot of explaining to do".

J. In addition to their practical, testable information about how to live life beneficently, the Michaels present an elaborate "belief system", many portions of which have no evidence, let alone proof. Theirs is not the first spiritual belief system that I encountered and studied. I was involved in a fundamentalist Christian church for twenty years after age twelve. It seemed reasonable to me at the time, and I understood everything within their mindset of Bible interpretation. It took a lot to break the hold of their "programming" in my early thirties. Those of you who have been part of a mind-bending cult know what this is like. I do not regard the Michaelian teachings as a cult, but part of it is an unsubstantiated belief system, a set of dogmas and doctrines. I am challenging some of this, but because I have been fooled by an erroneous belief system and yet found my way out, I acknowledge how difficult it might be for some people to reinterpret, according to another system, the Process/Aspect System. For the same reason, I realize that the Process/Aspect System might not be the final answer either, just another step on my path.

K. My path at present is to find out where the Process/Aspect System is valid. "Valid" is a word similar in meaning to "truth", and "truth" is a loaded word, because it has been so badly abused by zealots and bigots promoting lies. "There is, of course, an ultimate perception that is the synthesis. This, of course, is truth." (Messages from Michael, p. 68), and none of us has that, not even the Michaels. Nevertheless, the Michaels have proposed their "model" of how the universe works, based in part on the septenary. One of my goals is to see how much and how well that model works in the real world. Part of that "real world" is what other deep thinkers and researchers have come up with over the millennia.

L. I have some informal background in expository and scholarly writing. When I was in that fundamentalist Christian church that I mentioned above, we were taught to regard the Bible as the inspired and infallible "word of God". One of my early writing projects — and the one I developed most fully — was a book manuscript on Bible chronology and the Jewish calendar. I read many scholarly books and journal articles, then analyzed and synthesized the information, then wrote my own book. This is called "exegesis". It was rather dry and tedious, as one might imagine for that subject matter. That was back in the 1970's. In the early 1980s, I substituted Messages from Michael for the Bible. I studied it and wrote about it in much the same way that I had the Bible — scholarly and systematic, hence the Process/Aspect System manuscript. Even now, decades later, there is still very much a part of me that actually enjoys the process of researching and writing that sort of document. Such is my Scholar soul at work and at play, filtered through the Role of an Artisan.

M. However, I want to emphasize that I know that producing an excruciating exegetical exposition full of abstractions is not what the Michaelian teachings itself is really all about. It is much more about being good to yourself, good to other people, and good to the planet. The logical and mathematical components of the Process/Aspect System are actually rather irrelevant to your life in the world and in your relationships. Therefore I acknowledge that some of the information *per se* in this book is unimportant. For me, as well as for the readers, it might only serve as intellectual exercise. By that I mean it sharpens and expands our mental skills if we examine the abstract components of the personality system. Even if nobody else in the Michaelian teachings does this kind of study and presentation, or appreciates that I have done it, I myself will have nevertheless gained the benefit of the exercise. Perhaps one can refer to this process of improving one's belief system as "intellectual healing".

N. Besides the Scholar and Artisan components of my personality, I am also a Spiritualist in Attitude. Part of my journey in this life has been to evolve from the Negative Pole of –Faith to the Positive Pole of +Verification, as those Poles were originally named. When I was in that fundamentalist Christian church that I mentioned above, starting at age twelve, learning to regard the Bible as the inspired and infallible "word of God", I accepted that dogma-doctrine in –Faith without much question. I left that church after twenty years realizing that even if the Bible was in fact the word of God (unlikely!), it didn't matter, because each person interprets it out of the biases of their own personality. I transferred much of that –Faith to the Michaelian teachings in the 1980s and, alas, it took me until about 2009 (when I was 62 years old, when I started what the Michaels refer to as the Fifth Life-Stage or Internal Monad) to finally get the "true believer" component (–Faith) out of my system. I now realize that even if (a big IF) there is a Michael entity, and even if (a big IF) they have an accurate model of the cosmos, they still have to get their message accurately through fallible human "channels" (another big IF). It is a fundamental tenet of the Michaelian teachings itself that errors in transmission do occur, and personal Validation by academic or experiential means is enjoined on all students. My research and writing has fostered my transition from –Faith to +Verification.

- O. My various books about the Michaelian teachings are not my first books. In the last decade of my stint in that fundamentalist Christian church, I had a penchant for scholarly pursuits. My first real and productive attempt at writing a book was about *Bible Chronology and the Jewish Calendar*. Interestingly enough to me at least there were a number of septenarian patterns therein, not unlike in the Michaelian teachings. There is the weekly pattern of seven days, ending in the Sabbath. There is the Sabbatical year, a week of years involving land use (every seventh year crops were not grown). There is a week of weeks of years called the Jubilee year every fiftieth year all debts were forgiven. This is reminiscent of the fractal nesting of septenaries within septenaries within septenaries in various cosmologies, including the Michaelian teachings. As part of my research for my Bible Chronology book, I read many scholarly books and journal articles. These informally taught me how scholarship is performed and delivered. Then I wrote my *Bible Chronology* book in the style of a scholarly presentation. I see now that this was practice for my books on the Michaelian teachings. This makes for unavoidably dry reading in some passages, but I try to make my writing style interesting, as well as informative where I can.
- P. My Attitude is Spiritualist and my strongest Center is Concept (aka Higher Intellectual). This is an unusual combination of Overleaves, and it makes for an unusual capability. It means that I have a talent, a penchant, a proclivity toward overarching belief systems or cosmologies. It seems I tend to see the underlying patterns and the principles normally hidden in a mass of noisy details, details far removed from the foundation, the source. There is a cosmology component in the Michaelian teachings and many other exalted spiritual teachings, by the way. And there is the psychology component of the Michaelian teachings having to do with down—to—earth interpersonal relationships and daily affairs. The vast majority of Michaelian students are immersed in the cares and concerns and details of their daily lives that are covered by this latter component; they do not really care that much about the cosmology component. To them, interest in this cosmology stuff might seem like a pretentious, pompous, presumptuous, and pedantic pursuit. Nevertheless, because of my particular Overleaves, I care about the cosmology component, and my books *The Tao of Cosmology* and *The Tao of Cosmology* are expressions of that. I know that few Michaelian students if any will grok it, but I just have to do it for my personal fulfillment.
- Q. So what is my point with my book *The Tao of Personality*? I feel strongly about a lot of the Michaelian teachings. For the first ten years I had an evangelical zeal about spreading the Gospel of Michael. After that the Michaelian teachings became more like a way of life (self-purification, error reduction) that I kept to myself, but there is still a bit of that externally-directed urge to proselytize and teach. Only now that urge is for correcting a few very minor "flaws" in the information, and presenting some of my own unique contributions to the Michaelian teachings, apart from and in addition to what the channels present. Sorry if this comes across as having an agenda. I really am a techno-geek with not the best people skills. I do try hard to keep my presentation a neutral delivery of information (and then you decide if it suits you or not), but I might not always be successful. The Michaels say that getting along well with each other is the most important thing. Much of the personality system orthodoxy is part of the unprovable dogma-doctrine belief system of the Michaelian teachings. It is of lesser value and lesser evidence than the practical and mundane realm of benevolence we all aspire to. However, I regard doing the intellectual exercise (of searching for the best model of reality) presented in *The Tao of Personality* book as a valid and useful part of learning to get along well. On the other hand, if reading this exposition has the side-effect of turning you away from excruciating exegetical exercises and toward the psychotherapeutic and agape aspects of the Michaelian teachings, I would also regard that as Good Work.
- R. So, having given you that background on myself, I invite you now to read *The Tao of Personality* book with patience and thoughtfulness, just in case you are susceptible to the cosmological component of the Michaelian teachings. This is not a presentation that you can breeze through mindlessly. The information is dense and must be carefully examined. So, learn and enjoy, if you so choose. Namaste.
- S. One of my goals with my books is to rebuild the structure of the Michaelian teachings on a firmer foundation than "channeling". The more I have seen of it, the less confidence I have in it, on account of the internal and external contradictions, the ambiguities, and the gaps. There are errors of commission and of omission. What then am I left to build it on? Multiple other sources, for one thing. My sense is that most people go through life and never build their belief, value, and behavior system from "first principles", principles that are both scientifically and philosophically sound, and based on the latest research. Most people go with their defaults, handed to them by nature and by nurture. They are neither introspective nor extrospective enough to consider that their own perceptions are defective and deficient.

T. You can expect to see in my books some information that might shake up and shake down whatever belief system structure or value system structure that you have built on the Michaelian teachings orthodoxy. Some of what I have to say is of orthodoxy and some is of heterodoxy. I do not see how it could be otherwise, considering the contradiction and ambiguities and gaps in the Michaelian teachings orthodoxy. Where the scientific and philosophic realms do not provide a good critique or supplement to the Michaelian teachings, then the next best source is other esoteric teachings, from mystical experiences to channeling.

Mainstreaming the Overleaf System

The core of *The Tao of Personality* book (Part One, Part Two, Part Three, Part Four), was written during the years from 1981 to 1986. All of it was originally intended for Michaelian students. However, from the beginning of my study of the Overleaf System, I had in mind that it would be useful and valuable for people who were not Michaelian students. My perception was that there were many people who would have no interest in, nor give any credence to, channeling as the source of the Overleaf System, but they would still have an interest in it, and could derive benefit from it. After all, there are many other personality typologies, such as Myers–Briggs and Enneagram, which have attracted a wide interest among people who have a psychological inclination, but not necessarily a metaphysical inclination.

Now, with the release of the *The Tao of Personality* book, only this Prologue is expressly directed toward Michaelian students, so obviously at some point I changed my intended readership. Why? you ask. Because, in 1985 I serendipitously discovered the Michael Educational Foundation, and in 1986 José Stevens published his first book, *The Michael Handbook*. I mostly stopped working on the *The Tao of Personality* book at that time, thinking, "Oh good; I don't have to publish my book; people who are more qualified and more credentialed than I am have done something better, and there is no use in my being redundant." But then, even as other Michaelian teachings books describing the Overleaf System were published in the late 1980s, it dawned me that I could excise the Michaelian teachings information out of my book, thus presumably making it more palatable to non-Michaelian students. That became the editorial policy for the next several decades as I fiddled with the manuscript; I gradually morphed the *The Tao of Personality* book into a mainstream document.

There was another reason to eventually finish the manuscript, and to do so in a way that was not redundant to other Michaelian teachings books. As stated previously, from the beginning of my study of the Overleaf System, it was self-evident and intuitively obvious to me, an engineer by temperament and by trade, that its structure was derived from logic, mathematics, and physics. The original 1986 manuscript included that derivation. To my surprise and dismay, the Michaelian teachings community has never tumbled to this realization on their own, and the Michaels have never stated it explicitly, so far as I know. Even so, I perceive that all readers, Michaelian students and non-Michaelian students, could potentially benefit from an understanding of this derivation of the structure and meaning of the Overleaf System. This alternative derivation of the Overleaf System — as not dependent on the "revelation" of channeling — also provides a way to present the Overleaf System to a mainstream readership in a framework that does not require a belief in the value and validity of channeling.

The usual approach to teaching the Overleaf System is, "Michael says thus and such". In my own evolution as a Michaelian student, I have less and less unearned credulity about what the Michaels allegedly say, because channeling has proven to leave much to be desired. Consequently, I have sought a method of validation of the teaching of the Overleaf System in addition to the empirical observation of people, that method being to understand the foundation of the System in terms of some things that are more grounded and reliable and verifiable, namely logic, mathematics, and physics — which transforms the Overleaf System into the Process/Aspect System matrix.

In my opinion, the Michaelian teachings in general has been discussed without application of the scientific method and other academic tools for far too long. The derivation of the Process/Aspect System matrix from logic, mathematics, and physics is one step in that direction. My program is to apply scientific and philosophical principles to an examination of the Michaelian teachings as best I can, considering that I am not a trained and credentialed academic. At minimum I can check it for internal consistency, and for consilience with external sources of knowledge, wisdom, insight, and understanding. In the long run, I would like to see an actual credentialed academic analyze and synthesize the Michaelian teachings; my work might be a good start, but it is definitely not the end state that I foresee, if there is an end.

My perception is that the Process/Aspect System is every bit as good if not better than the other personality typologies that are used by professional counseling psychologists in their clinical work to evaluate their clients and help them. If a publisher were to discover *The Tao of Personality* book as it is now, and wanted to produce a book that is suitable for the self-help or professional psychology markets, then it would be relatively easy to tweak it to suit the sensibilities and purposes of the publisher, and have that book. Also, if some leaders of self-help seminars were to discover this book as it is now, they could do something similar, and thereby provide a product tailored to their non-Michaelian–student, non-metaphysical clients. More power to any such publisher or person that might show up; they have my blessing.

Certain portions of the Michaelian teachings will perhaps eventually break into the mainstream, and my work might facilitate that. Three of my other books — *The Tao of Cosmology, The Tao of Cosmogony,* and *The Tao of Relationships* — have a similar function to *The Tao of Personality* book in that I believe that they provide suitable information for seekers of understanding outside of the Michaelian teachings community. They expand some components of the Michaelian teachings further into the realms of physics, cosmology, history, theology, philosophy, psychology, sociology, relationships, and systems theory, for instance, than any other Michaelian teachings books published heretofore. Only two of my six-book œuvre are aimed specifically at Michaelian students, namely *A History of the Overleaf Chart,* and *Study Papers on the Original Michaelian Group.*

The Michaels were not averse to the mainstreaming their teaching in the way that I am proposing here:

Many months ago, we advised some other way of <u>introducing this teaching to potential students without</u> <u>reference to the mode of transmission</u> [channeling]. This has not been done as yet, and <u>many new students are lost</u> because of this. We would hope that you would <u>spend some time on this</u>. [31 January 1974]

I am spending four books on this type of outreach. I do not know what type of "new student" the Michaels had in mind, but as I said above, I have in mind academics and other educated professionals such as psychotherapists and life-coaches and organizational development instructors — those who perhaps already use a personality typology in their counseling and coaching and teaching work, but are open to the notion that there might be something better than what they are already using.

We would prefer that you <u>assemble the material</u> here given, <u>editorializing</u> if you wish, and <u>present it to all potential students in a palatable form</u>. There are <u>Scholars</u> among you who are up to this task, as well as <u>Artisans</u> aplenty who can contribute the imaginative approach. We could see this as one of your <u>major tasks</u>, and we have advised you this before. We would see the core "school" remains small, as otherwise the commitment will never be strong. Now it is our aim to see you eventually <u>propagate this teaching at large</u>. [08 February 1974]

Of the six founding original Michaelian group members, two were Scholars and four were Artisans. They did little to fulfill this prime directive, except to say that Sarah Chambers passed the material on to Quinn Yarbro. It so happens that I am a Scholar-cast Artisan. I have been assembling the material, editing the material, presenting the material to potential students in a palatable form, and propagating the material at large. So have many others subsequent to the original Michaelian group.

Some Conclusions

Michaelian students might recall that the Michaels identify three "sizes" of truth: universal truth, world truth, and personal truth. For me to simply read the Michaelian teachings material and agree with it because it "makes sense" would not have made it my personal truth. It so happens that I have reformulated the Michaelian teachings in such a way that it has become my personal truth; it is no longer just the Michaels' personal truth. I am not just a "passive consumer" of the Michael messages — good as those may be — but an active inculcator of the Michael messages. In the process, I am fulfilling the "Meta-Michaelian" project, which both incorporates the Michaelian teachings and reinterprets it. In my opinion, not just the Overleaf System, but the Michaelian teachings as a whole needs a non-trivial overhaul or makeover, from top to bottom, and I do that in my books other than *The Tao of....* books as a part of morphing the Michaels' truth into my truth, at minimum, and perhaps a Meta-Michaelian truth at maximum.

It is not really in the spirit of the Michaelian teachings to carve out a piece of it, such as the Overleaf System, to talk about only that and not talk about the entire context into which the Overleaf System fits. The Michaels themselves refer to their teaching as The Synthesis, and it is indeed comprehensive in terms of an integrated understanding of "life, the universe, and everything" — that phrase coined by Douglas Adams in the *Hitchhikers Guide to the Galaxy*. The Michaelian teachings includes so much more than the Overleaf System; it

covers the field of "cosmology" in regard to the seven planes of all creation, for instance. It is also an overarching theory of human life, mostly explained in terms of reincarnation and its ramifications, with the Overleaf System being just one of the ramifications. It has happened in the history of the Michaelian teachings that the Overleaf System is that ramification of reincarnation that has elicited the most interest and been given the most thought by most students of the Michaelian teachings. This book is the effluvium of my thoughts on the subject. Other parts of the Michaelian teachings — more important parts, in my own estimation — are covered in my other books and in books published by others.

My thoughts are different enough from the orthodox Michaelian teachings that to me they seem worth promulgating in my seven books, so that Michaelian–teachings students have a fresh perspective, which might provide to some people a deeper and broader understanding of life, the universe, and everything. There is a way of understanding the Overleaf System as a *system* indeed, something that is not generally attempted by Michaelian students; the focus has been on understanding each individual Trait rather than on the pattern in which all of the Traits can be arranged. Another way to say this is that students typically focus on the "content" rather than on the "context" of the Overleaf System. Individual students and/or the Michaelian community in general might or might not regard this different approach as valid, or as an improvement, or as insightful. Nevertheless, I personally feel that it is Good Work, and that is why I present it.

There are many subjects in the orthodox Michaelian teachings that cannot be validated, such as planes beyond the Physical Plane. There are also contradictions within the orthodox Michaelian teachings. I present my opinions about such matters in my books. But this, of course, is just my own personal truth and has no more authority than your own personal truth. I believe that you the reader can derive benefit from both the orthodox and the unorthodox.

According to the Michaels, they gave the Overleaf System to us, their students, so that we could understand ourselves better and relate to other people more lovingly. This system has been proven to be a very good tool for students for this very purpose. Personally, I was obsessed with understanding the Overleaf System and the people I knew in terms of the Traits for the first ten years of my involvement in the Michaelian teachings. *The Tao of Personality* book is a product of that decade of my life, the 1980s. In subsequent decades, I have tended to just relate to the person as a coherent entity, not a collection of various Traits or other personality factors. Most of the time, I do not even care to know what other people's Traits are. My hope and expectation is that the readers of this book will learn from the information presented herein, will change themselves for the better as a result of the understanding, and will be brought to the condition of relating to people in their wholeness graciously and gracefully, sooner rather than later.

If one were to ask the typical Michaelian student where the Overleaf System "came from", they would probably answer, "Well, the Michaels, of course!" Yes, they were the first to *reveal* it to the world — so far as we know — but my question is and was, did the Michaels *invent* it as merely a useful tool to help people on their path to agape, or did they *discover* it as a pattern of cosmic significance? The Michaels did not claim the latter, but my claim is that the latter is the case, and *The Tao of Personality* book backs up that claim with evidence and arguments. Like the Michaels, I did not *invent* the Process/Aspect System matrix; I *discovered* it, because it was only vaguely obscured to someone, myself, who has a talent for recognizing the logical and mathematical pattern. To me, the pattern of the Process/Aspect System matrix that I explain in this book was self-evident, intuitively obvious.

There is a chapter in Part One that discusses various personality typologies. The thing about other personality systems — such as Astrology, the Enneagram, Myers–Briggs, and the Big Five — is that they are contrived, fabricated. By that I mean that they have no foundation and derivation in logic, mathematics, and physics. That is to say, they were not discovered to be a fundamental part of nature; they were invented, made-up; therefore they are in some sense "artificial". This is not to say that they are worthless or untrue. I like to say that they are valuable — one can learn a lot about oneself and others by studying and using them — but they are not valid, in the sense that they have no archetypal significance in the unfolding of the Tao. They only apply to personality, the human personality — they are not manifestations and instantiations of Tao's Template. Unlike these other systems of personality traits, the Process/Aspect System is derived via algorithm from fundamental principles. How this is so is explained in Part One of this book.

As I came to understand the pattern of the Attributes of the Traits, and as I studied each Trait, I wrote down my insights. These are contained in Parts Two and Three of *The Tao of Personality* book. Most of what I wrote in *The Tao of Personality* book comes from the early-to-mid 1980s when what I had was a dictionary and a thesaurus for guidance about what the Traits meant, plus my unique understanding of the structure of the

Process/Aspect System. Therefore, much of what you see in my descriptions of the Traits is theoretical rather than empirical, although much of it is also empirical, because I was focused on understanding via the Overleaves the people who were in my life at the time: I did scores of Charts on people with the Ouija board, and I observed them intentionally. I do appreciate that other expositors have a deeper understanding of the Traits from empirical observations or channeling than I do, but my unique contribution to the Overleaf System is to understand the abstract structure from which the concrete phenomena emerge.

At the same time that I was coming to understand the Traits and the Attributes of the Traits, it was obvious to me that a person's Traits interacted with other people's Traits in certain ways, based on their nature and their Attributes. These insights are contained in Part Four of *The Tao of Personality* book. In various places in the original Michaelian group transcriptions, there was mention of "Overleaves that abrade". There was a hint of one particular type of abrasion in *MFM*, page 110: "Occasionally there is conflict between the Goal and the Mode. For example ... Repression Mode with a Goal of Growth ... almost impossible to accomplish anything ... Such a soul might take refuge in madness, or act out of the Negative Pole." I expanded on this clue, and noticed many other types of interactions in theory and in practice, and generalized them into several principles, covering how the Traits affected each other favorably or unfavorably.

So here is the deal with the Michaels and me. They have shown us the 'tree' and named some of the parts, but they have not explained the tree; that job has fallen to me. Even their channels have not done the job, because they are being questioned by those who are more concerned about their mundane lives than they are about the roots of the reality system in which we find our consciousness embedded. And rightly so. I am an outlier. The Michaelian teachings shows us some of what is going on 'behind the scenes' in regard to daily life, but it does not explain the 'foundation' upon which the 'stage' is built. In my estimation, my most important contribution to the Michaelian teachings is the understanding of the structure and meaning of the Overleaf System.

So, The Tao of Personality book has been written over a period of more than forty years. It is somewhat uneven in its quality. Frankly, I did not do a very good job, and now I am too old and tired to fix it. Fortunately, several Michaelian teachings books have been published since then, and, because of their talents, they do a better job of explaining the Overleaf Traits than I did in the original manuscript, and even in this final Tao of Personality book. For instance, I refer you to Varda Hasselmann/Frank Schmolke with Archetypes of the Soul and The 7 Archetypes of Fear, Elizabeth Puttick with 7 Personality Types, Shepherd Hoodwin with Journey of Your Soul, JP Van Hulle et al. with Michael: The Basic Teachings, José Stevens with The Michael Handbook and Transforming Your Dragons.

I have a different talent than they do, and that is to understand the structure and meaning of the Overleaf System based on its derivation from logic, mathematics, and physics — not channeling.

Chapter E-2

Prologue for Michaelian Students to my Book:

THE TAO OF COSMOGONY:

THE NATURAL SEQUENCE OF THE COSMIC SEPTENARY

INTRODUCTION

One of the goals in my books is to rebuild as much of the systematic component of the Michaelian teachings as I can on the foundation of what I call "The Process/Aspect System". A thorough treatment of the foundation of the Process/Aspect System is presented in my first book, *The Tao of Cosmology*. That book reveals that the Overleaf System, which the Michaels gave to their students as a map of human personality, is a subset of a map of the entire Cosmos that I refer to as "Tao's Template". The introduction to, and outline of, the Process/Aspect System is contained in Part One of my third book, aptly named *The Tao of Personality: The Process/Aspect System of Personality Traits*. The structural component of all seven of these books — the foundation on which I proposed to rebuild the Michaelian teachings — is logic, mathematics, and physics. These tools are used to build "sciences"; the scientific enterprise endeavors to discern and understand regularities in "nature"; I use these same tools to discern regularities in the Michaelian teachings; this is the way I remove the 'chaos' (disorder) from the 'cosmos' (order) inside and outside of the Michaelian teachings. Philosophy has the same aspiration as science, namely to make sense of the world. My books constitute my attempt to document my science and philosophy of the Michaelian teachings.

The reason this literary endeavor became imperative for me is that, in my estimation, channeling has been found to be defective and deficient when it comes to the systematic component of the Michaelian teachings, its cosmology. The Michaelian teachings got its start with channeling, but in my opinion, it could benefit from some other sources; it could use some corrective and supplemental information. I call my endeavor and enterprise "giving the Michaelian teachings the academic treatment". So far as I know, this is something that has not been attempted by anyone else, either inside or outside of the Michaelian teachings. The spiritual path found in the Michaelian teachings appears to be rather solid when compared and contrasted to other esoteric resources, sources extraneous to the Michaelian teachings. However, I have found problems when checking those extraneous sources because they reveal potential errors and omissions in the systematic component of the Michaelian teachings. And the worst issue that I found in the Michaelian teachings cosmology is addressed in a subset of the Process/Aspect System that I call the Natural Sequence. What does that refer to?

Numerous times in this *History* book, I have referred the reader to one of my other books, *The Tao of Cosmogony: The Natural Sequence of the Cosmic Septenary.* This Chapter E-2 is to be considered an introduction to that book. The Natural Sequence — hence the subtitle of the book — is a sequence that appears in the form of a septenary — "septenary" being another word for "sevenness". The name 'septenary' — which can be applied to any set of seven items — is a central feature of the Michaelian cosmology (structure in space) and cosmogony (structure in time). The Michaels started talking about it immediately after they showed up in the channeling sessions of the original Michaelian group in August 1973, and they have not stopped talking about it since. It is the kind of information that you can expect from Kings and Warriors on the Scholar-ish level of the Artisan-ish Plane — what is really going on here on the Physical Plane among humans, and how does it work. Sevenness and septenary are real words that you can find in the dictionary and on the Internet, including Wikipedia. The Michaels' "cosmology of sevenness" (as I like to call it) is the framework of the

systematic portions of their teaching. It is claimed that the source of the Michaelian teachings is an Entity that exists and functions on the Fourth (Scholar-ish) Level of the Mental (Artisan-ish) Plane — two planes (coherent reality systems) beyond the Physical Plane — the reality system where we humans live. Michaelian students know what that means. A structured, systematic cosmology about what is and how it works is exactly the kind of thing one should expect from an Entity at that stage of Being: they provide information about the structure and function of the cosmos. It so happens that I am an Artisan Role, Scholar-Cast Fragment, so you should expect that I will really appreciate the systematic component of the Michaelian teachings, way more so than the typical Michaelian student, who has less Scholar-Artisan influence in their psyche.

The Natural Sequence is a specific arrangement of a septenary of specific fundamental characteristics revealed by the Process/Aspect System. My book *The Tao of Cosmogony* limits itself to the Natural Sequence component of the larger-scope found in the Process/Aspect System, which is covered in my book *The Tao of Personality*. This Prologue to my *Cosmogony* book documents and demonstrates the issues and inadequacies found within the Michaelian teachings regarding its lack of understanding of septenaries in general, and the Natural Sequence in particular. Perhaps you will be as dismayed as I was when I started noticing the contradictions decades ago.

Beyond this Prologue for Michaelian Students, several other Parts of that *Cosmogony* book attempt to document evidence for the Natural Sequence found in various sources, some within the Michaelian teachings and some outside of it. Part One of that book provides a derivation of the Natural Sequence from fundamental principles. Part Two presents the Natural Sequence as found in several sources outside of the Michaelian teachings in modern-day spiritual teachings. Part Three documents the Natural Sequence as it is found in ancient religions. Part Four documents the Natural Sequence as it is found in natural evolution. Part Five documents the Natural Sequence as it is found in developmental psychology. Part Six documents the Natural Sequence as it is found in teachings about spiritual paths that aim for enlightenment. What might or might not seem remarkable is that the esoteric and exoteric sources agree on the pattern of the septenary embodied in the Natural Sequence. Perhaps you will be amazed; perhaps not. Regardless of your reaction or response, the confluence and congruence of spirituality and science is important to me; it is one of the main themes in my life and in my writings.

My book, *The Tao of Cosmogony*, Legacy Volume 2, is a companion book to *The Tao of Cosmology*, which is Volume 1 in my *Legacy* hexology; *Cosmology* is about the structure of space; *Cosmogony* is about the structure of time. These two books are the epitome of my claim that the Overleaf System is derived from logic, mathematics, and physics.

THE ISSUES INVOLVED

I first read *Messages from Michael* (hereinafter *MFM*) in October of 1980, when it came out in paperback. (It was published in hardback the year before.) I had just gotten into metaphysics after reading *Seth Speaks* in July. (I read about one hundred metaphysics books that first year or two.) In August of 1981 I loaned *MFM* to a dowser friend of mine and she dowsed my Overleaves. This kick-started my real interest in the Michaelian teachings. I promptly reread the book and sat down with pen, ruler, and paper to draw up the Overleaves in chart form. The seven Roles, Goals, Modes, Attitudes, Centers, and Chief Features were neatly organized with Axial Attributes of Action, Inspiration, Expression, and Assimilation, and with Dialectic Attributes of Cardinal, Ordinal, and Neutral, and — from my brief examination of the personality traits themselves — it was obvious why the system had these patterns of Attributes.

The Problem Appears

But there was something not stated in *MFM* that bugged me from the time I first drew up the Overleaf Chart, and that was: what Attributes do Level and Age have? That is, is the Infant Soul Age and First Level an Action, Inspiration, Expression, Assimilation, Cardinal, Ordinal or Neutral Overleaf? And so on for the other six Ages and Levels. I was not able to figure it out on my own to my personal satisfaction during the next 4.5 years. Then *More Messages from Michael* (hereinafter *MMFM*) was published in February 1986, and I eagerly read it. I had very mixed feelings when, in the "Michael Math" chapter of that book, I found the correlation I sought (rejoice!), but it immediately struck me as being wrong (dismay!). That is, *MMFM* gave the sequence as:

- Infant/First Level = Ordinal Inspiration (Server-ish, Emotional Center)
- Baby/Second Level = Ordinal Expression (Artisan-ish, Intellectual Center)

- Young/Third Level = Ordinal Action (Warrior-ish, Sexual Center)
- Mature/Fourth Level = Neutral Assimilation (Scholar-ish, Instinctive Center)
- Old/Fifth Level = Cardinal Expression (Sage-ish, Higher Intellectual Center)
- Astral/Sixth Level = Cardinal Inspiration (Priest-ish, Higher Emotional Center)
- Causal/Seventh Level = Cardinal Action (King-ish, Moving Center)

Whereas I felt very strongly that the correct sequence was:

- Infant/First Level = Ordinal Action (Warrior-ish, Sexual Center)
- Baby/Second Level = Ordinal Inspiration (Server-ish, Emotional Center)
- Young/Third Level = Ordinal Expression (Artisan-ish, Intellectual Center)
- ... and so on the same as in the "Michael Math" chapter.

Out of respect for the Michaelian teachings in general, I tried to believe what I came to call the Michael Math Sequence for 5.8 years, until late 1991, but I kept encountering evidence from various sources that my original insight was correct. None of the evidence supported the Michael Math Sequence, and numerous "cosmologies of sevenness" followed what I have come to call the Natural Sequence because I found that nature follows it. Therefore intellectual honesty eventually forced me to regard the Natural Sequence as legitimate and the Michael Math Sequence as in some way illegitimate. However, when I presented my ideas to some other Michaelian students in the early 1990s, I got push-back. Shepherd Hoodwin even published some of that push-back in the first edition of his book, *The Journey of Your Soul*, in 1995. This did not dissuade me, and the evidence for the Natural Sequence continued to accumulate through the 1990s serendipitously — I did not even have to go looking for it; it happened as a part of my general metaphysical researches and studies.

Every now and then through the 1990s I thought I should research this subject more thoroughly and write it up in a scholarly document, just so it would be available to inquiring minds if/when the subject came up. I did that research and writing in increments, starting in about the year 2000, prompted by exchanges on the >www.michaelteachings.com< internet discussion list. This "Prologue for Michaelian Students" and my book The Tao of Cosmogony is the final result.

The Cosmogony book has been fairly easy to compile because the evidence for the Natural Sequence is abundant. Without even looking for it, over the last several decades since I first thought of the Natural Sequence, I noticed that many spiritualist cosmologies are based on the number seven, and they typically support the Natural Sequence. I have come to call them "cosmologies of sevenness". This is generally known as "the septenary", and an internet search will lead to more information. For instance, refer to >https://theosophy.wiki/en/Septenary_Principle<. The material covers a lot of areas of personal experience and natural phenomena.

