The image on the title page is of the Heart Chakra, called "Anahata" in Sanskrit; it was borrowed from the Wikipedia page on that subject. The Heart Chakra is the middle of seven major chakras; it is the bridge between a 'lower' triad and a 'higher' triad of chakras. The purple-colored image on page eight is called the "Antah'karana". This is a Sanskrit word and image for the concept of the totality of Mind. As with the Heart Chakra, the image represents the bridge between the 'lower' and the 'higher' realms; it has been adopted by Reiki practitioners as a symbol of the healing of the three levels of Being, namely body, mind, and spirit. Note the three-dimensional cube in the center, with three 'arms', representing the fundamental trichotomy of the Cosmos. The image of two hands on this page is yet another evocation of the fundamental dichotomy of the Cosmos. It is from the Sistine Chapel ceiling painting by Michelangelo: the passive hand of Adam on the left and the active hand of God on the right are extended toward each other. The Yin–Yang symbol, on page nine — also with passive and active sides — has the Chinese name "Taijitu"; its meaning is that apparent opposites define and contain each other.

The Meta-Michaelian Project

Some people who are not familiar with the "Overleaf Chart" referred to in the title of this book might find this book without knowing what it is. For them — as well as for those who are already familiar with the Overleaf chart — a brief introduction is expedient. Basically and briefly, the Overleaf chart is a matrix or grid of human personality traits.

The so-called Overleaf chart was first revealed to the general public in the book *Messages from Michael* (1979), compiled and written by Chelsea Quinn Yarbro. The book was based on "channeled" information received during the years 1973 to 1978 by a group of people in the Bay Area of California. The source of the information suggested the group members refer to the entity by the name "Michael", and the subsequent body of information is therefore referred to as the Michael teachings, and the personality system that is an important part of that teaching is therefore sometimes referred to as "the Michael chart".

Several channels in subsequent groups have promulgated their own version of the Michael teachings over the decades after the original group disbanded, and they have documented their words in books and on websites, and they have produced various version of the Overleaf chart. When reading these, it is obvious even to the casual observer that the emphasis and style and substance and coverage embodied in each particular version is different from the other offerings, and it is also obvious that the differences depend somewhat on the personality of the channel. Thus, the Michaels'-messages have not been delivered with one 'voice', literally and figuratively. Each version consists of a conglomeration of doctrines and dogmas that have been delivered didactically and descriptively and without evidence or argument or explanation. Mostly there are similarities between these various versions, but there are also significant differences. Newbie students of the material quickly discover that there is not a consistent and coherent and consilient teaching that came through a single source, even though it is claimed that it comes from a single source.

By inconsistent I mean that sometimes the versions from different channels do not always agree with each other in all matters where the information overlaps; the information from one version is not supplementary or complementary to other versions, it is actually directly contradictory. By incoherent I mean that the author of each version has cobbled their doctrines together without realizing that they should constitute an elegant, cohesive, integrated, holistic system that can be presented within a unified comprehensive explanatory underlying framework. An analogy is that the various doctrines seem like a dissonant cacophony; reading about them is like listening to this musical instrument and then that musical instrument and so on without realizing that the individual instruments should be playing in a combined coordinated harmonious orchestra. By non-consilient I mean that the versions do not agree in every respect with other credible sources, whether they be channeled, mystical, perennial, scientific, cosmological, theological, and/or philosophical systems. If I were to apply one word to these three types of defects and deficiencies in the systematic, structured component of the Michael teachings, it would be "nonsense".

Because of this diversity rather than unity, it seems to me that there is no collective body of information that can reasonably be called *The* Michael Teaching; rather, what we see is a variety of quasi-Michael or semi-Michael or Michael-like or pseudo-Michael (if Yarbro's claim that groups other than hers are "frauds and impostors") teachings, or what may be called "Michael*ian* teachings" — and that is what I call it in my books that refer to this body of information.

When I survey the situation, I see two broad divisions in the Michaelian teachings world. The "standard", shall we say, Michaelian teachings includes the work of Sarah Chambers, of Leslie Briggs, of Quinn Yarbro and others in her orbit, of JP Van Hulle and others in her orbit, of José Stevens, of Shepherd Hoodwin, and of Troy Tolley. These channels have not drifted very far outside the 'box' of the generalized Michaelian teachings. Channels in the other broad division acknowledge that their work is, shall we say, "para-Michaelian", "para" being the Greek-language prefix meaning "beside" or "next to". For instance, Stephen Cocconi says he is working with the "Michael Consortium", his channeling having stated that Michael has graduated to the next higher "plane" from where they originally spoke, as documented on Cocconi's Michaelian website, here: (>https://www.themichaelteaching.com/about-stephen/michaels-consortium/<). Susannah Redelfs acknowledges the standard Michaelian teachings, but says she is actually working with the "Council of One" (>https://councilofone.org/<). Karen Murray (aka Talyaa Liera) says she used to work with the Michaels, but subsequently worked with "Polaris" and is now working with "Solara" (>https://oracleofdestiny.com/about-talyaa/<). Varda Hasselmann in Germany encountered Yarbro's first two books about the Michaelian teachings in the mid-1980s, but became a channel for "Die Quelle" ("The Source"), described as a sibling

reunited Entity to the Michaels on the third plane (>https://septana.de/septana/<). Larry Byram started out as a student of the channeling of Alice Bailey, then became a channel for the Michaelian teachings in the mid-1980s, but has diverged away from that foundation to create his own teaching in the wider Michaelian world (>https://higheralignment.com/<). All of these channels in both of these divisions can be considered to be variations in the greater Michaelian teachings world, with some being more divergent or derivative than others.

Another instantiation of diversity rather than unity in Michaelian sources is the assertion that "the Michaels" — as they are sometimes referred to, "they" being a collective of 1050 souls or "fragments" — do not always speak as a single unified entity. In *Messages from Michael*, on page 102 (quoting an early session of the original Michaelian group, 27 October 1973), it was said that the Michaels are an "Entity" that consist of 850 Warrior Fragments and 200 King fragments — "Warrior" and "King" being two of seven "Roles" in the Overleaf personality system. However, in the first session that Sarah Chambers — the original channel — held when she resumed public channeling in 1996 (14 January) after an eleven-year hiatus, it was said that not just two Roles, but all Roles were present in the Michaels' Entity. It was also stated that various channels prefer to hear from certain conglomerations of Roles, such as the Sages and/or the Priests and/or the Scholars within the Michael Entity. It was also stated that various channels are better or worse at getting information on various subjects because of the depth and breadth of understanding or lack thereof that the channel has on the background information on that subject. This diversity in source and receiver provides further evidence for my assertion that there is no consistent, coherent, consilient body of "Michael Teaching"; rather, there is an inconsistent, incoherent, inconsilient "Michaelian teachings". My assertion is backed up by documentation presented in this 900+ page *History* book.

The fact that there are various resources in the Michaelian worlds (heavenly and earthly) has its advantages and disadvantages. On the one hand, the various Michaelian teachings are broader and deeper and richer as a result of the various perspectives provided by various alleged sources and receivers. On the other hand, it might be disconcerting to students to see the many actual inconsistencies and discrepancies within and between and among channels. I am one of those who finds the situation dismaying and disappointing, embarrassing even. To my way of thinking, the presence of so much nonsense calls into question the validity of the alleged sources and the integrity of the receivers; the Michaelian teachings is dubious at best and false at worst.

So what are we truth-seekers who value the virtues of consistency and coherence and consilience to do about this fact? What are we to make of these variations? My answer is: "Do our own research" until you arrive at validation and verification — because I have done my own research. To me, this does not seem unimportant. To the Michaels themselves, they are reported to have said that this is not unimportant; in fact, it is said to be a vital endeavor for their students. Yes, the amount of cognitive 'labor' required to fix the mess is intense, but the reward for having done so is also intense. I have accomplished the cognitive labor to my satisfaction and edification, and I present it in this and my other books for your consideration — while acknowledging that cognitive labor is required on your part just to read my weighty tomes, let alone assimilate and understand and appreciate their information. My books require readers to depart from the usual Michaelian teachings 'pablum'. With my books, students are not 'spoon fed' the 'baby food' of dogmas and doctrines of the orthodox Michaelian teachings as if they were infants.

Some students are drawn to and prefer one version in the various Michaelian teachings over the other versions, and they let it go at that; they do not examine the issues of contradiction and incoherence and nonconsilience at depth, and this avoids the difficulties and unpleasantness of confronting contradictions and incoherence and non-compliance with other teachings. However, to their credit, every Michaelian channel says that their students should not "let it go at that"; they say that it is up to students to "validate" the channeled information, and that to not do so renders the teaching worthless — or worse, misleading — for those students. Some Michaelian students take this injunction more seriously than others do. Furthermore, some students have more competence in scientific or academic acumen and/or epistemological sophistication and/or experiential curiosity than others do, and they bring these tools to bear on their process of validation, whatever that process means to them.

There is more to say regarding the process of validation.

There are far too many errors in channeling for us to trust it implicitly. We know for a fact that these errors exist because there are many obvious irreconcilable contradictions. The channels make no efforts that I know of to correct the errors, and the Michaels make no efforts that I know of to correct the errors (except maybe they are using me for that purpose). To their credit, the channels do say that we should not trust them

implicitly, and they do enjoin students to validate the channeling. My concern is that many students might be naively credulous by nature; my observation is that few if any students actually do the hard work of the validation process at all, because they are probably unskilled in epistemology — the philosophy of how scientific and academic knowledge is confirmed and how experiential gnosis is fostered. Or it may be that if they do validation they do not broadcast their conclusions, as I have done in this *History* book.

As I said above, almost the entirety of the various Michaelian teachings has been asserted by numerous channels without evidence and/or argument; it is delivered *ex cathedra*, by 'pontification', and students are *indoctrinated* thereby and therewith. Personally, I find this type of delivery to be profoundly problematic; it is like a fundamentalist cultish religion that takes some alleged Holy Scripture as the Word of God, and establishes a 'priesthood' of channels to spread the 'gospel'. Perhaps I find this to be more odious than others do because I was once a member of just such an organization. ("Fool me once, shame on you. Fool me twice, shame on me.") What are we to do? Perhaps you have heard it said in some legal systems that a person accused of a crime is "presumed innocent until proven guilty in a court of law". Following that pattern, my approach is to presume that a channeled dogma-doctrine is in the limbo zone of my belief system until corroborated or discorroborated "beyond a reasonable doubt". Perhaps you have heard it said that "That which is asserted without evidence can be dismissed without evidence." Following that aphorism, if I cannot accumulate enough evidence and argument and experience to validate or invalidate a particular Michaelian dogma-doctrine, then I leave it in the limbo zone of my belief system until further notice.

Personally, I take the fact that there are issues of inconsistency, incoherence, and inconsilience within and among the various Michaelian versions versus scientific and philosophical and spiritual teachings as an incentive, not a disincentive, to study harder and deeper and wider. It may be that I function near the extreme, which is why I have adopted the motto, "The unexamined teaching is not worth believing." Using the tools known to me, and bringing to bear whatever talents I may have, to my own satisfaction I have been able to validate some components of some versions of the Michaelian teachings, I have been able to invalidate some components of some versions of the Michaelian teachings, and yet other components are still in the limbo zone of my belief system, yet to be moved to one or the other side of the validation–invalidation ledger. Supplemental to the changes or modification to the Michaelian teachings arrived at via my process of validation, I have added some relevant components of my own to the validation ledger; they are my 'special sauce' added to the mix of various Michaelian versions. In addition to that, I have discovered that there are explanations for some of the Michaelian dogma-doctrines. By "explanations" I mean that there are levels of meaning and understanding both 'below' and 'above' the superficial layer that Michaelian students have been made aware of via the channels.

Regarding the concept of "explanation", a metaphor is appropriate. Some, if not many, Michaelian students are in the 'grade school' level of their learning about the Michaelian dogma-doctrines. This is where the student typically learns by rote memorization, because that is all they are capable of in the early phases of their learning. This is where they read the books and the websites and they can repeat what the channel said about a particular subject on this page of a book or that URL of a website. This is a necessary phase in the story arc of the overall learning process for newbie students. However, the Michaels themselves have apparently enjoined us to validate and inculcate their teaching experientially: put it into practice. The Michaelian teachings can show the students the way, but students must take the journey themselves; it is not just a "head trip".

As I said above, I take the position that there are layers of explanation 'above' and 'below' the superficial strata of data that is imparted via channeling. For instance, a personality trait on the Overleaf chart can be described in minute detail and at great length — Michaelian books and websites do just that — and it leads to comprehension, but only of a primitive and preliminary sort. What a descriptive dogmatic didactic teaching does not do is provide an *explanation* of *how* or *why* that particular trait is what it is and does what it does; the mere bare description of a trait does not provide the *context* in which the *content* of the trait is to be understood at the deeper and higher and larger level of explanation and understanding. Most Michaelian books mention the *Attributes* of the traits — e.g., Cardinal Inspiration — but none of them other than my books explain the Attributes of those traits in the context of the ontological substrate of the reality system in which we find our personality embedded, namely logic and mathematics and physics and cosmology. And not only the Overleaf system, but many other components of the dogma-doctrines of the Michaelian teachings can be understood in terms of these ontological primitives. The goal of my project is to provide the *explanations* that get behind and go beyond the mere *descriptions* that have heretofore been provided by the channels to their newbie students.

Returning to the school metaphor: I aspire to emulate the kind of learning that takes place in the educational system after graduation from high school, where there is less mere description and more deep explanation. In American terms, this means the bachelor's degree, the master's degree, and the doctoral degree. Even here though, as I understand it, getting a master's degree indicates that the graduate has mastered a subject at its current level of understanding. Only the doctoral degree goes 'meta' in the sense that it teaches the student — or should teach the student — how and why to learn, how and why to think for themselves, how and why to research for themselves, how and why to extend the horizon of knowledge and understanding beyond the current level of knowledge and understanding in a particular field of inquiry. My hope is that Michaelian students will get a 'master's degree' in the Michaelian teachings with the help of my books, but then go even further into what amounts to 'doctoral degree' territory with the help of my additional components, which provides something like a doctoral degree of understanding and explanation. My extensions are not the complete or the final answer, but my claim is that they are steps in the right direction. Michaelian students may do their very own doctoral study and dissertation according to their very own aspirations to transcend the Michaelian teachings that have been promulgated thus far.

In abidance with the ethical principle of 'full disclosure', I would be remiss if I did not notify readers at the beginning of my Michaelian books that what I offer in my books is not The Michael Teaching, first of all because there is no such consistent/coherent/consilient thing, as indicated above, and second of all because I offer yet another distinct version in the 'smorgasbord' of various Michaelian teachings; my Michaelian 'train' is running on a different 'track', so to speak. Because I have made unique modifications and added explanations to the current versions, I have come to refer to my version as the Meta-Michaelian project, "meta" being the Greek-language prefix meaning "above and beyond". Perhaps I could have called it the "Philipian" project, but that would not acknowledge its broad affinity with, and my indebtedness to, Michaelian sources. Whatever the name, the Meta-Michaelian project is my own thing; it is not a thoughtless regurgitation of what the Michaels allegedly said through some alleged channel or channels; it is what I have validated and invalidated; it is what I say through my computer word processor. And, per the tradition of all other Michaelian teachings, I encourage validation, lest the reader find my particular offering worthless and/or misleading.

As I said above, the Meta-Michaelian project in not a re-presentation of the familiar material that the reader finds in other Michaelian books and on Michaelian websites. It is, among other things, a re-formulation of the Michaelian teachings from the ground up, built on a foundation of ontological primitives in addition to channeling; in fact, the reformulation occasionally overrides channeling. I am not a 'channel', but it may be that I am a 'conduit'. Frankly, I am not exactly certain where the Meta-Michaelian project comes from. It may be that my muse is not even the Michaels; it might be the "technology and science Entity" that was mentioned in the 14 April 1974 session of the original Michaelian group. It that is the case, it would make sense because a Scholar-Cast Artisan such as myself would prefer the inspiration from an Artisan (technology) and Scholar (science) Entity than from a Warrior and King Entity such as the Michaels are. Whatever the ultimate source of the insights, my process for doing the Meta-Michaelian project is perhaps similar to channeling. As I conceptualize it, there is a sub-personality, which I call The Writer, that lives in the right hemisphere of my brain. It has absorbed a lot of cosmological, metaphysical, philosophical, sociological, anthropological, scientific, psychological, and technical information over this lifetime and perhaps other lifetimes; I have read a number of books that bear on ontological primitives or 'first principles', and I have had a number of transcendent mystical experiences that bear on 'first principles'. My right brain hemisphere assimilates and processes and integrates this information; it notices abstract patterns and systems and concepts; it translates it all into words, and sends them across the *corpus callosum* to the left hemisphere of my brain when it is in a receptive state, and that hemisphere instructs the body to write the words down on scraps of paper, take them to my computer, and commit them to a word processor. Beyond that conceptualization, I am reluctant to characterize my muse as a "higher self" or an "Entity" on some Plane beyond the Physical. The bottom line is that I add to the Michaelian material when the Meta-Michaelian material comes to me or through me. Wherever the inspiration comes from, the unique perspective is what makes my books different from anything that Michaelian students have seen from elsewhere.

Looking back to August of 1981 when I first began to study the Michaelian teachings in earnest, it seems that I was not satisfied with the Michaelian teachings as they were then. Neither am I satisfied with them as they have become, more than forty years later. From the beginning of this journey, I have seen things that Michaelian students have not yet seen; I have understood things that Michaelian students have not yet

understood, even after four decades. It appears that I 'march to a different drummer'. This journey leads me to believe that I have never actually been a Michaelian student; rather, I have always been a Meta-Michaelian student. So, as I said, I have added and subtracted and multiplied and divided the mainstream orthodoxies of the Michaelian teachings in my own unique way. One metaphor for what I have done is that I found the Michaelian teachings as a 'diamond in the rough', a gem that has just been dug out of a mine, rough and covered with dirt. It is ugly in this state, but it has a lot of potential. It even has some practical utility in this raw state. My Meta-Michaelian project is to clean it, cut it, and polish it, so that it is a gem of sublime beauty as well as utility, and set the polished gem in an adornment. The purpose of the Meta-Michaelian project is to throw out the 'bathwater' while retaining the 'baby'.

Another metaphor, one from the Bible, is to 'separate the wheat from the chaff'. Yet another metaphor is that I found the Michaelian teachings to be like a dilapidated ramshackle edifice, and I have refurbished and remodeled it, and added some rooms. It can also be thought of in these terms, that by applying the tools of consistency, coherence, and consilience (described in the fourth paragraph of this section), the Meta-Michaelian project is the 'error-correction code' that attempts to clean up the Michaelian 'signal' by removing the 'noise' created by the fact that there are various sources and receivers of the Michaelian teachings.

Please keep in mind that I am not averse to the sensible components of the Michaelian teachings; I am only trying to fix the senseless components. I am not challenging any component of the Michaelian teachings that is similar to the standard esoteric and mystical teachings that have been extant in the perennial spirituality on the planet for millennia. What I am challenging is the systematic, structured component that is unique to the Michaelian teachings but which unfortunately I see as rife with nonsense, and because I regard the structural component as the unique contribution of the MT to the prior teachings, I am suggesting please let's get that right. My aim in my books is to keep the beautiful, healthy 'baby' and throw out the filthy 'bathwater'; my purpose is to eat what is 'wheat' and throw out what is 'chaff' in the structured systematic component. My name for the resultant consistent, coherent, consilient product of my Meta-Michaelian project is the "Process/Aspect System".

A situation that is common with Michaelian students is that they either lose interest in learning more about the Michaelian teachings so they look elsewhere, or they hunger for more within the Michaelian teaching but do not find it and become stagnant. The Meta-Michaelian project suggests that there is much to be 'interpolated' within the current realm of the various Michaelian teachings, and much to be 'extrapolated' outside the current realm of the various Michaelian teachings. My suggestion is that the entire cosmos, from the largest realm to the smallest realm, can be better understood with the help and guidance of the Meta-Michaelian project.

Personally, I find the defects and deficiencies in the various Michaelian teachings to be awkward at best, and embarrassing at worst. The Priest-ish (Cardinal Inspiration) components in my personality (Priest tertiary influences, Spiritualist, Arrogance) feel disappointed that the teacher and the students have made no efforts to correct the issues as part of the validation process. The Priest in me says, "We can do better than this!" It wants to feel pride in a Michaelian Teaching, it wants to be able to recommend a Michaelian Teaching to others wholeheartedly, but, in its current state of disarray, it cannot be advocated and promoted by me.

The point that I drive home in my books is that the various Michaelian teachings are not the be-all and end-all of accurate information. One should not presume that it is at the top level of available knowledge about anything. The lack of consistency, coherence, and consilience among the channels demonstrates that conclusively. To assume that a supernatural entity is able to accurately communicate through a mere human — if that is what is happening here — is a huge leap of faith. As Morpheus said to Neo in the Matrix movie, my books suggest to the reader that they take the 'red pill', "free your mind", and wake up in their own intuitive faculties that are awakened and informed and augmented by comparison with the sensible worlds of science, technology, engineering, and math.

Some students may find it uncomfortable that some of my work involves pointing out the defects and deficiencies of the Michaelian teachings, but this could be a useful phase in their transition to a Meta-Michaelian project of their own, should they ever become dissatisfied with the various Michaelian teachings in their present sorry condition. Even though my Meta-Michaelian project is distinctive from the various Michaelian teachings, in this book and in my other books, my aspiration for service is that I have something worth sharing with the Michaelian community, after my four decades of involvement in it, and subsequent to my departure from it. "Your mileage may vary", as the saying goes, but here it is for whatever it is worth to you, somewhere between zero and infinity; you make your own evaluation. Six books that document the

Meta-Michaelian project are in progress. My aspiration is that the reader benefit from the fruits of my efforts thus far. May you enjoy and learn.

Dedication

To all Michaelian and Para-Michaelian and Meta-Michaelian students — everywhere and everywhen.

But also, I am reminded of Jesus's parable of the sower and the seed:

The Parable of the Sower (sometimes called the Parable of the Soils) is a parable of Jesus found in Matthew 13:1–23, Mark 4:1–20, Luke 8:4–15 and the extra-canonical Gospel of Thomas.

Jesus tells of a farmer who sows seed indiscriminately. Some seed falls on the path (wayside) with no soil, some on rocky ground with little soil, some on soil which contains thorns, and some on good soil. In the first case, the seed is taken away; in the second and third soils, the seed fails to produce a crop; but when it falls on good soil, it grows and yields thirty-, sixty-, or a hundred-fold.

Jesus later explains to his disciples that the seed represents the Gospel, the sower represents anyone who proclaims it, and the various soils represent people's responses to it.

[>https://en.wikipedia.org/wiki/Parable_of_the_Sower< — retrieved 28 March 2023]

My guess is that there are many spiritual seekers who could be likened to 'dark matter' in that they are influenced by the books and websites of the Michaelian teachings, but they are invisible to the Michaelian students who make themselves visible to other students. May this book be like a 'seed planted in fertile soil'—the 'soil' being the hearts and minds of spiritual seekers of every kind, not just Michaelian.

Copyright Status

This publication is released under the Creative Commons License, version CC BY–NC–ND by the original author, Philip Wittmeyer. This allows you to share it verbatim with anyone so long as, 1) you credit the author, 2) you charge no money, and 3) you make no derivatives — without contacting Philip and getting his permission: >wittmeyer@gmail.com<. However, the recommended way to make this available is for readers not to duplicate it themselves but to refer others to me.

The purpose of the copyright is, of course, not to stop the information from spreading; it is to give credit where credit is due. Although you are not forbidden to copy and disseminate the entire document verbatim, you may prefer to borrow (some of) the ideas, modify them, and/or add to them; you are also allowed to do this to your heart's content, and present the modifications as your own. Even here it is common courtesy to let others know where some of the original inspiration came from, and that would be me and this book and my other books.

This book has been written in a way that it can be used as a manual, a manual that might lend itself to group learning such as monthly meetings and gatherings. I am not the type to lead seminars or retreats myself, but if you are, and if you have studied the system with a view to teaching it and receiving compensation, then by all means do so. If you want to rework the information in your own words and for your own purposes, I encourage that, so long as you attribute the source to me, so that others can find me. I in my turn refer the reader to the precursors to my perspective, first of all *Messages from Michael*, by Chelsea Quinn Yarbro, and subsequently other books and teachers who can be found with an internet search for "Michael Teaching". In my books I have uniquely adapted and modified the information found in the Michaelian teachings community as a whole. Go thou and do likewise.

It may not be possible to apply this present copyright notice strictly. Precursor portions of this *History* manuscript have been given to Michaelian students over the decade since it was begun, following the year 2010. Versions of the manuscript in various stages of completion and polish were released and distributed, and who knows what has become of them? Printouts of those versions had a cover letter, and it included a copyright notice that changed over the versions. Basically, my intention for copyrighting the manuscript was to preclude anyone else from claiming the work as their own and claiming their copyright on it and thereby blocking my copyright. Whatever it said in its various incarnations, perhaps those copyrights are still relevant for those printouts. I just want the information to get out and to be useful for seekers, for whatever it is worth to them. If you are not sure what to do with the use and/or distribution of my writings, including this manuscript and/or the previous versions, contact me and we will talk about it.

Acknowledgments

Thanks of course to Sarah Chambers for the original channeling of the Michael entity, to members of the original Michaelian group for recording, transcribing, and disseminating the transcriptions, and to Chelsea Quinn Yarbro for publishing *Messages from Michael* based on those and other transcriptions; all that allowed me to find the Michaelian teachings in 1980. Thanks to others who have published books on the Michaelian teachings and created websites: you know who they are. Thanks to all of the friends I have made among Michaelian students, and who have taught me much. Thanks to Nancy Gillpatrick Cross, who was my primary editor on this book; her comments were valuable. Thanks to, Ellen Fauerbach and Ed Hamerstrom for proofreading and commenting on the pre-publication manuscript.

The serif and sans-serif typefaces used in this document are from the Mesouran family of fonts. To the author's aesthetic sensibilities, Mesouran has just the right balance between a "masculine" (angular or spiky) and a "feminine" (rounded or smooth) appearance, with a touch of elegance that is beautiful, but not so much as to be a distraction from easy readability.

"Propagate the Logos. This isn't trite. We expect this teaching to reach others.

We are not just hollering down the rain barrel." — the Michaels

Books by The Center for Michael Teachings, Inc.

The Michaelian teachings, filtered through the brains of some channels: *Michael Speaks: The Legacy of Sarah Chambers* (Volumes 1 and 2 and 3)

Michael Speaks: The Legacy of Leslie Briggs

Michael Speaks: A Legacy of JP Van Hulle (Volume 1 and Volume 2 and Volume 3)

Books by Philip Joel Wittmeyer [in preparation]

The Meta-Michaelian project, the Michaelian teachings filtered through the brain of an engineer:

The Tao of Cosmology: Tao's Template of First Principles (The Legacy of Philip Joel Wittmeyer, Volume 1)

The Tao of Cosmogony: The Natural Sequence of the Cosmic Septenary (The Legacy of PJW, Volume 2)

The Tao of Personality: The Process/Aspect System of Personality Traits (The Legacy of PJW, Volume 3)

The Tao of Relationships: The Chemistry and Alchemy of Service and Intimacy (The Legacy of PJW, Vol. 4)

A History of the Overleaf Chart: From the Original Michaelian Group to the Present (Legacy of PJW, Vol. 5)

Study Papers on the Original Michaelian Group (The Legacy of Philip Wittmeyer, Volume 6)

"The unexamined life is not worth living." — Socrates
"The unexamined teaching is not worth believing." — Wittmeyer

Back Cover Blurb for A History of the Overleaf Chart

"Propagate the Logos. This isn't trite. We expect this teaching to reach others.

We are not just hollering down the rain barrel." — the Michaels

In the original Michaelian group, the Michaels referred to their teaching as "The Synthesis". They said that it was their attempt to pass on to their students the knowledge and understanding and wisdom that they accumulated during their many tens of thousands of incarnations as humans on this planet over tens of thousands of years. During those lifetimes they experienced what the Physical Plane has to offer, from the development of mundane coping skills to enlightenment on transcendent spiritual paths. If you are familiar with various metaphysical teachings, historical and present-day, you will recognize components of many of them in the Michaelian teachings; that is why the Michaels referred to their teaching as The Synthesis.

Phil Wittmeyer has been a student of the Michaelian teachings since 1981. His Scholar soul avidly acquires knowledge of all kinds; his Artisan Role structures the knowledge and applies tools to the knowledge in the production of tangible objects, in this case, books. In a series of books, he is attempting to pass on to other students some of his accumulation of knowledge and understanding and wisdom, prompted by what he received from the Michaels and from other of their students, and from other scientific, psychological, philosophical, and spiritual traditions and teachers. The Michaelian teachings has come to us piecemeal, a little here and a little there. As part of his own process of gathering these pieces, and his process of coming to understand the scattered elements of the Michaelian teachings, Phil has reformulated it 'from the ground up', from 'first principles'. In other words, this series of books represents Phil's synthesis of the Michaels' Synthesis.

Phil started his first book in 1981, and has added several other books over the decades, never finishing any of them along the way, until recently. Each of these books presents what the author believes might be a unique and significant contribution to the Michaelian teachings community as a whole, but if not that, then perhaps some individual students will find his offerings edifying and informative. Because of the reformulation of the Michaelian teachings, Phil's books are rather different from all other Michaelian teachings books. Therefore, even if you have read all of those other books, you will learn a lot more from Phil's books. This is not just a retelling or a rehash of the material; the 'bones' of the Michaelian teachings are 'fleshed out' considerably.

The Michaelian teachings first appeared in 1973, and an enormous amount of channeling has added to it over the decades. Numerous expositors have presented and explained the Michaelian teachings in books and on websites. Phil's suggestion is that the Michaelian teachings is now mature enough and complete enough to deserve an "academic" treatment of the material in a somewhat historical, scientific, objective, critical way. That is Phil's intention with his books. In other words, Phil's approach is analytical as well as synthetical.

The volume you have in your hands now is about the Overleaf System of personality traits revealed by the Michaels — that element of the Michaelian teachings that has fascinated, and will continue to fascinate, Michaelian students. The Overleaf System has been graphically represented in many charts in the four decades since it was first revealed. It might be that most Michaelian students do not realize that there were precursors in other teachings to most components of the Overleaf System. It might be that most Michaelian students do not realize that there are numerous discrepancies and contradictions regarding the arrangements of the personality traits in the Overleaf System. If you are one of those, then prepare to gain some knowledge and understanding and wisdom from reading this book. Phil shares his new and unique insights about the Overleaf System here, and supplements his insights with information from other spiritual teachings.

"The unexamined life is not worth living." — Socrates
"The unexamined teaching is not worth believing." — Wittmeyer

PRELUDE

This is the fifth in a series of six books that I, Phil Wittmeyer have written on the Michaelian teachings. It is best if you read these books in the intended order, Volume 1, Volume 2, and so on, but this book actually works pretty well as a stand-alone volume.

In the terminology of the Overleaf System, a collection of personality traits that was revealed to the original Michaelian group, I am a Scholar-Cast soul or "Fragment" (to use Michaelian terminology) experiencing the Artisan Role in this and all other lifetimes. Typically, the Scholar-Cast Fragment wants to know what is, and the Artisan Role wants to understand how it works. These seven books comprise what I refer to as my personal "systematic cosmology project" to satisfy those Scholar-Artisan basic needs to know and to understand. For me, the Michaelian teachings has provided the context and much of the content of that project. I am sharing the product of the project with the Michaelian teachings community, and beyond, via these six volumes; these are the legacy of my forty-year plus Michaelian student-hood.

(By the way, these are not to be confused with the "Legacy" books published by The Center for Michael Teachings, Inc.: The Legacy of Sarah Chambers; The Legacy of Leslie Briggs; The Legacy of JP Van Hulle.)

The situation that Michaelian students find ourselves in is that the Michaels revealed and described the Overleaf categories and the Overleaf personality traits, but they did not explain the Overleaf System, its structure and its meaning, its derivation from first principles, and its existence as an instantiation of logic, mathematics, and physics. Apparently that task has fallen to me; that is what Volume 1 and Volume 2 of my Legacy books are all about. The introductory material on cosmology and cosmogony is then elaborated in the subsequent four Legacy Volumes. Unless a Michaelian student understands this fundamental structure to the Overleaf System, they do not understand the Overleaf System, no matter how well they understand the Overleaf traits as they manifest in the mere human personality. The mere human personality is a faint shadow of the primordial archetypes of all of creation.

Here is a list and a description of the six *Legacy* books.

VOLUME ONE: The first book, called *The Tao of Cosmology: Tao's Template of First Principles* (hereinafter referred to as *Cosmology*), demonstrates how Chapter 42 of the *Tao Teh Ching* presented an algorithm for generating the framework of the universe in which we live, as well as the Overleaf System that we Michaelian students all know and love:

Tao produced the One; the One produced the Two; the Two produced the Three; the Three produced All things; All things carry the yin and embrace the yang; Through the blending of the chi they achieve harmony.

Fans of Douglas Adams's book *Hitchhikers Guide to the Galaxy* will notice that — coincidentally — "42" is also "the meaning of life, the universe, and everything". Anyway, in my book *Cosmology*, the realms of logic, mathematics, physics, science, philosophy, and theology are examined in the light of Tao's Template. The three subsequent Volumes are conceptual extrapolations of this first volume, in successively smaller subsets, which means that each volume provides some of the context for the content of subsequent volumes. This first volume was written sporadically over about four decades, starting in 1983 with the discovery of the Ra channeling and the physics theory of Dewey Larson (which can be correlated with the Overleaf System, thus uniting mathematics, physics, and psychology), and ending with the date of its publication. The Overleaf System is a subset of Tao's Template.

VOLUME TWO: The second book, called *The Tao of Cosmogony: The Natural Sequence of the Cosmic Septenary* (hereinafter referred to as *Cosmogony*), was written mostly in the years surrounding the year 2000, although the seeds of it were planted in 1986 with the publication of *More Messages from Michael*. The seeds sprouted in 1991, but serious work did not begin until the late 1990s. The book is about that portion of Tao's Template that refers to development or evolution over time, in seven steps or stages. In

the Michaelian teachings, it is known as Internal Monads and Levels and Ages, but there are dozens of other realms of knowledge that discuss the same seven stages of development. In my *Cosmogony* book, I compare and contrast, analyze and synthesize them, into a coherent picture. Concerned as they are with the structure of space and time respectively, the first two volumes of this *Legacy* are rather abstract and impersonal. However, the next volume in this series is concerned with the concrete and personal application of this foundational knowledge and understanding.

VOLUME THREE: The third book, called *The Tao of Personality: The Process/Aspect System of Personality Traits* (hereinafter referred to as *Personality*), was written mostly during the years 1981 to 1987. It is about the pattern of personality traits, called the Overleaves, first revealed to the world in the book, *Messages from Michael*, authored by Chelsea Quinn Yarbro and published in 1979. I have made some significant advances in the understanding of the Overleaves based on my understanding of Tao's Template and the physics theory of Dewey Larson as documented in *Cosmology* and *Cosmogony*. The metaphor that I like to use, to explain the function of this book, is of the 'trees' and the 'forest'. Most Michaelian students become acquainted with the 'trees' (the individual Overleaf traits) — this is an oak tree and that is a maple tree and so on — but they do not gain much acquaintance with the ecosystem of the entire 'forest' (the meaning and structure of the Overleaf System as a whole in terms of the logic—mathematics—physics of what I call the "Dialectic Attributes" and the "Axial Attributes" that are shown in the headers to the columns and rows of Overleaf Charts). This *Personality* book describes and explains both the 'trees' and the 'forest'.

VOLUME FOUR: The fourth book, called *The Tao of Relationships: The Chemistry and Alchemy of Service and Intimacy* (hereinafter referred to as *Relationships*), was written mostly during the years 1989 to 1991. In the late 1980's, after having written *Personality*, some of the people who had learned of the Michaelian teachings through me talked me into leading a group. For the purpose of teaching that group, I compiled information on about sixty subjects from three Yarbro books available at the time, namely *Messages from Michael (MFM*, 1979), *More Messages from Michael (MMFM*, 1986), and *Michael's People (MP*, 1988). That project helped me to understand the Michaelian teachings deeply, and then I tumbled to the realization that there was a correlation between the chakras and the Centers and some of my spiritually transformative experiences. Two of the written products of that study and that group were the Prequel and Part One of the *Relationships book*. Part Two of the *Relationships* book followed shortly thereafter.

Legacy Volumes 1 through 4 are written in such a way as to mainstream some of the components of the Michaelian teachings to people who are not Michaelian students. The following two Legacy Volumes, Volumes 5 and 6, cannot be divorced from the Michaelian teachings and mainstreamed to a general readership, but some chapters from them can be edited and incorporated into the mainstream versions of the first four Legacy volumes.

VOLUME FIVE: The fifth book of my *Legacy*, the one that you are now reading, is *A History of the Overleaf Chart: From the Original Michaelian Group to the Present* (hereinafter referred to as *History*). In *History*, I discuss precursors to the Overleaf System, the revelation of the Overleaf System and its structure, charts of the Overleaf System, and examination of discrepancies among expositions of the Overleaf System. The seeds of this book were planted in the late 1990s, when the internet exploded and online Michaelian teachings communities formed. I did my Scholar–Artisan thing and wrote some study papers on some Michaelian teachings subjects, over the period of a few years, to share with those Michaelian teachings communities. It dawned on me in about the year 2011 that these could be assembled into a book, this *History* book. I worked on it sporadically up until its publication; the most intense work was in 2019.

VOLUME SIX: The sixth book of my *Legacy* is titled *Study Papers on the Original Michaelian Group* (hereinafter referred to as *Study Papers*). Therein are gathered the Michaels' answers to questions on more than two hundred topics as found in the transcriptions of the original Michaelian group. These topical compilations are analyzed and synthesized with extensive commentary. The seeds of this book were planted in 1986 when I compiled information on five dozen subjects from the first two Yarbro books, for the purpose of teaching a group of students that met in my home. About twenty years later, in about the year 2011, I started this Volume Six with a similar objective but for the entire Michaelian teachings community, and worked on it sporadically up until its publication. I regard myself as a displaced

member of the original Michaelian group, and one of my soul assignments is to clean up the mess that they left behind by their premature departure from the scene.

Let me describe how the books have been delivered to me from the right hemisphere to the left hemisphere of my brain: not as a string of letters, words, sentences, paragraphs, sections, chapters, and books from beginning to end in a linear fashion. The way the right hemisphere of my brain works, it is as if a jigsaw picture puzzle is dumped out of its box onto the table in front of me, and it is up to me to put the pieces together to reveal the whole picture. These dumps have happened over decades. The books are not picture books; they are written as a string of letters, words, sentences, paragraphs, sections, and chapters. Therefore, the way this works for readers is that they must scan the picture that the words describe by reading from left to right and top to bottom and beginning to end. Only when readers have read all of the books will they see the complete picture that is my reformulation of the Michaelian teachings. This is not actually unlike the delivery of the Michaelian teachings itself; it has been piecemeal, a little here and a little there, and it has been up to the students to try to figure out what the big picture looks like.

FYI, my Role-ish "energies" are, in descending order, Scholar — Artisan — Priest — Sage. Six of my books are from the Scholar–Artisan–Sage "brainiac" side of my Being; one of them (*Relationships*) is from the Priest-ish "cardiac" side of my Being. I am a scientist, an engineer, a philosopher, and a mystic in that order.

You will notice from the dates above that I have been working on these books for more than forty years. It is my pleasure that now some others besides myself will presumably benefit from this investment in time and energy. My desire and intention is that others derive as much understanding from this gift of knowledge as I have — and that is considerable.

Note that in this book and others that I use the phrase "the Michaels" to refer to the original source of the information, allegedly a collective of souls that can be considered a conglomerate being as well as a singular being, an "Entity". The Michaels refer to themselves as a "they" in the channeling, so it makes sense to conform their name to that plurality. Others within the Michaelian teachings originally proposed this, and I have adopted it. I usually refer to what "they" say only when the subject is not something that I have been able to "Validate". There is an extensive explanation of my Validation process in the Prologue of this *Personality* book.

Michaelian Teachings Books Quoted

TFW = The Fourth Way, P. D. Ouspensky, 1957

In this book, many times I refer to and quote from other books on the Michaelian teachings. In order to streamline the presentation, I will refer to them by their acronym only. Most Michaelian students will own these books and have read these books; they are the standard reference books used in the Michaelian teachings community and have been for decades in many cases. The initial letters of the names of the books are italicized, as is the custom in the publishing industry. A more comprehensive, formal Bibliography can be found at the end of this book; it includes more information, such as the publishing company. Typically, I will use the entire book name the first time that it appears in a chapter, show the acronym in parentheses, and then use the acronym henceforth in that chapter. Rinse and repeat.

Glossary

If/When these books are published for real, I might make a Glossary. Until then, I suggest that you refer to the Glossary in Shepherd Hoodwin's books, *The Journey of Your Soul* (1995) and *Journey of Your Soul* (2013), if you see any words or concepts that you do not recognize or understand. Two other books, *The Michael Handbook* and *Michael: The Basic Teachings*, also have a glossary.

PROLOGUE

Perhaps most Michaelian students would agree that the Overleaf System is the crown jewel of the Michaelian teachings. It is something unique to us, compared to the various channeled and metaphysical teachings available in the world today. It is the thing we tell our friends and relatives and co-workers about after we discover our own Overleaves. It is the practical part of the Michaelian teachings that we find easiest to understand and apply. Consequently, Michaelian students often have an endless fascination for all things Overleafy. Well, students, we are going to get a hefty dose of Overleafiness in this book.

The Michaels launched into their revelation of the Overleaves about two weeks after their first appearance to the original Michaelian group. It took from August of 1973 to April of 1974 for all seven Overleaf categories to be revealed. It turns out that there were seven Overleaves in each of the seven Overleaf categories, for a total of forty-nine personality Overleaves.

Seven is a very important number in the Michaelian teachings. Sets of seven have the name "septenary", and septenaries are common in other teachings. There were examples of septenaries in the Gurdjieffian teachings and other spiritual teachings that the founding members of the original Michaelian group were familiar with, but the Michaels' teaching went beyond those in some important areas. It is obvious with all of this "sevenness" that there must be some sort of system involved.

We all understand that there is value in knowing our Overleaves and the Overleaves of the people in our lives. It helps us to understand and get along with ourselves, others, and the world in general. Granted, this is mundane psychology and sociology, and also granted, it is a very important part of the Michaelian teachings. However, in the original Michaelian group there was also a huge interest in cosmology, which is the opposite of mundane. There is information about seven "Planes" of creation, and information about the history thereof, which traces the fragmentation and reintegration of "Tao". Thus, the entire universal *being in space* and *doing in time* is covered by a systematic structured framework. Hence, cosmology.

The word "cosmos" derives from a Greek word that means something like the orderliness of the world, and refers to its regularities, its lawfulness, its harmonious wholeness, its pattern. In Greek philosophy, the concept of cosmos was contrasted with the concept of "chaos". The Michaelian teachings has very little of the latter because so many parts of it are interrelated. In fact, the Michaels said that the history of the universe comprises an "awesome order", and they called this "the tapestry". The Overleaf Chart is a part of this orderly tapestry. When understood to its fullest extent, the orderly pattern of the Overleaf System embodies the Michaels' version of the structure of the cosmos — not just the structure of the human personality. Contained in the Overleaf System are the overarching principles upon which the entire Michaelian teachings is based. The existence of such phenomena as families of souls and their karma and Monads and many other aspects of the Michaelian teachings follow naturally from an understanding of the Overleaf System. The Overleaf System is a conceptual edifice so fundamental that one might say that it is "Tao's Template". In that respect, we might call the Overleaf System in its cosmic magnificence a "mandala", an image worthy of contemplation — and contemplate it we will in this book.

The history of the Overleaf Chart among Michaelian students exhibits some chaos as well as some cosmos. As we review the versions of the Overleaf Chart that have appeared over the decades, we will note that much attention has been paid to the names of the Overleaves and their Poles as people search for their best word. There is much that students can learn from that exercise. We will also note that some attention has been paid by the creators of those Charts to the arrangement of the Overleaves in a meaningful grid on the page. There is much that students can learn from this exercise. Also we will note that there are differences of opinion about both the names of the Overleaves and their arrangements. We will need to metaphorically 'exercise' our intellectual 'muscles' as we explore these differences.

If the Michaelian teachings did not have a structural, systematic component, there would be no reason for such exercises. If the Michaelian teachings was just a mass of nebulous ideas, as some other spiritual teachings are, there would be no such discrepancies to exercise our intellects with. But, the differences exist, and the value of discussing them is in the amicable exchange leading to a meeting of minds and hearts as a valuable part of community function. At the very least, students may find enough here to cause them to pause and explore the discovery of a new way of thinking about the Michaelian teachings. At best, students might have a joyous epiphany or two leading to more Agape, which is the ultimate purpose for which the Michaels gave the Overleaf System to us.

This *History* book is unlike any other Michaelian teachings book by other authors. So far as I know, there has been no academic treatment of the Overleaf System, either from inside the Michaelian teachings or from outside of it. By "academic" I mean a scholarly endeavor, using recognized means and methods of scholarship, to examine the Overleaf System as it is found in various sources. This *History* book compares and contrasts the sources within the Michaelian teachings, and similar esoteric and exoteric sources outside the Michaelian teachings; it analyzes and synthesizes the sources into a single coherent overview of the Overleaf System. When this is done, we see discrepancies as well as congruities; we learn much that we might otherwise overlook. Every Michaelian student can perhaps benefit from my academic exercise, but those Michaelian students who have a Scholar influence in their Personalities will perhaps appreciate my academic treatment of the Overleaf System more than those who don't.

There is information in the original Michaelian group transcriptions that I believe is better than anything we have seen in subsequent channeling, and there is information there that I believe has been superseded by better channeling. Also, metaphorically speaking, a lot of the 'bones' of the Michaelian teachings that were given in the original Michaelian group have now been 'fleshed out' with 'muscles' and 'organs'. This is reflected in various Overleaf Charts that have appeared over the decades as students have applied themselves to understanding and representing the System graphically. We examine nearly two dozen different Charts. There is extensive commentary on each Chart, in terms of both analysis and synthesis. For instance, we note how each Chart compares and contrasts with other Charts. We note that some names of Overleaves have been changed by various teachers. We note that the arrangement of the Overleaves in the grid or tabulation form is different from Chart to Chart. We also note if there has been an improvement, that is, an evolution in understanding, as the years and decades went by.

As we investigate the history of the Overleaf Chart, we pay particular attention to the changes in understanding of, first of all, the names of the Overleaves and their Poles, then of the way the Overleaves are arranged in a pattern. This careful examination will extract the maximum learning from this central aspect of the Michaelian teachings.

The very first Overleaf Chart was apparently created about six months after the Overleaves began to be revealed. It was named "The Ordering of the Cosmos" and it included a list of the seven planes of creation. This indicates a recognition early in the original Michaelian group that the Overleaf System actually comprehended all of creation, not just human personality. However, it is obvious from the unstructured nature of that particular Chart itself that the pattern and the meaning of the Overleaf System was understood hardly at all. The Michaels mentioned thesis, antithesis, and synthesis, but they did not explain the logical and mathematical and historical significance of these terms. They indicated that the Overleaves relate to each other in terms of two "poles" and three "axes" but they did not explain how this relates to the cosmic order. Progress has been made, in the decades since the Overleaf traits were revealed, in spite of the fact that the Overleaf System was not explained at the beginning. Only with the revelation of the logical and mathematical underpinnings of the Overleaf System do we come full circle to fulfill the promise of the first Overleaf Chart: now we see and understand "The Ordering of the Cosmos". Personally, I perceive the Overleaf Chart in its optimally ordered form with its universal applicability to be aesthetically pleasing as well as intellectually satisfying. From the beginning, the Michaels intended the Overleaf System to be a tool of great personal and social utility, to make our lives as humans easier. In the long run, the Overleaf System also proves to be an object of sublime universal beauty.

Reason for Being

The Michaels launched into their revelation of the Overleaf System within the first two weeks of their appearance to the original Michaelian group. What was that all about? Why is this such a key element of their teaching? The answer is given in those same transcriptions of the original Michaelian group, published

by the Center for Michael Teachings, Inc., as *Michael Speaks: The Legacy of Sarah Chambers (SJC)*. Here are four occasions when the Michaels answered that question during some months when the Overleaf System was being revealed, one Overleaf category at a time:

Gene: All of a sudden we're having this huge body of information about souls, and it must be important, and I would like an overview. Is this information going to be practical to me? Can I use it? Why this topic?

This [Soul Age] is another Overleaf [in addition to Centers], and integration [of this information] must take place before you are able to perceive The Synthesis, which, of course, must precede perception of the Tao. Yes, it can be of great value to you. Body Typing answers some questions. This [information about Soul Age] answers still another set of questions. This is a broader Overleaf, and there are more. [SJC, 18 September 1973]

There is no particular advantage to know this unless you plan to put it into practice in helping you to observe yourselves and those around you, toward improving your interactions in a positive fashion. There is no specific advantage to a Level on the Cycle. Self-aggrandizement [for being an older soul than someone else] is Maya too, of a most negative sort. [SIC, 17 October 1973]

A large and important part of the Michaelian teachings is the Overleaf System that we all know and love. It is one of the crown jewels of the Michaelian teachings. The Michaels launched into it very early on. It is not all that there is to the Michaelian teachings, and it is not *per se* The Synthesis, but if you master it, you should be well on your way to The Synthesis:

Edgar: They tell me I'm impatient after ten thousand years [of reincarnating repeatedly]. (Said later.)

The actual visualization of The Synthesis will only come about when you have all of the physical Overleaves, and [beyond the Overleaves] only after the teaching has progressed to the point where we are able to communicate with you directly on the high planes [higher than the Physical Plane, that is]. [S/C, 31 December 1973]

The word "visualize" is used here, as if The Synthesis is a coherent "picture" of what life, the universe, and everything is all about. Even though the Michaels do not say so, it would seem that since the Overleaf System is based on the number seven, and the cosmos itself consists of seven planes, there is a correlation between the two. That is to say, human personality and cosmic "personality" correspond, so that understanding the former leads to an understanding of the latter. Thus, the Overleaf System is the template for the big 'picture puzzle', and you don't understand it all until you understand the entire system of seven. That is why when the Overleaf System is understood thoroughly at a deep level, it becomes a gateway that enables communication with an even higher source of understanding. It is best, then, that you do not object to the Overleaf System:

Tina: What is the purpose of learning all these [Overleaf] labels? I dislike labels.

It is only important if you wish to make The Synthesis. We agree, verbal communication is a poor excuse for the sum of communication. However, until one of you break through with telepathy [to us], this will have to do. This study [of the labels of the Overleaves] enables you to have insights to the motivation of certain activities which could conceivably be perceived by you as hostile or undesirable, and prohibit the understanding necessary for Agape to take place. It will also enable you to aid those who seek your counsel. [S/C, 31 December 1973]

Ah, so Agape toward your fellow humans, learned through mastery of the Overleaf System, leads to non-verbal connections with higher sources of understanding. Now that we have the goal of the Overleaf System defined, let's go back down to one nitty-gritty specific:

Dick: I would like to ask for a comment on my hatred for Dominant Warriors, and anything on The Synthesis for acceptance and fears.

This [hatred] would represent a major part of Friction for you, as you see in them all those traits you endeavor to eradicate from your own life. Only by understanding that Warriors in the earlier Cycles [Soul Ages] are pretty much a victim of their Karmic Ribbons — and will be until they meet with a teaching — then you can apply the same principle of unconditional acceptance that you must with all others. In perceiving The Synthesis, this <u>acceptance</u> is imperative. [SJC, 03 January 1974]

Here again we see that proper use and understanding of the Overleaf System leads to Agape — unconditional acceptance of people exactly as they are. Removing faulty perceptions about people leads to perceiving The Synthesis. (In passing, note that one level of synthesis occurs when one thoroughly understands each Overleaf, and a higher level occurs when one understands people as gestalts of their Overleaves, wherein each Overleaf affects every other.)

Those statements indicate that the Overleaf System is the foundation of the Michaelian teachings, which the Michaels themselves referred to as "The Synthesis". The entire edifice of the Michaelian teachings is built on that foundation. There is a chapter in my book *Study Papers on the Original Michaelian Group* that discusses all of the instances where The Synthesis is mentioned. The first Overleaf Chart created by the original Michaelian group is titled, "The Ordering of the Cosmos". The second Overleaf Chart created by the original Michaelian group is titled, "The Synthesis". So, the Overleaf System is not just about understanding Personality (which is important); it is also about understanding the universe (which is even more significant).

The following Q&A exchange came from the very last session of the original Michaelian group that has come into our possession, and it is a fitting part of the Prologue to this *History* book.

It seems to me that the presentation of this teaching has focused on SRGA (Soul–Role–Goal–Attitude) [but] has not been successful in communicating to others. Should another approach be used? Do the SRG's make this teaching unique from all others?

We would hesitate to call this system of naming behavior patterns as the cornerstone of our teaching. Rather, we would see you all ascertaining from those expressing interest in this teaching: whether or not they are ready to accept in full the concept that they have lived before and that this life is merely a continuation of an experience begun in another time frame. And by this, we mean, to be sure, within yourselves that they do in fact accept this as truth for them. All the rest, including the Soul Levels, will come easily. It is upon this premise [reincarnation] that the entire teaching is based and it is therefore useless (underlined) to any student not knowing this truth for himself — it becomes a parlor game of meaningless words. We give this [Overleaf] system to you as a tool more than a solution in order to free you from certain considerations that would cloud your interpersonal relationships, and if you can teach this to others as a tool, then it will be successful. One must be extremely cautious in giving out this as an explanation of antisocial behavior. Surely, you can all understand that those exhibiting antisocial or otherwise bizarre behavior are in no way ready for this information. It is more important to many to understand their Sequential behavior and what the mechanism of Karma does in their life patterns. Perhaps even more important than knowing their Role, is the realization of why they are relating to certain other persons in seemingly irrational ways. Often, this is the most pressing question that new students have. [SJC, 13 January 1978]

Whatever the Michaels may or may not have intended in revealing the Overleaf System, the reader will have his or her own reasons for pursuing the information in my book on its history, but the author believes this book can serve several purposes:

- This book is a historical record of the development of a very important component of the Michaelian teachings. For that reason alone it might be inherently interesting to most students. This is the first attempt that I know of by any Michaelian student to trace that history and put it in writing.
- Besides the history of its revelation and development, there is an examination of the structure and meaning of the Overleaf System, something that has not been explained anywhere else in the Michaelian teachings that I know of. Thus, there is a lot of new information for students to assimilate.
- The information is not just for storage in the mental data banks of Michaelian students; it is also useful in daily life in dealing with self and other, the ultimate purpose for which the Overleaves were revealed. It is better to have a clear and accurate and thorough understanding of the Overleaf System than it is to have a defective and deficient perception.
- While we are going through the intellectual exercise of reviewing the history of the Overleaf Chart, let us not lose sight of the ultimate purpose of the exercise: in addition to the practical and experiential application of the Overleaf System, the purpose is that students should advance spiritually so much that it makes the Overleaves obsolete in and among the students.

The Michaels made this explicit claim to the original Michaelian group in at least three sessions:

In the beginning of this group, the primary concern was in the development of the belief system in the language necessary to explain it to each other and to oneself. This is a necessary step in the formation of any group, but in most [groups] becomes a barrier toward further growth, and eventually becomes the belief system itself. In this group, there has been evolution of a sort that now points toward continuance in growth. The possibility still exists, however, that you will continue to concern yourselves with the intellectual hierarchical aspects and neglect the spiritual, yes, but you do not have to. You can put this belief system to the acid test and see if it works. Until you do this, yes, you are still trapped in the beginning stages. This is where most of the other belief systems remained throughout their existence, including the world's great religions. The concern remained hierarchical and primarily intellectual, and never got off the ground

spiritually. You are right, of course, you are trading one belief system for another; but there is a unity here that has not been before, and there is a trend toward integration that you are capable of verifying implicit within the system. [SJC, 19 October 1974]

This desire to do away with labeling [people in terms of their Overleaves] is not at all bad, and in its more positive stance approaches Zen Buddhism. Labeling for this cadre is now only an expedient of communication. At a later point, we would hope to be able to dispense with this. Right now, it is easier this way and more understandable. [SJC, 14 December 1974]

In order for the True Personality to emerge, the student must be in a firm state of Balance, and if the Centers are Balanced, all work will be from the Positive Poles of all Overleaves. In fact, at that moment, the whole concept of Overleaves becomes obsolete. Balanced Man is not a victim of his Overleaves any longer. This is, of course, why the Work is to strive for Balance and why we attempt to effect those exercises that will allow you to choose the work you need, tailor made. [SIC, 25 January 1975]

Even decades after these words were given to the original Michaelian group, it seems that the Michaelian teachings community taken as a whole is still very much in the beginning stages of its evolution. Part of the intention for this book is to clear up discrepancies in what the Michaels referred to in the quotation above as the "hierarchical, intellectual" components of the Overleaf System, then deepen the understanding of the structure of the Overleaf System, in the hope that we students of the Michaels can collectively move forward on a firmer foundation, one on which we generally agree. However, even if the Michaelian teachings community as a whole never progresses from the "hierarchical/intellectual" through the "Balanced" to the "spiritual" phases, students can make that progress either individually or in coteries. At minimum, it is hoped that students will be made intellectually aware of these stages of progress on the spiritual path with the help of this *History* book.

With that introduction behind us, we are now ready to 'get down to business'.

Part One

PRECURSORS TO THE OVERLEAF SYSTEM

INTRODUCTION TO PART ONE

Before we get into a review of the various versions of the Michaelian teachings Overleaf Chart in Part Three, here in Part One we will review what was known about components of the Overleaf System before the original Michaelian group convened, and in Part Two we will review what was revealed about the Overleaf System within the original Michaelian group that led to the creation of their Charts.

What information did they have to work with to create their Charts? Investigation reveals that there were precursors to significant elements of the Overleaf System in other teachings. So far as I have been able to discover, five of the seven Overleaf categories are found in other sources. And the pattern of the Overleaf Septenary itself is discernible in dozens of other sources — that I have discovered so far. So there was actually more to it than what was revealed by the Michaels to the original Michaelian group.

The founding members of the original Michaelian group had an interest in spiritual matters for years before they contacted the Michaels; they were well-read in the subject. In the transcriptions, there are references to Gurdjieff and Ouspensky, Theosophy, Rosicrucianism, Seth, *A Course in Miracles*, Erhard Seminars Training, Sri Aurobindo, Meher Baba, and several other teachers and teachings. Their strongest influence appears to have been the Gurdjieff and Ouspensky "Fourth Way" teaching. Gurdjieff and Ouspensky were alive and active during the first half of the Twentieth Century. Before they founded the original Michaelian group, some members attended meetings of one of the local Fourth Way groups that called itself the Fellowship of Friends, led by a Seventh Level Old King named Robert Burton. Several of the following chapters discuss what the Michaelian teachings adopted and adapted from the Fourth Way teaching.

Despite the fact that founding members of the original Michaelian group had personal influences from the Fourth Way teaching, there is actually a greater similarity of the Michaelian teachings to Theosophy. This teaching was contemporaneous with the rise and spread of the Gurdjieffian teachings in the late 19^{th} and the first half of the 20th Century. Several of the following chapters discuss the ways in which Theosophy resembled and prefigured the Michaelian teachings, apparently without the original Michaelian group members realizing the depth and breadth of the similarities. In my research for this *History* book, I discovered that an important work of Jewish mysticism, the Kabbalah, also prefigure many of the components of the Michaelian teachings, including the Overleaf System. These historical precedents tell me that there is something valid about "Perennialism", the notion that many spiritual and religious teachings down through the millennia of human history on this planet had their origin in the same ultimate source: channeling or inspiration from entities on the third plane — or something like that.

One of the organizing principles of the Michaelian teachings is the "septenary". That is, many of its systematic components come in groups of seven. Several of the chapters in Part One (and Part Two) explain

characteristics of septenaries as they were understood in the Fourth Way and other esoteric teachings that were precursors to the Overleaf System.

The chapters that explain the precursors to the Overleaf System are as follows:

- Chapter 1A THE SEVEN PLANES: The names and natures of these seven levels of creation apparently came from Theosophy, not the Fourth Way. Theosophy originated in the second half of the Nineteenth Century via Helena Blavatsky and was further developed (Neo-Theosophy) during the first half of the Twentieth Century, contemporaneous with Gurdjieff and Ouspensky. Numerous esoteric cosmologies both ancient and modern have a teaching about the seven planes. Several Overleaf Charts show the planes along with the personality traits, and that is reason enough to have a chapter on it in this book. Beyond that, this chapter on planes sets the stage of the pattern and the meaning of the Overleaf System septenary; the Overleaf System septenary explored and explained in the *History* book is a subset of the planes superset.
- Chapter 1B PERSONALITY TYPOLOGIES: The desire to understand human psychology and personality goes back more than two thousand years in recorded history. Over the millennia, many systems for typing (or stereotyping) people with common personality traits, and many ways of arranging the traits into some pattern, have been proposed. Some of these are described, then compared and contrasted with the Overleaf System. I regard the Overleaf System as the pinnacle of personality typology systems, and this chapter aims to demonstrate that to the reader.
- Chapter 1C THE SEVEN CHAKRAS: Besides the information about planes, another septenary that was adopted by and refined in Theosophy was the information about chakras. The chakra system is an ancient septenary, perhaps thousands of years old in Oriental esotericism. There was channeling on the subject during the original Michaelian group. Some students of the Michaelian teachings have shown enough interest in them to put them on their Overleaf Charts and/or discuss them in their books and/or on their websites. The chakras are typically correlated with the Centers of the Gurdjieffian teachings and of the Michaelian teachings; there is also a correlation with ascending steps of spiritual development. Therefore, I have deemed it expedient and useful to provide a chapter about them here in Part One.

The next five chapters of Part One are about precursors to five of the seven Overleaf categories, the five categories that had precursors so far as I have been able to discover:

- Chapter 1D THE SEVEN CENTERS: All Michaelian students are familiar with these seven Overleaves. They did not originate with the Michaels, but were adopted and adapted from the Gurdjieffian teachings from the beginning of the original Michaelian group. The Centers appear on every Overleaf Chart that is reviewed in Part Three. This chapter covers some of what Gurdjieff taught about the Centers.
- Chapter 1E THE SEVEN SOUL AGES: Many esoteric teachings over many millennia talk about reincarnation, but I have only found three independent sources that describe in detail the stages of the evolution of the soul during the course of reincarnation. The first source is Jewish mysticism, the Kabbalah, a source that I have already mentioned; another is from Theosophy, another source that I have already mentioned; the third source is a south Asian guru who lived and taught in the middle of the 20th Century, Meher Baba.
- Chapter 1F THE SEVEN HUMAN TEMPERAMENTS: As mentioned above, Theosophy actually has more similarity to the Michaelian teachings than the Gurdjieffian teachings does. The description of "the seven human temperaments" found in Theosophy is so similar to the description of the Roles found in the Michaelian teachings that one can hardly tell the difference.
- Chapter 1G SEVEN PHILOSOPHIES SEVEN ATTITUDES: Michaelian students are probably aware that the seven Attitudes are named after formal 'philosophies of life' from ancient to modern times, but many probably never studied them in school, looked the philosophies up in books, or researched them on the internet. I did that for you, and wrote the results down for inclusion in this chapter.
- Chapter 1H CHIEF FEATURES AND THE SEVEN DEADLY SINS: The name for this category of Overleaves came from the Gurdjieffian teachings. Gurdjieff did not have seven Chief Features there was an indeterminate number of them but there were 'seven deadly sins' in Christian hamartiology (the study of sin). This, and other ideas about fatal flaws and character defects in the human psyche, can be

regarded as precursors to the Chief Features as we have been given to understand them in the Michaelian teachings.

The Overleaf System has a pattern to it, based on the numerical principles of Oneness, Twoness, Threeness, and Sevenness. Some of those numerical principles have precursors in other teachings, notably the Gurdjieffian teachings. The next three chapters of Part One discuss some of these principles as they were represented in the Gurdjieffian teachings.

(By the way, there is no Chapter 1I because of the ambiguity of the character "I" — it looks too much like a "1".)

Chapter 1J — GURDJIEFF'S LEVELS OF BEING: Fourth Way groups are interested in spiritual growth, and this was said to consist of seven steps, which were mostly correlated with Centers. Gurdjieff referred to these seven stages of spiritual development as "Levels of Being". It was said that if one works their spiritual path diligently enough, one could advance through the Levels of Being in a single lifetime. The concept was retained in the original Michaelian group, but seems to have been lost to, or watered down in, subsequent Michaelian groups, except to the extent that these seven stages in spiritual growth correlated with the seven Soul Ages, each of which took many lifetimes of reincarnation to advance through. (The seven Levels of Being are not neglected in another one of my books on the Michaelian teachings, namely *The Tao of Relationships*.)

There are two categories of what in this and my other books are collectively called "Attributes". Attributes are applied to each of the seven components of the septenaries in the Michaelian teachings. These appear in the headings of the columns and the rows on the grid of the typical Overleaf Chart. The first is:

Chapter 1K — GURDJIEFF'S LAW OF THREE: This Gurdjieffian concept was adopted and adapted into the original Michaelian group and was renamed "Monads". Monads consist of three components, named during the original Michaelian group: Ordinal — Neutral — Exalted. These three words are used in headings on many if not most of the Overleaf Charts reviewed in the series of chapters in Part Three, and they are herein referred to as the Dialectic Attributes. Gurdjieff applied the Law of Three to the Centers, and in the original Michaelian group it was applied to all of the Overleaves as they were revealed by the Michaels to the original Michaelian group. In her second book written about the Michaelian teachings, *More Messages from Michael*, author Chelsea Quinn Yarbro substituted the word Cardinal for the word Exalted. Some other students subsequently adopted this in their Overleaf Charts, including myself. In Part One and Part Two, only the word 'Exalted' is used, because that was the word used in the original Michaelian group.

The second category of Attributes pertains to:

Chapter 1L — GURDJIEFF'S LAW OF SEVEN: This phrase is not generally used among Michaelian students, but the concept of the septenary, aka "sevenness", is known to Michaelian students, and certain attributes of it are applied, using the words Action, Inspiration, Expression, and Assimilation. Myself and other Michaelian students refer to these four words as the "Axial" Attributes. The basic concept here is that developmental or progressive experience is cyclical in seven steps. The concept is derived from Gurdjieff, but the four Attributes are pure Michael. There is a pattern to the seven steps that Gurdjieff did not understand and that in fact was not even clear during the original Michaelian group. Consequently, these four names did not show up on Charts created during the original Michaelian group. However, this category of Attributes was made clearer in the books authored by Yarbro, namely Messages from Michael (MFM) and More Messages from Michael (MMFM), and are made even clearer in this History book. Explanations are also found in my books in the Tao quadrilogy, especially The Tao of Personality and The Tao of Cosmogony.

Any collection of seven items can be called a "septenary". When properly arranged, each of the seven steps in a septenary has both Dialectic Attributes and Axial Attributes, and the combination of the two types is hereinafter called the Septenarian Attributes. The proper order of what I refer to as the Natural Sequence is this: Ordinal Action \rightarrow Ordinal Inspiration \rightarrow Ordinal Expression \rightarrow Neutral Assimilation \rightarrow Cardinal Expression \rightarrow Cardinal Inspiration \rightarrow Cardinal Action. The seven Septenarian Attributes also apply to the seven Planes and the seven chakras.