In researching the subject, I found that there are discrepancies within the published Michaelian teachings about the proper sequence of the components of the septenary. So, I personally am not trying to create a schism within the Michaelian teachings — the schism already exists. This Prologue is directed to pointing out and hopefully resolving issues about these discrepancies in the published Michaelian teachings.

In this Prologue, I present arguments and evidences based on my long history in, and detailed study of, the Michaelian teachings. Of course I have come to my own conclusions based on my own biases, so I argue for those. Frankly I would rather this issue did not exist, but I did not put the discrepancies into the Michaelian teachings; I am just trying to get them out. We could all just ignore them and perhaps that would be the best course of action. Perhaps not. I do acknowledge that they are not terribly important issues in themselves, being somewhat "theoretical" and "academic" in many cases. Whatever the proper sequence is, it will probably not affect your earning and burning of karma, your completion of Monads, your fulfillment of Agreements, your True Work, True Play, True Study, or True Rest, your development from tolerance to understanding to Agape — or any of the other aspects of incarnation that are significant in the development of your soul during incarnation.

On the other hand, the Natural Sequence, when understood as a sort of map of the spiritual path, seems to be an important part of many spiritual teachings. What I do regard as most important is that we are intimately involved with each other in this (or any other) discussion, and therefore improvements are actually made in people's perceptions — and, one hopes, lives — as a result. So, I am saying that there are non-

theoretical and constructive consequences to whatever exchange you and I and others may have with each other in coming to understand the Natural Sequence.

Let me give you a little history of my background in fundamentalist Christianity so that you will understand better where I am coming from. I was drawn into a small, unusual, Christian sect at the age of twelve. This appears to have been part of my Life Plan because it taught me important lessons about being doctrinaire and dogmatic about the 'letter of the law' rather than the 'spirit of the law'. The founder and leader of that personality cult died in 1986, some years after I left it, and since then the church has splintered into about 400 groups (so I was told) because of doctrinal differences. I do know what is important in the matter of 'letter versus spirit' and I do not intend to foster dogmatism. Rather, I hope that it is perceived that I am fostering what the Michaels advocate, namely "Validation" — with a capital 'V', meaning, understanding and manifesting spiritual truth at a personality level. I frankly believe the Michaels allow discrepancies in the Michaelian teachings because it impels us to feel/think/intuit for ourselves and check other teachings against theirs. It also impels us to feel and think together as we work through the Validation process. So, once again I say that my intention is to work toward unity, not toward disunity, even if the only result for some might be to 'agree to disagree'. My Goal is Acceptance.

I would like to think that my line of reasoning ("arguments") will also prove air-tight. Perhaps it will help your process of accepting the Natural Sequence as Valid if I share my own struggle with accepting the Natural Sequence as Valid.

When I first sat down in 1981 with MFM and paper and pencil and ruler and drew up the Overleaf Chart, it was obvious that the Ages and Levels should correspond in some way with the seven (what I soon came to call) "Processes". The descriptions of the Levels and the Ages given in MFM seemed too ambiguous to me at the time to make a sure identification. I quessed but had zero confidence that the sequence was;

First Level/Infant Age = Ordinal Action (Warrior-ish)

Second Level/Baby Age = Cardinal Action (King-ish)

Third Level/Young Age = Ordinal Inspiration (Server-ish)

Fourth Level/Mature Age = Cardinal Inspiration (Priest-ish)

Fifth Level/Old Age = Ordinal Expression (Artisan-ish)

Sixth Level/Astral Age = Cardinal Expression (Sage-ish)

Seventh Level/Causal Age = Neutral Assimilation (Scholar-ish).

In retrospect this correspondence seems glaringly ignorant and stupid, and I am appalled that I didn't apply myself to figure it out any better than that. Problem was, then and now, that the descriptions of the Ages and Levels found in Michaelian teachings books did not then, and do not now, provide compelling clues, just vague clues.

Anyway, when MMFM was published in February of 1986, and I read the Michael Math chapter, I rejoiced that it gave me an answer, but was dismayed because my instincts told me that it was the wrong answer. Because I had no evidence at the time to back up my intuition that the Natural Sequence was correct, and because I had such a high regard for the quality of information in the Yarbro books, I tried my best to believe in and make the Michael Math Sequence work, for nearly six years, all the while feeling very uneasy about it. Meanwhile I kept stumbling across manifestations of the Natural Sequence in non-Michaelian teachings places. Finally I gave up on the Michael Math Sequence and began to reinterpret the nature of the Levels and Ages within the Natural Sequence schema. So, I do not expect any reader to turn around immediately — or ever, if they are not interested in this subject enough to scrutinize it. As I have said before, it is almost entirely an intellectual exercise with no significant affect on your life anyway, so why bother? Why not just continue to trust in the channeling? I will comment more on that later in this Proloque.

Another point I want to emphasize is that the cosmology of sevenness and its expression in the Natural Sequence comes not from the Negative Pole of Scholar, namely –Theory (which I think would have been better named, –Conjecture or –Speculation or –Hypothesis), but from the Positive Pole of the Higher Intellectual Center, namely +Integration. The Natural Sequence is a "theory" in the best sense of that word: an integrated, comprehensive, overarching explanatory principle. As we shall see below, the Michael Math Sequence is not a "theory" in this sense of the word — it has a limited and specific applicability. It takes a certain kind of brain structure to appreciate a "theory" in the sense of +Integration, and not everyone has that kind of brain, so the *Cosmogony* book is not for everyone.

This subject of Michael Math Sequence versus the Natural Sequence has come up for discussion on the internet among Michaelian students, the >www.michaelteachings.com< list. It has been fascinating for me to note the various responses to my presentations about the Natural Sequence versus the Michael Math Sequence.

- 1. Some people aren't interested because they truly do not need this information. It would genuinely be of no value or use to them they are beyond it; it is irrelevant to them in any way that they perceive.
- 2. Some have closed minds, and no matter how much evidence and argument for the Natural Sequence that I amass and present to them, they metaphorically 'brush it off with a wave of their hand', believing that the original channeling and subsequent channeling must be correct. It is very difficult to change a person's mindset when they have interpreted the world according to a particular schema for a very long time that schema is *habitual* at that point, and almost impossible to *break*.
- 3. Others have a negative emotional reaction to information that I present as part of an intellectual exercise in accuracy, consistency, coherence, consilience, and thoroughness. This is an inappropriate reaction; this is an example of what Gurdjieff (and the Michaels) call "wrong use of Centers" in this case having a negative emotional reaction to an intellectual exploration and presentation.

I am well aware of the futility of trying to talk someone into something — or even the appearance thereof. I have not yet figured out exactly how to present this information without some people thinking I am on the offensive — as if I were attacking the Michaelian teachings. If they perceive what I am doing in this Prologue and the *Cosmogony* book as an "attack", they might get defensive, or even offensive toward me or what I am saying. What I am doing in these writings is just presenting the information in as neutral, unemotional a way as I can, and hope that readers receive it in as neutral a way as they can, and evaluate it dispassionately to see how the evidences and arguments stack up. Readers who are more open-minded and willing to learn — these are the people I address in this book. And even if readers disagree with my conclusions, I am confident that they will learn something from my presentation.

The Value of Validation

Let me make some general comments (some might see this as a rant) about how, I have noticed, "validation" is typically done by Michaelian students. The Michaelian teachings is full of wonderful, useful, stuff. After more than forty years in this teaching myself, I still believe it is some of the best information available for people on a spiritual path. Because so much of it is so good, it would be easy to assume that the information is almost always accurate. It is also comforting to believe that we lucky, special chosen few are in accurate contact with a near-omniscient source of information. Consequently, there is a strong tendency to assume that all of the information is good — unless proven otherwise. Students typically read what is said, they believe it, then they go looking for evidence that "confirms" it, and they call this "validation".

The question is, are they seeing what is actually there, or are they seeing what they were told by an authority figure is there? Are they understanding data as it is *per se*, or are they interpreting data as it looks through a biased, prejudiced lens that focuses on a predetermined belief and filters out contrary evidence? Are they aware of, and have they considered, any alternatives presented by unbelievers or critics?

In a subsequent section of this Prologue that presents Caris Turpen's channeling, the Michaels say many of their students have not done their Validating well, if at all. In regard to the septenary, the problem is just that most Michaelian students — including channels apparently — are unaware of the massive amount of information on the septenary outside of the Michaelian teachings, and the Michael Math Sequence has become a deeply ingrained habit in the minds of students and channels, replete with rationalizations galore and abundant pseudo-validation. It is to the Michaels everlasting credit that they say channeling is not to be trusted implicitly:

Those of you reading this book may choose to hear the words and to validate this teaching for yourselves. If you decide to explore this teaching, we would wish that you do not accept it "on faith" but question it and test it, for that is the most direct means to validation accessible to you on the physical plane. We would hope those who choose to pursue this teaching would exercise skepticism in dealing with the material given, so that validation may come. [MMFM pp. xiii-xiv]

So, according to this, the proper approach to the Michaelian messages is to assume that the information is invalid unless proven valid, rather than assume that it valid unless proven invalid. As I like to say, the unexamined teaching is not worth believing. Unless you do this you are no better than fundamentalist

Christians who believe "on faith" that the Bible is God's Word, or the fundamentalist Muslims who believe "on faith" that the Qu'ran is God's Word.

Part of the problem is that students often don't know that there is an alternative to the Michael Math Sequence that makes sense, in some contexts, and has actual philosophical arguments and scientific evidence. Part of the problem is that Michael Math is a tough chapter to digest, and I suspect that many students gloss over it uncritically. Part of the problem is that leaders in the Michaelian teachings have embellished Michael Math with their own speculations, rationalizations, and pseudo-validation. Sorry if that sounds harsh. In my opinion, there are just a few blemishes on the Michaelian teachings, and this matter of where the Natural Sequence applies versus where the Michael Math Sequence applies is one of them.

When I was in a fundamentalist pseudo-quasi-Christian church in my twenties, I liked to say, "The Bible says" In my early thirties I saw my way out of that church, but then when I was just getting into a higher metaphysics, I read the Seth books, and I found myself saying, "Seth says" Now I am in the Michaelian teachings community, and sometimes I hear people say, "Michael says". First of all, I want to ask, Which Michael? Shepherd's Michael? Troy's Michael? JP's Michael? Sarah's Michael? Quinn's Michael? As we will see in the next section of this Prologue, this makes a difference, because all of these alleged "Michaels" seemingly contradict each other at one time or another, on one subject or another, in one way or another. Second of all, I want to say, "Phil says ..." but only when I really know what I am talking about, when I have Validated something to the best of my ability. Sometimes what I say contradicts what the Michaels are alleged to have said by one channel or another. It is likewise up to the reader to come to their Personal Truth to the best of their ability, and to say what they know, as distinct from what others allege. This is Validation in the sense that the Michaels enjoin us to pursue.

From a practical standpoint this issue of Natural Sequence versus Michael Math Sequence is quite unimportant. We have proven over and over again that we cannot agree via dueling channels or personal perceptions what are the Overleaves of many celebrities, but this is also unimportant in the grand cosmic scheme of the Michaelian teaching. Therefore it is unimportant that anyone come to understand this issue of Natural Sequence versus Michael Math Sequence the way that I do. It is all just an intellectual exercise, as I have said before.

But enough people have commented on and questioned my remarks that I continued to study and write until the completion of the *Cosmogony* book. Otherwise it would seem as though I am trying to talk people out of something and into something else, and that would be tiresome to both me and others, perhaps even counterproductive. My wish is that if the reader learns anything from this discussion of the Overleaves, it is to meticulously scrutinize themselves as well as the channeling, as well as reality. This is the desire of the Michaels on the Scholar-ish level of the Artisan-ish Plane — and the desire of a retired engineering designer, moi, an Artisan Role, Scholar soul Fragment, because meticulous scrutiny is what the engineering profession teaches one. Otherwise, widgets malfunction and structures collapse.

If you, dear reader, are thoroughly processing this Prologue and my *Cosmogony* book, please do the scholarly thing of objective research. Take up my challenge to Validate the Natural Sequence by neutralizing your previous interpretation of data, and instituting the new interpretation of the data, then later comparing to see which works best. The tricky part of course is discerning what is interpretation (seeing what you are looking for) and what is data (seeing what is actually there).

The Michaels tell all of their students to Validate, Validate, Validate. This is an injunction to discern the Truth, of which, according to the Michaels, there are three sizes: Universal Truth (pertaining to all seven planes of reality), World Truth (pertaining to the Physical Plane), and Personal Truth (pertaining to yourself specifically). My investigations and cogitations convince me that the Natural Sequence Validates at all three sizes of truth.

Before I present further thoughts on the Michael Math Sequence and Natural Sequence, I am feeling the need to explain a little bit about the way I approach my quest for truth, that being basic to my being. The value of Validating the Michaelian teachings is well known, so I want to tell you how I go about it. This might help some readers appreciate/understand me — or not; whatever.

First of all, I believe the Michaelian teachings is a work in progress. There are inaccuracies yet to correct, ambiguities yet to clarify, contradictions yet to resolve, loose ends yet to tie up, areas yet to explore, and deficiencies yet to fill. This is fun for this particular Scholar–Artisan–Priest; it might not be fun for you. The

Michaels themselves explain something about where I, as an Artisan Role Fragment, am coming from (underlines are mine):

The more a Fragment knows about the structure of anything, the more a Fragment can perceive the whole. Any self-respecting Artisan can tell you that without blinking an eye. [MMFM, pp. 271–272] For each Role, there are a number of natural pitfalls, levels of behavior that are so automatic that they in fact block insights while fulfilling the nature of the Role. For the Artisan, the automatic trap is that of the total preoccupation with structure and the resultant tendency to attempt to interrelate everything with everything else, as in the case of those who seek to equate the laws of physics with the perceptions of sociology with the geometric philosophies of architecture. While this is not an invalid Artisan perception, carried to extremes it serves only to block Validations and to distort the functions of structure. [Michael's People (hereinafter MP), p. 179]

That's me! In the case under discussion in this document, I do not believe I am taking this natural tendency to model reality as a structure to a counterproductive extreme, and I am not going to deny its expression if I think it serves myself and the Michaelian community. You will see in the sections and subsections that follow that I am unearthing data, not imposing some distorted interpretation on the data.

From the beginning of my exposure to the Michaelian teachings, I have thought that the Overleaf System was a pattern for understanding the whole universe, not just a pattern for understanding human personality. You should note that many of my arguments revolve around my understanding that the cosmology of sevenness is truly universal — the Michaels themselves said that seven is a Universal Truth, so it applies not just to personality stuff such as Overleaves, but to all natural phenomena. Many parts of the Michaelian teachings go beyond the sevenness contained in the Overleaf System. I believe creation is derived from "Consciousness" (Tao), hence logic, mathematics, and physics. Psyche and physics are both manifestations of Consciousness. That is why I look to the sciences and to philosophies to understand the Michaels at a deeper, larger level of reality than our mere personalities. This is part of the Artisan nature as mentioned in the paragraph quoted above.

Regarding Validation in general, I know of four methods:

- 1. There is what resonates as true within oneself. But this has limitations because oneself can be biased, of course. I believe there is such a thing as "counterintuitive". Personal Truth is not necessarily World Truth, and I am claiming that the Natural Sequence is at least a World Truth.
- 2. There might be personal experience that something is True. But here again Personal Truth does not always equate with World Truth.
- 3. In regard to evaluating the Truth of what the Michaels say, fitting with other spiritual teachings is another method of Validation; the technical name for this is consilience. But the other teachings can also be in error. We in the Michaelian teachings cannot help but be aware that various channels within the teachings come out with contradictory information. If we look at channeled information outside of the Michaelian teachings, we find a lot of things that agree and a few that disagree with the Michaelian teachings and each other. We can't be certain if the Michael Math Sequence is truth or error just because it agrees or disagrees with other spiritual teachings.
- 4. I personally place the highest trust in the scientific examination of nature as a means for Validation, especially for World Truth. Within nature I include logic, mathematics, and physics as closest to the ultimate "Truth". In the *Tao of Cosmology* book I present scientific evidence and philosophical arguments that the Natural Sequence is within the categories of both Universal and World Truth.

For me, the Natural Sequence evidences as Valid by all four methods — unreliable though they be, taken individually — as we shall see in the sections to follow. So far as I have been able to determine, the Validation evidence for the Michael Math Sequence from any of these four methods is very weak. There is so little that I find wrong in the Michaelian teachings that I attribute what little error I do see to channel error or blocking or bias.

All Michaelian students seem to agree that discrepancies come into existence in the Michaelian teachings because of channel error and bias, but I would like to comment about perhaps why the Michaels *allow* them to continue. You may not know this because you might not have seen the unedited transcripts of the early and/or later channeling of Sarah Chambers (the original Michaelian channel), but I have. What most people see was sanitized and purified by Quinn Yarbro. The Michaels do not point out errors/bias that the channel made unless someone asks about it. It is as if they wait for students to notice a problem that needs to be checked. Then the Michaels either come up with the correction or the reconciliation, or they tell the student they need to

Validate on a personal level. Because I saw a discrepancy between the Michael Math Sequence and other teachings and my own intuition, I asked about it. The Michaels did not volunteer the corrected, supplemental information so far as I know until I asked. Further on you will read what the Michaels said when I asked them about this issue, but basically they said the Michael Math Sequence was a variation of the universal Natural Sequence and of limited applicability.

During my forty plus years in the Michaelian teachings I have learned not to give the Michaelian teachings a higher status than other teachings as I did at first. In fact, I now believe that there are "better" channeled teachings (more accurately channeled from higher sources), but I know that my home has been in the Michaelian teachings. Also, I have learned not to place a particular Michaelian channel or channels above another/others, although I resonate with some better than others.

As Michaelian students, we all know of many minor examples that prove channeling is an unreliable phenomenon for finding Truth, so there is no need to belabor that. Frankly, the more channeling I see over the years, the less confidence I have in it. But that is just me. I grew up in a fundamentalist Christian cult and was indoctrinated to believe in the Bible. I left that cult at the very beginning of my fourth Life-Stage (age 32). The more I read the Bible and compared it with reality, the less confidence I had in it. However, I still transferred some credulity in spiritual matters to the Michaelian teachings. Then I got over that when I rejected the Michael Math Sequence as Truth. I see this lengthy process partly as getting out of the Negative Pole of my Spiritualist Attitude, –Faith (or –Superstition) and into the positive pole of +Verification. Also I feel that there might be some past-life implications for me, in both that church experience and in the Michaelian teachings. It might have something to do with being brave enough to be a "heretic" challenging the prevailing "dogmadoctrine". It is uncomfortable for me to counteract the authoritativeness that has been accorded the Michael Math Sequence in the minds of Michaelian students, but apparently it is something I just have to do to get free. Hope it helps you all in your journey as well.

The Value of an Accurate Map

I have noticed that there is little if any knowledge of the Natural Sequence scattered among Michaelian students, even though it is common in other teachings. This is probably because there is little mention of the Natural Sequence in the Michaelian teachings, and this is probably why the Michael Math Sequence is widely assumed to be a universal phenomenon — apparently among the channels as well as the students. The whole reason for my presentation about this subject on the following pages is that it has become obvious to me that, in the minds of Michaelian students, the Michael Math Sequence has hijacked the correct cosmology of sevenness, namely the Natural Sequence. But, my insistence on the universal applicability of the Natural Sequence rather than the Michael Math Sequence is not just a personal ax that I am grinding. Even though some Michaelian students have told me they are not interested in hearing about the Natural Sequence, I still want to point out that many teachers of spiritual and psychological matters outside of the Michaelian community are interested in presenting it.

There is a reason that they do this: they believe that it is valuable and useful information about the form and function of the universe in general and the spiritual path in particular. I happen to be one who believes it is not a totally insignificant endeavor to make sure the information is accurate. When different sources are discussing the same subject that happens to seem important to me, naturally I would want them to agree, or I would want to find out what the problem is. To those students who are not interested in a proper understanding of the cosmology of sevenness, I say this: please humbly consider that perhaps the teachers sometimes know better than the students what is useful or significant. On the other hand, I acknowledge the primacy of personal choice in the matter; each person has the right and duty to discern what is best for themselves. Also I acknowledge that, "You can lead a girl to Vassar but you can't make her think", as Joseph Campbell said about some of his students. You will recognize this as a variation on the aphorism, "You can lead a horse to water but you cannot make him drink." All of my philosophical arguments and scientific evidences might not convince you of the value of the Natural Sequence; the Natural Sequence might not become a part of your way of knowing like it is a part of mine.

Since the processes of spiritual growth by souls incarnate on the Physical Plane are automatic — they work whether you know about them or not — I say it matters just a little bit to have an accurate map of the journey. It only really matters if you want to consciously understand and maybe even assist your spiritual growth by using a map. I think that so many spiritual teachings have a cosmology of sevenness because it is presented as a map that applies to a lot of spiritual developmental processes right here in time-and-space, such as the

ascension of kundalini through the chakras (I got that from yoga), increasing intimacy through the "rays" (I got that from The Ra Material), development through "Levels of Being" (I got that from Gurdjieff), and the evolution of the soul through Levels and Ages and Planes (I got that from the Michaels and from Theosophy). It just so happens that a lot of spiritual teachings other than the Michaelian teachings use the Natural Sequence map, not the Michael Math Sequence map. It might be that all of these spiritual teachings are just parroting each other thoughtlessly, but I don't think so. (What I do think is that Michaelian students are parroting the Michael Math Sequence idea thoughtlessly.) Basically and briefly, I have seen the Natural Sequence as a map that works for me in the real world.

I am not efforting to convert others. I am just letting people know that I have found the Natural Sequence to be an accurate and useful map, whereas I have found that the Michael Math Sequence is not an accurate or complete map. You readers then decide its importance or relevance to you. I am giving people an option they do not have if they regard the Michael Math Sequence as the only way things can be.

Another reason this subject is of particular interest to me is that I have written a book explaining the Overleaves: *The Tao of Personality*. It is my karmic responsibility for it to be as accurate as I know how to make it, and one of the issues I have had to face squarely is Michael Math Sequence versus Natural Sequence. I found inconsistencies in the published Michaelian teachings, so I had to go outside of it in order to confirm my perceptions that the Michael Math Sequence did not apply to every aspect of the Michaels' cosmology of sevenness.

In the following sections we will read about those inconsistencies, but first we will read about some Michaelian channeling that provided me with an answer to the inconsistencies. In Parts One through Six we will read about the esoteric evidence for the Natural Sequence and the exoteric evidence for the Natural Sequence. My books *The Tao of Cosmology* and *The Tao of Personality* present the logical and mathematical derivation of the Natural Sequence. All of these Validations satisfy my conscientiousness about my responsibility in teaching the truth as I understand it.

Before we begin the presentation, I want you to understand something about the naming of the Action Centers. There is disagreement in the Michaelian teachings, overall, about the names and functions of them. In Yarbro, the Ordinal Action Center is called "Sexual" or "Physical Excitation", and the Cardinal Action Center is called "Moving". In another contingent of the Michaelian teachings and in the Gurdjieff teaching, these are reversed. I agree with the latter and explain why in my book A History of the Overleaf Chart, the section in Part Four on "The Action Centers". In the following presentation, I further complicate matters by calling the Ordinal Action Center "Motion" and the Cardinal Action Center "Excitation", so that at least there is no confusion about which Center (Cardinal or Ordinal) is named "Moving" — in my books neither Center is.

Okay then. After those introductory sections, now let's start to dig into the actual material on the subject of this book. We will start with the channeling that pointed me in the direction of sorting out the contradictory channeling on the subject of the septenary in the Michaelian teachings.

The Solution Is Revealed

As mentioned above, the issue of Natural Sequence versus Michael Math Sequence bugged me from 1986 when I first read about the Michael Math Sequence. As the evidence accumulated over the next few years, I came to the conclusion in 1991 that the Natural Sequence was correct and the Michael Math Sequence was incorrect, but the general subject of the septenary still puzzled me. Therefore, when I actually sat down with a Michaelian channel for the very first time, I asked the Michaels about it. Following is a transcription of the verbal channeling on this subject that I got in April 1998 from Caris Turpen.

OK. Thank you. I have one other question. It has to do with my understanding of the proper sequence of the Overleaves, because I have never been able to validate the sequence as given: that is, One as being connected with Server, Two connected with Artisan, and Three connected with Warrior. I have always thought it should be One connected with Warrior, Two with Server, and Three with Artisan. I just cannot see it the way it has been given. So what is going on there?

There is a complex answer here. It has to do with how the sequence is being applied, and what the desired outcome of the application is. In terms of original position and Casting, yes, Server does come first when there is nothing there. When there is already something there, Warrior moves to first position. Server moves to third position, because Warriors then serve as what we would term "recon." When there are already systems in motion, it would make no sense to cast the "sheep" among the "wolves" by sending Servers first; they would be eaten. It makes every bit of sense to send Warriors first — for reconnaissance, for building fires, for protection, for creating [= establishing] the fort — so that the Artisans can come and figure out how to dig

the well, and then the Servers can come patch up the wounded, and make the good bread, and then everything else starts to happen. It is a dynamic triad that actually will rotate in terms of the perceived need. So both are correct, and it all has to do with application.

As you are aware, when this material was first channeled, and this information was being reawakened in the people who had agreed to be our initial consorts, there was a certain amount of prejudice applied, and that prejudice continues. By and large there will be a reconvening of thought as the new information continues to manifest and there is a certain amount of dialog and discussion — and we would also anticipate heady argument — that is going to come about because of the lack of self-validation. People simply do not consistently apply their tools of self-validation. These things are going to be expounded upon and shifted a bit, but you can come away from this brief meeting knowing that it has to do with circumstances and applications.

If one examines and ponders this channeling carefully, one finds a lot to 'chew on'.

- The Michaels mention "dialog, discussion, and heady argument" about this subject. I would like to believe that my books will eventually precipitate these activities of Validation here spoken of on at least this one topic, and maybe some related issues presented in this *History* book and in my other books. There was some excitement about the subject on the www.michaelteachings.com list in the early 2000s, but no general consensus among Michaelian students was arrived at then.
- Notice that the Michaels themselves view their teaching as a work in progress, as least as far as what has come through channels is concerned. As it stands now, it is acknowledged to be defective and deficient. It is not like some inspired writing from an omniscient being, perfect in transmission from them to us, written on stone tablets by the very hand of God. Rather, there are contradictions among Michaelian channels, and there are contradictions with other sources of information. I regard the limitation being more with the accuracy and thoroughness of the channels than with the Michaels themselves. Perhaps, as the Michaels say above, some responsibility for this also lies with the students who are not always keen on Validating the information they receive from channeling. This book is intended to be a nudge toward minimizing some of the defects and deficiencies in the Michaelian teachings, in the channels, and in the students.
- The sequence presented in this channeling is neither the Michael Math Sequence nor the Natural Sequence. It had Warrior-1, Artisan-2 and Server-3, and it described a situation in which that sequence was supposedly reasonable. (Frankly, I think the Natural Sequence would have made more sense in the example given. That is, in a hostile or challenging environment, it makes sense to send the Warriors in first to establish law and order, then send in the Servers to patch up the wounded, then send in the Artisans to patch up the infrastructure.) However, the point remains: there are situations in which the Michael Math Sequence is not appropriate it is not a Universal Truth or a World Truth. It might not even be a Personal Truth. There is plenty of Michaelian channeling on septenaries where the Michael Math Sequence is not used, and I will refer to those cases in later sections here in the Prologue.
- It was only after this channeling that I began to think that there might actually be some validity to the Michael Math Sequence after all. I had totally doubted its validity some 6.4 years before. A few days after this channeling session, while I was driving to work, at the intersection of 63rd Street and Nieman Road in Shawnee, Kansas, I was pondering this answer because it did not completely satisfy me at the time. I then tumbled to the realization that both the Michael Math Sequence and the Natural Sequence have their validity in different realms as the Michaels said, but most important to me, I understood the reason why in a way that the Michaels did not say. Simply stated, the distinction is between development versus deployment. I emphasize these words to drive the distinction home with easy-to-remember words. Natural development follows the Natural Sequence and cannot be any other way, whereas deployment can follow the Natural Sequence or any one of the 5040 (7! = 7 x 6 x 5 x 4 x 3 x 2 x 1) variations from the Natural Sequence, and one of these variations is the Michael Math Sequence. Please note these two words (development and deployment) and their meaning well. Their distinction will be discussed at length in the pages that follow. You could think of these two words as exemplifying the difference between time and space: development of a septenary of items concerns structure in time; deployment of a septenary of items concerns structure in space.

- I believe that the original "error" (The Michaels' words in the channeling regarding the "prejudice applied") was to lump the two manifestations of the cosmology of sevenness (development and deployment) into the Michael Math Sequence, and once the Michael Math Sequence version was presented, nobody except myself has thoroughly questioned it. (Some students who have read an earlier manuscript about the Natural Sequence now regard it as Valid.) The function of this Prologue, and then my Cosmogony book, is to present the evidence and argument to people in the Michaelian teachings community for their Validation process, if they are interested in such, and if they choose to take the Michaels' stinging rebuke about Validation seriously and personally.
- What I would like to see is a more critical examination among Michaelian students, perhaps with the assistance of channels, of when the Michael Math Sequence is Valid and when the Natural Sequence is Valid. It is not that one or the other sequence is Valid for everything. Evidence presented below suggests to me that the Natural Sequence is a Universal Truth and a World Truth, whereas the Michael Math Sequence is just a Personal Truth of limited applicability that has been erroneously elevated to the status of a World Truth in the minds of so many Michaelian students. The question I am putting to the Michaelian teachings community is, When and where is each sequence appropriate? I have some ideas that I have worked through to some extent, but the feedback I solicit can help to expand my horizons and clarify my perceptions. (I am in the Observation Mode, of which the positive pole is +Clarity.)
- I have no direct experience of the Michael Math Sequence in real life as I do with the Natural Sequence, so my information on the Michael Math Sequence is strictly hearsay from Michaelian channels. From what Caris/Michael told me, I gather that the Michael Math Sequence has to do with the Cadre Fragmentation presented in MMFM, which is a form of deployment, not development. They brought up another sequence pertaining to the deployment of Roles in hypothetical situations: Warriors first, then Artisans, then Servers. This might or might not be referring to the actual sequence of ensoulment of homo sapiens (or cetaceans?) on this planet, or what the Michaels call "creatures of reason" on other planets. I do not perceive that Cadre Fragmentation has to occur in the same sequence as ensoulment, because purposes and conditions on the planes beyond the Physical Plane might make some other sequence of deployment appropriate there. It does say in MMFM, p. 190, that all of one of the Roles in an Entity are Cast as a group, and then another block of another Role is Cast, and then another, and so on. If this is valid (we have no way of "knowing" other than by channeling, and I do not regard this as "knowledge" — personal experience yields "knowledge" in my opinion), then this is apparently a way of skewing energy in a desired direction — an instance of deployment, not development. I have more to say about this in a subsequent section of this Proloque. In my opinion, discussion of Fragmentation and ensoulment per the Michael Math Sequence or any other sequence is truly hypothetical and academic, and of little or no value since it cannot be Validated and does not affect what is happening here and now so far as we can discern. In my opinion, the Natural Sequence has a much greater verifiability and practical utility. Because I have experienced it personally, and also because I see a long and wide tradition for it in various sciences and spiritualities, I believe that the Natural Sequence governs ongoing developmental processes on the Physical Plane.

This channeling by Caris Turpen was the beginning of the understanding of the solution to the contradiction between the Natural Sequence and the Michael Math Sequence. It is also the end of this section of this Prologue. In the next section, we will examine numerous other channeled Michaelian teachings sources. As will be shown, these are the *sources* of the problem, not the *solutions* to the problem, of the contradiction between the Natural Sequence and the Michael Math Sequence and other septenaries. What these various sources show is that the Michael Math Sequence is just one of a multitude of various septenaries that are proffered in the Michaelian teachings, and the point of the presentation in the section following that is to demonstrate that the Michael Math Sequence should have no preferred status inside of the Michaelian teachings. If the Michael Math Sequence has any status outside of the Michaelian teachings, I have not found it, as demonstrated in my book *The Tao of Cosmogony*.