Besides the system of Personality traits and the stages of development, another strong influence from the Fellowship of Friends on the original Michaelian group, one that found its way onto the first Overleaf Chart and some others, is the concept of Body Types:

Chapter 1M — THE SEVEN BODY TYPES: In the 1950s, two decades before the original Michaelian group convened, Rodney Collin, a student of Gurdjieff and Ouspensky, invented the concept that there were seven body types, which he named after the seven visible planets of the solar system. A local Fourth Way group, the Fellowship of Friends, which some founding members of the original Michaelian group were familiar with, developed an extensive teaching about the Body Types, based on Collin's original work. This typology was adopted and adapted by those original Michaelian group members, and it has continued to the present day among Michaelian students.

It is fitting to start this Part of the book with a discussion of the planes and end it with a discussion of the Body Types. The former provides a context within which to set the content of the Overleaf System, and it is necessary to have a body with Body Types through which one can express a personality. The former transcends mere human personality; the latter is a foundation for the personality.

One final note in this Prologue: there is an enormous amount of information in this 900+ page book, and much of it will be new to even mature students of the System. May I suggest that the way for students to not be overwhelmed by this weighty tome is to read it in small chunks, a little at a time, having set one's expectations in advance for a 'marathon' rather than a 'sprint'. Settle in when you have time for a comfortable read, a time that will likely be undisturbed by external or internal events, while holding the intention to absorb at most maybe one chapter per sitting. The more focused the commitment, the more the reward in understanding — and appreciation for the revelation of the Overleaf System to yourself and to humanity.

Chapter 1A

THE SEVEN PLANES

On the first Chart that is shown and reviewed in Part Three — a Chart that is titled "The Ordering of the Cosmos — seven "planes" are named in the first category on the Chart. Their names are given as "Physical, Astral, Causal, Akashic, Mental, Buddhaic, Tao." So what is that all about? This chapter on planes introduces the idea that there are six reality systems beyond what we call "the universe". By "reality system", I refer to a coherent, consistent, mostly self-contained, objective world within which a subjective consciousness can be embedded. All of the planes apparently have this characteristic. In our research on planes, we are going to delve into various spiritual teachings and traditions that preceded the original Michaelian group, and that the original Michaelian group members were likely familiar with before they received channeling on the subject. There is also discussion of channeling about planes extracted from the original Michaelian group sessions. Note that further on, in Part Four of this *History* book, Chapter 4E, "The Seven Planes", we cover information about planes extracted from Michaelian teachings books published subsequent to the original Michaelian group, and that chapter also includes other information about them from outside the Michaelian teachings.

Introduction to Planes

There is an enormous amount of information about planes on the internet. Readers are encouraged to research for themselves. Just point your favorite search engine to "seven planes," or narrow it down to the name of each of the planes you see in this chapter.

Looking through the original Michaelian group transcriptions, it seems that some of the members of the group might have first gotten this notion of "planes of creation" from somewhere other than the channeling, although this is not completely clear. The word 'plane' is used for months before an explanation and a description are offered. So where might they have gotten this idea?

The original Michaelian group received more direct influence from a Gurdjieff, aka Fourth Way, group than from any other spiritual teaching. However, in books about that teaching, "planes" are not listed in the Index. Nor is Gurdjieff listed as a teacher about planes in internet searches. There is a "rays of creation," and there are "worlds" correlated to the music scale, but their resemblance and correspondence to the planes is uncertain. Therefore, it is reasonable to believe that the original Michaelian group was not introduced to the information about the planes from Gurdjieff.

There are teachings about planes in many other metaphysical cosmologies, and one can get an introduction to those by following the various Internet links provided at:

>http://en.wikipedia.org/wiki/Plane_%28metaphysics%29<. For another introduction to the subject in general, refer to >http://kheper.net/topics/Gurdjieff/cosmology.htm<. The following is from the Wikipedia article >https://en.wikipedia.org/wiki/Plane_(esotericism)<.

In esoteric cosmology, a plane is conceived as a subtle state, level, or region of reality, each plane corresponding to some type, kind, or category of being.

The concept may be found in religious and esoteric teachings — e.g. Vedanta (Advaita Vedanta), Ayyavazhi, shamanism, Hermeticism, Neoplatonism, Gnosticism, Kashmir Shaivism, Sant Mat/Surat Shabd Yoga, Sufism, Druze, Kabbalah, Theosophy, Anthroposophy, Rosicrucianism (Esoteric Christian), Eckankar, Ascended Master Teachings, etc. — which propound the idea of a whole series of subtle planes or worlds or dimensions which, from a center, interpenetrate themselves and the physical planet in which we live, the solar systems, and all the physical structures of the universe. This interpenetration of planes culminates in the universe itself as a physical

structured, dynamic and evolutive expression emanated through a series of steadily denser stages, becoming progressively more material and embodied. [retrieved 04 August 2019]

From this statement it is obvious that the concept of planes is very common with various spiritual traditions going back thousands of years. So which of these did the original Michaelian group members know about? From their mention in the transcriptions, we can say they knew about several of those mentioned above, specifically: Theosophy, Rosicrucianism, Eckankar, Ascended Masters, and Kabbalah. Let's look at Theosophy first.

Planes per Theosophy

Sarah Chambers, the original Michaelian channel, read a lot of metaphysical books. She was almost surely aware of planes before she channeled on the subject. Apparently, information about the planes came to others the same way it came to Michaelian students, via channeling, but also mystical insight, or clairvoyant perceptions. However, there are differences in names and descriptions among these various sources. Because most of the names in the Michaelian teachings are identical to those found in what is now called Neo-Theosophy (see below), but not as similar as the other systems listed above, this suggests that the names used by the Michaels might have been borrowed from Neo-Theosophy, either consciously or subconsciously. That is to say, in regard to planes, the Michaels used terminology already familiar to the original Michaelian group members. Theosophy is in fact mentioned three times in the original Michaelian group transcriptions:

You are all World Servers [the oldest Soul Age]. Theosophists are right for a change, about that. [S/C, 26 August 1973]

Is Theosophical teaching accurate, e.g., what [Neo-Theosophist] Annie Besant wrote?

Some of it is, some of it isn't. The lady [Neo-Theosophist] Alice Bailey wrote some inspired material. [SJC, 22 November 1973]

How about Alice Bailey's works, and those of Annie Besant?

We recommend the lady [Alice] Bailey. She reached a high level of spiritual growth. We will be happy to correct any misconceptions [you might find there]. [S/C, 20 December 1973]

Let's take a look at a general description of the planes. These descriptions seem to be a summary combination drawn from the various teachings, but they most closely resemble the descriptions of Neo-Theosophy. Following are some brief quotes culled from Wikipedia about the planes. One may of course do an internet search on each of the names of these planes and supplement from other sources what is said below. There is a lot of disagreement about names for the planes.

In occult teachings and as held by psychics and other esoteric authors there are seven planes of existence. Most occult and esoteric teachings are in agreement that seven planes of existence exist; however, many different occult and metaphysical schools label the planes of existence with different terminology.

[FIRST] PHYSICAL PLANE

The physical plane, physical World, or physical universe, in emanationist metaphysics taught in Neoplatonism, Hermeticism, Hinduism and Theosophy, refers to the visible reality of <u>space and time, energy and matter</u>: the physical universe in Occultism and esoteric cosmology is the lowest or densest of a series of planes of existence.

According to Theosophists, after the physical plane is the etheric plane and both of these planes are connected to make up the first plane. Theosophy also teaches that when the physical body dies the etheric body is left behind and the soul forms into an astral body on the astral plane.

[SECOND] ASTRAL PLANE

The astral spheres were thought to be planes of angelic existence intermediate between Earth and heaven. The astral plane, also called the astral world, is where consciousness goes after physical death. According to occult philosophy, all people possess an astral body. The astral plane (also known as the astral world) was postulated by classical (particularly neoplatonic), medieval, oriental, and esoteric philosophies and mystery religions. It is the world of the planetary spheres, crossed by the soul in its astral body on the way to being born and after death, and generally said to be populated by angels, spirits, or other immaterial beings. In the late 19th

Throughout the Renaissance, philosophers, Paracelsians, Rosicrucians and alchemists continued to discuss the nature of the astral world intermediate between Earth and the divine. The Barzakh, *olam mithal* or intermediate world in Islam and the "World of *Yetzirah*" in Lurianic Kabbalah are related concepts.

and early 20th century the term was popularized by Theosophy and neo-Rosicrucianism.

The Theosophist author Curuppumullage Jinarajadasa wrote: "When a person dies, they become fully conscious in the astral body. After a certain time, the astral body disintegrates, and the person then becomes conscious on the mental [third] plane."

In early theosophical literature the term "astral" may refer to the aether. Later theosophical authors such as Annie Besant and C. W. Leadbeater make the astral finer than the etheric plane but "denser" than the mental plane. In order to create a unified view of seven bodies and remove earlier Sanskrit terms, an etheric plane was introduced and the term "astral body" was used to replace the former kamarupa — sometimes termed the body of emotion, illusion or desire. Some of those propounding such claims explain their belief that letting go of desires is spiritual progress by noting that, the more one lets go of feelings, the less [one is] tied down to the physical world, a world of illusion, and the more [one is] connected to the astral, where all is visible and known. According to Max Heindel's Rosicrucian writings, desire-stuff may be described as a type of force-matter, in incessant motion, responsive to the slightest feeling. The desire world is also said to be the abode of the dead for some time subsequent to death.

Astral projection author Robert Bruce describes the astral as <u>seven [sub-]planes</u> that take the form of planar surfaces when approached from a distance, separated by immense coloured "buffer zones". These planes are endlessly repeating ruled Cartesian coordinate system grids, tiled with a single signature pattern that is different for each plane. Higher planes have bright, colourful patterns, whereas lower planes appear far duller. Every detail of these patterns acts as a consistent portal to a different kingdom inside the plane, which itself comprises many separate realms. Bruce notes that the astral may also be entered by means of long tubes that bear visual similarity to these planes, and conjectures that the grids and tubes are in fact the same structures approached from a different perceptual angle.

In his book *Autobiography of a Yogi*, Paramhansa Yogananda provides details about the astral planes learned from his resurrected guru Swami Sri Yukteswar Giri. Yogananda reveals that nearly all individuals enter the astral planes after death. There they work out the seeds of past karma through astral incarnations, or (if their karma requires) they return to earthly incarnations for further refinement. Once an individual has attained the meditative state of nirvikalpa samadhi in an earthy or astral incarnation, the soul may progress upward to the "illumined astral planet" of Hiranyaloka. After this transitional stage, the soul may then move upward to the more subtle causal spheres where many incarnations allow them to further refine until final unification.

[THIRD] MENTAL PLANE [erroneously referred to as the "Causal Plane" in the Michaelian teachings] The mental plane is the third lowest plane according to Theosophy. The mental plane is divided into seven subplanes.

Charles Webster Leadbeater wrote: "In the mental world one formulates a thought and it is instantly transmitted to the mind of another without any expression in the form of words. Therefore on that plane language does not matter in the least; but helpers working in the astral world, who have not yet the power to use the mental vehicle." [sic]

Annie Besant wrote that "The mental plane, as its name implies, is that which belongs to consciousness working as <u>thought</u>; not of the mind as it works through the brain, but as it works through its own world, unencumbered with physical spirit-matter."

A detailed description of the mental plane, along with the mental body, is provided by Arthur E. Powell, who has compiled information in the works of Besant and Leadbeater in a series of books on each of the subtle bodies.

According to Hindu occultism the mental plane consists of two divisions, the lower division is known as heaven (swarglok) and the upper division is known as the causal plane (maharlok).

Satguru Sivaya Subramuniyaswami wrote: "The causal [another term for "mental"] plane is the world of light and blessedness, the highest of heavenly regions, extolled in the scriptures of all faiths. It is the foundation of existence, the source of visions, the point of conception, the apex of creation. The causal plane is the abode of Lord Siva and his entourage of Mahadevas and other highly evolved souls who exist in their own self-effulgent form — radiant bodies of centillions of quantum light particles."

Sri Aurobindo developed a very different concept of the mental plane, through his own synthesis of Vedanta (including the Taittiriya Upanishad), Tantra, Theosophy, and Max Théon ideas (which he received via The Mother, who was Theon's student in occultism for two years). In this cosmology, there are seven cosmic planes, three lower, corresponding to relative existence (the Physical, Vital, and Mental), and four higher, representing infinite divine reality (Life Divine bk. 1 ch. 27) The Aurobindonian Mind or Mental Plane constitutes a large zone of being

from the mental vital to the overmental divine region (Letters on Yoga, Jyoti and Prem Sobel 1984), but as with the later Theosophical concept it constitutes an objective reality of sheer mind or thought.

[FOURTH] BUDDHIC PLANE

The buddhic plane is described as a realm of pure <u>consciousness</u>. According to Theosophy the buddhic plane exists to develop buddhic consciousness which means to become unselfish and solve any problems with the ego. Charles Leadbeater wrote that in the buddhic plane man casts off the delusion of the self and enters a realization of <u>unity</u>.

Annie Besant defined the buddhic plane as "Persistent, conscious, spiritual awareness. This is the full consciousness of the buddhic or <u>intuitional</u> level. This is the perceptive consciousness which is the outstanding characteristic of the Hierarchy. The life focus of the man shifts to the buddhic plane. This is the fourth or <u>middle</u> state of consciousness."

Sri Aurobindo calls the level above the mental plane the supermind.

[FIFTH] SPIRITUAL PLANE

George Winslow Plummer wrote that the spiritual plane is split into many <u>sub-planes</u> and that on these planes live spiritual beings who are more advanced in development and status than ordinary man. According to metaphysical teachings the goal of the spiritual plane is to gain spiritual knowledge and experience. [Holy Spirit]

[SIXTH] DIVINE PLANE

According to some occult teachings, all souls are born on the divine plane and then descend down through the lower planes; however souls will work their way back to the divine plane. On the divine plane souls can be opened to conscious communication with the sphere of the divine known as the Absolute and receive knowledge about the nature of reality.

The divine plane (hyperplane or continuum/universe, enclosing and interpenetrating grosser planes, respectively) is the plane in which Brahman and Om or Aum, i.e. Logos or Agathon, i.e. (according to Theosophy) spirit of deity (as Brahman, Logos i.e. Agathon, etc.,) i.e. the creative Word (as the Pranava Om or Aum, Logos, Tikkun, etc.) and ideal, exists. The term is from the Greek word "Logos" and is used in the Arcane School ideas. 'Classical' 1800s Theosophy does not say whether this spiritual plane is the only one that has to do with Logos is human [sic], but Annie Besant & Charles Leadbeater may have said so, and Alice Bailey or others, who uses similar ideas, did say so.

Rosicrucianism teaches that the divine plane is where Jesus dwelt in Christ consciousness [the Son].

[SEVENTH] LOGOIC PLANE

The logoic plane is the highest plane. It has been described as a plane of total <u>oneness</u>, the "I AM Presence". Joshua David Stone describes the plane as complete <u>unity</u> with God [the Father].

[>https://en.wikipedia.org/wiki/Plane_(esotericism<) — retrieved on 04 August 2019]

Some comments on this Wikipedia article are in order:

- 1. "Emanationist metaphysics" is mentioned in the description of the Physical Plane. This idea will be explained in several chapters of this *History* book.
- 2. Descriptions of a couple of the planes mention that they have seven levels within them. This is consistent with the Michaelian teachings, as quoted further on.
- 3. Descriptions of the second plane, the Astral Plane, mention that it is the realm of emotions, feelings, and desires. This is consistent with the Michaelian teachings.
- 4. The astute and knowledgeable Michaelian student might wonder about the above name for the third plane being given as "Mental", whereas in the Michaelian teachings that is the name for the fourth or fifth Plane, depending on which book you read. With further research one will find that the Michaelian teachings way of naming the planes is an anomaly because the great majority of metaphysical cosmologies do it the Theosophical way.
- 5. In the description of the Mental Plane, it is said that some sources regard the upper levels of the Mental Plane as the "causal" levels. This has come into Michaelian teachings as the name of the entire third plane. More is said about this elsewhere.
- 6. In the Michaelian teachings, the Fourth Plane is variously referred to as the Mental Plane or the Akashic Plane, and the Buddhaic plane is higher than that. In the Wikipedia Article, the Buddhaic Plane is the Fourth Plane.

7. In one source, the upper triad of planes is equated with the Trinity of the Christian tradition: Seventh = Father, Sixth = Son, and Fifth = Holy Spirit. In the Michaelian teachings, the sixth plane, adopting a Rosicrucian doctrine, is the plane of the so-called "Christ Consciousness", from which the avatar descended as an Infinite Soul into Jesus.

In the internet information about the planes, the descriptions of the three "lower" planes are fairly consistent. If one looks for descriptions of the four "higher" planes on the Internet one will see that there is a dearth of information and also a lot of disagreement about names and characteristics of those planes. Even within the Michaelian teachings, there is disagreement about the names and natures of the higher planes. These issues and those mentioned in the numbered list above are covered in detail in Part Four, Chapter 4E, "The Seven Planes". Furthermore, in Chapter 1F, below "The Seven Temperaments", the description of the seven Rays in Theosophical emanationist metaphysics, provides a description of the seven planes that allows for a correlation with the Michaelian teachings Roles.

Planes per the Rosicrucians

Besides Theosophy, Rosicrucianism was also mentioned in the original Michaelian group transcriptions. The Rosicrucians had a world headquarters in the Bay Area, in San Jose, California. Perhaps that is why they were known to the original Michaelian group members. More than a month before the Michaels appeared, Sarah addressed a question to Tomas, one of their earlier supernatural contacts. Tomas said he had no knowledge of Rosicrucianism, but the Michaels did, on three separate occasions:

I have read of the Rosicrucians and their exercises for development of psychic powers. Are these exercises useful?

I do not know of these. Meditation is the best way I have found. [S/C, 05 July 1973]

What is a Rosicrucian?

[Someone answered:] It is a society that apparently began in Egypt, at the time of the Pharaohs. It has to do with the occult arts. It is one of the oldest esoteric schools. They study these things, such as astral projection. [SJC, 08 September 1973]

Are there cycles of souls mentioned in the Rosicrucians?

Sarah: Not to my knowledge. [SJC, 06 October 1973]

Could we have some information on the Rosicrucians?

Some of the Rosicrucians are *bona fide* brothers, some are not. In the neophyte program, there is no screening; the winnowing comes later. The heaviest concentration is now in India rather than the mid-east, where it formerly was.

Are the brothers chosen because of their psychological health and strength?

Usually, they are "chosen" through telepathic communication. This should tell you where they are on the [spiritual-development] path. [SJC, 25 December 1973]

The Rosicrucians have a different naming but similar descriptions of planes beyond the physical. In the following descriptions, Michaelian students will see similarities to information in the Michaelian teachings, even if the names are unfamiliar. Bracketed comments are mine. Where two names for Planes are given, the first name is from the original Michaelian group Chart, and the second name is from post-original Michaelian group Charts. A lot has been left out of the following quotation excerpt; the complete description can be found at: >http://en.wikipedia.org/wiki/Rosicrucian_Fellowship<:

- [7 Tao or Buddhaic Plane] The World of God
- [6 Buddhaic or Messianic Plane] The World of <u>Virgin Spirits</u>: differentiated within God Himself as "sparks from a Flame" at the beginning of Manifestation, prior to the beginning of pilgrimage through matter ...
- [5 Mental Plane] The World of <u>Divine Spirit</u>: related to the Ego's Divine Spirit [= "Essence" in Michaelian teachings?] aspect; inhabited by the Lords of <u>Wisdom</u> ...
- [4 Akashic or Mental Plane] The World of <u>Life Spirit</u>: related to the Ego's Life Spirit aspect; home of the Christ [Infinite Soul?]; inhabited by the Lords of Individuality;... higher Memory of Nature (events from the earliest dawn of our present manifestation, open only to Adepts and higher Spiritual Beings) [the Akashic Record] ...
- [3 Mental Plane in Theosophy, Causal Plane in the Michaelian teachings] The World of Thought
- [2 Astral Plane] The <u>Desire</u> World; the abode of deceased persons, for some time subsequent to the event of death

higher regions, Attraction, the "First heaven" state of consciousness intermediate region, Interest and Indifference

lower regions, Repulsion, the "Purgatory" state of consciousness

[1 — Physical Plane] The Physical World, composed of seven (7) regions ... [retrieved 04 August 2019]

Other passages indicate that some of the original Michaelian group members were familiar with various spiritual teachings other than Gurdjieff, such as *A Course in Miracles* and Seth and Castaneda and Sri Aurobindo. Other than Aurobindo, these have no teaching about the seven planes. We see what Aurobindo had to say about planes in the next section.

Planes per Sri Aurobindo

Although the original Michaelian group teaching about the seven planes most closely resembles Theosophists, some of the original Michaelian group members were also familiar with an Oriental Indian guru who westernized many of the oriental spiritual traditions. His name was Sri Aurobindo and he lived from 1872 to 1950, which was contemporaneous with Gurdjieff and Ouspensky. You can read about him, among other places on the Internet, at: >http://en.wikipedia.org/wiki/Sri_Aurobindo<.

The main reason to devote a section to him rather than any one of a number of teachers who had a cosmology about planes is that a member of the original Michaelian group asked about him:

What about Sri Aurobindo?

He is, or was, an Old Soul, final cycle [Level]; [he] is now part of the lower Causal [Plane] body. He is worth emulating. We find no fault with his works. [S/C, 18 September 1973]

Not that this is a blanket endorsement of everything Aurobindo taught, but it does so happen that he concurs with many other traditions about the planes. Note the quotation found at this following Internet site: >http://www.kheper.net/topics/Aurobindo/Aurobindo_cosmology.htm<. Some relevant comments from me are interspersed in [bracketed italics].

Sri Aurobindo's Cosmology — The Seven Planes

Aurobindo's writing style, like that of other esotericists like Blavatsky and Steiner, is heavy and repetitious. This is unfortunate, as the poor style veils a cosmology of great comprehensiveness and profundity.

Of great relevance ... is his detailed map of states of consciousness. Influenced by such diverse sources as the Theosophical idea of seven planes of consciousness and existence, the "Hindu" (Vaishvanite) Puranas with their poorly-defined idea of seven Lokas or "Worlds", and the early Taittiriya Upanishad (700 B.C.E.), which refers to an ascending series of five "selves" (atma) — [#1] Food (anna), [#2] Life (prana), [#3] Mind (manas), [#4] Consciousness (Vijnana), and [#5] Bliss (Ananda); Aurobindo postulated seven planes of being. But these are not equivalent to Theosophical ones. The higher four are totally transcendent planes of infinite Consciousness and Bliss. The lower three — the physical, vital, and mental — are the planes of finite [fragmentary] existence. Beyond all the planes was "the Supreme" or Absolute.

The four higher planes are eternally pre-existent, and constitute the modes or qualities of the Absolute (in Indian philosophy, the Absolute is described as being Sat-Chit-Ananda or Sachchidananda, of the nature of pure Being, Consciousness, and Bliss. The 'Supermind' is Sachchidananda in manifestation; the transitional stage between the unchanging planes of Sat, Chit-Tapas and Ananda and the finite lower ones. Aurobindo considers it pivotal for the Divine transformation of the world. "It alone contains the self-determining Truth of the Divine Consciousness (that) is necessary for a Truth-creation." (*Letters on Yoga*, Vol. 1, p. 239)

Between the Supermind and the lower three planes is a transitional level, the Overmind, a level of global or cosmic consciousness [#4 Akashic Plane]. Beneath the Overmind one passes from Truth (albeit a multiform, rather than as in the Supermind a Unitary, Truth) into falsehood and ignorance. These are the lower planes of Mind [#3 Mental Plane], Life [#2 Astral Plane], and Matter [#1 Physical Plane]. It is also in these lower planes that there dwells the Divine Soul, or "Psychic Being".

The terminology in all this is a little confusing, for Aurobindo and Mirra use the term Life or "Vital" to designate what Western occultists and Theosophists call the Astral plane. "Vital" in this context therefore has nothing to do with the life-principle (the Etheric plane of Steiner and the Prana of the Hindus). Similarly, "Psychic" is used to refer to the Spiritual or Higher Self, the Divine Soul, rather than the Astral realms, as is the case with the common understanding of the word (e.g. "psychic experiences"). This curious terminology derives originally from Max Theon, Mirra's teacher in occultism. [Retrieved on 04 August 2019.]

Note that his names and descriptions differ from the Michaels and Theosophy, so it is not likely the Michaelian teachings borrowed from Aurobindo, yet there are enough similarities to consider Aurobindo to be

in basic agreement with the Michaels and with Theosophy. In my view, Aurobindo's "heavy and repetitious style" would have benefited if he had had knowledge of the clear and clean, logical and mathematical, Process/Aspect System–Natural Sequence schema.

For your convenience, these three sources are tabulated below.

| Та | Table 1Aa — PLANES per THEOSOPHY, ROSICRUCIANISM, and AUROBINDO | | | | | | | | | | | | |
|-------------|---|---|---------|-------------|---------------------------------|--------|--------|--|--|--|--|--|--|
| DIALECTIC | | ORDINAL NEUTRAL CARDINAL | | | | | | | | | | | |
| AXIAL | ACTION | ACTION INSPIRATION EXPRESSION ASSIMILATION EXPRESSION INSPIRATION | | | | | | | | | | | |
| THEOSOPHY | Physical | Astral | Mental | Buddhaic | Spiritual | Divine | Logoic | | | | | | |
| ROSICRUCIAN | Physical | Desire | Thought | Life Spirit | Divine Spirit Virgin Spirit God | | | | | | | | |
| AUROBINDO | Matter | Life/Vital | Mind | Overmind | Supermind | | | | | | | | |

There are yet other sources worth examining regarding the subject of planes.

Olamot: The Worlds According to Kabbalah

Recently I began to investigate the theological component of Judaism that has been gathered into a body of work called "Kabbalah". As I have explored it, I have been repeatedly astonished at its similarities to the Michaelian teachings. The Kabbalah includes a teaching that is functionally equivalent to the seven Soul Ages, and another teaching that is functionally equivalent to raising one's consciousness on a spiritual path, and another teaching that is functionally equivalent to the seven planes; all three of those teachings are touched upon in various places in this *History* book. In this section of this chapter, I discuss the component that is functionally equivalent to the planes.

The Kabbalah was mentioned in the transcriptions of the original Michaelian group, and this was said about it:

A question was asked concerning the Kabbalah.

This is the occult component of the Judaic thought. For the most part, it was valid in the beginning and has become somewhat corrupted with time, but there are several Kabbalists who are *bona fide* brothers. [SJC, 13 February 1974]

For more information about "brothers", refer to >https://en.wikipedia.org/wiki/Great_White_Brotherhood<. Let's take a look at what Kabbalah had to say about planes, and discern if that part is corrupted, and if so, which part, because there are discrepancies among the various interpreters of the system. My plan is to sort out the "valid" from the "corrupt" using the Process/Aspect System and the Natural Sequence as the filter to discern the signal from the noise.

The First Approximation

The following lengthy quotation is from the Wikipedia article on the "worlds" spoken of in the Kabbalah. The Hebrew word for worlds is *Olamot* (singular *olam*), and the Kabbalistic concept is functionally equivalent to the planes spoken of in other esoteric cosmologies. In the quotation, italicized words are Hebrew; English transliterations vary, so I have standardized on the spelling found in one of the quoted sources. Underlined words are my emphasis, to draw attention to subjects that I comment on. I insert some words of clarification in [brackets], and I intersperse some commentary within the quotation. I have also included a graphic image of the so-called "Tree of Life", one of the representations of the structure of the cosmos per Kabbalistic cosmology. It shows features that are mentioned in the quotation, but it also shows features that are not mentioned in the quotation and are of no concern in this section; it was the most appropriate that I could find of the very many images that are available on the internet.

The following quotations were extracted from >https://en.wikipedia.org/wiki/Four_Worlds< on 16 June 2020. The Four Worlds, sometimes counted with a prior stage to make Five Worlds, are the comprehensive categories of spiritual realms in Kabbalah in the <u>descending chain of Existence</u>.

The "descending chain of Existence" is indicated by the numbers in the circles on the graphic image. (The circles collectively are referred to as sefirot (singular sefirah), and their Hebrew names are shown. The names of the planets shown with the names of the *sefirot* are irrelevant to this discussion.) The ascending numbers indicate the alleged path of the emanation of creation from the most spiritual at the top to the most physical at the bottom. In Michaelian terms, that is the successive fragmentation of the ultimate Essence, aka Oversoul, on the Akashic Plane down to the level of the individual incarnate soul on the Physical Plane. Reversing the sequence of the Tree of Life numbering is equivalent to the increasing reintegration of Fragments into larger and larger composites of soul families: Cadence > Greater Cadence > Side > Entity > Cadre > Greater Cadre.

THE 4 MAIN WORLDS. The Tree is divided into four levels known as the Four Worlds...:

Refer to the graphic image at right as you read the following names and descriptions of the Worlds. Notice the three heavy horizontal lines dividing the *sefirot* into *olamot*—worlds—planes.

The Archetypal World called *Atzilut* [Akashic Plane], the Creative World called *Briah* [Mental/Causal Plane], the Formative World called *Yetsirah* [Astral Plane], and the Material World called *Assiah* [Physical Plane].

The concept of "Worlds" denotes the emanation of creative lifeforce from the *Ein Sof* Divine <u>Infinite</u> [Cardinal Planes], through progressive, <u>innumerable</u> *tzimtzumim* (concealments–veilings–condensations) [qualitative gradations in the Cardinal Planes]....
While these dimmings [of the divine light] form

TREE OF LIFE LEFT PILLAR MIDDLE PILLAR RIGHT PILLAR Severity Mildness Mercy Kether Crown 1st Level - ATZILUTH ARCHETYPAL WORLD FIRE 2 Supernal Triangle Binah Chokmah Saturn Wisdom Daath Knowledge CREATIVE WORLD 2nd Level - BRIAH AIR - MIND 18 13 17 16 5 4 Chesed Geburah Abstract Triangle Mars Jupiter 6 Tiphareth 23 21 Sun 25 Hod Netzach Astral Triangle Mercury 9 FORMATIVE WORLD 3rd Level - YETZIRAH Yesod EMOTIONS - WATER Moon 31 4th Level -ASSIAH ASSIAH: Represents ACTIVE WORLD the physical operating EARTH - Saturn on the objective plane 10 Malkuth

innumerable differentiated spiritual levels, each a particular World/Realm, nonetheless, through the mediation of the *sefirot* (Divine attributes) [quantitative variations], *five* Comprehensive Worlds emerge.

The fifth World is named Adam Kadmon further on. In many other esoteric teachings, there are a total of seven, not five planes/worlds as in Kabbalah. My understanding of this discrepancy is that the three Cardinal "planes" found in other teachings are regarded in Kabbalah as one "world" beyond the four main worlds; adding one world to four makes five, but adding three higher planes to four lower planes makes a total of seven. One can see why three higher worlds would be conflated into one "infinite" world in Kabbalah because of their "innumerable" progressive dimmings of the divine light.

"Higher" realms metaphorically denote greater revelation of the Divine *Ohr* light, in more open proximity to their source, "Lower" realms are capable of receiving only lesser creative flow. The Worlds are garments [aka overlays, aka Overleaves] of the *Ein Sof*, and Hasidic thought interprets their reality as only apparent [maya, aka illusory, aka not real] to [the point of view of] Creation, while "from above" the Divine Infinite fills all equally.

"Higher" and "Lower" do not actually have any spatial meaning; their use is only a convenient metaphor. The Higher realms of the *Ein Sof*, aka The Infinite, are metaphorically like the spectrum of the rainbow that has an infinite gradation of qualitative differentiation. This is an apt description of the nature of the journey of the "spark" (see below), or the "Essence" on the Cardinal planes, to use Michaelian teachings terminology. In the Lower realms (Neutral and Ordinal planes), the experience of the soul and its composites is fragmentary, in the same way that the *sefirot* have distinct characteristics, unlike the infinite gradations in the Higher realms. From the point of view of the Lower realms, the Higher realms are illusory; from the point of

view of the Higher realms, the Lower are illusory; more is said about that in Chapter 4N in Part Four, "Casting Concerns".

As particular *sefirot* dominate in each realm, so the primordial fifth [Cardinal Planes] World, [named in Kabbalah as] *Adam Kadmon*, is often excluded for its transcendence, and the four subsequent Worlds are usually referred to. Their names are read out from Isaiah 43:7: "Every one that is called by My name and for My glory (*Atzilut* "Emanation/Close"), I have created (*Beriyah* "Creation"), I have formed (*Yetzirah* "Formation"), even I have made (*Assiyah* "Action")." Below *Assiyah*, the lowest spiritual World, is *Assiyah-Gashmi* ("Physical *Assiyah*"), our Physical Universe, which enclothes its last two sefirot emanations (*Yesod* [Etheric levels of the Physical Plane] and *Malchut* [material levels of the Physical Plane). Collectively, the Four Worlds are also referred to as ABiYA, after their initial letters. As well as the functional role each World has in the process of Creation, they also embody dimensions of consciousness within human experience [Centers].

Notice that in this description the lowest two *sefirot* are considered to be a part of the Physical Plane, whereas the graphic image places only the lowest *sefirot* in the Physical Plane. Further on, we will find other ideas about where the dividing lines between worlds should go on the Tree of Life. The sequence of worlds is always the same, but which *sefirot* should go in which world is not universally agreed upon among Kabbalists. Notice that in the graphic image, the physical world is the lowest, the emotional/astral world is above that, the mental world is above that, and the archetypal world is above that. We will see below that other sources shift the descriptions of the worlds up the *sefirot* a notch.

The correspondence of the structure of the cosmos (physical, astral, mental, spiritual) and the structure of the human psyche (behavior, emotion, thinking, essence) is recognized in Kabbalah as well as many other esoteric teachings, including the Michaelian teachings. Recall what I have said before and will say again, that this is why I have this chapter on planes in this book on the Overleaf System.

THE FIVE WORLDS IN DESCENDING ORDER:

1. Adam Kadmon, meaning Primordial Man. The anthropomorphic metaphor "Adam" denotes the Yosher (Upright) configuration of the sefirot in the form of Man, though not yet manifest. "Kadmon" signifies "primary of all primaries", the first pristine emanation, still united with the Ein Sof. Adam Kadmon is the realm of Keter Elyon (Supernal Crown of Will), "the lucid and luminous light" (Tzachtzachot), "the pure lucid sefirot which are concealed and hidden" in potential. Containing the future emergence of Creation, it is Divine light with no vessels, the manifestation of the specific Divine plan for Existence, within Creation (after the Tzimtzum in Lurianic Kabbalah). In Lurianism, the lights from Adam Kadmon precipitate Tohu ["chaos", aka fragmentation into Fragments] and Tikun ["repair", aka reintegration into Oversoul]. As Keter [at the top of the Tree of Life] is elevated above the sefirot, so Adam Kadmon is supreme above the Worlds, and generally only Four Worlds are referred to.

The realm described above looks like the Cardinal planes to me, or perhaps just the fifth plane. In Kabbalah, *Adam Kadmon* and the Lower realms are said to be a concealing–veiling–condensation of higher levels of deity, namely *Ohr Ein Sof* ("infinite light", perhaps an appropriate name for the sixth plane), *Ein Sof* ("infinity", perhaps an appropriate name for the seventh plane or the immanent Tao), and *Ayin* or *Ein* ("nothing", or zero, perhaps an appropriate name for the transcendent Tao). Refer to >https://en.wikipedia.org/wiki/Ein_Sof< for the explanation of those Hebrew terms and their concepts in relation to the created world represented by the Tree of Life.

2. Atzilut, meaning World of Emanation, also "Close." On this level the light of the Ein Sof (Infinite Divine "without end") radiates and is still united with its source. This supernal revelation therefore precludes the souls and Divine emanations in Atzilus from sensing their own existence. In Atzilus the 10 sefirot emerge in revelation, with Chochma (Wisdom) dominating, all is nullification of essence (Bittul HaEtzem) to Divinity, not considered created and separate. The last sephirah Malchut (Kingdom) is the "Divine speech" of Genesis 1, through which lower Worlds are sustained.

The realm described above is functionally equivalent to the Akashic Plane, the dividing plane between the Higher realms, the Cardinal planes, and the Lower realms, the Ordinal planes. This plane is the Source of differentiation into separated consciousnesses that get successively broken down into what we in the Michaelian teachings refer to as Fragments.

3. Beriyah, meaning World of Creation. On this level is the first concept of creatio ex nihilo (Yesh miAyin), however without yet shape or form, as the creations of Beriyah sense their own existence, though in nullification of being (Bittul HaMetzius) to Divinity. Beriyah is the realm of the "Divine Throne", denoting

the *sefirot* configuration of *Atzilus* descending into *Beriyah* like a King on a Throne. The *sephirah Binah* (Understanding) predominates, Divine <u>intellect</u>. Also called the "Higher Garden of Eden". The Highest Ranking Angels are in *Beriyah*.

The realm described above is functionally equivalent to the Mental/Causal Plane, based as it is on "intellect".

4. Yetzirah, meaning World of Formation. On this level the created being assumes shape and form. The emotional sefirot Chesed to Yesod predominate, the souls and angels of Yetzirah worship through Divine emotion and striving, as they sense their distance from the Understanding of Beriyah. This ascent and descent channels the Divine vitality down through the Worlds, furthering the Divine purpose. Therefore, in Yetzirah are the main angels, such as Seraphim, denoting their burning consummation in Divine emotion. Also called the "Lower Garden of Eden".

The realm described above is functionally equivalent to the Astral Plane, based as it is on "emotion".

5. Assiyah, meaning World of Action. On this level the creation is complete, differentiated and particular, due to the concealment and diminution of the Divine vitality. However, it is still on a spiritual level. The angels of Assiyah function on the active level, as the sephirah Malchut (fulfillment in Kingship) predominates. Below spiritual Assiyah [Etheric levels of the Physical Plane] is Assiyah Gashmi ("Physical Assiyah"), the final, lowest realm of existence, our material Universe with all its creations. The last two sefirot [Yesod and Malchut] of Assiyah channel the lifeforce into Physical Assiyah. [>https://en.wikipedia.org/wiki/Four_Worlds< — retrieved 16 June 2020]

The realm described above is functionally equivalent to the Physical Plane, based as it is on "action". The "spiritual" level of the Physical Plane is called the "etheric" level in other esoteric cosmologies, and corresponds to the abstract features such as laws and fields; the lowest level of the Physical Plane is the concrete world of particles, atoms, molecules, polymers, cells, plants, animals, planets, stars, and such.

The correlation of *Olamot*–Worlds with planes seems obvious upon this cursory examination, but there is an incongruity, or at least the necessity for interpretation of a finer point. Take another look at the graphic image of the Tree of Life. Notice that there are three vertical "pillars", a left pillar called "Severity", a middle pillar called "Mildness", and a right pillar called "Mercy". Other names found on other graphic images of the Tree of Life are Negative, Neutral, Positive; Feminine, Androgynous, Masculine; Passive, Balanced, Active. It is obvious that these three pillars are functionally equivalent to Ordinal, Neutral, and Cardinal respectively. This is a huge clue for correlating the Tree of Life with the Overleaf System, but it adds a wrinkle.

The question is, how does this component of the Tree of Life correlate with the planes as understood in the Michaelian teachings and elsewhere? The correlation could be that the *sefirot* on the left-side pillar represent the Ordinal Levels of each plane, the *sefirot* on the central pillar represent the Neutral Level of each plane, and the *sefirot* on the right pillar represent the Cardinal Levels of each plane. This is not completely consistent with the Kabbalistic notion that the numbers of the sefirot, shown on the graphic image, represent the sequence of creation from top to bottom, zigzagging down through the *sefirot* from top to bottom. That is, on each plane, the Cardinal *sefirot* is first, then the Ordinal *sefirot* is second, and the Neutral *sefirot* is third, and so on down the *sefirot*. In every other system of planes, the Neutral level is sandwiched between the three Ordinal levels and the three Cardinal levels, just as the central vertical pillar is sandwiched between the polarized pillars in the graphic image. My view is that the Tree of Life is inconsistent with itself in this regard.

The table below shows the suggested correlation of the Tree of Life with the planes per information provided in this subsection.

| | Table 1Ab — FIRST APPROXIMATION: PLANES per the TREE OF LIFE | | | | | | | | | | | | |
|-----------|--|-------------------------------|------------------------------------|---------------------------------|------------------------------|------------|--|--|--|--|--|--|--|
| DIALECTIC | -ORDINAL- | | | =NEUTRAL= | +CARDINAL+ | | | | | | | | |
| AXIAL | ACTION | INSPIRATION | EXPRESSION | ASSIMILATION | EXPRESSION INSPIRATION ACTIO | | | | | | | | |
| PLANE | PHYSICAL | ASTRAL | CAUSAL | AKASHIC | BUDDHAIC | | | | | | | | |
| OLAM | Assiyah | Yetzirah | Beriyah | Atzilut | A | dam Kadmon | | | | | | | |
| SEFIROT | =Melchut= | +Netzach+ =Yesod= -Hod- | +Chesed+ =Tiferet= -Gevurah- | +Chochmah =Da'at= -Binah- | =Keter= | | | | | | | | |

My comments on this table are as follows:

- DIALECTIC: The first row shows the Dialectic Attributes.
- AXIAL: The second row shows the Axial Attributes. Combine the Dialectic Attributes with the Axial Attributes and we have the Septenarian Attributes. The Septenarian Attributes say a lot about the archetypal nature of the planes in the next row.
- PLANE: The third row shows the names of the planes as given in the text of the original Michaelian group. Other sections in this chapter on the seven planes show other names for the planes. For instance, the name of the Ordinal Expression plane is commonly labeled "Mental". Refer also to Chapter 4E in Part Four, "The Seven Planes" for further discussion of the evolution of the understanding of the planes in the history of the Michaelian teachings.
- *OLAM*: The fourth row shows the names of the so-called "worlds" according to the Kabbalah. It might not be accidental that one name originally covered the Cardinal planes according the Michaelian teachings, and one name apparently covers the "infinite" worlds according to Kabbalah, emanated from the infinite and transcendent realm of *Ein Sof*.
- SEFIROT: The fifth row shows the names of the sefirot correlated with the planes according to the interpretation presented in this subsection. The sefirot with the "+", "=", and "-" signs refer to the Cardinal triad of Levels, the Neutral Level, and the Ordinal triad of Levels of a plane, respectively. In the quoted text, the lowest Olam is said to be divided into two sefirot, Yesod and Malchut, is said to be divided into a dichotomy, equivalent to the material and the nonmaterial levels of the Physical Plane, unlike the other Worlds that are divided into a trichotomy, as shown on the table. The quotation does not match the graphic image in this regard.

However the discrepancy between the text and the graphic is to be understood, I find this schema ugly and unsatisfying. Can we do better than this, *re* correlating Kabbalah with Michaelian cosmology? Let's keep looking.

The Second Approximation

Take a look at the Tree of Life below. If you look at the English translations of the *sefirot*, you can see that the words might not immediately make clear how they should be correlated with features of the Overleaf System, or of the planes. Apparently, Kabbalists have the same problem among themselves, because they have various interpretations about which Worlds contain which *sefirot*; that explains why there is a difference between this Tree of Life and the first Tree of Life that was reviewed above.

This Tree of Life shows another way to group the *sefirot* in order to delineate the planes from each other. Notice that the "Action Level" in this Tree of Life is regarded as "emotional" in the previous Tree of Life; notice that the "Emotional Level" in this Tree of Life is regarded as the "mind" level in the previous Tree of Life; notice that the "Cognitive Level" in this Tree of Life is regarded as the "archetypal" level in the previous Tree of Life.

In support of this Tree of Life, I call upon a source different from Wikipedia. That source is the book *Kabbalah* for *Dummies (KFD)*, written by Arthur Kurzweil, and published in 2006.

Kabbalists view reality as consisting of four fundamental worlds. In Hebrew, the term used is olam.... In order to understand the Kabbalistic conception of the soul, which has five levels ..., you first have to explore the notion of the four worlds. The four worlds correspond to the first four levels of the soul.... Humans are a microcosm of the universe; just as the universe consists of four worlds, the human soul has four corresponding levels.... When Kabbalists speak of "worlds", they're not talking about different location but rather different dimension of being. These four worlds are four general levels of reality [internally consistent reality systems], and Kabbalists conceive of the human consciousness as constantly going up and down and back and forth between worlds. Following are the four worlds, according to Kabbalistic tradition:

- Atzilut: The world of emanation; the world of the spirit
- Beriyah: The world of creation; the world of the intellect, where ideas reside
- Yetzirah: The world of formation; the world of emotions
- Assiyah: The world of <u>action</u>; the concrete, <u>physical</u> world [KFD, p. 95–96]

Following that introduction is a page of explanation and description, but all I want to do in this section is make it obvious that the *olam* of Kabbalah clearly correlate with features of the Process/Aspect System–Natural Sequence and other esoteric teachings, particularly the notion of "planes" and their characteristics.

The description continues:

Another way of looking at Kabbalah's four worlds in order to understand them is to relate them to the four realms of human experience: the physical, the emotional, the intellectual, and the spiritual.

Each human being exists simultaneously in these four levels:

- <u>Physical</u>: Every person has a physical aspect that includes the body and the physical senses. This aspect corresponds to the world of action, in which the human being acts within the physical world.
- <u>Emotional</u>: Every person lies within the world of emotions, which is more spiritual than the physical world. All have within them a wide array of emotions of seemingly infinite gradations. The world of emotions that each person experiences is said to reside in the world of formation.
- <u>Intellectual</u>: Every person has an intellectual life that exists above the world of emotions. Just as the world of emotions is not a physical world, so too the world of ideas is an abstract spiritual world.
- <u>Spiritual</u>: Above the intellectual world of each human being is the world of emanation. Sometimes this realm isn't even considered a world; because it is so abstract and transparent some consider it to be God Himself. [KFD, 97–98]

So now the question is, which of the *sefirot* belong in which world? The answer agrees with the second graphic:

The horizontal lines of the Tree of Life reveal three pairs of sefirot.

Chochmah and Binah: When a Kabbalist uses his mental faculties, he employs a combination [Da'at] of Chochmah (intuition) and Binah (logical analysis). A Kabbalist may say that, at any given moment as he thinks, he is going back and forth between Chochmah and Binah and between a combination of the two [Da'at] because some situations call for more intuition and others call for more logical analysis. Chochmah (wisdom), Binah (understanding), and Da'at (knowledge): these three sefirot correspond to mental or intellectual activities. [KFD, p. 70]

Recall from the first approximation that the *sefirot* on the right side of the Tree of Life are Cardinal, and the *sefirot* on the left side are Ordinal. That and this description makes it obvious that the correlation here is *Chochmah* with the Concept Center and *Binah* with the Intellect Center. *Da'at* could be correlated with the Neutral Assimilation Impulse Center, or it could be regarded as the Expression Axis, which also comprises the Concept and Intellect Centers.

Chesed and Gevurah: In all relationships, in almost everything a Kabbalist does, she's constantly negotiating Chesed (giving) and Gevurah (receiving) and finding the proper balance for every situation. [KFD, p. 70]

Elsewhere in *KFD* (see below), and in the Tree of Life in this subsection, this triad is said to involve emotional factors. *Chesed* is obviously correlated with the Sympathy Center and *Gevurah* with the Emotion Center. The sefirot of balance in this triad is *Tiferet*, which could also be correlated with the Impulse Center, or *Tiferet* could be regarded as the Inspiration Axis, which also comprises the Sympathy and Emotion Centers.

Netzach and Hod: Particularly when a Kabbalist works on something in the world, he's actively exercising the sefirot of Netzach (the urge to get things done) and Hod (persistence). Netzach prompts him to participate in the task before him, and Hod keeps the Kabbalist motivated and provides the power and strength to see a job thorough to its conclusion. [KFD, p. 70]

It is obvious that the correlation here is *Netzach* with the Excitation Center and *Hod* with the Motion Center. The *sefirot* of balance in this triad is *Yesod*, which could also be correlated with the Impulse Center, or *Yesod* could be regarded as the Action Axis, which also comprises the Excitation and Motion Centers.

This correlation of *sefirot* with the Axial Attributes of the Process/Aspect System is reinforced by these statements:

There are also three triads, or groups of three *sefirot*, each also with its own significance. Following are the three triads on the Tree of Life:

Chochmah (wisdom), Binah (understanding), and Da'at (knowledge): These three sefirot correspond to mental or intellectual activities.

Chesed (lovingkindness), Gevurah (justice), and Tiferet (harmony): The three sefirot comprise emotional lives.

Netzach (eternity), *Hod* (splendor), and *Yesod* (foundation): These three *sefirot* generally act on the <u>physical</u> world in which people live. [KFD, p. 70]

Yet another passage in *KFD* clinches the notion that *Binah* and *Chochmah* have to do with cognitive functions:

Modern theorists observe that *Binah* and *Chochmah* correspond neatly with <u>left-brain and right-brain thinking</u>. Of course, the notions of *Chochmah* and *Binah* predate such theories by many centuries, but it's not unusual for Kabbalistic insights made generations ago to foreshadow scientific discoveries. [*KFD*, p. 62]

In this second scheme, instead of correlating the Ordinal and Cardinal levels of a plane with the *sefirot* on the left pillar and the right pillar of the Tree of Life respectively, those *sefirot* are correlated with Ordinal and Cardinal Centers. This is my preference, but it reveals a confusion somewhere, either in the Tree of Life or in the correlation of the Tree of Life with the Process/Aspect System–Natural Sequence; I say the confusion is in the Tree of Life, and I say this because the Centers correlate with planes per the Natural Sequence as shown in the following table and documented in this *History* book.

| | Table 1Ac — SECOND APPROXIMATION: WORLDS/CENTERS per the TREE OF LIFE | | | | | | | | | | | | |
|-----------|---|------------------------|-----------------------------------|---|---------------------------------|-------------------------------|-------------------------|--|--|--|--|--|--|
| DIALECTIC | -ORDINAL- | | | =NEUTRAL= | +CARDINAL+ | | | | | | | | |
| AXIAL | ACTION | INSPIRATION | EXPRESSION | ASSIMILATION | EXPRESSION | INSPIRATION | ACTION | | | | | | |
| PLANE | PHYSICAL | ASTRAL | MENTAL | AKASHIC | TRUTH | LOVE | ENERGY | | | | | | |
| CENTER | MOTION | EMOTION | INTELLECT | IMPULSE | CONCEPT | SYMPATHY | EXCITATION | | | | | | |
| OLAM | Assiyah | Yetzirah | Beriyah | Atzilut | Adam Kadmon | Ohr Ain Sof | Ain Sof | | | | | | |
| | "Action" | "Formation" | "Creation" | "Emanation" | "Primordial Man" | "Infinite Light" | "Infinite" | | | | | | |
| SEFIROT | <i>–Hod–</i> "Honor" | -Gevurah- "Justice" | <i>–Binah–</i> "Understanding" | =Keter= =Da'at= =Tiferet= =Yesod= =Melchut= | + <i>Chochmah</i> + "Wisdom" | +Chesed+ "Loving-kindness" | +Netzach+ "Eternity" | | | | | | |

My comments on this table are as follows:

- DIALECTIC: The first row shows the Dialectic Attributes and their Signs (-, =, +).
- AXIAL: The second row shows the Axial Attributes. Combine the Dialectic Attributes with the Axial Attributes and we have the Septenarian Attributes. The Septenarian Attributes say a lot about the archetypal nature of the planes in the next row.
- PLANE: The third row shows the names of the planes as appropriate for this subsection. Other sections in this chapter on the seven planes show other names for the planes. Refer also to Chapter 4E in Part Four, "The Seven Planes", for further discussion of the evolution of the understanding of the planes in the history of the Michaelian teachings.
- CENTER: The fourth row shows the names of the Centers as I prefer to call them. My changes to the classic Michaelian teachings nomenclature are explained in chapters on Centers in Part Four.
- OLAM: The fifth row shows the Hebrew names of the Worlds according to the Kabbalah. Unlike Table 1Aa, I do not conflate the three Cardinal olamot into one Adam Kadmon; instead, I show Kabbalistic words that are said to refer to levels of divinity beyond the divinity of Adam Kadmon, but they might or might not apply to olamot above Adam Kadmon; at the time of this writing, I am unclear on the correlation of this feature of the Kabbalah with the Michaelian teachings schema, but I am pretty sure there is a correlation. The words in quotation marks are English translations of the Hebrew words. Most of them are somewhat sensible compared to their Michaelian teachings correlates.
- SEFIROT: The sixth row shows the Hebrew names of the *sefirot* correlated with the planes according to the interpretation presented in this subsection. I find this schema more satisfying than the first approximation. The words in quotation marks are English translations of the Hebrew words. Most of them are somewhat sensible compared to their Michaelian teachings correlates.

Although the second approximation looks better to me than the first approximation, I am not completely satisfied yet. Notice that in the Tree of Life image shown in this subsection, a miniature Tree of Life image is shown within each *sefirot* circle. There is a reason for this, as follows:

Kabbalistic tradition teaches that each of the ten sefirot has each of the ten sefirot within it. [KFD, p. 71]

This is the same situation as in the Michaelian teachings: each plane has seven sub-planes. This idea creates another problem for the interpretation presented in the first approximation. That is, if we understand one of the triads of *sefirot* to refer to one of the Ordinal planes as shown in the Tree of Life image in this subsection, and if we understand one of those *sefirot* to refer to either the Cardinal triad of Levels, or the Neutral Level, or the Ordinal triad of Levels, it makes no sense. However, identifying *sefirot* with Centers rather than with the Ordinal planes and the Levels of the planes leads one to wonder if something is awry with the structure of the Tree of Life. A suggested improved structure is presented in the next subsection, and we do not even need to leave the Kabbalah, and it agrees with the second approximation.

The Third Approximation

As I was nearing the completion of this section, it occurred to me to check if Kabbalists recognized a correlation of the structure of the *sefirot* with the structure of the *menorah*. This is another meaningful symbol, besides the Tree of Life, in Jewish tradition, that I have long recognized to be an instantiation of the Natural Sequence–Process/Aspect System pattern. So, I did an internet search, and sure enough, this graphic image is what I found, and there were others like it. I was delighted by the results, because it turns out to be exactly what I thought it should be if my interpretation in the second approximation was correct.

The *menorah* is a candelabra with deep meaning in Judaism. It has seven candle-holders, as shown schematically in this graphic image. The central candle-holder stem has three branches with nested U-shaped candle-holders. The central stem has the same lineup of

sefirot as the central column of the Tree of Life from top to bottom. That is: Keter at the top, Da'at below that where Binah on the left and Chochmah on the right connect to the stem; Tiferet below that where Gevurah on the left and Chesed on the right connect to the stem; Yesod below that where Hod on the left and Netzach on the right connect to the stem. The lowest sefirot, Melchut, is at the base on which the menorah stands.

The correlation of the *sefirot* with Septenarian Attributes is as follows:

Keter = the next higher septenary, the superconscious levels

Hod = Ordinal Action; Gevurah = Ordinal Inspiration; Binah = Ordinal Expression

Chochmah = Cardinal Expression; Chesed = Cardinal Inspiration; Netzach = Cardinal Action

Da'at = Expression Axis; Tiferet = Inspiration Axis; Yesod = Action Axis

Melchut = the next lower septenary, the subconscious levels

This discovery clinched the way that I correlate the *sefirot* (archetypal attributes) and *olamot* (planes) with the planes as understood in other teachings, which have obvious Septenarian Attributes. My sense of the situation with the Tree of Life, as it is typically shown, is that it is confused and therefore misleading; it provides a distorted view of the way the cosmos is actually structured. In my view, Kabbalists would have benefited if they had had knowledge of the clear and clean, logical and mathematical, Process/Aspect System–Natural Sequence schema, and which is more accurately represented in the *menorah*.

Readers who wish to pursue the Kabbalah further might wish to check out dozens of articles on the subject in Wikipedia. Just check the one linked in this section, then jump to the others from that one. Also check Chapter 1E, here in Part One, "The Seven Soul Ages", for another dip into the vast pool of Kabbalah correlations with the Michaelian teachings.

Accepting the correlation of *Sefirot* with the Septenarian Attributes as shown above, it is possible to correlate the *Sefirot* with the Centers, and from there correlate *Sefirot* with chakras. For instance, check out Chapter 4F in Part Four, "The Instinctive Center", where I correlate the zeroth Center, the Physiology Center, with the root chakra. That correlates the *Melchut Sefirot* with the Physiology Center, the Body Type Center, the septenary "below" the Centers of Personality.

Other Resources

These seven planes that are described in Theosophy and Rosicrucianism and Aurobindo and Kabbalah are also described in various other teachings, and in various sites on the Internet. It is not always clear where these came from, although it is clear that they all mostly agree with each other. For instance, take a look at the following instances:

http://www.kheper.net/integral/planes.html

http://www.kheper.net/integral/vertical.html

http://www.esotericscience.org/article10a.htm

The following table is from >www.esotericscience.org<. Readers who find this subject interesting can, of course, visit that website and the others listed above this paragraph to learn more.

| | Table 1Ad — PLANES per BLADON | | | | | | | | | | | | | |
|---|-------------------------------|------------------|----------|-----------|------------------|----------|------------|-------------|------------|--|--|--|--|--|
| | BLADON | LAURENCY | THEOS'Y | KABBALAH | VARIOUS | EASTERN | DESIGNATIO | ONS | TRANSLA' | | | | | |
| 7 | Upper Monadic | Manifestal | Logoic | Kether | Mahapara- | Ataia | Satyaloka | Adi | First | | | | | |
| Ľ | Lower Monadic | Mannestai | Logoic | Chokmah | nirvana | Ataia | Satyaloka | Adi | FIISt | | | | | |
| 6 | Divine | SubManifestal | Monadic | Binah | Paranirvana | Vitalia | Taparloka | Anapadaka | Parentless | | | | | |
| 5 | Upper Spiritual | Super- Essential | Atmic | Daath | Nirvana | Sutala | Janarloka | Atma | Spirit | | | | | |
| Ľ | Lower Spiritual | Super- Essential | Atmic | Chesed | Mirvana | Sutulu | | 7 tillia | Spirit | | | | | |
| 4 | Unity | Essential | Buddhic | Geburah | 1 | Rasatala | Maharloka | Buddhi | Intuition | | | | | |
| 3 | Causal | Causal | Causal | Tiphereth | Formless Heavens | Talatala | Svarloka | Manas | Mind | | | | | |
| Ĺ | Mental | Mental | Mental | Netzach | Form Heavens | Talatala | Svarioka | Wallas | Willia | | | | | |
| 2 | Emotional | Emotional | Astral | Hod | Desire Heavens | Mahatala | Bhuvarloka | Kama | Desire | | | | | |
| 1 | Etheric | Etheric | Etheric | Yesod | | Patala | Bhurloka | Sthula | Coarso | | | | | |
| [| Physical | Physical | Physical | Malkuth | _ | | bilulloku | loka Sthula | Coarse | | | | | |

My comments on this table are as follows:

- RANK: The first column shows the normal numbering of the seven planes, from the first plane at the bottom row of the table to the seventh plane at the top.
- BLADON: The second column shows the descriptive names of the planes that Lee Bladon, creator of this website, settled on after his investigations into what others had to say. (I do not know where in Theosophy he got the idea to divide the third plane into (lower) Mental and (upper) Causal.)
- LAURENCY: The third column shows the names that Henry Laurency settled on. Wikipedia has an article on him, which will lead you to other resources:
 https://en.wikipedia.org/wiki/Henry_T._Laurency<. According to that article, he adapted the teachings of Theosophy to a more Westernized perspective.</p>
- THEOSOPHY: The fourth column shows the names of the planes as given in Theosophy. Notice that in Theosophy the Buddhic plane is the fourth plane rather than one (or all) of the higher planes as in the Michaelian teachings (depending on who is naming the planes).
- KABBALAH: The fifth column shows the names of the ten *sefirot* of the Kabbalah of Jewish Mysticism, the so-called "Tree of Life". Esotericists often seek to correlate systems with one another. So far as I know, no one in the Michaelian teachings has sought to correlate the Kabbalah with the Michaelian teachings in any way, but if they did, perhaps this correlation would be something to consider. However, the correlation shown is not the way I understand it; refer to previous section.
- EASTERN: There is nothing to say regarding the various eastern designations in the next four columns.
- TRANSLATION: The last column provides an English translation of the foreign language words found in the four columns at its left.
- It is not obvious from this table that the three higher planes reflect (in reverse order) the sequence of the lower three planes. However, that is explicitly stated elsewhere, as we see in the following section.

Attributes of Planes

Occasionally in the many chapters in this book, the term "Attributes" is used to collectively refer, not to the individual Overleaves themselves, but to various characteristics of Overleaf categories. That is, each Overleaf can be classified according to the Dialectic Attributes and the Axial Attributes, together called the Septenarian

Attributes. Those are discussed in chapters further on, but for now, Michaelian students know what is meant by the term Attributes when given the names of Attributes, even if they do not use the term Attributes. These Attributes are typically shown in the headers of columns and rows on Overleaf Charts:

Dialectic Attribute names: Ordinal — Neutral — Exalted (aka Cardinal).

Axial Attribute names: Action — Inspiration — Expression — Assimilation.

Septenarian Attribute names = the combination of Dialectic and Axial Attributes: Ordinal Action, Ordinal Inspiration, Ordinal Expression, Neutral Assimilation, Cardinal Expression, Cardinal Inspiration, Cardinal Action.

In the Michaelian teachings, as we see below, the seven planes have Dialectic and Axial Attributes, same as the individual Overleaves. Some of this appears to be common knowledge in esoteric circles, as seen from the following, taken from >http://www.kheper.net/topics/Theosophy/HPB-planes.html<:

Madame Blavatsky's cosmology is nothing if not elaborate. As with her cycles and subcycles of cosmic evolution, she has planes and subplanes of being, a fractal ontological spectrum of innumerable divisions, comparable to the elaborate Theosophies of Gnosticism and Kabbalah, but actually deriving from the "cosmic philosophy" and classifications of Max Theon. [retrieved 04 August 2019]

>http://www.innerlab.com/atmanet/ing/sevenplanes.htm< (This link is now dead.)

In a septenary, the number four is the point of balance and the zone where two opposites meet. We have talked of opposite forces while considering other planes and subplanes, like the opposing energies within the Astral and Mental Planes, but this fourth principle is the meeting point, or the point of crisis where the major opposites in a septenary manifestation meet, where a definite line is drawn between them and where the balance and fusion of both can reach its highest expression.

At this point in the text, there was an image of a *menorah*, the Jewish candelabrum with seven candles. Out of the central stem candle holder there are three nested U-shaped candle holders, showing opposition of candles 1 and 7, 2 and 6, 3 and 5. This is an appropriate image showing the mirror image of the lower (Ordinal) and higher (Cardinal) planes with the Neutral (Akashic) plane in the middle.

The quotation continues:

THE MENTAL OR MANASIC PLANE

All the mental functions in human beings have their origin in this plane, where the thoughts of men assume very definite shapes of mental matter. Thoughts are things in this plane where they originate.

The Ego is located in the third subplane of the Mental Plane, ... as it is the source of self-consciousness in man, or the sense of I am. The Ego can be said to be also what is known as the Soul, and it is that which for eons assumes in a cyclic way a form (or vehicle) constructed with matter from the Mental, Astral and Physical Planes in a process called Reincarnation.

THE EMOTIONAL OR ASTRAL PLANE

The Astral Plane is the sixth subplane of the Cosmic Physical Plane, and it is also very special for various reasons: From this plane, everything that we understand as the emotions have their origin. The Ego clothes itself on every incarnation with a new body or vehicle made of astral matter so it will be capable of experiencing the high sensitive response that this vehicle is capable of providing.

Many people can (voluntarily or involuntarily) abandon their physical vehicles and move with certain freedom on this plane (where what we call "dreams" occur) and this phenomenon is commonly called Astral Travel. Most of the time when we dream, what is really happening is that we are experiencing this kind of "travel", but because it occurs unconsciously the events and the perceptions experienced are scattered and incoherent, and our memories of them are distorted and truncated.

... [T]his plane has a very strong influence on a man, and until he is capable of controlling the lowest aspects of this energy (anger, hate, etc.), the chances of assimilating the positive influences of the higher Mind or the Ego are very remote. The lower emotions have to be superseded by the highest aspect of this plane, which are spiritual aspiration, devotion and dedication towards that which is seen as the highest goals. Even these qualities can sometimes turn into some kind of stubborn fanaticism.

After the Second Initiation, a great measure of control over the lower subplanes of the Astral plane is achieved, and the Initiate ceases to be swayed by the powerful currents of emotions, gaining thus a good deal of inner peace.

Desire also has its origin in this plane, and the focusing of its force on that which is material (sensory pleasures and money together with all it can buy) instead of its transmutation into spiritual aspiration is what prevents Humanity and most aspirants to the Mysteries to achieve the so much needed inner peace and the freedom that will make their progress possible. Until the aspirant learns to desire only that which is essential to carry on his service to Humanity (and to the Planetary Hierarchy) and learns to be dispassionate towards those things that create unnecessary attachments in the material world, his path will be one full of deceptive turns, something more like a labyrinth instead of a straight path from where he can always see his goal ahead (his inner God, the Monad) no matter how far it may seem to be.

THE PHYSICAL PLANE

The Physical Plane is the last to be treated in this section related to the seven planes. Because of the fact that Humanity is most familiar with this plane, the field of sensory perceptions, little explanation will be required.

As I said before, each of the seven planes is at the same time a septenary. ... the complete seventh plane is considered purely physical, and doesn't have much to do with the higher faculties that makes us humans, like reason, emotions and our sense of individuality or self-consciousness. Those are the results of vibrations originated in the higher planes we already treated.

Note with this presentation the numbering is reversed. That is, instead of the Physical Plane being numbered One as in the Michaelian teachings, it is numbered Seven. A little research shows that some presenters of a cosmology of sevenness start their numbering at the "bottom" and some start at the "top".

Here we move on to another presentation: >http://www.geocities.com/xeroiii/6planes.htm<. (This link is now dead.)

HIGHER PLANES OF EXISTENCE

A fundamental Theosophical teaching is that our solar system is divided into seven "Worlds" or "Planes" of existence. We are all familiar with the lowest one, the Physical Plane, but there are also 6 more, each more subtle than the last. These planes are (from the least subtle to most): the Physical, the Emotional, the Mental, the Buddhic, the Atmic, the Monadic, and the Adi Planes. Many different names have been used to denote these planes, but these will be used for this site for ease of recognition and clarity.

Each of these planes is then sub-divided into seven sub-planes. The Physical Plane is divided into (from least subtle to most): Solid, Liquid, Gas, Fourth, Third, Second and First Ethers. The solid, liquid, and gas we are all familiar with through general Science, and observation of nature. The ethers however are generally considered to be not perceived by the five senses, but the effects of which we can perceive. The fourth ether is regarded as the medium for ordinary electrical current and sound. The Third ether for the medium of light. The second ether for the medium of the finer forms of electricity (Kundalini power is also given by E. C. Chaney in [his book] *Man* — the Measure of All Things). The first is the medium for the transmission of thought from brain to brain (Psychic Powers). It is within this, the Physical Plane that the Physical and Etheric Bodies lie, and the chakras are part of the Etheric body, so they too lie here.