CONFUSION IN THE MICHAELIAN TEACHINGS

So, Turpen/the Michaels made me aware that there is not just one possible valid sequence of components in every septenary. Not only Turpen/the Michaels, but there are numerous variations and inconsistencies in the published Michaelian teachings about the sequence of the septenary. That is, other sequences have been

presented, which would also seem to indicate that the Michael Math Sequence, if it has any validity, is of limited applicability, just as Turpen/the Michaels said. There are other variations of the septenary presented in the transcriptions of the original Michaelian group, from the channeling of Sarah Chambers herself, the original Michaelian channel. In this section I will present these for your consideration. First we will consider the books of Chelsea Quinn Yarbro, then the books of José Stevens, then the channeling of Sarah Chambers, then the book of Shepherd Hoodwin.

The Books of Chelsea Quinn Yarbro

First of all, we are going to look at the channeling to which I alluded in the Introduction of this Prologue, the channeling that was cause for both my rejoicing and my dismay. That is the infamous Michael Math chapter in *MMFM*, specifically page 189 of the Classic Edition, where the Michaels begin to discuss their version of the cosmology of sevenness:

You can perceive that while One is Ordinal and Seven is Cardinal, that the first half is Cardinal and the last half is Ordinal — in other words, the pattern 'doubles back on itself'. This is what is implied by the 'yin-yang' symbol, and it would probably be of use to keep the 'yin-yang' in mind while considering what we tell you of the function of levels and numbers. [MMFM, p. 189]

This was the part for which I rejoiced when I first read it in 1986, because it seemed intuitively correct to me then, and it still seems intuitively correct to me now, almost forty years later. It is also backed up by other metaphysical sources, as documented in my *Cosmogony* book.

What I find remarkable about this statement is that they tell us that the Cardinal half of the sequence "doubles back" on the Ordinal half, and they tell us to "keep the yin-yang in mind" — but then according to this channeling the Michaels do not themselves keep the yin-yang in mind as they present the Michael Math Sequence on the very next page, because it does *not* "double back on itself", at least not in terms of Action, Inspiration, and Expression Axes. In the Michael Math Sequence, if you take the three steps in the Ordinal half, you do not retrace the three steps in the opposite direction when you take the three steps in the Cardinal half. With the Michael Math Sequence, either the first three steps or the last three steps have to rearrange in order to be the reverse of the other half. The Natural Sequence *does* "double back on itself" — the Ordinal triad is the mirror image of the Cardinal triad. The Natural Sequence is symmetrical just like the yin-yang symbol, and the Michael Math Sequence is not symmetrical, unlike the yin-yang symbol. Out of respect for the Michaelian teachings in general, I have tried to reconcile the inconsistency. The next sub-subsection presents a possible solution, but I think a very strained one.

The Names of the Poles of the Levels

One potential way around the apparent inconsistency presented in the previous section that I have been able to think of is to suppose that the Michaels meant that positions One and Seven are a composite of Ordinal Inspiration and Cardinal Action, positions Two and Six are a composite of Ordinal Expression and Cardinal Inspiration, and positions Three and Five are a composite of Ordinal Action and Cardinal Expression.

Another possibility is that perhaps the Positive Pole of the Level corresponds to the Cardinal pole of the Axis, and the Negative Pole of the Level corresponds to the Ordinal pole of its Axis. I found these ideas repugnant for their lack of clarity, but I tried to make it fit with the names of the Negative and Positive Poles of the Levels as given in *MMFM*, pages 28 and 29, and *MMFM*, page 189 right there in the "Michael Math" chapter. These names are given in the table below, along with the yin-yang and axis blending I propose as a possible but dubious interpretation of the Michaels' "doubles back on itself" statement:

First Level = +Purpose (Cardinal Action?) and -Simplicity (Ordinal Inspiration?)

Second Level = +Stability (Cardinal Inspiration?) and -Balance (Ordinal Expression?)

Third Level = +Enterprise (Cardinal Expression?) and -Versatility (Ordinal Action?)

Fourth Level = +Consolidation and -Achievement (Neutral Assimilation)

Fifth Level = +Expansion (Cardinal Expression?) and -Adventure (Ordinal Action?)

Sixth Level = +Harmony (Cardinal Inspiration?) and -Connection (Ordinal Expression?)

Seventh Level = +Inculcation (Cardinal Action?) and -Eclecticism (Ordinal Inspiration?)

Unfortunately, you really have to study this to begin to understand what I am trying to convey. It is a very forced attempt at justifying what MMFM said about the Michael Math Sequence. I leave it to the reader to

decide if it makes sense to them, but to my way of thinking, it is a Procrustean exercise of cutting and stretching to fit the names of the Levels with the names of the combination of Axes-Polarities. The other Overleaves (Role, Goal, Mode, Attitude, Center, Feature) do not have this confusing ambiguity, so it makes no sense to me that the names of the Levels should.

The names of the Poles of the Levels are discussed at length in this *History* book, in Chapter 4K, "Names of the Levels". There you will read that there is no way to salvage the names that *MMFM* gave to the Poles of the Levels if one is to fit them sensibly in with the other six Aspects of the Overleaf System, so new names are proposed.

Inputs of the Roles

Students of the Michaelian teachings will be familiar with the personality factor called "Inputs". It has been said that Warriors have 1 Input, Servers have 2 Inputs, Artisans have 5 Inputs, Scholars have 1 Input, Sages have 3 Inputs, Priests have 2 Inputs, and Kings have 1 Input. (*MMFM*, pp. 59-60, 192, and *MP*, pp. 88-90, 181, 236) In the transcription of the 10 October 1983 session (refer to the book, *Michael Speaks: The Legacy of Sarah Chambers (Volume 3)*, available from The Center for Michael Teachings, Inc.), 'channels' is the word used, rather than 'Inputs'. Inputs are said to have something to do with how many 'channels' a Role 'receives' on, as if each Role was like a different type of 'television', metaphorically speaking.

Let's look at this in more detail.

Placing the Roles in the Natural Sequence, we see that this makes a pattern of the quantities of Inputs ascribed to the Roles, thus: Warrior = 1 Input, Server = 2 Inputs, Artisan = 5 Inputs, Scholar = 1 Input, Sage = 3 Inputs, Priest = 2 Inputs, King = 1 Input. The numbers go up with the Ordinal Roles, then down with the Cardinal Roles. If the Artisan were said to have three Inputs instead of five, it would make the septenary of Input quantities symmetrical — like the yin-yang symbol that the Michaels mentioned at MMFM, page 189.

If only an Artisan had been said to have three inputs instead of five, I could have pointed to it as a clear example of the Natural Sequence in the Yarbro books. Better yet, I could have pointed out its correspondence with a certain feature of my derivation of the Overleaf System. In Part One of my *Tao of Personality book*, I explain that Action (Warrior and King) are analogously 'One-dimensional', Inspiration (Server and Priest) are analogously 'Two-dimensional', Expression (Artisan and Sage) are analogously 'Three-dimensional', and Assimilation (Scholar) is analogously 'Pan-dimensional'. That is to say, in my derivation of the Overleaf System, the Axial (Dimensionality) Attribute of Roles is related to geometric figures (Action = line, Inspiration = plane, Expression = solid) in a very abstract way. Check out my *Tao of Personality book* if this idea intrigues you.

I believe that, except for the anomalous alleged five Inputs for the Artisan, the Dimensionality of the Roles explains Inputs. That is, more Dimensions results in more 'Inputs', aka 'channels' of reception. I have not found the Yarbro dogma-doctrine about Inputs really useful for interpreting any actually noticed phenomena that cannot be explained by my understanding of the Dimensional structure of the Overleaf System, so maybe Inputs are a manifestation of that, with one error or one exception, namely the Artisan with five Inputs.

Some students of the Michaelian teachings might think Inputs has elements of numerology in it, 'numerology' being the idea that numbers have intrinsic meaning in the mind of Tao. I am not really into that kind of numerology, and it is not a part of my explanation of the Overleaf System. I do not believe that the characteristics or 'personalities' (if you will) of the seven basic 'energies' of creation are tied to some numerological-type meaning of the first seven numbers. My ultimate explanation of the Overleaf System is from logic and geometry and physics, but I see this as different from numerology, as I understand the principles of numerology. One might think that the universe is on a 'base seven' counting system because of the prominence of the septenary in metaphysical teachings. That is not quite the way I see it.

Role Abundance

Some astute students of the Michaelian teachings might point out that the relative abundance of Roles follows the Michael Math Sequence rather than the Natural Sequence. Per *Messages from Michael*:

There are more Slaves than any other Role in essence. Then Artisans, Warriors, Scholars, Sages, Priests, and last and fewest, Kings. As you can see, it is an orderly progression. *There is more need for* Slaves and Artisans than for Priests and Kings, both in the cosmic sense and in the material sense. [MFM, p. 96]

This information was later amplified when the alleged percentages of the Roles were given in *More Messages* from *Michael*:

Slaves constitute roughly twenty-five percent of the population, both on this planet and throughout the cosmos. Artisans constitute roughly twenty-two percent of the population. Warriors constitute roughly seventeen percent of the population. Scholars constitute roughly fourteen percent of the population. Sages constitute roughly ten percent of the population. Priests constitute roughly eight percent of the population. Kings constitute roughly four percent of the population. [MMFM, pp. 25-26]

So far as I know, students of the Michaelian teachings in general agree that this percentage seems to be correct for the planet as a whole (not for every nation or group on the planet), and I have no qualms saying it is therefore Validated. Some would say this constitutes evidence in favor of the Michael Math Sequence, and I would agree that it does — in this particular case. However, I view this as irrelevant to the validity of the Natural Sequence (or the Michael Math Sequence) when applied to some other realm — each realm has to be evaluated separately for the septenary that might apply. Notice that in the realm of relative abundance of Roles, this is simply a matter of *deployment* (as the channeling said, "there is more need for...", and this is obviously about allocation of resources for logistical considerations by conscious beings), not *development* (building naturally on what has gone before). As I have said before and say again and again in my *Cosmogony* book, my contention is that *development* tends to follow the Natural Sequence, and *deployment* can follow any sequence someone decides — to suit logistical considerations.

Shepherd Hoodwin in JOYS (2013), page 136, has somewhat to say about Role abundance:

Michael student Ed Hamerstrom noticed the elegant way that these percentages form descending fractions of twenty-eight. They follow the order of [second] most ordinal to most cardinal, with the neutral role, scholar, comprising one seventh. So about sixty-four percent of the population have an ordinal role, and twenty-two percent have a cardinal role, with fourteen percent having the neutral role, scholar. [/OYS, p. 136]

The percentages according to Hamerstrom are: Servers = 7/28ths = 25%; Artisans = 6/28ths = 21%; Warriors = 5/28ths = 218%; Scholars = 4/28ths = 214%; Sages = 3/28ths = 211%; Priests = 2/28ths = 27%; Kings = 1/28th = 29%. So you see, Hamerstroms' mathematical scheme is no more than 1% off of Yarbro's channeling, and some of it is spot on. The interesting thing to me about this is that there might be this mathematical underpinning to this particular instance of the Michael Math Sequence, the *deployment* of Role abundance into incarnation. The Natural Sequence also has mathematical underpinnings in terms of *development*, and you can read about those in my book *The Tao of Personality*, in Part One.

Incarnation Transit Times

It was stated in a couple of Yarbro's books that different Roles transit their series of lifetimes on the Physical Plane with a speed proportional to their location in the Ordinal \rightarrow Cardinal sequence. That is, 1-Servers are the fastest and 7-Kings are the slowest. For instance:

The Server has all means open for reaching the goal and is the only Role that is so by nature. All other Fragments require special circumstances to achieve the goal, those special circumstances increasing with Role Cardinality. For many Kings, the circumstances for progress toward the goal may be very limited. [MP, p. 269]

This statement is another one of those dogma-doctrine assertions allegedly from the Michaels that cannot be personally Validated by us while we are incarnate. The presumption here, apparently, is that the Server is the most Ordinal Role, but this is only true if the Michael Math Sequence actually governs this particular phenomenon rather than the Natural Sequence, wherein the most Ordinal Role is said to be Warrior. Note that it is said in the Michaelian teachings that the Warrior Role correlates with the Physical Plane (and the Server Role correlates with the Astral Plane, and the Artisan Role correlates with the Causal Plane). Therefore, if the validity of the Natural Sequence was presumed for this particular phenomenon, then it might have been said that Warriors transit their incarnations the fastest because the Physical Plane is so challenging in so many ways, and thus Warriors, of all the Roles, are the most at home on and compatible with it — and therefore the best equipped to deal with it in a competent and straightforward no-nonsense way. What I am saying is that the "nature" of Servers is not in fact the best suited to transit the Physical Plane the fastest, so I regard this notion as yet another example of the incoherence in the Michaelian teachings, as currently understood, that I find odious. Also what I am saying is that transit times seems more *developmental* to me than *deploymental*, so it is reasonable to presume that the Natural Sequence should govern this situation.

Number Additions

According to the Michael Math Sequence, the numerical values of the Role pairings, because they are of mixed Axis, add up to 7 in some cases, and some might claim this as argument and evidence for the validity of the Michael Math Sequence. In *MMFM*, it was stated this way:

In most instances [2 out of 3] the numbers of the polarities [Axes] add up to seven, which in the positive pole brings +Inculcation [the alleged name of the Positive Pole of Level Seven]; the exception, that of the Action polarity [Axis], is compensated for with the interaction of Warrior and Scholar — three and four — essences, and the nature of the Mid-cycle [an alleged zone between Levels Three and Four], which is reflected in this interaction. [MMFM, p. 212]

As stated elsewhere in *MMFM*, it is made more clear than in this statement that the numbers assigned to the Roles are correlated to the numbers assigned to the Levels within the Soul Ages. That is, First Level corresponds to Server in the Michael Math Sequence, Second = Artisan, Third = Warrior, Fourth = Scholar, Fifth = Sage, Sixth = Priest, Seventh = King. Making this quotation easy for you to understand: in the Michael Math Sequence, 1-Server + 6-Priest = 7 and 2-Artisan + 5-Sage = 7, but 3-Warrior + 7-King do not, so 3-Warrior + 4-Scholar = 7 and King is 7 alone. What we have here is one rule with two exceptions, and this is alleged to have a cosmic significance. Although ugly, I do not otherwise have a problem with this in terms of *deployment* — you do what you have to do to make things work better in the particular situation you find yourself in, even if it is logically or mathematically ugly.

In the Natural Sequence, the Axis pairings are symmetrical, and the numerical values add up to eight. Thus (Action) 1-Warrior +7-King = 8; (Inspiration) 2-Server + 6-Priest = 8; (Expression) 3-Artisan + 5-Sage = 8; and (Assimilation) 4-Scholar + 4-Scholar = 8. With the Natural Sequence we have one rule and no exceptions. Because of my prejudice for beauty over ugliness and symmetry over asymmetry in the function of the Cosmos, I prefer the Natural Sequence over the Michael Math Sequence, but also I prefer it for the following reason.

If the Michael Math Sequence were valid for *development*, when you completed the integration of the asymmetrical pairings through all seven Levels (or stages in septenaries other than Levels), you would still be at Level seven, even if that Level is +Inculcation, the alleged name of the Positive Pole of Level Seven. Therefore it is a *static* sequence — it doesn't go anywhere. That is suitable for *deployment*, but it is not suitable for *development*; it is stagnation. In the Natural Sequence, when you complete the sequence of seven Levels (or Life-Stages or Soul Ages) and integrate the symmetrical polarities, you arrive at Level 8 (or Life-Stage or Soul Age), the first stage of the next higher Level (or Life-Stage or Soul Age). It is a *dynamic* sequence, and I find this to be a satisfying concept when applied to *development*.

Per the Turpen channeling, the Ordinal triad of Roles can be moved around to suit a *deploymental* situation. Let's see what happens when the invented 'rule' is to add up to nine instead of add up to seven. Turns out it works just as well as the Michael Math Sequence, by this means. If the Warrior was moved to the #2 position while keeping its pairing with the #7 King, and the Server was moved to the #3 position while keeping its pairing with the #6 Priest, and the #4 Scholar was paired with #5 Sage the same way that #3 Warrior was paired with #4 Scholar in the Michael Math Sequence, then the paired numbers would add up to nine and the Artisan in the #1 position would be the 'odd man out' instead of the #7 King. If this schema had been canonized in the Michaelian teachings community, then we would rationalize why Artisans are loners instead of Kings being loners per the Michael Math Sequence schema. Anything other than the Natural Sequence where the pairs add up to 8 begins to look like a silly numbers game because of the exceptions to the rule.

In all of this, I believe this sort of contrived mathematical rationalization is very poor evidence for or against the Michael Math Sequence and the Natural Sequence. I argue that numerical rules and exceptions to rules can perhaps be found/invented by a knowledgeable mathematician for some if not many of the 5040 possible arrangements (called "permutations" in mathematical parlance: $7 \times 6 \times 5 \times 4 \times 3 \times 2 \times 1$) of the septenary. A knowledgeable, clever mathematician might be able to relate some of the permutations to odd/even, or to prime numbers, or to the Fibonacci series, or whatever other mathematical things there be, with and without exceptions to the rules of the game. This may or may not have any significance in the mind of Tao; I for one do not really know.

So ... the point of these arithmetical exercises is that the Michael Math Sequence *might* be a real thing, but it is not because of the structure and meaning of the numbers; it is because of the choice of the Logos or Oversoul

to *deploy* available resources, such as Roles, in something other than the standard *developmental* sequence, the Natural Sequence, in order to accommodate situations and conditions.

What is not wrong about the idea of adding up numbers in the septenary is that doing so *should* mean something, and it does, namely the Dialectic Principle. That is, for instance, in the case of Monads, when the Cardinal and the Ordinal sides of a Monadic experience are satisfied, one finds oneself at the beginning of the next higher so-called "octave" (eight-ness) of experience. The Dialectic Principle is elaborated on in Chapter 1K, "Gurdjieff's Law of Three" in this *History* book, and in the chapter on Monads in my book *Study Papers on the Original Michaelian Group*.

The "Mid-cycle" mentioned in the quotation above is discussed at length in Chapter 4L in this *History* book. It is doubtful that it exists; it only makes sense to me if it is generalized into a principle of the nature of a transition zone from one level to another in *development*.

The Nature of the Planes

According to Yarbro's book Michael's People:

"... the lessons of the physical plane are learned through <u>choice</u>, the lessons of the astral plane are learned through <u>interpretation</u>. The lessons of the causal plane are learned through <u>teaching</u>, the lessons of the akashic plane are learned through experientiation, the lessons of the buddhic plane are learned through integral resolution." [MP, p. 277]

It makes the most sense to me that 'choice' is of the Action Axis per the Natural Sequence rather than the Inspiration Axis per the Michael Math Sequence; it makes more sense to me that 'interpretation' is of the Inspiration Axis per the Natural Sequence rather than the Expression Axis per the Michael Math Sequence; it makes more sense to me that 'teaching' is of the Expression Axis per the Natural Sequence rather than the Action Axis per the Michael Math Sequence. I acknowledge the tenuousness of this correlation; what do you think?

The Michaelian teachings about planes is documented and discussed at length in Chapter 1A and in Chapter 4E, "The Seven Planes". A summary of tentative conclusions about planes from info in Yarbro books is as follows: There are seven planes with seven sub-planes; there are "lower" planes and "lower" subplanes apparently but not explicitly said to be Ordinal in nature; there is a "middle" plane and middle subplane apparently but not explicitly said to be Neutral in nature; there are "higher" planes and "higher" subplanes apparently but not explicitly said to be Cardinal in nature. Yarbro is simply not explicit whether the Ordinal Planes follow the Natural Sequence or the Michael Math Sequence; not all the higher planes are named or described. Even in the Yarbro books, it is evident that the Physical, Astral, and Causal Planes are not Neutral in the septenary, so the only thing else they could be is Action, Inspiration, or Expression. We just cannot tell for sure which of the three axes each one matches based on this channeling about Physical being the Choice plane, Astral being the Interpretation plane, and Causal being the Teaching plane. Therefore I tentatively conclude that the Yarbro books are inconclusive about the lower planes being per the Natural Sequence or the Michael Math Sequence. My suggestion is that this lack of correlation resulted in the assertion documented in a previous sub-subsection that Servers transit the Physical Plane the fastest per the Michael Math Sequence, rather than Warriors, who are most at home on the Physical Plane per the Natural Sequence.

Comments on Yarbro's books

Following is a summary of the conclusions I have reached regarding Yarbro's channeling on this subject:

- My opinion is that if the Yarbro channels had understood what I understand about the Natural Sequence, that the planes and numerous other septenaries follow the Natural Sequence, then the Michaelian community might not be misled and encumbered with the dubious channeling that the Ages/Levels follow the Michael Math Sequence as stated in the "Michael Math" chapter of MMFM. Just because Casting deployment might follow the Michael Math Sequence does not mean that developmental Age/Level does also.
- As we will see in a subsequent section, the Michael Math Sequence is in disagreement with the sequence given in some channeling from the original Michaelian group.
- There is also disagreement with other contingents of the Michaelian teachings, as we will see in subsequent sections.

- The material is internally inconsistent and therefore suspect. That is, the Michael Math Sequence is not symmetrical as it was purported to be in the very chapter of *MMFM* that introduced the Michael Math Sequence.
- Another inconsistency concerns the Levels. Information about the Levels is presented in greater detail
 elsewhere in this *History* book, in Chapter 4K. There you will read that the names given to the Poles of
 the Levels do not fit with the names of the other Overleaves of the same Axial Attribute (Action,
 Inspiration, Expression, Assimilation) and Dialectic Attribute (Cardinal, Ordinal, Neutral).
- We students were not given any evidence for the Michael Math Sequence. It is simply presented to us as a dogma-doctrine. In my *Cosmogony* book, I present some real physical evidence for the Natural Sequence from Nature, as well as evidence from numerous spiritual traditions and teachings.
- We students were not given an explanation for the Michael Math Sequence. That is, there seems to be no how/why to it. There is a structure of Cardinal, Ordinal, and Neutral; in Action, Inspiration, Expression, and Assimilation but what is the source and meaning of this structure? Here again, the structural framework of the Overleaves is simply presented to us as a dogma-doctrine. I personally am not content to accept this structure on faith, as "Truth revealed from on high by the omniscient Guru". Now it so happens that this Scholar/Artisan— moi has figured out the source/meaning of the structure, and it supports the Natural Sequence, not the Michael Math Sequence. That structure is explained in my "The Tao of ..." books.

The Books of José Stevens

José Stevens is one of the foremost of students and teachers of the Michaelian teachings. He is a PhD who has lectured widely and published several books on it. Let us take a look at those books and see what he has to say about the cosmology of sevenness. He has a lot to say. Spoiler alert: most of it is internally inconsistent, and inconsistent with other sources within the Michaelian teachings.

The Michael Handbook

Various spiritual teachings have assigned colors of "rays" to their cosmologies of sevenness. Typically the seven colors of the rainbow are given with the low-frequency (red) end of the spectrum in the number one position and the high-frequency (violet) end of the spectrum in the number seven position. This has been done in the Michaelian teachings as well, although I am not certain if it was actually channeled.

In *The Michael Handbook* (Stevens & Warwick-Smith, 1986, page 78 of the English version), Stevens correlates seven colors of the rainbow spectrum with the seven Roles. Stevens referred to this Role/color correlation as the Roles being "cast out of Tao". This correlation is shown in the following table, in the first two columns, but the sequence of Roles is neither per Michael Math Sequence or Natural Sequence. Notice that Stevens sequenced the colors as in a rainbow, from lowest vibration (red) to highest vibration (violet). In the third column, I show the common correlation of colors with the chakras shown in the second column, which the reader can verify on numerous internet websites. The fourth column shows colors tentatively correlated with a chakra healing modality discussed in *Earth to Tao* on page 169. This is an attempt to correlate Stevens's colors for Roles with chakras and Centers, which will be noted further on. Also, in another section further on, I present the evidence for the correlation of colors and chakras which are shown in this table:

| ROLE | COLOR | CHAKRA | COLOR |
|---------|--------|---------|------------------------|
| Warrior | Red | First | Red |
| King | Orange | Second | Orange? |
| Scholar | Yellow | Third | Gold &Yellow & Silver? |
| Server | Green | Fourth | Pink & Rose |
| Sage | Blue | Fifth | Blue & Gold & Silver |
| Artisan | Indigo | Sixth | Lavender? |
| Priest | Violet | Seventh | Purple? |

This particular septenary, if it has any validity, is obviously a product of *deployment* rather than *development*, so in my view there is no reason it should follow the Natural Sequence rather than some other sequence, such as the Michael Math Sequence. Even though Stevens's book was published after *MMFM*, in which the Michael Math Sequence was presented, the order of the Roles presented above obviously has not been derived from the

Natural Sequence or the Michael Math Sequence, as it matches the former in only two places (#1 and #5) and the latter in only one place (#5). No explanation or source is given in *The Michael Handbook* for this correlation of Roles with colors, and it was not even mentioned in Stevens's two subsequent books (*Tao to Earth*, 1988, and *Earth To Tao*, 1989), books that were also published after the Michael Math Sequence was published in *MMFM* in February 1986.

(By the way, the variations in colors that channels have assigned to components of the Overleaf System are reviewed in Chapter 4P, "Color Assignments", in this *History* book. That chapter alone should convince the reader that there is nothing sacrosanct about channeling on the septenary or about one of the consequences of dubious channeling, namely the origin and perpetuation of the Michael Math Sequence.)

Let's move on to another septenary mentioned in his book. On page 214 of *The Michael Handbook*, Stevens provides a correlation of chakras, Centers, and Roles, and these are shown in the following table. The fifth column, COLOR, is my own correlation with the first column. It shows the traditional colors assigned to chakras. Notice that for me to make that correlation with chakra colors has the effect of scrambling the correlation of Roles given above, agreeing in only three places, #4, # 5, and #7:

| <u>CHAKRA</u> | LOCATION | CENTER | ROLE | COLOR |
|---------------|------------------|---------------------|---------|--------|
| First | Base of spine | Instinctive | King | Red |
| Second | above sex organs | Higher Moving | Artisan | Orange |
| Third | solar plexus | Moving | Warrior | Yellow |
| Fourth | heart | Emotional | Server | Green |
| Fifth | throat | Intellectual | Sage | Blue |
| Sixth | third eye | Higher Intellectual | Scholar | Indigo |
| Seventh | crown | Higher Emotional | Priest | Violet |

Please notice some things about this tabulation:

- There is not a clear indication from what Stevens says about his correlation of Centers and Roles regarding whether this is an instance of *development* or *deployment*. It is, of course, possible to have septenaries that fit in neither category, as we will see further on. Other Michaelian students clearly do put Centers and Roles in one or the other of those categories.
- This correlation of Centers with Roles disagrees four times out of seven with the correlation given in *MFM* in 1979. The Overleaf chart at the back of *The Michael Handbook* shows the *MFM* correlation of Roles and Centers; thus it appears that Stevens contradicts himself.
- We will see below that there is only agreement with Sarah Chambers's channeling on how the chakras correlate with the Centers in regard to one chakra, the first.
- The middle three Centers are per the Natural Sequence, not the Michael Math Sequence.
- Four years later, in *Earth to Tao* (1989), Stevens reversed the sequence of the last two, again contradicting or correcting himself, but no explanation was given.
- There is only agreement with the Michael Math Sequence at one location, #3. Stevens did have Yarbro's book presenting the Michael Math Sequence at the time he wrote his books. He might also have had Sarah Chambers's channeling, presented below, because someone in the original Michaelian group was giving him their transcriptions while it was meeting. Yet he contradicts them both. It may be that his placements were based somewhat on his understanding of their traditional descriptions, but in a subsequent section I will explain why I believe the Natural Sequence is a better fit for the chakras than the sequence given by either Chambers or Stevens.

There are other anomalous and contradictory orderings of sevenness in Stevens's other books.

Tao to Earth

Two years after the publication of *The Michael Handbook*, Stevens published another book, *Tao to Earth (TTE*, 1988). On pages 170-176 of *Tao to Earth*, Stevens presents his theory of natural development through seven "stages", numbered one through seven. This is obviously an instance of *development* as distinct from an instance of *deployment*, so in my view it should follow the Natural Sequence. But it does not. And it does not fit with his other septenarian sequences: his names for the stages and their descriptions do not fit well with either

of the two prior septenaries in his previous book, or with his assignment of Centers to these seven stages of various processes:

- 1 = growth, incarnation = Intellectual Center (does not fit with Warrior or King)
- 2 = elimination, disintegration, decay = Emotional Center (does not fit with King or Artisan)
- 3 = stabilizing, purifying, refining = Moving Center (does not fit Scholar but does Warrior)
- 4 = corruption, disease, rebellion = Instinctive Center (does not fit with Server and Server)
- 5 = healing, renewal, adaptation = Higher Intellectual Center (does fit with Sage and Sage)
- 6 = completion = Higher Emotional Center (does not fit with Artisan or Scholar)
- 7 = neutrality = Higher Moving Center (does not fit with Priest and Priest)

Notice that the above sequence does equate to the Michael Math Sequence and Natural Sequence in the latter stages (4, 5, 6, 7), but does not in the former stages (1, 2, 3).

Moving on to another of Stevens's septenaries, we find that there is another lack of consistency in Stevens's understanding of the seven Levels within each Soul Age. One might reasonably think the description of the seven Levels would be similar to the description of the seven stages of development shown above, but that is not the case. On page 105 of *Tao to Earth*, Stevens accepts the names of the Poles of the Levels as given in Yarbro, but on page 308 he gives a brief description of each Level — but that *description* does not relate well with the *names* of the Poles given to the Levels in *MMFM*:

| LEVEL | NAMES OF POLES | DESCRIPTION OF LEVELS |
|---------|-------------------------------|--|
| First | +Purpose / –Simplicity | examine new soul age, explore |
| Second | +Stability / –Balance | transition/creation, self-karma, plunge in |
| Third | +Enterprise / –Versatility | introspection, adapt to change internally |
| Fourth | +Consolidation / -Achievement | emotions, exemplifies stage |
| Fifth | +Expansion / –Adventure | new knowledge, eccentricity |
| Sixth | +Harmony / –Connection | karmic completion, intense and busy life |
| Seventh | +Inculcation / –Eclecticism | teach, share, consolidate, prepare for next stage. |

Elsewhere in this *History* book in a Chapter 4K, "The Names of the Levels", these Levels are shown to be another instance of the Natural Sequence. Therein the description does match the name.

Earth to Tao

Moving on to Stevens's third book, *Earth to Tao (ETT*, 1989), on page 131 he has a table showing his correlation of the seven planes with the seven Centers. The first column is shown for the convenience of comparison with other septenaries discussed in this section. The second and third columns show Stevens's correlation. Among Stevens's various septenaries, this is the only one that follows the Natural Sequence from beginning to end (none of his septenaries follows the Michael Math Sequence from beginning to end):

| RANK | PLANE | CENTER |
|---------|-----------|---------------------|
| First | Physical | Moving |
| Second | Astral | Emotional |
| Third | Causal | Intellectual |
| Fourth | Akashic | Instinctive |
| Fifth | Mental | Higher Intellectual |
| Sixth | Messianic | Higher Emotional |
| Seventh | Buddhaic | Higher Moving |

So the question I naturally ask — and that is asked throughout my *Cosmogony* book — is, if the basic aspect of creation, embodied in the so-called "planes", is structured per the Natural Sequence (and I believe that it is), then why do not all of the septenaries within the creation follow that sequence? There are reasons not all septenaries follow the Natural Sequence, and the reasons were given in channeling by Caris/Michael: it depends on what circumstances and situations govern, whether that be *deployment* or *development*. In the circumstances and situations of natural *development*, it makes sense to follow the Natural Sequence because each stage builds on the previous stages and one cannot skip 'grades' in the 'school' of evolution.

Two chapters in this *History* book are devoted to a discussion of the seven planes, but for here and now, let us move on to Stevens's next septenary in his *Earth to Tao* book.

And here is yet another seeming contradiction. First there is the following table in *Earth to Tao*, on page 157. The Chakras are numbered and named/located and correlated with Centers as follows:

| RANK | CHAKRA | CENTER |
|---------|--------------|---------------------|
| First | Root | Instinctive |
| Second | Abdomen | Higher Moving |
| Third | Solar Plexus | Moving |
| Fourth | Heart | Emotional |
| Fifth | Throat | Intellectual |
| Sixth | Forehead | Higher Emotional |
| Seventh | Crown | Higher Intellectual |
| | | |

Then on page 229 of this same book he numbers and names the Centers thus:

RANK CENTER

First Moving
Second Emotional
Third Intellectual
Fourth Instinctive
Fifth Higher Moving
Sixth Higher Emotional
Seventh Higher Intellectual

Comparing this list with the previous list that correlated chakras with Centers, we see that it scrambles the ranking of Centers, so much so that there is agreement only at ranks 6 and 7. But he does proclaim on page 229 that, "The centers, although generally related to each of the chakras, more accurately represent certain combinations of them." Recall that in the two chapters on chakras in this *History* book, I present arguments and evidences that the correlation of chakras with Centers is not so confused; they obviously follow the Natural Sequence. The chapters on chakras in my book *Tao of Cosmogony* present even more evidence and argument. Without correlations with other septenaries, there is no way that I know of to assign Centers to the *deployment* or *development* categories. However, according to kundalini yoga, the chakras are part of a developmental sequence, and we will see further on in this Prologue that it follows the Natural Sequence.

As documented in chapters on the Gurdjieffian teachings in Part One of this *History* book, the septenary presented above is the probable "Gurdjieffian sequence". It is known that Stevens was familiar with the Gurdjieffian teachings, so he might have borrowed this particular sequence from that teaching. Gurdjieff put the Centers into a *developmental* sequence, and this is reviewed in Part One, in Chapter 1J, "Gurdjieff's Levels of Being".

One final note about Stevens's various and variable septenaries: on page 239 of *Earth to Tao*, there is a repetition of the descriptions of each Level, which is the same as in *Tao to Earth* on page 308.

For your convenience, Stevens's various septenaries are shown in the table below.

| | Table E-2a — SUMMARY OF STEVENS'S SEPTENARIES | | | | | | |
|-------------------------------------|---|---------------------------------|-----------------------------------|------------------------------|--------------------------------|---|-----------------------------------|
| RANK | FIRST | SECOND | THIRD | FOURTH | FIFTH | SIXTH | SEVENTH |
| [ONE] TMH p. 78 COLORS ROLES | Red Warrior | Orange King | Yellow Scholar | Green Server | Blue Sage | Indigo Artisan | Violet Priest |
| [TWO] TMH p. 214 CENTER CHAKRA ROLE | Instinctive Root/Base King | Hi'r Moving Navel Artisan | Moving Solar Plexus Warrior | Emotional Heart Server | Intellectual Throat Sage | Hi'r Intellect. Third Eye Scholar | Hi'r Emotional Crown Priest |

| Table E-2a — SUMMARY OF STEVENS'S SEPTENARIES | | | | | | | |
|---|--|--|--------------------------------------|-----------------------------------|------------------------------------|-------------------------------------|-----------------------------------|
| RANK | FIRST | SECOND | THIRD | FOURTH | FIFTH | SIXTH | SEVENTH |
| [THREE] TTE p. 175 CENTERS | Intellectual | Emotional | Moving | Instinctive | Higher Intellectual | Higher Emotional | (Higher Moving) |
| [FOUR] TTE p. 196-8 GROUPS | Infant Stage Intellectual | Baby Stage Emotional | Young Stage Moving | Mature Stage Instinctive | Mature Stage Hi'r Intellect. | Mature Stage Hi'r Emotional | Old Stage Hi'r Moving |
| [FIVE] TTE p. 231-2 CHAKRAS AGES | Spine Base Instinctive Infant Soul | Spleen/Navel Hi'r Moving Baby Soul | Solar Plexus Moving Young Soul | Heart Emotional Mature Soul | Throat Intellectual Old Soul | Brow Hi'r Intellect. (Truth) | Crown Hi'r Emotional — |
| [SIX] ETT p. 131 PLANES CENTERS | Physical (Moving) — | Astral Emotion(al) — | Causal (Intellectual) Beliefs | Akashic Instinctive Healing | Mental Hi'r Intellect. Truth | Messianic Hi'r Emotional Love | Buddhaic Hi'r Moving Energy |
| [SEVEN] ETT p. 157 CHAKRA CENTER | Root/Base Instinctive | Abdomen Hi'r Moving | Solar Plexus Moving | Heart Emotional | Throat Intellectual | Forehead Hi'r Emotional | Crown Hi'r Intellect. |
| [EIGHT] ETT p. 169 COLORS CHAKRAS | Red Instinctive | (Orange) (Sexual) | (Yellow) Gold Intellectual | Pink, Rose Heart | Blue, Silver Throat | (Lavender) — | (Purple) — |
| [NINE] ETT p. 228-9 CHAKRA CENTER | Root/Base Moving | Abdominal Emotional | Solar Plexus Intellectual | Heart Instinctive | Throat Hi'r Moving | Brow Hi'r Emotional | Crown Hi'r Intellect. |

My comments on this table are as follows:

- RANK: The header row at the top of the table shows the Rank, aka sequence numbers, of the septenary. These numbers apply to the columns, all the way down to the bottom. The numbers are the glue that hold the rest of the table together, and allow us to see the inconsistencies between Rows.
- ROW: Numbers are shown in [brackets]. Each row contains two or three correlated components of the septenary, except Row Three.
- Words shown in (parentheses) are surmised from suggestive text; check the books for details. In the table, *TMH* refer to *The Michael Handbook* (1986); *TTE* refers to *Tao to Earth* (1988); *ETT* refers to *Earth to Tao* (1989).
- COLOR: Comparing the sequence of colors in Rows One and Eight we see that Stevens was mostly consistent. Row One shows the standard primary and secondary colors that have been assigned to the chakras in the Western esoteric pop cosmology. The colors in Row Eight were not presented in a septenary; thirteen colors were given in the context of healing properties; there were references in the description to some chakras and some Centers, which are also mostly consistent with information in other rows. Other colors were mentioned in the text that are outside the standard septenary colors, namely Gold, Silver, Pink, Rose, Brown, White, Black, and Grey.
- AGES: Ages are rigidly coupled with Ranks. There is only one row that shows the Soul Ages, Row Five. Their mention in Row Four was for comparison only in the context of the development of groups.
- CHAKRA: Chakras are rigidly coupled with Ranks. Comparing the chakras in Rows Two, Five, Seven, Eight, and Nine, we see Stevens was consistent, except the names sometimes changed. Stevens never explicitly correlates chakras with colors, unlike most others in the Western esoteric tradition.

- PLANES: Planes are rigidly coupled with Ranks. They only show up in the sixth row where they are correlated with Centers, which indicates that the sequence used is the Natural Sequence, which is consistent throughout the Michaelian teachings, except we are uncertain of Yarbro.
- Rank, Color, Chakra, Soul Age, and Plane are rigidly correlated, but Role and Center are able to detach from one septenary and attach to another septenary.
- ROLES: Comparing Roles in the first and second rows, we see that there is inconsistency in four out of seven cases.
- CENTERS: Comparing Centers in Rows Two, Three, Six, Seven, and Nine we see considerable inconsistency: (In fact, there are five unique variations in the sequencing of the Centers.)
 - The Moving Center appears in the First and Third Ranks.
 - The Emotional Center appears in the Second and Fourth Ranks.
 - The Intellectual Center appears in the First, Third, and Fifth Ranks.
 - The Instinctive Center appears in the First and Fourth Ranks.
 - The Higher Intellectual Center appears in the Fifth, Sixth, and Seventh Ranks.
 - The Higher Emotional Center appears in the Sixth and Seventh Ranks.
 - The Higher Moving Center appears in the Second, Sixth, and Seventh Ranks.
- CENTERS: Stevens gave his apparent copiers five unique variations to choose from, but the Center
 Rank variations that got copied by others are Row Two (Taylor, Basic, Cocconi) and Row Seven
 (Tolley): refer to Chapter 4J, "The Seven Chakras", in Part Four of this *History* book. These two
 variations differ in only the last two Ranks, where Higher Emotional and Higher Intellectual are
 switched. Evidently some of the people who borrowed from Stevens did not notice that he "corrected"
 himself in Row Seven, three years after Row Two was published.
- Row Seven correlates chakras and Centers. Row Nine, from the same book, does the same thing, but
 the two disagree in five out of seven cases. In fairness, Row Nine is derived from two numbered lists, 1
 → 7, on two facing pages, and it is not explicitly stated that chakras and Centers correlate through the
 shared numbers. Stevens's copiers apparently did not regard Row Nine as legitimate, and I do not
 believe that it represents Stevens's belief.

General Comments on Stevens's Septenaries

So, what is the point, or points, of all this detailed analysis?

- This source might be the most egregious example of incoherence in the Michaelian teachings. Stevens gives us no source for his various septenaries and their correlations, whether from his or someone else's channeling, or some other spiritual teachings, or his own thinking, or somebody else's thinking. So many of his various presentations of sevenness are different that it might explain something if he got them from different sources and did not compare/contrast them with each other, or see a connection.
- Stevens understood that the Planes follow what I have come to call the Natural Sequence, and that souls evolve up through those Planes in sequence. To me it seems obvious that *development* is *development* whether it is through the chakras or the Life-Stages or the Levels or the Ages or whatever and that this follows the Planes which follow the Natural Sequence, as taught in a multitude of spiritual teachings, as well as nature itself, as presented in Parts of my *Cosmogony* book. Nature itself is coherent, unlike Stevens.
- Many people will of course not even notice this incoherence because they do not care about, or focus on, patterns. If they do notice them, maybe they just throw up their hands in hopeless frustration at this incoherence. Many other people will say it doesn't matter to them and so they don't care about this issue at all. Nevertheless I press on, because for some reason it does matter to me, and if it matters to you also, then you can press on with me.
- There are many anomalous septenaries in the Michaelian teachings septenaries that do not fit the pattern of the Natural Sequence. Frankly, I wonder how much of these variations are *real* channeling, and how much are improvisations that have no intrinsic merit and therefore cannot be Validated.

• I have been unable to find any evidence in any of Stevens's books that he ever accepted the Michael Math Sequence, which was invented in the Yarbro group, and which appeared in the same year that Stevens published his first book, 1986. It may be that Stevens preferred his own many inventions. Contra this conclusion is that one of Stevens's students, Barbara Taylor, uses the Michael Math Sequence in some of her writings, and credits Stevens for them. This is documented in various parts of this *History* book that discuss the contribution of Taylor to the Michaelian teachings.

Michael: The Basic Teachings

Michael: The Basic Teachings (1988 and 1990) was written by Aaron Christeaan, JP Van Hulle, and M. C. Clark. Unlike Stevens's books which present many septenaries, it presents the septenary in only one aspect, the correlation of chakras with Centers, as follows:

| <u>RANK CHAKRA</u> <u>CENTER</u> | | | | |
|----------------------------------|---------------|-------------------------|--|--|
| First | base of Spine | Instinctive | | |
| Second | genitals | Higher Moving | | |
| Third | stomach | Moving | | |
| Fourth | heart | Emotional | | |
| Fifth | throat | Intellectual | | |
| Sixth | brain | Higher Intellectual | | |
| Seventh | top of head | Higher Emotional | | |

This agrees with the Stevens's correlation presented above in Table 0-2a, in Row Two and Row Five.

Sarah Chambers's Channeling

In a previous section I presented José Stevens's sequence for the chakras. Correlating numbers with chakras and Centers is another iffy subject; within the Michaelian teachings community there has been a lot of disagreement of the speculative opinion variety. There has even been some channeling on the subject, as documented in two chapters in this *History* book, but it does not fit my understanding of the chakras based on my research. I studied it in various sources and came up with a correlation that satisfied me. Additional documentation is presented in a chapter in my book *The Tao of Cosmogony*, but here I want to present Sarah Chambers's channeling. We all know that Sarah Chambers was the original Michaelian channel.

Channeling About Chakras

There seems to be no consistency among Michaelian channels about the numerical sequence of the chakras/Centers. Interpretations differ between Sarah Chambers's channeling and José Stevens's books, and neither of those agrees with the standard understanding of the chakras.

A dozen years before Stevens gave his inconsistent sequences of chakras and Centers, Sarah Chambers gave hers in the original Michaelian group in the 1970s, but Stevens may or may not have had access to this channeling at the time he wrote his books in the 1980s. It is known that he was given original Michaelian group transcriptions by a member thereof, but for whatever reason, his correlation did not follow the original Michaelian group sequence. Transcriptions of unpublished original Michaelian group material did not become available to the Michaelian teachings community until the mid-1990s.

Following is some of Chambers's channeling that did not get published in any of the Yarbro books, but has since come out of oblivion thanks to the generosity of some of the members of the original Michaelian group and the people who tracked them down and eventually published them.

I want to know about "chakras".

The significance probably lies in the fact that so many have become aware of this at all, some not even on the path, or following strange pseudo-paths. These "chakras", of course, correspond to the measurable energy flow from the individual Centers. In other words, the lowest chakra corresponds to the output of the Instinctive Center.

Can the chakras be perceived through the "third eye"?

They are normally perceived through the Emotional Center or gut chakra.

Do the Centers and chakras correspond?

Yes, they do. This is what the yogis perceive when they expound on this. In one able to visualize the auras this becomes easy, for there is a transitory puff of color accompanying significant outputs, such as occurs in the digestion of the major meal of the day or in deep meditation. The gut chakra is Emotional Center, Intellectual Center manifests itself at the chest level and so forth. The Sexual Center can be measured at the level of the thyroid; the Higher Emotional Center at the level of the pineal body; the Higher Intellectual Center at the level of the anterior pituitary. Procreation is handled by the Moving Center in sleeping animals. [16 June 1974]

Is there a correlation between energy Centers and chakras?

When one becomes Balanced there is tremendous correlation, yes, for you feel the use of the energy in these spots described as, or called, chakras, with the Higher Intellectual Center being, of course, analogous to the highest chakra or the chakra of liberation that places it above the physical body. All the chakras would be felt as energy Centers, yes. At the moment that the Emotional Center was responding to an appropriate situation, this would be felt in the gut chakra. [25 January 1975]

This channeling puts the Chambers/the Michaels' sequence of chakras/Centers as follows:

| CHAKRA | NAME | LOCATION | <u>CENTER</u> |
|---------|--------|---------------|---------------------|
| First | Root | "lowest" | Instinctive |
| Second | Navel | "procreation" | Moving |
| Third | Plexus | "gut" | Emotional |
| Fourth | Heart | "chest" | Intellectual |
| Fifth | Throat | "thyroid" | Sexual |
| Sixth | Brow | "pineal" | Higher Emotional |
| Seventh | Crown | "pituitary" | Higher Intellectual |

The first column is the common rank of the chakras; the second column is a common name/location for the chakras; the third column is the location given to the chakra in the body according to the channeling; the fourth column is the corresponding Center according to the channeling.

Studying this, numerous comments come to mind, as follows.

- Chakras are discussed in greater detail in this *History* book and my book *The Tao of Cosmogony*. There we find that the traditional description of the chakras follows the Natural Sequence, not the sequence shown above.
- Chapter 1J in Part One, "Gurdjieff's Levels of Being", documents that the above sequence of the chakras is the same as Gurdjieff's sequence of the Centers. I believe that Chambers was subconsciously following the Gurdjieff teaching (with which she was very familiar) rather than truly channeling the Michaels, because:
- As documented in Chapter 4J of this *History* book, *n*one of the usual common names of the chakras was given; the Chambers' version does not fit the modern Western esoteric descriptions or sequence of the chakras. This leads me to believe that Chambers likely did not know the names and placements, or they would have been used.
- Notice that the sequence given by Chambers/the Michaels follows neither the Natural Sequence nor the Michael Math Sequence, nor any of the sequences given by José Stevens as described in the previous section.
- The Neutral Center is placed first; then the Ordinal triad of Centers is per the Natural Sequence (Moving, Emotional, Intellectual).
- The "Sexual" Center is with the so-called "higher" Centers. There is disagreement among students of the Michaelian teachings about the naming and placement of the Action Centers, but in Chambers's channeling the Sexual Center is a Cardinal Center; see next sub-subsection. This disagreement is discussed at length in this *History* book, in Chapter 4H, "The Action Centers".
- The sequence of the Cardinal triad is the same (not the reverse as in the Natural Sequence) as the sequence of the Ordinal triad in regard to Action, Inspiration, and Expression. I have no idea what this might have meant, if anything, in the mind of Gurdjieff, the presenter of this sequence from whom Chambers likely borrowed. I have not seen this "Gurdjieffian" sequence among the other septenaries that I have found and that I present in Part Two, "Modern Day Spiritual Teachings" of my *Cosmogony* book.

An Overleaf Chart from the Original Michaelian Group

The chakras are of course not the only appearance of septenaries in the original Michaelian group. Below is a tabulation of the Overleaves that was found among the documents from the original Michaelian group. It is not exactly like what we are familiar with in modern versions. There were two versions of the chart among the documents, but with identical information. I do not know the date(s), but most likely they are from the spring of 1974, after all seven Overleaf categories were revealed.

In this table, the numbers before the names were in the document. For convenience of explanation I added letters in [brackets] to indicate the "Axis" of the Overleaf: [a] = Action, [i] = Inspiration, [e] = Expression, and [n] = Neutral. Also in brackets in the first column I indicated the dates on which those Overleaves were revealed by the Michaels. This is information gleaned from the transcriptions of the original Michaelian group. I found it very instructive to analyze this chart in detail, so I am sharing my conclusions with you. There is more analysis of this chart, Chart #1, in this book, A History of the Overleaf Chart, but here we are only looking at items relevant to the sequencing of Overleaves, whether Natural Sequence or Michael Math Sequence or whatever.

| Table E-2b — THE ORDERING OF THE COSMOS | | | | | | | |
|--|---|--------------|---|--|--|--|--|
| OVERLEAVES | OVERLEAVES ORDINAL NEUTRAL [n] EXALTED [Cardinal] | | | | | | |
| PLANES [17 August 1973 29 November 1973] | 1. Physical 2. Astral 3. Causal | Akashic | 1. Mental 2. Buddhaic 3. Tao | | | | |
| SOUL LEVELS [late August 1973] | 1. Infant 2. Baby 3. Young | 4. Mature | 5. Old 6. Transcendental 7. Infinite | | | | |
| ROLES [20, 23 October 1973] | 1. Slave [i] 2. Artisan [e] 3. Warrior [a] | Scholar | 1. Priest [i] 2. Sage [e] 3. King [a] | | | | |
| GOALS [25 December 1973] | 1. Retardation [i] 2. Rejection [e] 3. Submission [a] | Stagnation | 1. Growth [i] 2. Acceptance [e] 3. Dominance [a] | | | | |
| ATTITUDES [22 January 1974] | 1. Cynic [a] 2. Skeptic [e] 3. Stoic [i] | Pragmatist | 1. Idealist [e] 2. Realist [a] 3. Spiritualist [i] | | | | |
| BODY TYPES [from Rodney Collin] | 1. Jovial 2. Lunar 3. Venusian | Solar | Mercurial Saturnine Martian | | | | |
| CENTERS [from Gurdjieff, with modifications] | 1. Moving [a] 2. Emotional [i] 3. Intellectual [e] | Instinctive | Sexual [a] Higher Emotional [i] Higher Intellectual [e] | | | | |
| NEGATIVE OUTLOOKS (Chief Feature) [27 February 1974] | Self-destruction [e] Martyrdom [a] Self-deprecation [i] | Stubbornness | 1. Impatience [a] 2. Greed [e] 3. Arrogance [i] | | | | |
| MODES [03 April 1974] | Repression [i] Perseveration [a] Caution [e] | Observation | 1. Passion [i] 2. Aggression [a] 3. Power [e] | | | | |

Studying this chart, numerous comments come to mind, as follows:

- 1. The title of the chart, *The Ordering of the Cosmos*, and the numbering of the categories, indicates to me that they realized that there was a correspondence among all of the manifestations of the septenary, from all creation (the seven planes), to human personality (Overleaves), to Body Types. They realized what I claim, that the septenary is "Tao's Template". However, at this early stage in the development of the Teachings they did not get all the correlations correct see below.
- 2. Note that in the Role row, the Role order is not per the Natural Sequence (Natural Sequence = a-i-e-n-e-i-a) or the Michael Math Sequence (Michael Math Sequence = i-e-a-n-e-i-a) in its entirety. The Ordinal triad is per the Michael Math Sequence (i-e-a), and the Exalted triad is per the same sequence (i-e-a). When the Role names were originally given on 20 and 23 October 1973, the sequence in which the names were given was per Michael Math Sequence, but this sequence of revelation was incidental to other channeling in two different sessions, so I do not think this can be used to bolster a case for the Michael Math Sequence. However, Yarbro might have taken it as such, and went with it, on a subconscious level, and this is what later came out as "channeling", presented in the "Michael Math" chapter of MMFM.
- 3. Looking at the sequence of the other Overleaves as they were originally given, we find that there is no significant correlation with sequences in the tabulation above or with each other or with the Natural Sequence or the Michael Math Sequence. For instance, Dominance, Acceptance, Growth, Stagnation, Submission, Rejection, Retardation; thus, a-e-i-n-a-e-i. Then Stoic, Skeptic, Cynic, Pragmatist, Realist, Idealist, Spiritualist; thus, i-e-a-n-a-e-i (a reverse symmetry to the Natural Sequence). Then Impatience, Arrogance, Greed, Stubbornness, Self-Deprecation, Martyrdom, Self-Destruction; thus, a-i-e-n-i-a-e. Finally, Power, Aggression, Passion, Observation, Caution, Repression, Perseveration; thus, e-a-i-n-e-i-a. Note that the only lack of randomness in all this is the separation of Exalted and Ordinal by the Neutral. There is no indication of the symmetry of Cardinal and Ordinal triads except in the case of Attitudes, but this would seem to be accidental considering all of the other non-Natural Sequence and asymmetrical orderings.
- 4. Note that there is no regularity in the sequence of the Overleaves regards Axis by either the Natural Sequence or Michael Math Sequence. In fact, five out of the six possible variations occurs: a-i-e, i-e-a, a-e-i, e-a-i, e-i-a, and i-a-e. Often there is an alignment of Axis from Ordinal to Exalted (aka Cardinal), but not always, such as Attitudes where Ordinal a-e-i does not align with Exalted e-a-i, and Features where Ordinal e-a-i does not align with Cardinal a-e-i. Thus, it would seem that at the time this chart was made, there was not a clear understanding of what Overleaves were Action, what were Inspiration, and what were Expression.

Chambers's 1980s Channeling

As published in *Michael Speaks* — the Legacy of Sarah Chambers, Volume 3, at the end of the 07 November 1981 session, there was an enumeration of the seven Levels within each Soul Age, with a word or two characterizing its nature. This list is tabulated below, along with my understanding of its Dialectic (Ordinal, Neutral, Cardinal) Attributes, and its Axial (Action, Inspiration, Expression, Assimilation) Attributes shown in brackets. (Together, the Dialectic and Axial Attributes are called "Septenarian" Attributes.)

| LEVEL | NAME | ATTRIBUTES |
|---------|-------------------------|----------------------|
| First | Action | Ordinal Action |
| Second | Realization (awareness) | Ordinal Inspiration |
| Third | Manifestation | Ordinal Expression |
| Fourth | Assimilation | Neutral |
| Fifth | Communication | Cardinal Expression |
| Sixth | Gathering | Cardinal Inspiration |
| Seventh | Move On | Cardinal Action |

Beyond the few words, there is no description to confirm the Attributes that I assign to the level, but it is pretty obvious to me that the most reasonable understanding is that it follows the Natural Sequence. The Michael Math Sequence does not work at all in the Ordinal triad, but it does work in the Cardinal triad, where it is the same as the Natural Sequence. The names and Attributes of the Levels are discussed at great length in Chapter 4K of this *History* book.

Chambers's 1990s Channeling

As with previous sections and subsections and sub-subsections, the purpose of this sub-subsection is to point out that (1) not every collection of seven can in fact be correlated to the seven, what I call, "Processes" (Cardinal and Ordinal Action, Inspiration, Expression, and Neutral Assimilation), and (2) not every collection of seven that can be correlated to the seven Processes is in the same sequence. There are numerous instances of both of these points inside (and outside) of the Michaelian teachings.

In this section I have chosen some septenaries from Sarah Chambers's later channeling, which happened during the years 1996, 1997, and 1998. These sessions are not available to the general Michaelian community at the time of the publication of this *History* book, but they have been made available to me. In most cases I have trimmed extensive descriptions down to a few words. This should be enough to make my points.

For easy comparison and contrast, here are the seven Processes arranged per the Natural Sequence:

Ordinal Action = Warrior + Submission + Perseverance + Cynic + Moving + Martyrdom

Ordinal Inspiration = Slave + Retardation + Repression + Stoic + Emotional + Self-deprecation

Ordinal Expression = Artisan + Rejection + Caution + Skeptic + Intellectual + Self-destruction

Neutral Assimilation = Scholar + Stagnation + Observation + Pragmatist + Instinctive + Stubbornness

Cardinal Expression = Sage + Acceptance + Power + Idealist + Higher Intellectual + Greed

Cardinal Inspiration = Priest + Growth + Passion + Spiritualist + Higher Emotional + Arrogance

Cardinal Action = King + Dominance + Aggression + Realist + Higher Moving + Impatience

Now for the various septenaries given by Chambers in the late 1990s.

Seven Stages Between Lifetimes

In the 09 March 1996 session we find this:

Assuming that, since there are seven stages of everything else, what are the seven stages of assimilation after death before rebirth?

The stages that most fragments experience are denial, questioning, self-realization, remembering, integrating, choosing, rebirth.

Presumably this situation could potentially be an instance or example where *development* made sense, but I do not see how to make this choice of words fit either the Natural Sequence or the Michael Math Sequence. I take this instance to be another example of a septenary that is a collection of seven elements applied to a situation that does not *require* it be per either the Natural Sequence or the Michael Math Sequence.

Seven Stages of Pathfinding

In the 18 March 1996 session we find this:

The seven stages of pathfinding are: Initiation, Nurture, Support, Change and Balance, Maturation, End of Life, Joyous Transition.

"Pathfinders" were said to be somewhat like counselors who help people through the major transitions in a lifetime. A paragraph of description is given for each of these stages. Text not quoted here explains that these transitions are the seven Internal Monads: birth and infancy, childhood, teen and young adult, midlife, retirement, dying, and death. In this *History* book, in Chapter 4Q, "Life-Stages", and in Part Five of my *Cosmogony* book, it is shown that the Natural Sequence makes more sense than the Michael Math Sequence as a correlation to the Internal Monads.

Seven Levels of Intimacy

In the 12 October 1996 session we find this:

What are the seven levels of intimacy?

The first level we would call 1) "the mating dance", or better, "acquaintance"; then comes 2) "disclosure", then 3) "the testing", then 4) "separation", 5) "renewal", 6) "trust", [and finally] 7) "soul-sharing" or "telepathy".

This is an instance where the sequence is obviously one of *development* — development of intimacy — not of *deployment*. However, I judge it would be difficult if not impossible to correlate this channeling with the Processes without some serious tweaking of explanation and description and Procrustean cutting and stretching and rearranging of, and even changing of, names. Therefore, this particular instance or example of development is not *The Development* that is typical of instances of the Natural Sequence.

However, in my book *The Tao of Relationships*, I propose seven stages in the *development* of intimacy, and, of course, they follow the Natural Sequence. I named those stages of intimacy 1) Behavioral, 2) Affective, 3) Mental, 4) Systemic, 5) Mystical, 6) Spiritual, 7) Cosmic. These are a special type of intimacy (kundalini energy exchange) based on some ideas found in the Ra Material (channeled) and elsewhere (Kundalini Yoga). That could explain why my list of seven levels of intimacy differs from the Michaelian list.

Seven Stages of Transition from Mature to Old

In the 14 December 1996 session we find this:

What are the seven stages of the transition from Seventh Level Mature to First Level Old?

They are: 1) Realization/discovery; 2) Recognition of the transcendent; 3) Transference; 4) Agreement; 5) Assimilation; 6) Crystallization of perception; and 7) Transformation.

This looks to me like another instance where there are seven items but they do not correlate with the normal septenary of Processes in any way that I have been able to discern. Here, "Assimilation" is #5 rather than #4, which is where that word is placed in both the Natural Sequence and the Michael Math Sequence.

Seven Stages of Disease

In a seminar handout paper titled "AIDS and Otherness", we find this:

What are the seven stages of dis-ease?

- [1] cry for rest by the physical body ... not serious
- [2] more serious illness ... suspend activities for at least a few days
- [3] illness and alone-ness ... Intervention by someone else is needed
- [4] retreat ... reversion ... helpless ... dependent on others
- [5] systems break down ... bodily functions cease ... "I will make a mess"
- [6] coma
- [7] death

There is no correlation here with Natural Sequence or Michael Math Sequence septenaries that I can see. The full description in the channeling is much more extensive, but these key words tell the story, and it does not seem to correlate with the Natural Sequence or the Michael Math Sequence.

Seven Stages from Fear to Trust

In an undated transcription we find this:

Some months ago Michael explained to me that the antithesis of fear is trust ... and mentioned that there were seven steps or levels between fear and trust ..., and I would like to know what those seven levels are...

In all of these antitheses [Ordinal] to theses [Cardinal] through syntheses [Assimilation], there are seven steps, with the midpoint being assimilation, or a synonym of that word, so here you have

- [1] fear with two tentative steps [away from fear], one of which is
- [2] denial that the fear exists, and the other being that
- [3] the fear exists, but for good reason. [So,]
- [1] fear; [2] denial; [3] causation; [4] assimilation. Then [there are] two tentative steps toward trust, which is another word for intimacy, the first being
- [5] sharing in parallel fashion (you are rehearsing something in your mind while the other fragment is talking).
- [6] risk-taking sharing is the next step that involves some soul-to-soul sharing. And then finally comes
- [7] the point where you are willing to trust the other fragment with your life.

Even though there is the statement that this septenary has the normal Ordinal–Neutral–Cardinal pattern — and that much is obvious — only the middle word "Assimilation" makes a strong match with the Processes so far as I can tell. I can see a tenuous connection between these seven stages and the seven Processes but regard it as a stretch. In my opinion, the last three steps are easier to match with the Cardinal Processes than the first three steps with the Ordinal Processes. One could argue, I think unconvincingly, for either the Natural Sequence or the Michael Math Sequence with the first three steps. You are welcome to give it your best shot, if you are so inclined.

Kabbalah — the "Tree of Life"

Another septenary that Chambers channeled about is the Kabbalah. In the 29 June 1997 session we see this: Would Michael correlate the seven Role Essences with the seven sefirot of the kabbalistic system.

Think of the Priest as the infinite and the King as the ultimate or finite, with the Priest functioning with the most diffuse energy and the King as being the most grounded, or earthbound, and then from top to bottom, energetically, you would have Priest, Slave, Sage, Artisan, Scholar, Warrior, and King. This is a different order from the one we have used in our teaching, but it is the order that correlates here, for it is the energetic flow that emanates from these particular Essences.

As stated in the channeling and as is obvious: there is no correlation here of the Kabbalistic "Tree of Life" with the sequence the Michaels normally used, whether that be of the Natural Sequence or the Michael Math Sequence or any other sequence prominent in the Michaelian teachings.

To me it is interesting that the word "emanates" was used. In some esoteric theologies, the word "emanation" is used for what is called "Fragmentation" in the Michaelian teachings — referring to the differentiation of the Tao, aka the One, into the Many. It is difficult to categorize the Kabbalistic emanation sequence as an example of *deployment* or *development*; one could argue it either way. If *development*, then in my estimation it should follow the Natural Sequence as so many other instantiations do; if *deployment*, then it could be any one of five thousand sequences. It is conceivable that emanation, aka Fragmentation, could have been a *deployment* that followed the Michael Math Sequence as claimed by the Michael Math chapter, whereas evolution back to the Tao, aka the reintegration of the Many into the One, would have to be a *development* that followed the Natural Sequence as the planes do — but I do not feel comfortable with the idea there would be a difference between the involutionary and the evolutionary phases of the Grand Cycle. More is said about this in the next section, which discusses the channeling of Shepherd Hoodwin.