The Mental Plane houses the Mental Body, which is made from particles of the lower four sub-planes of the Mental Plane. It also houses the Causal Body, made solely of the particles from the third (... most subtle) sub-plane of the Mental Plane. Also on this Plane is the Spiritual Mind, made of the most subtle (first) sub-plane of this plane.

Notice that here the Causal Body is said to exist on the Mental Plane. This is in disagreement with some other sources, and reflects a confusion of the terminology more than a disagreement in the nature of the plane.

Planes per the Original Michaelian Group

The first mention of planes happened even before the Michaels showed up in the original Michaelian group in August of 1973, when Tomas and Soleal were the informants. Someone asked a question:

Does "later" mean "on the Astral Plane" or "above the Astral Plane"? [undated session, first half of 1973]

Planes are mentioned numerous times in channeled answers, from the first session that we have onward, and no one questioned what was meant by that word, until several months into it, when Tomas was online:

Can we hear more about planes?

You understand that this is an extensive subject. The time [element] in planes is presently misunderstood. The planes are different levels, as in ladders, though your time concepts are being misinterpreted. You are now

living in your time, and yesterday and tomorrow are all the same, going on now, as with today. Planes are ladders, steps, graduations. This is unclear because you cannot see above you [into the 'future']. As you see yesterday, it is somewhat clearer to you how you are misusing energies. And yet, if in the right place, you can see tomorrow, as it is all happening now. The planes are a way to step up and see better — a reward, as such, for growth. You can be where you are or in yesterday or in tomorrow, all at the same time. Your growth and work places you where you can understand. There is much difficulty seeing even today and yet the truth is that to grow and learn, you must stop seeing today and be able to see yesterday, now and tomorrow all as one, and develop yourself according to your needs. On the higher planes, you can see yesterday and today and tomorrow, and yet cannot see higher than you are. This is difficult to communicate through Carolyn as she lacks the words and understanding... [SIC, 17 July 1973]

Physicists refer to Tomas's assertion in this passage — that all time exists at once — as the "block universe". This is discussed in some detail in Chapter 4M in Part Four of this *History* book, "The Seven Soul Ages", and in Chapter 4N, "Casting Concerns", because it is relevant to an understanding of those subjects.

The planes are levels of being — where your head is at. There are also planes — places — where you go after passing on, when you come over — heaven and hell type places that are planes. Planes have many definitions. Planes for you are levels of being and steps on a ladder. After passing on to here, it is a place of being, where your soul is stored until class. [SJC, 17 July 1973]

No planes are actually named by Tomas or Soleal that we have transcriptions for. Planes were mentioned several more times by Tomas, and then in the Michaels' first appearance, they mentioned the Astral Plane and the Physical Plane:

Some of your most rewarding sexual encounters occur when you think you are asleep. These are encounters with unknown beings on the Astral Plane and also Essence encounters with actually known beings.

You reach the point [in elevated consciousness] where environment on the Physical Plane does not matter anymore. You can leave it at will. [SJC, 12 August 1973]

Physical and Astral Planes are mentioned a few more times, then the Causal Plane is introduced a week after the Michaels' first appearance:

Who are we talking to tonight?

The name I am called is Michael. That is a convenience and not a truth. Only one small Fragment of this Entity had that name. We are integrated Fragments of a larger Entity. We are these, then. We come to you from the causal body and not the astral. You are accustomed to dealing with astral entities.

What is a causal body?

The causal body is the plane above the Astral Plane. It is an upward step in the spiritual evolution. Heaven is created out of astral materials for those between bodies who need that experience before they review [their last lifetime]. Some also need the experience of hell and [that] too they create from astral matter. It is very pliable — it can take any shape you wish. This is the stuff used to conjure up the demons. They can cause only the amount of damage that you allow them to, in your mind. There have been many instances of Fragments being literally frightened to death by products of their minds, manufactured from astral matter. ...

The causal Entity has the ability to create earthbound elementary forms and throw a Fragment of the Entity to that form for its Earth-bound [Physical Plane] experience. This only becomes necessary occasionally and is rare. There are some strong ties with certain Earth elementals. The problem has arisen more often than not among those who hunt and eat the flesh of animals. That Fragment sometimes becomes a "restless spirit". ...

Do humans reincarnate in animal form?

Human spirits reincarnate in human form without exception. The only karma incurred of importance relates to other people. However, there are sometimes unresolved emotional conflicts in the Entity. I have said that astral matter can be used to materialize self and other objects. The Entity chooses then to create the hunted and experience the hunt. From that dimension this experience is real, in the sense that it is needed to play out a scene.

Can astral matter materialize?

Only the causal Entity has this ability. No other Entity would have a reason. The animals thus created from astral matter are only as real as anything else created from astral matter, but they give the Fragment from the causal body a suitable vehicle for working out an unresolved conflict. Notice I do not say karmic. These are short-lived experiences. [SJC, 21 August 1973]

In the next session there are hints of the plane above the causal with the mention of the high mental body as the Infinite soul:

Neither the Transcendental Soul nor the Infinite Soul pursues physical union. Quite often, however, the high causal body or the high mental body displaces an older soul and at that time of the manifestation, the sexual activity ceases. These souls are not challenged by maya. [SJC, ~24 August 1973]

Physical, Astral, and Causal Planes are mentioned some more times before new information about their structure appears:

The high planes each have seven levels. [S/C, 18 September 1973]

The higher planes each have seven levels of evolution, not just the physical. [SJC, 06 October 1973]

Can you tell us about the Astral Plane and its levels?

The first level of the Astral Plane is populated by living Fragments adept at astral travel and those souls who penetrate this plane accidentally through drugs.

The second level of the Astral Plane is inhabited by all those between [physical] bodies.

The third level attracts Old Souls who are trying to burn final karma without being reborn.

The mid astral [fourth level] bodies are partially reunited entities. You have manifested a mid-astral Entity previously [Tomas].

The three higher levels [fifth, sixth, seventh levels] are progressively integrated [Entity-wise]. Access to the high planes is through these levels.

Even very high adepts such as Soleal have fantasies concerning the high planes. We have confronted him on the low Astral Plane and have been required to descend a staircase that does not exist except in his mind.

What is meant by the high planes?

By high planes, we refer to the Causal [Plane] and beyond. [S/C, 08 October 1973]

Finally, someone asked for a clarification of names and qualities of planes:

I am confused about which souls inhabit what planes after the physical level. I would like more information about this

There are, of course, seven planes in all, each with seven levels. Beyond the Astral Plane is the Causal Plane with seven levels ... three low, one mid Causal Plane level upon which we reside, and three higher levels upon which reside the high causal bodies — the Transcendental Souls contiguous with this plane, and the Mental Plane is the Akashic Plane, which is a photographic record of all history. Some very high adepts have access to this plane. On the Mental Plane, resides the Infinite Soul, and the low and Mid-Mental [sub-Plane] bodies. Beyond this is the Buddhaic Plane and upon this level are all of those souls who have achieved physical communion with the Tao. Beyond this, of course, [is] the Tao. [SJC, 29 November 1973]

Will Michael's Entity join with other Entities as we do here with Fragments?

Yes. On the high Causal Plane, there will be progressive reunion, then again on the Mental Plane. [SJC, 06 March 1974]

Can Crystal be a guide?

You could. We would stress that differentiation here is imperative or the guidance will be worthless. The guide must have access to the Akashic Plane. [S/C, 27 March 1974]

Discussion about Akashic Plane being where records are kept. Wondered about the scripture "Book of Life" and the connection between the two.

The Akashic Plane is a living photographic record of all that ever was and is, to a millisecond ago, even less. Yes, this is the "Book of Life." It is contiguous to both the Causal and Astral Planes. [S/C, 16 June 1974]

The planes can also be likened perhaps most easily to the Goals. For instance, on the Physical Plane there is much resistance and Rejection, particularly of those things beyond the physical. On the Astral Plane, there is much Submission, particularly on the lower levels, where the painful lessons are being learned. This can be extrapolated on up to the Tao, which represents [the Goal of] Growth in the highest order. Souls experience this "overall goal" in very subtle ways, almost imperceptible, except to the highest student. The learning process, therefore, is very different on each plane, with physical inhabitants learning primarily through Rejection. You prefer to call it experience or more often, "bitter experience". More often than not, it is merely a Rejection of intuition. Therefore, the errors made on the Physical Plane often are the result of cognitaling [sic; cogitating?] and eventually rejecting the intuitive selection for the more profitable or culturally acceptable one. These errors are not usually resolved until the physical student meets with a teacher, this usually occurring in the later cycles. These lessons, of course, provide the groundwork for the lessons yet to

come, as the Entities work progressively toward the Tao. You see, there is an overall synthesis of which your synthesis is a component. [S/C, 08 October 74]

In my opinion, there is some confusion in this passage, because the Physical Plane, which has Ordinal Action Attributes, does not correlate with the Goal of Rejection, which has Ordinal Expression Attributes. Likewise, the Astral Plane, which has Ordinal Inspiration Attributes, does not correlate with the Goal of Submission, which has Ordinal Action Attributes. Likewise, the Tao Plane has Cardinal Action Attributes, and does not correlate with the Goal of Growth, which has Cardinal Inspiration Attributes. No subsequent Michaelian students have adopted the errors contained in this passage. Refer to Part Four, Chapter 4E, "The Seven Planes", for a thorough discussion.

The previous paragraph mentions that the planes have Septenarian Attributes; the next section explains the Septenarian Attributes of the planes in some detail.

The Natural Sequence

My preference is to present information starting with the most general and ending with the specific topic under consideration. This forms a nested hierarchy of explanation. One of the reasons that I put this chapter on planes first in this book is because it is near to being the most general relevant realm to the subject of the book, such that other subjects in subsequent chapters can be considered as subsets (of subsets (of subsets (and so on))) of the planes. In this book, Attributes and traits of Personality are embodied in the Overleaf System, the subject of this book, but those same Attributes and traits are manifestations of the same Attributes and traits embodied in the Cosmos at large, including the six planes other than the Physical Plane. That is the essence of what a "nested hierarchy" is; each level in the hierarchy recapitulates the levels above and below it.

Therefore, while we are on the subject of the planes, it is appropriate to introduce the reader to the Natural Sequence. The planes are arranged per the Natural Sequence, the same as the Overleaf System is. Volume 2 of my hexology of books is a thorough presentation on the Natural Sequence, hence its title, *The Tao of Cosmogony: The Natural Sequence of the Cosmic Septenary.* If the reader has read that book, then regard this as a very brief review; if the reader has not read that book, then regard this as a very brief introduction. The Natural Sequence appears in several discussions in other chapters of this *History* book. The Natural Sequence is the fundamental nested hierarchy all up and down the creation, from smallest to largest, from shortest to longest, as shown in the following table.

| | Table 1 | Ae — The NA | TURAL SEQ | UENCE from | n PLANES to | OVERLEAVES | |
|-----------------------|-----------------------|--|----------------------|------------------------|------------------------|---------------------------|-----------------------|
| PLANE | PHYSICAL | ASTRAL | CAUSAL | AKASHIC | MENTAL | MESSIANIC | BUDDHIC |
| SUB-PLANE | First Level | Second Level | Third Level | Fourth Level | Fifth Level | Sixth Level | Seventh Level |
| SOUL AGE WORLDVIEW | Infant Primitivism | Child Traditionalism | Young Materialism | Mature Collectivism | Senior Holism | Elder Transpersonalism | Ancient Messianism |
| LEVEL in AGE | First Resolution | Second Immanence | Third Separation | Fourth Experience | Fifth Unification | Sixth Transcendence | Seventh Activation |
| LIFE-STAGE | Infancy | Childhood | Youth | Middle-Age | Seniority | Elderhood | Dying |
| | Rows | above are a nested from the Overlea | • | | • | • | |
| CENTER | Moving | Emotional | Intellectual | Instinctive | Higher Intellectual | Higher Emotional | Higher Moving |
| ROLE | Warrior | Server | Artisan | Scholar | Sage | Priest | King |
| | I | Rows below show th | he Septenarian 1 | Attributes for th | e items in the ro | ws above. | |
| DIALECTIC | | Ordinal/Cardina | ıl | Neutral | | Cardinal/Ordinal | |
| AXIAL | Action | Inspiration | Expression | Assimilation | Expression | Inspiration | Action |

My comments on this table are as follows:

- PLANE: The first row shows the names of the seven planes as given in the mainstream Michaelian teachings. Refer to the thorough discussion in Part Four, Chapter 4E, "The Seven Planes", for alternatives names in addition to those discussed in this chapter from Kabbalah, Theosophy, Rosicrucianism, Aurobindo, and Bladon.
- SUB-PLANE: The second row shows the seven levels within each plane. They were mentioned previously in this chapter. They do not have names; they have only a rank: First, Second, and so on.
- SOUL AGE: The third row shows my names for the seven Soul Ages. These differ in some places from the mainstream Michaelian teachings. Refer to Chapter 4M in Part Four, "The Seven Soul Ages", for a thorough discussion. Also shown are my names for so-called "Worldviews", alternative names for the Soul Ages that do not refer to the maturation process. These are discussed at great length in Part Three of my book, *The Tao of Personality*.
- LEVEL in AGE: The fourth row shows my names for the seven Levels within each Soul Age. These differ from the mainstream Michaelian teachings. Refer to Chapter 4K in Part Four, "The Names of the Levels", for a thorough discussion.
- LIFE-STAGE: The fifth row shows my names for seven stages during a full human lifetime. These are related to the so-called "Internal Monads" in the Michaelian teachings, which are about the difficult transitions between Life-Stages, whereas Life-Stages are about the plateaus between the Internal Monads. Refer to Chapter 4Q in Part Four, "The Seven Life-Stages" for a thorough discussion.
- CENTER: The sixth row shows the original names of the Centers. Refer to four chapters in this book for a thorough discussion: Chapter 1D here in Part One, "The Seven Centers"; Chapter 4F, "The Instinctive Center"; Chapter 4G, "The Higher Centers"; Chapter 4H, "The Action Centers", all in Part Four.
- ROLE: The seventh row shows the names of the Roles arranged per the Natural Sequence. Refer to Chapter 1F here in Part One, "The Seven Human Temperaments" for a thorough discussion.
- DIALECTIC: The eighth row shows the names of the Dialectic Attributes. Refer to Chapter 2B, "Attributes of Overleaves", in Part Two of this book, for a thorough discussion. Refer to sections on the Taijitu Tango Principle for the explanation of the reciprocal (space/time versus time/space) nature of the septenary.
- AXIAL: The ninth row shows the names of the Axial Attributes. Refer to Part Two, Chapter 2B, "Attributes of Overleaves", for a thorough discussion. Adding together the name of a Dialectic Attribute (e.g. Cardinal) to the name of an Axial Attribute (e.g. Inspiration) makes a phrase that I refer to as a Septenarian Attribute (e.g. Cardinal Inspiration). The Septenarian Attributes are a feature of the Overleaf System, and therefore they show up repeatedly in this book.
- Notice that the Cardinal Triad in the right side columns is the reverse order of the Ordinal triad in the left side columns, on either side of Neutral Assimilation. Thus, the triads are a mirror image of each other

Soul Ages, Levels, and Life-Stages are a nested hierarchy of time scales; each one being a subset of the next longer time scale. The Planes and the sub-planes can also be regarded the same way — as nested time scales — if viewed as longer time scales of the soul's evolution than Soul Age is.

Speaking of nested hierarchies, let's examine that subject in more detail in the next section.

The Great Chain/Nest of Being

While we are on the subject of planes, let me also introduce the subject of the Great Chain of Being (GCB), and the Great Nest of Being (GNB). These metaphors appear in other discussions in other chapters.

An internet search will lead you to many resources on the topic of the Great Chain of Being. Basically, the metaphor is of interconnecting links of a chain representing how the universe is connected together in interdependent parts. The interconnections might be metaphorically one-dimensional as in a chain, or the interconnections might be metaphorically two-dimensional as in a net, or the interconnections might be metaphorically three-dimensional as in a lattice. This >https://en.wikipedia.org/wiki/Great_chain_of_being< is a good place to start. Its relevance to the Michaelian teachings is that Agape recognizes that we are all

pieces of a holistic whole as members in our human and spiritual families and societies and communities; it acknowledges that our lives are parts of an intricately-woven tapestry, now and forever.

An internet search will lead you to many resources on the topic of the Great *Nest* of Being. This is a variation on the Great *Chain* of Being. So far as I know, Ken Wilber formalized and elaborated on this concept, although it had precursors going back into ancient times. The idea here is that the components of the universe, from atoms to galaxies, are nested within each other. That is, atoms are nested within molecules are nested within cells are nested within organisms are nested within ecosystems are nested within planets are nested within solar systems are nested within galaxies are nested within universes. This kheper.net article is a good place to start: >http://www.kheper.net/topics/Wilber/Great_Nest_of_Being.html<. Its relevance to the Michaelian teachings in this chapter is that the planes are the largest nest, subplanes are nested within planes, then in terms of the evolution of the soul or essence, Soul Ages are nested within the Physical Plane, Levels are nested within Ages, and Life-Stages are nested within Levels.

In the context of the GCB and the GNB, it seems appropriate to share a quotation from Gurdjieff:

It is impossible to study a system of the universe without studying man. At the same time it is impossible to study man without studying the universe. Man is an image of the world. He was created by the same laws which created the whole of the world. By knowing and understanding himself he will know and understand the whole world, all the laws that create and govern the world. And at the same time by studying the world and the laws that govern the world he will learn and understand the laws that govern him. In this connection some laws are understood and assimilated more easily by studying the objective world, while man can only understand other laws by studying himself. The study of the world and the study of man must therefore run parallel, one helping the other. [P. D. Ouspensky, *In Search of the Miraculous*, p. 75]

Volume 3 of my hexology of books, *The Tao of Cosmogony*, is a thorough presentation of the Great Chain/Nest of Being as it pertains to the Michaelian teachings. The range of coverage is the entire spectrum from the cosmos to human consciousness, the laws of physics to the laws of Personality.

Concluding Remarks on the Topic of Planes

Following are some observations about what has been presented so far.

- 1. One can do an Internet search on "the seven planes" and come up with enough material to read for months, if not years.
- 2. Note that the seven planes are each divided into seven subplanes in Theosophy, and other sources, just as they are in the Michaelian teachings. There is a principle here that also applies to Levels within Ages, Life-Stages within a lifetime, and Casting that is, Positions within Cadences within Greater Cadences within Sides within Entities within Cadres. This "fractal" nesting phenomenon is mentioned at this website: >http://www.kheper.net/topics/fractals/fractals.htm<.
- 3. In other esoteric cosmologies, it is recognized that the three Ordinal planes are a reflection of the three Cardinal planes, the middle plane being a turning point, where the order reverses. This is due to the structure of the universe in time according to what I call the Natural Sequence refer to my book by that name on that subject. I find no evidence that this fact was recognized during the original Michaelian group in the 1970s, but it was recognized in subsequent Michaelian groups in the 1980s, and beyond.
- 4. The third plane has been named Causal in the Michaelian teachings. Its name according to Neo-Theosophy is Mental, and this fits with the correlation with the Intellectual Center in the Michaelian teachings. In numerous other esoteric cosmologies, the third plane is considered to have a mental, thought nature. Lee Bladon's research, referred to in this chapter, reveals that the name Causal should be applied to the Cardinal levels of the third plane. My speculation is that Sarah Chambers had the name Causal for the third plane in her head from somewhere and applied it to the entire third plane rather than just the Cardinal levels, and the Michaels simply adopted it for convenience, as they did other terminology from some various teachings familiar to the original Michaelian group.
- 5. Some esoteric cosmologies number the planes with 'one' at the top and 'seven' at the bottom rather than the other way around as is normally done in the Michaelian teachings. This is not a problem because there is no intrinsic meaning in the numbers. What is intrinsic is the nature of each plane, not the number artificially attached to it. These intrinsic natures are the Septenarian Attributes, as described elsewhere in this book.

- 6. The Michaels refer to a phenomenon which appears on all seven planes as a "Universal Truth", and a phenomenon which appears throughout the Physical Plane as a "World Truth" (MMFM, pp. 44–45).
- 7. If one researches the planes further on the internet, one will notice that they are correlated with other concepts, such as "rays" and "bodies" and "states of consciousness". There is discussion of these in Part One of my book *The Tao of Cosmogony*.
- 8. The Neo-Theosophy names of the planes in sequence are per the following, although there are variations: #1 Physical, #2 Astral, #3 Concrete Mental, #4 Abstract Mental or just #3 "Mental" and #4 "Causal" #5 Buddhic, #6 [so-called] Atmic, and #7 Monadic. Notice the similarities and differences here with those names given in the Michaelian teachings, and here also there are variations: #1 Physical, #2 Astral, #3 Causal, #4 Mental or Akashic, #5 Buddhic or Mental, #6 Messianic, and #7 Buddhaic or Tao. Most significantly, the Michaelian names switch the order of Causal and Mental from the Neo-Theosophical names. An Internet search reveals that the Causal Plane is generally used for the Fourth or any plane beyond the third, but sometimes third even outside the Michaelian teachings. The Michaelian naming convention obscures the nature of the third plane in the Michaelian teachings. Besides giving the plane of thought a name not reminiscent of thought, it also mis-aligns the "Mental" Plane hence Intellectual Center with the Scholar, which Role is properly aligned with the Instinctive Center and Akashic Plane. I believe this misalignment has caused some misunderstanding about the nature of the Scholar Role. The data and information of the Scholar is not just intellectual; it encompasses all of the other Centers. This is discussed further in Chapter 4E, "The Seven Planes", in Part Four.
- 9. Descriptions as well as names of the Cardinal planes differ from esoteric teaching to esoteric teaching. This is to be expected because sources agree on this at least experience there is indescribable in human terms. Generally, one can say that experience on the lower planes is "quantitative" in nature, and experience on the higher planes is "qualitative" in nature. That is, on the lower planes, we are Fragments of Tao experiencing evolution as integration with other Fragments in increasingly larger composites. In the Michaelian teachings, these are named "Cadences, Greater Cadences, Sides, Entities, Cadres, Greater Cadres". On the higher planes, evolution is something like the All or the One not being amorphous or homogeneous but having a "quality" gradient or gradients of various kinds on each plane, a gradient that is ascended on the way to Tao.
- 10. Besides the fact that planes are shown on one of the Overleaf Charts, this *History* book includes a discussion of them because there is confusion in the Michaelian teachings about their names and their characteristics, as stated throughout this chapter. Further discussion is found in the chapter on planes in Part Four of this book.

The reason I started out with the presentation on Planes was because it gives the reader an overview of the cosmology — the ordered structure of the universe — within which the Overleaf System exists and functions. In my view, the Overleaf System is a small subset of the cosmos. The next eleven chapters cover precursors to the Overleaf System. Some of these were known to the original Michaelian group, and some were not. It should be clear to you, after reading these, that the Michaelian teachings did not come into a vacuum and did not contradict existing esoteric teachings, but in fact built upon them as its foundation. We can all learn a great deal by comparing and contrasting these other esoteric teachings with the Michaelian teachings, and analyzing and synthesizing the Michaelian teachings in relationship to them.

With the next chapter, we reduce the scope of the investigation, all the way down from the seven planes of the entire cosmos, to the realm of personality typology, of which the Overleaf System is the one of concern in this *History* book.

Chapter 1B

Personality Typologies

This *History* book is about the Overleaf System. Part One of this *History* book is about precursors to the Overleaf System. The Overleaf System is a personality typology. Therefore, it is appropriate that the first step in this Part of this book should be for me to present the history and the features of personality typologies in general. Hence, the title of this chapter.

Part One of this *History* book is also about explaining the Overleaf System in the context in which it appeared. Founding members of the original Michaelian group were intent on finding a spiritual teaching and/or a spiritual teacher. For a while they were involved in a local "Fourth Way" Gurdjieff–Ouspensky group called the Fellowship of Friends, led by a spiritual teacher named Robert Burton. That group proved to be unsatisfactory to them, so they formed their own group, and then they attempted to make contact with a *literal* "spiritual" teacher via an Ouija board and other methods.

In the Fellowship of Friends, among many other facets of that spiritual teaching, there were some components of personality typology being spoken of: the Centers, the Chief Features, and the Body Types. And although it seems unlikely to me that original Michaelian group members, after they left the Fellowship of Friends, were actually looking for an enlargement of the Fellowship of Friends personality typology, that is what they got, along with spiritual teachings from that literal spiritual teacher that became known by the name, "Michael", or, more accurately, "the Michaels" because they are a composite of souls joined into an "entity". It was only about two weeks after the appearance of the Michaels to the original Michaelian group that the Michaels launched into their revelation of the Overleaf System as a key component of their teachings.

Members of the original Michaelian group were already familiar with various spiritual teachings that included personality typologies, and, of course, there were some other spiritual teachings that included personality typologies that they were not familiar with; both the familiar and the unfamiliar are discussed in this *History* book.

Something that becomes evident in subsequent chapters of this book is the influence that came from prior acquaintance of the original Michaelian group with Gurdjieffian concepts and vocabulary. We discuss precursors to five of the seven Overleaf categories that were revealed by the Michaels. Topics that were a part of the Gurdjieffian teachings lie behind two of those chapters: the Centers and the Chief Features. After those five chapters on precursors, in a couple of other chapters, we cover two other systematic features of Gurdjieff's teaching, namely the "Law of Three" and the "Law of Seven". By "systematic" I refer to the orderly arrangement of components in a meaningful pattern. Both of those Laws are components of both the Gurdjieffian personality typology and the Overleaf System.

Yet another contribution from the Gurdjieffian teachings is introduced and described in this chapter on personality typologies: a systematic understanding of how the universe works. That contribution is named the "Enneagram". A later, the last, chapter in Part One, discusses one of the Enneagram's applications, the seven Body Types. So there are six chapters in this Part One that discuss components of the Gurdjieffian teachings, and they comprise appropriate introductions to the Michaels' revelation of the Overleaf System to the original Michaelian group that is covered in Part Two of this *History* book.

By the way, this chapter is written assuming that the reader is familiar with the basic components and the main features of the Overleaf System. This whole book, really, is aimed at knowledgeable students of the Michaelian teachings. If you are a Michaelian teachings "newbie", then you might struggle a bit with what I have to say; you might have to 'get up to speed' by following my references to other chapters in this and my other books, and then return to this book. At the end of this chapter, there is a section on the numerical

structure of the principles that are found in the Overleaf System; that provides an overview of the Overleaf System for both newbies and seasoned students alike.

Introduction to Personality Typology

Every person that you meet has a different personality. What is that all about? Attempting to answer that question has been the endeavor of professional philosophers and psychologists, as well as amateur students of human nature, for millennia. Beginning at least in the middle of the Axial Age, a half-millennium BCE (refer to this website: >https://en.wikipedia.org/wiki/Axial_Age<), if not earlier, there have been people who devised systems of personality types.

There are various reasons for this: some people are propelled by their own personality proclivities and penchants to figure this out; others have the scholarly desire to know how the world works, and people are a part of the world; others have a healthy social and sociological impulse to understand the 'chemistry' between people in order to deal with other people more effectively and efficiently than one otherwise might if lacking conscious understanding.

The way this exploratory, experimental, and explanatory endeavor is typically done is to devise or discover categories of personality types, and then sort different people into those various categories. Over the millennia since the Axial Age, numerous systems were devised, as we will see. Psychology as a branch of science was only created at about the turn of the 19th to the 20th Century. Before that, personality typing was mostly casual and anecdotal — unscientific. The branch of psychology that deals with the study of personality types is, of course, referred to as "personality typology". Understanding the historical development of personality typologies contributes to understanding the Overleaf System, so that is why an entire chapter is dedicated to this topic.

That historical endeavor happens to be a significant part of the Michaelian teachings. Our tool for participating in this endeavor is the Overleaf System. What others might call "effective and efficient transactions" with other people Michaelian students prefer to call "Agape".

This chapter is an introduction to some of those personality typologies prior to and outside of the Overleaf System. We see below that there has been an increasing sophistication and systematization of personality typologies over the millennia. I suggest that that the progress in sophistication and systematization culminates in the best personality typology of them all, the Overleaf System, so in discussing other schemas for looking at personalities, I am going to be pointing out points of correlation with the Overleaf System Chart.

It is interesting to me that some of the ancient personality typologies reviewed in this chapter came out of spiritual teachings. These were the psychology of their day. In the Greek language, the word *psyche* refers to the mind and/or the soul and/or the spirit. The modern psychology profession (excluding a few psychologists identifying as transpersonal psychologists, a quite small branch of the profession) prefers to limit its purview to the study of the functions of mind and deny the existence of the spirit. That does not mean that modern psychologists have not made significant contributions to those persons — and they are many — who are endeavoring to use personality typologies on their spiritual paths.

The intended purpose of ancient personality typologies was for self-understanding and self-improvement, to become a better person. For instance, one of the maxims attributed to various wise personages of the Axial Age was "Know thyself" (https://en.wikipedia.org/wiki/Know_thyself). In other words, "Sort yourself out" and "Figure out who and what you really are". It was good advice millennia ago, and it is good advice now for all kinds of people, not just spiritual people, in all kinds of circumstances, not just on spiritual paths.

More recently, personality typologies have been part of academic, clinical psychology research projects, intended for practical usage, such as in counseling psychotherapy — the purpose being self-understanding, the same as before. One of the most common uses of personality typologies is in couples therapy and family therapy, with people in intimate relationships, for the purpose of helping couples get along in healthier ways than before. Psychotherapies using personality typologies are also applied to improve group dynamics in all kinds of organizations. Many of the personality typologies reviewed in this chapter have been used by people interested in improving their business, such as fitting the right person to the job (no 'square pegs in round holes' please), or understanding interpersonal psycho-dynamics to make the working environment more effective and efficient. This is also Agape, no matter how mundane it may seem in a business context.

Let's approach this subject from a little different angle.

Starting when we are infants, we learn that dad is different from mom is different from siblings are different from playmates are different from cousins are different from classmates are different from coworkers are different from celebrities — *ad infinitum*. Everyone has a personality, and all of them are unique; so far as we know there are no identical twins when it comes to personalities, even with identical twins. Most people, as they grow up, just learn to accept this as a feature of human existence, and they deal with it as best they can, driven by whatever unconscious, automatic 'chemistry' exists between themselves and others. They might never pursue an understanding of personality in general *per se*. Readers of this book are probably among those people who do want to understand personality typology, for whatever reason(s).

So, there are innumerable people with innumerable personality traits, but are there *categories* to these traits? And is there a *pattern* to the categories? In this chapter, we are going to briefly review a few personality typologies, and then introduce you to the Overleaf System, the subject of this book. I discuss the patterns within the personality typologies. As we review the personality typologies in the following sections, we see that there are examples of personality typologies that are *barely* systematic, and there are examples of personality typologies that are *very* systematic. The Overleaf System is perhaps the most extreme example of a systematic personality typology, based as it is on an algorithm of logic and mathematics..

Another way to say this is that there are two types of personality typologies: the *model* type and the *theory* type. (Those are the extremes; there is a spectrum between the extremes, mixtures of types.) A model has little or no structure; it is just a collection of personality traits that have little or no relationship to each other; these personality typologies consist of lists and descriptions. These are best represented in a *table*. On the other hand, a theory has structure of some kind, usually a numerical structure of the types mentioned in the next few sections. We will see that there are usually *graphical* representations of the pattern of the traits as well as descriptions of the traits. Another use of the word "theory" in this context is that an *origin* or *cause* for the personality traits is posited. In the sections to follow, we see a couple of instances of that, where specific personality traits are associated with specific body types in one case, or bodily fluids (!?!?) in another case. The Overleaf System has both types of theory built in: it is structured, and it posits a source–origin–cause, namely, the structure of reality and the soul's choice to experience some portion of the structure of reality for the duration of the incarnation.

The Overleaf System is theoretical in yet another way: it is an instantiation of a template that governs the structure of various systems from top to bottom of the cosmos. I begin to demystify that statement in this chapter.

Different researchers and thinkers have assembled various collections of personality traits in various ways, in their attempts to lump the infinite variety of individual personalities into convenient and manageable categories. Tests have been devised so that oneself or others may lump particular people into particular categories. As with so many other subjects, Wikipedia has many articles on the subject of personality, and many of them were used in the preparation of this chapter. Interested readers can peruse these online resources and follow links to many other internet resources and books galore. Here are links to some of those Wikipedia articles:

https://en.wikipedia.org/wiki/Personality

https://en.wikipedia.org/wiki/Interpersonal_circumplex

https://en.wikipedia.org/wiki/Five temperaments

https://en.wikipedia.org/wiki/Psychological_typologies

https://en.wikipedia.org/wiki/Personality_type

And then there is this link to an online article that provides an overview of the subject of personality typologies:

https://www.frontiersin.org/articles/10.3389/fpsyg.2017.01751/full

From this link, I extracted the following quotation, it being extremely appropriate for this chapter (underlined words are my emphasis, in this and subsequent quotations):

The concept of personality can be seen as the very core of Psychology (Atkinson et al., 2000; Santrock, 2008; Feist and Gregory, 2009). Even though there is no universally accepted definition for the term, most authors would agree that it entails a set of individual traits that act upon motivational, emotional, cognitive, and behavioral processes to produce a consistent pattern of thought [and feeling] and action throughout one's existence, something that involves self-perception, values, and attitudes (Krauskopf and Saunders, 1994). Such

traits are also generally defined as being relatively stable in time and exclusive to each person (Feist and Gregory, 2009).

This online article's content carries its own interest in the matter of personality typologies, as it goes on to analyze the utility and accuracy of the personality typology found in the "Divergent" series of novels that also became a movie franchise:

The story of the Divergent trilogy is set within the dystopian, isolated, post-apocalyptical city of Chicago, where order is maintained by dividing the population into five Factions, each with its own values, patterns of behavior, social functions and personality traits of its members. At the age of 16, every individual is required to, with the help of a personality test, choose to which Faction he or she wants to belong to and live with for life. Failure to live up to the standards of one's Faction will lead to expulsion, making one "Factionless" and socially excluded, a fate considered to be "worse than death." The plot of Divergent revolves mainly around the fact that the protagonist ("Beatrice Prior" or "Tris") has inclinations toward Abnegation, Dauntless and Erudite all at the same time, instead of to just one of the Factions, which means facing possible persecution and death.

A brief list of each Faction, its social function, and main psychological characteristics that are attributed to them, as idealized by Roth is summarized in Table [1Ba].

| | Table 1Ba — FACTIONS in the DIVERGENT TRILOGY | | | | | | | | | |
|------------------------------|--|--|--|--|--|--|--|--|--|--|
| FACTION | SOCIAL FUNCTIONS | PSYCHOLOGICAL CHARACTERISTICS | | | | | | | | |
| Abnegation (The Selfless) | Government, public service and social assistance | Altruism, support of others, focus on duties and obligations, attention to details, organization, self-discipline, religiousness | | | | | | | | |
| Amity (The Peaceful) | Agricultural production, counseling and care-taking | Pacifism, valuing social harmony, forgiveness, desire to please, taste for pleasure and entertainment, hedonism | | | | | | | | |
| Candor (The Honest) | Application of the Law and trials | Frankness, honesty, energy, seeking attention and interaction with others, positive emotions, talkativeness | | | | | | | | |
| Dauntless (The Brave) | Defense and maintenance of order | Thrill-seeking, courage, capacity to overcome fear, competitiveness, assertiveness, importance given to physical fitness | | | | | | | | |
| Erudite (The Intelligent) | Teaching, research, technology, medicine, librarianship | Intelligence, curiosity, eloquence, appetite for knowledge and information, creativity, critical thinking, appreciation of art | | | | | | | | |

Roth describes the five Factions in Divergent as philosophical responses to the human faults considered to be "the cause of all the evil faced by humankind." Each Faction has its own "Manifesto" which states its belief in the overwhelming relevance of the particular vice it stands against and how they propose to overcome it. Thus, Abnegation fights selfishness with selflessness, Amity counters aggression with pacifism, Candor combats duplicity with honesty, Dauntless opposes cowardice with bravery, and Erudite attempts to defeat ignorance with knowledge.

In this fictional story, we see the application of a personality typology intended and configured to make better people and a better world; thus, *Divergent* is a "morality tale" that reminds me of the Positive and Negative Poles of each Trait in the Overleaf System.

But I am getting ahead of myself. There is some preliminary explaining to be done before we look at a number of personality typologies, and then, after that review, we finish this chapter by beginning an explanation of the Overleaf System.

The Pattern Behind the Overleaf System Personality Typology

The point of this section is to introduce the reader to my proposal that the Overleaf System is not only a pattern of human personality traits; it is also the pattern of the "personality traits" of the entire cosmos, from beginning to end (Action), from top to bottom (Inspiration), from inside to outside (Expression). To some extent, this idea is an undercurrent of my expositions in all of my books. Here is how that plays out in the other volumes in my hexology of books.

My books, Legacy Volumes 1, 2, 3, 4, 5, 6, and 7 are ordered in such a way as to present my reformulation of the systematic components of the Michaelian teachings in a general-to-specific direction. Volume 1 explains the most general abstract principles. Successive volumes explain, step-wise, more and more specific applications of the general abstract principles in the mundane realm of our human lives. Each volume takes a component of the information found in the volume preceding it, and elaborates on it. These are the steps:

- 1. Volume 1, titled *The Tao of Cosmology*, lays the foundation of my hexology. That book is a meditation on Chapter 42 of Lao Tzu's book *Tao Te Ching*, which says:
 - <u>Tao</u> produced the <u>One</u>; the One produced the <u>Two</u>; the Two produced the <u>Three</u>; the Three produced <u>All</u> things. All things carry the <u>Yin</u> and embrace the <u>Yang</u>; through the blending of the <u>Chi</u> they achieve harmony.
 - That Volume explains what I am calling "Tao's Template". It explains Tao's Template in terms of logic, mathematics, physics, metaphysics, mythology, and mysticism. All of these realms are manifestations of the primeval archetypes and principles as revealed in the quotation above, namely, $Tao \rightarrow Oneness \rightarrow Twoness \rightarrow Threeness \rightarrow All$, and Yin + Yang = Chi. This is the structural framework of all reality systems; this is the algorithm that generates reality systems. Table 1Bb below presents this schema and this formula in graphic form.
- 2. Volume 2, The Tao of Cosmogony: The Natural Sequence of the Cosmic Septenary, expands on one of the features of Tao's Template, the one that I refer to as the "Natural Sequence", into a few dozen realms of development or evolution that are known to esoteric sciences and to exoteric sciences. In the Overleaf System, this shows up as Soul Ages, Levels within Ages, and Life-Stages within Levels.
- 3. Volume 3, *The Tao of Personality: The Process/Aspect System of Personality Traits,* briefly recapitulates the explanation of Tao's Template, and then extends the application of Tao's Template into the instantiation of human personality archetypes as laid out in the Overleaf System.
- 4. Volume 4, *The Tao of Relationships: The Chemistry and Alchemy of Service and Intimacy,* elaborates on two of the features of Tao's Template Twoness and Sevenness (see below) that apply to the realm of individual psychotherapy, and that apply to the realm of interpersonal relationships on the conscious and intentional spiritual path toward Agape.
- 5. Volume 5, this book, A History of the Overleaf Chart: From the Original Michaelian Group to the Present, is an overview of some of the aspects of Tao's Template, those aspects covered by the name "the Overleaf System" that have been revealed and utilized in the Michaelian teachings community. It covers some of the same territory as Volume 3, but more from a historical perspective than from an explanatory perspective.
- 6. Volume 6, *Study Papers on the Original Michaelian Group*, expands the exploration of the Michaelian teachings beyond the Overleaf System. Other instantiations of Tao's Template are reviewed in this volume.

So, Tao's Template, revealed in an ancient sacred text, introduces to us *principles* of Oneness and Twoness and Threeness and Allness and Yin and Yang and Chi. Why do I bring these principles into this chapter on personality typologies? Because in subsequent sections I point out that these principles are found in personality typologies over and over again, one way or another, in every case. When psychologists look for or see a way to organize their classification schemes, the pattern typically reduces to these fundamental principles. It is the same situation with the Overleaf System, because the Overleaf System is a faithful instantiation and representation of Tao's Template. Other personality typologies might have *some* of the pattern revealed in Tao's Template, but not *all*; only the Overleaf System has it all. It is important to me that you see and understand that; it will enhance and deepen your appreciation of the Michaels' gift to Michaelian students.

The following table is a graphic representation of Tao's Template:

| | Table 1Bb — TAO'S TEMPLATE in BASIC FORM | | | | | | | | | | |
|-------|--|--|--|--|--|--|--|--|--|--|--|
| | Yin Chi Yang | | | | | | | | | | |
| First | First Second Third All Threeness Twoness Oneness | | | | | | | | | | |
| | Seventh — Sevenness | | | | | | | | | | |

My comments on this table are as follows:

- Tao itself has a Twoness about it: it is both outside the boundary of the table ("transcendent") and inside the boundary of the table ("immanent"). The transcendent side of Tao is undifferentiated and insubstantial. One and Two and Three are produced from the substantial side of Tao. More is said about this subject in Chapter 4N in Part Four, "Casting Concerns".
- The three aspects of the nature of Yin (= Ordinality in the Michaelian teachings) are embodied in the words "First Second Third" on the left side of "All" in the Table. Notice that Ordinality is quantitative and has its numerical components characterized as a sequence.
- The three aspects of the nature of Yang (= Cardinality in the Michaelian teachings) are embodied in the words 'Threeness Twoness Oneness' on the right side of "All" in the table. Notice that Cardinality is *qualitative* and has its numerical components characterized as *principles*.
- The formula from Tao's Template is "Yin + Yang = Chi". All things are made up of Chi, the immanent, substantial side of Tao. All things all reality systems are built out of this numerical structure and this interplay of Yin and Yang. "All things" includes the Overleaf System.

At this point in the exposition, it is expedient to introduce an elaboration of Tao's Template that I refer to as the Taijitu Tango Principle. I was first made aware of the Taijitu Tango Principle when I read the "Michael Math" chapter of Chelsea Quinn Yarbro's book *More Messages from Michael*. The relevant passage says this:

You can perceive that [from the point of view of space, being, noun] while one is ordinal and seven is cardinal, that [from the point of view of time, doing, verb] the first half is cardinal and the last half is ordinal — in other words, the pattern "doubles back on itself". This is what is implied by the "yin-yang" symbol, and it would probably be of use to keep the "yin-yang" in mind while considering what we tell you of the function of levels and numbers." [MMFM, p. 189]

This is one of the deepest philosophical ideas that there is, and one that is not easily grasped. The implications and ramifications of the Taijitu Tango Principle are elaborated in subsequent places in this book (and my other books) where appropriate, but for here, note how it alters Table 1Bb above into Table 1Bc below. The basic idea here is that the yin contains the yang and *vice versa*, as the black contains the white and *vice versa* in the Taijitu symbol.

| Table 1Bc — TAIJITU TANGO in TAO'S TEMPLATE | | | | | | | | | | |
|---|--|-------|-----|-----------|---------|---------|--|--|--|--|
| Yin / Yang Chi Yang / Yin | | | | | | | | | | |
| First | Second | Third | All | Threeness | Twoness | Oneness | | | | |
| Oneness | Oneness Twoness Threeness All Third Second First | | | | | | | | | |
| Seventh — Sevenness | | | | | | | | | | |

Table 1Bd below shows the Overleaf System arranged per the Natural Sequence, which was introduced in the previous chapter on planes. You may regard Table 1Bd below as an instantiation of Table 1Bc above, but with Michaelian terminology.

| | Table 1Bd — The NATURAL SEQUENCE | | | | | | | | | | | | |
|-----------|----------------------------------|----------------|--------------|---------------|------------------------------|--------------|------------|--|--|--|--|--|--|
| DIALECTIC | ORDINAL | [YIN] / CARDIN | AL [YANG] | NEUTRAL [CHI] | CARDINAL [YANG] / ORDINAL [Y | | | | | | | | |
| AXIAL | ACTION INSPIRATION | | EXPRESSION | ASSIMILATION | EXPRESSION | INSPIRATION | ACTION | | | | | | |
| GOAL | Submission | Reduction | Rejection | Equilibrium | Acceptance | Growth | Dominance | | | | | | |
| SHADOW | Martyrdom | Lowliness | Renunciation | Stubbornness | Greed | Arrogance | Impatience | | | | | | |
| ATTITUDE | Cynic | Stoic | Skeptic | Pragmatist | Idealist | Spiritualist | Realist | | | | | | |
| SOUL AGE | Infant | Child | Young | Mature | Senior | Elder | Ancient | | | | | | |

| | Table 1Bd — The NATURAL SEQUENCE | | | | | | | | | | | | |
|-----------|--|------------|-----------|--------------|------------|-------------|------------|--|--|--|--|--|--|
| DIALECTIC | CTIC ORDINAL [YIN] / CARDINAL [YANG] NEUTRAL [CHI] CARDINAL [YANG] / ORDINAL [YIN] | | | | | | | | | | | | |
| AXIAL | ACTION INSPIRATION EXPRESSION | | | ASSIMILATION | EXPRESSION | INSPIRATION | ACTION | | | | | | |
| CENTER | Motion | Emotion | Intellect | Impulse | Concept | Sympathy | Excitation | | | | | | |
| ROLE | Warrior | Server | Artisan | Scholar | Sage | Priest | King | | | | | | |
| MODE | Perseverance | Repression | Caution | Observation | Power | Passion | Aggression | | | | | | |

My comments on this table are as follows:

- DIALECTIC: ("The One produced the Two") In the first row, the Dialectic Attributes are shown as they apply to the Overleaves. Most of the personality typologies reviewed in this chapter have Twoness as one of their systematizing principles, and these Dialectic Attributes can be applied to them. Other names, besides yang and yin, for Cardinal and Ordinal are 'Positive' and 'Negative', and 'Presence' and 'Absence'.
- AXIAL: ("The Two produced the Three") In the second row, the three dimensions of Ordinality and Cardinality are shown: Action Inspiration Expression. Many of the personality typologies reviewed in this chapter have Threeness as one of their systematizing principles, and often there is an obvious correspondence with these three Axial Attributes.
- The 'All' of Tao's Template shows up in the Natural Sequence and in the Process/Aspect System as "Assimilation" and "Neutral".
- The combination of Dialectic Attributes and Axial Attributes produces Septenarian Attributes. For example: (Dialectic) Ordinal + (Axial) Action = (Septenarian) Ordinal Action. Refer to Chapter 2B in Part Two, "Attributes of Overleaves", for an explanation of all four ways of attributing characteristics to features of the Overleaf System.
- If/When there is not a Twoness or Threeness in the structure of a personality typology reviewed in the following sections of this chapter, this is equivalent to saying that there is no numeric structure in that personality typology; the personality typology is a collection of unrelated traits. In those cases, in order to be true to Tao's Template, I say that "All" is the operative schema. That is, in the Natural Sequence, the Neutral Dialectic Attribute and the Assimilation Axial Attribute are manifest in that personality typology.
- SOUL AGE: The sixth row show the name of one of the Overleaf System categories that has to do with the evolution of the soul. Only one subsection in this chapter on personality typologies covers this factor.
- ROLE: In the eighth row, the names of the Roles, an Aspect of the Overleaf Chart, are shown, arranged per the Natural Sequence. These seven personality traits are "personifications" of the Septenarian Attributes. All of the Overleaves that correspond to the Roles share the same Septenarian Attributes. We see many of the names and synonyms for Overleaf System traits in many of the personality typologies reviewed in this chapter.

The following sections in this chapter on personality typology do not cover what is called "developmental psychology". That is the study of how people change psychologically over the course of a lifetime. In the Michaelian teachings, this aspect of life has the names "Milestones" and "Internal Monads" and "Rites of Passage", but which I prefer to call Life-Stages. That subject is covered in detail in Chapter 4Q in Part Four, "The Seven Life-Stages". Developmental "soul-ology" — developmental psychology of a higher sort — shows up in the Michaelian teachings as Soul Ages and the Levels within Soul Ages; that is a type of developmental psychology that spans lifetimes, from beginning to end of the reincarnation cycle. Developmental psychology in the Michaelian teachings and in various other teachings, including the mainstream psychology domain, follows the Natural Sequence. In this chapter I do not deal with that; here I am only concerned with personality typologies.

However, there is one comment that would be appropriate to interject here in regard to developmental psychology. In the Michaelian teachings, the Overleaf System personality traits are of "nature" or True

Personality, not "nurture" or False Personality, to use Michaelian teachings terminology. If the Life-Stages are successfully transited in the Positive Poles, then in terms of developmental psychology, the personality transitions from more nurture to more nature over the course of a lifetime. Developmental psychology is not typically associated with mainstream personality typologies as it is in the Michaelian teachings Overleaf System. Nor do personality typologies make a distinction between True Personality and False Personality as the Michaelian teachings does. One can see both True Personality and False Personality traits represented in some personality typologies reviewed in this chapter, and one can see in various personality typologies that some traits belong to less mature souls, and some traits belong to more mature souls. To my way of thinking, the Overleaf System rightly recognizes these factors of developmental psychology, whereas other personality typologies typically do not.

Classification and Its Issues

It is a practical necessity to categorize things and phenomena in the world and give them names because otherwise it would be too ambiguous and confusing to understand them and talk to other people about them. Besides the practical utility of putting phenomena into categories for the purpose of understanding them and effectively and efficiently dealing with them, it is typical for some people to want to 'boil things down', so to speak, to get to the *essence*, to the *archetype*. In biology, the scientific name for this activity is *taxonomy*. Wikipedia has an article on this subject: >https://en.wikipedia.org/wiki/Taxonomy_(biology)<:

Taxonomy: the branch of science concerned with <u>classification</u>, especially of organisms; <u>systematics</u>. [Google definition retrieved 27 April 2019]

The article points out that living things have been lumped into successively larger groups: Species, Genus, Family, Order, Class, Phylum, Kingdom, and Domain.

Within taxonomy there is the process called *cladistics*. Wikipedia has an article on this subject: >https://en.wikipedia.org/wiki/Cladistics<:

Cladistics: a <u>method</u> of classification of animals and plants according to the proportion of measurable <u>characteristics</u> that they have in common. It is assumed that the higher the proportion of characteristics that two organisms share, the more recently they diverged from a common ancestor. [Google definition retrieved 27 April 2019; underlined words are my emphasis]

That Wikipedia article points out that there are different ways of doing the classifications, and that different biologists prefer one or another of these ways. The subject of cladistics (how) is a subset of taxonomy (what).

There are big problems with taxonomy and cladistics: How does one decide what characteristics to put into categories? And, how does one decide where to put the dividing lines between the categories? In the early days of biological taxonomy, in the 1700s, biological organisms were classified by similarity of form. After Darwin discovered evolution in the 1800s, biological organisms were classified by where they fit on the evolutionary 'tree', so to speak, so-called because the graph of the evolutionary path looked like a tree. These days, with the advent of DNA testing, plants and animals can be ever more accurately classified based on similarities and differences in their DNA. Methods for developing personality typologies are not this good.

Note that the subject of taxonomy is also called "systematics", and of course Wikipedia has an article on that subject: >https://en.wikipedia.org/wiki/Systematics<. I bring these biological sciences up because personality sciences share some of the same concerns: How shall we classify personalities? Personality typology is not as easy as biological typology, but the means and methods of systematizing the subjects have things in common. One can trace the relationships of personality typologies down through history, not only via the historical record, but by their similarities and differences. In this chapter, we are going to trace some of their evolution, not unlike tracing the evolution of a biological organism.

The downside of lumping people into groups — *typing* them — is, of course, *stereo*typing them, ascribing traits to individuals that might be true of the group as a whole or on average for the group, but which the individual does not have. This results in such ideologies as classism, racism, ageism, and sexism. Even though there are advantages to classifying people according to a system, the disadvantage is that every individual is unique, and every individual is ambiguous in that they change through the course of a lifetime. Heck, they change through the course of a day depending on whether they are having a "good day" or a "bad day", and such variables as 'which side of the bed they got up on'! Nevertheless, overall, psychologists regard basic personality types and traits as somewhat stable over a lifetime; when there is a dramatic change in someone's personality, their friends ask, "What is that all about!?!?" Yes, personality is somewhat ambiguous and

changeable, but on the other hand, it is obvious that personalities are distinctive from person to person, and psychologists aim to figure out the stable and distinctive traits and types as best they can.

In biological taxonomy and in personality typology, the question is and always has been, what categories to create, and then where to draw the lines between the categories. The problems of classification that apply to biology also apply to personalities. There are ancient systems, and there is an evolution of systems up to the modern day. The biological classification process has improved over time. I assume that the personality classification process has also improved over time. My claim is that the Overleaf System is the current state of the art/science.

Principles of Systematization

In sections to follow we review the history of some personality typologies that are relevant to the Overleaf System in one way or another.

Before we do that, in this section, I introduce the numerical principles that govern the systematic component of the personality typologies. As it so happens, the Tao's Template principles of Oneness and Twoness and Threeness and multiples thereof, and the principles of Yin (no) and Yang (yes) and Chi (maybe), are the principles that often show up in these personality typologies. Even a cursory review of various attempts to systematize personality typologies over the millennia reveals that these logical and numerical principles consistently show up in the systems. The next few subsections are a brief review of those numeric principles. Because they are principles, I tack the suffix "-ness" onto them, as in Oneness, Twoness, Threeness, Allness.

As we review various personality typologies in subsequent sections, I will point out the logical and numerical principles embodied in the personality typologies. Then, near the end of this chapter, I show how the Overleaf System embodies all of these principles. The entire point of this chapter is to introduce the reader to the structure and meaning of the Overleaf System. This foundation figures in to the explanations and descriptions of the personality traits of the Overleaf System noted in the remainder of this *History* book.

Oneness

This principle refers to a personality typology in which there is no Twoness, Threeness, Fourness, Sixness, Sevenness, or other (numerical) structure. There is simply a collection of traits that have no easily recognizable relationship to each other. Therefore, Oneness = not systematic: each trait is just what it is and is not related to the other traits in the collection.

Recall from a previous section that the name for this unstructured type of personality typology is "model". Most of the typologies reviewed below are not in this category. Most have some structure that is logical and numerical in nature, because it helps the whole project of categorizing and understanding personality types if there is at least some structure. Recall from a previous section that the name for the structured type of personality typology is "theory".

Twoness (and Fourness)

The principle of Twoness is predicated on oppositeness of some kind. In reference to a particular trait, if one has that trait, then it means that one does not have the opposite trait, and *vice versa*. Typically, a person is somewhere on the spectrum between the extremes of two opposite traits.

Most personality typologies that are reviewed below make use of Twoness in one way or another. It is an obvious, self-evident way to classify personalities; you do so in terms of what people *are* like as well as what people are *not* like. Thus, Twoness can show up as *polarity* of one kind or another, or as presence/absence as mentioned in the previous paragraph.

Fourness can be thought of as the permutations of positive and negative polarities — permutations" being the mathematical jargon term for the number of ways that a +positive item and a -negative item can be arranged, and there are four of them: ++,+-,-+, and --. However, Fourness more than doubles the quantity of Twonesses — it triples them. Visualize Fourness as a single window but with four panes of glass: upper left, upper right, lower left, and lower right; any of the four panes has three opposite panes. These types of oppositeness can be called "complementarity" or "opposition" or "negation" or any one of a number of other words in order to distinguish them.

Threeness (and Sixness and Nineness)

Threeness is unique from Oneness and Twoness in that it further complicates the categories by adding dimensions to the typology. One common Threeness found in numerous personality typologies is the distinction among behavioral, emotional, and mental realms of being. If we multiply Threeness (dimensions) by Twoness (polarity), we get Sixness — and this shows up in some personality typologies reviewed further on. If we multiply Threeness by Threeness, we get Nineness — and this shows up in some personality typologies.

Sevenness and Sequencing

As stated above, this chapter is not about developmental psychology. Some personality typologies, particularly of the developmental type, abide by the Sevenness numerical principle. In a sense, Sevenness can be regarded as a variation of Oneness. That is, many developmental systems complete a cycle of seven steps, such that going through all seven stages returns one to the beginning, but at the next higher 'octave', so to speak — as in a musical scale in the Western musical tradition. More explanation of Sevenness is provided in Chapter 1L below, "Gurdjieff's Law of Seven".

The Sevenness principle is so important that my book *The Tao of Cosmogony* is entirely dedicated to explaining it. Therefore — and because it is part of developmental psychology, not most personality typologies — it will not be dealt with extensively in this chapter. What I will say here is that Sevenness is the combination of Oneness, Twoness, and Threeness in the way that is shown in the first two tables in the chapter: Table 1Bb, "Tao's Template in Basic Form", and Table 1Bc, "The Natural Sequence". Of the personality typologies reviewed in subsequent sections and subsections in this chapter, only the Enneagram has Sevenness as a component of its systematics; it does claim to be a sequence, but it does not follow the Natural Sequence. More explanation of Sequencing is provided in Chapter 2C, "Sequences of Overleaves", in Part Two.

Twelveness

Threeness times Twoness equals Twelveness. The only personality typology that I know of that manifests Twelveness is Astrology, which is discussed in a section further on. Thus, it has elements of Threeness and Twoness (and Fourness) built in. The Overleaf System does not embody the Twelveness principle.

At least one of the above principles shows up in each of the personality typologies that we examine in this chapter.

Some Personality Typologies Reviewed

The following subsections are brief and shallow introductions to a few personality typologies. The subject of personality typology is huge; to explore all of the available personality typologies in all of their detail would be like diving into a bottomless pit, so I only hit the highlights of a few of them: their origins, their outline, and their structure. Each of them has a rich history; each of them has a plethora of websites where one can research them; each of them is useful for understanding oneself and others and one's relationship with those others. I have selected the most salient features of the personality typologies — the parts that are relevant to the structure and meaning of the Overleaf System — and, where possible, I have correlated features of each personality typology with features of the Overleaf System. My theme for this section is that the numerical principles, discussed in the previous section, show up in almost all of the personality typologies.

At times, the presentations that follow might seem tedious to you. Please bear with me; 'there is a method to my madness.' There is a purpose to the way that I am explaining the personality typologies, and the information that I include. The investment that you make in paying attention to the presentations will be rewarded by a deeper understanding of the Overleaf System when I explain the structure and meaning of the Overleaf System near the end of this chapter.

In the following subsections, I rely mostly on Wikipedia for references. From there, you can easily pursue further information if you are so inclined, using internet resources. Often I provide additional pointers to internet resources that I used, and which interested readers can also pursue and peruse.

It would be ever so helpful to you if you made a photocopy of the Overleaf Chart, Table 1Bo near the end of this chapter, and looked at it while reading the following. If not that, then at least place a physical bookmark at the location of the Overleaf Chart, so that you can refer to it instantly.

Astrology

Most readers will have at least some familiarity with Astrology, so I will not go into it in detail here. It might actually be the most well-known personality typology of all. Take a look at the overview provided by Wikipedia, >https://en.wikipedia.org/wiki/Astrology< if you need an introduction; there are supplementary articles referenced there. And there are internet resources and books and clubs galore if you want to go deep, beyond Wikipedia.

To be brief: a dozen or so "Planets" of the solar system have personality traits; a dozen constellations in the sky, called zodiacal "Signs", through which the Planets pass, have personality traits; a dozen divisions of the sky, called "Houses", have personality traits. The interplay of those three factors plus some numerically-based principles makes astrology a very rich personality typology. Almost surely this richness fascinates certain personality types.

Let me make the following brief points about some structural components of astrology.

- 1. The numerical principles of Oneness, Twoness, and Threeness show up in various ways on an astrological chart.
- 2. For instance, planets have so-called "Aspects" to each other in terms of fractions of the Zodiacal circle, and these Aspects have a significance in terms of getting along well or not getting along well with oneself and with other people. The interactions of the Aspects are said to function the way they do within the individual, and between individuals. (Similar structural components of the Overleaf System provide exactly this same function, as explained in Part Four of my *Tao of Personality book.*) Here are the aspects and their functions:
 - Conjunction is when two planets are apparently very near to each other in the sky that's the
 Oneness principle as found in astrology, and it is a harmonious Aspect to have within oneself and to have with other people, but it is static rather than dynamic.
 - Opposition is when two planets are very nearly opposite in the sky from each other that's the
 Twoness principle as found in astrology, and that is a challenging and dynamic aspect because of
 the oppositeness.
 - Trine and Sextile are when two planets are one third, or half of one third, respectively, of the way around the sky from each other that's the Threeness principle as found in astrology, and they are said to be favorable Aspects to have within oneself and to have with other people. There is a reason for this compatibility, mentioned further on.
 - Square is when two planets are a quarter of the way around the sky from each other that's the Fourness principle as found in astrology, and it is said to be a difficult Aspect to have within oneself and to have with other people. One could think of this as half of an *Opposition*, a manifestation of Twoness, hence the counteracting energies.
- 3. Another way that Fourness manifests in astrology is that there are four so-called "Elements" in the twelve Signs and twelve Houses: Air, Earth, Fire, and Water. Take a look at the geometric graphic at right. These Elements provide attributes or properties to the Signs and Houses. In antiquity, these four Elements were theorized to be "irreducible" that is what makes them "Elements". (Further on we see that some personality typologies are built on just these four Elements.) Because there are twelve Signs, the four Elements are in the Trine Aspect with each other around the zodiacal circle (3 x 4 = 12). Trine is a favorable Aspect because the same Element is the component that rules the situation. Further on we see that

- some personality typologies are built on just these four Elements. If you want to know more about this, Wikipedia has an article: >https://en.wikipedia.org/wiki/Astrology_and_the_classical_elements<. Take a look at that web page and you will see the systematization of properties of the Elements depicted in some tables.
- 4. Another way that Threeness manifests in astrology is that there are three so-called "Modalities" of signs: Cardinal, Fixed, and Mutable: People who are born with sun in one of the four Cardinal signs

(Aries, Cancer, Libra, Capricorn) are natural born leaders who love to plan ahead. People who are born with the sun in one of the four Fixed signs (Taurus, Leo, Scorpio, Aquarius) are patient and productive workhorses. People who are born with the sun in one of the four Mutable signs (Gemini, Virgo, Sagittarius, Pisces) have the ability to adapt to situations, metaphorically like a chameleon. There are Wikipedia articles on each of these, such as this one about the Cardinal Modality: >https://en.wikipedia.org/wiki/Cardinal_sign_(astrology)<. If I were to correlate these three Modalities to the Overleaf System, then the best fit seems to be that Cardinal = Cardinal, Fixed = Neutral, and Mutable = Ordinal. This seems a rather forced fit to me. Further on in this subsection there is a graphic of the zodiacal circle that shows the Threeness of Modalities. From it you certainly get the idea that systematization in terms of the numerical principles of Tao's Template (Oneness, Twoness, Threeness) is an important component of Astrology. I believe this systematization is one of the factors that give astrology so much appeal in the minds of a certain kind of person. The Overleaf System has the same appeal for the kind of personality that likes systematization.

5. Sevenness does not appear in Astrology so far as I know. However Twelveness appears in the twelve Signs and twelve Houses.

With that discussion of the structure of astrology behind us, let's now take a look at the personality traits of some components of astrology. Refer to the following table for the personality traits commonly associated with the Planets in astrology:

| | Table 1Be — PLANETS in ASTROLOGY and MICHAELIAN TEACHINGS ROLE | S | | | |
|---------|--|--|--------------|--|--|
| PLANET | PLANET PERSONALITY TRAITS | | | | |
| SUN | Conscious ego, the self and its expression, personal power, pride and authority, leadership qualities, principles of creativity, spontaneity, health, vitality, the "life force" | PRIEST | INSPIR | | |
| MOON | emotional make-up, unconscious, habits, rhythms, memories, moods and their ability to react and adapt to those around them, maternal instincts, nurture, home, security, childhood | SERVER | INSPIRATION | | |
| MERCURY | communication, mentality, thinking patterns, rationality, reasoning, adaptability, variability, information gathering skills, physical dexterity, inconstant, vivacious, curious | ninking patterns, rationality, reasoning, adaptability, g skills, physical dexterity, inconstant, vivacious, curious | | | |
| VENUS | nony, resilience, beauty, refinement, solidarity, affections, equality, sympathize and unite rith others, pleasure, comfort, ease, romantic relations, partnerships, sex, arts, fashion, social life | | EXPRESSION | | |
| MARS | Confidence, self-assertion, aggression, sexuality, energy, strength, ambition, impulsiveness, sports, competitions, physical activities, impulse, action, masculine, discipline, willpower, stamina | | | | |
| JUPITER | growth, expansion, prosperity, good fortune, long distance and foreign travel, big business, wealth, higher education, religion, law, urge for freedom and exploration | KING | | | |
| SATURN | focus, precision, nobility, ethics, civility, lofty goals, career, great achievements, dedication, authority figures, ordered hierarchy, stability, virtues, productiveness, valuable hard lessons learned, destiny, traditions, structures, protective roles, balance, karma, limitations, restrictions, boundaries, anxiety, tests, practicality, reality, time, sense of duty, commitment, responsibility, endurance, long-term planning or foresight | SCHOLAR | ASSIMILATI'N | | |
| URANUS | ingenuity, new or unconventional ideas, individuality, discoveries, electricity, inventions, democracy, revolutions, genius, societies, clubs, ideals, sudden and unexpected changes, freedom and originality, radical ideas and people, revolutionary events that upset established structures | NA | | | |
| NEPTUNE | idealism, dreams, dissolution, artistry, empathy, illusion, vagueness | NA | | | |

PLUTO

destroys in order to renew, brings buried but intense needs and drives to the surface, and expressing them, even at the expense of the existing order; transformation, power and personal mastery; major business and enormous wealth, mining, surgery and detective work, and any enterprise that involves digging under the surface to bring the truth to light.

NA

My comments on this table are as follows:

- This table about the personalities of the astrological Planets is derived from information in the Wikipedia article: >https://en.wikipedia.org/wiki/Planets_in_astrology<.
- PLANETS: the first column shows the names of the Planets. Most of these are the names of Roman deities that were attached to the Planets. The last three Planets were not discovered until modern times, but astrologers added them to their methodology. The Planets are listed in the same order as in the Wikipedia article. This is a standard sequence in much astrological writing.
- PERSONALITY TRAITS: the nouns and adjectives in the second column were extracted verbatim from the descriptions of each Planet in the above-referenced Wikipedia article. The personality traits of the Planets relate to those ascribed to the Roman deities in their mythology.
- ROLE: My correlations of the Overleaf System Aspect called "Role" with the astrological Planets are shown in the third column. (The Overleaf System Aspect of Role was chosen because it is archetypal in the same way that the Planets of Astrology and Roman deities have been ascribed archetypal characteristics.) As far as plausibility of correlations with various personality typologies (reviewed below) goes, this is actually one of the better ones. Some of the correlations are more solid than others, so I started with the most obvious and worked toward the least obvious. Read the descriptions in the second column and see if you can come up with a better fit for the Roles in the third column. More is said about this correlation of Roles with Planets in Chapter 4D in Part Four, "Body Types".
- AXES: Subsequent chapters, in Part Two, explained the nature of the Axes of Inspiration, Expression,
 Action, and Assimilation. All that I will say here is that Axes are one way that the numerical principle
 of Threeness shows up in the Overleaf System. Notice that the Axes of Inspiration, Expression, Action,
 and Assimilation are not split up when correlated with the Planets that were shown in the standard
 order.
- CARDINALITY-ORDINALITY: Subsequent chapters, in Part Two, explain the nature of Cardinality and Ordinality, terms that are found in mathematics and the Overleaf System. All that I will say here is that these are one way that the numerical principle of Twoness shows up in the OlS, with Cardinality being "yang" and Ordinality being "yin" to use terms that I believe most readers will be familiar with. Notice that in each pairing of Planets as correlated with Roles, one can be regarded as Cardinal and the other regarded as Ordinal. That is: (major Planets, the "lights") Sun-Priest is Cardinal and Moon-Server is Ordinal (in terms of brightness); (inner Planets) Venus-Sage is Cardinal and Mercury-Artisan is Ordinal (in terms of brightness); (outer Planets) Jupiter-King is Cardinal and Mars-Warrior is Ordinal (in terms of brightness); Saturn-Scholar is Neutral Assimilation, and it encompasses all of the other visible Planets within its orbit, it being the farthest of them from the sun with the slowest speed in the sky.
- NEWCOMER PLANETS: Uranus, Neptune, and Pluto have no corresponding Role, but in the
 Michaelian teachings they do have Body Types named after them, with appropriate descriptions and
 personality traits. "NA" in the last column means that that Planet is "Not Applicable" to any Role in
 the Michaelian teachings.