This alleged Kabbalistic "emanation" sequence is somewhat reminiscent of Stevens's alleged "vibration" spectrum of Roles from highest vibration (violet) to lowest vibration (red) as listed in a previous section of this Epilogue, and as discussed in Chapter 2C, "Proposed Sequences of Overleaves", of this *History* book. However, in four out of seven cases they do not match. You may compare and contrast them per the following table:

| Table E- | Table E-2c — EMANATION versus VIBRATION | | | | | |
|----------|---|--------------------------|--|--|--|--|
| RANK | CHAMBERS'S "EMANATION" | STEVENS'S "VIBRATION" | | | | |
| <u>Z</u> | Priest | <u>Priest</u> | | | | |
| 6 | Slave | Artisan | | | | |
| <u>5</u> | Sage | Sage | | | | |
| 4 | Artisan | Server | | | | |
| <u>3</u> | Scholar | Scholar | | | | |
| 2 | Warrior | King | | | | |
| 1 | King | Warrior | | | | |

As we see throughout this *History* book, contradictions such as these are common between Michaelian channels when they do not know about, or agree with, or understand what other channels have said.

My review of the Kabbalah is found in this *History* book in Part One, in Chapter 1A and Chapter 1E, the chapter on Planes and the chapter on Soul Ages respectively. There you will see that the Kabbalah unequivocally follows the Natural Sequence, unlike Sarah's Michaelian channeling. Make of this what you will, but what I make of it is that Sarah was having a bad day in terms of accuracy of channeling, because my review of the Kabbalah reveals that it has many remarkable similarities to the Michaelian teaching; I was rather astonished at the consilience, actually. The fact that the Kabbalah (and Theosophy and other structured esoteric cosmologies reviewed in this *History* book and in my *Cosmogony* book) follows the Natural Sequence for

the involutionary phase of the Grand Cycle provides evidence that I am not amiss to dismiss the Michael Math Sequence as probably being bogus channeling.

The Seven Levels of Friendship

This is yet another septenary channeled by Chambers, this one on 27 July 1997. The key words of the lengthy descriptions were extracted for the following:

What are the seven levels of friendship?

- 1) "amiability" ... superficial friendliness ... extend to coworkers, to service personnel, to strangers on public conveyances. No important data is exchanged, conversation is superficial and the arena is small.
- 2) "sociability" ... involves the *moving* center ... superficial relationships, but involves repeated exposures ... predicated on social demands ...popular with *young souls*... Biographical data is exchanged ... to enhance standing.
- 3) "collegiality" ... intellectual center primarily ... emotional center begins ... common threads... seen in academia . Some politico-ecological groups ... Considerable personal data is exchanged ... ideas, concepts, beliefs. These fragments all have "something in common," and their friendship is based upon that element they share.
- 4) "compatibility" ... intimate acquaintanceship ... trust [first] becomes a [vital] factor ... important data is often exchanged ... some degree of intimacy ... still based upon expectations ... successful marriages ... based on mutual and shared interests and a shared goal
- 5) "comradeship" ... best friend ... comrades-at-arms ... Very intimate data is exchanged ... absolute trust ... [self-sacrifice] ... dyadic Life partnerships ... resist intrusion from outside ... mature souls and above only ... moving, emotional and intellectual centers involved.
- 6) "stewardship" ... protective love ... unconditional love ... older souls ... parental and maternal or ... the world at large... telepathic ... share soul-to-soul ... Higher centers involved.
- 7) "agape" ... infinite and transcendental souls bestow upon their followers... no expectations...

This septenary seems to have little if any real resemblance to the normal septenary. We would have to make various reassignments to the Centers and the soul Ages mentioned to match either the Natural Sequence or the Michael Math Sequence, except the Intellectual Center is already at #3, matching the Natural Sequence here; it would have to move to #2 to match the Michael Math Sequence. The reference to Moving Center at #2 would have to move to #3 to match the Michael Math Sequence or #1 to match the Natural Sequence. The "Young Souls" at #2 would have to move to #3 to match both the Natural Sequence and the Michael Math Sequence. The combination of Moving, Emotional, and Intellectual Centers at #5 would all be shifted to #4, because the Instinctive Center is a combination of all Centers. The reference to Mature Souls at #5 would have to move to #4 to match both the Natural Sequence and the Michael Math Sequence. The reference to Older Souls" at #6 would have to move to #5 to match both the Natural Sequence and the Michael Math Sequence. The reference to Transcendental Souls at #7 would have to move to #6 to match both the Natural Sequence and the Michael Math Sequence. Either the channeling was garbled in transmission or there really is not a match to the normal septenary here. However, this looks to me like a septenary that *could* be formulated per the Natural Sequence, because it involves a *development*, not a *deployment*.

Levels of Paraverbalism (Telepathy)

In a recent study group, Michael mentioned telepathy and alluded to the various levels of it. What are the seven levels of telepathy? (Note: These levels were given to us by Michael in reverse order. In other words, a level 7 is the weakest of the paraverbalists, while a level 1 is the strongest.)

The level SEVEN paraverbalist accurately perceives the emotions of others around him/her, and can sense danger whenever present.

The level SIX paraverbalist (low-level monitoring) can accurately perceive whether or not a person talking to him/her is telling the truth as he/she knows it, as well as perceiving the person's emotions.

The level FIVE paraverbalist perceives the emotions surrounding the spoken words, but also can hear words that are being formulated before they are spoken — or swallowed. This is the level where most touch paraverbalists work. All mature souls and older are at least level three [five?] paraverbalists.

The level FOUR paraverbalist can accurately assess the physical condition of the speaker, as well as perceive emotions and thoughts.

The level THREE paraverbalist can gauge the historical context as well; in other words, he/she can tap into the sender's memory banks if permission is given.

The level TWO paraverbalist is able to effect mind-to-mind contact, but cannot break through heavy shielding without permission. This fragment can sift through your memory banks and help you recover long-buried memories even from past lives.

The level ONE paraverbalist is able to invade the minds of others, without permission, and alter them at will. Level ONE paraverbalists can effectively perform "mind wipes." The level ONE paraverbalists we work with are aware of, are very cognizant of, their strengths and very careful how they use them.

Why does Michael put the top paraverbalist in the number one slave position and not in the number seven king position.

There is no real reason, and it has absolutely nothing to do with the Roles this time. It is simply that this is the way the information came down to us and we have perpetuated it. You can reverse this if it would be more comfortable for you.

Well there you have it from the Michaels themselves: This septenary allegedly has nothing to do with the seven Roles. Notice also that the numbering is the reverse direction as other septenaries given by the Michaels, indicating that there is nothing numerologically sacred about starting at one end or the other of the sequence. This is important for understanding aspects of some other instances of the septenary, as indicated in other sections and subsections and sub-subsections of this Epilogue.

Astral Plane Levels and Stages

There is also some information in Sarah's later unpublished channeling about the seven levels of the Astral Plane and the passage of the soul through those levels on the way to reincarnation. This situation is obviously an example of development rather than deployment. With some work it is possible to combine and somewhat reconcile three versions of the alleged information.

Here is the first version:

What are the seven stages of assimilation after death before rebirth?

The stages that most fragments experience are [1] denial, [2] questioning, [3] self-realization, [4] remembering, [5] integrating, [6] choosing, [7] rebirth. [09 March 1996]

In my opinion, some of these have a vague resemblance to the corresponding Processes in the Natural Sequence, but I perceive it would be a stretch to make a case that there is an actual correspondence. It might be a case where students who have some time to think about it could come up with better names than Sarah/Michael did "on the spot".

This list was expanded upon at a later session, and had some differences:

Even before my father's death last year, I was interested about what happens in the Astral interval, between incarnations. Is it at all possible to identify stages through which the astral fragment passes between the physical death of one lifetime and the rebirth of another? An example on the physical plane is the seven Internal Monads.

The stages that a fragment passes through during the astral interval are very much like those that fragments on the physical plane experience when faced with a potentially fatal illness:

- [1] First there is denial and a period of utter confusion (lasting anywhere from a few minutes to several years). Depending upon the soul level, the fragment may have to experience an extended period of time during which the personality creates, out of astral matter, whatever it was that the particular fragment believed might happen after death. For instance, if the early mature soul wholeheartedly embraced the existentialism of Jean-Paul Sartre, then that fragment might have to endure a long period of "nothingness" before proceeding. Baby soul fundamentalists may create for themselves an entire heaven-hell panoply, complete with angels, devils, thrones, harps and the like. All of this is a stalling procedure, while the fragment continues to deny that a transition has occurred.
- [2] Recognition comes later, when the fragment realizes that the astral matter in which it has found itself is malleable and can be molded to form anything the fragment desires. The fragment also realizes that it is not alone, and is, in fact, surrounded by other similar fragments that are very familiar.
- [3] Anger ensues as the fragment realizes that it is without a physical body, and that body, which it prized so highly and feared so greatly, is truly dead. Often the fragment in this stage will lash out at any other fragment close at hand, particularly those who are trying to help. The anger begins to abate when the fragment realizes that its astral body is far more fluid and flexible, and can be used to travel enormous distances at unheard of speeds.

- [4] Assimilation comes as the fragment understands that there is work to be done as it begins to review the life just lived. Emotions run the gamut here, from mild amusement to deep horror and shame, when they realize what the personality left behind as it vacated the physical plane.
- [5] Reconciliation occurs as the fragment meets up with entity mates, cadence mates, old comrades-at-arms and learns that it is a part of an endless cycle. Often it is joined by the essence twin and the task companion, even if those fragments are still incarnate. This will be experienced as dreamtime by fragments still in the physical body. The fragment begins to review its entire life cycle, including the Overleaves
- [6] Acceptance comes as the fragment begins to review the options for the next life and to make new agreements. An example might be that this fragment and the essence twin would agree not to meet in the next life because both have difficult karmic ribbons with other fragments. At this point, the personality of the past life has faded away, and it is the essence that is making the agreements. No Overleaves are in the way, so this may explain to students why "such awful Overleaves" are often chosen. Those awful Overleaves are chosen because the essence understands that they will facilitate the lesson that the fragment needs to learn in order to move along the cycle.
- [7] Mastery or renewal comes now, when the Fragment chooses its gene pool, or its family of birth and elects to be reborn. When the Essence enters its new body differs with the soul age. Mature and older souls tend not to enter the new body until the moment of birth. Advanced students of ours have recalled being present at the birth of an older soul and actually being aware of that Essence "swooping down into the body". Many infant and baby souls will, on the other hand, be anxious to get back to the Physical Plane and will inhabit the body as soon as it is viable. [undated]

It would be a bit of a stretch to make all of these descriptions fit either the Natural Sequence or the Michael Math Sequence, although I believe one could tweak the descriptions to fit the Natural Sequence rather well.

Following is the third accounting of development of the soul on the Astral Plane:

I'm fascinated with the Astral Plane, and would like any interesting comments that Michael has not mentioned before.

As you may have noticed, most of what we have been discussing has seven levels, or seven facets, or seven names. The rule of seven pertains to the astral plane also.

- [1] The lowest level of the astral plane could be called the gateway, or even the receiving area. This is where fragments enter when astral traveling, where most of the deathscapes are created by newly transitioned fragments.
- [2] The second level is the Akasha, or the living record. You could even call it the library.
- [3] The third level is the ... work room, and this is where you begin to review all of your past lives.
- [4] The fourth level is where you put it all together and try to understand why you did what you did and why other people did what they did to you.
- [5] The fifth level is the meeting ground, where the major agreements are made with other fragments for the next life. This is also a visiting area, where still incarnate fragments come to learn.
- [6] The sixth level is the level during which the fragment chooses the Overleaves which will manifest in the next life; looks at possible genetic pools, karmic ribbons.
- [7] The seventh level is the level from which the fragment reincarnates, the other door of the gateway. [undated]

I leave it to the reader to compare and contrast these three accountings of the astral interval of the soul's development. So far as I have been able to discern, no case can be made that the accounting favors either the Natural Sequence or the Michael Math Sequence in the first three stages, which is where the Natural Sequence differs from the Michael Math Sequence.

One other septenary is mentioned in the transcriptions of Chambers's 1990s channeling:

I would like to ask about the seven parts or levels or whatever they are [called] of [the Chief Feature of] Self-deprecation.

Well, there is [1] "abasement", which is the negative pole; there is [2] "self-abnegation" (or denial of self); there is what we would term [3] "mortification"; there is [4] "resignation"; there is [5] "timidity"; there is [6] "meekness", and there is [7] "humility" (which is the positive pole). [08 June 1996]

This sequence obviously does not help with resolving the matter at hand in this chapter: "Mortification" was given as the negative pole of Martrydom, and "Resignation" as the negative pole of Stoic in *MFM*. Perhaps "Timidity" fits better as a step in the Caution Mode, above the negative pole of "Phobia". As with other names

originally presented by the Michaels, perhaps better names are warranted, and perhaps they could resemble the Processes better.

Comments on Chambers's 1990s Channeling

From these and many other examples we can see that neither the Michael Math Sequence nor the Natural Sequence is the be-all and end-all of the septenary. There are examples of the septenary that do not fit the Processes, and if they do fit the Processes, they do not necessarily follow the Natural Sequence or the Michael Math Sequence.

As we have seen in both José Stevens's books, and in Sarah Chambers's channeling, there are many anomalous septenaries in the Michaelian teachings — septenaries that do not fit the pattern of the Natural Sequence or any other pattern. It would have been convenient and consistent if these had been ordered per Natural Sequence — or something. Frankly, I wonder how much of these variations are real channeling, and how much are improvisations without merit. For me to accept these anomalous septenaries as valid, in my opinion, there needs to be a compelling rationale for it, and none has been given, and none has been found by me. I have a strong bias to retain the Natural Sequence in all *developmental* septenaries unless there is a good reason to do otherwise. This way, I can use the stages of one septenary to more fully understand the stages of another septenary, thus disambiguating them, rather than ambiguating the stages by mixing the components. Examples of *deployment* can of course vary to suit circumstances and situations.

Shepherd Hoodwin's Channeling

In late 1991, I capitulated to the accumulating evidence that the Natural Sequence was fundamental rather than the Michael Math Sequence. Soon afterwards, I had some correspondence with Michaelian channel Shepherd Hoodwin about my "heresy" (we had known each other for several years). Subsequently, some of my ideas about the Natural Sequence got published in his book *The Journey of Your Soul (TJOYS)* (1995). This will be reviewed below, and as we will see, I have some quibbles with that channeling, and it leaves a number of questions unanswered. It provides a rationale for why the seven planes of creation follow the Natural Sequence, and it also gives a reasonable and plausible explanation of why perhaps some soul energy *deployments* might be per the Michael Math Sequence. Thus, Hoodwin's channeling asserts the validity of both Natural Sequence and Michael Math Sequence, just as Caris Turpen's channeling did.

One of the questions left unanswered was that Hoodwin's channeling did not address my understanding that Roles correlate with soul Ages/Levels this way: Infant Soul = Warrior; Baby Soul = Server; Young Soul = Artisan. It was in 1998, three years after *TJOYS* was published, that I got the channeling from Turpen previously mentioned, so at the time I had my discussions with Hoodwin, I did not understand that *development* could follow the Natural Sequence and *deployment* could follow the Michael Math Sequence without contradiction. Therefore, Shepherd's channeling did not address the issue of Ages/Levels correlating, or not, with the Natural Sequence.

With that brief introduction in mind, let's look at Hoodwin's channeling in some detail.

In Hoodwin's book *TJOYS* we find information about Planes arranged per the Natural Sequence. I asked him where he got this information, but he said he did not remember. I find it in Stevens and in Theosophy and elsewhere (as reviewed in the two chapters on planes in this *History* book and one chapter on planes in the *Cosmogony* book), but I don't remember when I first found it in Theosophy; some time in the 1980s I suspect. At any rate, here is what the Michaels through Shepherd had to say on the subject of the planes:

The causal plane [the third plane, is called "Mental" in Theosophy] is a plane of intellect; it has a medium of thought (expression axis) energy, whereas the physical [first] plane has a medium of kinetic (action axis) energy, emphasizing movement and action. The astral [second] plane has a medium of emotional (inspiration axis) energy, or content. [TJOYS, p. 344]

In one sense, there is symmetry in the reflection of higher and lower planes when correlated with centers and essence roles. In other words, warriors do correlate with the physical plane more than servers do, in the sense that warriors' energy is kinetic, and so is the physical plane's. The same is true for the astral plane and servers, and the causal plan and artisans. However, in another way of looking at it, in terms of Cardinality and Ordinality, the role of server correlates with the physical plane, in that both are the most Ordinal of roles and planes. You might wonder why the correlations are not the same in both the qualities of kinetic / emotional / intellectual, and Ordinality to Cardinality. The answer has to do with the structure of this universe. Servers need to be the most

Ordinal, so that the base of universal function be service and inspiration rather than action. The universe would be a different game if warriors were the most Ordinal. The lack of symmetry in relationship to numbers and roles vis-á-vis the axes is deliberate. The fact that each axis occupies a different position in the higher and lower triads ensures that one does not become predominant. If warriors were number one, and kings seven, the action axis would be predominant: first and last are the most powerful positions. However, beginning the sentient progression with a kinetic plane, the physical, and ending with a kinetic plane, the buddhaic, before rejoining the Tao, makes sense because the first and last planes are closest to the Tao, and pure energy [Action] must precede its differentiation into love [Inspiration] and truth [Expression]. Therefore, there is symmetry with the planes. We caution against looking only for symmetry. The universe must be both symmetrical and asymmetrical in order to grow. There is symmetry when looking at the planes themselves, and asymmetry when looking at the soul's experience of the planes. The soul's experience of the physical plane, for instance, has a number one, serverly, cast to it. To advance on the physical plane, the essence must toil with a steadfastness, and even endure drudgery, that the server essence is best equipped for. Physical-plane experience must have an inspirational resonance for there to be evolution. An action resonance on this action plane would be out of control. [TJOYS, p. 185]

Contrary to the nonsense in the last couple of sentences in that quotation, I would say that the Warrior Role is better "equipped" by nature than the Server Role to "toil with steadfastness" and "endure drudgery" because of the aforementioned correlation of the Ordinal Action Plane (Physical) and the Ordinal Action Center (Moving) with the Ordinal Action Role (Warrior). If I were of the conviction that the Michael Math Sequence has no validity, I would say that this channeling hints of rationalization rather than rationale. It is a number of unsupported and probably unsupportable assertions and arguments. Whereas the Natural Sequence has corroborating evidence from mathematics, science, and experiential knowledge about other realms of being — as we shall see in whole Parts of my Cosmogony book — whereas the Michael Math Sequence does not. However, I would also say this channeling does not contradict what I am proposing about the appropriate realms of the Natural Sequence and the Michael Math Sequence. It does not seem completely implausible to me that the Roles could allegedly intentionally be Cast (deployed) in a sequence for a reason that did not conform to the Natural Sequence of development, which is the structure of the Universe (in terms of the seven planes) itself, which Hoodwin regards as more fundamental, as do I. The Michael Math Sequence is said to only apply to the soul's experience of this more fundamental reality system. This assertion is reminiscent of Turpen's channeling, which, I remind you, said that Ordinal triad deployment can vary to suit "circumstances and applications". Some people would say these two independent channelings are sufficient to establish veracity in the matter. I say: maybe so, maybe not; let's look to scientific evidence and philosophical argument rather than dubious unreliable channeling.

I do have a quibble about Hoodwin's channeling in the paragraph quoted above. There is the sentence where it says, "Servers need to be the most Ordinal". The Server energy is not inherently most Ordinal per se—it is second most Ordinal per se in its natural position in the Natural Sequence, the most fundamental arrangement of the septenary. According to MMFM, page 189, the number one of the sequence of seven is the most Cardinal — not Ordinal. The Server Role is the second-most Ordinal in the Natural Sequence, but Casting it in the number one position gives it more Cardinal influence than it would have in any other position. Therefore, I believe it is more accurate to say that the choice was made (who knows by whom) for the second-most Ordinal Role, Server, to be Cast as most Cardinal. Furthermore, the Server is allegedly the most common Role on planet earth, 25% of the world population according to Yarbro, and Michaelian students have generally accepted this channeling as valid, as do I. That helps give it more influence than any other Role on this planet. As Hoodwin's channeling said, this is preferable to those contentious, pugnacious Warriors having the most influence. Homo sapiens is violent enough without that, because of its animal heritage: survival of the fittest in a hostile environment.

So, please note that nowhere am I arguing for or against the Michael Math Sequence in regard to Fragmentation of Cadres into Entities into Sides into Greater Cadences into Cadences. Fragmentation is something for which we have no "evidence" other than channeling. Per Hoodwin's and Turpen's channeling, which seems reasonable to me, the Michael Math Sequence does not apply to every instance of the septenary — as some seem to believe. Because of what I see in so many other spiritual teachings as well as what I see in the world, I contend that the Michael Math Sequence is not a Universal Truth (of all seven Planes) or even a World Truth (of the Physical Plane). Specifically, I contend that the Michael Math Sequence does not apply to developmental processes, such as Soul Age and spiritual growth, because developmental progress in stages must

build on stages that have gone before; there is a logical progression to the sequence of stages. Just as the soul progresses from the Ordinal Action (Physical) Plane to Ordinal Inspiration (Astral) Plane to Ordinal Expression (Mental, aka Causal) Plane; so the soul progresses through the Ordinal Action (Infant) Age to the Ordinal Inspiration (Baby) Age to the Ordinal Expression (Young) Age. It is merely an unsupported and unsupportable dogma-doctrine of the Michael Math Sequence that the reverse of the Integration process, the Fragmentation (Casting) process, happens in a different sequence.

As for Hoodwin's channeling, I had done little thinking and writing on the Natural Sequence when he channeled on the Michael Math Sequence for his book. And I don't find his channeling totally objectionable, except it does not address the who, what, when, where, why, how questions about the Michael Math Sequence. All I have in mind is to find out which instances of deployment were per the Michael Math Sequence, if anywhere, and where. Having found no instantiations of the Michael Math Sequence outside of the Michaelian teachings, I suppose it would require reliable revelation via an unbiased Michaelian channel, if there is such a thing. I would ask the standard penetrating questions: who, what, when, where, why, how. Does it only apply to human souls? on this planet? at ensoulment? at Casting? who made the decision? on the Physical Plane, or above? under what circumstances? And so on.

Two dubious assertions were made on the second page of the Michael Math chapter of MMFM; these alerted me, and should alert everyone else, to the fact that Michael Math is confused — in the sense that there are some obviously problematic statements about it. The first clue that there is confusion is where it gives the names of the poles of the Levels and says these "resonate" with the other six Overleaves in the same Process (my terminology), but even a cursory comparison reveals they do NOT resonate. (A non-cursory comparison is given in this History book in Chapter 4K, "The Names of the Levels". No one other than myself that I know of had actually tried, prior to and subsequent to MMFM, to pick names for the Levels that actually do "resonate" with the names of the Overleaves.) The second clue that there is confusion in the Michael Math chapter is where it says that the sequence of seven Overleaves is symmetrical like the yin-yang symbol (the Natural Sequence is), but then we are given a sequence, the Michael Math Sequence, that is NOT symmetrical. It never ceases to amaze me that everyone tolerates these issues, even when I point them out. Anyway, in my mind, these two blatant confusions cast doubt on other related Michael Math Sequence "revelations". I suspect that the channel of the Michael Math Sequence was biased because s/he was unfamiliar with Gurdjieff, and s/he subconsciously took a clue from the relative abundance of Roles (as channeled perhaps by Chambers), Servers being most common and Kings least, hence the Michael Math Sequence. It occurs to me that maybe the reason the Michael Math Sequence feels right to some students is that they glided right over these contrary clues, the info went past their critical filters (unlike with me) and into their subconscious, and lodged there as a "feeling" that it is correct.

I perceive an additional problem with the Michael Math schema.

Hoodwin's channeling offered a rationale or rationalization for why the Roles where Cast per the Michael Math Sequence and not Cast per the Natural Sequence, but the Michael Math chapter moved the entire lineup of Overleaf categories (Goal, Chief Feature, Attitude, Age/Level, Center, Mode) along with the Roles. Thus: "One: Infant, Slave, [Repression,] Retardation, Stoic, Emotional Center, Self-deprecation." (MMFM, p. 190) And so on for the other Overleaf categories (pages 191–192). It is one thing to say, as Hoodwin's channeling says, that the Roles were Cast (deployed) in an unnatural sequence for tainting ("flavoring" and "coloring") reasons, but it is quite another thing to say, as the Michael Math chapter says, that all of the other Overleaf categories were also Cast (deployed) in an unnatural sequence. It makes perfect sense that the ordering of the Overleaf categories should stay with the ordering of the Roles, and one can sensibly put forward a rationale for deploying Roles per the Michael Math Sequence. However, that would mean that all of the Overleaf categories would be tainted if deployed other than in the Natural Sequence, and that makes no sense. We know that birth order affects human personalities; it taints their qualities and characteristics. The Michael Math chapter goes on and on about how Casting sequence taints the qualities and characteristics of the Roles — and by implication, the corresponding Overleaf categories that metaphorically 'come along for the ride'.

It makes sense to me that there is meaning to the numerical ordering of the Casting process. In the Michael Math chapter it says that physical plane Roles are chosen by the entity as a whole, and then Cast in groups of Roles, and this place in Casting within their entity affects their Cardinality/Ordinality ratio. When I first read that chapter in 1986, in trying to accommodate the channeling, I went beyond this assertion to speculate that, if there is any validity to Michael Math, then Casting order distorts them if the casting is not per Natural Sequence. That is to say, Casting — position, cadence, side, entity, and cadre — "taints" the pure Natural

Sequence quality with a Michael Math Sequence quality. In trying to accommodate the channeling, I went even beyond this to speculate that this principle might apply to differentiation of the Logos of this planet? this star? this galaxy? even before entities and cadres are Cast, where the "energies" are cast out of Natural Sequence into Michael Math Sequence, skewing them somewhat. I am not at all comfortable with this idea, although it seems to be what Shepherd's channeling implies. As I have thought about this idea, and observed people over the decades since then, I don't see this distortion in the names of the traits or the expression of the traits; therefore I don't believe in the Michael Math Sequence. This is another clue that the Michael Math chapter is confused. If there was a tainting of Traits by a re-sequencing of energies, it should have been reflected in the names and descriptions of the Traits. So, my current understanding is that the Michael Math Sequence is just wrong in regard to casting deployment as well as development.

I strenuously object to the Michael Math Sequence for the fact that the Michael Math Sequence hijacks the meaning of Oneness, Twoness, and Threeness that is inherent in the Natural Sequence schema, and which is explained in detail in my book *The Tao of Personality*. Because I understand the logical and mathematical derivation of the Overleaf System, I know that the Natural Sequence, not the Michael Math Sequence, represents the fundamental structure of the universe in space/time and time/space. I understand the structure and meaning of the Natural Sequence, and I see that Oneness (e.g., Warrior) has not been tainted with Twoness (e.g., Server), I see that Twoness (e.g., Server) has not been tainted with Threeness (e.g., Artisan), and I see that Threeness (e.g., Artisan) has not been tainted with Oneness (e.g., Warrior). I also see that the names of all of the Traits, including Roles, are consistent with the untainted Natural Sequence. When observing people and their Overleaves, I do not see any hints of the tainting of Traits that would occur if there was a resequencing of the energetic spectrum somewhere this side of Akasha into the Michael Math Sequence or any other unnatural sequence.

In conclusion, there are numerous reasons why I doubt the validity of the Michael Math chapter. More is said about tainting in the section after the next section, which is about the planes. I have more to say about the planes because it is the one septenary about which most contingents of the Michaelian teachings agree that they follow the Natural Sequence, not the Michael Math Sequence.

General Comments on Planes

The Michaels refer to a phenomenon which appears on all seven planes as a "Universal Truth", and a phenomenon which appears throughout the physical plane as a "World Truth" (MMFM, p. 44-45). Because the seven planes follow the Natural Sequence, this means that the Natural Sequence is a Universal Truth. It is also stated that each plane is divided into seven levels or sub-planes (e.g. MFM, p. 42). The sub-planes are a subset of the planes. Because the seven sub-planes including the physical plane follow the Natural Sequence, this means that the Natural Sequence is a World Truth.

The same set/subset configuration is said about the seven Levels within the seven Soul Ages. Thus we see a "nesting" of septenaries within each other in terms of the planes/sub-planes and in terms of the Ages/Levels. My claim is that this nesting appears at many time scales all down from the Cosmos as a whole, thus from Planes to sub-Planes to Ages to Levels to Life-Stages to sub-Life-Stages. Thus there is a nested pattern of 7 within 7 within 7 within 7 et cetera in terms of time processes ... aka development.

Because the Michaels present the Natural Sequence as a Universal Truth, I regard the Natural Sequence as the "Natural Sequence", as "Tao's Template", as the "primordial pattern" for creation. There are several specific features of the Natural Sequence septenary that are required of any other septenary if it is to be regarded as a proper subset of Tao's Template: a) there are seven components altogether; b) there are two triads in a symmetrical reflection of each other with the middle component being the reflecting point; c) the two triads have a recognizable oppositeness (complementarity, duality), as in "positive and negative", or "yin and yang", or what Michaelian students call Cardinal and Ordinal; d) the middle component is recognizably "neutral" or intermediate with respect to the "positive" and "negative" triadic components; e) the components of the triads are recognizably the three dimensions of "Action, Inspiration, and Expression". Whenever I evaluate a proposed septenary to see if it is a subset of the Natural Sequence, I look for the pattern shown above. In previous sections of this Prologue I quoted some channeling in which septenaries were presented, but which did not qualify as subsets of the Universal Truth, the Natural Sequence.

With each subset of Tao's Template, we can expect some variations in names and descriptions. I see the subsets as variations on a theme, required by the circumstances in which the subset exists and functions. I also

like the analogy of fractals in mathematics: each iteration of the fractal pattern looks similar in some ways yet different in others. The Overleaf System of human personality traits is a subset that is far removed, many fractal iterations or generations, from Tao's Template. My *Cosmogony* book purports to present some of the septenaries between the pure abstract archetypes in Tao's Template and the Overleaf System.

The Michael Math Sequence is not a subset of Tao's Template, it is a variation from the Natural Sequence, and it might or might not have validity. As explained in previous sections, the Michael Math Sequence is an example of a *deployment*, and it can vary from the Natural Sequence and still be valid.

Evolution/reintegration of Fragments back to the Tao ('up' through the Planes) is just one example of development that I have found to apparently follow the Natural Sequence. The evidence for this is connected with the nature of the seven planes of creation, which follows the Natural Sequence. The Natural Sequence is developmental — meaning, each step is necessarily built on what went before. You cannot graduate to the Astral (aka Emotional) Plane until you have completed the curriculum of the Physical Plane, and so on all the way back to Tao. My present understanding is that the Natural Sequence developmental order is not subject to choice. Deployment is subject to choice, to suit "circumstances and applications" as Caris/Michael said. I believe it is essential for readers to understand this distinction. Tao decided some things that we cannot undecide, such as the Natural Sequence space/time structure within which we exist and function and develop. Some things can apparently be decided at levels within Tao's creation, deployments of septenarian "energy" perhaps being one of them.

Just in case I did not make it completely clear in previous sections, below I state explicitly the trail of logic that I follow in regard to the Michaelian teachings about the planes.

- My research reveals that the Natural Sequence is perhaps rampant in nature and supernature, and it is not that hard to find or see if you have a knack for that sort of thing. For whatever reason, I found it, I recognized it, I understood it, and I have an irrational urge to share it. This might just be the result of some bias on my part; in my *Cosmogony* book I present hundreds of pages of examples of it, and I invite readers to be the judges and provide feedback about whether they believe I am objective or not
- So far as I have been able to discern from reading the four Yarbro books on the Michaelian teachings published between 1978 and 1995 — that the Yarbro contingent was not aware of the Natural Sequence during that interval.
- However, the non-Yarbro contingent of the Michaelian teachings is not unaware of the Natural Sequence, in regard to the planes at least. They taught it (*Earth to Tao*, 1989, p. 131, *Michael: The Basic Teaching*, 1990, p. 13) before I accepted it (1991) after trying to believe in the Michael Math Sequence (because I had "Yarbro fundamentalist" inclinations back then.) Previous sections in this chapter reveal that the non-Yarbro contingent uses the Natural Sequence, the Michael Math Sequence, and a number of other random orderings of the septenarian components, which I suspect are mostly the product of sloppy channeling.
- Most readers of my *Cosmogony* book will probably be unaware of the Natural Sequence and its significance.