Moving on to some other features of astrology, the following circular chart shows the twelve signs of the Zodiac and the main traits that are associated with them. It also shows the Elements and the Modalities that were discussed earlier in this subsection. As usual with various personality typologies, many traits are common to various personality typologies. Michaelian students who are also astrologers enjoy comparing the two systems, and they find many things in common.

The graphic shown below was found on the internet and is borrowed from Black Hat Astrology. There you see the Threeness of Cardinal—Fixed—Mutable (Modalities) and the Fourness of Earth—Water—Air—Fire (Elements). In the outermost ring of the chart you see some personality traits ascribed to each Sign. Many of those same traits appear in other personality typologies reviewed further on, including the Overleaf System.

Astrologers who understand the Process/Aspect System might notice that the four Elements of Earth, Water, Air, and Fire can be loosely correlated with the Axial Attributes: Action, Inspiration, Expression, and Assimilation respectively. Perhaps the fit would seem to be a little better if the Elements were said to correlate with the non-Cardinal Centers: Moving, Emotional, Intellectual, and Instinctive. I am not convinced about the clarity of either of those proposals, but I present them anyway for your consideration.

The possibility of self-contradictory traits is present in Astrology and the Overleaf System, but not in the other personality typologies reviewed in this chapter. I believe that it is important to realize that we can be 'our own worst enemy'.

There are other astrologies in other cultures that have other ways of understanding and systematizing their personality typology, but they will not be examined in this book. The above treatment of Western astrology in its present form is adequate to get the point across that systematizing around certain principles in various personality typologies is the usual thing. More is said about astrology in Chapter 4D in Part Four, "Body Types".

I started out this exploration of personality typologies with astrology because it is familiar to most readers. Astrology had its origins in antiquity, hundreds if not thousands of years BCE. The next of the personality typologies to be reviewed also had its origin in antiquity.

The Four Temperaments of Antiquity

Astrology is probably older than the Four Temperaments model, but the latter has been around for nearly 2500 years. Take a look at this Wikipedia article: >https://en.wikipedia.org/wiki/Four_temperaments<.

The four temperament theory is a proto-psychological theory which suggests that there are four fundamental personality types: sanguine, choleric, melancholic, and phlegmatic. Most formulations include the possibility of mixtures among the types where an individual's personality types overlap and they share two or more temperaments. Greek physician Hippocrates (c. 460 — c. 370 BC) described the four temperaments as part of the ancient medical concept of 'humorism', that four bodily fluids affect human personality traits and behaviors. Modern medical science does not define a fixed relationship between internal secretions and personality, although some psychological personality type systems use categories similar to the Greek temperaments. [retrieved 17 March 2019]

Hippocrates invented the model as described above, but the concept had no structure, by which I mean that the four did not have any relationship to any of the others in terms of the Twoness or Fourness principles, aka some form or forms of duality or polarity. A century and a half after Hippocrates, Galen defined the four into two pairs which he referred to as hot/cold and dry/wet, therefore giving the four types the structure of Twoness. The graphic above reflects even more refinement and development; it depicts the work of Hans Eysenck, who lived in the 20th Century, after psychology became a real thing. Read more about this here: >http://www.mysomatotype.com/body-type/?page_id=1525<.

Notice some things about the Eysenck model: There is Introversion versus Extroversion, and Stable versus Unstable. Those same factors show up in numerous other models and systems, as we see in the following subsections. Eysenck later added a third polarized dimension, psychoticism versus neuroticism. This also shows up in some personality typology theories.

It makes some sense to correlate Eysenck's Introversion–Extroversion dichotomy with the Ordinal–Cardinal dichotomy in the Overleaf System. It also makes some sense to correlate Eysenck's Stable–Unstable dichotomy with the Positive Poles–Negative Poles dichotomy in the Overleaf System. One can also look at the names of the traits around the perimeter of the circle in the image above and see the names and synonyms of various traits of the Overleaf System.

Eysenck was just one in a long line of developers of the Four Temperaments typology.

Four Temperaments — Historical Development

The four temperaments that appeared in antiquity saw a long history of development in subsequent millennia, lasting all the way into the modern era. Someone has done the work of tracing this history.

The following table was created by David Keirsey and published in his book *Please Understand Me II.* It was reproduced in >https://en.wikipedia.org/wiki/Keirsey_Temperament_Sorter<, and I redrew it for inclusion here.

| Table 1Bf — KEIRSEY's TABLE of FOUR TEMPERAMENTS through HISTORY | | | | | | |
|--|--|---------------------------------|--|-----------------------------------|-----------------------------|--|
| DATE | AUTHOR | ARTISAN TEMPERAMENT | GUARDIAN TEMPERAMENT | IDEALIST TEMPERAMENT | RATIONAL TEMPERAMENT | |
| c. 590 BC | Ezekiel's four living creatures | lion (bold) | ox (sturdy) | man (spiritual) | eagle (far-seeing | |
| c. 400 BC | Hippocrates' four humors | cheerful (blood) | somber (black bile) | Enthusiastic (yellow bile) | calm (phlegm) | |
| c. 340 BC | Plato's four characters | Artistic (iconic) | Sensible (pistic) | Intuitive (noetic) | Reasoning (dianoetic) | |
| c. 325 BC | Aristotle's four sources of happiness | Sensual (hedone) | Material (propraietari) | Ethical (ethikos) | Logical (dialogike) | |
| c. 185 AD | Irenaeus' four temperaments | spontaneous | historical | spiritual | scholarly | |
| c. 190 | Galen's four temperaments | SANGUINE | MELANCHOLIC | CHOLERIC | PHLEGMATIC | |
| c. 1550 | Paracelsus' four totem spirits | changeable salamanders | industrious gnomes | inspired nymphs | curious sylphs | |
| c. 1905 | Adickes' four worldviews | innovative | traditional | doctrinaire | skeptical | |
| c. 1912 | Dreikurs'/Adler's four mistaken goals | retaliation | service | recognition | power | |
| c. 1914 | Spranger's four value attitudes | artistic | economic | religious | theoretic | |
| c. 1920 | Kretschmer's four character styles | Manic (hypo- manic) | Depressive | Oversensitive (hyper-esthetic) | Insensitive (anesthetic) | |
| c. 1947 | Fromm's four orientations | exploitative | hoarding | receptive | marketing | |
| c. 1958 | Myers' Jungian types | SP (sensing perceiving) | SJ (sensing judging) | NF (intuitive feeling) | NT (intuitive thinking) | |
| c. 1978 | Keirsey/Bates four temperaments (old) | Dionysian (artful) | Epimethean (dutiful) | Apollonian (soulful) | Promethian (technological) | |
| c. 1988 | Keirsey's four temperaments | Artisan | Guardian | Idealist | Rational | |
| c. 2004 | Gordon-Bull Nexus Model | Gamma | Beta | Delta | Alpha | |
| | | | dia table; it shows my s features of the Overleaf | | | |
| 1973 | The Michaels | Artisan–Sage Expression Axis | Warrior–King Action Axis | Server–Priest Inspiration Axis | Scholar Assimilation Axi | |

My comments on this table are as follows. Basically, it looks to me as if the long history of the original Four Temperaments personality typology has converged on components of the Overleaf System in modern times.

• DATE: In the first column, note that the idea of four basic personality categories spans 2600 years of human history.

- AUTHOR: Note that if you are really interested in pursuing any of this history, you can easily start with an internet search on the names listed in the second column. Or just visit the website referenced above the table, and click on the names, which are hyperlinked.
- ARTISAN: The descriptors in the column under this name, often as not, do have some resemblance to the Artisan Role as found in the Overleaf System. If we add the complementary Role, Sage, then it makes even more sense, so let's call this temperament the Expression Axis temperament, the mental domain.
- GUARDIAN: The descriptors in the column under this name, often as not, do have some resemblance to the Warrior Role as found in the Overleaf System. If we add the complementary Role, King, then it makes even more sense, so let's call this temperament the Action Axis temperament, the behavioral domain.
- IDEALIST: The descriptors in the column under this name, often as not, do have some resemblance to the Server Role as found in the Overleaf System. If we add the complementary Role, Priest, then it makes even more sense, so let's call this temperament the Inspiration Axis temperament, the emotional domain.
- RATIONAL: The descriptors in the column under this name, often as not, do have some resemblance
 to the Scholar Role as found in the Overleaf System. Therefore, this column correlates with the
 Assimilation Axis. Scholars are some of the most sensible, reasonable people you will ever meet,
 believe me.

There is mention of the Jungian and Myers personality typologies listed in this table; they are both discussed in subsequent subsections.

It looks as if originally there was only the Oneness principle — unrelated categories — in the Four Temperaments personality typology, but it has differentiated over the millennia into a Fourness personality typology. Also, if we look closely, this personality typology is transformed into the Sevenness of the Overleaf System via the Threeness–Sixness principle plus Allness.

Said another way: looking at the original Four Temperaments personality typology from ancient times, there is not a clean and clear correlation with the Overleaf System, but, it looks to me as if over the last couple of millennia, the Four Temperaments have clarified and converged on what we in the Michaelian teachings refer to as the Scholar Role as one of the Temperaments, with the Warrior–King (Action), and the Server–Priest (Inspiration), and the Artisan–Sage (Expression) as the other three. It is not a beautiful fit, but close enough for me to say that they were more or less seeing what we have been told by the Michaels. It is not a perfect fit, but close enough that I felt excitement when I noticed it.

David Keirsey's personality typology is listed a couple of times in this table; more is said about him in a following subsection.

Carl Jung's Psychological Types

Wikipedia has an introduction to Carl Jung's system of psychological types. These are not exactly the same as personality traits, but close enough for our purposes. For an introduction, refer to this internet resource: >https://en.wikipedia.org/wiki/Psychological_Types<. The underlined words in the quotation below are my emphasis.

Psychological Types is Volume 6 in the Princeton / Bollingen edition of The Collected Works of C. G. Jung. It was also published in the U.K. by Routledge. The original German language edition, Psychologische Typen, was first published by Rascher Verlag, Zurich in 1921. Extensive detailed abstracts of each chapter are available online. In the book Jung categorized people into primary types of psychological function. He proposed four main functions of consciousness:

<u>Two perceiving</u> functions: Sensation and Intuition <u>Two judging</u> functions: Thinking and Feeling

The functions are modified by two main attitude types: extroversion and introversion. Jung theorized that the dominant function characterizes consciousness, while its opposite is repressed and characterizes unconscious

The eight psychological types are as follows:

Extraverted sensation

behavior.

Introverted sensation Extraverted intuition Introverted intuition Extraverted thinking Introverted thinking Extraverted feeling Introverted feeling

In *Psychological Types*, Jung describes in detail the effects of tensions between the complexes associated with the dominant and inferior differentiating functions in highly and even extremely one-sided types. [retrieved 07 July 2019]

First of all, notice the multiple manifestations of Twoness here, and notice the presence of three contraries: one "attitudinal" and two "functional". These eight types are tabulated in the next subsection.

Second of all, I correspond the two perceiving functions of Sensation and Intuition to the Negative and Positive Poles of the Instinctive Center of the Overleaf System respectively. I correspond the two judging functions of Thinking and Feeling to the Intellectual and Emotional Centers of the Overleaf System respectively. The Moving Center of the Overleaf System is not a part of Jung's personality typology; otherwise the Threeness of the Ordinal Centers in the Overleaf System would be represented. I correspond the two attitude types of Extroversion and Introversion to Cardinality and Ordinality in the Overleaf System, but this is not as good a fit of the two systems as the others that I postulated in this paragraph.

These types are tabulated and explained in some detail in the next subsection. Note that Jung's personality typology does not get much respect among more recent clinical psychologists. Even so, Jung's psychological types have gained a wide acceptance in the general population via the MBTI; see next subsection.

Myers-Briggs Type Indicator (MBTI)

There is an introduction to this personality typology in a Wikipedia article, as usual. You may peruse it at this URL: >https://en.wikipedia.org/wiki/Myers%E2%80%93Briggs_Type_Indicator<.

The Myers–Briggs Type Indicator (MBTI) is an introspective self-report questionnaire with the purpose of indicating differing psychological preferences in how people perceive the world around them and make decisions. Though the test superficially resembles some psychological theories it is commonly classified as pseudoscience, especially as pertains to its supposed predictive abilities.

The MBTI was constructed by Katharine Cook Briggs and her daughter Isabel Briggs Myers. It is based on the conceptual theory proposed by Swiss psychiatrist Carl Jung, who had speculated that humans experience the world using four principal psychological functions — sensation, intuition, feeling, and thinking — and that one of these four functions is dominant for a person most of the time.

Although popular in the business sector, the MBTI exhibits significant scientific (psychometric) deficiencies, notably including poor validity (i.e. not measuring what it purports to measure, not having predictive power or not having items that can be generalized), poor reliability (giving different results for the same person on different occasions), measuring categories that are not independent (some dichotomous traits have been noted to correlate with each other), and not being comprehensive (due to missing neuroticism). The four scales used in the MBTI have some correlation with four of the Big Five personality traits, which are a more commonly accepted framework. [retrieved 07 July 2019]

The "Big Five" personality typology mentioned in this quotation is discussed in a subsection further on.

After that introduction to the MBTI in the Wikipedia article, there is a lengthy description of it, including more dismissal of it as unreliable and unscientific. Be that as it may, it has achieved a considerable popularity and utility in the general populace. Internet resources regarding the MBTI on the internet are inexhaustible. Included in the internet resources are numerous graphic representations of this personality typology. May I recommend that you take the time to read the Wikipedia article; it is informative for anyone who wants to understand the subject, and understand the issues surrounding personality typology as a scientific pursuit in the professional psychology domain.

Take a look at this graphic found in the referenced Wikipedia article (redrawn by me), notice the features, and take the self-reporting "test" if you like. Below it I have some comments on it.

Table 1Bg — Myers-Briggs TYPE INDICATOR (MBTI) "What is Your Personality Type?"

Use the descriptions in the top eight boxes to determine the four letters of your Myers–Briggs type.

For each pair of letters, choose the side that seems most natural to you, even if you don't agree with every description.

| For each pair of letters, choose the side that seems most natural to you, even if you don't agree with every description. | | | | | | |
|---|--|--|---|--|--|--|
| 1. Are you outwardly or | inwardly focused? If you: | 2. How do you prefer to take in information? If you: | | | | |
| Could be described as talkative, outgoing | Could be described as reserved, private | Focus on the reality of how things are | Imagine the possibilities of how things could be | | | |
| Like to be in a fast-paced environment | Prefer a slower pace with time for contemplation | Pay attention to concrete facts and details | Notice the big picture, see how everything connects | | | |
| Tend to work out ideas with others, think out loud | Tend to think things through inside your head | Prefer ideas that have practical applications | Enjoy ideas and concepts for their own sake | | | |
| Enjoy being the center of attention | Would rather observe than to be the center of attention | Like to describe things in a specific, literal way | Like to describe things in a figurative, poetic way | | | |
| Then you prefer E Extroversion | Then you prefer I Introversion | Then you prefer S Sensing | Then you prefer N Intuition | | | |
| 3. How do you prefer to | make decisions? If you: | 4. How do you prefer to l | ive your outer life? If you: | | | |
| Make decisions in an impersonal way, using logic reasoning Value justice, fairness Enjoy finding the flaws in an argument Could be described as reasonable, level-headed Then you prefer T Thinking | Base your decisions on personal values and how your actions affect others Value harmony, forgiveness Like to please others and point out the best in people Could be described as warm, empathetic Then you prefer F Feeling | Prefer to have matters settled Think rules and deadlines should be respected Prefer to have detailed, step-by- step instructions Make plans, want to know what you're getting into Then you prefer J Judging | Prefer to leave your options open See rules and deadlines as flexible like to improvise and make things up as you go Are spontaneous, enjoy surprises and new situations Then you prefer P Perceiving | | | |
| ISTJ Responsible, sincere, analytical, reserved, realistic, systematic, hardworking and trustworthy with sound, practical judgment | ISFJ Warm, considerate, gently, responsible, pragmatic, thorough. Devoted caretakers who enjoy being helpful to others. | INFJ Idealistic, organized, insightful, dependable, compassionate gently. See harmony and cooperation, enjoy intellectual stimulation. | INTJ Innovative, independent, strategic, logical, reserved, insightful. Driven by their own original ideas to achieve improvements. | | | |
| ISTP Action-oriented, logical, analytical, spontaneous, reserved, independent. Enjoy adventure, skilled at understanding how mechanical things work. | ISFP Gentle, sensitive, nurturing, helpful, flexible, realistic. Seek to create a personal environment that is both beautiful and practical. | INFP Sensitive, creative, idealistic, perceptive, caring, loyal. Value inner harmony and personal growth, focus on dreams and possibilities. | INTP Intellectual, logical, precise, reserved, flexible, imaginative. Original thinkers who enjoy speculation and creative problem solving. | | | |
| ESTP Outgoing, realistic, action- oriented, curious, versatile, spontaneous. Pragmatic problem- solvers and skillful negotiators. | ESFP Playful, enthusiastic, friendly, spontaneous, tactful, flexible. Have strong common sense, enjoy helping people in tangible ways. | ENFP Value inspiration, enjoy starting new projects, see potential in others, enthusiastic, creative, spontaneous, optimistic, supportive, playful. | ENTP Inventive, enthusiastic, strategic, enterprising, inquisitive, versatile. Enjoy new ideas and challenges, value inspiration. | | | |
| ESTJ Efficient, outgoing, analytical, systematic, dependable, realistic. Like to run the show and get things done in an orderly fashion. | ESFJ Friendly, outgoing, reliable, conscientious, organized, practical. Seek to be helpful and please others, enjoy being active and productive. | ENFJ Caring, enthusiastic, idealistic, organized, diplomatic, responsible. Skilled communicators who value connect'n with people. | ENTJ Strategic, logical, efficient, outgoing, ambitious, independent. Effective organizers of people and long- range planners. | | | |

My comments on this table are as follows:

The Twoness principle is all over this personality typology: Introversion is the opposite of Extroversion;
Intuition is the opposite of Sensing; Feeling is the opposite of Thinking; Perceiving is the opposite of
Judging. These four dichotomies, invented and/or discerned by Carl Jung, form the basis of this
personality typology.

- The Extroversion–Introversion dichotomy is referred to as an *attitude*. This is different from the other three dichotomies.
- The other three dichotomies (Sensing–Intuition, Thinking–Feeling, Judging–Perceiving) are referred to as *functions*, so one could say that the Threeness principle exists in the MBTI. If I could, I would correspond the three *functions* to the Action, Inspiration, and Expression Axes of the Overleaf System, or the Moving, Emotional, and Intellectual Centers respectively, but I have not been able to make that work in my thought functions.
- However, there is a way to correlate the MBTI somewhat with the Overleaf System. Because the MBTI is a derivative of Jung's personality typology, what I said about Jung in a previous subsection can also be said about the MBTI. For instance:
 - Thinking and Feeling correspond somewhat to the Intellectual and Emotional Centers respectively
 in the Overleaf System. In the Overleaf System, they are on different Axes (perpendicular to each
 other, in different 'dimensions'), so they are contrary in a sense, but not in the same sense as in
 the MBTI, where they are said to be visualized as being at opposite ends of the same axis.
 - Sensing and Intuition correspond somewhat to the Negative and Positive Poles respectively of the Instinctive Center in the Overleaf System. Or, more broadly, it seems to me that Sensing types hang out more in the Ordinal Centers of mundane-concrete experience, whereas Intuitive types hang out more in the Cardinal Centers of otherworldly-abstract experience.
 - Extroversion and Introversion have a vague correspondence to the three Cardinal lineups of Overleaves and the three Ordinal lineups of Overleaves respectively. This correlation is very tenuous, so I do not submit it to you with any conviction.
 - Also, I do not see how to confidently relate the so-called "Attitudes" of Judging and Perceiving to anything on the Overleaf System. I judge/perceive a vague resemblance of Judging to decision-making from the Intellect Center and Perceiving to decision-making from the Emotion Center. Another suggestion is that Judging is an active attitude about the world and Perceiving is a passive attitude about the world, which correlates somewhat with Cardinality and Ordinality respectively in the Overleaf System.

My view is the same as its critics, namely that the MBTI is missing many important factors; it is helpful for what it is, but it is not rich enough in its parameters to provide a description of a personality that is anywhere near as complete and accurate as one might wish. It could be more useful, if only there were more to it. I believe that, to a large extent, the Overleaf System is far better as a personality typology because it has so many more dimensions.

The Wikipedia article, as quoted above, mentions the 'Big Five' personality typology. What is that all about? It is the subject of another subsection, further on. But before we get to that, we take a look at a personality typology developed, in part, as an offshoot of the MBTI.

Keirsey Temperament Sorter (KTS)

This section discusses a personality typology that is somewhat derivative of the MBTI in that it has the same components, but with some unique wrinkles, additions, and rearrangements. It being somewhat of an extension of the previous subsection, gets it placed here.

The introduction below is from Wikipedia >https://en.wikipedia.org/wiki/Keirsey_Temperament_Sorter<:

The Keirsey Temperament Sorter (KTS) is a self-assessed personality questionnaire designed to help people better understand themselves and others. It was first introduced in the book *Please Understand Me.* It is one of the most widely used personality assessments in the world, and its user base consists of major employers including Bank of America, Allstate, the U.S. Air Force, IBM, 7-Eleven, Safeco, AT&T, and Coca-Cola. The KTS is closely associated with the Myers–Briggs Type Indicator (MBTI); however, there are significant practical and theoretical differences between the two personality questionnaires and their associated different descriptions.

David Keirsey expanded on the ancient study of temperament by Hippocrates and Plato. In his works, Keirsey used the names suggested by Plato: Artisan (iconic), Guardian (pistic), Idealist (noetic), and Rational (dianoetic). Keirsey divided the four temperaments into two categories (roles), each with two types (role variants). The resulting 16 types correlate with the 16 personality types described by Briggs and Myers. [retrieved 07 July 2019]

The following table summarizes Keirsey's personality typology correlation with the Myers-Briggs Typology Indicator (MBTI), discussed briefly in the previous section. In the first three columns of the table, the names of

the MBTI categories are written as whole words, but in the fourth column, the letters in parentheses are the four-letter acronyms of the names of the sixteen Types of the MBTI system. You will, of course, recognize the last two columns as the Roles and the Axes of the Overleaf System, which I believe correlate fairly well with the KTS as shown.

| Table 1Bh — KEIRSEY TEMPERAMENTS and INTELLIGENCE TYPES with Suggested Overleaf System Correlates | | | | | | | |
|---|--|---|--|---|-----------------|-------------|--|
| TEMPERAMENT ROLE | | ROLE | ROLE VARIANT | | TEM S | | |
| Concrete or Abstract? | or or or | | Expressive [Extravert] or Attentive? [Introvert] | Role with Poles (my suggested best fit) | AXIS | | |
| | Guardian | Conservator | Provider (ESFJ): Supplying | +Mastery | | | |
| | (Sensation Judging) | (Sensing Feeling Judging) Supporting | Protector (ISFJ): Securing | KING –Tyranny | ACTION | | |
| | Logistical | Administrator | Supervisor (ESTJ): Enforcing | +Persuasion | ON | | |
| Observant | | Inspector (ISTJ): Certifying | WARRIOR -Coercion | | | | |
| (Sensation) | | | Performer (ESFP): Demonstrating | +Expression | | | |
| [Ordinal] | | | Composer (ISFP) Synthesizing | SAGE –Oration | EXPR | | |
| | | Operator | Promoter (ESTP): Persuading | +Creation | EXPRESSION | | |
| | | Crafter (ISTP): Instrumenting | ARTISAN –Artifice | N | | | |
| | Idealist | Advocate | Champion (ENFP): Motivating | +Compassion | | | |
| | (iNtuitive Feeling) | (iNtuitive Feeling Perceiving) | | Healer (INFP): Conciliating | PRIEST –Zeal | INSPIRATION | |
| | Diplomatic Mentor | | Teacher (ENFJ): Educating | +Service | АТІО | | |
| Introspective | [Cardinal- (iNtuitive Feeling Judging) | | Counselor (INFJ): Guiding | SERVER –Bondage | Z | | |
| (iNtuitive) | | Engineer | Inventor (ENTP): Devising | | | | |
| [Cardinal] | Rational (iNtuitive Thinking (iNtuitive Perceiving) Constructing | Architect (INTP): Designing | +Knowledge SCHOLAR | ASSIMILATION | | | |
| | Strategic [Cardinal– | Coordinator | Fieldmarshal (ENTJ): Mobilizing | –Theory | ATIO | | |
| | Cardinal] | (iNtuitive Thinking Judging) Arranging | Mastermind (INTJ): Entailing | | 4 | | |

My comments on this table are as follows:

• To be clear, note that the second letter of the word "iNtuitive" is used in both the MBTI and the KTS rather than the initial letter of the word "Intuitive" so as to avoid confusion with the initial letter of "Introvert", another of the eight words defining the personality typologies.

- This is a case where Twoness produced Fourness produced Eightness produced Sixteenness; the initial dichotomy multiplied or divided repeatedly. (This typology is missing the trichotomy of the dichotomy, $2 \rightarrow 3$.)
- Keirsey reformulated the MBTI conceptually, so he used different words from the MBTI terminology; because of the way he analyzed the MBTI with a series of divisions ($2 \rightarrow 4 \rightarrow 8 \rightarrow 16$), his meanings for the sixteen categories are a bit different. There is no Threeness in the KTS, so the KTS is dissimilar to the way that Tao's Template is derived ($1 \rightarrow 2 \rightarrow 3 \rightarrow \text{All}$).
- CONCRETE OR ABSTRACT?: The first column asks that question and gives two answers: Observant (Concrete) and Introspective (Abstract). KTS Observant = MBTI Sensation = a person who lives in the *outer* world; I correlate Concrete–Observant–Sensation somewhat with Ordinality in the Michaelian teachings. KTS Introspective = MBTI Intuitive = a person who lives in the *inner* world; I correlate Abstract–Introspective–Intuitive somewhat with Cardinality in the Overleaf System. So far, so good.
- COOPERATIVE OR PRAGMATIC TEMPERAMENT?: The second column asks that question and gives four answers: Guardians and Artisans deal with the Concrete-Observant-Sensate (Ordinal) world; Idealists and Rationals deal with the Abstract-Introspective-Intuitive (Cardinal) world. KTS words Cooperative and Pragmatic correspond to MBTI words Judging and Perceiving respectively. So far not so good; this is where the KTS correlation with the Overleaf System breaks down, because instead of Twoness producing Threeness as in the Overleaf System, Twoness just produces another Twoness. At this step in the development of KTS, I can roughly correlate it with the Overleaf System in terms of the four quadrants of the Overleaf System (see the Overleaf System Chart, Table 1Bo, near the end of this chapter); there is the Ordinal-Ordinal quadrant in the lower left corner of the Chart, the Ordinal-Cardinal quadrant in the lower right corner, the Cardinal-Ordinal quadrant in the upper left corner, and the Cardinal-Cardinal quadrant in the upper right corner.
- INFORMATIVE OR DIRECTIVE ROLE?: (It is surely just coincidental that Keirsey chose the word 'Role', a word used in the Overleaf System, for these eight personality types.) The third column asks that question and gives eight answers. KTS words Informative and Directive correspond to MBTI words Feeling and Thinking respectively. The closest I can come to correlating the Overleaf System with this stage of the KTS development is to make Supporting Conservator = King, Regulating Administrator = Warrior, Improvising Entertainer = Sage, Expediting Operator = Artisan, Mediating Advocate = Priest, Developing Mentor = Server, Constructing Engineer and Arranging Coordinator = Scholar. It is not a great fit, but neither is it a bad fit.
- EXPRESSIVE OR ATTENTIVE ROLE VARIANT?: The fourth column asks that question and gives sixteen answers. KTS words Expressive and Attentive correspond to MBTI words Extrovert and Introvert respectively. The only way I could even begin to correlate this column with the Overleaf System is to suppose that the Roles can split into those that are more Cardinal and those that are more Ordinal, depending on the predominance of Cardinal or Ordinal Traits in their Array, and given the Casting Underleaves (refer to Chapter 4N in Part Four, "Casting Concerns") and current Personality Overleaves. In this speculative correlation, the Neutral Scholar has even more opportunities, so it can split into a quadrate of types.
- OVERLEAF SYSTEM CORRELATES: The last two columns were not a part of the chart that I copied from a web page; they are my best guess as to the correlation of the KTS components with the Overleaf System components. The fit is not as good as I would like it to be, but there seems to be more than a vague resemblance. If we substitute Cardinal and Ordinal types of each Role for the Positive and Negative Poles of each Role shown, then it helps with the correlation.

These are the kinds of problems that one has when attempting to coordinate two semi-compatible systems: some things kinda work and some things sorta do not. The KTS has the principle of Twoness mastered, but it totally missed out on a more elegant formulation by not including the principle of Threeness.

I regard Keirsey as a man after my own heart. I appreciate his work in attempting to provide a reasonable synthesis of the personality typologies that preceded his work. And it seems to me that he came about as close to the Overleaf System without being the Overleaf System as is reasonable. If it were not for the superior Overleaf System, this would be my favorite personality typology of those reviewed in this chapter. I read his first book, *Please Understand Me*, decades ago.

Sarah Chambers, the original Michaelian channel, proposed a correlation between MBTI and Overleaf System, and then presented it at a Michaelian teachings seminar in Santa Fe, New Mexico, in June, 1998. I suggest that the Overleaf System is superior to the MBTI, and does not need to get a boost into the mainstream consciousness by attaching itself to, or interpreting it within, a more popular personality typology.

The following website has a thorough description of these sixteen KTS types, as well as a round graphic of the types that I show in Table 1Bg: >https://blog.adioma.com/16-personality-types/<. By the way, in case you were wondering, in this personality typology, I am more of an INTP, aka "Architect", than anything else. What are you?

Eduard Spranger — Value Types

Years after I originally finished this chapter on personality typology, I inadvertently and serendipitously stumbled upon this fellow while researching someone else. I will let Wikipedia introduce this person and his personality typology:

Eduard Spranger (27 June 1882 – 17 September 1963) was a German philosopher and psychologist. A student of Wilhelm Dilthey, Spranger was born in Berlin and died in Tübingen. He was considered a humanist who developed a philosophical pedagogy as an act of 'self defense' against the psychology–oriented experimental theory of the times.

Spranger was the author of the book *Lebensformen* (translated as *Types of Men*), which sold 28,000 copies by the end of 1920. Spranger theorizes that types of human life are structures in consciousness. His belief was that personality types have a basis in biology, but can not be fully explained by biology. He wrote, "On a lower level, perhaps, the <u>soul</u> is purely biologically determined. On a higher level, the historical, for instance, the soul participates in objective values which cannot be deduced from the simple value of self-preservation." He criticized psychologists who reduced the psyche and society to abstract elements of science. Another characteristic of Spranger's thought is his interest in <u>holism</u>, which involves the discovery that "everything is part of everything else", and that the "totality of mind is present in every act." He asserts that quantitative calculations of sensations, reflexes, and citations from memory are meaningless units, that when synthesized, do not add up to the meaningful whole that we all live.

By others, the notion that "the whole is more than the sum of its parts" is referred to as "gestalt"; refer to >https://en.wikipedia.org/wiki/Gestalt_psychology<. Certainly, no personality typology, not even the Overleaf System, captures the entirety of who a person is, but some typologies appear to approach the ideal better than other typologies.

Spranger evaluated personalities in terms of <u>six ideals or value orientations</u>; theoretical, economic, aesthetic, social, political, and religious "types" of personality traits. Spranger contributed to the pedagogy of personality theory, in his book *Types of Men*. His *value* attitudes were:

The <u>Theoretical</u>, whose dominant interest is the discovery of <u>truth</u> [Neutral Assimilation, personified by Scholar]

The Economic, who is interested in what is <u>useful</u> [Ordinal Action, personified by Warrior]

The <u>Aesthetic</u>, whose highest value is <u>form</u> and harmony [Expression, personified by Artisan and Sage]

The Social, whose highest value is love of people [Ordinal Inspiration, personified by Server]

The <u>Political</u>, whose interest is primarily in <u>power</u> [Cardinal Action, personified by King]

The <u>Religious</u>, whose highest value is <u>unity</u> [Cardinal Inspiration, personified by Priest]

Those six in more detail are:

- Theoretical: A passion to discover, systemize and analyze; a search for knowledge. [Scholar]
- <u>Utilitarian</u>: A passion to gain a return on all investments involving time, money and resources. [Warrior]
- <u>Aesthetic</u>: A passion to experience impressions of the world and achieve form and harmony in life; self-actualization. [Artisan and Sage]
- Social: A passion to invest myself, my time, and my resources into helping others achieve their potential. [Server]
- <u>Individualistic</u>: A passion to achieve position and to use that position to affect and influence others. [King]
- <u>Traditional</u>: A passion to seek out and pursue the highest meaning in life, in the divine or the ideal, and achieve a system for living. [Priest]

[>https://en.wikipedia.org/wiki/Eduard_Spranger< — retrieved 27 June 2022]

If one compares Spranger's *Types of Men* with Theosophy's personality typology, *The Seven Human Temperaments*, discussed in Chapter 1F, one will see considerable similarities, but because the quantities of archetypes are different (six versus seven), when I first encountered Spranger's system, I did not get a sense that Spranger copied from Theosophy, which was extant in Spranger's lifetime. Upon further research, my perception was confirmed by another exposition of Spranger's ideas, by Theo Winter, to be found at >https://blog.dtssydney.com/in-a-nutshell-6-attitudes<. This website notes that Spranger more or less made up his system based on his own personal observations and studies; obviously, the guy was very perceptive, considering how well his system correlates with Theosophy and with the Overleaf System.

That website also provided a more complete description of Spranger's personality typology, quoted as follows:

The Theoretic Attitude [Neutral Assimilation, exemplified by the Scholar Role] — a pure scientist or scholarly type with a passion for objective knowledge who holds truth in the highest regard. The person who "recognises nothing as beautiful or ugly, useful or useless, holy or impious but only as true or false." This type of individual likely sees himself or herself as an "intellectual". They are pained by ignorance and by the ignorant. They're easily absorbed by puzzles, riddles, mysteries, and strategy games such as chess. Nothing is so tempting as a book store. They spend their lives in pursuit of solving problems, asking and answering questions, tinkering with ideas, and making the unknown known. Their love is the pleasure of discovery.

The Economic Attitude [Ordinal Action, exemplified by the Warrior Role] — a pragmatist who "in all the relations of life prefers utility to all other values." This is not just someone who cares about money, but in what money affords: the ability to maximise utility. While not necessarily the type who invests in the stock market, this is an individual who is passionate about return on investment in the broadest sense and will place a great deal of value on where, how and with whom they spend their time. Nothing is so pointless as a purely academic discussion. Just as those with a theoretical attitude are often attracted to scientific areas of study, people with an economic attitude naturally gravitate to business and entrepreneurship. Where a lover of art looks at a painting and asks, "Isn't it beautiful?" the utilitarian asks, "How much is it worth?"

The Aesthetic Attitude [Ordinal and Cardinal Expression, exemplified by the Artisan and Sage Roles] — aestheticism is summarized as "the formed expression of an impression." Impression deals with input from the world as it is captured by our senses and fires the imagination, expression deals with the manifestation of mental, emotional, and physical states, and form deals with the interplay and harmony between impression and expression. The aesthetic person is one who is attuned to the world in a unique way. They see with the eye of the artist. They may be artists or art critics, professional or amateur. All aesthetics are lovers of art, though specific interests and tastes won't be uniform. These creative types are typically interested in the states that objects of beauty produce; sensual pleasure; experience — especially new sights, cuisine, songs, and cultures; self-development ("they make out of their lives works of art"); and losing themselves in the moment. A true aesthetic experience is defined as "a state of pure contemplation, a letting oneself go in the manifold nature of actual or imagined objects."

The Social Attitude [Ordinal Inspiration, exemplified by the Server Role] — a caring soul whose fundamental nature is driven by the "impulse to give oneself to another" and whose basic attitude towards life affirms the sacredness of life itself. In the pure sense, or in its highest development, the social value is called "love" — defined as "interest in the value possibilities of another." The spirit of this love is the foundation of many major religions. Social types will often be drawn to areas such as teaching, nursing, clergy, poverty alleviation and non-profit causes. Where money makes people greedy, love is giving. Where knowledge makes people proud, love is humble. The social strives to create all-inclusive communities, which is not to be confused with endeavours at equality in the sense of making everyone the same, an aim that would be theoretically or politically motivated. In its full expression, the social's chief concern is human flourishing and the development of the potential in others, without any hidden political agenda or expectation of return.

The Political Attitude [Cardinal Action, exemplified by the King Role] — not to be confused with someone who seeks a job in politics, the political type in the broadest sense is concerned with the expression of power; someone who seeks to direct one's own life and the lives of others. The political type is attuned to the fact that hierarchical structures and relations of power are fundamental to life. Humans who are thus born into systems of dependence and interdependence (family, friends, colleagues, communities) as well as oppositional relations (antagonists, competitors, enemies) must recognize that in order to survive, meets one's needs, and achieve anything of little or great significance, it requires the navigation of power structures. Where the scientist sees knowledge as an end in itself, the political type accords to the maxim "Knowledge is power." He or she is a student of human nature. Politics is one expression of this attitude, though the stakes tend to be more or less

serious, whereas sport is also an expression of power-seeking through competition, which tends to be more playful. A political type may search for influence in every way and at any price, or they may seek only a certain level of status in a narrow field. An effective political type is likely to be seen by others as an over-achiever or a strong leader, although whether their tendency is toward a tyrannical or a more democratic leadership style will depend on other factors.

The Religious Attitude [Cardinal Inspiration, exemplified by the Priest Role] — this is not necessarily someone who is defined by membership with a religious organization. It is an attitude expressed in the person "whose whole mental structure is permanently directed to the creation of the highest and absolutely satisfying value experience." In other words, the highest and richest revelations that some may call God or nature or the universe in the sense of a totality of oneness. Some are "immanent mystics" who find something divine in everything and this sense of meaning infuses their lives with vitality and a love for all people and all life; he or she is a kind of spiritual optimist. Contrast this with the "transcendental mystics" who grasp the divine in a way that is less dependent on cultural values and material attachments. He or she may believe that everything is fundamentally meaningless, and finds a certain satisfaction in spiritual pessimism, in abandoning worldly pleasures for a life of meditation, to experience that which is beyond purely logical or rational comprehension. Religiosity is defined as "the condition, instinctive or rational, in which a single experience is either positively or negatively related to the total value of life." [retrieved 27 June 2022]

In my opinion, those expanded descriptions by Theo Winter clinch my correlation of Spranger's system with the Septenarian Attributes of the Overleaf System. However — so far as I know with so little research — the six Values were not understood to have a structure in terms of what I am referring to as Twoness (complementary opposites) or Threeness (dimensions) as the Septenarian Attributes do.

The story line of this particular personality typology does not end there; it continues on to other people who built upon Spranger's insights with their own insights.

The Innermetrix Values Index

The information in this subsection is derived from a copyrighted document that I found on the internet at >https://hrgirlfriends.com/wp-content/uploads/2020/02/ValuesManual.pdf<. This document can be found at other internet websites. (Because of the copyright, I will not quote verbatim from it.) This is the work of Peter Klassen, Leon Pomeroy, and Robert Hartman. This document is titled *The Innermetrix Values Index*, and it was published in 2009. It says the Innermetrix Values Index is derived from the combined work of Eduard Spranger (discussed in the previous subsection) and another psychologist named Gordon Allport (whom I will not discuss). Both of those men came to prominence in the middle third of the 20th Century. The thing about the Values Index is that, in combining and elaborating both Spranger and Allport, it ends up with seven archetypal values, and it does so in a way that fits with the Septenarian Attributes of the Overleaf System better than either Spranger or Allport does. The following is from an organization that markets the Index, >http://www.symbiontperformance.com/id235.html<

The Value Index measures seven dimensions of motivation:

- Aesthetic a drive for balance, harmony, beauty and form [Cardinal Expression = Sage]
- Altruistic [aka Social] a drive for humanitarian results and service to others [Ordinal Inspiration = Server]
- Economic a drive for financial or practical return on effort [Ordinal Action = Warrior]
- Individualistic [Allport] a drive to stand out as independent and unique [Ordinal Expression = Artisan]
- Political a drive to possess power, control or influence [Cardinal Action = King]
- Regulatory [aka Religious] a drive for order, structure and routine [Cardinal Inspiration = Priest]
- Theoretical a drive for knowledge, learning and understanding [Neutral Assimilation = Scholar]

Sorry to say, you will need to retrieve the document to see the full descriptions of each "value". It is not a perfect fit, but to me it is good enough for practical purposes. My suggestion is that, the Innermetrix Value Index could be improved if the originators of this list had realized that these seven archetypes could be systematized as three pairs of opposites and a combination trait, as is the case with the Overleaf System. Then their system would have been more consistent with reality, and their descriptions would have been more accurate.

Raymond Cattell — 16 Personality Factors

Here again I turn to Wikipedia for an introduction to this person and his personality typology. In this quotation, I <u>underline</u> some key words and provide some comments in [brackets]:

Raymond Bernard Cattell (20 March 1905 – 2 February 1998) was a British-American psychologist, known for his psychometric research into intrapersonal psychological structure. His work also explored the basic dimensions of personality and temperament, the range of cognitive [Expression Axis] abilities, the dynamic dimensions of motivation [Action Axis] and emotion [Inspiration Axis], the clinical dimensions of abnormal personality, patterns of group syntality and social behavior, applications of personality research to psychotherapy and learning theory, predictors of creativity and achievement, and many multivariate research methods including the refinement of factor analytic methods for exploring and measuring these domains. Cattell authored, co-authored, or edited almost 60 scholarly books, more than 500 research articles, and over 30 standardized psychometric tests, questionnaires, and rating scales. According to a widely cited ranking, Cattell was the 16th most eminent, 7th most cited in the scientific journal literature, and among the most productive psychologists of the 20th century. Beginning in the 1940s, Cattell used several techniques including the new statistical technique of common factor analysis applied to the English-language trait lexicon to elucidate the major underlying dimensions within the normal personality sphere. This method takes as its starting point the matrix of inter-correlations between these variables in an attempt to uncover the underlying source traits of human personality. Cattell found that personality structure was hierarchical, with both primary and secondary stratum level traits. At the primary level, the 16PF measures 16 primary trait constructs, with a version of the Big Five secondary traits at the secondary level. These higher-level factors emerged from factor-analyzing the 16 x 16 intercorrelation matrix for the sixteen primary factors themselves. The 16PF yields scores on primary and second-order "global" traits, thereby allowing a multilevel description of each individual's unique personality profile. A listing of these trait dimensions and their description can be found below. Cattell also found a third-stratum of personality organization that comprised just two overarching factors. [>https://en.wikipedia.org/wiki/Raymond_Cattell< — retrieved 28 June 2022]

This Wikipedia article compares and contrasts the 16PF with another personality typology, The Big Five, which is reviewed further on in this chapter. As for the "two overarching factors", I did not find them discussed in the Wikipedia article, but my speculation is that it has to do with brain lateralization: the basic differences between the functions of left and right brain hemispheres, and which correlates with Cardinality and Ordinality in the Overleaf System schema. For more about that subject, not discussed here in my *History* book, I refer the reader to the work of Iain McGilchrist at this website: >https://channelmcgilchrist.com/<.

The Wikipedia article on Cattell does not provide information on his sixteen personality factors; that is found in another Wikipedia article, namely >https://en.wikipedia.org/wiki/16PF_Questionnaire<. On the internet, I found an abbreviated version of a table provided in that Wikipedia article, and it is inserted below.

| Factor | Low Score | High Score |
|----------------------|---------------------------|---------------------------|
| Warmth | cold, selfish | supportive, comforting |
| Intellect | Instinctive, unstable | cerebral, analytical |
| Emotional Stability | Irritable, moody | level headed, calm |
| Aggressiveness | Modest, docile | controlling, tough |
| Liveliness | somber, restrained | wild, fun loving |
| Dutifulness | untraditional, rebellious | conformity, traditional |
| Social Assertiveness | shy, withdrawn | uninhibited, bold |
| Sensitivity | coarse, tough | touchy, soft |
| Paranoia | trusting, easy going | wary, suspicious |
| Abstractness | practical, regular | strange, imaginative |
| Introversion | open, friendly | private, quiet |
| Anxiety | confident, self-assured | fearful, self-doubting |
| Open-mindedness | close-minded, set-in-ways | curious, self-exploratory |
| Independence | outgoing, social | loner, crave solitude |
| Perfectionism | Disorganized, messy | orderly, thorough |
| Tension | relaxed, cool | stressed, unsatisfied |

Let me make the following points about this personality typology:

- The Wikipedia article describes how these 16 primary traits were 'boiled down' to a set of five secondary traits rather similar to the Big Five schema, a schema one may read about further on in this chapter.
- As I look at these names of personality factors and think about them, I can correlate all of them with Traits or combinations of Traits of the Overleaf System. This same thing can usually be said about the other personality typologies reviewed in this chapter. So what makes the Overleaf System better? In my opinion, it is that the Overleaf System has a logical and mathematical structure to it the same kind of structure that underlies nature down to the fundamental levels that are explored by physicists and philosophers that structure explains the personality traits (and physics and philosophy) at a deep level. Many research psychologists have done a "scientific" "factor analysis" of one kind or another on a body of raw research data, and then 'boiled it down' to a collection of personality traits; we see numerous examples of this procedure in this chapter. I find it interesting that each 'boiled down' collection of traits has numerous differences as well as numerous similarities to the work of other researchers. One wonders if there is "one personality typology to rule them all".
- This particular personality typology does reflect one of the logical structures, namely Twoness, in that there is a named trait, and that there is a spectrum from the trait through the *absence* of the trait, and that the spectrum continues to the *opposite* of the trait. One could visualize this as a line with two ends, a positive end (the trait) and a negative end (the opposite or complement of the Trait) with a neutral spot in the middle (the absence of either pole). Any of the other personality typologies reviewed in this chapter that have Twoness inherent in them can be visualized as being this way. (By the way, the Michaels declared that the goal of people on a psychotherapeutic and spiritual path should be to understand the Overleaf System with a view to becoming "balanced", meaning that they ultimately let go of the default biases in their personality, such that they simply do the appropriate thing in every circumstance they find themselves in.)
- What I do not see in this personality typology is any awareness of Threeness, which is found in numerous other personality typologies. It is said in the Wikipedia article on Cattell that the Threeness of cognitive Expression, emotional Inspiration, and behavioral Action was taken into consideration during the data-gathering phase, but I do not see that the results reflected a division of the 16PF or the Big Five into a Threeness.

The takeaway point of this personality typology and all other personality typologies is that the various personality typologies each look at human personality from a different viewpoint. Depending on how much curiosity a person has in their collection of traits, that trait determines how interested that person has in learning about themselves and other people by studying the various typologies. In order to get a somewhat complete picture of the subject, then one should research personality typologies to the limit of their curiosity.

RIASEC

As with several other personality typologies reviewed in this chapter, "RIASEC" is an acronym made up of the first letters of six personality traits, arranged in a meaningful pattern. For an introduction to this system, Wikipedia again comes to the rescue: >https://en.wikipedia.org/wiki/Holland_Codes<:

The Holland Codes or the Holland Occupational Themes (RIASEC) refers to a theory of careers and vocational choice (based upon personality types) that was initially developed by American psychologist John L. Holland. The basic premise was that one's occupational preferences were in a sense a veiled expression of underlying character.

Holland originally labeled his six types as "motoric, intellectual, aesthetic, supportive, persuasive, and conforming." He later developed and changed them to: "Realistic (Doers), Investigative (Thinkers), Artistic (Creators), Social (Helpers), Enterprising (Persuaders), and Conventional (Organizers)." Holland's six categories show some correlation with each other. It is called the RIASEC model or the hexagonal model because the initial letters of the regions becomes R–I–A–S–E–C when it is expressed as a circle connecting the regions of high correlation. Professor John Johnson of Penn State suggested that an alternative way of categorizing the six types would be through ancient social roles: "hunters (Realistic), shamans (Investigative), artisans (Artistic), healers (Social), leaders (Enterprising), and lorekeepers (Conventional)."

Furthermore, while Holland suggests that people can be "categorized as one of six types", he also argues that "a six-category scheme built on the assumption that there are only six kinds of people in the world is unacceptable on the strength of common sense alone. But a six category scheme that allows a simple ordering of a person's [degree of] resemblance to each of the six models provides the possibility of 720 [6x5x4x3x2x1] different personality patterns." [retrieved 10 July 2019]

A graphic of this personality typology is shown at the right. This was found in a search on Google for images of RIASEC; there are dozens more, of various sorts intended for various purposes. If you check those out, you will get a better and fuller explanation of each category, and of the system as a whole.

This personality typology has an enormous amount of research and application behind it because it is used to match people with jobs that are suitable for them.

This personality typology was devised in the late 1950s; some subsequent derivatives, alleged to be improvements found via research, are mentioned in the Wikipedia article.

You may read the descriptions of each type and get a better idea of the personality characteristics that apply to each name. The six names and their descriptions very much remind me of the names of most of the Roles in the Overleaf System, although they are not as definitive as the names of the Roles, in my estimation. Consequently, some of the RIASEC names seem like combinations of Roles rather than any pure Role. Both Role and RIASEC names are decent indicators of occupational preferences. It would be easy to modify this

diagram to show the names and descriptions of six Roles, with paired Roles (Warrior and King, Server and Priest, Artisan and Sage) opposite each other, and the Scholar in the center in its own hexagon.

In the Wikipedia article, about 150 occupations are listed, with the combination of three of these six types suggested as the best fit for each occupation. Holland's idea that a person is a mixture of all six basic types is exactly one of the features of the Overleaf System if you include the Overleaves and the Casting as secondary and tertiary and quaternary and so on influences on Role, Role being regarded as the primary influence on occupational fit. For instance, I am a combination of Scholar, Artisan, Priest, and Sage in that order. Uppity engineer worked well as my career.

Note that there is Twoness and Threeness in this personality typology; that is, there are three dimensions of contrary traits:

- 1. Investigative/Ideas/Thinkers are the opposite of Enterprising/Tasks/Persuaders;
- 2. Artistic/Creativity/Creators is the opposite of Conventional/Order/Organizers;
- 3. Social/People/Helpers are the opposite of Realistic/Things/Doers.

From the perspective of the Overleaf System, these three contraries are confused. The Twoness of Cardinal and Ordinal is not distinctive, and the Threeness of Action, Inspiration, and Expression is not distinctive either. Even though the RIASEC embodies some of the same principles as the Overleaf System, it is not nearly as definitive, comprehensive, and systematic. This assertion is explained in the section on the Overleaf System near the end of this chapter.

Note in the quotation that the MBTI and the KTS and RIASEC do not get much respect from clinical psychologists these days. They prefer something less theoretical and more empirical. The next three subsections are an introduction to three models of personality typology of the empirical persuasion.

Learning Styles

This subsection covers a category of personality typologies that are more properly characterized as natural abilities, talents, aptitudes, inclinations, proclivities, and knacks. Even so, it seems appropriate to discuss this category in this chapter because the Overleaf System can also be used to discern some of the activities that a person is likely to be interested in and/or naturally good at. Readers of this *History* book, who are likely interested in personality typology in general because of its existence as a central component to the Michaelian teachings, might also find that this peripheral category is interesting, and that it supplements their understanding of themselves and other people.

This subsection was placed here because the RIASEC system, discussed in the previous subsection, is used to match people with career paths, but is also used by guidance counselors in K–12 education to discern the aptitudes of students. There are other personality typology systems used for these purposes, and they are discussed in other sections and subsections, but this subsection is specifically aimed at typologies used in the educational system. As usual, this subsection only 'scratches the surface' of the psychological typology that gets reviewed. If you find it interesting, by all means explore it to your heart's content via research on the internet and via books.

As an introduction to the subject, take a look at the obligatory Wikipedia article on learning styles: Learning styles refer to a range of competing and contested theories that aim to account for differences in individuals' learning. The many theories share the proposition that humans can be classified according to their 'style' of learning, but differ in how the proposed styles should be defined, categorized and assessed. A common concept is that individuals differ in how they learn. The idea of individualized learning styles became popular in the 1970s, and has greatly influenced education despite the criticism that the idea has received from some researchers. Proponents recommend that teachers have to run a needs analysis to assess the learning styles of their students and adapt their classroom methods to best fit each student's learning style. Although there is ample evidence that individuals express preferences for how they prefer to receive information, few studies have found any validity in using learning styles in education. Critics say there is no consistent evidence that identifying an individual student's learning style, and teaching for specific learning styles, produces better student outcomes. There is evidence of empirical and pedagogical problems related to forcing learning tasks to "correspond to differences in a one-to-one fashion". Well-designed studies contradict the widespread "meshing hypothesis" that a student will learn best if taught in a method deemed appropriate for the student's learning style. They further show that teachers cannot assess the learning style of their students accurately. There are substantial criticisms of learning-styles approaches from scientists who have reviewed extensive bodies of research. A 2015 peer reviewed

article concluded: "Learning styles theories have not panned out, and it is our responsibility to ensure that students know that." [>https://en.wikipedia.org/wiki/Learning_styles< — retrieved 25 April 2020]

The fact that theorizing and researching various "learning styles" has not held up well to scrutiny does not mean that the idea that some people are naturally talented in one way or another is worthless and that we cannot learn from the various attempts to discern them. When we compare and contrast some of the proposed systems, we see correspondences with components of the Overleaf System. Therefore, I want to use this topic as a "teaching moment" for Michaelian students.

In all of the various learning styles reviewed below, it seems to work best to correlate them with the Centers of the Overleaf System, both in terms of similar descriptions, and in terms of the fact that the Centers govern the type of response a person has to what is happening, whether it be cognitive, emotional, or behavioral. It is said in the Overleaf System that we *process* life experiences in our Centers, and "process" is another word for "learn about". The secondary Overleaf System factor that seems to influence learning styles is the Role, because a person's Role also influences *what* aptitudes and proclivities and interests a person 'brings to the table' of learning situations. A tertiary Overleaf System factor that might influence learning styles is the Mode, because it defines *how* a person approaches learning situations. One would naturally assume that knowing a child's Overleaves would help a teacher understand how to deal effectively and efficiently with that child, for the same reason that it is helpful for us to know our own Overleaves, and the Overleaves of others that we interact with.

That said, let's now review some of the systems that have been proposed, and see what we can learn about the Overleaf System from proposed learning styles. Underlines are my emphasis; a brief explanation follows the quotation.

David Kolb's Model

David A. Kolb's model is based on his experiential learning model, as explained in his book *Experiential Learning*. Kolb's model outlines two related approaches toward grasping experience: Concrete Experience and Abstract Conceptualization, as well as two related approaches toward transforming experience: Reflective Observation and Active Experimentation. According to Kolb's model, the ideal learning process engages all four of these modes in response to situational demands; they form a learning cycle from experience to observation to conceptualization to experimentation and back to experience. In order for learning to be effective, Kolb postulated, all four of these approaches must be incorporated. As individuals attempt to use all four approaches, they may tend to develop strengths in one experience-grasping approach and one experience-transforming approach, leading them to prefer one of the following four learning styles:

- 1. Accommodator = Concrete Experience + Active Experiment: strong in "hands-on" practical doing (e.g., physical therapists) [= Warrior]
- 2. Converger = Abstract Conceptualization + Active Experiment: strong in practical "hands-on" application of theories (e.g., engineers) [= Artisan]
- 3. Diverger = Concrete Experience + Reflective Observation: strong in imaginative ability and discussion (e.g., social workers) [= Server]
- 4. Assimilator = Abstract Conceptualization + Reflective Observation: strong in inductive reasoning and creation of theories (e.g., philosophers) [= Scholar]

Kolb's model gave rise to the Learning Style Inventory, an assessment method used to determine an individual's learning style. According to this model, individuals may exhibit a preference for one of the four styles — Accommodating, Converging, Diverging and Assimilating — depending on their approach to learning in Kolb's experiential learning model. Although Kolb's model is widely accepted with substantial empirical support and has been revised over the years, a 2013 study pointed out that Kolb's Learning Style Inventory, among its other weaknesses, incorrectly dichotomizes individuals on the abstract/concrete and reflective/action dimensions of experiential learning (in much the same way as the Myers–Briggs Type Indicator does in a different context), and proposed instead that these dimensions be treated as continuous [on a spectrum] rather than dichotomous/binary variables. [>https://en.wikipedia.org/wiki/Learning_styles< — retrieved 25 April 2020]

Two instances of Twoness are found in this model: Concrete versus Abstract, and Observation versus Experimentation. This existence of Twoness pushes this "model" into "theory" territory, although not a comprehensive or deep theory. Let me attempt to relate it to the Overleaf System, which *is* a comprehensive and deep theory of personality.

It is easy to correlate Kolb's model somewhat with certain features that are included in the Overleaf System. The dichotomy of "Concrete" versus "Abstract" is somewhat equivalent to Ordinal and Cardinal respectively, but they can be narrowed to the two basic cognitive functions, the Intellect Center and Concept (aka Higher Intellectual) Center respectively, commonly correlated with left brain hemisphere and right brain hemisphere functions. The dichotomy of "Reflective Observation" versus "Active Experimentation" is also somewhat equivalent to Ordinal and Cardinal respectively, which often manifest as passivity and activity respectively. Passivity and activity can be narrowed down to the strength of the Motion (aka Lower Moving) Center, whether strong or weak relative to the strength of the other two mundane Centers, Intellect and Emotion.

So far as I can tell, there is no straightforward correlation of this model and these four types with the Overleaf System. The most obvious correspondence of this model might be with the Roles (as much as with the Centers), particularly with the Ordinal and Neutral Roles, as indicated by the names of four Roles in brackets. For instance, the description of the Accommodator fits pretty well with the Warrior; the description of the Converger fits pretty well with the Artisan; the description of the Diverger fits pretty well with the Server; the description of the Assimilator fits pretty well with the Scholar. These four Roles make up nearly four-fifths of the population, so naturally they will receive the most attention.

Kolb's model seems to address mostly the cognitive (Intellect Center) and behavioral (Motion Center) functions; it does not overtly address the Emotion Center. However, that function does get addressed in other models, such as some of those discussed below.

Walter Barbe's Learning Modalities

Further along in the same Wikipedia article that was referenced above, we find this:

Walter Burke Barbe and colleagues proposed three learning modalities (often identified by the acronym VAK):

1. Visualising modality, 2. Auditory modality, 3. Kinesthetic modality. Descriptions of learning modalities:

| VISUAL | KINESTHETIC/TACTILE | AUDITORY |
|-----------|---------------------|-----------|
| Picture | Gestures | Listening |
| Shape | Body movements | Rhythms |
| Sculpture | Object manipulation | Tone |
| Paintings | Positioning | Chants |

Barbe and colleagues reported that learning modality strengths can occur independently or in combination (although the most frequent modality strengths, according to their research, are visual or mixed), they can change over time, and they become integrated with age. They also pointed out that learning modality strengths are different from preferences; a person's self-reported modality preference may not correspond to their empirically measured modality strength. This disconnect between strengths and preferences was confirmed by a subsequent study. Nevertheless, some scholars have criticized the VAK model. Psychologist Scott Lilienfeld and colleagues have argued that much use of the VAK model is nothing more than pseudoscience or a psychological urban legend. [>https://en.wikipedia.org/wiki/Learning_styles< — retrieved 25 April 2020]

Motivated as I am to correlate this model with the Overleaf System, particularly the Ordinal Centers, I do it this way: The Kinesthetic learner is primarily in the Motion Center (notice that the words in the Kinesthetic column have to do with actions of the physical body); the Auditory learner is primarily in the Emotion Center (notice that the words in the Auditory column have somewhat to do with music, which is usually an emotional experience); that leaves the Visual learner to be primarily operating out of the Intellect Center.

Is this the closest that psychologists can come to the Overleaf System? I think not, and as evidence for that claim, I submit the following.

Neil Fleming's VAK/VARK Model

Further along in the same Wikipedia article that was referenced above, we find this:

Neil Fleming's VARK model and inventory expanded upon earlier notions of sensory modalities such as the VAK model of Barbe and colleagues and the representational systems (VAKOG) in neuro-linguistic programming. The four sensory modalities in Fleming's model are: 1. Visual learning, 2. Auditory learning, 3. Physical learning, 4. Social learning. Fleming claimed that visual learners have a preference for seeing (visual aids that represent ideas using methods other than words, such as graphs, charts, diagrams, symbols, etc.). Subsequent neuroimaging research has suggested that visual learners convert words into images in the brain and vice versa, but some

psychologists have argued that this "is not an instance of learning styles, rather, it is an instance of ability appearing as a style". Likewise, Fleming claimed that auditory learners best learn through listening (lectures, discussions, tapes, etc.), and tactile/kinesthetic learners prefer to learn via experience — moving, touching, and doing (active exploration of the world, science projects, experiments, etc.). Students can use the model and inventory to identify their preferred learning style and, it is claimed, improve their learning by focusing on the mode that benefits them the most. Fleming's model also posits two types of multimodality. This means that not everyone has one defined preferred modality of learning; some people may have a mixture that makes up their preferred learning style. [>https://en.wikipedia.org/wiki/Learning_styles< — retrieved 25 April 2020]

The "Social" learning style is not described here, but I would correlate this with people who are primarily in the Emotion Center because a high Emotional Intelligence (see below) makes one good at interpersonal relationships. A strong Sympathy (aka Higher Emotional) Center in a person also provides a talent for dealing with social situations, and it makes learning in such situations a natural preference. The addition of that category nudges me to make a correlation different from what I did for the Barbe model reviewed above. That is, both Visual and Auditory are now perhaps better correlated with cognitive functions, Visual with Concept Center (because it deals better with images), and Auditory with Intellect Center (because it deals better with words). This correlation aligns better with Kolb's model, which seems to have two cognitive learning modalities that correlate with left brain hemisphere and right brain hemisphere functions. Even though I or others might correlate these models with each other differently, the situation seems to be that mostly the same basic personality factors have been discerned, and the differences of correlation arise because the factors are not well defined theoretically, as they are in the Overleaf System.

This is not the end of the development of various models of learning modalities proffered by psychologists.

Anthony Gregorc's Model

Further along in the same Wikipedia article that was referenced above, we find this:

Anthony Gregorc and Kathleen Butler organized a model describing different learning styles rooted in the way individuals acquire and process information differently. This model posits that an individual's perceptual abilities are the foundation of his or her specific learning strengths, or learning styles. In this model, there are two perceptual qualities: concrete and abstract, and two ordering abilities: random and sequential. Concrete perceptions involve registering information through the five senses, while abstract perceptions involve the understanding of ideas, qualities, and concepts which cannot be seen. In regard to the two ordering abilities, sequential ordering involves the organization of information in a linear, logical way, and random ordering involves the organization of information in chunks and in no specific order. The model posits that both of the perceptual qualities and both of the ordering abilities are present in each individual, but some qualities and ordering abilities are more dominant within certain individuals. There are four combinations of perceptual qualities and ordering abilities based on dominance: concrete sequential, abstract random, abstract sequential, and concrete random. The model posits that individuals with different combinations learn in different ways — they have different strengths, different things make sense to them, different things are difficult for them, and they ask different questions throughout the learning process. The validity of Gregorc's model has been questioned by Thomas Reio and Albert Wiswell following experimental trials. Gregorc argues that his critics have "scientifically-limited views" and that they wrongly repudiate the "mystical elements" of "the spirit" that can only be discerned by a "subtle human instrument". [>https://en.wikipedia.org/wiki/Learning styles< — retrieved 25 April 2020]

Twoness is obvious in this model, what with the two contraries of concrete/abstract and random/sequential. Here again, we have the rudiments of a "theory". We have seen the pair, concrete/abstract perceptions already, and I applied it to the Overleaf System factors of Ordinality and Cardinality in general, and Intellect (left brain) Center and Concept (right brain) Centers in specific. I also see random versus sequential ordering as a product of right-brain versus left-brain functions respectively, so I am not certain what to do with this model yet.

The references to mystical and spiritual factors apparently has to do with the belief that a child has a soul with an innate nature and "God-given" talents that should be discerned and then nurtured by teachers and parents; the child is not just a blank slate upon which the educational system should write a script for the child. Thus, in Gregorc's view, the soul has a plan for what to do with the lifetime, and it has inborn abilities for accomplishing its goals. That notion is very much in agreement with the Michaelian teachings and the Overleaf System (in its assertion that Nature or True Personality rules over False Personality and Illusion), but it is not a notion that sits well with mainstream psychologists and educators.

The next model reviewed has even more components of an actual systematic theory, and thus it fits with the Overleaf System better than do the learning styles discussed above.

Cognitive Approaches

Further along in the same Wikipedia article that was referenced above, we find this (words in [brackets] are my correlations to the Overleaf System):

Anthony Grasha and Sheryl Riechmann, in 1974, formulated the Grasha-Reichmann Learning Style Scale. It was developed to analyze the <u>attitudes</u> of students and how they approach learning. The test was originally designed to provide teachers with insight on how to approach instructional plans for college students. Grasha's background was in cognitive processes and coping techniques. Unlike some models of cognitive styles which are relatively nonjudgmental, Grasha and Riechmann distinguish between adaptive and maladaptive styles. The names of Grasha and Riechmann's learning styles are:

- avoidant [Cynic]
- participative [Realist]
- competitive [Skeptic]
- collaborative [Idealist]
- dependent [Stoic]
- independent [Spiritualist]

Aiming to explain why aptitude tests, school grades, and classroom performance often fail to identify real ability, Robert Sternberg listed various cognitive dimensions in his book *Thinking Styles*. Several other models are also often used when researching cognitive styles; some of these models are described in books that Sternberg coedited, such as *Perspectives on Thinking, Learning, and Cognitive Styles*.

[>https://en.wikipedia.org/wiki/Learning_styles< — retrieved 25 April 2020]

Taking a cue from the use of the word "attitude" in the description of this model, I compared the list of six attitudes with the six non-Neutral Attitudes of the Overleaf System, and the fit was not bad, as you can see from the names of Attitudes in brackets after this model's names for attitudes.