To Understand "Deployment"

Please indulge me while I indulge in some speculation that attempts to understand and reconcile the Michael Math Sequence and the Natural Sequence. I propose that during whatever *deployments* of personality factors (such as Role and Casting) there be (at some stage in the Fragmentation of Tao and/or at the Casting of souls and groups of souls and/or at the incarnation of a species), energy can be skewed or shifted out of the Natural Sequence for whatever purpose suits the individual making the decision, to suit the situation encountered or to effect the result desired. We Michaelian students are already familiar with a similar process. Let us say that a Server soul wants to experience what it is like to be a King, for whatever reason. All it has to do is choose the King-ish (Cardinal Action) Overleaves — Dominance, Aggression, Realist, Higher Moving, and/or Impatience — for a lifetime or more. These Overleaves together would give it far more of the "energy" of a King than a King who chose the lineup of Server-ish (Ordinal Inspiration) Overleaves.

This has practical implications, and I am going to use myself as an example because of the way I am generally perceived. Even though I am an Artisan in Role, most people mistake me for a Scholar. I certainly seem like Scholar Role, but this is mostly because I have four Scholarish Overleaves and Casting: Observation

Mode, Instinctive Center (secondarily), Position, and Cadence. But, to make the Artisan energy show up even less, I also have four Sage-ish Overleaves: Acceptance, Higher Intellectual, Fifth, and Old. These are on the opposite side of the Expression Axis from my Artisan Role, thereby counteracting the Artisan "energy". In addition, I have three Priest-ish Overleaves: Arrogance, Spiritualist, and Greater Cadence. Thus, there is nothing in my Overleaf array to reinforce or augment my Artisan Role; in fact, the other energies counteract the Artisan. It is no wonder people do not see much Artisan in me — other influences are stronger. What they don't see in mere personality expression is an art major in college, then a four-decades long career in engineering (where I was drawing blueprints and writing specifications), and a love of fixing computers — typically Artisan stuff.

So, my speculation is this: Individuals in the Fragmentation process skew their energy by shifting it out of the Natural Sequence into some other sequence, the Michael Math Sequence being one option among more than five thousand. Fragmentation is a way of reallocating resources to meet a situation or accomplish a goal. The unified mind of the Cadre, or perhaps some even larger Being, chooses its "underleaves" — to coin a new word — not by ADDING different energies ("Overleaves") to the basic (Role at the Physical Plane end of the Ordinal triad) energy, but by DIVIDING up its energy in a way to produce the desired effect (at the third plane end of the Ordinal triad). By Fragmenting an energy other than in the Natural Sequence, it gives that energy the quality of that different position. For instance, if the Server-ish (Number Two) energy is deployed to the Number One position in Casting, it gives that Server-ish energy a Warrior-ish flavor. If the Artisan-ish (Number Three) energy is deployed to the Number Two position in Casting, it gives that Artisan-ish energy a Server-ish flavor. If the Warrior-ish (Number One) energy is deployed in the Number Three position, it takes on an Artisan-ish flavor. I see it as akin to birth order among human siblings. In case you have not heard of this — I think it is fairly widely known — birth order can significantly affect a person's overall personality. Firstborn children tend to have some particular traits, and last-born children tend to have some particular different traits, and middleborn children also tend to have some particular characteristics. Firstborn Warriors will be a little different from middle-born Warriors will be a little different from last-born Warriors.

This idea of "skewing" "energies" via "unnatural" casting comes from the first paragraph on page 190 of More Messages from Michael, where it talks about the Casting of Roles in the Entity. Different Roles are said to be Cast in blocks scattered throughout the Entity. Ordinal Roles can be Cast in the Cardinal half, and Cardinal Roles can be Cast in the Ordinal half ... or whatever. This "influences" the nature of the Role in that particular Entity. My suggestion is that a similar process might have preceded this Casting into "unnatural" locations even before Entities and Cadres are Cast. This is an idea about which we have no channeling, and even if we did, there is no guarantee that it would be accurate, so I am doubtful of its usefulness in our daily lives. Each Role does not completely take on the quality of the sequence number when cast in some other sequence than the Natural Sequence; it is only "tainted" (or "flavored" or "colored") with the quality of the number. It metaphorically adds a dab of green to the red, or strawberry to the vanilla. This is stated repeatedly in the MMFM Michael Math chapter. If it were a total conversion, then a Server would become a Warrior for instance, not a Warrior-flavored Server.

If all Roles were cast per the Natural Sequence, they would all be balanced Cardinal/Ordinal. Shifting the Ordinal triad of energies per the Michael Math Sequence, the Warrior becomes more Ordinal/feminine by two steps and the Server and Artisan both become more Cardinal/masculine by one step so the whole septenary remains balanced Cardinal versus Ordinal. If this actually happened and it is not a mistake in channeling, there are consequences in real life. There are also consequences in that the Warrior gets less Action and more Expression "energy", the Artisan gets less Expression and more Inspiration "energy", and the Server gets less Inspiration and more Action "energy".

So, I can live with the idea that the Michael Math Sequence and other variations on the Natural Sequence are perfectly legitimate when it comes to *deployment*. I accept that deployments can be managed as an exercise in choice. It may also be that resources could be deployed in some arbitrary way, merely as a scientific experiment, just to see "what happens if we do this ..." It adds an element of the unknown into the mix; it adds chaos and adventure and exploration and creativity and challenge into the equation. Our lives are most interesting when we are operating in the precarious balance of chaos and cosmos. If all septenaries were per the Natural Sequence, perhaps that would be too boring, too stagnant, too rigid. Hoodwin's version of the Michaels made this point in the channeling that I quoted, and I concur.

So, Hoodwin's channeling provided one explanation of why the Natural Sequence is a Universal Truth. I do know that Hoodwin is not the only channel aware of the Natural Sequence. At the second Association of

Michael Teachers (AMT) conference in early 1999, channel Aaron Christeaan gave a whole talk in which he used the Natural Sequence to explain something. I was exhilarated to find that someone besides myself in the Michaelian teachings knew of it and understood it. It was afterward when I asked him about it that he said that the Natural Sequence and the Michael Math Sequence were both valid — to quote him: "It can be both ways." I did not have time to discuss this with him further. Some Michaelian students would say that these three independent channelings are sufficient to establish that there is some truth to the Michael Math Sequence. I say: maybe so, maybe not.

My belief is that most of the channels were and are simply unaware of the Natural Sequence and its significance as the default septenary, and that is why the Michael Math Sequence has taken on a much wider significance than it properly should, in my opinion. One of the points I am trying to make in this Prologue to my Cosmogony book is that the Natural Sequence rules the meaning of the numbers because the Natural Sequence is a World Truth of necessity in terms of the way that the cosmos is structured in time, and that this determines the way that things naturally develop. The Michael Math Sequence does not rule the meaning of the numbers, as MMFM says, because it is not a World Truth — it only applies to deployments, which are matters of choice, not a matter of a foundational structure of a reality system. To use a musical analogy, the Natural Sequence is 'The Theme' of the Universe, and the Michael Math Sequence is one variation on 'The Theme', composed for whatever reason. This variation is what makes the symphony of life interesting and worth playing out. There are of course "seven factorial" (7 x 6 x 5 x 4 x 3 x 2 x 1) = 5040 ways to arrange the sequence of sevenness, and choosing something other than the Natural Sequence provides other interesting and challenging variations on 'The Theme'.

Ensoulment

Around the turn of the millennium, on one of the Michaelian teachings websites, I initiated a discussion about the difference between *development* and *deployment* as I applied the terms to the Natural Sequence and to the Michael Math Sequence. The following is a record of the exchange that ensued, after I revealed what the Michaels had said to me via Caris Turpen, which I repeat here for your convenience.

There is a complex answer here. It has to do with how the sequence is being applied, and what the desired outcome of the application is. In terms of original position and Casting, yes, Server does come first when there is nothing there. When there is already something there, Warrior moves to first position. Server moves to third position, because Warriors then serve as what we would term "recon". When there are already systems in motion, it would make no sense to <u>cast</u> the "sheep" among the "wolves" by sending Servers first. They would be eaten. It makes every bit of sense to send Warriors first — for reconnaissance, for building fires, for protection, for creating [= establishing] the fort — so that the Artisans can come and figure out how to dig the well, and then the Servers can come patch up the wounded, and make the good bread, and then everything else starts to happen. It is a dynamic triad that actually will rotate in terms of the perceived need. So both are correct, and it all has to do with application.

One question that arose in the online discussion was if the word "cast" underlined in that quotation referred to Casting on the Astral Plane or if it referred to the original ensoulment of hominids on the Physical Plane — "ensoulment" referring to the alleged event where animals that have species souls start having individual human souls instead, which appears to have happened in human prehistory when archaeological evidence indicates that hominids made a quantum leap in the quality of their consciousness, in terms of such expressions as art and religion and technology and language.

Following is a record of that discussion.

Q: So we are beginning with the first incarnated lifetimes of fragments on the physical plane or the densest plane, like on Earth, for example. We might call it Birth of Sentience in physical form.

Phil: It appears to me that in this post you are basically opining about how the initial ensoulment of homo was managed in Cro-magnon for sure or perhaps Neanderthal times, some tens of thousands of year ago. (I am vaguely aware that there is dispute among anthropologists about whether or not Neanderthals were "sapient" (better choice of word than "sentient" in this context) the way Cro-magnon's were, but that is irrelevant to our discussion here.) Further down you refer to the Caris/Michael channeling. When I heard what she said, I wondered, as you apparently did, if the Michaels were referring to ensoulment [on the Physical Plane] rather than Casting [on the Astral Plane]. I regard ensoulment as an example of deployment, not development, so it does not affect my understanding of whether the ensoulment occurred per Natural Sequence or Michael Math Sequence. That is, even if ensoulment is an example of deployment, the choice

could have been made by the managers of the procedure to follow the Natural Sequence rather than the Michael Math Sequence — or follow the non-Natural Sequence, non-Michael Math Sequence sequence that Caris/Michael mentioned. The choice was probably made to suit "circumstances and applications".

Q: Here's where I sense a somewhat masculine (which has dominated our culture) perception seems to be influencing your take on development.

Phil: Perhaps because I have not yet presented my research on the manifestations of the Natural Sequence in various realms and various scales of development, you and maybe other people do not have a clear idea of what I mean by "development". I mean evolution in time, and this has nothing to do with cardinal/masculine and ordinal/feminine bias so far as I can tell. The Natural Sequence is not a bias of mine even if it is a bias of our masculine-dominated culture. Ultimately the Natural Sequence has to do with the Tao-ordained structure of space/time, and mystics tell us that Tao itself has no cardinal/ordinal bias let alone masculine/feminine bias, hence the symmetry of the septenary per the Natural Sequence: "You can perceive that while one is ordinal and seven is cardinal, that the first half is cardinal and the last half is ordinal." (MMFM, p. 189). Per the Natural Sequence, the whole septenary is balanced Cardinal/Ordinal: if all Roles were Cast per the Natural Sequence, they would all be balanced Cardinal/Ordinal. However, by shifting the Ordinal triad of energies according to the Michael Math Sequence, the Warrior becomes more Ordinal/feminine by two steps and the Server and Artisan both become more Cardinal/masculine by one step. If this actually happened and it is not a mistake in channeling, there are consequences in real life. There are also consequences in that the Warrior gets less Action and more Expression "energy", the Artisan gets less Expression and more Inspiration "energy", and the Server gets less Inspiration and more Action "energy". However, this is irrelevant to the points we both make on this subject of this post, but interesting I think.

Q: In order to have this sentient physical form survive, nurturing must take place first. The organism will not survive without it. Hive souls have a nurturing instinct. In the Caris/Michael channeling, it's said that if "there is nothing there" then servers come first.

Phil: Ensoulment probably did not take place in an ecological vacuum, but we do not know all the conditions of that environment. Did it happen at a harsh and hostile or a benign and supportive time/space? There were pre-sapient hominids as well as predatory animals and difficult environments on some parts of the planet, but probably not all. My very first Michaelian–student friend, a Mature Priest, once said that if she found herself struggling to survive like in a wild jungle with a couple of other people, she would want them to be a Warrior and an Artisan. Warrior = protective and durable, Artisan = resourceful and inventive. Would you prefer a couple of Servers = nurturing in that wild jungle? What about ensoulment in the Garden of Eden? So it all depends on "circumstances and applications" whether to initiate with Warrior or Server or some other "energy". Such is the case with deployment, but not with development. Development in the sense that I mean it inevitably starts with Action = Warrior/King.

Q: I would use "nurture" rather than "love" when discussing the initial energy that must come into play when establishing a sentient life form. Caring for the physical body, for the young (survival of the species), providing food (via plant-life, not necessarily hunting), are all first necessities. This can be done at the Infant soul level, since it's what non-sentient creatures do, too. The dual-channel Server input is the physical awareness along with the "common good" awareness which is used so that the entity mates, as well as physical mates can survive. Without awareness of the others, e.g., "me and many other me's" — the _common_ good — basic survival is not possible. The dual input makes other-awareness and Essence awareness possible, providing an energy framework for sentience, or consciousness. The nurturing energy is what we would term feminine, which, if we're speaking biologically, would make sense, too. All fetuses are female first. The Y chromosome happens a bit further on in gestation. Given no outside interference, a creature can physically survive on basic nurturing alone.

Phil: I also regard "nurture" as an accurate word for what Servers do, but not so appropriate for Warriors, although I have seen the slogan, "To Protect and Serve", on police cars in my city. But maybe that is because Baby soul (Server Age) Warriors make good cops. (*MFM*, p. 98) Anyway, take a look at *Michael's People*, pages 56-57. Here the "love" septenary is given, and the first level of love is named "Nurturing". "First is nurturing. Here the emphasis is on survival, and it is seen not only in creatures of reason but in all creatures with a sense of individual survival. One of the indications of the degree of species evolution is the degree of nurturing and the length of time the nurturing is provided." Personally, I think this word "nurturing" reflects a feminine Michael Math Sequence bias that puts Server function first. If I were to reflect a masculine Natural Sequence bias and put Warrior function first in this example of the septenary, I would have called it something like "Protection". So what ensures survival? In my understanding of the "survival of the fittest", unless there is "protection" of self first there will be no "nurturing" of other second. I am not an evolutionary biologist so I might be talking outside of my area of expertise, so correct me if I am wrong in the following observation. It is interesting to me to note that our very distant ancestors, the cold-blooded reptiles, neither provided the

Warrior-ish/masculine function of protecting their offspring from external danger, nor provided the Serverish/feminine function of nurturing their offspring: males impregnated females without pair-bonding, eggs were laid and abandoned to their fate. Male and female reptiles had no family life. So far as they cared, it was all about protecting and nurturing their own survival, and the perpetuation of the species was just something that happened haphazardly. So far as I know, the protecting and nurturing of offspring came later, with the evolution of warm-blooded mammals [and birds]. Here is how I understand that evolutionary development in terms of the Natural Sequence. The reptiles (and fish before them), which came "first", operated almost entirely out of their Motion Centers, another one of the Ordinal Action Overleaves, thus a Warrior-ish function. The rudiments of the Ordinal Inspiration Emotion Center — which includes both the masculine protectiveness of self and feminine nurturingness of others — evolved with mammals and came "second". Male and female mammals and offspring had a family life, and a community social life built on cooperation with each other, but still competition with things outside the family or the community. Lest you think from this that I am a male chauvinist pig because in this interpretation "masculinity" came "first" and "femininity" came "second", note that mammalian "femininity" is an evolutionary developmental improvement on reptilian "masculinity" in this case — it was an improvement that ensured the survival of more offspring. Then of course cerebral humans with Ordinal Expression Intellect Centers came "third", so now we humans have the survival advantage of being able to out-move, out-emote, out-think all other prior species — and consequently out-protect and out-nurture more primitive species. No sexism there, just Artisanism — and a good example of the Natural Sequence so far as I know.

Q: I believe this is what xxx was referring to when he wrote that Michael said it would be too harsh if Warrior was first. If Warrior is quintessential masculine Ordinal energy, then Server would be quintessential feminine Ordinal energy.

Phil: Okay with the first sentence of the above paragraph in regard to deployment but not okay with regard to development. Tentative okay with the second sentence of the above paragraph for now. In our species at least, the male is typically more a creature of Action (Motion Center) and the female is more a creature of Inspiration (Emotion Center), but I am not sure if that is the case in all species. I have more to say about the difference between men and women in another email because it might be relevant to where the Natural Sequence applies and where the Michael Math Sequence applies. There might be a built-in female bias for the Michael Math Sequence and a built-in male bias for the Natural Sequence in regard to the sequence in which they process situations unto completion.

Q: How would it benefit survival if the Warrior energy were to arrive first? By this token, it would make sense that that Warrior would be 2, which would be the yang to the yin, so to speak.

Phil: I think I answered that in my comments above in terms of evolution (Natural Sequence development, Ordinal Action first) in general, but we are just opining here without any evidence of how the logistics of ensoulment (deployment) was actually managed. As I said above, I am not committed to either Natural Sequence or Michael Math Sequence or non-Natural Sequence/non-Michael Math Sequence in regard to deployment, since I regard ensoulment as an example of deployment, not development, and the managers were free to do whatever they believed would work best, depending on local "circumstances and situations" in time and space. The development of life on earth that lead to humans obviously followed the Natural Sequence in terms of reptiles > mammals > humans.

In discussing issues of Natural Sequence versus Michael Math Sequence on various occasions, the people that I have talked to do not seem to tumble to the insight that the resolution of the issue has to do with the difference between the necessity of the sequence of stages of *development* versus the contingent choice involved in situations of *deployment*.

Another Rationale for the Michael Math Sequence

I do not see any way that we can academically Validate the two sequences options (Michael Math Sequence versus Natural Sequence) in terms of the Casting of the Oversoul into Roles on Planes above the Physical versus ensoulment of the hominid species on the Physical Plane, but I am going to suggest a realm were we might be able to more easily validate them: the difference between men and women, which was introduced in the previous sub-ubsection. This is not entirely an abstract theoretical matter. It is not without very practical and immediate implications. The next paragraph is a quotation from the RA Material in a publication called "The Law of One". Ra is my second favorite channeled source of information, after the Michaelian teachings. As with so many non-physical teachers, Ra has a septenarian cosmology (and it follows the Natural Sequence, by the way). Here they (they call themselves a "social memory complex" = entity? Cadre?) discuss one of the differences between men and women. This was mentioned in the context of spiritualizing one's sexuality

(raising one's kundalini) through seven steps (the chakras, as it so happens), but we will not go into that here: it is discussed at length in my book *The Tao of Relationships: The Chemistry and Alchemy of Service and Intimacy.*

The energy of which we speak in discussing sexual energy transfers is a form of vibratory bridge between space/time and time/space. The energy transferred from male to female is different than that transferred from female to male. Due to the polarity difference of the mind/body/spirit complexes of male and female the male stores physical energy, the female [stores] mental and mental/emotional energy. When sexual energy transfer is completed the male will have offered the discharge of physical energy. The female is thereby refreshed, having far less physical vitality. At the same time the female discharges the efflux of her stored mental and mental/emotional energy, thereby offering inspiration, healing, and blessing to the male, which by nature is less vital in this area.

In terms of Roles, what Ra refers to as "physical energy" is Warrior-ish (a masculine Role per Michael), and what Ra refers to as "emotional and mental" energy is Server-ish and Artisan-ish (feminine Roles per Michael) This information leads me to wonder. Just suppose for the sake of argument that the female of our species is stereotypically energized per the hierarchy: 1 = emotional energy, 2 = mental energy, 3 = physical energy per the Michael Math Sequence; whereas the male is stereotypically energized per the hierarchy 1 = physical energy, 2 = emotional energy, and 3 = mental energy per the Natural Sequence. Is there any evidence for this? Has anybody else noticed that women when they get together typically like to laugh (emotion) and talk (mentation) a lot, whereas men when they get together typically like to play ball or watch ball being played (physical action)? I am here presenting the wild speculation that — very generally and stereotypically speaking — women tend to operate per the Michael Math Sequence and men tend to operate per the Natural Sequence.

Here is how I have seen this play out in my own life. I was married for a dozen years to a Server in the Emotional Center. As a guy — energized by action first — I saw everything that happened in terms of, let's say, black and white and shades of gray. There was not a lot of emotional attribute attached to what happened. As a gal — energized by emotion first — my wife applied a color (emotional) attribute to every action that I just saw as a shade of gray. In fact, to her, the emotional component of the action was the most important thing about the action. As you might expect, I was often accused of being a typical insensitive male because I was oblivious to the particular color (emotion) she attached to a particular action. It would have been helpful if I had understood this at the time. I have already shown you a quote from Caris/Michael about the flexibility of the sequence of the ordinal Roles, and the same flexibility could be applied to the Ordinal Centers. Gender differences might just be a situation in which both sequences are evident, and it makes for an interesting interaction, just as it can make for an interesting discussion.

It occurs to me that there might be something like this going on with the issue of Michael Math Sequence versus Natural Sequence. Because of their own personality arranged per the Michael Math Sequence, some people are perceiving per the yin point of view, and will prefer to put Ordinal Inspiration (Server-ish, Emotion) in the number one position and tend more to see this quality in everything. Others with a Natural Sequence-biased personality will perceive per the yang point of view and will tend to put Ordinal Action (Warrior-ish, Motion) in the number one position and see more of this in everything.

Below are some additional semi-random comments and speculations relevant to the subject of stereotypical gender characteristics as it applies to the Michaelian teachings. Each of these points could use some elaboration as I develop my exposition and complete my *Cosmogony* book.

- Near as I can tell, the Natural Sequence is a component of Tao's concept for its creation, according to various sciences and philosophies and mysticisms reviewed in my *Cosmogony* book, the seven Planes of creation exist within that structure. Therefore the Natural Sequence is absolutely fundamental. The evolution of Fragments of Tao happens within the septenarian Natural Sequence structure "down" through the Planes and back "up" again in the recycling of Tao's creation. Therefore, the Natural Sequence is repeated at smaller septenarian scales in each Fragment's evolution, notably at the scales we call "Age" and "Level" and "Life-Stage".
- It is common understanding to regard Cardinal/yang/male/and so on and Ordinal/yin/female/and so on as the two most basic complementary aspects of creation. Tao itself is not "sexist"; it is Neutral with respect to Cardinal and Ordinal. That is why, for instance, the most Cardinal Role, King, was cast in the Ordinal-most position, last. The Warrior is the most Ordinal Role, and if it were cast in the Ordinal-most position, last, it would have been encumbered with excessive passivity = yin/feminine. Instead, we have the Taijitu Tango Principle, where the Cardinal-most in terms of space-like being

- (King) is Cast in the Ordinal-most position in terms of time-like doing (seventh), whereas the Ordinal-most (Warrior) is cast first. This is Michael Math basics. It may be, as speculated previously, that this Cardinal/Ordinal Taijitu Tango symmetry has to break somewhere to make conscious experience more interesting and worth playing out.
- Near as I have been able to discern from various Michaelian channels, the Michael Math Sequence applies to Cadres, invented for logistical deployment considerations (having to do with skewing "energy" in Casting Fragmentation, and perhaps ensoulment of hominids). It might go beyond that to even larger groups of souls "pods", "nodes", or whatever groupings that showed up in channeling subsequent to MMFM. It might also be even more fundamental than groups of souls. Therefore Michael Math Sequence is not fundamental; it was invented within and after the primordial and unalterable Natural Sequence structure by conscious beings making intelligent and informed choices somewhere in the course of the evolution of the universe to suit "circumstances and situations" as Caris/Michael said. I refer to whatever being may have decided, in the Casting process, to depart from the primordial Natural Sequence template as the "Oversoul".
- As above, so below; as in heaven, so on earth. Ordinal bodies and their Cardinal souls are poles of a Monad. Even as souls differentiate in the Casting process, so species differentiate in evolution. In the realm complementary from Fragment evolution and a reflection of it, there is physical evolution of biological entities. There are numerous instances of the Natural Sequence in nature (the Physical Plane) as explained elsewhere in this *History* book and in my *Cosmogony* book.
- (I am not an evolutionary biologist so I have only a vague notion of what is in this bullet point.) Somewhere in the course of biological evolution, sexual reproduction was "invented". The male and the female may have differentiated along the lines of some primitive version of Cardinality and Ordinality to begin with. However, somewhere further along the way, the male and female may have further differentiated along the lines of Natural Sequence and Michael Math Sequence (and this might have something to do with variations in the chakra system between the genders?). Therefore, those two Sequences are a sort of heaven/earth reflection of the departure that the Oversoul made from the Natural Sequence to the Michael Math Sequence. Cardinality/masculinity and Ordinality/femininity are themselves fundamental concepts in the mind of Tao, but it might be that the Natural Sequence becomes a male gendered thing (in addition to Cardinality) appearing at some point in "experiential differentiation" (to use a term that first showed up in print in MFTM in 1995), and the Michael Math Sequence becomes a feminine thing (in addition to Ordinality) appearing at some point in "experiential differentiation" among biological systems.
- Ra said that the male of our species stores "physical energy" and the female stores "mental/emotional energy". It seems to me that what they call "physical energy" we Michaelian students call "Action Axis energy" and what they call "mental/emotional energy" we call "Inspiration and Expression Axis energy". In the Michaelian teachings, the Action Axis Warriors and Kings and the Neutral Scholar all said to be one-input Roles and therefore "simple" are said to prefer male lifetimes over female lifetimes. (MFM, p. 232 and MMFM, p. 64). That these three Roles are more "masculine" is not disputed by myself or other Michaelian students that I know of.
- So far as I know, in the evolution of vertebrates leading to humans, there was very little external difference between the males and the females until mammals. Reptiles had some reproduction-specific differences, externally and internally, but that was about it. Other than that, they basically looked and acted the same. Better species survival strategies evolved with mammals, and a "division of labor" between masculine "protection" and feminine "nurturing" came along. Bodies changed accordingly; biologists refer to this as "sexual dimorphism". Mammals also had a family and social life. This may have been the bifurcation where the "physical energy" went to the male and "mental/emotional" energy went to the female, per Ra's statement.
- Roles other than one-input Action and Assimilation are considered to be more "feminine". Two Roles,
 Ordinal Inspiration Servers and Ordinal Expression Artisans, are considered to be the most "feminine"
 of the seven. Two other Roles, the Cardinal Expression Sages and Cardinal Inspiration Priests, are
 considered to be more masculine than Servers and Artisans, but less masculine than the one-input
 simple Action and Assimilation Roles.

- The two Inspiration and two Expression Roles are also said to be more "complex" in terms of quantities of "inputs", making them seem more "feminine" than the "masculine" one-input Action and Assimilation Roles. This reminds me of a joke someone once sent to me via email. There is a photo of two control panels, one labeled "Men" and the other labeled "Women". The male control panel has only one on-off toggle switch. The female control panel is loaded with a couple dozen switches, dials, gauges, sliders, knobs, and various colored lights. I am not a knowledgeable biologist, but it is my impression that the above differentiation between Cardinal/Ordinal and Simple/Complex is stereotypically true in our species, but not in all species in all of nature.
- The alleged asymmetry between five-input Ordinal Expression Artisans and three-input Cardinal Expression Sages might be yet another experiential differentiation. And it might have a biological/evolutionary or soul-physics explanation, or it might be just a choice of an Oversoul or Fragments of planetary, stellar, or galactic "Logoi" (manager-minds), which are described by Ra, or it might be just another example of bogus dogma-doctrine channeling.
- There is a lot of speculation in the above, but I really do think there might be a gold mine of understanding to be excavated in this subject, with practical implications, if people would open their minds and consider the possibility of alternatives to the Michael Math Sequence. The asymmetry between the Natural Sequence and the Michael Math Sequence might be one of the more primordial of asymmetries, somewhere downstream of THE most primordial asymmetric distinction between Cardinal and Ordinal. It bears further investigation inside and outside the Michaelian teachings. Who knows how far back to Tao the differentiation of "energy" goes, in the separate realms of development in time versus deployment in space. We can speculate and we can research.

Conclusion to This Section

In summary, let me explain my perception succinctly and, I hope, clearly.

I see the Natural Sequence as the fundamental space-time-dimension geometrical structure of all creation, physics as well as psyche. Therefore, in regard to *deployment* (what we call "Fragmentation" and "Casting" in the Michaelian teachings), I see the Natural Sequence as the *normal* "birth order" of "energies". We have been told of this birthing specifically in regard to souls and groups of souls. In the Ordinal triad of the Natural Sequence, first-born = Warrior, middle-born = Server, last-born = Artisan. If they are "born" (Cast) in a different order, such as the Michael Math Sequence, it influences the Fragment's personality, the same as human birth order influences personality. However, *development* has to do with the *evolution* of the soul, not the *personality* of the soul. Abundant evidence from many sources suggests that the *development* of the soul through septenaries such as Enlightenment, Internal Monads, Levels, Ages, sub-Planes, and Planes follows the Natural Sequence, not the Michael Math Sequence. Evidences and arguments are presented in my *Cosmogony* book to support this contention.

Hoodwin has channeled on why Casting deployment might have happened per the Michael Math Sequence rather than the Natural Sequence, and I have elaborated on that. Perhaps Servers have been Cast (deployed) in the Number One (normally Warrior) position to give Servers some Warriorish 'flavor'. (Personally, if there is any validity to the Michael Math Sequence, it makes more sense to me that the unnatural Michael Math Sequence Casting took place before the Roles were Fragmented in the Entity for the purpose of incarnation. That means that Entities and Cadres have the Michael Math Sequence deployment distortion.) The Physical Plane correlates with Warrior Role as indicated above, so Warriors are more at home here than the other Roles, and if Servers are deployed in the natural Warrior position somewhere in the Casting Fragmentation, this gives them greater comfort with the Physical Plane than they would naturally have. The preponderance of Servers in the number One position gives the whole planet a more humanitarian aura, which I certainly think is a Good ThingTM. According to the Michael Math Sequence, Artisans have supposedly been deployed in the natural Server (Two) position, and Warriors have supposedly been deployed in the natural Artisan (Three) position. A possible reason for deploying Artisans in the Two (Server) position might be to impel Artisans to skew their artistic and technological creations more into service of humanity than otherwise. A possible reason for deploying Warriors in the Three (Artisan) position might be to impel Warriors to put more energy into competition in technology and construction and industry rather than on a literal battlefield, thus giving them a more productive, less destructive expression. So, I can see why the Logos (manager-mind) of this planet or even the Tao of this universe might have deployed the lower triad of Roles out of their normal sequence to achieve these purposes, as Hoodwin's channeling said.

What I find most distressing about the information on the Michael Math Sequence in the orthodox Michaelian teachings is that it is so defective and deficient. It raises so many questions that it does not answer. When one finds out about and understands the Natural Sequence, immediately one wants to understand how the Michael Math Sequence relates to it. I would like to present these questions to some channels, and ask some penetrating and specific questions, namely: who, what, when, where, why, how. If the Michael Math Sequence is valid (is it?), who invented it (the Tao, the Logos of this planet, this solar system, this galaxy, this universe?), why was it done (was it as Hoodwin's channeling said), where is it being applied (this planet, this solar system, this galaxy, this universe?); where was it done (at the differentiating boundary of the Akasha, the Mental Plane, the Astral Plane, the Physical Plane?); does it apply to the ensoulment of the species, only humans — or animals or plants also? For the record, let me state that I suspect that the most reasonable time/place for the skewing of Natural Sequence into Michael Math Sequence taking place is just this side, the Ordinal side, of the Akashic level of the middle (fourth) plane. This is where quantitative differentiation — "Fragmentation" — exists and happens, as distinct from the qualitative differentiation of the Cardinal planes. But I still wonder if it is otherwise limited.

Anyway, the above takes care of *deploymental* processes as best I can at the moment. However, Hoodwin's and Turpen's channeling did not address the issue of what sequence the Levels and Ages and Internal Monads and other *developmental* processes follow. Is it per the natural development of the soul through the Planes (Physical, aka Moving; Astral, aka Emotional; Causal, aka Mental) per the Natural Sequence, or is it per *deployment* in Casting per the Michael Math Sequence? I will, of course, have more to say about that in subsequent sections of this Prologue to my *Cosmogony* book.