In addition to that, notice that there is both Twoness and Threeness in this model. The previous models show either Twoness or Threeness, but not both, so this model is closer to the numerical structure of the Overleaf System. That is, there are three pairs of contraries, with Ordinal (so-called "maladaptive") and Cardinal (so-called "adaptive") poles. I would correlate these with Overleaf System features as follows: –Avoidant versus +Participative are on the Action Axis, then –Competitive versus +Collaborative are on the Expression Axis, and then –Dependent versus +Independent are on the Inspiration Axis. These correlations are not clear to me, and I appreciate that they could be argued otherwise. If the authors of this model had clearly divided the Threeness into cognitive, affective, and physiological pairs, as the following model does, perhaps words more consistent with the Overleaf System could have been chosen. All it would take to make this model congruent with Sevenesss is to add another attitude, or Attitude, that is not polarized: a person who is neutral, aka Pragmatic, i.e., not on any spectrum of adaptive or maladaptive thoughts, feelings, or behaviors.

The models have been listed in the order in which they were presented by Wikipedia, and it looks to me as if each one looks more and more like the structure of the Overleaf System. The next one is even more so.

NASSP Model

Further along in the same Wikipedia article as referenced above, we find this:

In the 1980s, the National Association of Secondary School Principals (NASSP) formed a task force to study learning styles. The task force defined three broad categories of style — cognitive, affective, and physiological — and 31 variables, including the perceptual strengths and preferences from the VAK model of Barbe and colleagues, but also many other variables such as need for structure, types of motivation, time of day preferences, and so on. They defined a learning style as "a gestalt — not an amalgam of related characteristics but greater than any of its parts. It is a composite of internal and external operations based in neurobiology, personality, and human development and reflected in learner behavior."

- <u>Cognitive</u> styles are preferred ways of perception, organization and retention.
- <u>Affective</u> styles represent the motivational dimensions of the learning personality; each learner has a personal motivational approach.

 <u>Physiological</u> styles are bodily states or predispositions, including sex-related differences, health and nutrition, and reaction to physical surroundings, such as preferences for levels of light, sound, and temperature.

According to the NASSP task force, styles are hypothetical constructs that help to explain the learning (and teaching) process. They posited that one can recognize the learning style of an individual student by observing his or her behavior. Learning has taken place only when one observes a relatively stable change in learner behavior resulting from what has been experienced. [>https://en.wikipedia.org/wiki/Learning_styles< — retrieved 25 April 2020]

Here the correlation of the NASSP model with the Overleaf System is unambiguous: Cognitive = Expression Axis in general and Intellect Center in specific; Affective = Inspiration Axis in general and Emotion Center in specific; Physiological = Action Axis in general and Motion Center in specific. We will see "physiology" again in this *History* book, as it relates to the "Instinctive-Moving Center" of the Gurdjieffian teaching, a precursor to some components of the Michaelian teachings.

The Wikipedia article says that all of these theoretical models have been used in practical situations (schools, businesses), but none of these models holds up well under academic scrutiny by psychologists, who have designed studies that test for effectiveness. Nevertheless, it is obvious to me that they are seeing something real in regards to various personality types, and I say that these personality types can be understood in the model that we call the Overleaf System.

There is one more model — not a "learning style" but tangentially related — that I want to present in this section. It was not found in the Wikipedia article quoted above; it was found in another Wikipedia article. Everyone has heard of mental or cognitive intelligence in terms of "IQ" (Intelligence Quotient); you might also have heard of Emotional Intelligence/Quotient, "EQ". But have you heard, there are allegedly even more types of "intelligence"?

Howard Gardner and Multiple Intelligences

The usual obligatory introductory excerpt from Wikipedia is as follows:

The theory of multiple intelligences differentiates human intelligence into specific 'modalities', rather than seeing intelligence as dominated by a single general ability [IQ]. Howard Gardner proposed this model in his 1983 book Frames of Mind: The Theory of Multiple Intelligences. According to the theory, an intelligence 'modality' must fulfill eight criteria: potential for brain isolation by brain damage; place in evolutionary history; presence of core operations; susceptibility to encoding (symbolic expression); a distinct developmental progression; the existence of savants, prodigies and other exceptional people; support from experimental psychology; support from psychometric findings. Gardner proposed eight abilities that he held to meet these criteria: 1) musical-rhythmic, 2) visual-spatial, 3) verbal-linguistic, 4) logical-mathematical, 5) bodily-kinesthetic, 6) interpersonal, 7) intrapersonal, 8) naturalistic. In 2009, he suggested that existential and moral intelligences may also be worthy of inclusion. [>https://en.wikipedia.org/wiki/Theory_of_multiple_intelligences< — retrieved 24 April 2020]

The original list contained the first seven of these; the eighth was added later, and then a couple more were added even later. An internet search will tell you much more about these so-called "intelligences". Some would prefer to call them talents and aptitudes. Whatever they may be called, they do seem to be components of personality typologies. Even so, I do not see a structural component in this model; there is no Twoness or Threeness to be found in it, as there is with so many of the other typologies found in this chapter. There are dozens of colored images of this system to be found on the internet, but the colors (and quantities of intelligences) are not consistent from source to source. An example is to be found on the next page.

So far, I have not been able to discern how to correlate it with the Overleaf System other than to say that Kinesthetic and Naturalistic seem to apply best to behavioral intelligence, therefore of the Motion Center; Interpersonal, Intrapersonal, and Musical apply best to affective intelligence, therefore of the Emotion Center; Linguistic, Logical, and Visual/Spatial apply best to cognitive intelligence, therefore of the Intellect Center. Take a look and see what you see that perhaps I do not see.

© 2008 Chino Valley Unified School District

The graphic inserted on the previous page was found on the internet. Note that it was used in a school district, so academicians must have thought that it was of value. Some of the Intelligences can be correlated with Roles of the Overleaf System in a fairly straightforward manner; others do not have a clear correlation with a Role: Word Smart = Sage; Number Smart = what I have come to refer to as "low", aka Ordinal, Artisan; Picture Smart = what I have come to refer to as "high", aka Cardinal, Artisan; as for Music Smart, I cannot correlate this one with a Role; Body Smart = Warrior; People Smart = Server; Self Smart (aka Introvert) and Nature Smart = Scholar. Your mileage may vary, so take a look and see what you see. It is said in the Theory of Multiple Intelligences that every person has all intelligences to one degree or another, but each person varies in the amounts of each intelligence that they have. The same thing is said about Roles when one includes the various levels of Casting.

One of the components of Gardner's ideas about the multiplicity of intelligences gained a lot of notoriety in the general population when Daniel Goleman published a book, *Emotional Intelligence: Why it Can Matter More Than IQ*, in 1995. You can read about that here: >https://en.wikipedia.org/wiki/Emotional_intelligence<.

Basically what Goleman said is that success is not all in your "head" (Intellect Center); a lot of it is in your "heart" (Emotion Center). Many people have thought and felt that this is good to know.

Here are my final comments on this subsection on learning styles.

I note that the Overleaf System could be considered to be an amalgam of many of the features of these various models, especially the Cardinal Aspects of Center, Role, and Mode, and even more especially of the Ordinal Centers, Motion, Emotion, and Intellect. I dare say, if the educational psychologists were to use the comprehensive Overleaf System *theory* instead of these mere *models*, it might advance a field which has had a widespread appeal and application, but which academic study has found to be mostly lacking in accuracy. At a very minimum, I do not see how it could hurt for teachers to be aware that every child is different, and that they do well to be aware of various systems of learning styles, and experiment with various techniques until they find something that works for them and for each individual individual.

One reason that I included this subsection on learning styles in this chapter on personality typologies is that the original Michaelian channel, Sarah Chambers, a Scholar, was interested in making improvements to the educational system based on what the Overleaf System can teach us about the inborn personalities of children. At a symposium in Santa Fe, New Mexico, in mid-1998, she handed out a sheet titled "Michael on the New Education". The opening paragraph said this, quoting this message from the Michaels:

We would say that our investment in the current state of education on this planet is very passionate, at least when we see how appallingly bereft of any intellectual consideration it is. Literacy is no longer a given in even the most advanced Western countries. Scholarship is not valued by the young. Alliteration is a lost art, and many 18 year old high school graduates cannot read a newspaper. We have proposed a new system that could be in place by the end of the first decade of the new millennium if the groundwork is laid right now. Here are some steps that can be taken by all of you in order to effect this change.

Thereafter followed seven paragraphs. The reader may wish to compare this commitment to educational reform with the Waldorf system, initiated by a Theosophist, founder of Anthroposophy, Rudolf Steiner, a hundred years ago: >https://en.wikipedia.org/wiki/Waldorf_education<:

The stated purpose of this approach is to awaken the "physical, behavioral, emotional, cognitive, social, and spiritual" aspects of each individual, fostering creative and inquisitive thought....

Notice that this list of realms of being to be nurtured with a comprehensive educational system follows the pattern of the chakras/Centers, from bottom to top: Physiology, Motion, Emotion, Intellect, Impulse, and the Cardinal Centers. This is the Natural Sequence, a pattern that is explained repeatedly in subsequent chapters of this *History* book and in my other books.

The excerpt from Wikipedia continues, and the functions of the three Ordinal Centers are listed, plus the four Temperaments that we have discussed earlier in this chapter on personality typologies:

Steiner considered children's <u>cognitive</u>, <u>emotional and behavioral</u> development to be interlinked. When students in a Waldorf school are grouped, it is generally not by a singular focus on their academic abilities. Instead Steiner adapted the idea of the classic four temperaments — <u>melancholic</u>, <u>sanguine</u>, <u>phlegmatic and choleric</u> — for pedagogical use in the elementary years. Steiner indicated that teaching should be differentiated to accommodate the different needs that these psycho-physical types represent. For example, "cholerics are risk takers, phlegmatics take things calmly, melancholics are sensitive or introverted, and sanguines take things lightly". Today Waldorf teachers may work with the notion of temperaments to differentiate their instruction.

Seating arrangements and class activities may be planned taking into account the temperaments of the students but this is often not readily apparent to observers. Steiner also believed that teachers must consider their own temperament and be prepared to work with it positively in the classroom, that temperament is emergent in children, and that most people express a combination of temperaments rather than a pure single type. [retrieved 26 April 2019]

Enough has now been said about learning styles in this book. You get the idea, and now you are welcome to research it further on your own, if the spirit moves you to learn more, using whatever learning style you prefer.

There is another component of the Overleaf System which has not found any correlate in the personality typologies reviewed thus far in this chapter. This is the subject of the next subsection.

Clare Graves and Spiral Dynamics

One of the personality categories of the Overleaf System has to do with a hierarchy of "Soul Ages", which is the Michaels' name for a type of psychological maturity, which is said to increase as a consequence of many reincarnations (scores to hundreds). Unsurprisingly, this is not a category in any of the other personality typologies reviewed in this chapter so far. However, it has an analog in a field related to personality typology, namely, developmental psychology. As reality would have it, developmental psychology and Soul Age see the same stages.

Developmental psychology arrived on the public scene in earnest about a hundred years ago, shortly after the field of psychology itself was propelled into the public consciousness by such luminaries as William James and Sigmund Freud. Many academicians have added information to this area of study over the decades since its original discovery, and in their researches they have all observed similar stages or levels of psychological maturity. Many of these are reviewed and compared and correlated in Ken Wilber's book Integral Psychology. In my book The Tao of Cosmogony, I review and compare and correlate some of them also, but not just in terms of psychological maturity; I correlate them with many other manifestations and instantiations of the Natural Sequence in physical realms and in metaphysical realms.

An introduction to developmental psychology can, of course, be found in a Wikipedia article, namely this one: >https://en.wikipedia.org/wiki/Dev elopmental_psychology<. I will not quote from it, but it would be helpful for the reader to check out this background information before reading on.

In this subsection, I am going to discuss a particular formal developmental psychology that is very well researched, is very systematic, and is widely accepted and used — and it seems to fit better with the Overleaf System than any of the other formal academic developmental psychologies that I know of. That system is "Spiral Dynamics" (SD). If you do an internet search on Spiral Dynamics you will find an enormous amount of information. There are websites galore, there are tables and graphs galore, there are YouTube videos galore, and there are some books. This tells us that Spiral Dynamics has gained credibility and traction and utility in various ways and for various purposes and by various people.

The graphic at the right is just one of many depictions of the model that one can find on the internet. It has a few basic features and descriptions; other depictions go into much more detail and present the information in different ways. This graphic emphasizes "Human Organizational Development", aka socio-cultural phenomena; other graphics emphasize individual psychological maturity and/or sociological phenomena. Look at the graphic now and note that progress in psychological and cultural maturity is represented from most primitive ("Simplicity, Independence, Localization") at the bottom to most mature ("Complexity, Interdependence, Globalization") at the top of the spiral. Note the difference between the left ("Individual") and the right ("Collective") sides of the spiral; this means that as progress up the spiral is made in a person or in a culture, there is a cyclical swing between focus on self and focus on group. Note that the spirals get larger as progress is made in the vertical direction; this represents the enlargement and inclusiveness of the various worldviews that are part of progress in maturity; each swing of the spiral is said to "transcend and include" the previous levels. Note that the bottom six levels (beige, violet, red, blue, orange, green) are referred to as Tier 1, and the top layer (yellow) is referred to as Tier 2 in this graphic; other graphics show another layer (turquoise) above yellow, also in Tier 2; other graphics show two more layers above that (coral, teal) in Tier 3. All of the features represented in this graphic have their counterparts in Soul Age, as we will see below.

The history of the development of Spiral Dynamics is briefly told in a Wikipedia article, namely this one: >https://en.wikipedia.org/wiki/Clare_W._Graves<: in the 1950s, academic psychologist Clare Graves sought to extend the work of developmental psychologists before him, and in the process he researched and formalized the concept of psychological and cultural maturity, working for decades with his students. In other words, the SD model was built on empirical observations. In the 1970s, two other psychologists, Don Edward Beck and Christopher Cowan, adopted and adapted Graves's work and extended it even further, then popularized it starting in the 1980s with their book *Spiral Dynamics*. Starting a couple of decades later, philosopher Ken Wilber did the same in a series of books. Other notable names are Dudley Lynch and David Robinson and Natasha Todorovic.

Constructing a *model* based on empirical observations is one thing, but my work with the Process/Aspect System, particularly the Natural Sequence arrangement of the Overleaf System, goes to a deeper layer, an explanatory layer; it provides a logical and mathematical structure to Spiral Dynamics, to the extent that it correlates with the Overleaf System. This addition of the Overleaf System makes Spiral Dynamics into a *theory*, in the best meaning of that word as a coherent and comprehensive framework that makes sense and explains the data in an elegant way.

The following points begin to compare SD with the Natural Sequence and Soul Age. This is another case where a numbered list seems to be the best way for me to present the information.

- 1. Spiral Dynamics (SD) is so named because it is often represented graphically as a helix that starts small at the bottom and increases in size as the loops of the spiral rise. The rise represents the increase in maturity; the increase in the size of the loops represents the idea that each higher stage includes and transcends the lower stage(s). It is the same with Soul Age (SA): the soul accumulates experiences in each lifetime, and the savvy gained in previous lifetimes is expressed in its current lifetime.
- 2. Another factor commonly represented in a graphic of the SD helix is that a distinction is made between what happens in the stages on the left side versus what happens in the stages on the right side: one side is said to represent focus on the self ("me"), and the other side is said to represent focus on the group ("we"). In the case of SA, it is said that there are seven Levels in advancing through each Soul Age, with the first three Levels within that Age being referred to as "Ordinal" and the last three Levels being referred to as "Cardinal"; this is just "me" versus "we" using different words. Thus, the SD word "spiral" is equivalent to the Michaels' use of the word "cycle" when referring to Levels and Ages. In SA, the fourth Level is "Neutral"; it does not have an analog in the SD system, unless one considers the characteristics of the SD stage as a whole as equivalent to the characteristics of the middle Level of a SA.

- 3. Ordinal versus Cardinal shows up in another way in both SD and SA. The six stages at the beginning of the helix, Tier 1, are more concerned with outer and mundane (Ordinal) worldviews; Tier 3 is more concerned with inner and transcendent (Cardinal) worldviews; Tier 2 is between these, thus a transition zone that straddles Tier 1 and Tier 3. Thus, Tier 1 correlates with the "younger", Ordinal, Soul Ages (Infant, Child, Young); Tier 3 correlates with the "older", Cardinal, Soul Ages (Senior, Elder, Ancient); Tier 2 correlates with the intermediate, Neutral, Soul Age (Mature).
- 4. The stages typically attributed to psychological maturity, as found in both SD and SA, are applied to various cultures and various historical time periods. For instance, entire cultures and societies extant on the planet today, as well as in the past, can be loosely sorted into a spectrum of maturity, from primitive to tribal to civilizations to advanced. In terms of humanity as a whole, the stages of SD and SA can be applied as follows: The hunter-gatherer stages, starting many tens of thousands of years ago, constitute the first two stages of SD and the Infant SA with Ordinal and Cardinal Levels; the pastoral-agricultural stages starting about 10,000 BCE, constitute the second two stages of SD and the Baby SA with Ordinal and Cardinal Levels; the civilization stages starting about 3500 BCE, constitute the third two stages of SD and the Young SA with Ordinal and Cardinal Levels, separated by the Axial Age about 500 BCE. Those six SD stages and three SAs constitute Tier 1 in SD and younger SAs in the Michaelian teachings. Indications are that humanity on this planet might be feeling the 'birth pains' of transition to Tier 2 in SD terms, aka the Mature Soul Age in Michaelian teachings terms. Clare Graves himself spoke of this in a 1974 publication:
 - > http://spiral dynamics integral.nl/wp-content/uploads/2013/09/Graves-Clare-Human-Nature-Prepares-for-a-Momentous-Leap.pdf<.
- 5. Both SD and the Michaelian teachings cover several fields of study where a maturity spectrum or hierarchy exists. For instance:
 - SPIRITUAL DEVELOPMENT: It is said in the Michaelian teachings that a person can achieve, but cannot exceed, the perceptions of his SA. Proponents of SD would like to think that they could 'raise the consciousness' of humanity on the planet, and I agree, but only up to a point, namely the limitation provided by the respective SA of individuals on the planet. There is another activity where progress might be possible: in some esoteric systems there is a hierarchy of stages other than SA and SD, generally called "spiritual development"; the goal there is to transcend typical human limitations by opening gateways to higher states of consciousness, and provoking "spiritually transformative experiences" by one means or another. In the Gurdjieffian teachings this hierarchy is referred to as Level of Being, which is the subject of a chapter in this *History* book. Intense "spiritual" practices of one sort or another are required to advance up through those levels, which are different in quality from those found in SD and SA, even though there is a correlation in the nature of the levels. So far as I know, SD does not concern itself with that sort of thing, and it is only a peripheral concern of the typical Michaelian student, focused as they are on the mere purification of negativity from the personality self, more so than on some transcendent spiritual path toward the manifestation of the spiritual self.
 - DEVELOPMENTAL PSYCHOLOGY: In the Michaelian teachings, developmental psychology during a lifetime is covered under the name Internal Monads and which I call Life-Stages; refer to Chapter 4Q in Part Four, "The Seven Life-Stages" for a thorough description of that phenomenon. In the Michaelian teachings communities, there is not much talk of accelerating this particular process of maturation, although there is some talk of transiting the Life-Stages in the Positive Poles. This is different from SA, which spans scores to hundreds of lifetimes. The straightforward fact is that people "grow up" through predictable stages or phases during their entire lives, not just during their pre-adult years. SD accepts the findings of developmental psychology in general, and many of its proponents aspire to "raise people's consciousness" up through the SD stages as far as possible via educational techniques and by psychological tools. This is psychotherapy for the personal self or some group; it does not aspire toward the revelation and realization of the transpersonal self, as in the previous bullet point.
 - CULTURAL EVOLUTION: Cultural evolution over the course of human prehistory and history, and some of the variation in cultural maturity in present-day regions, is not a part of the Overleaf System except to the extent that it is understood as a consequence of the Soul Age of the majority of the population in those cultures. Refer to the chapter on cultural evolution in my book *The Tao*

of Cosmogony for a thorough discussion of that phenomenon. Some expositors of SD apply SD concepts to cultural evolution also, but of course they do not see this as having anything to do with reincarnation.

Below is a table that presumably clarifies some of what I said above. Life-Stages and Levels of Being (mentioned above) are not shown on this table, but they are described elsewhere in this book and my other books. The different systems have similar characteristics in similar stages of development and evolution, and they all follow the Natural Sequence. However, all instantiations of the Natural Sequence have some variations in descriptions because, of course, they apply to different realms of experience, human or otherwise.

| | Table 1Bi — SPIRAL DYNAMICS STAGES and SOUL AGES | | | | | | | | |
|------|--|---|---|--|---|---------------|---------------------|-------------|--|
| TIER | R COLOR NAMES STRUCTURE MOTIVES CHARACTERIST | | CHARACTERISTICS | LEVEL | SOUL AC | ĴΕ | | | |
| | Teal | | | | Spirit and life connecting | Late "we" | SENIOR | C A | |
| 3 | Coral | Post-Integral Ironist/Unitive | guardianship | | Realizes oneness; exhibits wisdom joy and love; seen in saints & sages | Early "me" | Holism | 1 _ 1 | |
| 2 | Turquoise | Holistic/Collective Global View | global compassion, uni- harmony uni- | | universal, harmonizing, experiential, contemplative, collaborative | Late "we" | MATURE Collect- | N E U | |
| | Yellow | Integrative/Autonomous Flex Flow | interactive | interactive adaptability, integration systematic, concept flexible, interdepen | | Early "me" | ivism | T | |
| | Green | Communitarian/Egalitarian Human Bond | egalitarian | equality, community | relativistic, personalistic, sensitive, pluralistic, humanistic, affiliative | Late "we" | | | |
| | Orange | Achievist/Strategic Strive Drive | delegative | autonomy, achievement | materialistic, strategic, ambitious, individualistic, enterprising | Early "me" | Mater- ialism | | |
| 1 | Blue | Purposeful/Authoritarian Truth Force | pyramidal | order, right & wrong | absolutistic, obedient, purposeful, authoritarian, conforming, guilt | Late "we" | CHILD | R D I | |
| | Red | Impulsive/Egocentric Power Gods | empires | power, dominance | egocentric, exploitative, impulsive, rebellious, heroic, self-assertive | Early "me" | Tradition- alism | N A | |
| | Purple | Magical/Animistic Kin Spirits | tribes | magic, safety | animistic, tribalistic, superstitious, protective, security-conscious | Late "we" | INFANT | L | |
| | Beige | Instinctive/Survivalist Survival Sense | loose bands | survival | archaic, instinctive, basic, automatic, autistic, hyper-vigilent | Early "me" | Primi- tivism | | |

My comments on this table are as follows.

- The first six columns contain information derived from proponents of Spiral Dynamics; the last three
 columns are derived from the Michaelian teachings, specifically Level, Soul Age, and Dialectic
 Attributes.
- TIER: In the first column, these Tier numbers make distinctions discerned by SD researchers. One may think of Tier 1 as "personal", Tier 2 as "impersonal", and Tier 3 as "transpersonal". These Tiers correspond to Ordinal, Neutral, and Cardinal respectively in the Michaelian teachings, as indicated in the right-most column. Spiral Dynamics did not come up with Tier 3; Ken Wilber did, as part of his integral psychology project; he is an older soul than most of the proponents of SD, and he was willing to explore the spiritual realm of transpersonal psychology beyond mere mainstream academic psychology, so he recognized the existence of Tier 3 even when most of the SD proponents did not.
- COLOR: In the second column, these colors were assigned by SD proponents who applied this logic: Beige, Red, Orange, Yellow, and Teal follow the rainbow sequence (and refer to the "me" sides of the spiral); and Purple, Blue, Green, Turquoise, and Coral also follow the rainbow sequence (and refer to the "we" side of the spiral), but with the two staggered as they are, they are out of sequence with each other. Ken Wilber prefers to give these same stages the colors of the rainbow sequence, from infrared at the bottom to ultraviolet at the top, thus correlating them with the color scheme typically attributed to the modern-day understanding of the chakra system; that is my preference also.

- NAMES: In the third column, the top names in each box are from primary SD sources; the bottom names in each box are from secondary SD sources, a 'second opinion', you might say.
- STRUCTURE: The words in the fourth column refer to the socio-political structures preferred by people in the various stages. Note that there is an ever-widening quantitative circle of associates in the lower stages, and a difference in the qualitative type of structure in the higher stages.
- MOTIVES: The words in the fifth column declare the primary drive of people in the SD stages.
- CHARACTERISTICS: These words in the sixth column are borrowed from various SD sources. Notice that SD sources do not have much to say about Tier 3 because there are so few Old Souls to speak of.
- LEVEL: In the Michaelian teachings it is said that there are seven Levels within each Soul Age. The earlier three Levels are said to be Ordinal (focused on the self) by nature, and the later three Levels are said to be Cardinal (focused on the group) by nature. This shows up in the SD system as the "me" versus "we" alternation in the ascending spiral of psychological maturity.
- SOUL AGE: These are my preferred names for the five Soul Ages found in the Michaelian teachings; refer to Chapter 4M in Part Four, "Soul Age", for more information. The Sixth and Seventh Soul Ages are not recognized in SD or shown in this table. The words below the names of the Soul Ages are the names I have given to the Worldviews; refer to the chapter on Worldviews in Part Two of my book *The Tao of Personality*. That book is written for a mainstream self-help psychology audience. In it, I use the word Worldview in place of Soul Age. That same word is often used in SD texts to refer to its stages of maturity.

When I was first learning about SD, the correlation with SA was not immediately obvious. It seemed to me that the description of Red was most similar to Infant Soul, Blue to Baby Soul, Orange to Young Soul, Green to Mature Soul, and Yellow to Old Soul. Obviously that scheme has issues, because it leaves out half of the colors: Beige, Purple, Turquoise, Coral and Teal. As I learned more about SD, the correlation shown in Table 1Bh fell into place; all I had to do was make some adjustments in my understanding of SA. In other words, the empirical derivation of SD by academic psychologists became a higher authority than my decades-long misconceptions of the nature of some of the Ages. The key insight was the correlation of the swing of the spiral between "me" and "we" in SD, and the swing between the "early" Levels and the "late" Levels of SA. For instance, I had always regarded environmentalism as mostly a Mature Soul concern, but then I saw that concern for the well-being of the planet makes more sense as a product of the Green/We/late-Level Young Soul Age/late Zone Materialism Worldview. That concern for "we the planet" is present in all higher Colors/Ages/Worldviews, but it starts with late Level Young, where it is most energetic.

The primary proponents of Spiral Dynamics were almost certainly Mature Souls, aka "Tier 2". They recognized that there was a qualitative difference between Tier 1 (competitive by nature) and Tier 2 (cooperative by nature). However, they probably did not encounter many realized older souls, so they did not postulate Tier 3 stages of psychological maturity. Even if they had seen Tier 3 people or cultures, they might not have recognized them as such, because it is so difficult to understand and appreciate things that are 'over your head' in the spectrum of psychological maturity. A metaphysically-inclined, spiritually-aware philosopher, Ken Wilber, studied Spiral Dynamics, saw this deficiency, and postulated the existence of Tier 3, which corresponds to the Cardinal Soul Ages/Worldviews. Even Wilber, a Seventh Level Mature Scholar, does not have a clear picture of the nature of Tier 3, partly because it is 'over his head', but also because there are relatively few notable personages in those categories as exemplars. In Chapter 4M in Part Four, "The Seven Soul Ages", I attempt to describe those Cardinal Soul Ages in some detail.

The Michaelian teachings makes it clear that the same structure exists in many septenaries, and it separates them into such categories as Soul Age, Levels, and Life-Stages. SD seems to be less distinctive, more muddled, in its understanding. Nevertheless, I believe that Michaelian students could learn a lot from a study of SD.

Both SD and SA agree that there is a "bell curve" distribution of developmental stages and Soul Ages, with the most people in the middle (Orange–Green = Young Soul) and numbers lessening on either side of the hump, with the fewest in the lowest and highest stages/Ages.

It seems remarkable to me that Clare Graves was able to discern empirically the nature of these stages of psychological maturity, and have it be in reasonably good conformity with the Overleaf System, revealed via channeling. I believe he would have perceived more accurately if he had had a logical–mathematical theory to guide him, as the Overleaf System does. There are some differences between SD and SA, but it looks to me as if the two can be used to improve each other. A much fuller examination of Spiral Dynamics is found in a

chapter in my book *The Tao of Cosmogony*, along with other chapters on other developmental psychologies; there I attempt to reconcile all sources, using each to inform the others. Much work has already been done in the effort to correlate various developmental psychologies, and my work presumes to add the logical—mathematical theoretical foundation.

Of all the personality typologies and developmental psychologies that I have encountered so far, it seems to me that Spiral Dynamics is the most useful for understanding oneself, the world of humanity, and one's place in the world of humanity, so I recommend it heartily. However, if put to a vote, present day psychologists in general might prefer a different scheme; see next subsection.

The Big Five

This personality typology is the darling of the modern-day world of psychology because it was derived empirically, by scientific analysis. Hereinafter I refer to this personality typology as "B5".

Its empirical derivation makes this the typology preferred by modern psychologists. It was derived using "factor analysis" of personality descriptors in literature. That is, in factor analysis, the words used when describing personality are analyzed and synthesized to tease out the various outstanding features of personality types. Other personality typologies, such as we have reviewed above, are typically more theoretical and systematic. There is something to be said for both methods. In the minds of the general population, a systematic presentation lends an air of authenticity that presenting five unrelated traits does not have.

The following quotation is extracted from >https://en.wikipedia.org/wiki/Big_Five_personality_traits<.

The Big Five personality traits, also known as the five-factor model (FFM) and the OCEAN model, is a taxonomy for personality traits. It is based on common language descriptors. When factor analysis (a statistical technique) is applied to personality survey data, some words used to describe aspects of personality are often applied to the same person. For example, someone described as conscientious is more likely to be described as "always prepared" rather than "messy". This theory is based therefore on the association between words but not on neuropsychological experiments. This theory uses descriptors of common language and therefore suggests five broad dimensions commonly used to describe the human personality and psyche.

The five factors are:

- 1. Openness to experience (inventive/curious versus consistent/cautious)
- 2. Conscientiousness (efficient/organized versus easy-going/careless)
- 3. Extroversion (outgoing/energetic versus solitary/reserved)
- 4. Agreeableness (friendly/compassionate versus challenging/detached)
- 5. Neuroticism (sensitive/nervous versus secure/confident) [retrieved 09 July 2019]

Notice that I have bolded the first letter of each name of a trait to emphasize the acronym OCEAN. Another acronym for the B5 is CANOE. These acronyms can be used as a mnemonic, helping one to remember the names of the traits.

One of these dichotomies that we have seen heretofore is the Extroversion–Introversion spectrum, which appears in Jung, MBTI, and KTS. Superficially, it seems to be the one theoretical trait dichotomy that survived the empirical treatment.

Notice that each of the five is a spectrum from the presence of the trait to the absence of the trait. Therefore, so far as I can tell, Twoness is the only numeric principle that applies to this personality typology. That is, there are five dimensions of opposites: notice the use of *versus* in the table above. The types are 'black and white' at the extremes, but there are 'shades of gray' between the extremes, and self-reported testing reveals where a person is on the spectrum.

There is some professional critique of the B5 noted in the Wikipedia article, which I tend to agree with, in my very unprofessional opinion. Let's take a look at those criticisms and note how they relate to the Overleaf System. Underlined words are my emphasis:

It has been argued that there are limitations to the scope of the Big Five model as an explanatory or predictive theory. It has also been argued that measures of the Big Five account for only 56% of the normal personality trait sphere alone (not even considering the <u>abnormal personality</u> trait sphere).

The B5 system says little about "abnormal psychology", whereas the Overleaf System has the Negative Poles and the Chief Features, although I would rather refer to those as "unhealthy personality traits".

Psychopathology is generally outside the purview of personality typologies, including the Overleaf System. Even "personality disorders" are outside the margins of personality typologies, to say nothing of psychoses.

One common criticism is that the Big Five does not explain all of human personality. Some psychologists have dissented from the model precisely because they feel it neglects other domains of personality, such as religiosity, manipulativeness / machiavellianism, honesty, sexiness / seductiveness, thriftiness, conservativeness, masculinity / femininity, snobbishness / egotism, sense of humour, and risk-taking / thrill-seeking. Dan P. McAdams has called the Big Five a "psychology of the stranger", because they refer to traits that are relatively easy to observe in a stranger; other aspects of personality that are more privately held or more context-dependent are excluded from the Big Five.

Comparing that list of "domains of personality" with the Overleaf System, it looks to me as though the Overleaf System has most of them covered. The B5 system has picked out the most obvious traits, the most overt, the least subtle, the most superficial traits — and let it go at that. (Originally many other traits appeared in the factor analysis data, but they were lumped together and pared down to the "big" five.)

It has been noted that even though early lexical studies in the English language indicated five large groups of personality traits, more recent, and more comprehensive, cross-language studies have provided evidence for *six* large groups rather than five. These six groups form the basis of the HEXACO model of personality structure. Based on these findings it has been suggested that the Big Five system should be replaced by HEXACO, or revised to better align with lexical evidence.

The HEXACO model, which has six dimensions, is discussed briefly in the next subsection. The Overleaf System has seven dimensions, which provides an even broader view of personalities, if anyone is counting.

In many studies, the five factors are not fully *orthogonal* to one another; that is, the five factors are not independent. Orthogonality is viewed as desirable by some researchers because it minimizes redundancy between the *dimensions*. This is particularly important when the goal of a study is to provide a comprehensive description of personality with as few variables as possible.

"Orthogonal" means "at right angles; perpendicular". This factor explains why it is important to have orthogonality in personality studies as well as in geometry studies. This Wikipedia critique of the B5 system is very relevant to the Overleaf System in that the Overleaf System consists entirely of "orthogonalities" and "dimensions", aka Twoness and Threeness. These principles found in the structure and meaning of the Overleaf System are explained in a section further on.

A frequent criticism is that the Big Five is not based on any underlying *theory*; it is merely an empirical finding that certain descriptors cluster together under factor analysis. Although this does not mean that these five factors do not exist, the underlying causes behind them are unknown.

In my opinion, the Overleaf System 'shovels' the 'underlying' theory to us 'in spades', so to speak: the Personality of people mirrors the personality of the universe; the same phenomena exist and function in psychology as exist and function in physics and mathematics. One cannot get any more "underlying" than that; it goes deeper than alleged physiological underpinnings of personality traits, such as the ancient idea of four "humors".

Considering all of the above, it appears that the B5 is defective and deficient compared to the Overleaf System.

For your convenience, here is a table of the B5 personality typology with some descriptions borrowed from various sources. With this, you can make a preliminary judgment about whether you want to pursue it, to supplement the understanding that you may gain about yourself and of other people as provided by the Overleaf System.

| Table 1Bj — The BIG FIVE (O.C.E.A.N.) PERSONALITY TYPOLOGY | | | | |
|--|--|---|--|--|
| TRAIT | TRAIT HIGH LOW | | | |
| Openness | creative, intellectual, imaginative, curious, cultured, complex, original, prefers variety, liberal | down-to-earth, uncreative, conventional, uncurious, conservative, narrow-minded, ignorant, simple | | |
| Conscientiousness | hard-working, well-organized, punctual, ambitious, persevering, competent, disciplined, dutiful, achievement | negligent, lazy, late, aimless, quitting, disorganized, impulsive, unreliable, | | |

| Table 1Bj — The BIG FIVE (O.C.E.A.N.) PERSONALITY TYPOLOGY | | | | |
|--|---|--|--|--|
| TRAIT HIGH | | LOW | | |
| | striving, deliberate, careful, orderly | careless, forgetful | | |
| Extroversion | affectionate, joiner, fun-loving, passionate, warm, gregarious, assertive, sociable, excitement seeking, active, spontaneous, optimistic, talkative | shy, quiet, reserved, passive, solitary, moody, joyless, reserved, loner, quiet, sober, unfeeling | | |
| Agreeableness | soft-hearted, acquiescent, lenient, good-natured, trustworthy, friendly, considerate, generous, helpful, altruistic | ruthless, stingy, antagonistic, critical, irritable, unfriendly, selfish, suspicious, uncooperative, malicious | | |
| Neuroticism | neurotic, anxious, depressed, self-conscious, temperamental, self-pitying, emotional, oversensitive, vulnerable | calm, even-tempered, reliable, peaceful, self-satisfied, comfortable, unemotional, confident | | |

My comments on this table are as follows:

- Twoness is the only numerical principle that I see in this personality typology. That is, there is the presence of the trait and the absence of the trait, referred to as "high" and "low" in this table. The correlation with the Overleaf System is that presence = Cardinality and absence = Ordinality. Beyond that Twoness, it is not comfortable for me to correlate the B5 with the Overleaf System but I 'took a hit for the [Michaelian teachings] team' and I did it anyway; see below.
- This personality typology is rather amorphous compared to the personality typologies examined heretofore. It is the second most amorphous, exceeded only by the original four Temperaments of antiquity. It seems to me that both of these personality typologies put unrelated or barely-related traits with very broad and general descriptions into each box.
- Looking at the descriptions, one notices that some of the words are identical to or synonymous with various names of traits and descriptions of traits in the Overleaf System. It is a forced fit to make any kind of correspondence of the B5 to the Overleaf System. Other personality typologies reviewed heretofore have some structures that do more than hint at correlations with the Overleaf System.
- In my attempt to correlate B5 traits with the Overleaf System, I saw the best fit of the Agreeableness–Disagreeableness spectrum is with the Expression Axis traits of the Overleaf System, in this way: Agreeableness = the Cardinal Expression, aka Synthesis Process lineup of traits (Acceptance, Power, Idealist, Concept, Greed, Sage, Holism); Disagreeableness = Ordinal Expression, aka Analysis Process lineup of Traits (Rejection, Caution, Skeptic, Intellect, Renunciation, Artisan, Materialism). The Cardinal versus Ordinal sides of the Expression Axis are all about the friendly versus hostile dichotomy, not that terribly different from the Agreeableness–Disagreeableness spectrum.
- In my opinion, the next best fit of B5 traits with the Overleaf System is to correlate the Openness—Closedness spectrum with the Inspiration Axis Traits, in this way: Openness = the Cardinal Inspiration lineup of Traits (Growth, Passion, Spiritualist, Sympathy, Arrogance, Priest, Transpersonalism); Closedness = the Ordinal Inspiration lineup of Traits (Reduction, Repression, Stoic, Emotion, Lowliness, Server, Traditionalism). The Cardinal versus Ordinal sides of the Inspiration Axis are all about the optimistic versus pessimistic dichotomy, not that terribly different from the Openness—Closedness spectrum.
- In my opinion, the third best fit of B5 traits with the Overleaf System is to correlate the Extroversion—Introversion spectrum with the Action Axis Traits, in this way: Extroversion = the Cardinal Action lineup of Traits (Dominance, Aggression, Realist, Excitation, Impatience, King, Messianism); Introversion = the Ordinal Action lineup of Traits (Submission, Perseverance, Cynic, Motion, Martyrdom, Warrior, Primitivism). The Cardinal versus Ordinal sides of the Action Axis are all about the active versus passive dichotomy, not that terribly different from the Extroversion—Introversion spectrum. The extrovert—introvert factor is found in many personality typologies, but I would say that it is implicit rather than explicit in the Overleaf System. Correlating it with Action Axis, and/or with Cardinal—Ordinal in general, is about as close as I can get.

- The correlation of B5 with Overleaf System in the above three bullet points is obviously very tenuous, but if one were to move many of the B5 descriptive words into different categories, the correlations proposed with Action, Inspiration, and Expression would make more sense. But, of course, this is goofy, because superficially the two personality typologies really do not have much in common.
- As for the Conscientious–Unconscientious spectrum of the B5, I would put that in the "character traits" category rather than the "personality traits" category. I have yet to figure out how to correlate it to some specific feature of the Overleaf System, but there is not a compelling reason to try to do so because, in my way of thinking, character is a different thing from personality. If forced to make a correlation, I have this idea: because I regard character development as a function of developmental psychology, I see a vague correlation of the Conscientious–Unconscientious spectrum as on the Soul Age spectrum: the older the soul, the more conscientious the personality becomes.
- As for the Neuroticism–Stable spectrum of the B5, I would put that in the False Personality category as exemplified in the Negative Poles and the Chief Features of the Overleaf System; the less Neurotic/more Stable a person is, the fewer Negative Poles and Chief Features the person manifests.

I see the B5 as mostly incompatible with the Overleaf System, but it can still serve as a supplement and/or complement to the Overleaf System for Michaelian students who are truly studious about personality typologies. It looks like an ambiguous and disordered way of looking at people, so it does not satisfy the level of clarity and order demanded by my own personality type.

Let's now take a look at a derivative of the B5 to see if it improves the systematics of empirical personality typologies.

HEXACO

The HEXACO model was mentioned above. According to the developers of the HEXACO model of personality factors, their studies indicate that the Big Five should have at least one more dimension, and those five dimensions need some tweaking. One can read about that in this Wikipedia article: >https://en.wikipedia.org/wiki/HEXACO_model_of_personality_structure<. Here is a quotation borrowed from that article:

- Honesty–Humility (H):
 - Facets: Sincerity, Fairness, Greed Avoidance, Modesty
 - Adjectives: Sincere, honest, faithful, loyal, modest/unassuming versus sly, deceitful, greedy, pretentious, hypocritical, boastful, pompous
- Emotionality (E):
 - Facets: Fearfulness, Anxiety, Dependence, Sentimentality
 - Adjectives: Emotional, oversensitive, sentimental, fearful, anxious, vulnerable versus brave, tough, independent, self-assured, stable
- **eX**troversion (X):
 - Facets: Social Self-Esteem, Social Boldness, Sociability, Liveliness
 - Adjectives: Outgoing, lively, extroverted, sociable, talkative, cheerful, active versus shy, passive, withdrawn, introverted, quiet, reserved
- Agreeableness (A):
 - Facets: Forgivingness, Gentleness, Flexibility, Patience
 - Adjectives: patient, tolerant, peaceful, mild, agreeable, lenient, gentle versus ill-tempered, quarrelsome, stubborn, choleric
- Conscientiousness (C):
 - Facets: Organization, Diligence, Perfectionism, Prudence
 - Adjectives: organized, disciplined, diligent, careful, thorough, precise versus sloppy, negligent, reckless, lazy, irresponsible, absent-minded
- Openness to Experience (O):
 - Facets: Aesthetic Appreciation, Inquisitiveness, Creativity, Unconventionality

 Adjectives: intellectual, creative, unconventional, innovative, ironic versus shallow, unimaginative, conventional [retrieved 11 July 2019]

To me, the HEXACO dimension of Honesty–Humility seems more like character traits than personality traits. This is the same opinion that I have for the Conscientiousness–Unconscientiousness dimension in HEXACO and B5: these are character traits. However, I would say that the absence of good character shows up in the Overleaf System as 49 Negative Poles and 7 Chief Features.

Most of the same criticisms of the Big Five model apply to the HEXACO model, but perhaps less so because it is a bit more broad in scope and the developers say that they made some improvements. From my point of view, interested as I am in the systematic component of personality typologies, I see still no principle other than Twoness in the HEXACO model. Both B5 and HEXACO just seem so lacking in definition and depth of understanding compared to the Overleaf System. An astute, knowledgeable Michaelian student could probably look at a person's Overleaf Chart array and place that person on the five B5 and six HEXACO dimensions, but not the other way around. This tells me that the Overleaf System is the broader system. Early in my Ouija Board endeavor doing Overleaf Charts, I asked for it to tell me if people were habitually in the Positive Pole or in the Negative Pole of whatever Trait. If this were done now, it would also place people in the B5 Neuroticism spectrum and the HEXACO Honesty–Humility spectrum.

The empirically-based personality typologies such as the B5 and HEXACO have the advantage that they attempt to read common personality types out of the data rather than read into the data some beautiful abstract theory of types. The disadvantage is that empirical endeavors yield a bit of an amorphous, ambiguous mess that lacks a pattern. The B5 and HEXACO personality typologies leave a lot to be desired; a lot of dimensions of personality are left out. They have no beauty or elegance. Therefore I find them unsatisfying compared to the Overleaf System.

But let's not stop there.

NEO Personality Inventory

I am not the only one who has found the B5 to be unsatisfactory because of ambiguity and deficiency. Others have expanded the B5 by adding six subcategories to the five, using the acronym NEO, for Neuroticism—Extroversion—Openness. Refer to >https://en.wikipedia.org/wiki/Revised_NEO_Personality_Inventory<. I have little to say about it beyond redrawing a table found on that website, and then commenting on the table:

| | Table 1Bk — NE | O PERSONA | LITY INVENTORY | |
|-------------------------|--------------------|------------|---------------------|----------------------|
| NEUROTICISM | EXTROVERSION | OPENNESS | AGREEABLENESS | CONSCIENTIOUSNESS |
| Anxiety | Warmth | Fantasy | Trust | Competence |
| Hostility | Gregariousness | Aesthetics | Straightforwardness | Order |
| Depression | Assertiveness | Feelings | Altruism | Dutifulness |
| Self-consciousness | Activity | Actions | Compliance | Achievement Striving |
| Impulsiveness | Excitement Seeking | Ideas | Modesty | Self-discipline |
| Vulnerability to Stress | Positive Emotion | Values | Tender-mindedness | Deliberation |

My comments on this table are as follows:

- There seems to be no correlation of traits in the same row in different columns.
- There is still no Twoness principle beyond the presence–absence dichotomy.
- Many of these traits fit into the structure of the Overleaf System even though there is so little structure here. So why not prefer a structured personality typology?
- This personality typology is more comprehensive and definitive than the B5, but in my view, it is still inadequate and unsatisfying because it lacks system and pattern.

The previous three personality typologies reviewed in this chapter are all based on "factor analysis". The thought occurred to me: what if, instead of doing a factor analysis on personality descriptor words in

published literature, as was done with these three personality typologies, somebody did a factor analysis on all of the personality typologies? I say this because I see a lot of the same descriptive words over and over again. A factor analysis would perhaps tease out the traits that seem to matter, and would perhaps tease out the structure that best explains the data.

Psychosynthesis

This subsection introduces the reader to the work of an Italian psychiatrist name Roberto Assagioli, who lived from 1888 to 1974. He was originally influenced by Sigmund Freud and Carl Jung, but then he went off on his own way, beyond them. Assagioli named his method of psychotherapeutic knowledge and techniques "psychosynthesis" to emphasize the contrast with Freud's "psychoanalysis". Assagioli's work was subsequently built upon by another psychotherapist, Kenneth Sorensen. Part of their system of understanding the human condition involves a personality typology that was built upon Freud's and Jung's work in the early 20th Century, and also the channeling in the middle of the 20th Century of a Neo-Theosophist named Alice Bailey, whose work is discussed here and elsewhere in this *History* book. Both Assagioli and Sorensen are therefore "transpersonal" psychologists, considering that they were, and are, open to the possibility of a supernatural component of the human psyche.

There is information about Assagioli and psychosynthesis on Wikipedia at these two following internet links: >https://en.wikipedia.org/wiki/Roberto_Assagioli< and >https://en.wikipedia.org/wiki/Psychosynthesis<. Those articles do not describe what I want told here in this subsection. For that information, I refer the reader to Sorensen's website >https://kennethsorensen.dk/en/<. There you will see information about "the seven types". Michaelian students who read the quotation below will immediately recognize the seven Roles and seven Centers. What the typical Michaelian student might not realize is that these descriptions of the seven types were not taken from the Michaelian teachings; they were taken from the Alice Bailey channeled teaching, which preceded the Michaelian teachings by a few decades. Sorensen does not mention that fact in the material quoted below, but he does mention it elsewhere on his website.

The following quotations were extracted from >https://kennethsorensen.dk/en/what-is-the-seven-types/<. My correlation of "intelligences" with Roles and (my names for the) Centers is shown in brackets. As per the Alice Bailey teaching, the seven types are presented in a sequence in the reverse order from the way they are typically numbered in the Michaelian teachings, so I have provided numbers in brackets to help Michaelian students see the correlation.

Here is an overview of the seven types seen as seven intelligences:

- [7 = King = Excitation] The dynamic type expresses itself as will, purpose and ambition. Leaders, heroes, pioneers are all characterized by this kind of energy, and they radiate courage and determination.
- [6 = Priest = Sympathy] The sensitive type radiates feeling, empathy and insight. Teachers, counselors and healers express this energy, and they come across as friendly and compassionate.
- [5 = Sage = Concept] The mental type radiates intelligence, perspective and curiosity. Thinkers, communicators and merchants belong to this type, and they come across as intelligent and sharp.
- [4 = Scholar = Impulse] The creative type expresses imagination, empathy and aesthetics. Artists, mediators and therapists are colored by this energy, and they radiate humor and spontaneity.
- [3 = Artisan = Intellect] The analytical type radiates logic, rationality and knowledge. Researchers, analysts and scientists belong to this type and come across as serious and reliable.
- [2 = Server = Emotion] The dedicated type shows passion, idealism and activism. Activists, romantics and advocates are influenced by this energy, and they radiate enthusiasm and sincerity.
- [1 = Warrior = Motion] The practical type expresses action, organization and practicality. Administrators, project managers and entrepreneurs are influenced by this energy, and they radiate efficiency and action.

Chapter 1F, "The Seven Human Temperaments", presents the Alice Bailey material at length. In that chapter I point out that there is some confusion in the description of the Artisan and the Scholar types, which is what you see in the above quotation; some descriptions ascribed to one should have been ascribed to the other, and *vice versa*. Also, Sorensen switched the descriptions of the 6-Priest and the 2-Server types; see below.

The referenced website continues:

What's the source of these energies from a psychological perspective? We assume that the seven energies arise in humans because of the seven psychological functions that govern human life.

The Swiss psychiatrist C. G. Jung (1875-1961) proposed a theory of four psychological functions that today is widely used, especially in the field of personality typology. The four functions are: thought, feeling, intuition and sensation. We understand ourselves and the world through these four functions.

These four "functions" were discussed in the previous subsection on the personality typology formulated by Jung. An astute Michaelian student will recognize that "sensation" corresponds to the Motion Center; "feeling" corresponds to the Emotion Center; "thought" corresponds to the Intellect Center; "intuition" corresponds to the Impulse Center. A knowledgeable Michaelian student will recognize that these four functions were also part of the Gurdjieffian teaching, which was contemporaneous with Assagioli and Jung in the first half of the 20th Century; this is discussed further on, in Chapter 1D, "The Seven Centers".

The referenced website continues:

The Italian psychiatrist Roberto Assagioli (1888–1974) suggests seven psychological functions. Assagioli's model represents the basis for the The Seven Types. These seven functions enable the intelligence and consciousness needed to navigate through life.

There are seven brain centers and intelligences that convey and produce the different psychological qualities.

Our starting point is that all humans possess will, feeling, thought, imagination, logic, passion, and action.

Besides what I regard as some confusion in Psychosynthesis in the description of what the Michaelian teachings refers to as Scholar and Artisan, I suggest that there is also some confusion in the terms that Psychosynthesis uses for the "psychological qualities" listed here. I suggest that "thought" and "logic" go together, "feeling" and "passion" should be switched, "imagination" should be moved, and "intuition" would be added in the middle. Thus, in terms of Number–Role–Center, "will" = 7–King–Excitation, "passion" = 6– Priest–Sympathy, "imagination" = 5–Sage–Concept, "intuition" = 4–Scholar–Impulse, "thought/logic" = 3– Artisan–Intellect, "feeling" = 2–Server–Emotion, and "action" = 1–Warrior–Motion.

The referenced website continues; keep the above correlation in mind as you read the following:

No intuition? According to Jung and Assagioli, intuition is an important psychological function. We agree with this; however we see intuition as a *transpersonal* function. In this short introduction we have chosen to focus solely on the psychology of the *personality*. In chapter three of *The Seven Types* [a book authored by Sorensen], you can read about Roberto Assagioli's seven psychological functions and how they underline the seven types.

The seven psychological functions of The Seven Types are:

WILL: Your ability to make decisions and choices. The will says something about the intention behind an action.

FEELING: Your ability to sense what is happening in yourself and others on an emotional level. Feelings communicate whether the experience is pleasant or unpleasant.

THOUGHT: Your ability to reflect, see and understand connections. Through thought you understand your experience using words and concepts.

IMAGINATION: Thought and feeling together allows you to imagine what you do not yet know or have not yet seen. With the imagination you can create something new that brings with it new possibilities.

LOGIC: Will and thought together produces analytical, focused, and penetrating thinking, enabling you to take strategic action. Logic discerns between what is right and wrong, true and untrue based logical thinking.

PASSION: Feeling and will together makes you goal oriented and ambitious, driving you to achieve something important.

ACTION: Will, feeling, and thought together triggers concrete practical action aimed at results.

[>https://kennethsorensen.dk/en/what-is-the-seven-types/< — retrieved 23 December 2020]

These seven steps are a narrative story that is slightly off because the correlation with the Roles/Centers is off, as partly explained above and below.

Following the above–quoted text are three graphic images that are not suitable for inclusion here, so I transcribed their contents into the following table.

| | Table 1Bl — PSYC | HOSYNTHESIS | |
|---|--|---|-------------------------|
| NAME | ON A GOOD DAY [Positive Pole] | ON A BAD DAY [Negative Pole] | ROLE CENTER |
| 1. WILL DYNAMIC TYPE THE HERO | POWERFUL, Independent, Commanding, Decisive, Inspirational, Self-controlled, Open- Minded, Principled, Courageous, Truthful, Strong, Driven | AGGRESSIVE, Grandiose, Domineering, Power-hungry, Controlling, Reckless, Impatient, Arrogant, Egotistical, Stubborn, Oppressive, Restless | 7. KING EXCITATION |
| 2. FEELING SENSITIVE TYPE THE ILLUMINATOR | LOVING, Understanding, Self-aware, Intuitive, Accepting, Trustworthy, Calm, Cooperative, Patient, Magnetic, Faithful, Gentle | SELF-PITYING, Deluded, Seductive, Fearful, Avoidant, People-leasing, Vague, Weak, Sentimental, Clingy, Overindulgent, Passive | 6. PRIEST SYMPATHY |
| 3. THOUGHT MENTAL TYPE THE GENIUS | INNOVATIVE, Efficient, Intelligent, Curious, Communicative, Practical, Cost-effective, Discerning, Objective, Reflective, Strategic, Broad-Minded | MANIPULATIVE, Critical, Cold, Suspicious, Opportunistic, Disorganized, Restless, Dishonest, Absent-minded, Indecisive, Hyperactive, Prideful | 5. SAGE CONCEPT |
| 4. IMAGINATION CREATIVE TYPE THE ARTIST | INTUITIVE, Insightful, Inspiring, Artistic, Wise, Candid, Creative, Poetic, Peacemaking, Spontaneous, Imaginative, Playful | MELODRAMATIC, Lazy, Narcissistic, Exaggerating, Appeasing, Ingratiating, Impractical, Seductive, Anxious, Suspicious, Unpredictable, Combative | 4. SCHOLAR IMPULSE |
| 5. LOGIC ANALYTIC TYPE THE EXPLORER | INVENTIVE, Meticulous, Truthful, Scientific, Discriminating, Precise, Practical, Patient, Focused, Observant, Independent, Rational | HYPER-CRITICAL, Rigid, Prejudiced, Arrogant, Judgmental, Dogmatic, Suspicious, Insensitive, Awkward, Boring, Miserly, Obsessive | 3. ARTISAN INTELLECT |
| 6. PASSION DEDICATED TYPE THE VISIONARY | PASSIONATE, Enthusiastic, Brave, Romantic, Sincere, Persuasive, Persistent, Visionary, Loyal, Humble, Adventurous, Optimistic | FANATICAL, Domineering, Dogmatic, Masochistic, Naive, Superstitious, Jealous, Impractical, Conflicted, Aggressive, Manic, Militant | 2. SERVER EMOTION |
| 7. ACTION PRACTICAL TYPE THE CREATOR | PRODUCTIVE, Elegant, Conscientious, Dignified, Diplomatic, Industrious, Disciplined, Methodical, Systematic, Magnificent, Organized, Skillful | CONTROLLING, Ritualistic, Crystallized, Boastful, Scheming, Intransigent, Greedy, Neurotic, Perfectionistic, Compulsive, Pompous, Conforming | 1. WARRIOR MOTION |

My comments on this table are as follows:

- NAME: The first column shows the numbers, functions, descriptors, and monikers given by Sorensen to the seven personality types. Note that the number sequence is the opposite from that used in my version of the Michaelian teachings, which is shown in the fourth column.
- ON A GOOD DAY: The second column shows some personality traits that Sorensen ascribed to the seven types. This is equivalent to the Positive Poles of the Traits in the Overleaf System. Notice that some of the same words and synonymous words in this column are used more than once, ascribed to different types. This is not my preference; I regard it as confusion. When I compare these words with the fourth (Role/Center) column, I notice that many of them should have been ascribed to other types. This is not my preference; I regard it as confusion.
- ON A BAD DAY: The third column shows some personality traits that Sorensen ascribed to the seven types. This is equivalent to the Negative Poles of the Traits in the Overleaf System. Notice that some of the same words, and similar words, in this column are used more than once, ascribed to different types. This is not my preference; I regard it as confusion. When I compare these words with the fourth column (Role/Center), I notice that many of them should have been ascribed to other types. This is not my preference; I regard it as confusion.
- ROLE/CENTER: The fourth column shows the numbers and the names of the Roles and the Centers
 that should correspond to the seven types given by Sorensen, except that, unfortunately, Sorensen
 confused the descriptions considerably, switched Server with Priest, and ambiguated Scholar and
 Artisan.

- These words used by Sorensen are all words that I would use to describe the Roles and Centers, but I would move most of them to correlate differently. Refer to my book *The Tao of Personality* for an explanation of my rationale.
- Besides switching Server and Priest, and besides confusing Scholar and Artisan, the most common error that I see in this list is that characteristics that are ascribed to one type often belong to the opposite type in terms of King versus Warrior, Priest versus Server, and Sage versus Artisan. As you can see in Chapter 1F, "The Seven Human Temperaments", the descriptions given for these seven types are not as confused and ambiguous as the descriptions given by Sorensen. This leads me to suggest that Sorensen did not understand the original Alice Bailey source material very well, and/or the secondary source material of Geoffrey Hodson quoted in Chapter 1F, "The Seven Human Temperaments". The Michaelian teachings is much closer to the Alice Bailey material than Sorensen is. Sorensen did not have the distinct clarity that the Overleaf System provides. I suggest that if Assagioli and Sorensen had known of the logical and mathematical structure of the Overleaf System, they would have had less ambiguity and less confusion in their descriptions.

Anyway, moving right along, besides the MBTI and related personality typologies, and the B5 and related personality typologies, the other personality typology that has gained a lot of traction in the popular consciousness is the Enneagram. It has not been relegated to a subsection in this chapter; it gets a section of its own, the next section. It is more relevant to the Overleaf System than the other personality typologies.

Enneagram

In this section we explore the so-called "Enneagram". This particular personality typology is different enough from those reviewed previously that I gave it a lengthy section of its own, with some subsections. It also has a minor presence in the Michaelian teachings, thanks to the Gurdjieffian teachings that founding members of the original Michaelian group were familiar with. Therefore, there is a real sense in which it can be regarded as a precursor to the Overleaf System, more so than the other personality typologies reviewed previously.

Although the Enneagram was not revealed by the Michaels, it found its way into the Michaelian teachings because of the association that some founding original Michaelian group members had with a local Bay Area Gurdjieff group that called itself the Fellowship of Friends. They used the Enneagram as a systematic teaching tool, along with several other structural components that originated with Gurdjieff. We know this because — even though the word Enneagram does not show up in the transcriptions of the original Michaelian group — there were documents from the Fellowship of Friends among those transcriptions that did refer to and show the Enneagram. These documents did not escape from obscurity into the Michaelian teachings community until the mid-1990s; Yarbro does not mention the Enneagram in any of her books. So how did the Enneagram find its way into the Michaelian teachings? Even though José Stevens, a prominent member of the present-day Michaelian teachings community, was not a member of the original Michaelian group, he had access to those original Michaelian group documents via a coworker who was a member of the original Michaelian group. It was he who introduced the Enneagram to the post-original Michaelian group Michaelian teachings community in his 1986 book *The Michael Handbook*. From there, knowledge of the Enneagram and its relationship to the Michaelian teachings spread to other Michaelian teachings books and to other groups of Michaelian students.

However, there is another important reason to discuss the Enneagram in this chapter: I perceive that it is a better representation of Tao's Template than other personality typologies discussed in this chapter. The Enneagram showcases the same numerical principles that are found in Tao's Template, and hence the

Overleaf System. And the Enneagram has been used for all of the same things that the Overleaf System has. However, my contention — argued and evidenced in this section — is that the Enneagram is a very primitive and distorted version of Tao's Template, and that it should be replaced by the Overleaf System. In my view, whatever value the Enneagram has, it has it to the (limited) extent that it embodies 7 and expresses Tao's Template. It is not a faithful instantiation of Tao's Template as the Overleaf System is. To demonstrate this requires some explanations.

The Enneagram is a graphic figure with nine numbered nodes equidistant around the perimeter of a circle; the nodes are connected by lines in two patterns: first a triangle, and second, what I refer to as a "sextangle". The bare figure is shown at

the right of this paragraph. There are several other versions of this figure (some of them shown in subsections further on) because the Enneagram has been used in several contexts and for several purposes by different groups.

In this figure, an astute Overleaf System student will find components of Tao's Template as represented by the numerical principles of Tao's Template: Oneness (the circle); Twoness (alleged Polarity of left side and right side); Threeness (the triangle of lines connecting nodes 3–6–9); Sevenness in the form of the sextangle, which is created by the lines connecting the six nodes numbered 1–4–2–8–5–7..., which is the repeating decimal expansion of the fraction 1/7. The principle of Sequence is represented in that repeating number, but it is also represented by the numbers 1 through 9 around the perimeter of the circle. (Students of the Enneagram read a lot of insights into these three types of sequencing.) This is the extent of the Enneagram's resemblance to Tao's Template so far as I have been able to discern and discover by reading and pondering. It embodies the same numerical principles as the Overleaf System, but in an inferior way, as we see further on, where I present the structure of the Overleaf System.

Explanations of the Enneagram are found in many books and internet websites. It has reached a much larger constituency than have the Michaelian teachings and the Overleaf System. Many individuals use it to help people understand themselves and other people and their relationships — the same as we do with the Overleaf System — and psycho-therapists use it in their clinical practice. People resonate with the information. The fact that the Enneagram has found such beneficial utility indicates to me that it represents truth as a manifestation of the numerical principles of Tao's Template, and therefore it has value. However, as I said above, my belief is that the *graphic* element of the Enneagram, as shown above and as shown and described below, is not an accurate or complete representation of how the archetypal elements of Tao's Template relate to each other; therefore the image is a distortion, and therefore the application in the human realm will perhaps be distorted. The components — Oneness—Twoness—Threeness—Sevenness—Sequence — are solid truths, but my belief and assertion is that the Overleaf System is more sensible and defensible. It has a way of graphically representing these same truths in a more logically and mathematically systematic way.

Thus, the Enneagram can be regarded as a historical precursor to the Overleaf System, not only because it preceded the Overleaf System in time, but also because it prefigured some numerical components of the Overleaf System, all in one graphical representation. However, the Overleaf System has what the Enneagram does not: a logical and mathematical derivation from First Principles. The Overleaf System is the proper successor to the Enneagram, which can now be regarded as a primitive, preliminary, provisional precursor that prefigured the Overleaf System.

This section on the Enneagram contains several subsections. The development of the Enneagram is convoluted and contradictory; it's a complicated subject, and deserves a treatment more thorough than what was given to the preceding personality typologies.

The Fourth Way Enneagram

This is another one of those personality typologies that has its origin in a metaphysical context; that is, among spiritual seekers, so far as we know. The origins of the Enneagram are obscure (there are several proposals), but it is known that a couple of esotericists, named Georges Gurdjieff and Peter Ouspensky (mentioned numerous times in this *History* book), in the first half of the 20th Century, are responsible for making it widely known in esoteric circles. Beyond esoteric groups, it has found its way into the consciousness of the general public as part of a spiritual path and/or a psychotherapy and/or a self-help psychology. However, in the Gurdjieffian teachings, the Enneagram was not about personality; it was about cosmology — the existence and function of the universe, in terms of Being and Doing. You find this interesting fact, relevant to the Overleaf System, in the following quotation from a Wikipedia article, >https://en.wikipedia.org/wiki/Fourth_Way_enneagram<:

The Fourth Way enneagram is a figure published in 1949 in *In Search of the Miraculous* by P. D. Ouspensky, and an integral part of the Fourth Way esoteric system associated with Georges Gurdjieff. The term "enneagram" derives from two Greek words, *ennea* (nine) and *gramma* (something written or drawn).

The enneagram according to Gurdjieff shows the "Law of Seven" and the "Law of Three" united and so some explanation of these laws is necessary here. The Law of Seven or law of octaves, according to which phenomena evolve in seven steps; and the Law of Three, according to which phenomena are produced by three forces, are presented by Gurdjieff as global laws appearing on all scales and essential to his cosmology. This cosmology offers a view of how the world operates ... [retrieved 11 July 2019]

There follows a long discussion about Gurdjieff's teaching on the meaning of the Enneagram in his cosmology — something about how the ascending notes of the music scale relate to human spiritual evolution. However, Gurdjieff's interpretation of the Enneagram in music is not relevant to this chapter or even to the Michaelian teachings; that the Enneagram has a *cosmic* significance because it contains some elements of Tao's Template is relevant. Refer to Chapter 1K below, "Gurdjieff's Law of Three", and Chapter 1L below, "Gurdjieff's Law of Seven", for those portions of Gurdjieff's teaching about the Enneagram that are in fact relevant to the Michaelian teachings and the Overleaf System.

One use of the Fourth Way Enneagram is to explain how it integrates another aspect of the Gurdjieffian teachings, other than the Law of Three and the Law of Seven. As we all know, a component of the Gurdjieffian teachings, as well as the Overleaf System, has to do with Centers as noted in personalities. Some expositors of

the Enneagram of Personality (see next subsection) bring the notion of Centers into the Enneagram, such as the graphic image at right. Other images found on the internet have different names for the triad of Ordinal Centers, but this one shows the names that Gurdjieff used. The Instinctive(-Moving) Center is said to apply to personality types at nodes 8, 9, and 1; the Emotional Center is said to apply to personality types at nodes 2, 3, and 4; the Intellectual Center is said to apply to personality types at nodes 5, 6, and 7. Several versions of this graphic indicate that these attributes are common knowledge among Enneagram aficionados.

This way of grouping numbered nodes adds a third type of Threeness to the Enneagram. The three Threenesses are: 1) the triangle 3–6–9; 2) the three Centers; 3) Nineness itself.

More is said about a variation of this Fourth Way Enneagram in the subsection on "Enneagram of Body Types" further on. There, the division of the nine into three is significant.

In the Wikipedia article, there are a number of claims about the origins of the Enneagram preceding Gurdjieff, but those do not concern me or my books. What does concern us in this chapter is the Enneagram of Personality; we examine that in the next subsection. It has a developmental history separate from the developmental history of the Fourth Way Enneagram.

The Enneagram of Personality

A number of people, starting in the 1950s, went way beyond Gurdjieff in applying the Enneagram, which — so far as I can tell — was not originally applied to a system of personality traits. Here is the story of how that happened, as told in this Wikipedia entry: >https://en.wikipedia.org/wiki/Enneagram_of_Personality<.

The Enneagram of Personality, or simply the Enneagram (from the Greek words ἐννέα [ennéa, meaning "nine"] and γράμμα [grámma, meaning something "written" or "drawn"]), is a model of the human psyche which is principally understood and taught as a typology of nine interconnected personality types. Although the origins and history of many of the ideas and theories associated with the Enneagram of Personality are a matter of dispute, contemporary Enneagram claims are principally derived from the teachings of Oscar Ichazo and Claudio Naranjo. Naranjo's theories were partly influenced by some earlier teachings of George Gurdjieff. As a typology the Enneagram defines nine personality types (sometimes called "enneatypes"), which are represented by the points of a geometric figure called an enneagram, which indicate connections between the types. There are different schools of thought among Enneagram teachers, therefore their ideas are not always in agreement.

The Enneagram of Personality has been widely promoted in both business management and spirituality contexts through seminars, conferences, books, magazines, and DVDs. In business contexts it is generally used as a typology to gain insights into workplace interpersonal dynamics; in spirituality it is more commonly presented as a path to higher states of being, essence, and enlightenment. Both contexts say it can aid in self-awareness, self-understanding and self-development.

There has been limited formal psychometric analysis of the Enneagram and the peer-reviewed research that has been done has not been widely accepted within the relevant academic communities.

G. I. Gurdjieff is credited with making the enneagram figure commonly known (see Fourth Way enneagram). He did not, however, develop the nine personality types associated with the Enneagram. Oscar Ichazo is generally recognized as the principal source of the contemporary Enneagram of Personality which is largely derived from some of Ichazo's teachings, such as those on ego-fixations, holy ideas, passions and virtues. The Bolivian-born

Ichazo began teaching programs of self-development in the 1950s. His teaching, which he calls "Protoanalysis", uses the enneagram figure among many other symbols and ideas. Ichazo founded the Arica Institute which was originally based in Chile before moving to the United States and coined the term "Enneagram of Personality".

Claudio Naranjo is a Chilean-born psychiatrist who first learned about the Enneagram of Personality from Ichazo at a course in Arica, Chile. He then began developing and teaching his own understanding of the Enneagram in the United States in the early 1970s, influencing others including some Jesuit priests who adapted the Enneagram for use in Christian spirituality. Ichazo disowned Naranjo and the other teachers on what he felt were misinterpretations and uses of the Enneagram. Among Naranjo's early students there are also differing understandings of Enneagram theory. Numerous other authors, including Helen Palmer, Don Richard Riso, Richard Rohr and Elizabeth Wagele, also began publishing widely read books on the Enneagram of Personality in the 1980s and 1990s. [retrieved 11 July 2019]

The fact that Enneagram teachers disagree among themselves is a mark against its ultimate validity. This is a situation that is mitigated in the case of the Process/Aspect System by the fact that the Process/Aspect System is ultimately derived from the unambiguous First Principles of Tao's Template, which has a solid logical and mathematical structure.

A little research on my part revealed the alleged origin of the Enneagram of Personality, as documented at this website, >http://natcath.org/NCR_Online/documents/ennea2.htm<:

Ichazo claimed to have discovered the personality type meaning of the enneagram while in some kind of ecstatic state or trance under the influence of some spirit or angelic being: the Archangel Gabriel, the "Green Qu'Tub," or Metatron, the prince of the archangels (the accounts vary).

So, the alleged source of the Enneagram of Personality is said to be revealed knowledge, not unlike the Overleaf System is. Many others, documented in the Wikipedia article and elsewhere, adopted and adapted it to suit their sensibilities. However, my research has not yet revealed if there is any underlying logical and/or mathematical rationale supporting the assignment of personality traits to the numbers of the nodes, such as there is with the structure of the Overleaf System. For this reason, I hesitate to call the Enneagram a "system" of personality traits. One alleged structure — which I find is not obvious — is the Threeness (Moving, Emotional, Intellectual Centers) illustrated with the diagram in a following subsection with respect to Body Types, but I have not seen that applied to the Enneagram of Personality. Various teachers of the Enneagram impute — read in — other marvelous meaningful features even if there isn't a logical and/or mathematical substructure to the Enneagram as there is with the Overleaf System. So far as I can tell, these meanings are not read out of the Enneagram structure except, for instance, narratives have been invented, stories have been created, about how to regard the characteristics assigned to the nodes of the three sequences (3-6-9 and 1-4-2-8-5-7 and 1-2-3-4-5-6-7-8-9) as steps in processes for self-discovery — or something like that. In my opinion, this inductive reasoning is less reliable than the deductive reasoning used to generate the Overleaf System, via an algorithm, from the First Principles of Tao's Template. (Refer to this Wikipedia article, >https://en.wikipedia.org/wiki/Inductive reasoning<, for an explanation of the difference between inductive and deductive reasoning.)

So far as I can tell, there is no inherent underlying archetypal meaning in the Enneagram Types; they are a collection of traits — to me it looks like a somewhat random collection, compared to some of the other personality typologies reviewed in this chapter. In that sense, it manifests the Allness principle of Tao's Template. For instance, the Enneagram is not similar to the MBTI as understood by Keirsey reviewed in a previous section, where the typology is systematically, logically developed from beginning to end. Take a look at Table 1B1 three paragraphs down, redrawn from a table on the Wikipedia page referenced above, and note the lack of Twoness or Threeness in any of the various sources.

The graphic image nearby shows the primary names that have been ascribed to the nine nodes around the

The Geometric Symbol of the Enneagram Personalities

perimeter of the circle. You can see the source of these names in Table 1B1 below, near the bottom of the table. Presumably, the lines connecting the nodes have a meaning in the Enneagram of Personality derived from meanings that they had in the Fourth Way Enneagram, but I have not pursued that knowledge, and it does not seem relevant to this chapter or to the Michaelian teachings.

This website, >https://www.enneagraminstitute.com/the-traditional-enneagram<, has a history of, and an introduction to, the Enneagram as originally revealed by Oscar Ichazo. I believe the information would be very helpful to anyone wanting to know more about this particular personality typology. See if you can match the standard Enneagram of Personality with Ichazo's diagrams. These are named Virtues, Passions, and Holy Ideas. Notice that the Virtues and the Passions are antithetical to each other, hence Twoness. The Enneagram Personality types are derived from the third diagram, the Holy Ideas:

The following table, redrawn by me, was found at >http://www.enneagram-monthly.com/the-enneagram-of-life-paths.html<. As usual, my comments below the table explain to you what the table means to me.

| | Table | e 1Bm — HO | OW DIFFE | RENT AUTI | HORS DES | CRIBE ENN | NEAGRAM | TYPES | |
|---|---------------------------------------|-------------------------------------|---|---|--|------------------------------------|---|---------------------|---|
| AUTHOR | TYPE 1 | TYPE 2 | TYPE 3 | TYPE 4 | TYPE 5 | TYPE 6 | TYPE 7 | TYPE 8 | TYPE 9 |
| Beesing, Nogosek, & O'Leary (1984) | Avoids Anger | Avoids Need | Avoids Failure | Avoids Ordinariness | Avoids Emptiness | Avoids Deviance | Avoids Pain | Avoids Weakness | Avoids Conflict |
| Riso (1989) | Reformer | Helper | Status Seeker | Artist | Thinker | Loyalist | Generalist | Leader | Peacemaker |
| Naranjo (1990) | Angry Virtue | Egocentric Generosity | Success Through Appearan- ces | Seeking Happiness Through Pain | Seeking Wholeness Through Isolation | Persecuted Persecutor | Opportun- istic Idealism | Coming on Strong | "Going with the Stream" |
| Palmer (1991) | Perfection- ist | Giver | Performer | Tragic Romantic | Observer | Devil's Advocate | Epicure | Boss | Mediator |
| Keyes (1992) | Perfection- ism with Resentment | Helpfulness with Manipulation | Advance- ment with Emphasis on Image | Excellence with Moody Nostalgia | Knowledge with Withdrawal | Security with Fear and Doubt | Easy Optimism with Uneasy Activity | Anger and Fight | Non- aggression w/ Indolence & Indecision |
| Hurley & Dobson (1993) | Achiever | Helper | Succeeder | Individualist | Observer | Guardian | Dreamer | Confronter | Preser- vationist |
| Linden & Spalding (1994) | Judge- Perfection- ist | Pleaser- Caretaker | Doer- Achiever | Romantic- Dreamer | Loner- Thinker | Skeptic- Perfectionist | Renaissance -Player | Fighter-Boss | Floater- Harmonizer |
| Baron & Wagele (1994) | Perfection- ist | Helper | Achiever | Romantic | Observer | Questioner | Adventurer | Asserter | Peacemaker |
| Palmer (1995) | Perfection- ist | Giver | Performer | Tragic Romantic | Observer | Trooper | Epicure | Boss | Mediator |

| | Table | e 1Bm — H0 | OW DIFFE | RENT AUTI | HORS DES | CRIBE ENN | IEAGRAM | TYPES | | |

| ROLE | PRIEST | SERVER | SAGE KING | ARTISAN | SCHOLAR | WARRIOR | SAGE | KING | SCHOLAR SERVER | |
| CENTER | CENTER INSTINCT' FEELING | | | | | THINKING | | | INSTINCTIVE | |

My comments on this table are as follows:

- The second-to-last row shows my best guess at the Overleaf System Roles that fit with the names in the columns above. There are nine Types and seven Roles. My strategy to deal with this mismatch was to first pick the best fit for all seven Roles some fits are much better than some others so I started with the best fit and worked down to the least best fit then I combined two Roles to fit the remaining two Enneagram types. See if you agree or disagree with my discernment.
- In the subsection preceding this subsection, an Enneagram circle is shown divided into the three Centers of the Gurdjieffian Teachings, to be found also in the Overleaf System. This is not unexpected, since both the Centers and the Enneagram were part of the Gurdjieffian Teachings. However, when I show that alleged Centering in the next-to-last row of the table above, it does not look to me like a very good fit. The Enneagram and the Process/Aspect System are incompatible, despite their use of the Tao's Template principles. This is another indication to me that the Enneagram is a garbled attempt to represent Tao's Template.
- From the quantity of people shown in this table, you know that a lot of people have given a lot of thought to the Enneagram over the last many decades since it was invented. An internet search got 5,560,000 results, about half as many as the MBTI got.
- There is no stated Twoness in the Enneagram, nor is any sort of Twoness obvious from looking at the traits. They are not presented as pairs of contraries; they are just a collection of nine types. Therefore I classify this as an Allness in the Tao's Template schema.
- Even though there is Nineness in the Enneagram, and even though some sources divide the Nineness into 3 Threenesses as stated in a previous bullet point, it is not obvious from looking at the traits that this makes sense.

According to Enneagram lore, a person is not a pure number type; typically a person is a mixture of a primary number type and an adjacent secondary number type, the secondary number being referred to as the "wing". Just so you know the kind of a person you are dealing with, I am a 5 ("Thinker, Observer") with a 4 ("Individualist, Romantic") wing (abbreviated 5w4 in Enneagram circles), the one-word descriptor for this pairing is "Iconoclast": apparently this means that I 'kill sacred cows' for sport. You will see some of that inclination in Part Four of this *History* book. This pattern is somewhat the equivalent of Scholar–Artisan in the Overleaf System, and that is what I am: a Scholar Fragment playing the Artisan Role in this world.

Enneagram and MBTI Correlation

There are people out there, like myself, who enjoy attempting to integrate and/or correlate various personality typologies, perhaps to create 'one system to rule them all'. (In my estimation, the Overleaf System does that.)

In this subsection, let me draw your attention to the graphic at right, which shows how the Enneagram personality typology and the MBTI personality typology are thought to correspond. I am not going to analyze it; whoever did this knows more about both of them than I do. However, I should point out that there are variations on this graphic, so even the experts are not in agreement about what fits with what. Personalities are ambiguous; typologies are ambiguous; experts are ambiguous.

What I choose to say here is that decades ago I did the questionnaire for the Enneagram and identified myself as a Type 5 with a Type 4 "wing". Looking at the table in the previous subsection, we see that this corresponds to a Scholar–Artisan, which is the case. Decades ago, I also did the questionnaire for the MBTI

and identified myself primarily as an INTP ("Architect") and secondarily as an INTJ ("Mastermind"), which are also correlated with Scholar–Artisan. So, to that extent, this particular version of the Enneagram-MBTI correlation fits what I understand about my personality based on the Overleaf System.

There are many other websites that compare and contrast Enneagram with MBTI. You can find them if you point your browser search engine to: enneagram Myers–Briggs . When I did this, I came up with a few, such as this one, >https://www.typologycentral.com/wiki/index.php/Enneagram_and_MBTI_Correlation<. I can also recommend this internet website that explains it well: >http://www.goconscious.com/home/articles/tom-flautt.html<.

The author's conclusions are these:

- 1. Each Enneagram Type can be correlated with several MBTI types and vice versa.
- 2. The relationship between the two personality systems is complex. Some Enneagram ego states are concentrated in one or two MBTI types. Others have a nearly equal distribution of the MBTI types.
- 3. Each system complements the other.
- 4. In describing Enneagram Types it is useful to take into account the various MBTI preferences, for example, Extraverted Fives, Thinking Fours, and Perceiving Ones. [retrieved 15 July 2019]

Similar comments could be made when comparing and contrasting any two personality typologies.

Enneagram of Body Types

Before we move on to the Overleaf System itself in the next section, it is appropriate to mention the particular use of the Enneagram that found its way into the Michaelian teachings, namely, the Enneagram of Body Types. The graphical representation of this is shown at right.

In this chapter I am not going to say much about the Enneagram of Body Types. However, much is said in Chapter 1M here in Part One, "The Seven Body Types", and in Chapter 4D in Part Four, "The Seven Body Types".

What little I am going to say in this chapter demonstrates that I cannot figure out how the personality traits that are ascribed to the Enneagram of Body Types (E-of-BT) could possibly relate to the personality traits that are ascribed in the Enneagram of Personality (E-of-P) described in the previous subsections.

To make this comparison easy to follow, I have created a table showing the E-of-BT personality traits and the E-of-P personality traits. Notice that the two have no discernible resemblance to each other:

| | Table 1Bn — BODY TYPES and ENNEAGRAM PERSONALITIES | | | | | | | | | | |
|--|---|---|--|--|---|---|--|---|--|--|--|
| BODYTYPE | LUNAR | MERCURIAL | URANIAN | VENUSIAN | MARTIAL | NEPTUNIAN | JOVIAL | SATURNIAN | SOLAR | | |
| E-of-BT (Fellow- ship of Friends) | obstinate, passive, cool, moody, introspective | quick- minded, perceptive, impulsive | independent original, versatile, sensuous | warm, lazy, passive, sympathetic sensuous | extroverted courageous passionate, violent | idealistic spiritual imaginative sensitive | Cheerful, gay affectionate flamboyant tolerant | dominant, introspectiv e ascetic, mental | fragile, ethereal, other- worldly | | |
| Below | Above this row are the Body Types and their associated personality attributes per the Fellowship of Friends. Below this line are the node numbers and the names of the Enneagram personality traits that are typically associated with the node numbers. | | | | | | | | | | |
| NODE # | One | Two | Three | Four | Five | Six | Seven | Eight | Nine | | |
| F_of_P | Reformer, | Helper, | Achiever, | individualist | Thinker, | Loyalist, | Enthusiast, | Leader, | Peacemaker | | |

My comments on this table are as follows:

Caretaker

Perfectionist

E-of-P

BODY TYPE: In the first row, nine Body Types are at the nine Node numbers shown in the fourth row. The latter two Planets, Uranian and Neptunian, are found in the Michaelian teachings, e.g., the book Michael: The Basic Teachings. My placement of them at Node #3 and Node #6 is arbitrary, so I showed them in italic text.

Observer

Romantic

Performer

Questioner

Epicure

Challenger

Mediator

- E-of-BT: The second row shows the personality traits ascribed to the Body Types in the Enneagram of Body Types found in the Fellowship of Friends documents that were among the transcriptions of the original Michaelian group. This schema was invented by a student of P.D. Ouspensky named Rodney Collin, who published it in his book *The Theory of Celestial Influence* in 1968.
- NODE #: The fourth row shows the Node numbers in the Enneagram of Personality and in the Enneagram of Body Types.
- E-of-P: The fifth rows shows the descriptive names of the Enneagram of Personality types (see Table 1Bh). Notice that there is no correlation to the personality traits shown in the second row.
- One could shift the personality traits of one or the other around to fit better with each other if one were so inclined, but this would negate any alleged validity of one or the other or both. The exercise of compiling this table leads me to have serious doubts about the validity of both the E-of-BT and the E-
- There seems to be no correlation between the Enneagram of Personality and the Enneagram of Body Type. The Enneagram of Body Type is based on the speed of the planets as they moved through the sky, with #1 node being the Moon, and #2 node being Mercury, and so on, ending at the slowest planet, Saturn. But how did the Enneagram of Personality get traits assigned to the numbered nodes? I documented above that Oscar Ichazo, the originator of the E-of-P was "inspired". Would it increase our understanding if the traits were scrambled into a different sequence that correlated the two? That seems like an exercise in futility to me.

So what is the point of comparing the E-of-P with the E-of-BT? Experiments with a null result still tell one something. In this case the conclusion is that there does not seem to be a correlation; they might as well be two separate systems. They both originated in the 1950s and 1960s, but by two different people, unbeknownst to each other. This tells me that the Enneagram is likely just a contrivance with no fundamental connection to Being and Doing. The numbers of the nodes do not have an intrinsic obvious meaning, or both systems would have used it, if indeed the Enneagram was an "inspired" graphic with some relation to reality.

All is not lost; there is another way to integrate the idea of body types with personality traits other than with the Enneagram. The website >www.mysomatotype.com< documents one person's attempt to integrate various personality typologies with the three fundamental body types proposed by Dr. William Sheldon in the 1940s: mesomorph, endomorph, and ectomorph. These are correlated with the three Ordinal Centers: Moving, Emotional, and Intellectual respectively, but there is more to it than that; refer to the website for one thing, but also, more is said about this subject in two other chapters on Body Types in this History book, 1M here in Part One and 4D in Part Four.

Concluding Comments About the Enneagram

- 1. Considering the history of its origin and development, it is obvious that the Enneagram of Personality is a contrived and artificial system. This is a personality typology that started out as a component of Ichazo's spiritual teaching. It has found a wide celebrity and utility outside of academic clinical psychology, which tends to disdain spirituality. Yes, it can be applied to human personality in a meaningful way, and some amateur and professional psychotherapists use it to good effect.
- 2. The Enneagram is a way of graphically representing Tao's Template as codified by G.I. Gurdjieff according to what he referred to as the Law of Three and the Law of Seven, but, as we see in the next section, the derivation and structure of the Overleaf System is a better way to graphically represent Tao's Template and these Laws. The Overleaf System has a significance that goes beyond a mere system of personality traits; the same claim was originally made for the Fourth Way Enneagram, and to the extent that the Enneagram represents Tao's Template, I go along with that assertion.
- 3. The Enneagram contains a developmental psychology according to some expositors, and that is a good thing that other personality typologies typically do not have, but the Overleaf System embodies a developmental psychology in the most obvious way, in Levels and Ages.
- 4. The Enneagram should be regarded as a precursor to the Overleaf System formulation in terms of logic and mathematics. It has these kernels of Truth built in (Oneness, Twoness, Threeness, Sevenness, Sequence), but not in a way that is itself an expression of Truth logic and mathematics. Because of that, I regard it as a harbinger of the Overleaf System, with its structure and meaning explained by Tao's Template. The Overleaf System is the fulfillment of the promissory note of the Enneagram. Whatever Truth the Enneagram embodies, it is embodied better in the Overleaf System.
- 5. There are many personality typologies other than the ones reviewed above, but there is little use reviewing them because surely I have made my point already: the principles found in Tao's Template Oneness, Twoness, Threeness are found in most of them. By introducing you to the structure and meaning of these other personality typologies, I have introduced you to the structure and meaning of the Overleaf System. Having prepared you in this way, you are now ready for the next section.

The Overleaf System

We have reviewed some personality typologies in previous sections of this chapter. Frankly, I consider those personality typologies to be defective and deficient compared to the Overleaf System. And frankly, I base that assessment on how well a personality typology conforms to Tao's Template. On that basis, the Overleaf System metaphorically 'passes muster'; the others do not. They have some resemblance to, but not all of the substance of, Tao's Template; what they do have of Tao's Template has not been assembled correctly.

The Overleaf System is special because, as an instantiation of Tao's Template, it is fundamental with respect to the other personality typologies. That is, you can do everything with the Overleaf System that you can do with other personality typologies, but not the other way around. The Overleaf System is less ambiguous and more rich in its depth and breadth than the other personality typologies reviewed in this chapter.

The Overleaf System is not the kind of personality typology that a clinical research psychologist would naturally favor, because it has not been derived empirically via some scientific method such as "factor analysis" as, for instance, the Big Five system was. Rather, it was mysteriously "revealed" by someone who "channeled" an alleged "supernatural" source. How scientific could that be?!?! My counterpoint argument to that presumed charge is that the Overleaf System still has a remarkably pragmatic utility: it assimilates and combines many other personality typologies in an elegant way, including the premier empirical personality typology, the Big Five. I see the Overleaf System as superior to other personality typologies because it contains elements of the various systems, and it has a deep and fundamental rationale; it is generated via a logical and mathematical algorithm; it is the product of a cascade of *first* principles, not just *any* principles.

One of the problems with personality typologies in general is that the empirical method, such as was used for the Big Five, does not get to the 'root' of the 'tree' of personality, so to speak. It sees the 'leaves' and the 'twigs', but not the 'trunk' and the 'main branches'. The Overleaf System, as an instantiation of Tao's Template, gets to the metaphorical 'trunk of the tree'. My claim is that the universe is an instantiation of Tao's Template; personality is another instantiation built on the same pattern, albeit an instantiation that is so far removed from the archetypal system that underlies it that it has not been recognized as such even in the Michaelian teachings community. One of my aims is to correct that oversight in my books.

Overleaf System students other than myself have devised tests, consisting of a series of questions, which when answered by the testee, can help discern which Overleaves they are likely to have. Validating one's Overleaves by introspection and collaboration with other students is an important endeavor in the Michaelian teachings community. It is almost an initiation ritual for a newbie Michaelian student to figure out where they fit on the Overleaf Chart, either by channeling, and/or by taking the tests, and/or by study of the Overleaf System, and/or by asking mature Michaelian students what they perceive. Among the options on the Overleaf Chart, students see what they probably *are*, and they see what they are probably *not*. This is similar to the self-reporting procedure used in other personality typologies in use by psychologists. Therefore I say that the Overleaf System is just as scientific as the others reviewed in this chapter.

So, placing that rant behind us now, let's look forward to the Overleaf Chart and how it manifests Tao's Template. It is hoped that with an understanding of Tao's Template the typical student of the Michaelian teachings will appreciate the depth and the breadth of the Overleaf System in a way that he or she has not done heretofore.

The Structure of the Overleaf System

First, let's have a review of Tao's Template as it applies to the Overleaf System, via this statement and the table below it:

<u>Tao</u> produced the <u>One</u>; the One produced the <u>Two</u>; the Two produced the <u>Three</u>; the Three produced <u>All</u> things. All things carry the <u>Yin</u> and embrace the <u>Yang</u>; through the blending of the <u>Chi</u> they achieve harmony.

| | Table 1Bo — TAO'S TEMPLATE SEEN in the OVERLEAF SYSTEM | | | | | | | | |
|-----------------|--|---------------------|---------------------|-------------------------|------------------------|-------------------|--|--|--|
| | Ταο | | | | | | | | |
| | Ordinal = Yin | | | Cardinal = Yang | | | | | |
| First Action | Second Inspiration | Third Expression | All Assimilation | Threeness Expression | Twoness Inspiration | Oneness Action | | | |

(This table may be compared with Table 1Ba.)

Now, let's take a look at the Overleaf System in the following table:

| | | | Table 1Bo | — OVERLEA | F SYSTEM ST | RUCTURE | | | |
|------------------|----------------------------------|--|--|---|--|--------------------------------------|---|---|--|
| Α | RANK | FIRST | SECOND | THIRD | FOURTH | FIFTH | SIXTH | SEVENTH | |
| T | DIALECTIC | | – ORDINAL – | | = NEUTRAL = | + CARDINAL + | | | |
| R I | AXIAL | ACTION | INSPIRATION | EXPRESSION | ASSIMILATION | EXPRESSION | INSPIRATION | ACTION | |
| B E | DIMENS'N | -1-D- | -2-D- | -3-D- | =P-D= | +3-D+ | +2-D+ | +1-D+ | |

My comments on this table are as follows:

- You are welcome to study this Overleaf Chart to your heart's content, but you can, for the time being, safely ignore some of the names that you do not recognize. Some of the unfamiliar features are explained in the course of this *History* book, but the full story is told in three previous books in this series of volumes, namely: *The Tao of Cosmology, The Tao of Cosmogony,* and *The Tao of Personality*. My purpose here is to introduce you to the structural components of the Overleaf System as I have reformulated it, and compare it with some of the other personality typologies discussed in this chapter. This you cannot safely ignore if you want to understand the function of this chapter.
- This Chart is structured per Tao's Template, to which you were introduced in a prior section of this chapter. Recall that: Tao → Oneness → Twoness → Threeness → All → Threeness → Twoness → Tao; Yin + Yang = Chi. I will now point out how this is so.
- Tao has Yin and Yang aspects: Yang Transcendent Tao is represented by the space outside of the Chart it is undifferentiated; Yin Immanent Tao is represented by the Chart it is differentiated into categories that are arranged per the numeric principles.
- The Overleaf Chart considered as a whole has Yang and Yin aspects: the Yang *context* of the Chart is the headers to the rows and columns outside of the heavy line around 49 personality Traits in the 7x7

matrix of Traits; the Yin *content* of the Chart is contained within the heavy line around 49 personality Traits in the 7x7 matrix.

- The headers in the top four rows, with the word 'ATTRIBUTE' at the left end, are 'Attributes' that apply to the seven *columns* of Traits; these four rows of Attributes also apply to the seven *rows* of Traits.
- The Oneness principle is found in the Chart in 3 places: 1) the Yin minimum Oneness is the Trait in the center of the 7x7 matrix, "Collectivism"; 2) The Yang maximum Oneness is all of the traits in the 7x7 matrix considered collectively (get it?); 3) the Attribute called 'Neutral' is a manifestation of the Oneness principle, being from the Yin perspective *neither* of Twoness nor Threeness, or from the Yang perspective *both* Twoness and Threeness.
- The Twoness principle is found in the Chart in (2x2=) 4 places: 1) The Chart is symmetrical vertically and horizontally, columns and rows. This is indicated by the fact that rows and columns both have the same Attributes (Dialectic, Axial, Dimensional); 2) there is the Twoness of the Dialectic Attributes, "Cardinal" and "Ordinal", which correspond to Yin and Yang of Tao's Template; 3) there are Positive and Negative Poles of each trait; 4) There are four quadrants to the Chart, an Ordinal–Ordinal quadrant in the lower left; an Ordinal–Cardinal quadrant in the lower right; a Cardinal–Ordinal quadrant in the upper left; a Cardinal–Cardinal quadrant in the upper right.
- The Threeness principle is found in the Chart in three places: 1) There are the three "Dimensions" of Action, Inspiration, and Expression; 2) that these Dimensions show up in the horizontal rows and the vertical columns means that there are blocks of 3x3=9 Traits; 3) although not shown as such, the Chart is a three-dimensional 7x7x7 block when you include the seven levels of the soul within the Oversoul (another Oneness there), which I refer to as "Underleaves" in Chapter 4N in Part Four, "Casting Concerns".
- One of the features that have been attributed to the Enneagram is the *processes* implied by the numerical sequences 3–6–9 and 1–4–2–8–5–7 and 1–2–3–4–5–6–7–8–9. The equivalent process found in the Overleaf System Chart is the seven-step process embodied most clearly in the seven Worldviews, which can be regarded as seven steps on a path of psycho–social–spiritual maturity.
- Right out of the gate, we see that the Overleaf System embodies the Law of Three and the Dialectic principle in a way that is not seen in other personality typologies. There is much elaboration of this point in several other chapters in this book.
- The two most important things to note about this arrangement of the Overleaf System Chart are these:

 1) Note the names given to the seven "Processes" (my one-word names for the Septenarian Attributes that apply to the Traits in the columns below those names); 2) Note that the "Aspects" (Overleaf categories) also partake of the Septenarian Attributes. Thus, there is a symmetry in the Septenarian Attributes applying to both Processes and Aspects.

This section is a brief introduction to the systematic component of the Overleaf System; other chapters and sections in this *History* book expand some of the details of this section; refer to Part One of my book *The Tao of Personality* for the whole story; refer to my books *The Tao of Cosmology* and *The Tao of Cosmogony* for the metastory, the context in which the Overleaf System is one of its contents.

One caveat and disclaimer about the Overleaf System is that the structure is well defined and static, but people are neither of those. As with any of the personality typologies, whether reviewed in this chapter or not, people do not fit well in boxes, any boxes, and they do not like to stay in boxes indefinitely. Even so, I like the Overleaf System for its elegance and beauty; its utility is also pretty good.

As Above, So Below

The title of this section is a well-known saying attributed to Hermes Trismegistus. What it means is that there is a correlation of metaphysics (psychology, personalty) with physics. Astrology is a prime example of this idea, that the outer and the inner worlds are influential with each other. I bring it up in this chapter because I want to emphasize the point that the Overleaf System of personality traits is an instantiation of Tao's Template, the pattern of universal order.

My opinion is that there is one simple, elegant structural framework within which to build a cosmos, a universe: Tao's Template of first principles, which manifests and embodies logic and mathematics as the basis of reality: the logic of Yin and Yang and Chi, and the mathematics of Oneness and Twoness and Threeness

and Sevenness. For a universe to exist and function, it must properly embody those organizing principles. In my opinion, the same framework of principles that applies to the universe should apply to the personality types available to the soul. That way, the soul gains greater understanding of the reality system in which it finds its consciousness embedded during incarnation. That way, introversion and extroversion can compare and contrast the same thing. That way, there is a correspondence between inner and outer realities. That way, the 'personality' of humans is a lot like the 'personality' of the cosmos. That way, the laws of human nature are the same as the laws of nature. I will not elaborate here, but in cosmology, this is the "anthropic cosmological principle", which says, tautologically, that our human existence must be consistent with the universe.

There is a mathematical relationship between the subjective realm of personality and the object realm of physics, somewhat as follows. The Overleaf Chart is a grid of human personality Traits, graphically represented on a flat surface. In mathematical terms there are two "axes" of the Chart: the left-right direction is referred to as the so-called "x" axis in the Cartesian coordinate system, and the up-down direction is referred to as the so-called "y" axis in the Cartesian coordinate system. The "x" and the "y" axes are perpendicular (aka orthogonal, aka at right angles) to each other. There is a third axis, the so-called "z" axis, which is perpendicular to the "x" and the "y" axes in the Cartesian coordinate system. The seven planes of the cosmos can be graphically represented on the "y" axis. You may visualize the planes as the Overleaf Chart being extended into the third dimension, above the flat surface of the Chart, one plane at a time until all seven planes are represented in a cube. You may picture this cube as an enlarged Rubik's cube, with seven little cubes on a side within the Rubik's cube rather than three.

For this reason, the planes and the Body Types belong on the Overleaf Chart, with planes graphically represented as 'above' the 7x7 Overleaf matrix, and the Body Types graphically represented as 'below' the 7x7 Overleaf matrix, and the Personality sandwiched between the two. That is why in Part One here I explain planes at the beginning, 'before' Personality, and Body Types at the end, 'after' Personality. On any Overleaf Chart, it would be appropriate to have Planes at the top and Body Types at the bottom with the Overleaves sandwiched in between.

The Overleaf System as a Mandala

As an introduction to this section, let me quote from the Wikipedia article on the subject of the mandala. Mandalas have a long history in many religions, from ancient to modern times. As you read the following, take note of the underlined phrases, and consider how this description of the pattern and the use of a mandala corresponds to a Michaelian student's regard for the Overleaf Chart. This is a lengthy quotation because I want students to appreciate the depth and breadth of the beauty and the utility of the Overleaf System.

A mandala ... is a geometric configuration of symbols. In various spiritual traditions, mandalas may be employed for focusing attention of practitioners and adepts, as a spiritual guidance tool, for establishing a sacred space, and as an aid to meditation and trance induction. In the Eastern religions of Hinduism, Buddhism, Jainism, and Shinto it is used as a map representing deities [archetypes], or especially in the case of Shinto, paradises, *kami* or actual shrines. A mandala generally represents the spiritual journey, starting from outside to the inner core, through layers.

In Hinduism, a basic mandala, also called a yantra, takes the form of a square with four gates containing a circle with a center point. Each gate is in the general shape of a T. Mandalas often have radial balance. It is considered to represent the abode of the deity. Each yantra is unique, and calls the deity into the presence of the practitioner through the elaborate symbolic geometric designs. According to one scholar, "Yantras function as revelatory symbols of cosmic truths and as instructional charts of the spiritual aspect of human experience."

Many situate yantras as central focus points for Hindu tantric practice. Yantras are not representations, but are <u>lived</u>, <u>experiential</u>, nondual realities. As Khanna describes:

Despite its <u>cosmic meanings</u> a yantra is a <u>reality lived</u>. Because of the relationship that exists in the Tantras between the <u>outer world</u> (the macrocosm) and man's <u>inner world</u> (the microcosm), every symbol in a yantra is <u>ambivalently resonant in inner—outer synthesis</u>, and is associated with the subtle body and <u>aspects of human</u> consciousness.

In Vajrayana Buddhism, mandalas ... are also a key part of Anuttarayoga Tantra <u>meditation</u> practices. The man mandala can be shown to represent in visual form <u>the core essence of the</u> Vajrayana <u>teachings</u>. The mandala represents <u>the nature of the Pure Land, Enlightened mind</u>. A mandala can also represent the <u>entire universe</u>, which is traditionally depicted with Mount Meru as the *axis mundi* in the center, surrounded by the continents.

The mandala is "a support for the <u>meditating</u> person", something to be repeatedly <u>contemplated</u> to the point of saturation, such that the image of the mandala becomes fully internalized in even the minutest detail and can then be summoned and contemplated at will as a clear and vivid visualized image. With every mandala comes what Tucci calls "its associated liturgy ... contained in texts known as tantras", instructing practitioners on how the mandala should be drawn, built and visualized, and indicating the mantras to be recited during its ritual use. By visualizing "pure lands", one learns to <u>understand experience</u> itself as pure, and as <u>the abode of enlightenment</u>.

Kværne in his extended discussion of sahaja, discusses the relationship of sadhana <u>interiority</u> and <u>exteriority</u> in relation to mandala thus:

...<u>external ritual and internal sadhana</u> form an indistinguishable whole, and this unity finds its most pregnant expression in the form of the mandala, the sacred enclosure consisting of <u>concentric squares</u> and circles drawn on the ground and representing that adamant plane of being on which the aspirant to Buddha-hood wishes to establish himself. The unfolding of the tantric ritual depends on the mandala; and where a material mandala is not employed, the adept proceeds to construct one mentally in the course of his meditation.

Each mandala is dedicated to specific deities. In Buddhism Deities represent <u>states of the mind to be obtained on the path to enlightenment</u>, the mandala itself is representative of the deities palace which also represents the <u>mind of the deity</u>.

In New Age, the mandala is a diagram, chart or geometric pattern that represents the cosmos metaphysically or symbolically; a time-microcosm of the universe, but it originally meant to represent wholeness and a model for the organizational structure of life itself, a cosmic diagram that shows the relation to the infinite and the world that extends beyond and within various minds and bodies. [>https://en.wikipedia.org/wiki/Mandala< — retrieved 05 March 2023]

The Wikipedia shows many images of mandalas from various religions; one of them is inserted in this section. The Overleaf System, when presented in its proper configuration as shown in Table 1Bo above, is a modern incarnation of the ancient and venerable form of instruction, the mandala.

Concluding Remarks on Personality Typologies

A numbered list is one of the best ways for me to organize my thoughts and explain things to readers.

- 1. Some people have an urge to correlate personality typologies, and if you do an internet search for, for instance, "MBTI Enneagram", you will find numerous attempts to do so with those particular personality typologies. In this chapter, I attempted to find correlations between numerous personality typologies, obviously. This taught me how weak versus how strong the correlations can be, and it varies all over the place. After writing this chapter, one of my conclusions was that correlating them is more of an intellectual exercise than anything else, which is an activity that has value *per se*, but the value of that exercise for me, at least, seems to have been rather limited.
- 2. So, my conclusion from all of my work of making correlations, was that it is better to use each typology for its intended purpose, which is to teach us about ourselves; one will learn something different about oneself from each and every typology that one takes the test for. For instance, on the >quora.com< website, an internet discussion group, there is much to learn about MBTI types. It has been very helpful to me to understand myself in terms of my MBTI types, primarily INTP and secondarily INTJ, near as I can tell. I learned stuff about myself that the Overleaf System does not teach me.

- 3. For this book A History of the Overleaf Chart, I wrote the "Personality Typologies" chapter mostly for the purpose of introducing readers to the structural components of the Overleaf System, by introducing readers to the structural components of these other typologies, and I emphasized that more than I discussed the personality traits themselves. I feel that I had more success in that exercise comparing structural components of typologies than in comparing personality traits in the various typologies. From my point of view, the meaning of the Dialectic and Axial Attributes, the "principles" of Twoness and Threeness from which the Overleaf System emerges, has been "neglected" by Michaelian students. INTPs and INTJs are into that sort of thing, and those are rare MBTI categories in the general population, so that is perhaps why the pursuit of understanding the Attributes of the Overleaf System has been "neglected" by others but not by me. My History book covers a lot of territory that has been "neglected" by other Michaelian students.
- 4. It is impossible for anyone to understand another person in the totality of their complexity, so it is often useful to reduce the complexity into a simple pattern. All personality typologies are intended to provide a "heuristic" for understanding self and other. By that I mean that they provide 'rules of thumb' or 'shortcuts' to figuring out where people are 'coming from', for understanding 'what makes them tick'. This promotes tolerance at minimum, intimacy in the mid-range, and Agape at maximum. If one can do this without being too simplistic, and without stereotyping people, and without creating expectation about how people "should" behave within the personality typologies, then that is a good thing.
- 5. When it comes to personality typologies, few people are serious about them. Those who are serious can be benefited by any one, or some, or all, of those reviewed in this chapter, and those not reviewed in this chapter. For people other than myself, their heuristic, derived from a study of a personality typology other than the Overleaf System, might be the most effective and efficient for understanding themselves and/or others.
- 6. Because the Overleaf System does not cover all aspects of personality, it is a good thing for Michaelian students to make use of personality typologies other than the Overleaf System, in order to maximize their understanding of life, the universe, and everything. Using some metaphors, let me emphasize that no single personality typology 'covers all of the bases' or 'fills in all of the gaps' or 'tells the whole story'.
- 7. Furthermore, no matter how well a Michaelian student knows the Overleaf System, it is helpful for them to know and understand and use other personality typologies because of the deficiencies in the Overleaf System itself; even the Overleaf System does not cover everything that it is useful or accurate to know about human personality. The Overleaf System is just a small piece of the personality puzzle, the piece that is an instantiation of fundamental archetypes revealed in Tao's Template. Other personality typologies have other insights to offer to anyone seeking to understand themselves and others. Some of them even manifest Tao's Template to one degree or another.
- 8. One of the values of this and all other personality typologies is to see ourselves in the context of humanity as a whole, so that we are not 'hung up', or 'trapped', into thinking that our own way of being and doing and perceiving is privileged. It is a good thing to see that all personality types add to the proper function of society as a whole. It is to our credit and benefit that we see how we, with our personality array, fit into the society made up of many other personality arrays.
- 9. For sure, there is the practical value to understanding the Overleaf System as it applies to myself and other people, but for me there is also value in the Overleaf System as an introduction to the study of the archetypes that lie behind all that exists and functions: Tao's Template. Tao's Template is the pattern of *physics*, as well as the pattern of *personality* the two reflect each other. Therefore because the Overleaf System and the universe have a common source and foundation in Tao's Template as one comes to understand one's self via the Overleaf System, one also comes to understand the universe and *vice versa*.
- 10. Despite what I say above about the value of understanding and using other personality typologies, the fact that so many components of these various personality typologies can be mapped onto the Overleaf System indicates to me that both the personality typologies and the Overleaf System are seeing the same patterns. In my view, the Overleaf System subsumes and integrates them into a coherent pattern for the first time in the history of personality typologies. For this reason, one of my

- claims is that the Overleaf System can properly be regarded as the pinnacle of personality typologies, and it could appropriately be used to supersede (take the place of) them, to some extent. It is broad enough to contain them all, and with a better structural theoretical framework than any of them. It might take many decades before this is widely recognized, based on the historical precedent that the origin of any writing about the Overleaf System was about fifty years behind the origin of the MBTI and about twenty-five years behind the origin of the Enneagram.
- 11. Comparing and contrasting the Overleaf System with these other personality typologies, invented as they were by some of the brightest investigators in history, I have the sense that no human could have *invented* the Overleaf System; it has obviously been *revealed* by a higher source of knowledge and understanding. To tell you that and to show you that and to drive it into your awareness is one of the purposes of this chapter. I am thankful for the revelation. I am empowered by the revelation. You too?
- 12. The fact that so many different personality typologies have been developed over the millennia indicates to me that personality typologies seem ambiguous compared to the definitiveness of the Overleaf System. Michaelian students who study the Overleaf System and the people around them also see how ambiguously people express their Overleaves, even though the Overleaf System is an instantiation of Tao's Template, which is not ambiguous.
- 13. Whatever personality typology one pursues, it is possible to go very deep with it, to take the personality typology and weave a web of greater and greater detail and complexity.
- 14. Most of the personality typologies reviewed in this chapter are pseudo-scientific, meaning that they have the trappings of science without the substance. They might have fundamental numerical principles built-in (Oneness, Twoness, Threeness), but that alone does not make them scientific. The psychological phenomena of personality traits might have allegorical connections to physical phenomena (Phlegmatic, Sanguine, Choleric, Melancholic), but that does not make them scientific.
- 15. Many personality typologies are an *a priori* "theory" that is developed one way or another, and then *read into* the observations of people. They were not derived from objective scientific study, nor are they verified by the scientific method. These types of personality typologies are not favored by academic researchers, but they are by others. Popular theories such as Astrology, MBTI, and the Enneagram fit in this category. The Overleaf System is a 'new theory on the block', so to speak, and it has not been submitted to scientific scrutiny.
- 16. The Overleaf System is not now, and might never be, recognized by the psychology profession, if it is only put out there as soul-ology. This book presents the Process/Aspect System as a derivative of logic and mathematics, which no other personality typology does, so skepticism in the psychology profession would be completely understandable, and, at least initially, appropriate.
- 17. Many of the 'building blocks' of the Overleaf System are found in these precursors to the Overleaf System. To me, this says that the Overleaf System is the legitimate successor to the precursors, and that the Overleaf System legitimately includes and subsumes them. Even though the Overleaf System has not been legitimated by the psychological establishment, the fact that the Overleaf System resembles various features of typologies that have found a practical utility over millennia and a scientific legitimacy over decades, means to me that the 'new kid on the block', the Overleaf System, can share in some of this legitimacy.
- 18. The Big Five and related models are *a posteriori* "models" built from data that is *read out* of the observations; they were developed by the academic research psychology community, and they have garnered support from the mainstream practicing psychological community, whereas "theories" such as Astrology, MBTI, and Enneagram have not. The latter have a lot of popular support; they have not needed the approval of the scientific and academic communities for them to spread widely.
- 19. In my opinion, typing and stereotyping personalities is an intermediate step on a journey. *Before* the journey, one is not trying to understand people within a systematic framework. *During* the journey, one is trying to place people within a context; the various personality typologies examined in this chapter all provide a journey of discovery and understanding. *After* the journey, when one has internalized the understanding of different personalities, one just accepts people exactly as they are, as unique individuals, without attempting to categorize them. Before the journey and during the journey, there is a lack of true intimacy with what is really happening. After the journey, there is more intimacy, because the filters of analysis and synthesis through which one might *interpret* others are no

- longer seen as appropriate. Recall from the introduction to this book that the reason that the Michaels provided the Overleaf System to their students was to get us onto that journey, with the expectation that we would eventually walk beyond the Overleaf System.
- 20. The seven steps of the journey of discovery are explained in my books *The Tao of Cosmogony* and *The Tao of Relationships*. There you will find that the study of personality typology is placed primarily in the third step: the Intellectual Center. When the seven Centers are regarded as a map of our spiritual journey, as Gurdjieff did and as the Michaels confirmed, we see that there are five Centers above and beyond the Intellectual Center: Instinctive > Higher Intellectual > Higher Emotional > Higher Moving. (Refer to Chapter 1J, "Gurdjieff's Levels of Being".)
- 21. The Overleaves come with the soul because they are chosen by the soul, but some of these other personality typologies, especially the ones developed by empirical methods such as the Big Five, are factors that come with the body and the brain. In the Michaelian teachings, the latter are typically lumped in with Body Type. Thus, there is a spiritual inheritance, the Overleaf System, and there is a physical inheritance, the Body Type, and together they make up True Personality. That is why the study of the Overleaf System and the other personality typologies can be valuable for understanding self and other.
- 22. The bottom line is this: it looks to me as though the Overleaf System presents a clear view of fundamental personality types, whereas other personality typologies present a muddled view. In the future, I would like to see the Overleaf System get the widespread mainstream recognition I believe that it deserves. I would like to see it get millions of hits in an internet search, as Astrology, the MBTI, and the Enneagram do now.

Chapter 1C

THE SEVEN CHAKRAS

It is common knowledge among students of esoterica, including Michaelian students, that the chakras are described as "energy centers" within the physical body, and that there are seven major chakras. The subject of chakras came up in the original Michaelian group sessions, and it appears on a few of the Overleaf Charts subsequent to the original Michaelian group (#17–Taylor, #19–Benning, #21–Tolley), and also in Michaelian teachings books and on Michaelian teachings web sites. One wonders if members of the original Michaelian group were aware of the common understanding of chakras, because there are differences between the two understandings, as we see in this chapter and in Chapter 4J in Part Four, "The Seven Chakras".

The subject of chakras is also intimately connected with the Centers of the Overleaf System, so the discussion below is very much appropriate for this book about the Overleaf System. Therefore, consider this subject and this chapter to be an introduction to this aspect, the Centers, of the Overleaf System.

Chakras per Wikipedia

The following quotation and tabulation originally came from the Wikipedia article on chakras a few years before this chapter was finalized, but it has since been removed.

The Rainbow Theory of Chakras: After Woodroffe and Leadbeater, the next most influential person regarding the chakras is Christopher Hills, a spiritual philosopher and researcher who set up his own university, the University of Trees. In a very thick book, *Nuclear Evolution*, published in the early 1970s, Hills suggests that each of the chakras corresponds to one of the seven colors of the spectrum. He then associates each chakra and color with a particular personality type. A great deal of his book is devoted to explaining each of these personality types in detail. His typology is quite fascinating, and certainly equal in profundity to the personality typology of comparable systems of character analysis, such as Carl Jung and Humanistic Astrology. The basic scheme is as follows:

| | Table | 1Ca — The S | EVEN CHAKRAS per WII | KIPEDIA ARTICLE | | |
|--------|-------------|----------------|--|--|---------|--------|
| COLOR | SANSKRIT | POSITION | ТҮРЕ | PERSONALITY | RANK | |
| VIOLET | Sahasrara | Crown | primordial imagination | Imagination; shame and wonder | SEVENTH | |
| INDIGO | Ajna | Forehead | intuitive — visionary Intuition; sensitivity, envy, admiration | | SIXTH | HIGHER |
| BLUE | Vishuddha | Throat | Contemplative — nostalgic | Mental concepts; authority, reverence | FIFTH | R |
| GREEN | Anahata | Heart | security or self-centered | Vital force; possession, jealousy, power | FOURTH | |
| YELLOW | Manipura | Solar plexus | intellectual | Thinking; intellect, change | THIRD | |
| ORANGE | Swadhistana | Splenic plexus | social — gregarious | Social; ambition | SECOND | LOWER |
| RED | Muladhara | Genitals | physical — sensation | Sensation; sex, fear, anger | FIRST | ~ |

My comments on this table are as follows:

- COLOR: The first column shows the colors that are typically assigned to the chakras in modern times. This is a convenient contrivance, invented in modern times as part of a general trend over the decades to correlate various esoteric systems with the chakras, even though the colors themselves have no intrinsic connection to the chakras. What meaning there is is that Red is low 'vibration' and Violet is high 'vibration'; the idea is that there is a progression along the spectrum from low to high.
- SANSKRIT: The second column shows the Sanskrit names for the chakras. They go by different names in other languages, of course.
- POSITION: The chakras are located at specific positions on the physical body. There is some
 disagreement from source to source about some of the locations of the lower three chakras. There is
 more information about that in Table 1Cb below.
- TYPE and PERSONALITY: The fourth and fifth columns provide some characteristics of the seven chakras. There is more information about that in Table 1Cb below.
- RANK: The sixth column shows the rank order sequence of chakras. Chakras are often referred to by their rank alone. Notice the sequence is from 'first' to 'seventh', starting at the bottom row of this table and going up. Undoubtedly they are listed this way because this is where they are on the body, from bottom to top. This column was not shown on the Wikipedia page, but it is here because it is such a common way of identifying chakras.
- The seventh column shows another typical descriptive designation for two triads of chakras: "higher" and "lower". This column was not shown on the Wikipedia page, but I show it here because it is such a common way of identifying chakras.

A review of internet websites that discuss the chakras reveals that the above understanding of the chakras, their associated color and attributes, has a wide acceptance. There is a thorough discussion of the history of the chakra system in a chapter in my *Cosmogony* book. The case made there is that the chakras follow the Natural Sequence, a phenomenon that is discussed in some detail in several chapters of this *History* book because it is relevant to several components of the Michaelian teachings.

The above was an introduction to the chakra system. Now let's dig a little deeper into the chakra system.

Historical Development of the Chakra Concept

Surely one of the most authoritative and scholarly chronicles of the development of the chakra concept is the book *Rainbow Body* — *A History of the Western Chakra System from Blavatsky to Brennan*. It was authored by Kurt Leland, it was published in 2016, and it is about 500 pages long. The last hundred pages are end notes and appendixes and bibliography; those are the hallmarks of a very scholarly work indeed. The subtitle says it covers the years from Blavatsky to Brennan; that is about one hundred years from the last part of the 19th Century to the last part of the 20th Century. It also has a long chapter on the history of the chakra system as understood and taught in the orient, where the system originated.

The chakra system has been the metaphorical 'kitchen sink' of esotericism for a very long time. By that I mean, it was the 'go to' place to put stuff that correlates with other stuff in a base–seven schema: colors, healing gems, endocrine glands, planes, personality typologies, levels of consciousness, and so on. As we saw in the previous chapter, astrology has served the same function for a base–twelve schema — metaphorically, 'everything plus the kitchen sink' has been lumped into its categories.

The *Rainbow Body* book has about two dozen tables showing the chakras — and correlations to numerous other factors such as colors and glands and planes and gems and so on — according to a couple dozen sources that documented their understanding of the subject over that century. There was a lot of disagreement among the various sources about a number of those correlations. On the other hand, as the century progressed, there was an obvious convergence on a particular pattern, similar to the pattern shown in the Wikipedia table in the previous section. The absence of consistency over the decades tells me that there is no absolute, revealed truth about the chakra system. On yet another hand, the presence of convergence tells me that there is a truth upon which to converge; and if not a truth, then at least a consensus. It so happens that the consensus has converged on the Natural Sequence. To demonstrate this, I provide two tables from the *Rainbow Body* book, shown below, redrawn by me.

The first table is redrawn from Leland's Table 22. It is derived from the work of Christopher Hills in his book *Nuclear Evolution: Discovery of the Rainbow Body* (1968, 1977). He is noteworthy enough in the history of esoteric thinking during the Twentieth Century to have a long Wikipedia article written about him and his many accomplishments: >https://en.wikipedia.org/wiki/Christopher_Hills<. Based only on what is found in this table, it seems likely that Hills was aware of some of the precursors to the Overleaf System that are documented in other chapters of this *History* book. This table is typical of the two dozen or so tables found in the *Rainbow Body* book. Some table creators chose to correlate some other items with other chakras, but you get the idea. This one happens to show a number of personality traits, which is why I chose it for inclusion in my *History* book about the Overleaf System. The six columns on the left are the same as shown on Table 22 in the *Rainbow Body* book; the four columns on the right were added by me so that the reader can easily see how some components of the Process/Aspect System schema correlate with the six columns on the left.

| Table 1 | ICb — C | CHAKRAS A | CCORDING T | O CHRIS H | ILLS (1977) | OVERLE | AF SYST | EM CORRE | LATES |
|-----------------|---------|------------------|---------------|-----------------|---------------------------------|-------------------------------------|---------|-------------------|-----------|
| Chakra | Color | Personality | Consciousness | Orientation | Time Sense | Center | Role | Axial | Dialectic |
| Crown | Violet | Imagina- tive | Cosmic | Divine Order | Timelessness | Higher Moving (Excitation) | King | Action | |
| Third Eye | Indigo | Intuitive | Future | Future | Present as future | Higher Emotional (Sympathy) | Priest | Inspiration | Cardinal |
| Throat | Blue | Idealistic | Conceptual | Memory | Fixer of time | Higher Intellectual (Concept) | Sage | Expression | |
| Heart | Green | Acquisitive | Security | Security | Chronologi- cal time | Impulse | Scholar | Assimila- tion | Neutral |
| Solar Plexus | Yellow | Intellectual | Analytical | Thinking | Planning for future | Lower Intellectual | Artisan | Expression | |
| Splenic | Orange | Social | Group | People | Present applied to future | Lower Emotional | Server | Inspiration | Ordinal |
| Genital | Red | Sensation | Physical | Action | Immediate moment | Lower Moving | Warrior | Action | |

Comments on the table are as follows:

- CHAKRA: The first column shows the standard names (locations) of the chakras. There is disagreement among various sources about the names (and locations) of the lower three chakras. For instance, some alternative names and locations to those given here are Root, Sacral, and Navel. It makes the most sense to me that the Root chakra is the Zeroth chakra and corresponds to the Instinctive Center as Gurdjieff understood it = the physiology Center. The Genital Chakra is also called the Sacral chakra, and I understand this to correspond to the Moving Center and Warrior Role. The Splenic chakra is also called the Navel Chakra, and this makes sense when corresponded with the Emotional Center and Server Role. Some sources do not mention the Solar Plexus Chakra, but it makes sense to me to include this nerve bundle and correlate it with the Intellectual Center and the Artisan Role.
- COLOR: The second column shows the seven rainbow colors commonly associated with the chakras shown in the first column. In sources earlier than this, generally speaking, the older the table, the less agreement with this lineup. Sources have mostly converged on this association of colors with chakras. The chakras do not actually have colors, or if they do, there is no agreement among the clairvoyant sources. Therefore, it is just a convenience to code the chakras with colors with the lowest-vibration, red, at the lowest chakra and the highest vibration, violet, with the highest chakra.

- PERSONALITY: Compare the names of the Personality traits given by Hills with the Centers and Roles in the seventh and eighth columns. The correlation fits well enough; scrambling the Centers/Roles in any way would not produce a better fit.
- CONSCIOUSNESS: Compare the names of the Consciousness traits given by Hills with the Centers and Roles in the seventh and eighth columns. The correlation fits well enough; scrambling the Centers/Roles in any way would not produce a better fit.
- ORIENTATION: Compare the names of the Orientation traits given by Hills with the Centers and Roles in the seventh and eighth columns. The correlation fits well enough; scrambling the Centers/Roles in any way would not produce a better fit.
- TIME SENSE: These sort of make sense to me when comparing them with Overleaf System factors, but it would probably help you to fully understand what he was getting at if you were to read Hills's book.
- CENTER: Because the Centers of the Overleaf System are often correlated with the chakras, they are shown in the seventh column.

There is little doubt in my mind that in the Hills chakra schema, the chakras can be seen to follow the Natural Sequence; more is said about the Natural Sequence in many other places in this *History* book.

The following table is a redrawing and combining of Table 23 (Western) and Table 24 (Bruyere) in the *Rainbow Body* book. Leland titled it "The Western Chakra System" because it was a summary of some things that are shown in other tables in the book derived from various sources. The three columns on the right side of this table show some factors in the Overleaf System, for the convenience of the reader, showing the correlation with the seven columns on the left. Once again, it is fairly obvious that the chakras follow the Natural Sequence.

| Table 1 | Cc — TH | E WESTERN | N CHAKRA S | YSTEM | (ca. 1990) | Bruyere OVERLEAF SYSTEM | | | |
|---------|-------------------|----------------------|------------------------|--------|--------------------------|-------------------------|-------------------------------------|-------------------------|-----------|
| Numbers | Names | Locations | Glands | Colors | Qualities | Planes | Center | Axial/Role | Dialectic |
| Seventh | Crown | Anterior fontanel | Pineal or pituitary | Violet | Enlighten- ment | Divine | Higher Moving (Excitation) | Action King | |
| Sixth | Brow Third Eye | Cavernous plexus | Pituitary or pineal | Indigo | Intuition Imagination | Monadic | Higher Emotional (Sympathy) | Inspiration Priest | Cardinal |
| Fifth | Throat | Laryngeal plexus | Thyroid | Blue | Communi- cation | Nirvanic | Higher Intellectual (Concept) | Expression Sage | |
| Fourth | Heart | Cardiac plexus | Thymus | Green | Love Compassion | Buddhic | Impulse | Assimilation Scholar | Neutral |
| Third | Plexus Navel | Solar plexus | Pancreas Spleen | Yellow | Will Power | Mental | Lower Intellectual | Expression Artisan | |
| Second | Genital Sacral | Prostate/ vagina | Gonads Adrenals | Orange | Sexuality Sensuality | Astral Emotional | Lower Emotional | Inspiration Server | Ordinal |
| First | Root | Sacral plexus | Adrenals Gonads | Red | Survival Grounding | Physical Etheric | Lower Moving | Action Warrior | |

Comments on the table are as follows:

 NUMBERS: The first column shows the rank of the chakras from First at the low end of the body to Seventh at the high end of the body. This is standard operating procedure. The reason to rank them this way is because the chakras represent developmental stages from lowest to highest in terms of progression or evolution of consciousness.

- NAMES: The second column shows the standard names of the chakras. These locations have not
 changed much over the hundred-year history of the chakra system in the west. Various sources locate
 the Second and Third chakras in slightly different positions on the body, and this is reflected in the
 double names in this column. In other words, the Western chakra system is inconsistent, ambiguous,
 and/or confused.
- LOCATIONS: The third column recapitulates the location of the chakras as shown in the second column, but with different nomenclature. In other words, the Western chakra system is inconsistent, ambiguous, and/or confused.
- GLANDS: The fourth column shows endocrine glands that are near the location of the chakras. It is common in the chakra lore to associate them with chakras, but one can see from this table that the correlation of chakra with gland is disputable; it is not an exact science. In other words, the Western chakra system is inconsistent, ambiguous, and/or confused.
- COLORS: The fifth row shows the rainbow colors that the esotericists have converged on over the 20th Century. These are a conventional convenience, not an actuality.
- QUALITIES: The sixth row shows the personality traits or endeavors ascribed to each chakra. The accuracy of the correlation of this column with the Centers and the Roles of the seventh and eighth columns should be obvious.
- PLANES: The names of the planes are from Theosophy, and were borrowed verbatim from Table 24 of the *Rainbow Body* book, which summarized the work of a clairvoyant named Rosalyn Bruyere who lived in the middle of the 20th Century. The names of the Cardinal planes differ from those given in Chapter 1A above, "The Seven Planes", but this is of no significance.
- OVERLEAF SYSTEM: Because the numbers and names and locations of the chakras below the heart chakra vary from Western source to Western source, as shown in the table, it is impossible to correlate the Centers with them the way I understand; refer to next section for an explanation.

There is little doubt in my mind that in the Western Chakra System as shown in this table, the chakras can be seen to follow the Natural Sequence schema; more is said about the Natural Sequence in many other places in this *History* book.

The number of tables could be multiplied from other sources, both from the *Rainbow Body* book and innumerable internet websites, but I deem this to be adequate as an introduction. More information is provided in a chapter on chakras in Part One of my book *The Tao of Cosmogony*. For here and now, let's compare the above with the original Michaelian group understanding in the next two sections.

Lower Chakras and Centers

Comparing the tables shown in the previous sections, we note that there is disagreement among the sources about the names and locations of the lower chakras. (The higher chakras, Heart to Crown, do not have this discrepancy among various sources.) What to do? My goal is to find a sensible correlation of Centers with chakras without doing excessive violence to either system. In this *History* book there are other chapters on chakras, and on Centers, so what I say here applies there. My tentative solution, my working hypothesis, my rationale, is as follows.

- 1. I make the "Root" chakra, also named the "Sacral" chakra located at the base of the spine the zeroth Center and zeroth chakra. This makes it correlate with the Instinctive Center as originally understood in the Gurdjieffian teaching; that is, as the Physiology Center. This idea is discussed in Chapter 4F in Part Four, "The Instinctive Center". The Physiology Center has nothing to do with personality, as the other chakras/Centers do.
- 2. I make the "Genital" chakra which some chakra systems regard as the first or second chakra to be the "first" chakra in my enumeration. This correlates with the Moving Center of Gurdjieff and original Michaelian group, but in the Yarbro books the lowest Center is the Sexual Center; refer to Chapter 4H in Part Four, "Action Centers", for a thorough discussion of this discrepancy. To the extent that sexuality is part of this Center (as in Gurdjieff; see next chapter), the first chakra/Center serves the animal, bodily, reproductive function driven by hormones for the perpetuation of the species. The location of the gonads differs between human males and females, and this might have contributed to the confusion in regard to the location of this chakra in the various sources, regarding whether the Genital chakra is the first or second chakra.

- 3. I make the "Navel" or "Spleen" chakra, to be the second chakra, and have it correspond to the Emotional Center. This makes sense to me as the umbilicus is nurturing in a way that the Emotional Center, and the corresponding Server Role, are nurturing by nature. Also, some kinds of negative emotions are often felt at this location, as indicated by the phrase "butterflies in the stomach". All of the tables show the second chakra as having to do with "social" concerns, which is also the function of Servers in societies.
- 4. All three of the tables shown above characterize the third chakra as being mental, but some sources omit the "Solar Plexus" chakra. I prefer not to overlook it, because the autonomic nervous system complex at this location on the body is brain-like, and this makes it a reasonable correspondent with the Intellectual Center and the Artisan Role.

Further study might change or refine or embellish what I say here, but this is the best I can do at this time. For instance, some sources correlate the chakras with endocrine glands, and I have not taken the time to do that.

I really believe that the ambiguity problem is with the chakra system, and that the Overleaf System should be used to disambiguate the chakra system. I suggest that the development of the chakra system over the last century and a half since Blavatsky has been converging on the Overleaf System, and my plan is to do whatever I can to nudge it further in that direction.

Chakras per the Original Michaelian Group

There were a couple of sessions during the original Michaelian group when the question of correlation of chakras with Centers came up:

I want to know about "chakras."

The significance probably lies in the fact that so many have become aware of this at all, some not even on the path, or following strange pseudo-paths. These "chakras," of course, correspond to the measurable energy flow from the individual Centers. In other words, the lowest chakra corresponds to the output of the Instinctive Center.

Can the chakras be perceived through the "third eye"?

They are normally perceived through the Emotional Center or gut chakra.

Do the Centers and chakras correspond?

Yes, they do. This is what the yogis perceive when they expound on this. In one able to visualize [see] the auras, this becomes easy, for there is a transitory "puff" of color accompanying significant outputs, such as occurs in the digestion of the major meal of the day or in deep meditation. The gut chakra is Emotional Center; Intellectual Center manifests itself at chest level, and so forth. The Sexual Center can be measured at the level of the thyroid [lower front of the neck]; the Higher Emotional Center at the level of the pineal body; the Higher Intellectual Center at the level of the anterior pituitary. Procreation is handled by the Moving Center in sleeping animals. [SJC, 16 June 1974]

Is there a correlation between energy Centers and chakras?

When one becomes Balanced there is tremendous correlation, yes, for you feel the use of the energy in these spots described as, or called chakras, with the Higher Intellectual Center being, of course, analogous to the highest chakra or the chakra of liberation that places it above the physical body. All the chakras would be felt as energy Centers, yes. At the moment that the Emotional Center was responding to an appropriate situation, this would be felt in the gut chakra. [S/C, 25 January 1975]

This would seem to put the original Michaelian group sequence of chakras/Centers as follows:

| | Table 1Cd — THE SE | VEN CHAKRAS per th | e ORIGINAL MICHAELI | AN GROUP |
|---------|--------------------|--------------------|---------------------|---------------------|
| RANK | NAME | LOCATION | CENTER | WIKIPEDIA |
| Seventh | Crown | "pituitary" | Higher Intellectual | Higher Moving |
| Sixth | Brow | "Pineal" | Higher Emotional | Higher Emotional |
| Fifth | Throat | "thyroid" | Sexual | Higher Intellectual |
| Fourth | Heart | "chest" | Intellectual | Instinctive |
| Third | Plexus/Navel | "gut" | Emotional | Intellectual |
| Second | Navel/Spleen | "procreation" | Moving | Emotional |
| First | Sacral/Groin/Root | "lowest | Instinctive | Moving |

My comments on this table are as follows.

- RANK: The first column lists the common rank order sequence universally ascribed to the chakras in various modern sources.
- NAME: The second column lists the common, typical, universal names for the chakras in modern
 sources, which also reveals their location on the body, from the base of the spine to the top of the
 head. Notice that there is a difference of opinion in the various sources about the locations of the
 lower three chakras. This has been discussed previously.
- LOCATION: The third column lists the location given to the chakra in the body according to the original Michaelian group channeling. Notice that in no case are the common names of the chakras used in the channeling. To me this indicates that the channel might not have been familiar with the common names of the chakras.
- CENTER: The fourth column lists the Center that corresponds to each chakra according to the channeling. This sequence has a lot of similarities to what I refer to as the 'Gurdjieff Sequence' in various parts of this *History* book. The channel was familiar with the Gurdjieffian teachings, so it is not surprising that this sequence shows up here. Whether or not it is accurate is another concern that is addressed elsewhere.
- WIKIPEDIA: The fifth column lists the Center that correlates with the description from the Wikipedia information shown at the beginning of this chapter, and elsewhere. Notice that there is only one correspondence of the original Michaelian group channeling with the Wikipedia presentation on chakras, the sixth chakra. This is another clue besides the name given to the chakra in the original Michaelian group channeling that tells us that the channel likely had no understanding of the chakras. The Wikipedia sequence follows what I refer to as the Natural Sequence in various parts of this History book.

My informed opinion is that this original Michaelian group channeling is entirely bogus, and therefore it should be dismissed; it simply does not match the consensus of students and expositors of the chakra system reviewed in previous sections of this chapter. Furthermore, the original Michaelian group placement does not match the placements presented by other Michaelian teachings channels in subsequent decades, as we see in the chapter on chakras in Part Four.

Concluding Remarks on Chakras

Notice that among the tables, the higher chakras are not as well-defined or distinguished from one another as the lower chakras. Perhaps this is because experiences of their qualities and characteristics are more ambiguous and less accessible than the experiences of the lower chakras.