HOW THE MICHAEL MATH SEQUENCE DISTORTS THE YOUNGER SOUL AGES

Let's review what it says about the correlation of Soul Ages with Roles in the "Michael Math" chapter of *More Messages from Michael (MMFM)*. There we read the following (<u>underlines</u> are my own emphasis; words in [brackets] are my elaboration):

One: Infant, Slave, [Repression,] Retardation, Stoic, Emotional Center, Self-deprecation. [Ordinal Inspiration] Two: Baby, Artisan, Caution, Rejection, Skeptic, Intellectual Center, Self-destruction. [Ordinal Expression] Three: Young, Warrior, Perseverance, Submission, Cynic, Sexual Center, Martyrdom. [Ordinal Action] Four: Mature, Scholar, Observation, Stagnation, Pragmatist, Instinctive, Stubbornness. [Neutral Assimilation] Five: Old, Sage, Power, Acceptance, Idealist, Higher Intellectual, Greed. [Cardinal Expression] Six: Astral, Priest, Passion, Growth, Spiritualist, Higher Emotional, Arrogance. [Cardinal Inspiration] Seven: Causal, King, Aggression, Dominance, Realist, Moving, Impatience. [Cardinal Action] [MMFM, pp. 190–192]

The Natural Sequence differs from the Michael Math Sequence only in the first three Ages, the younger Ages. This chapter is where I make the case that the Natural Sequence is a better fit for the younger Ages than the Michael Math Sequence. In Parts One through Seven of my *Cosmogony* book, I make it abundantly clear that this correlation of the Infant Soul Age with the Ordinal Inspiration Overleaves, the correlation of the Baby Soul Age with the Ordinal Expression Overleaves, and the correlation of the Young Soul Age with the Ordinal Action Overleaves, makes no sense in light of the dozens of other Septenaries that are discussed in Parts Parts One through Seven. This Michael Math Sequence error seems unfortunate to me when it comes to understanding the nature of the younger Soul Ages because I see that the Michael Math Sequence has potentially blocked recognition by the Michaelian community of these dozens of other septenaries, which are obvious instantiations of how the cosmos, including the Overleaf System, is actually structured — per the Natural Sequence, not per the Michael Math Sequence.

I cringe and wince whenever I see someone in the Michaelian teachings community apply the Michael Math Sequence to any *developmental* sequence. If any good has come from this pernicious Michael Math Sequence error, it is that my cringing and wincing at this Michael Math Sequence error over the decades has prompted me to research and write my *Cosmogony* book. It might be too late to turn the Michaelian teachings community around; the Michael Math Sequence might be too entrenched in the habitual parts of Michaelian student's brains. Parts Parts One through Seven were written for Michaelian students, yes, but also for people who are not Michaelian students. Even if the Natural Sequence gains no traction in the Michaelian teachings

communities, it might gain some traction among people or groups of people whose minds are not prejudiced against it; we will see how this plays out.

As with other humans in general, Michaelian students are prone to make two cognitive mistakes, one called "anchoring bias", which means that a person tends to accept the first information they find and discount subsequent contradictory information, and the second cognitive mistake called "confirmation bias", which means that they see what they are looking for; they interpret the world according to their preconceptions. In addition to those biases, most people (who are not contrarians by nature) tend to believe what an authority figure tells them. People who are not Michaelian students do not have a prejudice to believe what the Michaels allegedly said that is contrary to what the scientific evidence indicates. As I said, the scientific evidence is documented in Parts One through Seven of my *Cosmogony* book.

Yarbro's Own Descriptions of the Soul Ages

In this section, before we review what was said about the Soul Ages in the original Michaelian group transcriptions in the next subsection, let's take a look at what Yarbro said on her website about the Soul Ages. After all, it was in her book *More Messages From Michael* that the Michael Math Sequence was introduced. And yet, Yarbro's own descriptions of the Soul Ages do not fit well with the Michael Math Sequence; it fits better with the Natural Sequence.

The following descriptions of the soul Ages were extracted from the >MessagesFromMichael.com< website. The webpage quoted below was copyrighted in 2009, and appears to not have changed much since then, but it is still available as of 2024. I have selected those portions of the description that most clearly follow the Natural Sequence, while stating that there were no omitted comments that would clearly indicate the Michael Math Sequence. It seems not to have occurred to the Yarbro contingent to interrogate their Michaels about this obvious discrepancy.

It is not clear from the following description of the Infant Soul that it correlates with Warrior per the Natural Sequence or the Server per the Michael Math Sequence. However, in the next subsection, the description of the Infant Soul, extracted from the transcriptions of the original Michaelian group, the fit is obviously better with the Warrior than the Server, per the Natural Sequence.

The Infant Cycle (1) is the first stage of physical evolution for Essence, and, like an infant, the fragments in this Cycle are learning to adapt to and accommodate the world around them. Fragments in this Cycle usually prefer simple cultural environments and limited forms of education. Infant Cycle fragments do not often incarnate in culturally diverse or technologically complex societies, since the focus of the Cycle is to acquaint the fragment with the nature, the characteristics, and limitations of the species in which the fragment is ensouled. The Infant Cycle Monad has to do with recognizing and validating identities and their limits. The youngest souls on this planet are fourth level Infant.

In the following description of the Baby Soul, the underlined words are obviously a better fit for the Server per the Natural Sequence than the Artisan per the Michael Math Sequence. This description is similar to descriptions throughout the Michaelian communities.

The Baby Cycle (2) is the second stage of physical evolution for Essence, and has to do with a growing awareness of the nature of <u>human interactions</u>. The Baby fragment, much like a three-year-old, has a much better sense of what is due it than in what may be due to others by it. Baby fragments are a bit more culturally adventuresome than the Infant Cycle fragments are, but are marked by an exaggerated sense of <u>propriety</u> and a dogmatic adherence to <u>social</u> rules. Although they are somewhat more adaptable than Infant souls, they prefer to be in single ethnic-<u>religious</u> settings, with specific educational goals and assigned uses for technology. There is an on-going assumption that there is a correct standard for everything that must be adhered to; failure to support the standard puts the offending fragment beyond the concern of the Baby soul. The Baby Soul Monad has to do with experiencing the limits of <u>immediate</u> (<u>family</u>, <u>tribe</u>, <u>clan</u>) <u>society</u>.

From the following description of the Young Soul, it is not completely clear that it correlates with Artisan per the Natural Sequence or the Warrior per the Michael Math Sequence, but the mention of gadgets and technology tilts toward the Artisan and the Natural Sequence. However, in the next section, the description of the Young Soul, extracted from the transcriptions of the original Michaelian group, the fit is even better with the Artisan per the Natural Sequence.

The Young Cycle (3) is the third stage of physical evolution for Essence, and has to do with taking on everything accessible to the fragment. Young fragments demand a lot of themselves and of others. They have a broad view

of their environment, but all is regarded in the fragment's terms, through the fragment's expectations and requirements. If a Young soul likes a thing, it is because the thing accommodates the Young soul; if the Young soul dislikes a thing, it is because that thing is not in accord with the Young soul. Although less inclined to perceive matters in the black-and-white terms of the Baby soul, the Young soul does tend to sort things out as for me or against me, and assigns motives to both categories, assuming that any resistance to the Young soul's actions or desires is a deliberate act of personally motivated thwarting. The Young soul is eager to learn that which serves its purpose, and is perhaps the most gadget-happy of all the Cycles, putting faith in technology if that suits the Young soul's view of the world, or rejecting it utterly, if that is the Young soul's bent. The majority of souls on this planet — human and cetaceans — are Young souls. The Young Soul Monad has to do with achieving larger recognition at any cost. [>https://messagesfrommichael.com/term.html< — retrieved 12 March 2024]

There is no need to quote the descriptions of the four older Soul Ages because they are irrelevant to the discussion of Natural Sequence versus Michael Math Sequence.

Based only on the descriptions of Soul Ages reviewed above, the case for the Natural Sequence in the Ordinal Soul Ages is significant, in my estimation, but not as 'slam dunk' as I would hope. However, the case for the Natural Sequence is bolstered by information presented right there in the "Michael Math" chapter of *MMFM* where the notion of the Michael Math Sequence was originally presented. By saying that, I refer to what I have come to call the "Taijitu Tango Principle".

The Taijitu Tango Principle

Before I quote the descriptions of each Age from the original Michaelian group transcriptions, I want to remind the reader — if you have read the other Volumes in this hexology of my books — of a principle that I refer to as the Taijitu Tango Principle. This is my catchy name for a factor introduced in the "Michael Math" chapter of *More Messages from Michael:*

You can perceive that while <u>One is ordinal and Seven is cardinal</u>, that the <u>first half is cardinal and the last half is ordinal</u> — in other words, the pattern 'doubles back on itself'. This is what is implied by the 'yin-yang' symbol, and it would probably be of use to keep the 'yin-yang' in mind while considering what we tell you of the function of levels and numbers. [MMFM, p. 189]

So far as I know, this statement has not been developed elsewhere in the Michaelian teachings communities subsequent to this initial revelation, but in my opinion it is significant, so I have developed it further.

This statement is actually about a fundamental cosmological principle, namely the nature of the relationship between space and time: the two have a "reciprocal" or "inverse" relationship to each other (to use mathematical terms), which simply means that the faster you go in space the slower you go in time, and vice versa. We actually know this from Einstein's theory of relativity and the experiments that confirm it. Because of this coupling between space and time, physicists sometimes combine the two words into one word, "space/time". However, we are dealing with personality here, not with physics. As explained in Part One of my book The Tao of Personality, "Derivation of the Natural Sequence", subjective personality is the reciprocal or inverse of objective physics. This means that personality can be understood in terms of "time/space" (notice that the word order is reversed from "space/time"). In my books, The Tao of Cosmology and The Tao of Cosmogony, I extrapolate far beyond the Overleaf System, which is about the structure of the human personality, to include the structure in space and function in time of the entire cosmos. I refer to this latter structure as the Process/Aspect System. Recall that in the Process/Aspect System, Processes are about doing in time and Aspects are about being in space. Therefore, the Process/Aspect System of personality traits could be called the "time/space" system.

The previous paragraph is my way of leading up to explaining the way that I understand the Taijitu Tango Principle in terms of the Natural Sequence component of the Process/Aspect (aka Time/Space) system. In the quotation above, the phrase "One is Ordinal and seven is Cardinal" refers to Space/Aspect/Being whereas the phrase "the first half is Cardinal and the last half is Ordinal" refers to Time/Process/Doing. The Taijitu Tango Principle is explained in much more detail in my other books. In the context of this chapter of this book, the way to think of the Taijitu Tango Principle is that the younger three Ages are Ordinal in the space–structure sense (they have the *nature* of Warrior, Server, Artisan in their space-like Being), but they are also Cardinal in the time–structure sense (they have King-ish, Priest-ish, Sage-ish energy in their time-like Doing). Likewise, the older Ages are Cardinal in the Space/Aspect/Being sense, and Ordinal in the Time/Process/Doing sense. (The middle, fourth, Age is Neutral.)

Another way to say this is that the Taijitu Tango Principle means that, in the context of Soul Age, even though the *Being-nature* of the younger Ages is associated with the Ordinal Overleaves, people in them exhibit the *Doing-dynamics* of the Cardinal Overleaves on the other side of the Action, Inspiration, and Expression Axes. This phenomenon is well known in the Michaelian teachings community. Ordinality is normally described as passive, and Cardinality is normally described as active (*MMFM*, p. 29: "The negative pole of cardinality is activity; the negative pole of ordinality is passivity"), but in the case of the younger Ages, there is more activity and less passivity than you might otherwise expect if the younger Ages were only Ordinal and not also Cardinal per the Taijitu Tango Principle. I will note these factors in the following sections. There are many places in the Process/Aspect System and in the Natural Sequence where the Taijitu Tango Principle comes into play, and these are noted in the appropriate places in this and my other books.

With the Taijitu Tango Principle in mind, let's now review the descriptions of the Ordinal/Cardinal Soul Ages in the transcriptions of the original Michaelian group.

Review of Original Descriptions of Soul Age

In the following subsections, I compare the descriptions of the three younger Ages from the original Michaelian group transcriptions, and then ask you to discern which lineup of Ordinal Overleaves, the Natural Sequence or the Michael Math Sequence best aligns with those descriptions. And I provide some commentary. There are only a few clues in these descriptions of the younger Ages that would lead to a proper correlation with Ordinal Overleaves arranged per the Natural Sequence; this is perhaps one of the reasons that no one other than myself has thought to challenge the orthodoxy of the application of the Michael Math Sequence to them. However, the original Michaelian group descriptions are *adequate* to see that the Natural Sequence is a better fit for the younger Ages than the Michael Math Sequence. It is really all the other septenaries reviewed in my *Cosmogony* book that clinch the case for the Natural Sequence.

Infant Soul Age

Per the "Michael Math" chapter of *MMFM*, the Michael Math Sequence correlates the Infant Soul Age with the Server Role and other Ordinal Inspiration Overleaves. According to the Natural Sequence, the Michael Math Sequence correlation is erroneous: the Infant Soul actually has a Warrior-ish nature, not a Server-ish nature. Recall the Infant Soul motto, "Lets not do it." (*MFM*, p. 69) The Infant Soul is all about Action, not Inspiration: the actions required to assure safety and security; it wants to survive in the world at any cost. This makes sense because if it does not survive, then it does not thrive, meaning, develop the potential that is innate but latent in its being. Applying the Taijitu Tango Principle, you might say that the Infant Soul has an Ordinal Warrior-ish nature expressed with a Cardinal King-ish force of will: both Roles are about struggling and bullying to make their way in the world. If Infant Souls did not have the Action Axis energy, it is not likely they would fare well at that level of lack of understanding of the Physical Plane, which is Ordinal Action, same as the Warrior.

In the light of what I just wrote, read the descriptions of the Infant Soul given in the original Michaelian group transcriptions quoted below. It is not obvious that it correlates with the descriptions of the Ordinal Inspiration (Server-ish) Overleaves; in my view, the fit is better with the Ordinal Action (Warrior-ish) Overleaves. In the following quotations (compiled from the transcriptions of the original Michaelian group and recorded in this *History* book), the underlined words and phrases are those that support the Natural Sequence correlation of Roles with the Ordinal Ages.

The Infant or "first born" Soul perceives itself and the world around it simply as "me" and "not me." In this cycle, there are no racial memories. If "not me" is perceived as hostile and unkind early in life, withdrawal occurs and a condition known as autism often results. If this perception occurs later, the Infant Soul may react with <u>unchecked violence: sadism, murder without visible provocation, acts of unbelievable cruelty.</u> The Infant Soul truly does not know the difference between right and wrong action, but it can be taught the laws of common sense and decency.

The Infant Soul perceives love only in the form of <u>lust</u>. It performs the sex act with all the <u>frenzy</u> of a wild animal, completely dependent upon some innate estrus lost to higher cycles. It is powerless to change this. Let it be known that intellect is not a factor in any of these cycles [Ages]. Intellect is a product of culture, and even firstborns and Infant Souls can be taught to read, write and compute arithmetically. Infant Souls rarely seek higher education unless forced. They are bewildered and <u>hostile</u> in strange situations.

The Infant Soul adopts the religion of its parents without modification, although its interest is cursory and its understanding poor.

Infant Souls and Baby Souls cook and eat to <u>survive</u> and the food is usually tasteless and overcooked. Infant Souls manifest fear. This can be seen in their eyes. This fear is out of proportion to the situation. The whole business of living is fearful to them.

Infant Souls almost never commit premeditated crimes. Most of their transgressions concern <u>striking back at</u> the hostile environment.

The Infant Soul is close, but furthest from the goal. The ladder must be climbed and the Infant [Soul] is aware of this. Its closeness comes from this knowledge. Beyond this, the knowledge is not expanded. The Infant Soul is in this way unique and it is as close to its 'mother' as the infant man who wanders to the Astral Plane continually and looses contact immediately. In the casting, the total awareness is lost, but not the feeling of loss. The Infant Soul then experiences the loss and the closeness simultaneously. The Infant Soul is again unique in this sense of loss and must start the sorting that later becomes the seeking of the Tao. [History, Chapter 2A, "Revelation of Overleaves", "Soul Ages"]

Although the correlation of Infant Soul with Warrior per the Natural Sequence is obscure here, it fits better than the correlation with Server per the Michael Math Sequence. The next Age is a more obvious fit for the Server, per the Natural Sequence.

Baby Soul Age

Per the "Michael Math" chapter of MMFM, the Michael Math Sequence correlated the Baby Soul Age with the Artisan Role and other Ordinal Expression Overleaves. According to the Natural Sequence, this is erroneous: the Baby Soul actually has a Server-ish nature, not an Artisan-ish nature. The Baby Soul is all about Inspiration, not Expression. Recall the Baby Soul motto: "Do it right or not at all." They can be moralistic and self-righteous, as described below. Applying the Taijitu Tango Principle, you might say that the Baby Soul has an Ordinal Server-ish nature expressed with a Cardinal Priest-ish moralism to the point of self-righteousness: both Roles are about social virtue and improving themselves and their world; both are concerned with ethical considerations and values. This is Inspiration Axis stuff, not Expression Axis stuff.

Read the descriptions of the Baby Soul given in the original Michaelian group transcriptions below. It is not obvious that it correlates with the descriptions of the Ordinal Expression (Artisan-ish) Overleaves per the Michael Math Sequence; in my view, the fit is better with the Ordinal Inspiration (Server-ish) Overleaves with Priest-ish as secondary influence per the Taijitu Tango Principle. Note in particular all the references to emotions, emotionality being an Aspect of Ordinal Inspiration. Read the description below in the light of this accurate understanding provided by the application of the Natural Sequence. Note especially the underlined words. Note that these do not accurately describe the Artisan/Sage Axis.

The Baby Soul perceives itself and the world around it as "me" and "many other me-s." The Baby Soul forms strong beliefs early in childhood, borrowed from those around it, and these are literally unshakable and incorruptible. The Baby Soul is normally <u>agreeable</u>, <u>a pillar of the community</u> — until an opposing viewpoint is expressed. Then, inwardly the Baby Soul is bewildered, baffled by the difference. Outwardly, it will express anger, hostility, <u>negative emotional energy</u>, belligerence.

The Baby Soul views its own sexuality with a vague uneasiness and if the culture fosters such, will think of it as somehow <u>shameful</u>. The Baby Soul will be <u>embarrassed</u> by overt displays of honest sexuality and it will strive to keep the others around it bound down by its own reprehensible <u>moral code</u>. Behind closed doors, the Baby Soul is more often than not quite as <u>prudish</u> as it is in public and seldom sustains any sort of sensual pleasure. Not having experienced such, it naturally does not "believe" in the existence of the experience. Baby Souls are <u>ashamed</u> of their sexuality, whether it be homo[sexual] or hetero[sexual].

The Baby Soul occasionally seeks higher education — does well in small, conservative liberal arts colleges, trade schools — learns "proper" subjects, is often the "good student."

The Baby Soul tends to be <u>fundamentalistic in its religious beliefs</u>. Personification of the godhead is the strongest in this cycle. The Baby Soul <u>believes in the forces of evil</u>.

The Baby Soul is fearful (of almost everything) and her kitchen is usually antiseptically clean.

Baby Souls are guileless and this shows in their eyes.

Baby Souls tend to congregate in mid-America towns. This to them represents the "good life." Baby Souls cannot see conflicts within themselves.

Baby Souls often commit group crimes such as the Ku Klux Klan was famous for, and most of their crimes are directed by prejudice.

The rituals derived from the <u>religions</u> are Good Work. They produce a group high, which is the only way that Baby Souls ever experience a high; that is, vicariously (through others).

... the Baby Soul has such a strong sense of right and wrong, and his opinion of himself is often exalted.

Most Baby Souls somatize. Any patient who fixates on a particular organ system can usually be categorized immediately. For instance, all elderly ladies with bowel fixations are Baby Souls.

Baby Souls use the courts excessively when their sense of justice has been outrageously insulted.

The <u>social</u> behavior of Baby Souls is normally a dead giveaway. They have none of the smoothness of the older Cycles. New situations frighten them. Change of any type is threatening.

Baby Souls tend to be immaculate about person and home — have strong feelings about <u>hygiene</u>. They live by standard clichés and, after all, "cleanliness is next to godliness." The Baby Souls regularly clean drawers, cupboards and the tops of refrigerators.

Few Baby Souls are ever truly troubled. They rarely question their motivation and everything that happens to them is either because they were bad and are being punished, or because they were good and are being rewarded. Think of the two and three year old child when you think of Baby Souls. [History, Chapter 2A, "Revelation of Overleaves", "Soul Ages"]

Of the three younger Ages, with this one it is most obvious that the Natural Sequence fits better with the original Michaelian group description than the Michael Math Sequence does. The other two Ages are not so easy to discern the correlation of Age with Role, but the Natural Sequence is obviously the most likely pattern.

Young Soul Age

Per the "Michael Math" chapter of *MMFM*, the Michael Math Sequence correlates the Young Soul Age with the Warrior Role. Michaelian students might point to the "Do it my way" motto of the Young Soul (*MFM*, p. 71), and the Poles of the Warrior Role, +Persuasion and -Coercion, and then say that both of these Poles seem Young Soul-ish to them. That is one understanding; that is not the correct understanding.

According to the Natural Sequence, the Michael Math Sequence correlation is erroneous: the Young Soul actually has an Expression Axis, Artisan-ish nature, not a Warrior-ish nature. Let's apply the Taijitu Tango Principle here: if you look at the whole lineup of Ordinal Expression traits (Rejection Goal, Caution Mode, Renunciation Shadow, Artisan Role, Skeptic Attitude, Intellectual Center), and the Cardinal Expression Traits (Acceptance Goal, Power Mode, Greed Shadow, Sage Role, Idealist Attitude, Concept Center), you see that these Expression Axis Traits are all about defining the self as an individual ego, and then asserting the self over the environment, including other people. You might say that the Young Soul has an Artisan-ish nature expressed in a Sage-ish way: both are egoistic; hence "Do it my way".

Read the descriptions of the Young Soul given in the original Michaelian group transcriptions below. It is not obvious that it correlates with the descriptions of the Ordinal Action (Warrior-ish) Overleaves; in my view, the fit is better with the Ordinal Expression (Artisan-ish) Overleaves, with Sage-ish as a secondary influence per the Taijitu Tango Principle. Read the description below in the light of this accurate understanding provided by the application of the Natural Sequence.

The Young Soul perceives itself and the world around it in quite a different manner than in the preceding cycles. It perceives itself as "me" and it perceives you as "you," but it perceives "you" as <u>different</u> from "me" and experiences the need to change you — to bring you around to its point of view.

If the Young Soul's own personal opinion of sex is rather low, it will do its best to convince those around it that sex is evil and should be eschewed. Renunciate monks and nuns are quite often Young Souls. They renounce loudly and take every opportunity to remind the world around them that they have renounced. On the other hand, the Young Soul can be an equally zealous proponent of total sexual freedom. The Young Soul perceives love as Eros, solely predicated upon those expectations it has of the others around it. If the others fail to live up to those expectations, the Young Soul can hate with equal zest. Sexual conflicts can be agonizing in this cycle — early training versus internal urge.

The Young Soul almost always seeks higher <u>education</u>, usually graduate degrees. The Young Soul is a tireless worker for its cause and will go through unbelievable hardship to bring this cause to bear: education can be an example of this.

The Young Soul, if religiously inclined, tends toward orthodoxy in the extreme. It will campaign tirelessly against all religious reform. If the Young Soul is atheistic, it will be equally as tireless in its efforts to wipe out the orthodoxy of others.

Early Cycle Young Souls tend to adhere to the food patterns learned in childhood. In the middle of this Cycle, experimentation is rampant, but the appetite is generally poor. Late Cycle Young Souls continue to experiment with food and foreign food fetishes often develop. Racial memories are stronger now and the déjà vu draws them to certain types of foods.

Some very wordy material comes from Young Souls.

Young Souls are in a state of unrest. This often shows up in erratic eye movements: the inability to hold eye contact for long.

Most Young Souls are unwilling to devote themselves to the life of contemplation that is necessary to cause the words to [come to] fruition. This is an active cycle, the one in which the most valuable lessons are learned and most of the mistakes are made.

The <u>smart</u> criminals are really Young Souls in the first cycle. The crimes of passion fall in the later part of this cycle and in the Mature cycle.

Young Souls like the <u>urban</u> life or the country.

The Young Soul is usually polished and poised socially.

The Young Soul often keeps external appearances: shoves everything into the closet before the company comes.

Think of the bright, lovable, overly energetic, quick, inquisitive eight to twelve-year-olds when you think of Young Souls. [HOLC > Chapter 2A — Revelation of Overleaves > Soul Ages]

The remaining four Soul Ages are properly aligned in both the Michael Math Sequence and the Natural Sequence as follows, and the Taijitu Tango Principle applies:

Mature Soul = Scholar = Assimilation Axis

Senior Soul = Sage/Artisan = Expression Axis

Elder Soul = Priest/Server = Inspiration Axis

Ancient Soul = King/Warrior = Action Axis

Refer to my other books for further evidence and argument. Part Three of my book *The Tao of Personality* thoroughly describes the Soul Ages, calling them Worldviews.

Which Role Correlates with Which Soul Age?

In this section, I address in greater detail, and put forward more arguments about, the issue that most Michaelian students get hung up on when I suggest they might want to change their perception of what Role goes with what Soul Age. Perhaps we should adjust our stereotypical images. I suggest we adjust our stereotypical images of Artisans and Young souls to correlate better with each other, and adjust our stereotypical images of Servers and Baby souls to correlate better with each other, and adjust our stereotypical images of Warriors and Infant souls to correlate better with each other. I am not asking the reader to do this without seeing good evidence and argument, and in this section I will get to that.

I believe students have misinterpreted some characteristics of both Ages and Roles because of erroneous Michael Math Sequence correlations. Since 1986, people have been interpreting per the Michael Math Sequence correlations rather than the Natural Sequence correlations. They have been building up a thought form of filtered interpretation rather than gathering unbiased data, in my opinion. The mental habit, rationalizations, and pseudo-validation of the Michael Math Sequence is deeply ingrained in the Michaelian student psyche. The only way that I can see that people will re-evaluate their paradigm is to read my *Cosmogony* book, see how compelling the evidence and arguments for the Natural Sequence correlation is in many realms, then truly forget what they think they "know" — wipe the slate clean, then believe in the Natural Sequence to the same degree they believed in the Michael Math Sequence, and begin anew/afresh to reinterpret the data per the Natural Sequence for as long as they contributed to the Michael Math Sequence belief system. Then of course one would have to compare the two belief systems. This is per the "scientific method". It is not my job to do Validation for others, but I can help, by making them aware that there is an eminently reasonable and authoritative alternative to the generally-accepted Michael Math Sequence, namely the notion that the *developmental* sequences (Age, Level, Life-Stage, *et cetera*) of the septenary follows the

Natural Sequence, and then share my research. However, please do keep in mind from my previous sections that it is OK with me if oversoul fragmentation casting, planetary species ensoulment, and other *deployments* follow the Michael Math Sequence. It is not a problem with me or with any other independent evidence or argument that I know of if that application of the Michael Math Sequence was accurately channeled.

However, for the most part, to me those alleged instantiations of the Michael Math Sequence seem irrelevant for all practical purposes. We can safely ignore the alleged casting structure of the cadre, entity, block, and cadence given in the Michael Math chapter of *MMFM* in this discussion because it is not something that can be Validated in the "real world". The means is available, however, to Validate — or not — the primacy of the Ordinal Action Process (Warrior "energy") over the Ordinal Inspiration Process (Server "energy") over the Ordinal Expression Process (Artisan "energy") here on the Physical Plane. I would not have pursued this issue if I did not believe it would be beneficial to correct a very simple error in channeling. I would like to propose an exercise in Validation for those who are interested. In the long run, this is the right solution to the issue I have raised. Since 1986, Michael students have been going around looking for and thinking they see evidence of the validity of Michael Math. (I myself tried for 5-1/2 years to make Michael Math work.) They have not looked for contrary evidence because they did not know there was a possible — nay, probable — alternative. (I did know, so could compare and contrast the available evidence.) If this issue interests you, may I suggest that you forget what you think you know in this regard. Wipe the slate clean and begin to look with new eyes.

One of the best places for a Michaelian student to begin is to re-examine Soul Age. Make this a fair test by assuming the Natural Sequence to be true the same way you assumed Michael Math to be true. Assume that Infant Soul does not correlate with Server Role as it says in *MMFM*, but that it correlates with Warrior Role. Assume that Baby Soul does not correlate with Artisan Role as it says in *MMFM*, but that it correlates with Server Role. Assume that Young Soul does not correlate with Warrior Role as it says in *MMFM*, but that it correlates with Artisan Role. Then, when you have done this for as long and as intensely as you did the Michael Math, step back and discern which one works better. Only when you have done this will you have credentials to discern the validity of the Michael Math Sequence versus the Natural Sequence. If you want to get a head start on this project, and know some of what I know already after decades of study, of course you can read my books, especially *The History of the Overleaf Chart* and *The Tao of Personality*.

Many have been busy for years interpreting the Roles and the Soul Ages in terms of their Michael Math Sequence correlations. This has not produced understanding, but confusion, because the Michael Math Sequence is quite simply wrong regarding the Soul Ages. People are ascribing to Soul Ages characteristics of Roles that do not correlate, and to Roles the characteristics of Soul Ages that do not correlate, because that is the way they have been doing it for years based on some erroneous channeling. They are seeing what they have been told to look for by an authority figure. Thereby they understand neither Ordinal Roles nor earlier Soul Ages correctly. I have witnessed some Procrustean exercises of mythic proportions to try to make the Michael Math sequence fit the Soul Ages. It is not my job to do other people's Validating for them, but I do have some informative comments, in addition to my provocative comments above, to make to those who might be interested.

In my opinion the right track is Validating the easiest to discern of the three younger Ages per the Natural Sequence or the Michael Math Sequence, which is Server with Baby Soul. The other two have to fall into place thereafter, Warrior moving to correlate with Infant and Artisan moving to correlate with Young. The Baby Soul description in MFM is fairly obviously more Ordinal Inspiration (Server-ish) than Ordinal Expression (Artisan-ish). The MFM descriptions of Infant Soul and Young Soul are less obviously correlated with Warrior and Artisan respectively. That is why the Michael Math Sequence could last so long without being challenged, and why it is so hard to dislodge in the minds of Michaelian students. The descriptions of the Levels at MFM p. 82 don't help much, except perhaps that, "At the second level the soul is particularly prone to emotional centering", reinforcing the Natural Sequence correlation at least a little bit. I say what has been presented so far in this particular section would not convince me about Ages, so I do not expect it to convince you or anybody else. The descriptions of the fourth ("the fragment gathers together its knowledge") and fifth ("integration begins", "understood within the context") Levels do seem to vaquely resemble Neutral Assimilation and Cardinal Expression respectively, but those correlations are not in dispute. I hope to demonstrate below that the Natural Sequence is a better fit than the Michael Math Sequence for the MFM descriptions, but admit that it is only slightly so, and admittedly not convincingly so. The evidence within the Michaelian teachings for the Natural Sequence is simply not convincing, so one has to go outside it. This is what I have done throughout my Cosmogony book.

The descriptions of the three younger Ages and Levels given in MFM are too ambiguous to be conclusive about which sequence they follow; I give a very slight edge to Natural Sequence but others will disagree. They are so ambiguous that the Michael Math Sequence has not been contested by anyone other than myself that I know of. The solid evidence for the Natural Sequence is entirely external to the Michaelian teachings and students have not seen it. I accumulated that evidence in the late 1980's until it was enough to finally compel me to accept the Natural Sequence in spite of channeling to the contrary, and I have happened upon plenty of other evidence since then. Once people see the pattern at many different scales and in many different realms (but all having to do with "development"), it becomes almost imperative to question the accuracy of the Michael Math channeling. After all that evidence has been presented we can accurately apply the descriptions from these other realms to Soul Age and Level.