Some esotericists teach that there is an eighth chakra, just above the top of the head, representing the etheric or astral body; this is not shown on any of the tables in this chapter, nor is it discussed in this chapter or other chapters in this book, which is about correlation of chakras with Centers.

Notice that there is a disagreement among the tables regarding the names and locations of the lower three chakras. My solution is to make four lower chakras, the lowest, in the zeroth position, corresponds to the Instinctive Center as Gurdjieff understood it, namely as physiology. That leaves the other three lower centers to easily be correlated with the lower Centers, Moving, Emotional, and Intellectual.

Refer to Chapter 4J in Part Four, "The Seven Chakras", for a thorough discussion of the correlation of chakras and Centers. It reviews information from Michaelian teachings sources, books and internet websites, subsequent to the original Michaelian group. There you will see that various Michaelian teachings sources do not match what is said in the previous section (they also disagree with each other). There is also a chapter about chakras in Part One of my book *The Tao of Cosmogony*. Chakras also play a part in my book *The Tao of Relationships*. Apologies for spreading this information in several places in this book and several of my other books, but the subject of chakras is connected to several aspects of the Overleaf System and of the Michaelian teachings. The chakra system as understood in esoteric circles also acts as a "fact checker" for the Centers as they could and/or should be understood in the Michaelian teachings.

Chapter 1D

THE SEVEN CENTERS

This is the first chapter in a series of five chapters on precursors to the seven Overleaf System categories, the five categories that had precursors: Center, Soul Age, Role, Attitude, and Chief Feature; if Goal and Mode had precursors in other teachings or psychologies, whether esoteric or exoteric, I have not yet discovered them. These five are presented in the order in which they were revealed to the original Michaelian group. This chapter reviews seven Centers as they were understood in the Gurdjieffian teachings, which were direct precursors to the seven Centers of the Michaelian teachings.

Some of the founding members of the original Michaelian group had previously been associated with a Gurdjieffian group, founded by a man named Robert Burton, the Fellowship of Friends, which was active in the San Francisco Bay area starting in 1970. These founding members were otherwise familiar with the Gurdjieffian teachings via books. Georges Gurdjieff originally came from a part of Turkey then dominated by Russia, traveled much, eventually living and beginning to teach in Russia. Later in life he settled in Paris, where he founded a school of teaching which remains to this day. Many Gurdjieffian teachings groups have been founded all over the world. He wrote several books himself, and many books have been written about him and his teachings. I read several of them myself in the 1980's after a friend of mine, when I showed him *Messages from Michael (MFM)*, pointed out that some of the Michaelian terminology and teachings were similar to Gurdjieff.

Of these several aspects of Gurdjieff's teaching that carried over to the original Michaelian group, the first of these to be discussed in this book is that the human personality is expressed through seven "Centers". In the Michaelian teachings, this factor became one of seven Overleaf categories. This is the only one of the seven Overleaf categories that did not originally come from the Michaels — unless one counts Chief Features; refer to Chapter 1F below. Perhaps as one of the consequences of this prior history, some of what Gurdjieff taught about the Centers has transferred into the Michaelian teachings via the original Michaelian group — in my opinion without sufficient examination. That examination will be presented in Part Four of this book, in three chapters dedicated to explaining the Centers as they are understood in the modern Michaelian teachings and in my Meta-Michaelian reformulation. Another possible consequence of that prior history is that the names of the Centers are not given in the noun form as all of the other Overleaves are, but are presented as adjectives modifying the word "Center", e.g. Emotional, rather than Emotion. (I supercede this tradition in my Meta-Michaelian reformulation of the Overleaf System.)

The Centers per Gurdjieff

To understand what founding members of the original Michaelian group understood about the Centers, one would need to read the same books that they read, books by Gurdjieff himself and by his primary students: Ouspensky, Orage, and Nicoll. Collectively, I refer to these related ideas as the Gurdjieffian teachings. For the *History* book that you are now reading, the following will suffice. Wikipedia has a brief introduction to Gurdjieff's understanding of Centers at >http://en.wikipedia.org/wiki/Centers_(Fourth_Way)<.

In G.I. Gurdjieff's Fourth Way teaching, also known as The Work, centers or brains refer to separate apparatuses within a being that dictate its specific functions. There are three main centers: intellectual, emotional, and moving. These three centers in the human body are analogous to a three storey factory: the intellectual center being the top storey, the emotional center being the middle storey, and the physical center being the bottom storey. The moving center, or the bottom storey is further divided into three separate functions: sex, instinctive, and motor.

In the book The Fourth Way, Ouspensky refers to the "center of gravity" as being a center which different people primarily operate from (intellectuals, artists, and sports enthusiasts, for example, might represent each of these centers).

Moving or physical center. This brain is located in the spinal column. This brain makes beings capable of physical actions. Some, but not all, Fourth Way schools have further divided this Center into three distinct parts:

- **Motor**: Controls motor functions. The acts of walking, the physical aspects of talking, as well as even functions that are considered "reflexive", are all part of this sub-center.
- Instinctive: Controls faculties which are completely involuntary. This does not typically encompass "knee-jerk" reactions, nor what we would typically consider reflexes. A common example of the functioning of this center is the contracting of blood vessels to facilitate the pumping of blood.
- Sexual: Controls sexual functions.

Emotional or feeling center. This faculty makes beings capable of feeling emotions. This brain is dispersed throughout the human body as nerves which have been labeled as the "nerve nodes". The biggest concentration of these nerves is in the solar plexus.

Intellectual or thinking center. This center is the faculty which makes a being capable of logic and reasoning. It is located in the head.

Higher centers: While the lower centers are considered separate faculties of one's material body, one can think of these higher centers as being faculties for "higher bodies".

Higher-emotional center: faculty of the astral body. It enables one to have sustained states of self-consciousness, self-awareness, and other deep feelings. It does not replace, nor is it an "upgraded" version of the emotional center, as it is a completely separate center.

Higher-intellectual center: faculty of the mental body. It enables one to have sustained states of objective consciousness and superior intellect. As above, it does not replace, nor is it an "upgraded" version of the intellectual center. [retrieved 05 August 2019]

From what can be found in other Gurdjieff sources, the above Wikipedia entry seems to be correct. Almost surely serious Gurdjieff students are responsible for the Wikipedia article.

Note that Gurdjieff had five primary Centers with one of them, the "Moving/Physical" Center, being divided into three parts, the Motor, the Instinctive, and the Sexual parts, for a total of seven Centers/Parts of Centers. This arrangement was not carried forward exactly into the original Michaelian group, which had seven primary Centers, but with the same names and descriptions as Gurdjieff; see below. Both Gurdjieff and the original Michaelian group have an elaborate understanding of Centers and Parts of Centers, but this is not discussed in this book in detail; it is covered in my book *Study Papers on the Original Michaelian Group*.

In Chapter 1J above you can read about something that Gurdjieff called "Level of Being", which has a partial correlation with the Centers. In that chapter, a student of Gurdjieff named Ouspensky is quoted. He correlates Moving Center with Man #1, Emotional Center with Man #2, and Intellectual Center with Man #3. However, he does not name the Centers that correlate with Man #4, #5, #6, and #7. Reviewing Internet resources, it seems that other students of Gurdjieff came up with different correlations of Man Numbers with Centers beyond the first three. For instance, Robert Anton Wilson at >http://deoxy.org/cirtable.htm#gurd< names them as follows:

The Gurdjieff vibration numbers and the levels of consciousness: [1] Movement center ...; [2] False emotional center ...; [3] False intellectual center ...; [4] False personality ...; [5] Magnetic Center ...; [6] True Emotional Center ...; [7] True Intellectual Center ...; [8] The Essence ... [this internet link is now dead]

Another Internet resource, authored by David Kerr, at >http://www.9starki.com/davidk1.htm<, puts numbers on the top four Centers in a different way:

Ouspensky: ...7. Super Cosmic Conscious ... 6. Higher Mental ... 5. Higher Emotional ... 4. Sexual 3. Conceptual / Thinking ... 2. Emotional / Feeling; ... 1. Physical / Moving. [this internet link is now dead]

What is one to conclude from these discrepancies among those who followed Gurdjieff? It appears that the Gurdjieffian teachings was ambiguous and incomplete, so some of his students and interpreters came up with a different understanding of the Centers. The Michaelian teachings has continued this evolution; subsequent revelations in the Michaelian teachings moved the understanding forward, and this *History* book proposes to move it even further forward.

My summary and conclusions for this section are as follows:

- 1. The Michaelian teachings has some different understandings from Gurdjieff's about the sequence of the Centers. In the Michaelian teachings, the Sexual and Instinctive Centers are not a part of the Moving/Physical Center as per Gurdjieff, and the higher Centers are reversed in sequence from Gurdjieff, as explained in subsequent chapters.
- 2. Like the Michaelian teachings, some students of Gurdjieff have separated the Sexual, Moving, and Instinctive Centers from the Physical Center.
- 3. So, it is acknowledged that the Michaels presented some information about Centering that differs from what the Wikipedia article on Gurdjieffian teachings indicates. Gurdjieff is certainly different from what appeared in *MFM*, but I believe that what appeared in *MFM* is different from what can be found in the transcriptions of the original Michaelian group. This will be covered in chapters in Part Four, one chapter on the Instinctive Center and one chapter on the Cardinal/Ordinal placement of the Sexual and Moving Centers.
- 4. Notice in the Wikipedia description of the higher Centers, there is reference to the astral and mental "bodies". This is covered in a chapter in my book *The Tao of Cosmogony*.

Centers per Maurice Nicoll

One of the best students of the Gurdjieffian teachings was Maurice Nicoll. His lectures on the teaching were recorded and transcribed and published in five volumes, *Psychological Commentaries on the Teaching of Gurdjieff and Ouspensky (PCTGO)*. Nicoll was mentioned in the transcriptions of the original Michaelian group (27 December 1973), so it is likely that some of the members were familiar with the books.

In Volume 1 of *PCTGO*, there is much discussion of the Centers, and there are pie charts of four of the Centers as Nicoll understood them. These are shown below, and some commentary that attended the diagrams is quoted, as found at this website >https://selfdefinition.org/gurdjieff/quotes/nicoll-centers-and-parts-of-centers.htm<:

>>> Beginning of commentary on Centers extracted verbatim from the website linked above. <<<

Figure One = Intellectual Center

Intellectual Centre is represented by a circle.

Positive Part of Intellectual Centre

The top half of the circle is divided left to right into 3 arcs as follows:

I. Moving Part

1. Moving Part: [Moving part of moving part of Intellectual Centre]

Repetition of words and phrases, mechanical talking

2. Emotional Part: [Emotional part of moving part]

Curiosity, inquisitiveness, a certain sort of imagination about others

3. Intellectual Part: [Intellectual part of moving part]

Shrewdness, craftiness, cautiousness, small plans

II. Emotional Part

Desire to know and understand, search for knowledge, imagination of a higher kind

III. Intellectual Part

Intellectual construction, "creative" thought, and discovery Negative Part of Intellectual Centre

Figure 1 - Intellectual Centre

The bottom half of the circle is labeled Negative Part of Intellectual Centre. No details are given other than dotted lines dividing the half into 3 arcs.

Figure Two = Emotional Center

Emotional Centre is represented by a circle. Positive Part of Emotional Centre: The top half of the circle is divided left to right into 3 arcs as follows:

I. Moving Part

- **1. Moving Part:** [Moving part of moving part] Mechanical expression of the emotions
- **2. Emotional Part:** [Emotional part of moving part] All emotions relating to one's own likes and dislikes. Personal emotions.
- **3. Intellectual Part:** [Intellectual part of moving part] Resultant of small desires, little daily "wills"

II. Emotional Part

Religious emotions, aesthetic emotions, moral emotions, may lead to Conscience

III. Intellectual Part

Artistic creation. (Chief seat of Magnetic Centre)

Negative Part of Emotional Centre

The bottom half of the circle is simply labeled Negative Part of Emotional Centre with no details.

Figure II - Emotional Centre

Figure Three = Moving Center

Moving Centre is represented by a circle. Unlike the other three figures, this circle is not divided into an upper half (positive) and lower half (negative). I.e., there is no negative part. Ref: PD Ouspensky: "In the *moving* centre the division into two parts, positive and negative, has only a logical meaning: that is, movement as opposed to rest. It has no meaning for practical observation." *Psychology of Man's Possible Evolution*, Lecture 4.

Positive Part of Moving Centre
The entire circle is divided into thirds,
clockwise from the left as follows:

I. Moving Part

- 1. Moving Part: [Moving part of moving part of Moving Centre]
 Automatic reflexes and movements
- **2. Emotional Part:** [Emotional part of moving part] Imitation on small scale
- **3. Intellectual Part**: [Intellectual part of moving part] Limited adaptability to learning new movements

II. Emotional Part

Pleasure in Movement — normal love of games — higher imitation — i.e., acting of a certain kind

III. Intellectual Part

Inventing things, machines, making adaptations ("Inventor's") mind.

Negative Part of Moving Centre — Does not exist

Figure Four = Instinctive Center

Instinctive Centre is represented by a circle.

Positive Part of Instinctive Centre

The top half of the circle is labeled Positive Part. It is divided left to right into 3 arcs as follows:

I. Moving Part

- **1. Instinctive-Moving Part** [instinctive-moving part of moving part] [blank]
- **2. Emotional Part**: [emotional part of moving part] Pleasant sensations
- **3. Intellectual Part** [intellectual part of moving part] [blank]

II. Emotional Part

Blind animal love (mother) — "instinctive" love — animal jealousy

III. Intellectual Part

Many so-called intuitions belong here and are the work of the Intellectual Part of Instinctive Centre

Negative Part of Instinctive Centre

The bottom half of the circle is labeled

Negative Emotional Part. It is divided left to right into 3 arcs as follows:

- I. Negative Moving Part
- 1. Instinctive-Moving Part [instinctive-moving part of negative moving part] [blank]
- 2. Emotional Part [emotional part of negative moving part] Unpleasant sensations
- 3. Intellectual Part [intellectual part of negative moving part][blank]
- **II. Negative Emotional Part**

Animal RAGE, desire to kill

III. Negative Intellectual Part

Comments on Nicoll Diagrams

There is some concern on my part that showing you these complex diagrams and this text might not serve to enlighten you about these four Centers as understood in the Michaelian teachings, because there are significant differences; therefore I offer some comments:

1. The Gurdjieffian view of Centers was complicated and inconsistent. One would not get the idea from the original Michaelian group transcriptions that the Centers and Parts of Centers were as complicated and inconsistent as shown in the Nicoll diagrams; one would get the idea that each of the three lower Centers — Moving, Emotional, Intellectual — was divided into three Parts: Intellectual, Emotional, and Moving, and that there was a positive half and a negative half. Furthermore, reading Michaelian teachings books subsequent to the original Michaelian group does not exhibit this much complexity and inconsistency. The conclusion I draw from this is that the Gurdjieffian view of Centers is not authoritative empirical science that we should blindly follow.

- 2. Three of the four Centers explicitly were said to have a Positive Part and a Negative Half. This was a precursor to the Michaelian teachings idea of Positive and Negative Poles for all the Overleaves. The Positive and Negative Halves were known to the original Michaelian group.
- 3. Nicoll's view of the Instinctive Center appears to differ from that found in Ouspensky's book *In Search of the Miraculous* and quoted in Chapter 4F in Part Four, "Instinctive Center". There it was said that the Instinctive Center had only to do with physiology, and that it was a sub-Center to the Physical Center. Here, the Instinctive Center is obviously a Center of its own, and it is said to involve more than physiology; it also involves psychology.
- 4. The Instinctive Center as represented here appears to include the lower Centers as Parts, but in the Michaelian teachings it also encompasses the higher Centers as Parts. Refer to Chapter 4F in Part Four, "Instinctive Center", for a thorough discussion.
- 5. In the previous section evidence was presented that some students post-Gurdjieff separated the Instinctive Center from the Moving Center. That appears to be the case here, and it appears to be the case in the Fellowship of Friends (see next section) where original Michaelian group founding members learned of the Centers. This is also the case in Fellowship of Friends member Susan Zannos's book *Human Types Essence and the Enneagram*. Further research might clarify this history, which is murky to me at this time. The next section is about the post-Gurdjieff innovation provided by the Fellowship of Friends in the 1970s.
- 6. Note that Nicoll had no place for the Sexual Part of Physical Center in his schema. This makes sense in that there are hints in Ouspensky's book *In Search of the Miraculous* (see below) and original Michaelian group transcriptions that the Sexual Center was considered to be a higher Center.

The Fellowship of Friends

This organization, based on the Gurdjieffian teachings, was initiated in 1970 by Robert Burton. Several founding members of the original Michaelian group were involved in it until late 1972, when they left for 'greener pastures', which turned out to be the Michaels less than a year later. The Fellowship of Friends had a lot to say about the Centers, and some of that was illustrated by a Fellowship of Friends member, a cartoonist named Harold Wirk. Some of his cartoons are reproduced in Volume Two of *Michael Speaks* — the Legacy of Sarah Chambers (SJC-2). Verbatim text from those cartoons was extracted and placed into the subsections below. The theme of the cartoons was that the categories of playing cards were used as symbols for the four lower Centers (Spades, Hearts, Diamonds, Clubs) and Parts of Centers (Ace, King, Queen, Jack), as follows.

>>> Beginning of explanation of Centers extracted from the Harold Wirk Fellowship of Friends cartoons. <<<

Moving Center = Spades

The Ace of Spades is the title card for the Moving Center.

The King of Spades is the title card for the Intellectual Part of Moving Center.

- It is an important and interesting instrument.
 - Well done physical work needs many inventions.
 - Imitating at will the voice, intonations, and gestures of other people, such as actors possess, belongs here.
 - o In better degrees, it is mixed with the work of the Intellectual Part of the Emotional Center.

The Queen of Spades is the title card for the Emotional Part of Moving Center.

- Connected chiefly with the pleasure of movement.
- Love of sports and games should belong here, but when Identification and emotions mix with it, it is rarely there, and in most cases the love of sport is in the Moving (Mechanical) Part of either Intellectual or Emotional Centers.

The Jack of Spades is the title card for the Mechanical Part of Moving Center.

- Imitation and the capacity for imitation which plays such a big part in life, belong here.
- All automatic movements which in ordinary language are called "instinctive" belong to it (such as catching a falling object without thinking).

Summary of Moving Center:

- The moving function includes in itself all external movements, such as walking, writing, speaking, editing, and memories of them.
- None of the moving functions are inherent and one has to learn them all as a child learns to walk or as one learns to write or draw.
- Moving Center also includes some strange moving functions which represent useless work of the human machine not intended by nature, but which use up a great quantity of time and energy. These are:
 - Formation of dreams, imagination, daydreaming, talking with oneself, all talking-for-talking's sake, and generally all uncontrolled or uncontrollable manifestations.

Emotional Center = Hearts

The Ace of Hearts is the title card for the Emotional Center.

The King of Hearts is the title card for the Intellectual Part of Emotional Center.

- Power of artistic creation.
- When Intellectual Parts of other Centers are educated, artistic creation may manifest itself in dreams.
- Chief seat of the Magnetic Center when it is fully developed and works with its full power. It is a way to higher Centers.

The Queen of Hearts is the title card for the Emotional Part of Emotional Center.

- Sense of humor or comical
- · Religious, aesthetic, moral emotions, and in this case it may lead to an awakening of conscience.
- But with Identification, it may be ironical, sarcastic, derisive, cruel, obstinate, wicked, and jealous only [except] in a less primitive way than the Mechanical Part of Emotional Center.

The Jack of Hearts is the title card for the Mechanical Part of Emotional Center.

- Consists of the cheapest kind of ready-made humor and a rough sense of the comical.
- Love of being in a crowd, being part of a crowd, attraction to crowd emotions of all kinds.
- Complete disappearance in lower-half animal emotions; cruelty, selfishness, cowardice, envy, jealousy, and so on.

Intellectual Center = Diamonds

The Ace of Diamonds is the title card for the Intellectual Center

The King of Diamonds is the Intellectual Part of Intellectual Center

- Capacity for creation, invention, and discovery.
- It cannot work without attention, and the attention must be controlled and kept there by will and effort.

The Queen of Diamonds is the Emotional Part of Intellectual Center.

- Consists chiefly of intellectual emotion that is, desire to know or understand.
- Satisfaction of knowing, dissatisfaction of not knowing.
- Pleasure of discovery.
- Requires full attention but no effort
- Attracted and held by the subject itself, very often thru Identification (called interest, enthusiasm, passion, or devotion)

The Jack of Diamonds is the Mechanical Part of Intellectual Center — or formatory apparatus or formatory center.

- Majority of mankind, Man #1, lives entire existence in this Center.
- Only counts to two.
- All popular theories are formatory
- Works almost automatically, it does not require any attention.
- It cannot think. Continues to work in the same way where circumstances have completely changed.
- Registers impressions, memories, and associations.

Summary of Intellectual Center:

- Mechanical Part Mechanical without attention or with attention wandering.
- Emotional Part Attention held by the subject but without effort.

Intellectual Part — Attention controlled and held in the subject by will.

Instinctive Center = Clubs

The Ace of Clubs is the title card for the Instinctive Center. The work of the Instinctive Center is very well hidden from us.

The King of Clubs is the Intellectual Part of Instinctive Center.

- The intellectual part serves a very big and a very important role.
- In the state of self-consciousness or approaching it, one can come into contact with the Intellectual Part of Instinctive Center and learn a great deal from it concerning the functioning of the machine and its possibilities. It is the mind behind all the work of the organism, a mind quite different from the intellectual mind.

The Queen of Clubs is the Emotional Part of Instinctive Center.

- We really know, that is, feel and can observe, only the sensory and emotional part.
- All physical emotions; that is, all physical sensations which are either pleasant or unpleasant. All kinds of pain or unpleasant smell, and all kinds of physical pleasure, such as pleasant taste, smell, and so on.
- The five senses: sight, hearing, smell, taste, touch; and all other senses, such as: sense of weight, of temperature, of dryness or moisture, and so on (indifferent sensations, neither pleasant nor unpleasant).

The Jack of Clubs is the Mechanical Part of Instinctive Center.

- The Mechanical Part includes in itself habitual sensations which very often we do not notice at all, but which serve as a background for other sensations.
- Instinctive movements, that is, all the inner work of the organism, all physiology, so to speak, digestion and assimilation of food, breathing, circulation of the blood, all the work of inner organs, the building of new cells, the elimination of worked out materials, the work of glands of inner secretion and so on.

Summary of the Instinctive Center:

- Includes all inner work of the organism.
- All instinctive functions without exception are inherent (no learning required).
- The division in the instinctive Center is: pleasure—pain.
- The negative half of the Instinctive Center is a watchman warning us of danger.

>>> End of explanation of Centers extracted verbatim from the Harold Wirk Fellowship of Friends cartoons. <<<

The comments that were made on the Nicoll material also apply to the Fellowship of Friends material, but here I want to emphasize one thing: in the Wikipedia article, the Instinctive Center was a mere Part of the Physical Center. I take this to be the original Gurdjieffian understanding, because that is what I read in Ouspensky's book *In Search of the Miraculous*, and what the Wikipedia article stated. With Nicoll and the Fellowship of Friends, there is the separation of the Instinctive Center from being a mere Part of the Physical Center. Originally, Gurdjieff and Ouspensky, put physiology, not psychology, in the Instinctive Center, but Nicoll and the Fellowship of Friends included personality factors in the Instinctive Center. What is not clear to me is whether the separated Instinctive Center precedes the three lower Centers (in the zeroth position), or succeeds them (in the fourth position). I have yet to find evidence of either. The original Michaelian group put the Instinctive Center in the fourth position of the septenary. This move of position in the septenary is discussed in detail in Chapter 4F in Part Four, "The Instinctive Center".

Although much more could be said, let's let the above be an adequate description of the lower Centers according to Gurdjieff and some of his successors; let's move on to the so-called "higher" Centers.

Higher Centers per Gurdjieff

The description and understanding of the lower Centers — Moving, Emotional, Intellectual — does *not* differ much between Gurdjieff, the Fellowship of Friends, students of Gurdjieff, and the Michaelian teachings community. The description and understanding of the Instinctive Center *does* differ between these groups, and I sort that out in Chapter 4F in Part Four. That leaves the so-called "higher" Centers to discuss in this chapter. Let me quote from Ouspensky in his book *In Search of the Miraculous (ISM)* for these.

Sexual Center

As stated in the Wikipedia article in the first section of this chapter, Gurdjieff taught that the sexual function was a Part of the Physical Center, along with Motor Part and the Instinctive Part. In the following passage quoted from *ISM*, he is ambiguous about whether Sex is a Part of a Center or a Center of its own:

It [sexual center] can [be regarded as an independent center]. At the same time if all the lower storey [Motor, Sexual, Instinctive] is taken as one whole, then sex can be regarded as the neutralizing part of the [triadic partitioned] moving [Physical] center.

Then, to immediately confuse matters even more, he characterized it as being similar to the two higher centers:

In the first place it must be noted that normally in the sex center as well as in the higher emotional and the higher thinking centers, there is no negative side. In all the other centers except the higher ones, in the thinking, in the emotional, in the moving, in the instinctive, in all of these there are, so to speak, two halves — the positive and the negative, affirmation and negation, or "yes" and "no" in the thinking center, pleasant and unpleasant sensations in the moving and instinctive centers.... Sex, in fact, governs all other centers....

Thereafter follows a page where it seems that Gurdjieff hints that the Sexual Center is different from and higher than the lower Centers:

... the energy of other centers which is much lower and coarser than its own. And yet the sex center is very important for the general activity, and particular of the inner growth of the organism, because, working with "hydrogen" 12 [a high-quality energy], it can receive a very fine food of impressions, such as none of the ordinary centers can receive.

That statement reinforces the notion that the Sexual Center was special and apart from the ordinary, lower Centers. The course of this discourse, recounted across three pages of this book, is proceeding from the Sexual Center being a part of a lower Center, to a Center of its own, to somewhat like a higher Center. The discourse continued this progression upward:

The role of the sex center in creating a general equilibrium and a permanent center of gravity can be very big. According to its energy, that is to say, if it uses its own energy, the sex center stands on a level with the higher emotional center. And all the other centers are subordinate to it. Therefore it would be a great thing if it worked with its own energy. This alone would indicate a comparatively very high level of being. And in this case, that is, if the sex center worked with its own energy and in its own place, all other centers would work correctly in their places and with their own energies. [Ouspensky, *ISM*, pp. 257–259]

The phrase, Level of Being, has a chapter of its own in this *History* book, Chapter 1J below. Briefly: there are seven Levels of Being in Gurdjieff's version of the spiritual path, and the seven steps are characterized by the qualities of the Centers. According to this passage, mastering one's sexual energy is tantamount to advancing to a very high spiritual level. My book *The Tao of Relationships*, elaborates on this idea considerably.

The last quoted passage could be used as justification for placing the Sexual Center at the top of the hierarchy of Centers. In fact, that is where it has finally landed in the Michaelian teachings community. Overleaf Charts from the original Michaelian group, reviewed in Part Three, place the Sexual Center in the #5 position, among the higher Centers. Subsequent Charts, after the original Michaelian group, move it to the #7 position, and rename it variously Higher Moving, Higher Kinesthetic, or Excitation. This is in keeping with the Gurdjieff assertion that the Sexual Center energizes all the other Centers. More is said about this migration and renaming in Chapter 4H in Part Four, "The Action Centers".

As an introduction to Gurdjieff's understanding of two higher Centers, I quote from the same book:

The two higher states of consciousness — "self-consciousness" and "objective consciousness" — are connected with the functioning of higher centers in man. In addition to those centers of which we have so far spoken there are two other centers in man, the "higher emotional" and the "higher thinking". These centers are in us; they are fully developed and are working all the time, but their work fails to reach our ordinary consciousness. [ISM, p. 142]

Higher Emotional Center

In those cases where the work of the emotional center reaches the intensity and speed of existence which is given by hydrogen 12, a temporary connection with the higher emotional center takes place and man experiences new emotions, new impressions hitherto entirely unknown to him, for the description of which he has neither words nor expressions. But in ordinary conditions the difference between the speed of our usual emotions and the

speed of the higher emotional center is so great that no connection can take place and we fail to hear within us the voices which are speaking and calling to us from the higher emotional center. [ISM, pp. 194–195]

It is clear from this passage that Gurdjieff regarded experience of the Higher Emotional Center as very rare and very unusual. This understanding was adopted by the original Michaelian group and by subsequent Michaelian teachings sources.

What is called according to one terminology the "astral body", is called in another terminology the "higher emotional center", although the difference here does not lie in the terminology alone. These are, to speak more correctly, different aspects of the next stage of man's evolution. It can be said that the "astral body" is necessary for the complete and proper functioning of the "higher emotional center" in unison with the lower [centers]. Or it can be said that the "higher emotional center" is necessary for the work of the "astral body". [ISM, p. 197]

It is clear from these passages that Gurdjieff regarded the Higher Emotional Center as a gateway to what we in the Michaelian teachings and many other esotericists refer to as the Astral Plane. This understanding did not get adopted into the original Michaelian group and into subsequent Michaelian teachings communities. Instead, the Higher Emotional Center is correlated with the sixth plane, a higher plane, not the Astral Plane, which is a lower Plane and which is referred to as the Emotional Plane in many esoteric sources. Refer to Chapter 1A above and to Chapter 4E in Part Four, "The Seven Planes", for elaboration.

Higher Intellectual Center

The higher thinking center, working with hydrogen 6, is still further removed from us, still less accessible. Connection with it is possible only through the higher emotional center. It is only from descriptions of mystical experiences, ecstatic states, and so on, that we know cases of such connections. These states can occur on the basis of religious emotions, or, for short moments, through particular narcotics; or in certain pathological states such as epileptic fits or accidental traumatic injuries to the brain.... [ISM, p. 195]

It is clear from this passage that Gurdjieff regarded experience of the Higher Intellectual Center as very rare and very unusual. This understanding was fostered in the original Michaelian group and in subsequent Michaelian teachings communities.

The "mental body" corresponds to the "higher thinking center". It would be wrong to say that they are one and the same thing. But one requires the other, one cannot exist without the other, one is the expression of certain sides and functions of the others. [ISM, p. 197]

It is clear from these passages that Gurdjieff regarded the Higher Intellectual Center as a gateway to what we refer to as the Causal Plane (which is properly named as the Mental Plane). This understanding did not get adopted into the original Michaelian group and into subsequent Michaelian teachings communities. Instead, the Higher Intellectual Center is correlated with the fifth plane, a higher plane, not the Mental Plane, which is a lower Plane in many esoteric sources. Refer to Chapter 1A above and Chapter 4E in Part Four, "The Seven Planes", for elaboration.

In this section discussing the three higher Centers, I listed them in what I refer to as the Gurdjieff Sequence. That is, Sexual Center, Higher Emotional Center, Higher Intellectual Center; refer to Chapter 2C in Part Two, "Sequences of Overleaves", for more information about the Gurdjieff Sequence. This sequence repeats the same order as the lower Centers: Moving, Emotional, Intellectual. As documented in Chapter 1C above, "The Chakras", the original Michaelian group adopted the Gurdjieff Sequence. Two Overleaf Charts that originated in the original Michaelian group showed the higher Centers in the Gurdjieff Sequence.

However, years later, Yarbro changed this sequence in a couple of ways. First, the Sexual Center was made a lower Center and the Moving Center was made a higher Center; this is documented in Chapter 4H in Part Four, "The Action Centers". Second, the sequence of the higher Centers were reversed, to become this: Higher Intellectual, Higher Emotional, [Higher] Moving. This change is documented in Chapter 2C in Part Two, "Sequences of Overleaves". Furthermore, there is an extensive discussion of the nature of the higher Centers in Chapter 4G in Part Four, "The Higher Centers". There you see my attempt to continue the evolution of an understanding of the higher Centers, beyond Gurdjieff, and beyond the current, mainstream Michaelian teachings community.

Now that we have some of the history of the precursor to the original Michaelian group understanding of Centers, let's take a look at the original Michaelian group understanding of Centers.

The Centers per the Original Michaelian Group

Because the teaching about Centers originated with Gurdjieff and not with the Michaels, there is no history of their revelations recorded in the original Michaelian group transcriptions as there is with the other Overleaf categories.

Astute and knowledgeable Michaelian students will immediately notice that the way Gurdjieff *originally* understood the Centers, documented in the Wikipedia article quoted above, is somewhat different from the way the original Michaelian group and subsequent Michaelian teachings books understood the Centers. Near as we can tell, also as documented above, there is evidence that the original presentation evolved in the minds of some of Gurdjieff's students, and the original Michaelian group adopted and adapted the latter understanding. We know this because two Overleaf Charts from the original Michaelian group, including the very first one, sequence the Centers as: 1 = Moving, 2 = Emotional, 3 = Intellectual, 4 = Instinctive, 5 = Sexual, 6 = Higher Emotional, 7 = Higher Intellectual.

The two most notable differences that Gurdjieff's students and the original Michaelian group made to the original Gurdjieff understanding are these:

- 1. What Gurdjieff called the Instinctive Part of Physical Center (the lowest of three lower Centers) became a separate Center and moved to the middle of the Septenary, the Neutral position between the Ordinal ("lower" Center) triad and the Cardinal ("higher" Center) triad. The implications of this move are covered in Chapter 4F in Part Four, "The Instinctive Center". The change in description, from physiology to psychology, is somewhat from Gurdjieff's students as implied by the work of Nicoll and the Fellowship of Friends as documented above, but I have not seen any evidence that the change in location was made by Gurdjieff's students.
- 2. What Gurdjieff called the Sexual Part of Physical Center (the lowest of three lower Centers) became a separate Center and moved to the lowest position among the higher Centers, forming a triad of higher Centers that repeats the lower triad in terms of what eventually got called "Action, Inspiration, and Expression" the "Axial" Attributes. The implications of this move are covered in the chapter "Action Centers", in Part Four.

No clues are to be found in the original Michaelian group transcriptions about these significant changes from the original Gurdjieff understanding to the original Michaelian group understanding; it is merely an inference that the original Michaelian group borrowed the new ideas from Gurdjieff's students. However, there are clues, in the same Wikipedia article as quoted above, that it might have happened with a couple of students of the Gurdjieffian teachings that are not documented above. The source in this case is this link: >http://en.wikipedia.org/wiki/Centers %28Fourth Way%29<.

Rodney Collin in his book, *The Theory of Celestial Influence*, says that he believes that the three centers [Instinctive-Moving, Emotional, Intellectual] seem to be a simplification of four centers: the emotional center, the instinctive center, the moving center, and the intellectual center. He believes that there is a clear separate existence of an instinctive and a moving center, as the instinctive center is born complete: nobody teaches the newborn baby how to breathe at birth, or to suck to be fed some hours later; however, it has to learn how to hold his feeding bottle some months later, or to stand and walk by himself some time later yet.

Susan Zannos in her book, *Human Types: Essence and the Enneagram*, writes that the four suits of the common deck of playing cards represent the four lower centers: diamonds for the intellectual center, hearts for the emotional center, spades for the moving center, and clubs for the instinctive center. She shows how the three court cards (jack, queen and king) are used to represent three levels of attention within man for each of the lower centers. She states that the sex center is represented by the ace of each suit, indicating how sex energy enters the other four lower centers. [retrieved ~2011]

This material was removed from the Wikipedia article who knows when after I copied it, but I own both of those books, and can confirm that the information is accurate.

Concluding Remarks on the Centers in the Gurdjieffian Teachings and the Original Michaelian Group

So, it looks as though Rodney Collin separated the Instinctive Center from being a Part of the Physical Center, and Susan Zannos separated the Sexual Center from being a Part of the Physical Center. Whether they were following the lead of other students of the original Gurdjieffian teachings is not clear to me. Collin wrote his book in the 1950s, before the original Michaelian group (and the original Michaelian group members knew of

Collin and his book), but Zannos wrote her book in the 1990s, after the original Michaelian group, so those two are not completely responsible for what we see in the original Michaelian group; perhaps it was Nicoll. Anyway, there are clues as to why the changes were made in Ouspensky's account, as documented above.

I have neither stumbled upon nor researched the answer to this whodunit question. Perhaps the Michaels made the changes but we just did not get the relevant transcription. Perhaps the original Michaelian group members got these changes from their local Gurdjieff group, the Fellowship of Friends. Perhaps some esotericists known to the original Michaelian group made comparisons between Gurdjieff's teaching about the Centers and Neo-Theosophy's teaching about the chakras and thereby upgraded the understanding of the Centers. (There is some discussion of chakras versus Centers in Chapter 2A in Part Two, "Revelation of Overleaves".)

Whatever the source, the original Michaelian group Charts made what I regard as improvements over Gurdjieff, but the original Michaelian group did not completely solve their proper sequencing or nature. That came with contributions from several channels and students in subsequent years. This progress will of course be noted in other chapters in this *History* book.

Chapter 1E

THE SEVEN SOUL AGES

This is the second chapter in a series of five chapters on precursors to the seven Overleaf System categories — the five categories that had precursors: Center, Soul Age, Role, Attitude, and Chief Feature; if Goal and Mode had precursors in other teachings or psychologies, whether esoteric or exoteric, I have not yet discovered them. These five are being presented in the order in which they were revealed to the original Michaelian group. In the previous chapter, we reviewed Centers, which were a part of the Gurdjieffian teachings.

Speaking of which, the Gurdjieffian teachings had a component about spiritual development, which Gurdjieff referred to as Levels of Being. (These are reviewed in Chapter 1J.) The Levels of Being correlate with the Soul Ages because they have the same Septenarian Attributes, but the two septenaries are not the same thing: Level of Being is Gurdjieff's name for spiritual growth within a single lifetime; Soul Age is the name for soul development over multiple lifetimes.

The Soul Ages were the first Overleaf category revealed by the Michaels to the original Michaelian group. I believe that fact says something about its importance to the Michaels, and to us, their students; the Michaelian teachings is all about reincarnation and the ramifications of reincarnation, Soul Age being one of the ramifications.

Many other spiritual and esoteric teachings have spiritual development via reincarnation as a central tenet. Wikipedia, my favorite introductory resource for general information, has an extensive review of the history of this notion: >https://en.wikipedia.org/wiki/Reincarnation<. However, I have found only three teachings that pre-existed the Michaelian teachings that list stages of this development and that provide specific characteristics of the stages such as we find in the Michaelian teachings. Those three teachings are:

- The Jewish Kabbalah, which developed a theory of stages of soul development in the late Middle Ages, if not sooner;
- Theosophy and branches thereof, starting in the late 19th and ending in the mid 20th Century;
- The teachings of Meher Baba, a South Asian enlightened guru, also of the mid 20th Century.

The next section, on the subject of so-called "spiritual evolution", is a brief introduction to the history of the concept of spiritual growth via reincarnation. It mentions that there are stages thereof, but it does not describe them. After that section, we review the three teachings about Soul Age in three sections.

Note that in previous chapters we found that Planes, Chakras, and Centers follow what I call the Natural Sequence. In this chapter we find the same thing in regard to the seven Soul Ages as espoused by these three sources outside of the Michaelian teachings. For your convenience as you read this chapter, the Attributes of the Natural Sequence are shown in the following table, plus additional rows that name Aspects, aka instantiations, of the Natural Sequence that cover various time scales. As you will see as you read this chapter, these Aspects are relevant to this chapter because they are mentioned herein.

| Table1Ea — ATTRIBUTES and INSTANTIATIONS of the NATURAL SEQUENCE SCHEMA | | | | | | | | |
|---|---------------------|---------------------------|-------------------------|----------------------------|--------------------------|--------------|-------------|--|
| RANK | FIRST | SECOND | THIRD | FOURTH | FIFTH | SIXTH | SEVENTH | |
| DIALECTIC | | -ORDINAL- | | =NEUTRAL= | +CARDINAL+ | | | |
| AXIAL | ACTION INSPIRATION | | EXPRESSION | ASSIMILATION | EXPRESSION | INSPIRATION | ACTION | |
| DIMENSION | -1-D- | -2-D- | -3-D- | =P-D= | +3-D+ | +2-D+ | +1-D+ | |
| DIRECTION | BACKWARD | DOWNWARD | OUTWARD | COMPLEX | INWARD | UPWARD | FORWARD | |
| PROCESS → ASPECT ↓ | TERMINATION | INVOLUTION | ANALYSIS | COMBINATION | SYNTHESIS | EVOLUTION | ORIGINATION | |
| CENTER | MOTION | EMOTION | INTELLECT | IMPULSE | CONCEPT | SYMPATHY | EXCITATION | |
| CHAKRA | GONADIC | NAVEL | PLEXUS | HEART | THROAT | BROW | CROWN | |
| ROLE | WARRIOR | SERVER | ARTISAN | SCHOLAR | SAGE | PRIEST | KING | |
| SOUL AGE | INFANT | BABY | YOUNG | MATURE | OLD | TRANSCENDENT | INFINITE | |
| CULTURE | HUNTER- GATHERER | AGRICULTURAL -PASTORAL | TECHNICAL- CIVILIZED | SCIENTIFIC- INFORMATION | HOLISTIC- PHILOSOPHIC | _ | _ | |
| PLANE | PHYSICAL | ASTRAL | MENTAL | BUDDHAIC | SPIRITUAL | DIVINE | LOGOIC | |
| BIOLOGY | PLANT | ANIMAL | HUMAN | TRANS-HUMAN | | _ | | |

My comments on this table are as follows:

- 1. RANK: The seven stages of progress through the Natural Sequence are ranked, from the left column to the right column.
- 1. The five rows below the RANK row show the so-called "Attributes" of the stages of the Natural Sequence schema. These Attributes are discussed in more detail elsewhere in this *History* book and in my other books, so I will not explain them here. Please review the names now if you are not already thoroughly familiar with these Attributes, because many references to them are made in this chapter and in this *History* book.
- 2. All of the rows below the five Rows of Attributes show Aspects of the so-called "Process/Aspect System" (my name for my particular understanding of the structure and meaning of the Overleaf System) that are relevant to this chapter.
- 3. CENTER: This row shows the seven "Centers" using my preferred names. Learned Michaelian students will note that my preferred names differ from those names preferred by most other Michaelian students. Refer to Chapter 4F ("The Instinctive Center") and Chapter 4G ("The Higher Centers") and Chapter 4H ("The Action Centers") for more information about my rationale for my naming conventions. That the Centers can be arranged in a time-like sequence along with these other time-like sequences was known to Gurdjieff, and he referred to them as Levels of Being, but others, such as myself, refer to them as stages of enlightenment. There is a correlation of the Centers with the Soul Ages in terms of Attributes, and that correlation is represented in this table.
- 4. CHAKRA: Refer to Chapters 1C and 4J, "The Seven Chakras", for more information about the names shown in this row of the table. That the chakras can be arranged in a time-like sequence is known to those who have experienced, or heard or read about, the rise of Kundalini energy from the base of the time to the top of the head. There is a correlation of the Chakras with the Soul Ages in terms of Attributes, and that correlation is represented in this table.
- 5. SOUL AGES: This row shows names for the seven Soul Ages that are commonly used in Michaelian sources. There are other names from sources reviewed in subsequent sections of this chapter.
- 6. CULTURE: This row shows names for stages of socio-cultural development that humanity in general has gone through up to now, and will supposedly go through in the future. In the Michaelian teachings it is said that humanity on average is making the transition from technical-civilized to scientific-informational because the average Soul Age is shifting from Young to Mature. On page 68 of *More Messages from Michael* (1979), it is said that "civilization will [eventually] become primarily philosophical", which I assume refers to the time when the average Soul Age is Old.

- 7. PLANE: These are the names of the seven planes as given in Theosophy. Learned Michaelian students will notice that these names differ from those names accepted by most other Michaelian students. Refer to Chapters 1A and 4E, "The Seven Planes", for more information about the rationale for this naming convention. One of the pre-Michaelian sources for Soul Age information reviewed further on (Meher Baba) uses the term "planes of consciousness" for what we Michaelian students call Soul Age, and it is well known among Michaelian students that there is a correlation of the two in terms of Attributes; that correlation is represented in this table.
- 8. BIOLOGY: In the next section of this chapter you will see documentation that the biological evolution of the life forms shown in the last line of the table is analogous to stages of soul development in the way shown.

The Michaelian teachings about Soul Age did not appear in a historical or conceptual vacuum; it is the culmination of a long line of thought about the meaning and purpose of human life, that purpose being the soul's long-term goal of graduating from the human experience. The next section provides a brief history of that concept of an evolving, developing soul.

Spiritual Evolution

Belief in the evolution of the soul via reincarnation has been extant for millennia. This is briefly documented in a Wikipedia article with the same name as this section heading.

Introduction

Spiritual evolution, also called <u>higher</u> evolution, is the idea that the mind or spirit, in analogy to biological evolution, collectively <u>evolves from a simple form dominated by nature, to a higher form dominated by the Spiritual</u> or Divine. It is differentiated from the "lower" or biological evolution, and thought to be foreshadowed by enlightened beings who have already evolved to this advanced <u>stage</u>. The concept of spiritual evolution is teleological [prospective, purposeful], in contrast to biological evolution [retrospective, purposeless].

The metaphor of 'lower' and 'higher' is appropriate for the subject of biological evolution because fossils of earlier creatures are lower in the geological strata than later biological creatures. In this way, structure in space reflects a structure in time. The space-time metaphor is used many times in this chapter, appearing as 'lower-earlier' and 'higher-later'. The space-time metaphor is extended from this geological-biological phenomenon to the Soul Age phenomenon.

According to the ancient notion that goes by the name, "The Great Chain/Nest of Being" (discussed below and elsewhere in this *History* book), biological evolution and soul evolution are instantiations of the same universal phenomenon over time, and that their evolution occurs in stages, but they involve different components of the cosmos, one "natural" and the other "supernatural".

Besides that, this notion of biological evolution versus soul evolution is broadly consistent with the notions of Ordinality and Cardinality in the Natural Sequence schema, in that the lower–earlier Ordinal stages are "natural" and the higher–later Cardinal stages are "supernatural" — in some meanings of those words. In my book *The Tao of Cosmogony*, various aspects of biological evolution are discussed in several chapters in the Part that is titled "Natural Evolution", and spiritual evolution is discussed in several chapters in other Parts. There you will read that both instantiations of evolution, natural and supernatural, are found to follow the Natural Sequence schema. Some esotericists do recognize this; see the next subsection of the Wikipedia article, quoted below.

The last sentence in the quotation referring to "teleology" means to me that biological evolution is generally understood to be driven forward in the present by the past, whereas spiritual evolution is generally understood to be drawn forward in the present by the future, the perceived and desired goal of reunion with divinity.

The Wikipedia article continues:

Theories of spiritual evolution are important in many Occult and Esoteric teachings, which emphasize the <u>progression and development of the individual</u> [soul] either after death (spiritualism) or <u>through successive reincarnations</u> (Theosophy, Hermeticism).

Numerous occult and esoteric teachings, such as Theosophy and Hermeticism and many others, are reviewed in various Parts of my book *The Tao of Cosmogony*, such as "Paths to Enlightenment", which is focused on the spiritual growth that one may traverse within a lifetime, but here in this chapter in this *History* book the focus is on the spiritual evolution that is said to takes place over the span of many lifetimes. My research indicates

that the stages of spiritual evolution toward enlightenment within a lifetime have the same Natural Sequence Attributes as the stages of evolution of the soul via reincarnation.

Spiritual evolution is just another component of a general, universal notion that originated in antiquity:

The Great Chain of Being

The concept of the great chain of being [was] developed by Plato and Aristotle, whose ideas were taken up and synthesized by [the Neo-Platonist] Plotinus. Plotinus in turn heavily influenced Augustine's theology, and from there [Thomas] Aquinas and the Scholastics. The Great Chain of Being was an important theme in Renaissance and Elizabethan thought, had an under-acknowledged influence on the shaping of the ideas of the Enlightenment and played a large part in the worldview of 18th century Europe. And while essentially a static [space-like] worldview, by the 18th and early 19th century it had been "temporalized" [also viewed as time-like] by the concept of the soul ascending or progressing spiritually through the successive rungs or stages, and thus growing or evolving closer to God. It also had at this time an impact on theories of biological evolution.

Wikipedia has a lengthy article on the GCB: >https://en.wikipedia.org/wiki/Great_chain_of_being<.

It is common to visualize the Great Chain of Being in space-like terms, as a ladder with rungs or steps or levels from lower to higher that the components of the universe sit on. It comes naturally to classify beings in terms of different kinds or types, and present them in a diagram as a sequence based on one parameter or another. It is also possible to regard the Great Chain of Being in time-like terms, as stages of evolution or development along one parameter or another. As it so happens, time-like evolution is no more smoothly continuous than space-like kinds or types are; distinctions exist between space-like levels and distinctions exist between time-like stages. Notice that I prefer the word "levels" for the space-like sequence of *beings* and the word "stages" for the time-like sequence of *doings*.

The Wikipedia article continues:

[Philosopher] E. F. Schumacher, author of *Small is Beautiful*, has recently proposed a sort of simplified Great Chain of Being, based on the idea of four "kingdoms" (mineral, vegetable, animal, human). Schumacher rejects modernist and scientific themes, his approach recalling the universalist orientation of writers like [theologian] Huston Smith, and likely contributing to [philosopher] Ken Wilber's "holonomic" hierarchy or "Great Nest of Being".

The Great Chain/Nest of Being was discussed in previous chapters, namely Chapter 1A on Planes, in Chapter 2C on Sequences, and is discussed in subsequent chapters in this *History* book. Basically and briefly, the so-called "holonomic" notion of Ken Wilber appears in the Natural Sequence schema as the notion that each higher-later level-stage contains and transcends ('nests' within it) the earlier-lower level(s)-stage(s). Many Michaelian students might not be familiar with that phrase (Great Chain/Nest of Being), and they probably aren't familiar with that word (holonomic), but the phenomenon to which the phrase and the word point make an appearance in the Michaelian teachings: the seven Life-Stages (aka Internal Monads) are said to be a subset of Levels, the seven Levels are said to be a subset of seven Soul Ages, the seven Soul Ages are said to be a subset of seven sub-planes, and the seven sub-planes are said to be a subset of seven planes. In this way, and others, the Michaelian teachings endorses the ancient nested hierarchy of the Great Chain/Nest of Being.

Regarding Schumacher's assertion of evolution from "mineral > vegetable > animal > human", that can be fit into the Natural Sequence schema as follows: mineral = Stage Zero = the previous septenary being the inanimate foundation for the animate world; vegetable = Stage One; animal = Stage Two; human = Stage Three. The correlation with the Centers is: plant = Motion Center, animal = Emotion Center, and human = Intellect Center. This correlation is discussed at length in my book *The Tao of Cosmogony*, in the Part on "Natural Evolution", in the Chapter on "Evolution of Life". One of the core beliefs of spiritualists is that this evolution continues beyond the kind of life that is contained within physical bodies that are subject to biological evolution along the spectrum of Centers; see next quotation:

Spiritualism

Spiritualists reacted with uncertainty to the theories of [biological] evolution in the late 19th and early 20th century. Broadly speaking, the concept of [biological] evolution fit the spiritualist thought of the <u>progressive development of humanity</u>. At the same time, however, a belief in the animal origins of man threatened the foundation of the immortality of the spirit, for if man[kind] had not been created, it was scarcely plausible that he would be specially endowed with a spirit. This led to spiritualists embracing spiritual evolution.

In the 19th century, Anglo-American Spiritualist ideas emphasized the progression of the soul after death to higher states [planes] of existence, in contrast to Spiritism which admits to <u>reincarnation</u> [on the Physical Plane].

Spiritualism taught that after death, spirits progressed to <u>new spheres of existence</u> [planes]. According to this idea, evolution occurred in the spirit world "at a rate more rapid and under conditions more favorable to growth" than encountered on earth.

Refer to Chapters 1A and 4E, "The Seven Planes", in this *History* book for a discussion of the "spheres of existence".

According to the Michaelian teachings, both Spiritualism and Spiritism are correct with their doctrines about the evolution of the soul. The point to be emphasized here is that the evolution of the soul via reincarnation in seven Ages on the Physical Plane is a preview of the further evolution of what is known in the Michaelian teachings as the "essence" or "spark" via experience on the six planes that are higher—later in the Great Chain/Nest of Being. Evidence presented in this chapter and other chapters in this *History* book shows that both Soul Ages and planes follow the Natural Sequence schema. Theosophy was one of the new religious movements, of spiritualism and spiritism, that formalized the stages of soul evolution in response to the formalization of biological evolution starting with Darwin, about which more is said further on in this section, and in subsequent sections.

The Wikipedia article continues:

The biologist and spiritualist Alfred Russel Wallace (1823–1913) believed that qualitative novelties could arise through the process of spiritual evolution, in particular, the phenomena of life and mind. Wallace attributed these novelties to a supernatural agency. Later in his life, Wallace was an advocate of spiritualism and believed in an immaterial origin for the higher mental faculties of humans. He believed that evolution suggested the universe had a [teleological] purpose, and that certain aspects of living organisms are not explainable in terms of purely materialistic processes. In a 1909 magazine article entitled *The World of Life*, which he later expanded into a book of the same name, Wallace argued in his 1911 book *World of Life* for a spiritual approach to evolution and described evolution as "creative power, directive mind, and ultimate purpose". Wallace believed natural selection could not explain intelligence or morality in the human being, so [he] suggested that non-material spiritual forces accounted for these. Wallace believed the spiritual nature of man could not have come about by natural selection alone, the origins of the spiritual nature must originate "in the unseen universe of spirit".

Robert Broom in his book *The Coming of Man: Was it Accident or Design?* (1933) claimed that "spiritual agencies" had guided evolution as animals and plants were too complex to have arisen by chance. According to Broom there were at least two different kinds of spiritual forces, and psychics are capable of seeing them. Broom claimed there was a plan and purpose in evolution and that the origin of Homo sapiens is the ultimate purpose behind evolution. According to Broom "Much of evolution looks as if it had been planned to result in man[kind], and in other animals and plants to make the world a suitable place for him to dwell in."

The Anglo-American position recalls (and is presumably inspired by) 18th century concepts regarding the temporalization [viewing it as time-like] of The Great Chain of Being. Spiritual evolution, rather than being a physical (or physico-spiritual) process is based on the idea of realms or stages through which the soul or spirit passes in a non-temporal, qualitative way.

An enormous amount of work has been done in classifying biological beings (plants, animals, humans), showing how they are related to each other in the metaphorical 'tree' of life, but before the Michaelian teachings came along, only minor work had been done on clarifying the evolution of the soul in terms of the qualities and characteristics of its developmental stages — on the Physical Plane and above. I suggest that the details of the Michaelian teachings revelation about the Soul Ages and the ever-larger Composites (refer to Chapter 4E) of soul families is one of the Michaelian teachings' most significant contributions to the notion of the progressive revelation about spiritual evolution recapitulating biological evolution.

The Wikipedia article continues:

Theosophical conceptions

Theosophy presents a more sophisticated and complex cosmology than Spiritualism, although coming out of the same general milieu. H.P. Blavatsky developed a highly original cosmology, according to which the human race (both collectively and through the succession of individual reincarnation and spiritual evolution) passes through a number of Root Races, beginning with the huge ethereal and mindless Polarian or First Root Race, through the Lemurian (3rd), Atlantean (4th) and our present "Aryan" 5th Race. This will give rise to a future, Post-Aryan 6th Root Race of highly spiritual and enlightened beings that will arise in Baja California in the 28th century, and an even more sublime 7th Root Race, before ascending to totally superhuman and cosmic states of existence.

This Theosophical notion of Root Races reminds me of what anthropologists call socio-cultural evolution in the pre-history and history of humankind. Root Races are reviewed in chapters, and socio-cultural evolution is reviewed in other chapters, in my book *The Tao of Cosmogony*. In the Michaelian teachings, it is said that the socio-cultural history of humankind as a whole has developed through stages that correspond with the younger Soul Ages. The reason given for this is that Infant Souls, then Baby Souls, then Young Souls were in the majority during those earlier socio-cultural stages. It is said that humankind is now in the transition between the predominance of Young Souls incarnate on the planet, and the predominance of Mature Souls on the planet. It is said that in the distant future, humankind will be dominated by Old Souls.

The Wikipedia article continues:

Blavatsky's ideas were further developed by her successors, such as C.W. Leadbeater, Rudolf Steiner, Alice Bailey, Benjamin Creme, and Victor Skumin, each of whom went into huge detail in constructing baroque <u>cycles</u> of <u>rounds</u>, <u>races</u>, and sub-races....

Theosophy has an online resource, >https://theosophy.wiki<, which is presented in the same style as Wikipedia. There you can do a search on these terms — cycles, rounds, races — and see that their notion of the evolution of the soul and groups of kindred souls on the planes beyond the physical is somewhat similar to the Michaelian teachings, especially regarding the nested septenarian hierarchy. In this chapter I am only going to discuss Soul Age, and leave the discussion of the various Theosophical septenaries for a chapter in my book *The Tao of Cosmogony*.

The Wikipedia article continues:

Although including elements of the science of her day as well as both eastern and western esoteric thought, Blavatsky rejected the Darwinian idea that man evolved from apes, and most subsequent esotericists followed this lead. Darwinism, with its explanation of evolution through material factors like natural selection and random mutation, does not sit well with many spiritual evolutionists, for whom evolution is initiated or guided by metaphysical principles or is [teleologically] tending towards a final spiritual or divine state. It is believed by Theosophists that humans are evolving spiritually through a series of esoteric initiations and in the future humans will become esoteric masters themselves as their souls gradually rise upward through the spiritual hierarchy over the course of eons as they reincarnate....

According to the Michaelian teachings as well as Theosophy, individual humans, and humankind in general, are evolving through a standard, predictable series of "initiations" or steps in a hierarchy, "hierarchy" being another name for the Great Chain/Nest of Being, which cannot be, and cannot do, other than abide by the logical and mathematical structure of space and time established by the Tao.

The Wikipedia article continues:

Rosicrucians

Rosicrucians view the world as a <u>training school</u>, which posits that while mistakes are made in life, humans often learn more from mistakes than successes. Suffering is considered as merely the result of error, and the impact of suffering on the consciousness causes humans to be active along other lines which are found to be good, in harmony with nature. Humans are seen as spirits attending the school of life for the purpose of unfolding latent spiritual power, <u>developing themselves from impotence to omnipotence</u> [Action Axis] (related also to <u>development from innocence into virtue</u> [Inspiration Axis]), reaching the stage of creative gods at the end of mankind's present evolution: Great Day of Manifestation.

This view has been compared with epigenesis, which views the [biological] development of [Stage One] plants, [Stage Two] animals, and fungi as a process in which plants, animals, and fungi develop from a seed, spore, or egg through a sequence of steps in which cells differentiate and organs form.... In esoteric spirituality epigenesis is the idea that since the mind [Expression Axis] was given to the [Stage Three] human being, it is the original creative impulse which has been the cause of all of mankind's development. According to this approach, humans build upon that which has already been created, but add new elements because of the activity of the spirit. Humans have the capacity, therefore, to become creative intelligences — creators. For a human to fulfill this promise, his training should allow for the exercise of originality, which distinguishes creation from imitation. When epigenesis becomes inactive, in the individual or even in a race, evolution ceases and degeneration commences.

Rosicrucianism is discussed in a chapter in my book *The Tao of Cosmogony*. In that book, you will read that the esoteric notion of a repeated septenarian hierarchy is espoused and developed in detail.

Early in this section we noted that the evolution of life forms — starting from mineral (Stage Zero) and evolving to vegetable (Stage One, Action) and then to animal (Stage Two) and then to human (Stage Three) — was presented as an analogy for stages in the evolution of the soul. Here we see hints of that same evolution, but stated in what amounts to the Action Axis and the Inspiration Axis and the Expression Axis. This idea is more than hinted at in the sources reviewed in subsequent sections.

The Wikipedia article continues:

Neo-Vedanta

According to Gosling, Swami Vivekananda based most of his cosmological and biological ideas on Samkhya. Influenced by western thought and esotericism, Vivekananda and Sri Aurobindo developed a view on reincarnation in which an involution of the Divine [Michaelese = fragmentation of the Tao] into matter takes place, and the person has to evolve over multiple lives [Michaelese = Soul Age advancement via reincarnation] until the Divine gains recognition of its true nature and liberation is attained....

Sri Aurobindo and Pierre Teilhard de Chardin both describe a progression from inanimate matter to a future state of Divine consciousness. Teilhard de Chardin refers to this as the Omega Point, and Sri Aurobindo as the Supermind.

Aurobindo and Chardin are discussed in chapters in my book *The Tao of Cosmogony*.

It seems to me that the quotation above is referring to both the evolution of Soul Age during reincarnation on the Physical Plane and to the continued evolution of the soul (essence, spark) thereafter on the higher–later planes. Evidence and argument indicate that the Natural Sequence pattern applies to both time scales.

The Wikipedia article continues:

Teilhard, who was a Jesuit Paleontologist who played an important role in the discovery of Peking Man, presented a teleological [purposeful] view of planetary and cosmic evolution, according to which the formation of <u>atoms</u>, <u>molecules</u>, and <u>inanimate</u> matter is followed by the development of the <u>biosphere</u> and organic evolution, then the appearance of <u>man</u> and the [so-called] noosphere as the total envelope of human thought. According to Teilhard evolution does not cease here but continues on to its culmination and unification in the Omega Point, which he identifies with Christ.

Note the distinct categories mentioned here as 'links' in the Great 'Chain' of Being. The GCB is not like a rope or a cable; evolution 'up' through the 'chain' is not a smooth, continuous development. In my book *The Tao of Cosmogony*, much is said about the reasons for the division of the cosmos into distinct space-like levels and time-like stages, with obvious, though porous, boundaries between the levels and stages. So it is with Soul Age.

The Wikipedia article continues:

New Age

New Age thought is strongly <u>syncretic</u>. A common theme is the evolution [Soul Age septenary] or the transcendence [enlightenment septenary] of the [individual] human or collective planetary [socio-cultural] consciousness in a higher state or higher "vibratory" (a metaphor taken from G. I. Gurdjieff) <u>level</u>.

By "syncretic", the quotation means that the New Age movement has borrowed ideas from many and various philosophical and spiritual traditions and teachings. The same can be said for the Michaelian teachings. One could research and write an entire book on *The Synthesis: The Michaelian Teachings as Perennialism.* (The way things are going with Artificial Intelligence, at some point in the near future, one could ask an AI engine to do exactly that.) This Part One of this *History* book, "Precursors to the Overleaf System", begins to document the same point.

In the quotation above we see an acknowledgment in the New Age mindset that, as the quantity of enlightened individuals increases, and as the average Soul Age of the population rises, the socio-cultural status of humanity on average also rises, which is reasonable and to be expected. Some sources, such as Wikipedia, make mention of, but do not always make as clear and thorough a distinction between these three instantiations in the Great Chain of Being having to do with the evolution of humans and of humanity. The briefest septenary in this triad is often referred to as enlightenment, and that is documented in this *History* book (in Chapter 1J) as Gurdjieff's "Levels of Being". The intermediate septenary in this triad is the subject of this chapter, on Soul Age. The longest septenary has to do with socio-cultural evolution, which is briefly mentioned numerous times in this *History book*, and is discussed in detail in my book *The Tao of Cosmogony*.

The Wikipedia article continues:

David Spangler's communications speak of a "New Heaven and a new Earth", while Christopher Hills refers (perhaps influenced by Sri Aurobindo) to the <u>divinization</u> of man.

The so-called "divinization" spoken of here has a correlate in the Michaelian teachings, namely that the end point of the evolution of the collective or composite souls of humanity is the Infinite Soul, with an intermediate step being the Transcendental Soul; the Wikipedia article continues:

[The book] *Jonathan Livingston Seagull* narrated the idea of evolution in a fascinating fashion. James Redfield in his novel *The Celestine Prophecy* suggested that through experiencing a series of personal spiritual insights, humanity is becoming aware of the connection between our evolution and the Divine. More recently in his book *God and the Evolving Universe: The Next Step in Personal Evolution* (2002) co-written with Michael Murphy, he claims that humanity is on the verge of undergoing a change in consciousness. It is also known as the path of Ascension.

The so-called "path of Ascension" does not happen in a smooth, continuous evolution; it happens in stages, which is to say that the periods of *evolution* are separated by transitional periods of *revolution*. In Table 1Ea, the lines between the names of the stages represent the revolutions.

The Wikipedia article continues:

STAGE THEORIES

The idea of a spiritual evolution finds contemporary expression in a number of stage theories, inspired by Sri Aurobindo, Jean Gebser, and Piaget, among others. In these models, <u>human development</u>, both <u>individual</u> [Life-Stage] <u>and collectively</u> [socio-cultural], is conceptualized as going through a number of <u>structural stages</u>, from the primitive psychophysical genesis [Ordinal Action] to the full-grown rational, cognitive [Ordinal Expression] and moral [Ordinal Inspiration] abilities, and beyond to transpersonal [Cardinal] stages in which unconscious drives are fully recognized and integrated, and the sense of a separate identity is loosened or abandoned.

Aurobindo's work is reviewed in my book *The Tao of Cosmogony*. Gebser and Piaget are also discussed in that book, in the Part on "Developmental Psychology".

One point to be emphasized here regarding this quotation: notice the hints that the "structural stages" have the characteristics and qualities of the Natural Sequence schema, namely the Dialectic (Ordinal, Neutral, Cardinal) and Axial (Action, Inspiration, Expression, Assimilation) Attributes. This provides you with a preliminary clue to these Septenarian Attributes as they are applied to the Soul Ages in subsequent sections of this chapter.

Another point to be emphasized here is that the Life-Stages, aka Internal Monads (see Chapter 4Q, "The Seven Life-Stages"), follow the same Natural Sequence schema as the Soul Ages and socio-cultural evolution, because all three time-scales of evolution are septenaries in the Great Chain/Nest of Being. These three are in addition to the stages of biological evolution mentioned previously.

The Wikipedia article continues:

Spiral dynamics

An interpretation of social [cultural] and psychological development [Life-Stages] that could also be considered a theory of spiritual evolution [Soul Age] is spiral dynamics, based on the work of Clare W. Graves. Spiral Dynamics posits a series of stages through which human's cultural development progresses — from a survival-based huntergatherer stage to a magical-tribal-agrarian stage to a city-building-invading stage to a mythic-religious-empire stage to a rational-scientific-capitalist stage to a green-holistic-inclusive stage and then ascending to a second tier where all the previous stages are contemplated and integrated and a third transpersonal tier where a spiritual unity or Omega point is eventually reached, which all the other stages are struggling to embody. He feels that individuals in each of the meme-plexes/stages can ascend to the peak of consciousness — these being the prophets, visionaries, and leaders of any region/age.

Spiral Dynamics was reviewed in a section in a previous chapter in this Part of this *History* book, namely Chapter 1B, "Personality Typologies". There you will read that its stages correlate well with the Soul Age stages. There you will also read that Spiral Dynamics is an excellent blend and extension of what the Michaels have to say about three septenarian time tracks in the Great Chain/Nest of Being, namely Life-Stages (aka Internal Monads), Soul Ages, and socio-cultural evolution. A much more extensive review of Spiral Dynamics is found in my book *The Tao of Cosmogony*, in the Part titled "Developmental Psychology", where it is a chapter among many other chapters, including chapters on Jean Gebser and Jean Piaget, mentioned above, and including Wilber, mentioned below.