Infant Soul Age = Warrior-ish

Here is the way I understand the Infant Age motto, "Let's not do it" in terms of the Natural Sequence, which makes Infant Age correlate with Warrior. It is helpful to understand the Overleaf System as an integrated pattern, not just a collection. Ordinal and Cardinal are opposite from each other. I have named Ordinal Action the "Termination Process" and Cardinal Action the "Origination Process". It is easy to see how the Origination Process Overleaves (Dominance, Aggression, Impatience, King, Realist, Higher Moving) are about making things start to happen — getting the 'ball' rolling and in the right direction so to speak. It is also easy to see how the Termination Process Overleaves (Submission, Perseverance, Martyrdom, Warrior, Cynic, Moving) are about getting things done (finished). They are about catching the 'ball' and carrying it to its goal so to speak. The Cynic Attitude is the Termination Process Overleaf that most resembles the "Let's not do it" motto, but the connection to Terminating Action is still there. I challenge the notion that Warriors are about "challenging the status quo" except in the sense that they challenge everything. I say Warriors are just as likely to institutionalize and standardize the status quo as part of obtaining and maintaining "law and order" in their positive pole as destroying the prevailing order in the negative pole. Hence they resist change: "Let's not do it." Think of the policing profession as a personification of the Warrior Role: their job is to enforce laws, which are more about telling people what bad things not to do rather than telling people about what good things to do.

Baby Soul Age = Server-ish

Any description that you find in some Michaelian literature of the Baby Age as about "structure, rules, ritual, design" is bogus. These are characteristics that have been falsely ascribed to Baby Souls because of the erroneous correlation with Artisans. It is not in the original Michaelian group transcriptions or the *MFM* description at all. According to the Natural Sequence, the Baby Age is about Ordinal Inspiration — what I call the "Involution Process", same as Server (along with Reduction, Repression, Lowliness, Stoic, and Emotional). They are about bringing spiritual values to bear in the realm of physical well-being ("the common good", "support the cause") whereas the opposite Cardinal Inspiration ("Evolution Process" — Growth, Passion, Arrogance, Priest, Spiritualist, Higher Emotional) is about transmuting and transcending earthly values. Ordinal Inspiration is the force behind the Baby Age motto, "Do it Right". It is also the source of their well-known inclination to fundamentalist religion. "The Baby Soul tends to be fundamentalistic in its religious beliefs. Personification of the Godhead is strongest in this Cycle. The Baby Soul believes in the forces of good and evil." (*MFM*, p. 70) Does that sound like Artisanish to you? "There are many Baby Souls who need the sense of God-approval in order to enjoy themselves." (*MMFM*, p. 197) Typically, Artisans are more prone to materialism than to spiritualism. By the way, "rules and rituals" are Warrior things, not Artisan OR Server. "Structure and design" are Artisan words though.

Young Soul Age = Artisan-ish

The Young Soul Age has been mistaken in regard to correlation with the Warrior Role. The "Do it my way" motto actually refers to the Analysis Process Traits: personal integrity, especially in the Positive Pole. There is an exploitation of others in the Negative Pole.

I have reviewed the description of the Baby Age throughout the Yarbro books and see no indication that this fits the Artisan. Instead, the description of the Young Soul Age better fits with Artisan. For instance the statements about "subduing the environment" and "outward thrust" are properties of the Young Age because this is the nature of the Artisan more than the Warrior. Because of my awareness of the Natural Sequence, when I look at this Young-Age-dominated planet, I see the technology, manufacturing, and industry as the

dominant theme, not the military. I see the Michael statement that Young Souls are "the architects of civilization" in MFM, p. 72, and I know that this fits with Artisan, not Warrior.

I suggest that many Michael students need to come to a different understanding of what it means to be an Artisan. As an engineer, in my 38 year career I worked with hundreds of Artisans who happen to be engineers, architects, and construction people. These are not the flaky, artsy type of Artisan that is typically portrayed in the Michaelian teachings by some people who only see this type because they are the type that usually get into metaphysics. The other and more common type of Artisan is very grounded and outwardly focused on their designs and bringing their creations into the world and shaping the environment whatever their Age might be. Artisans are the most "materialistic" of the Roles in the sense of their belief in the proliferation of gadgetry, and their use and abuse of the environment through the application of technology (I mean this in the broad sense of mechanical aptitude — 'how things work'). The Warriors in their positive pole of course are taking advantage of the technology and manufacturing of the Young Age by organizing Artisan products into focused businesses in competition with other businesses, but they do their power struggle thing with everything in all Ages.

The notion that Young Soul = Ordinal Expression (Artisan-ish) per Natural Sequence rather than Ordinal Action (Warrior-ish) per Michael Math Sequence correspondence might be the hardest for the typical Michaelian student to see if they have been perceiving it as Warrior-ish because of the prevailing Michael Math Sequence orthodoxy. Therefore, I think it expedient to emphasize and summarize and reword what I said above: it seems to me that the description of Artisans prevalent among Michael students is the type I call "high Artisans" — the "artsy-fartsy" type more likely to be encountered in metaphysical circles. There is the other type, "low Artisans", that I encountered in my engineering profession on construction sites doing the hard and dirty work of building the infrastructure of civilization. They are not sissies and they would perhaps better fit the usual stereotypical description of energetic materialistic individualistic enterprising Young Souls. (Being a Scholar-cast Artisan myself, I fall in the middle and can go either way.)

Concluding Comments on Role-Age Correlation

It helps me, and presumably you, to understand my evidence and argument by presenting them in bullet points:

- The Michael Math Sequence Role–Age correlation was provided without any evidence or argument or explanation, aka "Validation". Obviously the Michael Math Sequence came to Michaelian students first, but with this book (and my other books) I am proclaiming the Natural Sequence.
- When the Michael Math Sequence was first presented, Michaelian students were not informed that there is an alternative to the Michael Math Sequence. I am informing them of the evidence for the Natural Sequence in this book.
- To their typical students, the Michaels appear to be such an authoritative source of knowledge that students do not ask the Michaels to justify the Michael Math Sequence Role–Age correlation. (Being atypical, I have asked, and received refutation of its universality. Besides that, I have found no evidence for the Michael Math Sequence outside of the Michaelian teachings, if one can even regard channeling as "evidence". Besides that, in this book I submit authoritative evidence from dozens of sources that contradict the Michael Math Sequence.)
- One of the things I have noticed repeatedly in discussions of the Michael Math Sequence is the following. Generally speaking, where people are presenting information to support the Michael Math Sequence, often times they have morphed the meaning of the Role or the Age out of all reasonable parameters, just to suit the correlations given by their acceptance of the Michael Math Sequence as true: the attributes that to me clearly belong to one Role or Age are ascribed to another Role or Age to suit the Michael Math Sequence Role–Age correspondence. I understand this distortion because I did it myself for 5.8 years, trying to make the Michael Math Sequence work. Even while I was doing it, I knew in my heart that I was doing a Procrustean cut or stretch, and it bothered me. I was not being honest with myself, but I was trying to be honest with the information as given, out of respect for what otherwise seemed to be good channeling. This was not Good Work for me. I was giving respect to information that had not earned it.
- It is obvious in retrospect that some descriptions of the Roles and of the Ages based on the Michael Math Sequence subsequent to the original Michaelian group and MFM reinterpreted the original

descriptions of the Roles and Ages given in the original Michaelian group and in *MFM*. Discussions with some people about this revealed that they preferred the Michael Math Sequence Role–Age correlation because the Michael Math Sequence might be a valid sequence for some situations in the real world — such as a matriarchal society where Server-first makes sense, claiming that a preference for the Natural Sequence Role–Age correlation is sexist, patriarchal. My answer to this is that Michael Math Sequence deployments such as matriarchy versus patriarchy happen regardless of Natural Sequence development; the two are irrelevant to each other.

The reason that I object to the Michael Math Sequence so strenuously is that it has made the Natural Sequence invisible to Michaelian students who might stumble upon the numerous instantiations of the Natural Sequence. It is not merely that the Michael Math Sequence distorts the understanding of the Levels and Ages as described above; it is much worse than that, because it deflects students from the incorporation of numerous instantiations of the Natural Sequence into the purview of the Michaelian teachings. In my opinion, the application of the Michael Math Sequence to *development*, not just limiting it to *deployment*, was the single greatest error in Michaelian channeling that has been made, because it is a dead end; it leads nowhere; it blocks understanding of the structure and meaning not only of Soul Age, but of many other instantiations of development from the bottom to the top of the Cosmos.

CONCLUSION TO THIS PROLOGUE

Without the dubious or bogus channeling that established the Michael Math Sequence as canonical in the Michaelian teachings community, my *Cosmogony* book might not have been produced, because it has come about as a reaction to an error that was so obvious to me. I am a bit of a free—thinker, so I could not help but notice the discrepancy, and I am a bit of a trouble—maker, so I could not let the erroneous Michael Math Sequence stand unchallenged in the Michaelian teachings community. You have my apologies that the documentation of, and untangling of, the mess of the orthodox Michaelian teachings in this Part is so tedious, but I did not create the mess. Please do not shoot the messenger; please shoot the original messy messages.

Summary of the Confusions

It might have been uninteresting to you, or it might have been too challenging for you, to follow the specifics of various sequences in previous sections of previous chapters. For your convenience, I provide the following table. It shows the numerous *developmental* (not *deploymental*) septenaries that were previously reviewed in detail. This makes it abundantly clear how much contradiction and confusion there is in the Michaelian teachings about the *developmental* sequence, to say nothing about the *deploymental* sequence, of the standard components of the septenary.

In this table, the names of books are abbreviated as follows: *MMFM* = *More Messages From Michael; TMH* = *The Michael Handbook; TTE* = *Tao to Earth, ETT* = *Earth to Tao; MTBT* = *Michael: The Basic Teachings.*

| Table 0-4a — DEVELOPMENTAL SEPTENARIES in the MICHAELIAN TEACHINGS | | | | | | | |
|--|-------|--------|-------|--------|-------|-------|---------|
| SOURCE | FIRST | SECOND | THIRD | FOURTH | FIFTH | SIXTH | SEVENTH |
| Yarbro — MMFM — MMS | 2 | 3 | 1 | 4 | 5 | 6 | 7 |
| Stevens — TMH — Chakras | 1 | 7 | 4 | 2 | 5 | 3 | 6 |
| Stevens — TMH — Centers | 4 | 7 | 1 | 2 | 3 | 5 | 6 |
| Stevens — TMH — Centers | 7 | 3 | 1 | 2 | 5 | 4 | 6 |
| Stevens — TTE — Centers | 3 | 2 | 1 | 4 | 5 | 6 | 7 |
| Stevens — ETT — Planes (per NS) | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| Stevens — ETT — Centers | 1 | 2 | 3 | 4 | 7 | 6 | 5 |
| Van Hulle <i>et al.</i> — <i>MTBT</i> — Centers | 4 | 7 | 1 | 2 | 3 | 5 | 6 |
| Chambers — 1970s — Centers | 4 | 1 | 2 | 3 | 7 | 6 | 5 |
| Chambers — 1980s — Levels (per NS) | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| Chambers — 1990s — Emanations | 7 | 1 | 4 | 3 | 5 | 2 | 6 |

The first row (SOURCE) shows the rank order sequence per the Natural Sequence. The rows below the top row show the various sources (author, book/date, phenomenon) and the rank order numbers that they associate with the phenomena when correlated with the Natural Sequence. Note the chaos. Note that only the second row shows the Michael Math Sequence; none of the other rows below the second row are per the Michael Math Sequence. This indicates that the Michael Math Sequence is not canonical; it is not sacred; it is not indisputable; it is not revealed knowledge. The Natural Sequence is shown in the middle row as the sequence of the seven planes, and in the next-to-last row as the Levels. If the septenaries in this table were all we had to go on, then it could be said that the Natural Sequence also is not canonical, sacred, indisputable, revealed. However, the septenaries in this table are not all that we have to go on; we have the testimony, the arguments, the evidences of numerous other septenaries documented in my book *The Tao of Cosmogony*.

In my opinion, the septenary is a realm where 'cosmos' — orderliness — should prevail, and 'chaos' — disorderliness — should not prevail. One would think that, because the septenary is such a central feature of the systematic component — the 'cosmology' — of the Michaelian teachings, that it would be ordered in a logical fashion. And one would think that the Michaelian teachings community would have figured out the orderliness of the septenary over the last few decades. As seen in the table above, and as described in this Prologue, the orthodox septenaries exhibit nothing but chaos. The Michael Math Sequence was proffered as that orderly system that one might reasonably expect, but it too has chaotic elements, as documented in this Prologue. The Natural Sequence has what we would reasonably expect for an orderly cosmos.

This tabulation graphically displays the near-total lack of consistency within the Michaelian teachings on the structure and meaning of the septenary. How is this possible?!?! To me, it indicates a few things:

- 1. Dubious/bogus channeling within and among channels is a known systemic problem in the Michaelian teachings, and there has been a lot of dubious/bogus channeling on this subject.
- 2. Students do not attempt to Validate (or inValidate) the channeling because hardly anybody actually *studies* the channeling with a critical mindset, so they may not even notice the inconsistencies.
- 3. Michaelian students are typically not talented 'systems theorists' by nature; they are just average spiritual aspirants, so even if they notice the inconsistencies, they do not know what to do about them.
- 4. Even if someone did notice the discrepancies, they likely do not have the moxie to confront the channels about their glaring inconsistencies.
- 5. There is virtually no talent in the Michaelian teachings community for scholarly analysis and synthesis of the data; therefore no one presents a case replete with philosophical argument and scientific evidence to the channels. Not that it is important that the channels or the Michaelian teachings community as a whole confront the situation; individual students such as myself and yourself can come to our own conclusions without the participation of leadership.

The quantity of the inconsistencies within the Michaelian teachings makes it even more remarkable — astonishing even — that septenarian systems in so many other esoteric teachings and academic disciplines are in fact consistent, even when it appears that they are unaware of each other. It seems that their 'sources' (nature and intuition) are better than the Michaelian teachings sources (various channels).

Summary of the Conclusions

Enough has been documented in this Prologue, from the published Michaelian teachings and some of the unpublished channeling of Sarah Chambers, to arrive at a firm conclusion. My general conclusion is that these various sources are all too inconsistent to be of much value in resolving the controversy between the Natural Sequence and Michael Math Sequence. My *Cosmogony* book presents some information outside of the Michaelian teachings that provides a reasonable answer to the issue of where the Michael Math Sequence is applied versus where the Natural Sequence is applied versus where the Natural Sequence is applied. As stated in that book, I believe the Natural Sequence is the cosmic default, a Universal Truth and a World Truth, the law of the organized system of creation, a necessary sequence of *development* due to the very structure of creation itself, which we cannot un-choose with our Personal Truth. I believe that all other sequences, some of which are given above, if and when they are valid, apply to the disorganized aspect of creation and are the results of good or bad choices of conscious entities as they attempt to allocate resources and functions for logistical considerations.

In spite of all my general reading and specific research on the septenary, I only remember recognizing the Michael Math Sequence unequivocally in one place, the Michaelian teachings, and there it is primarily

addressing something for which we can have no objective empirical scientific or subjective experiential evidence, namely Casting Fragmentation of the Oversoul (whatever that is) into individual souls.

I have not gone looking for evidence supporting the Michael Math Sequence, but then neither did I go looking for evidence supporting the Natural Sequence. The latter kept finding me, and the former has not. I would be pleased to see a number of Michaelian students willing to look at the evidence and reconsider their beliefs. Michaelian students are typically unaware of the numerous examples of the septenary outside of the Michaelian teachings. They simply do not realize what an anomaly the Michael Math Sequence is among spiritual teachings. My *Cosmogony* book aims to enlighten the student body, and anyone else who is willing to learn.

The Michaelian teachings is aimed almost entirely at making people into better people; its systematic cosmological component is merely incidental. I know that the technical issues that I point out in most of these sections make no difference in our daily mundane or spiritual endeavors. That might be why the Michaels did not make a point to clear up certain inaccuracies early on. Part of that job seems to have fallen to me.

The Michaelian teachings is a work in progress. It did not all appear in an unambiguous and perfected state. Improvements and clarifications have been made over the decades and in different groups. Near as I can tell, the understanding of the symmetrical three-Axis structure of the Overleaf system and the proper placement of each Overleaf within it did not happen in the original Michaelian group. There was no real understanding of either the Natural Sequence or the Michael Math Sequence in that group that I have found so far. Yarbro made some progress with the "Michael Math" chapter of *MMFM* in 1986. There it was stated that Cardinal and Ordinal triads were symmetrical around the Neutral, but the Michael Math Sequence does not in fact do that, the Natural Sequence does. In my *Cosmogony* book, I argue for more progress in accuracy and consistency within the systematic component of the Michaelian teachings, the symmetrical Natural Sequence.

After a thorough study, some research, and much thought, my current informed opinion is that some — not all — of the information about the Michael Math Sequence got garbled in transmission between Causal and Physical Planes, and the errors have simply been uncritically accepted and repeated and embellished in the orthodox Michaelian teachings ever since.

At this time in history on our planet there is a battle raging between spirituality and materiality, religion and science, revelation and investigation. Personally, I believe that there is some overlap in these areas. In this context, it appears that certain parts of the Michaelian teachings are like 'a house of cards' built on 'a foundation of sand' — to mix a couple of metaphors. The 'foundation of sand' is the phenomenon of channeling itself, which is notoriously subject to error and bias, and the 'house of cards' is all of the information provided in channeling that cannot be verified by materialistic scientific methods or Validated by other methods such as academic philosophy. My aim in my books, especially in my *Tao* quadrilogy, is to bring as much of the Michaels' revelation into the realm of the academic disciplines of science and philosophy as possible, and then point out what must, for the time being, remain in the realm of questionable "revelation". My conclusion is that the Natural Sequence is in the category of verified science, and the Michael Math Sequence in regard to Fragmentation of the Tao to create human souls and/or ensoulment of the species is in the realm of unverified and unverifiable revelation.

Therefore, this far along in the development of the Michaelian teachings, more than fifty years from its origin, it seem appropriate to reformulate it from the ground up. The channeling has been the foundation heretofore; now it is time to dig deeper, and lay another foundation, one that is much firmer than dubious and discrepant channeling, one that is based on such academic standards as logic, mathematics, physics, psychology, sociology, philosophy, theology, and cosmology.

Frankly, I tell you that it seems strange and awkward to me that I have to present the case for the Natural Sequence when applied to natural development when it presents itself all over the place in both science and revelation. For whatever reason, the truth of the Natural Sequence was intuitively obvious to me from my first reading of the Michael Math chapter in *MMFM*, and subsequent investigation of the evidence confirmed my instincts. The only "evidence" for the Michael Math Sequence is some of that questionable channeling. There are too many discrepancies and errors in the channeled information for us to have much confidence in certain parts of it, this particular instance being notable, since the evidence against it when applied to natural development is so clear and so widespread.

I suggest this type of mis-channeling is allowed by the Michaels for two reasons. #1: it impels us to do what the Michaels always say to do: "Validate" what is allegedly said in their name; and #2: it doesn't really matter

that much in practical terms of spiritual growth, since most of that takes place whether we understand the stages of it correctly or not. It is in the same category as the discrepant channeling that either Michael Jackson or Dave Barry is the reincarnation of Wolfgang Mozart. This might be true of both or neither and it affects us not very much, if at all.

Examining, as I have, many instantiations of sevenness in my *Tao of Cosmology* book, I see what looks to me like varying amounts of confusion and ambiguity in some of them. The reason I perceive their lack of accuracy and consistency is because I claim to have a relatively clear understanding of the cosmology of sevenness — because I see its derivation from logic and mathematics, and its manifestation in physics/nature. Those disciplines (logic, mathematics, physics) find confusion and ambiguity loathsome. I believe that promoters of these other cosmologies of sevenness could tighten up their descriptions of the seven archetypal categories considerably if they also understood the logical and mathematical underpinnings and physics manifestations of the categories.

I wonder if any Michaelian channel independently "channeled" the Michael Math sequence — without knowing about it previously. We have seen that José Stevens published different sequences from what Yarbro published in the Michael Math chapter. Which alleged Michaelian channel are we to believe without being arbitrary? Upon examination of these discrepancies by resorting to sources outside the Michaelian teachings, I find that I cannot be credulous with Sarah's or José's or Quinn's or anybody's channeling. I suspect whoever channeled the Michael Math Sequence originally was unaware of the Natural Sequence and its pervasiveness in esoterica and exoterica, and everyone since then is likewise more or less unaware of the Natural Sequence, and so they just keep repeating and adding to the Michael Math Sequence credulously, student and channel alike, out of respect for the otherwise decent channeling in unstructured matters. It may very well be that the Michael Math Sequence is correct in regard to Fragmentation of Entities (although there is no way to Validate it that I know of). If so, then I can understand why other aspects of the cosmology of sevenness — such as Levels, Ages, and Life-Stages — got erroneously lumped in with that. As I have said before in different words, I can see that the Entity Fragmentation — as a *deployment* — might be an UN-natural sequence, a variation from the Natural Sequence, for logistical reasons, to appropriately meet a situation at the time. On the other hand, natural development follows the Natural Sequence, a necessary hierarchy, an expression of the time structure of the cosmos itself, ordained by Tao.

My speculative explanation for the inability of Michaelian students to accept the Natural Sequence, when I make them aware of it, is that:

- 1. Students don't want to give up a belief that we lucky special chosen few are in accurate contact with a near-omniscient supernatural entity;
- 2. Students have pseudo-validated for the Michael Math Sequence because their scientific and scholarly acumen, their epistemic sophistication, their critical mentality, is minimal;
- 3. It is almost impossible to replace a paradigm in people's belief systems rewire their neuronal connectome once the paradigm has become entrenched;
- 4. The Michael Math Sequence *feels* right to some people. Perhaps there is no amount of scholarly and scientific evidence that will sway those people to whom some or all these four factors apply.

Whenever I present the topic of Natural Sequence vs Michael Math Sequence to others, I feel like Galileo must have felt when he told church people to look through the telescope and believe their eyes rather than believe what it says in some old venerated unscientific book, or that they feel in their heart, or sense energetically.

Ever since I first received push-back against the Natural Sequence, after I presented it to some members of the Michaelian community, I have given a lot of thought over the three decades as to why there might be such push-back. From my perspective, there seemed to be a reflexive 'knee jerk' need to defend the orthodoxy of what to me was obviously bogus channeling. How much more bad "channeling" will students need to discover (such as presented in the last five hundred pages of this *History* book) before they understand just how untrustworthy and unreliable so-called "channeling" can be? Please, my fellow students, if you have developed any skepticism about channeling, then apply that skepticism to the Michael Math Sequence as you read the evidence and arguments for the Natural Sequence in the hundreds of pages in my *Cosmogony* book.

It is not as if I do not understand the difficulty of exchanging one belief system for another. In my youth, for twenty years I was a member of a fundamentalistic Christian church. Toward the end of that journey, I could feel that something was wrong; the reality that I was experiencing did not square with what I was being told

in their indoctrination process. What got me out of that indoctrination and brainwashing was reading so-called "dissident literature" from those who had previously found their way out of the cultish programming. Perhaps the reader could consider my books to be dissident literature, aimed against indoctrination about the Michael Math Sequence.

I can elaborate on my previous four points about the inability of Michaelian students to change their minds when presented with solid evidence and sound argument for the Natural Sequence and against the Michael Math Sequence. In my discussions with other Michaelian students about the primary issue that motivated the research and writing of my book *The Tao of Cosmogony*, I encountered much resistance to the new way of interpreting the data that evidence for the Natural Sequence provides. Naturally, I questioned why this is the case, since the evidence and argument that I present seems overwhelming and incontrovertible to me. Being unable to get into other people's minds and belief systems, I can only speculate about the reasons for the resistance. My presumption is that Michaelian students are encumbered by the same cognitive biases that typically afflict most humans, those that one can read about in the psychology literature, and that are summarized in such websites as >https://en.wikipedia.org/wiki/List_of_cognitive_biases<. It is good to know about the many cognitive biases that apply to all domains where we consume information, but those particularly relevant to this Prologue are as follows:

- 1. PRIMING BIAS. This is the notion that, when learning about a new subject, people tend to accept and believe the first thing that they are taught by an otherwise credible source. The Michael Math Sequence has been in circulation in the Michaelian teachings communities since 1986; that orthodoxy has been taught to all new students ever since then. Even though the information that the seven planes follow the Natural Sequence has also been in circulation for about that long, so far as I know I am the only one who claims that the Natural Sequence is the canonical septenary that governs all *developmental* septenaries, including Life-Stages (aka Internal Monads), Levels, and Ages, not just the planes.
- 2. CONFIRMATION BIAS: This is the notion that people tend to look for evidence that confirms what they already believe. For years and decades, Michaelian students have been told by the channels repeatedly that the Michael Math Sequence is true. For years and decades Michaelian teachers and their students have been interpreting the data that they see with their own eyes within the framework of the Michael Math Sequence schema. This makes them blind to any evidence for the Natural Sequence that they might encounter. As with all erroneous belief systems, the Michael Math Sequence provides a metaphorical 'filter' that causes people to not see stuff that is there, and a metaphorical 'lens' to see stuff that is not there. Therefore Michaelian students interpret reality with the distorted perception that belief in the Michael Math Sequence provides. After someone has misinterpreted their world and their experience per the Michael Math Sequence schema for years or decades, it is almost impossible to dislodge that belief system, even with a multi-hundred page book such as *The Tao of Cosmogony*, full of evidence and argument to the contrary, revealing the firm foundation of reality on which the Natural Sequence rests.
- 3. MOTIVATED REASONING: The "motivation" that commonly pushes a particular belief system is that the person has a particular value system. In other words, people are inclined to believe something because it suits their emotional stance; they believe something because they want to believe that something because it makes them feel good, or has some other 'pay off' function. (>https://www.psychologytoday.com/us/basics/motivated-reasoning<)
- 4. INERTIA/STATUS QUO BIAS: Once a belief system or paradigm has become configured and set in the neural 'network' of the brain, it is almost impossible to dislodge it and substitute another belief system or paradigm; it is as if it required a 'rewiring' of the brain connectome itself. This bias results in the tendency of most people to prefer to not 'rock the boat' and to resist "trouble-makers". Even if their current belief, value, or behavior system is sub-optimal, it might be "good enough", so why bother to alter it.

Other biases are described here: >https://www.psychologytoday.com/us/basics/bias<.

Of the various cognitive biases that people are subject to, the four most at work here seem to be those listed above. Another thing that resistance to the Natural Sequence tells me is that Michaelian students (and people in general) typically are not good at pattern recognition; they do not naturally incline to compare and contrast the various proposed instances of the septenary to see what the essences of the components are. This

phenomenon is not exactly a "bias", but it is a limiting factor in the evaluation of new evidence and argument. If my ideas are ever going to gain any traction for the Natural Sequence within the Michaelian teachings community, then it might not be enough to write a massive tome that presents the scientific evidence and philosophical arguments for it. However, I have not yet found another way to potentially "deprogram" Michaelian students who have been "brainwashed" by the orthodoxy of the Michael Math Sequence.

As yet another summary, in the following numbered list, I itemize my trail of logic in the matter of Natural Sequence versus Michael Math Sequence, taken from comments scattered throughout this Prologue.

- 1. Even though the Michael Math Sequence never "felt" right after I first read about it, and the Natural Sequence always did "feel" right, I tried to believe in the Michael Math Sequence from its first appearance in *MMFM* in February 1986 until enough external evidence for the Natural Sequence accumulated that I gave up completely on the Michael Math Sequence (and the names of the poles of the Levels) in late 1991, 5.8 years later.
- 2. I told Shepherd Hoodwin about it some time in the early 1990's, but he did not accept it.
- 3. Hoodwin's channeling on the subject appeared in *The Journey of Your Soul* in 1995. It offered a rationale or rationalization for why the Michael Math Sequence applied to Roles rather than the Natural Sequence. I simply rejected it on the strength of all the scientific evidence for the Natural Sequence and no evidence for the Michael Math Sequence other than questionable channeling.
- 4. Then in 1998, I asked Caris Turpen about it, and she said that Michael Math Sequence or Natural Sequence or whatever septenarian sequence depends on circumstances and applications. This answer puzzled me at the time. Then a few days later I tumbled to a realization that the Natural Sequence was a matter of *development*, but any variation therefrom could be applied in cases of *deployment*. This satisfied me to some extent, but "the devil is in the details" and the details are confusing. It was obvious to me that septenarian developments typically follow the Natural Sequence, but it was not obvious which, if any, deployments follow the Michael Math Sequence.
- 5. In an effort to accommodate the *MMFM* and Shepherd's and Caris's channeling, I speculated that the Michael Math Sequence only applied to Casting of Roles and maybe some other situations not specified in the channeling, such as the initial ensoulment of humans.
- 6. This was just me trying to make sense of, and salvage some of, the channeling. I still don't actually believe the channeling about the Michael Math Sequence is true. Nor do I disbelieve it it cannot be Validated or inValidated. I have been unable to find any non-channeling evidence for the Michael Math Sequence, and rationales and rationalizations for the Michael Math Sequence are questionable in light of the overwhelming evidence for the validity of the Natural Sequence. The more channeling I see, the less confidence I have in it. I may or may not go after more channeling to try to sort it out it is all in realms of stuff that cannot be otherwise Validated anyway, so why bother? The conclusion I have come to after more than 40 years in the Michaelian teachings is that channeling should be given zero inherent credibility. Better to be grounded in reality, and the evidence there is strongly in favor of the Natural Sequence.

I am all too aware that it is very difficult to change people's minds; once they have learned something a particular way. Earlier versions of this Prelude and my book *The Tao of Cosmogony* have been given out during the 2000s and 2010s, but the premise has gained very little traction. If the Michael Math Sequence gets set into people's belief system before the Natural Sequence does, then their brains are wired with that erroneous correlation of Roles and Ages and numbers, making it is almost impossible to reconnect their brain wiring into the Natural Sequence pattern. But ... I am not letting this difficulty stop me from trying.

If you are favorable to my promotion of the Natural Sequence, then please take a look at Part One of my book *The Tao of Personality* and see if helps (or hinders) your new-found appreciation or insights about the Overleaf System, of which the Natural Sequence is a significant component. I regard that Part in that book as my most important contribution to the Michaelian teachings. The symmetry of the Natural Sequence and the symmetry of Processes and Aspects do indeed make the Overleaf System beautiful.

Mainstreaming the Natural Sequence in My Book *The Tao of Cosmogony*

There are stages of development that have been presented in non-academic, esoteric, research: mysticism, shamanism, and channeling — both ancient and modern. In my *Cosmogony* book, these are presented in Part Two and Part Three, after the derivation of the Natural Sequence from logic, mathematics, and physics is

presented in Part One. There are stages of development that have been presented in academic, exoteric, research in biology, anthropology, psychology, sociology, and elsewhere. Those are presented in Part Four and Part Five. The latter are from the Ordinal levels of consciousness, focused as they are on external experience. The former are from the Cardinal levels of consciousness, focused as they are on internal experience. If this does not make much sense to you now, it probably will become clear to you in the course of your reading of that book.

This Prologue was written for Michaelian students. The entirety of my book *The Tao of Cosmogony* is presumably more palatable to these who are not interested in the entirety of the Michaelian teachings — which is obviously the vast majority of people on the planet. My *Cosmogony* book omits this "Prologue for Michaelian Students". In my *Cosmogony* book, in Part Two where I examine various esoteric traditions that bear on the septenary, I present the Michaelian teachings as just another esoteric teaching. In this way, people who are not Michaelian students can still have the benefit of the knowledge and wisdom and insight that the Michaelian teachings provides. Thus, my *Cosmogony* book was written so that it is a stand-alone work. By that I mean that it could be given to someone who was not a Michaelian student, and it would be complete in itself. I did this so that it could be used for exactly that purpose: given to interested parties who are not students of the Michaelian teachings; for them, the Prologue would be almost entirely useless. Septenaries espoused by the Michaelian teachings are included in my *Cosmogony* book, but they are presented as just other instances of the Natural Sequence; they bolster the case for the Natural Sequence along with the dozens of other instantiations documented in that book.

Can we do better than the obvious mess that the Michaelian teachings has made of the septenary? Yes, we can, and the wonderful thing is that the work has already been done, better and deeper by researchers and experiencers in other realms of knowledge, as documented in my *Cosmogony* book, intended for a mainstream readership.

If some of the valuable aspects of the Michaelian teachings are to reach a readership outside the Michaelian teachings, then the information must be presented in a way that is both palatable and sensible to academic, scientific types; spiritual types will take it 'as is'. Although mysticism is not exactly "scientific" in the modern conceptualization, it is not necessarily *pseudo*-scientific either. The fact that the exoteric Parts of my *Cosmogony* book corroborate the esoteric Parts of the book — is evidence that mysticism can be good at discerning the fundamental patterns underlying the natural world. The fact that the outer world and the inner world are in fundamental harmony is a Good Thing $^{\text{TM}}$.