The Wikipedia article continues:

Ken Wilber

More recently the concept of spiritual evolution has been given a sort of respectability it has not had since the early 19th century through the work of the integral theorist Ken Wilber, in whose writings both the cosmological [Soul Age] and the personal [Life-Stages] dimensions are described. In this integral philosophy (inspired in part by the works of Plotinus, Hegel, Sri Aurobindo, Eric Jantsch, and many others) reality is said to consist of several [space-like] realms or [time-like] stages, including more than one of the following: the physical, the vital, the psychic, (after the Greek psyche, "soul"), the causal (referring to "that which causes, or gives rise to, the manifest world'), and the ultimate (or non-dual), through which the individual progressively evolves. Although this schema is derived in large part from Tibetan Buddhism, Wilber argues (and uses many tables of diagrams to show) that these same levels of being are common to all wisdom teachings. Described simplistically, Wilber sees humans developing through several stages, including magic, mythic, pluralistic, and holistic mentalities. But he also sees cultures as developing through these stages. And, much like Hegel, he sees this development of individuals and cultures as the evolution of existence itself. Wilber has also teamed up with Don Beck to integrate Spiral Dynamics into his own Integral philosophy, and vice versa. [>https://en.wikipedia.org/wiki/Spiritual_evolution< — retrieved 28 December 2022]

The various stages of Wilber's so-called "Integral" psychology–philosophy–theology–cosmology are correlated with the various stages of components of the Michaelian teachings, specifically the Natural Sequence schema, in my book *The Tao of Cosmogony*. That correlation will not be summarized here.

But what I will summarize is this: the point of this section was to demonstrate that the notion of the evolution, in stages, of a non-material component of the human experience that transcends lifetimes has been a component of many philosophies and world religions for thousands of years. Besides these revelations, the concept is also a component of modern-day empirical research in socio-cultural evolution and in developmental psychology. Now that we have established that background information, we can go on to ask this: what are the qualities and characteristics of those stages? My research so far has discovered that the Jewish Kabbalah might have been the first to define and codify and systematize the stages, and it so happens that it is consistent with the pattern revealed by the Michaels.

Kabbalah

In Chapter 1A, "The Seven Planes", I introduced the reader to my understanding of the correlation of the *olamot* (singular *olam*) of the Jewish Kabbalah with the planes of other esoteric cosmologies. In this section of this chapter, I discuss yet another aspect of the Kabbalistic teaching, one that is functionally equivalent to the Soul Ages as presented in the Michaelian teachings. Reincarnation is one of the central teachings of the Kabbalah, just as it is with the Michaelian teachings, and it so happens that Kabbalists have formulated a structured framework for this aspect of their teaching. It is the oldest such structured teaching about Soul Ages that I have stumbled upon so far in my research on this topic. Some of the ideas were espoused in a document called the *Zohar*, but the date of its authorship is disputed; it could have been as early as the 2nd Century CE, or at the latest it was the 13th Century CE; you can read about that here: >https://en.wikipedia.org/wiki/Zohar<.

Following is a quotation extracted from the book *Kabbalah for Dummies* [KFD], authored by Arthur Kurzweil and published in 2006. In the quotation, the *italicized* words are Hebrew words transliterated into the Roman alphabet. <u>Underlined</u> words within the quotations are my emphasis, to call attention to correlates with features of the Michaelian teachings. Also included are some explanatory words or phrases in [brackets], and I have inserted some commentary, interspersed within the quoted text. I also use my preferred names for the Centers, which are in the noun form rather than in the traditional adjective form (in order to be consistent with all the other names of Overleaves). Some of this discussion might be hard to follow, so a table is included near the end of this section.

Kabbalists conceive of the soul as having five levels. Each level has a name and represents aspects of the divine soul in man. The five levels of the soul are:

1. Nefesh: The **lowest** and most basic aspect of the soul. Sometimes, the word "nefesh" is used more generally to refer to the soul. Nefesh animates existence and gives the human body its ability to move, its life force, and its ability to reproduce. The level of the soul called nefesh corresponds to the world of action. People living on the level of nefesh share it with animals. These people simply move, breathe, and are alive.

The level of the soul described above correlates with the Infant Soul Age, and the Motion Center and the Warrior Role of the Overleaf System.

2. *Ruach*: The **second** level of the soul. *Ruach* is often translated as spirit. The level of the soul called *ruach* corresponds to the world of formation and <u>emotions</u>. People living on the level of *ruach* not only are alive but also experience the range of human emotions including <u>love</u>, <u>compassion</u>, <u>humility</u>, and awe.

The level of the soul described above correlates with the Baby, aka Child Soul Age, and the Emotion Center and the Server Role of the Overleaf System.

3. Neshama: The **third** level of the soul. The word "neshama" is sometimes used informally to refer to the soul in general, but neshama really refers to the higher soul, corresponding to the world of creation and ideas. People living on the level of neshama think, meditate on God, and reach for an intellectual grasp of the world and the Divine.

The level of the soul described above correlates with the Young Soul Age and the Intellect Center and the Artisan Role of the Overleaf System.

4. Chaya: The **fourth** level of the soul. The level called *chaya* corresponds to that which goes on in the spiritual world of emanation. People living on the level of *chaya* pierce through the worlds of emotion and ideas and enter <u>spiritual</u> realms that are almost impossible to describe. They begin to grasp spiritual reality and see that they're far more than bodies that are born, live, and die.

The level of the soul described above correlates with the Mature Soul Age, and the Impulse Center and the Scholar Role of the Overleaf System.

5. *Yechida*: The **fifth** level of the soul. This level is called the most inward point of the divine spark. Kabbalists see *yechida* as beyond all the four worlds ... and the actual point in which the soul and the Divine make contact. People living on the level of *yechida* have reached the point of contact between the soul and God.

The level of the soul described above correlates with the Old Soul (and the Concept Center and the Sage Role).

What's the point of all these levels? Well, the point of the levels is the point of life, and the point of life, according to Kabbalah, is to realize one's spiritual potential and ultimately connect with the Divine within oneself. [KFD, pp. 99–100]

These descriptions do not present an understanding of the levels or aspects of soul in terms of the development of the soul over the course of reincarnations; that idea is presented further on. The understanding presented here is that all of these levels of the soul exist in us simultaneously, but that we manifest and emphasize them at various times in our lives. This notion is made clearer further on.

Of course, there is a fuller description of these levels of soul in that book, and in other sources. For instance, some years ago, while looking through the library of a friend whom I was visiting, I found a book by a Rabbi about Jewish views of soul, afterlife, and reincarnation: Does the Soul Survive? A Jewish Journey to Belief in Afterlife, Past Lives, and Living with Purpose (DTSS), by Rabbi Elie Kaplan Spitz. Rabbi Spitz's sources were mostly from traditional Jewish teachings and from Jewish mystics. I later purchased my own copy. Following is the verbatim quote, with my explanatory and correlative comments in [brackets] as usual. It is a lengthy quote, and you will see in it stages that can be applied to various scales of personal experience. Hebrew words are italicized, and underlined words provide correlations with components of the Natural Sequence of the Overleaf System Traits.

The soul is composed of nestled, complementary qualities. The *Zohar* [a primary text of Kabbalah] describes three dimensions of soul — *nefesh*, *ruach*, and *neshamah* (the same three words for breath) — and correlates them with facets of inner human existence [like the Centers]. *Nefesh* is linked to *assiyah*, the physical world [plane] of action [Ordinal Action = Motion Center = Physical Plane]; *ruach* is in the domain of *yetzirah*, the world [plane] of feelings [Ordinal Inspiration = Emotion Center = Astral Plane]; *neshamah* is in the world [plane] of *beriyah*, thoughts [Ordinal Expression = Intellect Center = Mental Plane]; the next realm of creation is *atzilut*, divine transcendence identified with intuition [Neutral Assimilation = Impulse Center = Akashic Plane], and later linked by Isaac Luria [mystic Jewish expositor of Kabbalah] with the highest levels of soul, *chayah* and *yechidah*. On a more cosmic level it describes them as separate realms of creation [like the planes]. Understanding Judaism's approach to soul requires an examination of these three dimensions of soul as described in the *Zohar*.

As I said at the beginning of this section, a correlation of the Kabbalistic notion of planes was made with other esoteric teachings in Chapter 1A above, "The Seven Planes"; here the Kabbalistic notion of levels of the soul are correlated with those planes.

Soul on the most **primary** level of human existence is called *nefesh*, representing the realm of <u>action</u> and <u>physical</u> pleasure. Our bodies are the foundation of our lives and we are fundamentally physical beings. With our bodies we act in the world.

The level of the soul described above correlates with the Infant Soul Age, and the Motion Center and the Warrior Role of the Overleaf System.

At the **next** level, *nefesh* supports and connects with *ruach*, the realm of <u>feelings</u>, which enables personality and the expression of <u>love</u>. Animals, too, have a body and feelings and thus have soul, but one that is limited to the lower dimensions of soul possibility.

The level of the soul described above correlates with the Baby/Child Soul Age, and the Emotion Center and the Server Role of the Overleaf System.

With *neshamah*, the **third** level of soul, we evidence uniquely human capacities. The *neshamah* is identified with analytic <u>thought</u>, the quest for <u>meaning</u>, and transcendence. Only humans ask (so we surmise), "What is the significance of my life?" This capacity for self-reflection and awareness is our link to God and is identified as the breath of life (*nishmat chayim*) that God uniquely breathed into Adam (Genesis 2:7). In traditional [Jewish] mystical writings, soul is often called by the term *neshamah* because it is that part of the personality most identified with self-identity and transpersonal relationships. As we will see later, *neshamah* is also that dimension of soul most identified with soul survival and reincarnation.

The level of the soul described above correlates with the Young Soul Age, and the Intellect Center and the Artisan Role of the Overleaf System.

Isaac Luria (Egypt–Israel, 1534–1572) was the most influential teacher of Jewish mysticism, with the possible exception of the author of the *Zohar*, Moses de Leon (Spain, d. 1305). He identified two more realms of soul — *chayah* and *yechidah*, which are often [but not always] grouped together as a fourth dimension of creation. These two higher spheres [planes] are accessed by <u>intuition</u> [#4 = Mature Soul = Impulse Center = Scholar Role] or disciplined <u>imagination</u> [#5 = Old Soul = Concept Center = Sage Role] and might be called "spirit," as distinguished from soul, because of their intrinsic link to the Divine.... For Luria the three lower facets of soul were identified with the personality of the individual. The upper two (spirit) were extensions of God and hence universal.

This paragraph makes it more obvious than the quotation from *KFD* that the fourth level of the soul and the fourth plane are about "intuition", which is my name for the Positive Pole of the Impulse (aka Instinctive) Center, and that the fifth level of the soul and the fifth plane is about "imagination", which is descriptive of the nature of what the Michaelian teachings calls the Higher Intellectual Center but I prefer to call the Concept Center.

In Hasidism [a sect/movement in Renaissance Judaism] the three lower levels of soul were given a more <u>psychospiritual</u>, <u>developmental</u> emphasis. The Maggid of Mezeritch (Rabbi Dov Baer, d. 1772), the chief disciple of the founder of Hasidism, the Ba'al Shem Tov (1698–1760), taught in the eighteenth century that the <u>levels of soul were acquired in stages</u>:

"When a man is born he has only an animal soul, the *nefesh*. When he overcomes the Evil Urge (physical compulsions such as the craving for food or sex) the person is given *ruach*. The entire world of angels is then in his domain. If the person is even more worthy (and he learns to master his emotions, such as anger) he is given a *neshamah*, corresponding to the Divine throne. This means that his every intent and thought creates a throne for God. When a person of this level thinks about his love of God, he is placed in the Universe of Love.... Such a person must never remove his thoughts from God, even for an instant, for God Himself rests in his thoughts." In this Hasidic description <u>soul development moves in stages and is a lifelong pursuit</u>. How we live our lives and our level of awareness determine which rungs of soul are most profoundly engaged. [DTSS, pp. 23–25

In this Hasidic interpretation of the levels of soul, there is a foreshadowing of an understanding of what came to be called "developmental psychology" in modern times, and which are formalized as the Internal Monad) of the Michaelian teachings and what I call Life-Stages in this *History* book. There is also a foreshadowing of the stages on a spiritual path, similar to the so-called Level of Being in the Gurdjieffian teaching. In this narrative there is not yet the idea of Soul Ages via reincarnation, but the point is that all of these various instantiations of developmental stages follow the same pattern on their different time scales.

The story told in Kabbalah tradition continues:

There are five levels of soul, or five rungs on purification of the soul. These levels in ascending order are nefesh, ruach, neshamah, chayah, and yechida (see Chapter 3 [of DTSS]). The two highest levels are so closely identified with God that they are universal in character and are not subject to reincarnation. Elevating our sparks through the lower three levels is our life work, and our status in the process reflects different degrees of spiritual maturity. Recall that nefesh is the physical level of being. This animal dimension of self is shaped by physical deeds. Ruach is the personal self, which contains the energy that animates us and is identified with our emotional life. Neshamah is the transpersonal self that is shaped by our capacity of thought and enables us to reach beyond ourselves in uniquely human ways. Beyond the influence of the soul sparks, a person has a primal capacity of consciousness and freedom of will that enable the process of soul repair. [DTSS, p. 85]

So far this is reminiscent of Gurdjieff and his Levels of Being, a version of the spiritual path during a lifetime, not the journey of the soul across many lifetimes; refer to Chapter 1J, "Gurdjieff's Levels of Being". There you will read that so-called Man #1 was Moving Centered, Man #2 was Emotionally Centered, and Man #3 was Intellectually Centered.

Thus, the three lowest levels of the soul according to Kabbalah (and Gurdjieff) obviously correspond to the Ordinal Centers: Motion, Emotion, and Intellect. It also corresponds to the three Ordinal planes: Physical, Astral, Mental/Causal as documented in Chapter 1A, "The Seven Planes". The two higher levels of soul, the fourth and fifth levels, *chaya* and *yechida*, are described as having to do with intuition and imagination respectively, so they are to be correlated with the Impulse and Concept Centers respectively, and to the Akashic plane and the fifth plane (by whatever name it gets called in various teachings), respectively. The correlation of these five stages of "soul" or "spiritual" development with five Soul Ages is simply this: Infant to Old respectively. Further on, somewhat will be said about two additional soul stages beyond these five, according to Kabbalah.

So what about advancing Soul Age via reincarnation? At this point in the book, *DTSS* seems to shift the description from soul development during a lifetime (as in Life-Stages) to Soul Age advancement via the process of reincarnation, as follows:

Luria said that in any one lifetime our soul sparks are only purified to move up one of the rungs of the purification ladder.... Each rung is also three-dimensional, hologram-like, containing the three aspects of the soul: physical, emotional, and intellectual.... Reincarnation offers two opportunities for soul repair. First, reincarnation enables a soul spark that has completed its work on one rung to begin its purification on the next level. Second, reincarnation provides an additional chance to repair a mistake that prevented the soul spark from moving upward in a previous incarnation. Luria said that a soul spark had only three lifetimes in which to rise up each soul rung. Repair of soul sparks is only achieved by the current deeds of the living. [DTSS, pp. 85–86]

This reminds me of the Michaelian statement that it generally takes three lifetimes to complete one Level within each Age; perhaps this is what Luria mystically intuited. Thus, the "rungs" of the ladder can be compared to the Levels within the Ages, the Ages themselves, and the planes — all of these stages of development apply to the journey of the soul, over increasingly larger septenarian cycles of time.

Before continuing the story told in *DTSS*, a new term must be defined:

Adam HaRishon — "The first Adam." In Lurianic Kabbalah, a reference to the Adam of the Bible, who suffered a spiritual fall in the Garden of Eden for violating God's command. The process of falling dispersed spiritual sparks in all directions. Adam's descendants possess spiritual sparks generated from different body parts of Adam HaRishon. Our task is to elevate the dispersed sparks back to the level of Adam, thereby reconstituting the wholeness of God's original creation.

My translation of this statement to Michaelian teachings cosmology is to say that *Adam HaRishon* correlates with the humanoid Oversoul, aka the Essence, the unified being that is the precursor of the Casting process for human souls (as distinct from animal souls). The "body parts" of *Adam HaRishon* are like the Cadre Group, Cadre, Entity, Side, Greater Cadence, Cadence, and Fragment spoken of in Michaelian teachings revelations. The "sparks" in Kabbalah are pretty much like the sparks spoken of in Michaelian teachings revelations; they are like the UUID (Universal Unique IDentifier) of the soul in the 'body' of the Oversoul/*Adam HaRishon*.

Then here is where the DTSS narrative gets even more relevant to the Soul Age perspective:

Luria offers a path other than reincarnation for a soul to return to the human plane. A soul from a previous life may return as a temporary visiting soul, in Hebrew an *ibbur* [plural *ibburim*]. An *ibbur* will choose to inhabit a person whose foundational sparks are derived from the <u>same body part</u> of *Adam HaRishon* as his or her own. The

visiting soul may gain the merit of a specific *mitzvah* performed by the host body that is needed to complete the *ibbur's* soul. When the mission is completed, the visiting soul returns to his or her source in the spirit realm. [DTSS, p. 86]

There are three ideas to correlate here with the Michaelian teachings that are pertinent to a certain understanding or interpretation of Soul Age that I present further on, in Chapter 4M in Part Four, "The Seven Soul Ages": 1) There is a dominant Fragment in each incarnation, but more than one member of one's soul family can inhabit the same body as a subordinate fragment, an *ibbur*, during the Mature and Old Soul Ages; 2) the completion of Monads (*mitzvah*) accomplished by the dominant Fragment can benefit the subordinate Fragment; 3) the arrangement is mutually beneficial because the subordinate Fragment provides muse-like inspiration and other assistance to the dominant Fragment as a sub-personality; more is said about this phenomenon below.

There is one other type of soul mentioned in Kabbalah sources that seems relevant to the topic of Soul Age in this chapter.

The visiting soul of a *tzaddik* (a spiritually complete person) is a second type of *ibbur* identified by Luria. The *tzaddik* is selfless and can return a thousand times. This is comparable to the Mahayana Buddhist concept of a *bodhisattva*. The *bodhisattva* is an enlightened being who is exempt from the laws of reincarnation and returns to the world to commiserate with others and to help them. A *tzaddik-ibbur* provides muse-like inspiration, aiding the host to elevate his or her soul, which facilitates the return of holy sparks to the body of *Adam HaRishon*. [DTSS, p. 86]

In Chapter 4M in Part Four, "The Seven Soul Ages", the *bodhisattva* is postulated to be equivalent to the so-called "Transcendental Soul" of the Michaelian teachings. Kabbalists believe that Isaac Luria was a *tzaddik*, and in the enlarged definition of a Transcendental Soul that I present in that chapter, I would agree with them, based on descriptions of his psychic abilities. The Kabbalistic notion of *ibbur* reminds me of the *daimon* of Socrates: >https://en.wikipedia.org/wiki/Daimonion_(Socrates)<.

So, if there is the functional equivalent of a Transcendental Soul in Kabbalah, is there a functional equivalent of the Infinite Soul? Yes, it seems to me that there is. So far as I have been able to discern in my investigations, it is *Mashiach*, based on descriptions such as found at: >https://en.wikipedia.org/wiki/Messiah<. It is a bit of a stretch from the description of the Messiah to the notion of the Avatar in oriental religions, a full embodiment of divinity in a human, but it is the closest that I have found in Kabbalah. Ideas similar to messianism are found in Hermeticism, Gnosticism, Christianity, and even in Greek philosophy. I leave it to the reader to research this further, starting with that Wikipedia entry on the Messiah, which provides many leads.

For your convenience, here is a table showing the correlation of the soul stages of Kabbalah with components of the Michaelian teachings, including Soul Age:

| | Table 1Eb — KABBALAH CORRELATIONS with MICHAELIAN TEACHINGS | | | | | | | | |
|------------|---|------------------------------|--------------------------------|--------------------------------|--------------------------------------|---------------------------------|------------------------|--|--|
| DIALECTIC | ORDINAL | | | NEUTRAL | CARDINAL | | | | |
| AXIAL | ACTION | INSPIRATION | EXPRESSION | ASSIMILATION | EXPRESSION | INSPIRATION | ACTION | | |
| PLANE | Physical | Astral | Mental | Akashic | Truth | Love | Energy | | |
| OLAM | Assiyah "Action" | Yetzirah "Formation" | Beriyah "Creation" | Atzilut "Emanation" | Adam Kadmon "Primordial Man" | Ohr Ein Sof "Infinite Light" | Ein Sof "Infinite" | | |
| LIFE-STAGE | Infancy | Childhood | Youth | Middle Age | Seniority | Elderhood | Dying | | |
| SOUL AGE | Infant | Baby | Young | Mature | Old | Transcendental | Infinite | | |
| CENTER | Motion | Emotion | Intellect | Impulse | Concept | Sympathy | Excitation | | |
| GILGUL | Nefesh "Life Force" action | Ruach "Spirit" emotion | Neshama "Soul" mentation | Chaya "Living" intuition | Yechida "Singular" imagination | Tzaddik "Righteous" | Mashiach "Anointed" | | |

My comments on this table are as follows:

• DIALECTIC: The first row shows the Dialectic Attributes, a structural feature of the Overleaf System.

- AXIAL: The second row shows the Axial Attributes, a structural feature of the Overleaf System.

 Combine the Dialectic Attributes with the Axial Attributes and we get the Septenarian Attributes.
- PLANE: Names for the planes are various, depending on the source. The third row shows names for the planes that seem relevant to this discussion; refer to Chapter 1A above, "The Seven Planes", and Chapter 4E in Part Four, "The Seven Planes", for more information, and my rationale for the choice of these words.
- OLAM: The fourth row shows the Hebrew names of the seven planes, so far as I have been able to discern reading about Kabbalah on various Wikipedia websites and in a couple of books; refer to Chapter 1A, "The Seven Planes", for more information. The English meaning of the Hebrew words is included.
- SOUL AGE: The fifth row shows the names of the Soul Ages as they were originally given to the original Michaelian group. After the original Michaelian group, there has been a significant change in the names and natures of the sixth and seventh Ages; refer to Chapter 4M in Part Four, "The Seven Soul Ages", to read about that discussion.
- LIFE-STAGE: As we have seen in this section, the Kabbalistic understanding of the stages of human soul evolution are broad enough to cover what the Michaelian teachings refers to as Internal Monads (aka Life-Stages), Soul Ages, and Planes. Refer to Chapter 4Q in Part 4, "The Seven Life-Stages", for more about that.
- CENTER: The seventh row shows the names of the Centers as I prefer them to be called. I show them in this table because the descriptions of the stages of the soul's development in the books cited, and as shown in the previous row and next row, make the correlation obvious.
- GILGUL: The eighth row shows the Hebrew names of the stages of the soul's development, and their English translations. Gilgul is the Hebrew word for reincarnation ("cycle, wheel"). In Kabbalistic thinking, these are both stages of the soul's psycho-social-spiritual development during a lifetime (called "Internal Monads" in the Michaelian teachings), and the stages of the soul's development during many lifetimes (called Soul Age in the Michaelian teachings).

Various Wikipedia articles cover many aspects of the Kabbalistic teaching on cosmology and cosmogony; for this chapter I have extracted just a small portion of what is available. It has been a fascinating investigation for me to explore it and discover so many parallels with the Michaelian teachings. I invite you to do the same.

Theosophy

The name theosophy (meaning "the wisdom of God") has been around for centuries, but the modern version that formally named itself Theosophy appeared via the Russian mystic Helena Blavatsky in the last half of the Nineteenth Century; a branch of Theosophy was channeled by Alice Bailey in the first half of the Twentieth Century. Wikipedia has wikis on them and their inspired and channeled teachings, and many other internet resources are available, as well as books galore. Even though some of the founding members of the original Michaelian group had been involved in a Gurdjieff group rather than a Theosophy group, the Michaelian teachings itself has more in common with Theosophy than it does with Gurdjieff, as indicated in some of the chapters of this *History* book. For this reason, one might expect Theosophy to say something about Soul Ages, and indeed that is the case.

This section examines the work of two Theosophists who had somewhat to say about the ages of the soul. The first to be reviewed is E. Norman Pearson.

E. Norman Pearson

The book *Space, Time and Self [STS]*, by E. Norman Pearson, was published by The Theosophical Publishing House in 1957. It appears to be a systematic compendium of Theosophical doctrines, a thorough cosmology of their concepts. The book has much to say about reincarnation.

In the Introduction, on page 8, we find this:

To unfold these Divine powers is the purpose for which we live. So, the Divine Monad is the Ultimate Reality within each one of us. It must be "born" into separate existence, individualized in a human form and experience stages of growth which correspond to infancy, childhood, adolescence, and maturity, using bodies of the various orders of matter as vehicles of consciousness in the worlds in which it lives. [STS, p. 8]

Four stages are mentioned here, but they are not formally named, and therefore they are not capitalized: "infancy, childhood, adolescence, maturity". The words chosen by Pearson declare that the soul maturation process during reincarnations is similar to the physical maturation process during a single lifetime. In Chapter 4Q, "The Seven Life-Stages", these stages of maturation during a lifetime are described at length. In the Michaelian teachings, the words chosen are formal — Infant, Baby, Young, Mature, Old — and it is also said that there is a correspondence to maturation during a lifetime.

In other chapters of his book, Pearson discusses in some detail the four 'bodies' that reside on the four 'planes' alluded to in the quoted passage. I have somewhat to say about those in my own books as they relate to the Michaelian teachings; a chapter is devoted to "The Subtle Bodies" in my book *The Tao of Cosmogony*, and two chapters are devoted to "The Seven Planes" in this *History* book. This passage from Pearson only hints at what is made explicit elsewhere in his book, namely, that there is a correspondence or correlation — a similarity — between 1) stages of development; 2) 'bodies' in which that development takes place, and 3) the reality systems ('planes') where the experience takes place.

Further on in the book *STS*, in the chapter on reincarnation, in Figure 69 on page 183, titled "The Evolution of the Soul", a caption says, "Through many incarnations the soul unfolds like a flower." Five stages are graphically shown and labeled: "primitive — ordinary — civilized — advanced — spiritual." I do not capitalize these words because they do not appear to be names given to distinct stages. The text below the Figure is as follows:

Thus, through many incarnations, man grows in spiritual stature, always unfolding from within the latent powers infolded in the beginning. In Figure 69 we have one more illustration of the manner in which reincarnation harmonizes with all nature's activities. Climbing the ladder of evolution, man begins in the [1] <u>primitive</u> state, advances to the [2] <u>ordinary</u>, and on to the [3] <u>civilized</u>, [4] <u>advanced</u>, and [5] <u>spiritual</u> states. These outer appearances are, of course, reflections in the material forms of the growth of the Soul. This growth can be compared with the opening of a flower. In Figure 69 we see each of these human stages placed beneath a similar stage in the flower's development from a small bud to the full bloom in all its beauty.

An internet search on those five names collectively did not reveal any other Theosophical sources that mention them. Therefore it would appear that they are not official or formal names such as were given to five Soul Ages in the original Michaelian group: Infant, Baby, Young, Mature, Old. Nowhere in the text of the book are characteristics of those five categories provided, nor are they explicitly correlated with any other aspect of the Theosophical cosmology, which is septenarian. Throughout Pearson's book, specific and distinct characteristics are attributed to the seven stages of the Theosophical conception of the septenary, but not to these five stages of soul development. To me this seems an odd omission or oversight. On the other hand, I regard the Michaelian teachings as a natural successor to Theosophy, an advancement and a clarification, a progressive revelation from higher realms in the story arc of human history.

A very prominent channel in the Theosophical movement had a lot more to say about Soul Age than Pearson did; that person is Alice Bailey.

Alice Bailey

There is another book, this one in the Neo-Theosophical library, that provides descriptions — but not names — of those stages of soul development. The book is *Esoteric Psychology*, Vol. 2 (1942), by Alice Bailey. On pages 202 to 207, Bailey also used the metaphor of the flower to describe the development of souls, but gives seven stages rather than five as given by Pearson. Then, after giving seven stages of the flowering of the lotus, Bailey proceeds to describe ten stages of soul development, rather than five as given by Pearson or seven as given in the Michaelian teachings. This discrepancy in the number of stages makes it difficult to correlate Bailey with Gurdjieff and with the Michaels, but I make that attempt in my comments among the quotations to follow.

- ... our premises and conclusions [about soul development] can be stated in the following propositions:
- 1. Every human being, in or out of incarnation, is a "fragment of divinity," and an outpost of the divine consciousness, functioning in time and space for purposes of expression.
- 2. All these souls, selves, or human beings are found, as we have seen, on one or other of the seven emanations [Rays] of spiritual energy, issuing forth from God at the beginning of an era of creative activity. They return to their emanating Source when that particular cycle is brought to a close.

- 3. In the interim between emanation [what the Michaels call "fragmentation"] and reabsorption [what the Michaels call "reintegration"], these souls pass through various experiences until such time as they can "shine forth in all their exactitude of truth."
- 4. They are called, as has been stated, in A Treatise on Cosmic Fire (see page 855):
 - 1. Lotuses of revelation [Cardinal Action]
 - 2. Lotuses with perfume [and color?] [Cardinal Inspiration]
 - 3. Radiant lotuses [Cardinal Expression
 - 4. Lotuses wherein the flower is on the point of opening [Neutral Assimilation]
 - 5. Lotuses of closed and sealed condition [anti-radiant] [Ordinal Expression]
 - 6. The colorless [and odorless?] lotuses [Ordinal Inspiration]
 - 7. Lotuses in bud [Ordinal Action]

Notice that the numbering, one through seven, starts at the mature end of the development and ends at the primitive end of the development. That method of numbering is the opposite of that found in the Michaelian teachings, but it is typical throughout Bailey's books with regard to the septenarian cosmology of Theosophy. Despite the reversal of sequence, the ideas expressed are quite familiar to Michaelian students.

Also, a thoughtful reading indicates that a reversal of the sequence is detectable in terms of the Ordinal and Cardinal stages, pivoting on #4 — this is a feature of the Natural Sequence schema.

The quotation continues; the underlined words are my emphasis:

- 5. These souls, cycling through various forms of life in the long evolutionary process, arrive eventually at full, self-conscious existence. By this we mean that they are self-determined, self-conditioned, and self-aware. They are also conscious of and responsive to their environment.
- 6. Once this conscious awareness is achieved, then progress becomes more rapid. It should be borne in mind that many human beings are not thus aware. The groupings which arise out of this awareness (limiting our ideas entirely to those within the radius of the human family) can be expressed as follows:
 - 1. The souls who live but whose consciousness sleeps. These are the dormant human beings whose intelligence is of such a low order, and their awareness of themselves and of life is so dim and nebulous, that only the lowest forms of human existence come into this category. Racially, nationally, and tribally they do not exist as pure types, but occasionally such a person emerges in the slums of our great cities. They are like a "throw back" and never appear among what are called the natural savages, or the peasantry.

This description appear to fit with severely retarded and/or brain-damaged humans, feral people living entirely in their Physiology and Motion Center, an animalistic state almost entirely devoid of understanding of what it is to be a human in the world. Perhaps this equates with the "firstborn soul" mentioned a few times in the original Michaelian group transcriptions but not again.

The description of the next two stages seems to me to fit best with the Level of Being that Gurdjieff referred to as Man Number One and equated with the Moving Center, and that in the Michaelian teachings are referred to as the Infant Soul Age. Perhaps the distinction made by Bailey is the difference between early-Level and late-Level Infant Souls:

- 2. The souls who are simply aware of <u>physical</u> plane life and of <u>sensation</u>. These people are slow, inert, inarticulate, bewildered by their environment, but they are not bewildered, as are the more advanced and emotional types, by events. They have no sense of time or of purpose; they can seldom be trained along any mental line, and they very rarely exhibit skill in any direction. They can dig and carry, under direction; they eat, sleep and procreate, following the natural <u>instincts</u> of the animal body. Emotionally, however, they are asleep, and mentally they are totally unawakened. These too are relatively rare, though several thousands of them can be found upon our planet. They can be recognized through their complete incapacity to respond to emotional and mental training and culture.
- 3. The souls who are beginning to integrate and who are emotionally and psychically alive. In them, of course, the animal nature is awake and the desire nature is becoming rampant. These people are to be found in all races to a small extent.... These are child souls, and though the mental equipment is there and some of them can be trained to use it, the preponderance of the life emphasis is entirely upon <u>physical</u> activity as it is motivated by the desire for satisfaction of some kind, and by a shallow "wish-life" or desire nature, almost entirely oriented towards the <u>physical</u> life....

The description of the next two stages seems to me to correlate best with the Level of Being that Gurdjieff referred to as Man Number Two and equated with the Emotional Center, and that in the Michaelian teachings

is referred to as the Baby Soul Age. Perhaps the distinction made by Bailey is the difference between early-Level and late-Level Baby Souls:

- 4. The souls who are primarily <u>emotional</u>. The mind nature is not functioning strongly, and only rarely does it swing into activity, and the physical body is slipping steadily into the realm of the unconscious. In every race and nation there are millions of such souls in existence....
- 5. Those souls who can now be classed as intelligent human beings, capable of mental application, if trained, and showing that they can think when need arises. They are still, nevertheless, predominantly emotional. They constitute the bulk of modern humanity at this time. They are the average citizens of our modern world good, well-intentioned, capable of intense emotional activity, with the feeling nature almost overdeveloped, and oscillating between the life of the senses [previous stage] and that of the mind [following stage]. They swing between the poles of experience. Their lives are spent in an astral [plane, which correlates with the Emotional Center] turmoil, but they have steadily increasing interludes wherein the mind can momentarily make itself felt, and thus at need effect important decisions. These are the nice good people, who are, nevertheless, largely controlled by the mass consciousness, because they are relatively unthinking. They can be regimented and standardised with facility by orthodox religion and government and are the "sheep" of the human family.

The description of the next stage seems to me to correlate best with the Level of Being that Gurdjieff referred to as Man Number Three and equated with the Intellectual Center, and that in the Michaelian teachings is referred to as the Young Soul Age:

6. The souls who think, and who are minds. These are steadily increasing in number and gaining in power as our educational processes and our scientific discoveries bring results, and expand human awareness. They constitute the cream of the human family, and are the people who are achieving success in some department of human life. They are writers, artists, thinkers in various fields of human knowledge and aspiration, politicians, religious leaders, scientists, skilled workers and artisans, and all those who, though in the front rank, yet take ideas and propositions and work with them for the ultimate benefit of the human family. They are the world aspirants, and those who are beginning to get the ideal of service into their consciousness.

The description of the next stage seems to me to correlate best with the Level of Being that Gurdjieff referred to as Man Number Four and equated with Balanced Man, and that I refer to as the Impulse Center, and that in the Michaelian teachings is referred to as the Mature Soul Age:

7. Those souls whose sense of awareness on the physical plane is now of such an order that they can pass on to the Probationary Path. They are the mystics, conscious of duality, torn between the pairs of opposites, but who are yet unable to rest until they are polarised in the soul. These are the sensitive, struggling people, who long for release from failure and from existence in the world today. Their mind natures are alive and active but they cannot yet control them as they should and the higher illumination remains as yet a joyous hope and final possibility.

The description of the next stage seems to me to correlate best with the Higher Intellectual Center (a departure from Gurdjieff), and that in the Michaelian teachings is referred to as the Old Soul Age:

8. Souls whose intelligence and love nature is becoming so awakened and <u>integrated</u> that they can begin to tread the Path of Discipleship. They are the practical <u>mystics</u>, or the <u>occultists</u>, of modern times.

The description of the next stage is not fully recognizable as correlating with the Level of Being that Gurdjieff equated with the Higher Emotional Center, and what in the orthodox Michaelian teachings is referred to as the Transcendental Soul or the Astral Plane phase of the soul's development. However, a few students of the Michaelian teachings suggest that there are two Soul Ages beyond the Old Soul that manifest on the Physical Plane. This is discussed at length in Chapter 4M in Part Four, "The Seven Soul Ages". The basic idea is that the sixth Soul Age in the Michaelian teachings schema has a Cardinal Inspiration — 'Priestish' — quality to it. The meaning of the phrase, "integrated personality" in the quotation below figures prominently in my explanation of the Sixth Age in the chapter on Soul Age in Part Four, where Transcendental Souls are hypothesized to be "composites" of souls in a "family" of souls.

9. The souls who are initiated into the mysteries of the kingdom of God. These are souls who are not only conscious of their vehicles of expression, the <u>integrated personality</u>, and conscious also of themselves as souls, but they know, past all controversy, that there is no such thing as "my soul and your soul," but simply "the Soul". They know this not only as a mental proposition, and as a sensed reality, but also as a fact in their own consciousness.

The description of the next stage is somewhat, but not totally, recognizable as what in the orthodox Michaelian teachings is referred to as the Infinite Soul and as correlating with the Higher Moving Center.

However, a few Michaelian students suggest that there are two Soul Ages beyond the Old Soul that manifest on the Physical Plane. This is discussed at length in Chapter 4M in Part Four, "The Seven Soul Ages". The basic idea is that the seventh Soul Age in the Michaelian teachings scheme has a Cardinal Action — 'Kingish' — quality to it, and the underlined word "Masters" is compatible with that correlation.

10. The souls who have achieved <u>release from all the limitations</u> [therefore "infinite"] of the form nature and who <u>dwell eternally in the consciousness of the One Soul</u>, withdrawn from identification with any aspiration of the form life, no matter how highly developed. They can and do use the [human] form at will for the purposes of the general good. These are the <u>Masters</u> of Life, the <u>perfected adepts</u>.

Higher than this we need not go, except by inference. A detailed analysis is not, however, in order, owing to the limitations of men's minds. The above is only a wide generalization, and the various groupings shade into each other in a bewildering way. The varieties of intermediate types are myriad, but this analysis will serve as a skeleton structure upon which to build. [Alice Bailey, *Esoteric Psychology*, Volume 2 (1942), pp. 202–207]

Comments on Soul Ages in Theosophy

- 1. The Theosophical metaphor for the evolution of the soul is of a flower unfolding, from the bud stage and through several stages of maturity. It is as if the fullness of the soul as it exists on the third plane, outside of time as we know it, is being gradually revealed on the Physical Plane during successive incarnations inside of time. This is a bit different from the Michaelian teachings conceptualization, but it is important to understand it when we examine Soul Age in Part Four of this *History* book.
- 2. Bailey acknowledges that the description of soul development stages is rendered ambiguous by many factors. Michaelian students have also found this to be true. However, my thesis is that by understanding the logic, mathematics, and physics underlying the Overleaf System what I call Tao's Template one can gain a much more definitive and distinct description of the Soul Ages in their pure form. My books *The Tao of Personality* and *The Tao of Cosmogony* disambiguate previous metaphysical teachings; in my opinion it is the best "skeleton structure" upon which to build a cosmology.
- 3. The fact that there are ten stages in Bailey's soul age classification also makes correlation with the Michaels' seven Soul Ages more challenging. I did what I could, but readers are encouraged to study and think for themselves.
- 4. There is the fact, as noted above, that some Michaelian students have different understandings of the last two Soul Ages, namely that they are experienced on the Physical Plane, not the Astral and Causal Planes (as proposed by Yarbro in *MMFM*), and not just by Transcendental and Infinite Souls; those proposals are covered in detail and at length in Chapter 4M in Part Four, "The Seven Soul Ages". Those understandings by some Michaelian students are in better alignment with the understanding presented by Bailey.
- 5. Note that Bailey's stages of soul development follow the Natural Sequence in the lower quadrad, corresponding to 0) Physiology Center, 1) Moving Center, 2) Emotional Center, and 3) Intellectual Center. This is the same as Gurdjieff; this is not the Michael Math Sequence, where we find 1) Emotional Center, 2) Intellectual Center, and 3) Moving Center. Refer to my book *The Tao of Cosmogony* for more information; there you find dozens of sources that profess the Natural Sequence, in addition to a more thorough presentation about Theosophy's seven Rays.
- 6. Regarding the Theosophical notion of Rays, it surprises me that Bailey did not correlate these stages of soul development with the seven Rays, because they are one of the key components of the Theosophical cosmology. Why ten stages rather than seven? What was the source of information about the first three primitive stages? Why break the "physical" stage into two categories, and also divide the "emotional" stage into two categories? Would further study of Neo-Theosophy reveal the reasons for these departures from the cosmology of sevenness? Whatever the answers to those questions may be, it is perhaps the reason the correlation between stages and Rays was not made by Bailey.
- 7. More is said about the septenarian aspects of the Theosophical cosmology in other chapters of this *History* book and in my other books.
- 8. Members of the original Michaelian group may or may not have been aware of the Alice Bailey teaching about Soul Age. We know that they were aware of Alice Bailey because she was mentioned

in the transcriptions, but how much did they know about her channeled teaching? We do not know. And even if they did know about it, the Michaels would not necessarily have agreed with it; it is known that they did not agree with everything that Gurdjieff had to say.

So much for Alice Bailey. There is another esoteric teacher who has a lot to say about Soul Age, and he is discussed in the next section. Besides Kabbalah and Alice Bailey, he is the only other person whom I have discovered so far who preceded the Michaelian teachings and goes into detail about the characteristics of each of seven Soul Ages.

Meher Baba

If you do an internet search for the phrase "reincarnation soul age" you get hundreds of hits. If you look at the resultant web pages, you find that virtually all of them are either Michaelian teachings websites, or websites that have adopted and adapted information from the Michaelian teachings. When I did this, I found a website dedicated to the teaching of Meher Baba: >http://www.theartofancientwisdom.com<.

You might not have heard of this fellow. Wikipedia has an article about him if you want to quickly get up to speed (>https://en.wikipedia.org//wiki/Meher_Baba<), and there is much more information freely available on the internet via your favorite search engine. He was an Indian (south Asian) guru who lived from 1894 to 1969. He dictated a book called *God Speaks*, and many of his miscellaneous essays were collected by his followers and published in a book called *Discourses*.

He was mentioned only once in the original Michaelian group transcriptions, in this Q&A exchange:

Gene: Recently on my trip, I read a book by Meher Baba and it really tore me up, because he said, "I am the Christ, I am God, I've gone all the way up and I've been united with the all." Then he says, "Yes, I catch colds, and I do this and that." I also know that Baba Ullah says, "I was Christ, who was Muhammed and now I am here!"

Sarah: And Saiya Baba says that, also.

Gene: Yeah, OK, and then there were the five perfect masters that Meher Baba talks about. Maharaj Ji, the 14-year old Guru calls himself the "Perfect Master." There are so many masters and there are so many Christ principles and God principles, and I sure would like some clarifying help in this.

The Infinite Soul manifested through the physical forms of Lao Tsu, Sri Krishna, Siddhartha Gautama, and Jesus — no others [in recorded history]. The Transcendental Soul has manifested through Socrates, Zarathustra, through Muhammad, and through Mohandas Gandhi [and others?].

What about Meher Baba?

No [he is not a Transcendental Soul or an Infinite Soul], he is an Old Soul who had a vision. [SJC, 18 September 1973]

Meher Baba's book *God Speaks* was first published in 1955, so it was after Theosophy and Neo-Theosophy and before the original Michaelian group. The second printing was in 1973, and this was perhaps the edition that the original Michaelian group attendee read in that same year. Anyway, it turns out that Meher Baba had a detailed teaching about seven ages of the soul's evolution on the Physical Plane, and these are summarized on this website: >http://www.theartofancientwisdom.com/avatar/<. For more than a half-dozen pages following, I quote portions of that website (in this sans serif typeface). As usual, I intersperse my own commentary among the quoted passages. Note that what are called "Ages" in the Michaelian teachings are referred to as "planes of consciousness" by Meher Baba.

There were 7 known Avatars throughout history — Zoroaster, Rama, Krishna, Buddha, Jesus, Muhammad, and Meher Baba.

The term "Avatar" is the oriental word for an incarnation of a "god". This concept is not much different from the term "Infinite Soul" in the Michaelian teachings. That Meher Baba was an Avatar, aka Infinite Soul, was dis-confirmed by the Michaels. However, there was agreement in this statement about three other Infinite Souls: Krishna, Buddha, and Jesus; Lao Tsu was left out of Baba's "Avatar" list, while he included two, Zoroaster and Muhammad, who were identified by the Michaels as Transcendental Souls rather than Infinite Souls. One may note that every name on this list except Baba's own has a centuries-long history of devotion on the part of some portion of the population of India. This may or may not have affected the making of the list.

The quotation from the website continues. Wherever you see the word "planes", substitute the word "stages":

Your Soul Ages by Moving Through the Planes of Consciousness

Meher Baba ... teaches that the human soul exists on different planes of consciousness which determines the soul's age.

At each plane, each soul has different purposes and different life issues they deal with.

Souls that haven't earned the right to involution [journey of integration back to Tao] begin on the zero plane (see chart above under the 'evolution' section where the soul goes through multiple cycles of reincarnation until it is ready to begin its journey of involution).

Once involution begins, there are two stages, the journey inward begins on the outer planes where one creates a lot of work and manifests their energy on the physical world and the second stage is the domain of the mind where they work with energy on the inner planes.

Baba's use of the words "involution" and "evolution" is the opposite of the way I use them in my books. That is to say, I regard involution as the fragmentation of the Tao, and evolution as the reintegration of the Tao. (This is just perhaps merely a semantic distinction, but on the other hand, I can also see how the Taijitu Tango Principle applies to this situation in that the fragmentation of Tao is evolution/involution and the reintegration of Tao is involution/evolution, depending on one's point of view, whether from the maximum transcendent Tao that includes all else versus the minimum immanent Tao to excludes all else.)

Involution has 7 stages.

At the beginning of each plane, the soul is 'finding their sea legs' managing the energy of that plane and finding their soul's purpose on that plane.

The "beginning of each plane" is what the Michaelian teachings refer to as the first three Levels of each Soul Age.

In the middle of each plane, the soul is an embodiment of the 'full power' of each plane and has the potential to do great work on that plane because they are equipped for it.

In the Michaelian teachings, the middle Level of each Soul Age is said to be "Neutral".

At the end of each plane, the soul has completed most of their karma on that plane and is 'finishing off' whatever work they have on that plane so they will start preparing for the work on the next plane.

In the Michaelian teachings, the "end of each plane" is referred to at the last three Levels. More is said about the early, middle, and late Levels in the next few paragraphs.

The first to the third planes of consciousness [are] all about doing work in the outer planes — which is navigating and conquering the physical world. [Ordinal Soul Ages: Infant, Baby, Young]

The fourth plane is the archway or the doorway to the inner planes and enables one to access both powers of the outer planes with the inner planes. [Mature Soul Age]

Once they hit the fifth and sixth plane, they reach in the domain of the mind which is the inner planes (more on the mental realm and managing energies of the inner planes). [Cardinal Soul Ages]

The fifth plane of consciousness was referred to as the "Adept" Level of Being according to Gurdjieff. The sixth plane appears to be equivalent to Gurdjieff's Sixth Level of Being, otherwise known as "subjective consciousness". Meher Baba might have known about Gurdjieff, but even if that was not the case, both had their spiritual roots in Sufism, the mystical branch of Islam. Apparently some Sufis teach reincarnation and some do not, according to this website: >https://www.reincarnation-research.com/islam/<.

Back to Meher Baba:

When they finally reach the seventh plane, they become 'God-Realized' and they see God as no longer separate from themselves.

The seventh plane appears to be equivalent to Gurdjieff's seventh Level of Being, which was described by him as "objective consciousness".

At the end of the seventh plane, they can choose to become a perfect master — to incarnate back on earth to be of service to mankind.

In other oriental spiritual teachings, souls who reincarnate to be of service to humanity are referred to as "Bodhisattvas". In the original Michaelian group, only five ages are said to be required to complete the reincarnation cycle; the last two ages are for Transcendental Souls (TS) and Infinite Souls (IS). The descriptions of the TS and the IS in the Michaelian teachings match those of "Bodhisattvas" and "Avatars". More will be said about all this in Chapter 4M in Part Four, "The Seven Soul Ages". There are also chapters on these two Soul Ages, as well as the other Soul Ages, in Part Three of my book *The Tao of Personality*.

Understanding the Life Issues of Each Plane

Depending on where the soul is on the plane and whether they are at the beginning, middle or the end, life issues tend to differ.

A person on a higher plane is not 'better' than another person [on a] lower plane.

In fact, the person who is on a higher plane is actually carrying more 'spiritual rocks in their backpack' and they have more work to do on the higher planes.

That is why some people tend to operate on a lower plane because it is easier to manage the energy on a lower plane.

Souls may also receive guidance from a higher plane.

In other words, older souls have more spiritual burdens compared to younger souls and embracing the spiritual path is a very commendable task — not for the faint-hearted.

(Some souls may also choose not to do spiritual work for the entire lifetime so they could actually be a high plane person but [are] not actively doing spiritual work, but are evolving spiritually on their own pace.)

Here are the life issues specifically on how each plane functions:

Zero Plane — The Plane of Superstition, Existence, Security, Coping, and Learning to be Human

A soul on the zero plane who hasn't earned the right for involution is human in every sense of the word.

What is here named "involution" (back to the Tao), I prefer to name "evolution". Elsewhere on this website, "evolution" is the term used for the development of consciousness from mineral to vegetable to animal in the *outer* world; the term "involution" is the term applied to the development of consciousness when it turns back to being *inward*. The notion that I refer to as the Taijitu Tango Principle might also be at play here, in that the whole story is that the first three stages have the attributes of involution/evolution and the last three stages are the inverse of that, so they have the attributes of evolution/involution. Whatever the attributes and the semantics, so far as I can tell, the description of the process of return to the Source is the same as in the Michaelian teachings.

They are unconscious of spiritual growth, unaware of higher consciousness and are thus not on the path. They may treat spirituality with a sense of superstition.

Over 80% of the population on earth [is] on various levels of the zero plane.

Michaelian students will know that this is not the way that the Michaelian teachings presents the situation. First of all, there is no "Zero" Age; and second of all, in the Michaelian teachings 100% of the population is in the first five Soul Ages. My reconciliation of the two teachings is that "80%" refers to those who are mid-Level Mature and younger, because that Age/Level is the turning point between the "unconscious" and the "conscious" phases of the Soul Ages in Michaelian teachings terms — and the percentage is accurate in that case. Mid-Level Mature is where involution reverses direction and turns to evolution, in Michaelian teachings terms.

They have the tendency to focus on their immediate needs, they are largely unaware of the interconnectedness of the collective consciousness.

Ruled by primitive needs and immediate desires, they have the tendency to follow the crowd.

Living on the zero plane can both be simple or confusing as they are spiritually innocent and asleep to their true nature.

That description is not inaccurate for the Levels and Ages younger than mid-Level Mature.

A person at the beginning of the zero plane (or even earlier — the sub-zero plane) lives in an even more opaque and primitive desire and will find it hard to live in modern society. The journey up the zero plane is very, very large, therefore it is not to be underestimated — the great lengths a soul goes through to earn the right [to] get into the first plane.

A person at the end of the zero plane is known as 'the seeker' and is almost ready to begin their long journey into involution [back to the Tao].

The high side of being on this plane is that a soul is not burdened by the spiritual weight of the higher planes (the higher a person's plane gets, the more 'spiritual rocks' they are carrying in their backpack).

My understanding of this paragraph in Michaelian teachings terms is that experiences before mid-Level Mature are more about *earning* karmic ribbons, and post mid-Level Mature experiences are mostly about *burning* karmic ribbons, which could reasonably be described as 'spiritual burdens'.

The low side of this plane is that almost everything can be turned into a superstition.

In the Michaelian teachings it is said that the Firstborn Soul is at once the closest to the Tao and also the furthest. At this primitive stage, 'superstition' is the appropriate way to describe their spirituality. The 'low side' and the 'high side' of 'planes' can perhaps be understood in Michaelian teachings terms as the early levels and the late levels of the Soul Ages, or understood as the Negative Poles and Positive Poles of Soul Ages.

First Plane — The Plane of the Survivor: Preservation, Stability, Grounding, and Fear

The following entire description of the First Plane is very congruent with the Michaelian teachings description of the Infant Soul (and the Warrior Role and the Motion Center). The underlined words (my emphasis) are key words that remind one of the description of the Soul Age (and Role and Center) in the Michaelian teachings.

A soul on the first plane has just earned the right for involution [and] is at the beginning of their journey up the planes. Bear in mind that even earning the right to be on the first plane is very huge for the soul indeed.

They are ruled by base instincts and have a lot of anxieties about survival.

Notice the connection here between the First Plane/Infant Soul and being ruled by instincts. Recall from Chapter 1D above, "The Seven Centers", that Gurdjieff referred to Man Number 1 as being "Instinctive-Moving Man", primarily operating in the Moving Center.

People on the first plane have the tendency to focus on self, the immediate environment, the bare essentials.

Like the zero plane, they are ruled by fear but they know that there is more to that fear than just merely existing. Some might find advanced or spiritual concepts difficult to grasp.

Living unconsciously on the first plane can lead towards hoarding, materialism, or greed.

Those that are on the path are deeply connected to the lands as with many shamans, sound healers, and native American spiritual tribes.

The high side [Positive Pole and/or late Levels?] of being on this plane is that a soul can serve as a <u>protector and preserver</u> and is deeply grounded on the land. A lot of animal guides and protectors also operate on the first plane.

The low side [Negative Pole and/or early Levels?] of this plane is that one can be deeply fearful and live like a survivor

Second Plane — The Plane of the Feudalist: Sexuality, Desire, Emotions, and Guilt

The following entire description of the Second Plane is very congruent with the Michaelian teachings description of the Baby Soul (and the Server Role and the Emotion Center). With the word "feudalist", we are given a correlation of a Soul Age with a socio-cultural stage.

A soul on the second plane is in the realm of mysticism, religion, and highly psychic.

They are ruled by emotions and lean towards physical glamour, self gratification, intuitive beauty, and magic.

Notice the connection here between the Second Plane/Baby Soul and being ruled by emotions. Recall from Chapter 1D above, "The Seven Centers", that Gurdjieff referred to Man Number 2 as being "Emotional Man", primarily operating in the Emotional Center.

The plane of the seductress, sexuality, and <u>emotions</u> rules this realm and many of the feudal practices like Bushido or organized religion, dogma, yogi powers, and rigid structures.

A lot of psychics are on this plane and they receive powerful guidance from source.

The high side [Positive Pole and/or late Levels?] of being on this plane is that they are highly devoted to their beliefs or the cause they are seeking.

The low side [Negative Pole and/or early Levels?] of this plane is that everything can be turned into a rigid dogma — and anything can be turned into a dogma, be it fundamentalistic religion, spiritual beliefs, groups, or even sports teams.

Third Plane — The Plane of the Conqueror: Will Power, Purpose, Energy, and Shame

The following entire description of the Third Plane is very congruent with the Michaelian teachings description of the Young Soul (and the Artisan Role and the Intellect Center).

A soul on the third plane is already a very advanced soul.

The focus is on the <u>mental</u> realm, and is very powerful at using [egotistical] willpower and domination to conquer the material world.

Notice the connection here between the Third Plane/Young Soul and being ruled by intellect. Recall from a Chapter 1D above, "The Seven Centers", that Gurdjieff referred to Man Number 3 as "Intellectual Man", primarily operating in the Intellectual Center. This means that the first three "planes of consciousness" follow the Natural Sequence schema, same as the planes of existence: Physical, Astral, Mental (aka Causal).

Their goal on the third plane is to learn power, and they are focused on being empowered, having a lot of accomplishments, [to] serve and rule through exerting their [intellectual] will.

They are the empire builders and often take charge using their influence, success, fame, and power.

Many powerful healers are on this plane as well.

The high side [Positive Pole and/or late Levels?] of being on this plane is that a soul is really empowered to serve and empower others and can become great leaders in the realm of the material world.

The low side [Negative Pole and/or early Levels?] of this plane is that they can become tyrannical and operate with a win-lose (I win, you lose) mentality.

There are parts of this description that might lead some Michaelian students to claim the Young Soul correlates with the Warrior Role and the Motion Center, but the gist of the description favors the interpretation that the Young Soul is more about assertive thoughts or beliefs than it is about assertive actions.

Fourth Plane — The Plane of the Empathizer: Love, Sharing, Balance, and Grief

The following entire description of the Fourth Plane is very congruent with the Michaelian teachings description of the Mature Soul (and the Scholar Role and the Impulse (aka Instinctive) Center).

A soul on the fourth plane is on the archway — the *doorway* between the physical planes (planes 1–3) and the mental planes (planes 5–7).

They are at the epitome of physical (manifestation) power and they also have access to the higher realms of the mental planes and are poised to do great work in the world. They also create a lot of good karma.

However, with great power, comes great responsibility.

A soul on this level is burdened by both great power and grief.

This is the plane of service to mankind, kindness, focusing on higher purpose as well as finding the need to <u>balance</u> instincts with compassion, power and spiritual glamour and showing light while facing the dark night of the soul.

Notice the connection here between the Fourth Plane/Mature Soul and concern about finding 'balance'. Recall from a previous chapter that Gurdjieff referred to Man Number 4 as "Balanced Man".

The high side [Positive Pole and/or late Levels?] of being on this plane is that a soul possesses great power and [such] compassion for the world that they will move and shake the world. Many of the humanitarians are on this plane. They are also at the plane where they have full access to the divine.

The low side [Negative Pole and/or early Levels?] of this plane is that they can be overwhelmed with grief, or abuse their power and fall from grace.

Fifth Plane — The Plane of the Telepath: Creativity, Communication, Healing, and Lies

The following entire description of the Fifth Plane is very congruent with the Michaelian teachings description of the Old Soul. We also see similarities to the Higher Intellectual Center and the Sage Role here. In the Gurdjieffian teaching, the Sexual Center is correlated with the fifth Level of Being, but that does not fit here. What does fit is that Gurdjieff places the so-called "Adept" at this stage.

A soul that reaches the fifth plane 'safely' resets and moves into the mental planes.

Think of the mental planes like the all powerful Wizard of Oz operating from behind the curtains (in contrast to the good/bad witches with great power on the physical world).

The focus of the mental planes is on inner work and from this point onward is focused on finishing karma.

They are telepaths on this plane in the sense that they can telepathically 'transmit' their ideas and have people understand their grand thoughts but after they are no longer present, the people will forget what they learned.

The abilities on this plane consist of <u>systems</u>, <u>patterns</u>, <u>models</u>, <u>knowing truth</u>, <u>finding the greater truth and their minds move towards synthesizing many models including spiritual models</u>.

They need to speak and be heard for their message is strong.

They are agents of purity — busting through false constructs and systems that are no longer serving the world.

The high side [Positive Pole and/or late Levels?] of being on this plane is that a soul assumes a creative identity and is able to manipulate thought forms.

The low side [Negative Pole and/or early Levels?] of this plane is that they can be meddlers in other people's lives — often causing a lot of trouble and find too many lies in life until everything seems to become an illusion.

Sixth Plane — The Plane of the Regulator: Clairvoyance, Imagination, Intuition, and Illusion

In this description we see similarities to the Higher Emotional Center and the Priest Role. At this point in the development of the story in this section, there is a departure from the Michaelian teachings in that this does not appear to match the description of a Transcendental Soul. Nor does it fit the description of a Bodhisattva; it more closely resembles the description of the penultimate Soul Age as found in Alice Bailey's writings, reviewed in the previous section. Furthermore, the description here fits more closely with Gurdjieff's characterization of the sixth Level of Being, namely that a person functioning at this Level is "subjectively conscious".

A soul on the sixth plane is a <u>really, really old soul</u> who has assumed the archetypal entity of not only manipulating thoughts [the fifth plane] but manipulating [higher] emotions as well.

At this level of the inner planes, they serve as the catalysts and they start finding God in everything but themselves.

They see the divine everywhere.

They have great <u>healing powers</u> and are highly emotional on this plane and are likely to be <u>prone to extremes</u>.

They are great guides, visionaries, healers and overseers in the world operating from behind the scenes.

The high side [Positive Pole and/or late Levels?] of being on this plane is that a soul is highly intuitive, sensitive, and possesses great clairvoyant power and imagination.

The low side [Negative Pole and/or early Levels?] of this plane is that it can be very volatile and they might see everything as an illusion.

Seventh Plane — The Plane of the Enlightened: Understanding, Wisdom and Spiritual Mastery

In the following description we see similarities to the Higher Moving Center and the King Role. At this point in the development, there is a departure from the Michaelian teachings in that this does not appear to match the description of an Infinite Soul; it more closely resembles the description of the ultimate Soul Age as found in Alice Bailey's writings, reviewed in the previous section. The description here fits more closely with Gurdjieff's characterization of the seventh Level of Being, namely that a person functioning at this Level is "objectively conscious". And the description has some similarities to the Transcendental Soul in the Michaelian teachings, or the Bodhisattva in some Oriental esoteric traditions.

Once a soul reaches the 7th plane, they become God-realized. They no longer experience God as apart from themselves but become one with their identity with God.

They achieve the perfect state of oneness, and reach the highest spiritual plane.

It is the plane of great wisdom.

Once God-realized, the soul becomes divinely absorbed with divine service, sees new realizations and is ruled by divine laws.

Great wisdom and understanding will be passed down to others on their journey up the planes as the seventh plane soul serves as a divine guide to those on the path through higher service.

The seventh plane is very, very large — larger than all the bottom (0–6) planes combined until they reach the final destination of a Perfect Master or an ascended master.

Nothing is said about the "high side" and the "low side" of the Seventh Plane incarnation, so perhaps it is not seen as subject to that polarity. This interpretation is consistent with other esoteric mystical teachings: the seventh plane is regarded as monadic, or non-dual; there is no light side or dark side to it.

The Function of the Avatar

The following description of the Avatar is obviously equivalent to what in the Michaelian teachings is known as the Infinite Soul. There is also a description of the "Perfect Master", which has a vague resemblance to what in the Michaelian teachings is known as the Transcendental Soul. In some other Oriental traditions, this is known as the Bodhisattva. The reader is invited to do an internet search on those two terms. More is said about them in Chapter 4M in Part Four, "The Seven Soul Ages", of this *History* book.

Every 700 to 1,400 years, the 5 Perfect Masters of the time [Transcendental Souls?] will bring down the Avatar [Infinite Soul?] on earth during this cycle of time where God will incarnate as man.

If a Perfect Master is a soul that has undergone countless lifetimes of evolution and involution to finally 'climb up' and become a Perfect Master, the Avatar is different in the sense that He is 'brought down' without going through the endless cycles of incarnation.

Avatars come to earth with a mission and they will complete that mission at all cost. This normally involves acceleration of the consciousness of humanity in large ways. (the founding of many major religions are the result of tremendous energies of the Avatars passed down from generation to generation — although losing some of its essence in translation, nevertheless traces its source back to each avatar.)

When born, the Avatar is completely unaware of himself and his divinity.

Avatars are usually awakened by a Perfect Master.

Meher Baba was awakened by a kiss on the forehead by Hasrat Babajan.

Jesus was baptized by John the Baptist who was also a Perfect Master at that time.

Once the Avatar is awakened, their work of accelerating the evolution and involution of mankind is hastened as more and more people are moving up rapidly on the planes of consciousness.

It would require more search than I am willing to do at this time to discover if Meher Baba was influenced by two of his predecessors, Gurdjieff and Alice Bailey, whose lives overlapped his and who both died about twenty years before he did. There is enough similarity to say that they are all describing the same phenomenon, Soul Age, but there are also enough dissimilarities to indicate that there was perhaps no direct copying between or among any of them. This means that Meher Baba either got his teaching from the same source as Gurdjieff, namely Sufism, or that he "channeled" the information afresh, as Alice Bailey did. Or it could have been a mixture of both methods.

Concluding Remarks on Discussions of Soul Age

In conclusion to this chapter, it looks to me as if these two latter sources, Alice Bailey and Meher Baba, claim that the full course of evolution for the soul takes seven Ages to transit the Physical Plane, not the five that are mentioned in the Michaelian teachings. This conclusion is not so clear in the Kabbalah. I am unaware of any evidence that members of the original Michaelian group might have been consciously influenced by either Kabbalah or Bailey or Baba. The similarities and dissimilarities between these teachers, and several others, are investigated at length in Chapter 4M in Part Four, "The Seven Soul Ages". Also, my entire book *The Tao of Cosmogony* is devoted to explaining numerous instances of development and evolution in seven stages. Perhaps these two independent sources on Soul Age, and the numerous other independent sources on other developmental septenaries that are documented in the book *The Tao of Cosmogony*, provide evidence that we in the Michaelian teachings should seriously consider that perhaps Soul Age is in some way a seven-step process on the Physical Plane.

Chapter 1F

THE SEVEN HUMAN TEMPERAMENTS

This is the third chapter in a series of five chapters on precursors to the seven Overleaf System categories — the five categories that had precursors: Center, Soul Age, Role, Attitude, and Chief Feature; if Goal and Mode had precursors in other teachings or psychologies, whether esoteric or exoteric, I have not yet discovered them. In the two previous chapters, we reviewed Center and Soul Age. These five are being presented in the order in which they were revealed to the original Michaelian group. In this chapter we review seven so-called "temperaments" as found in Theosophy, which I perceive to be precursors to the seven so-called "Roles" of the Michaelian teachings. Because the word temperaments has a special meaning in Theosophy just as Role has a special meaning in the Michaelian teachings, I capitalize it henceforth: Temperaments.

We have already seen the word temperaments used for personality traits in a previous chapter, Chapter 1B, "Personality Typologies". However, the word Temperaments in this case is from Theosophy. In Theosophy, the seven Temperaments are thought of as "personifications" of the seven "Rays". In the Theosophical cosmology, the primordial, undifferentiated Source of all things differentiates itself in the seven archetypal Rays, and the Rays were said to manifest in seven archetypal human personality types that they refer to as Temperaments. This is the same idea as we find in the Michaelian teachings, but the Theosophical concept of Temperaments preceded the Michaelian teachings revelation about Roles by decades. That is why I am discussing it in these chapters on precursors to the Overleaf categories.

Wikipedia has a general article on "temperaments", >https://en.wikipedia.org/wiki/Temperament<, and it leads to other articles on temperaments, but these are distinct from and other than the seven Temperaments of Theosophy, which are the subject of the remainder of this chapter.

The Rays of Emanationism

There is a lengthy chapter about the Rays in Part One of my book *The Tao of Cosmogony*, but a brief introduction is useful in this chapter. The word "Rays" is a term that is part of an esoteric cosmology called "emanationism".

Emanationism is an ancient concept, found in various forms in philosophic and religious systems from Plato on, and in the modern world we find that Theosophy (as well as numerous other esoteric cosmologies) has adopted and promulgated the concept. Wikipedia has an article on the subject, namely this: >https://en.wikipedia.org/wiki/Emanationism<. That article will lead you to many other internet resources, and an internet search will reveal even more websites that discuss the subject.

Basically, the idea is that the undifferentiated Source differentiates itself into multiple fundamental, archetypal 'forms'. In Theosophy there are seven of them, and they are styled as "Rays". Wikipedia has a wiki on the subject of the seven Rays of esoteric cosmologies: >https://en/wikipedia.org/wiki/Seven_rays<.

This same idea appears in the Michaelian teachings, but in the Michaelian teachings cosmology emanation is called "Casting": the Tao is said to "fragment" itself into seven different types of "energies", for lack of a better word. This means that the Michaelian teachings has an emanationist cosmogony at its foundation, so it would behoove Michaelian students to read about that in the Wikipedia article, and in numerous other internet resources, such as this one, which also refers to others:

>http://www.kheper.net/topics/worldviews/emanationism.htm<.

The metaphor of Casting is to take the raw, unformed, 'substance' of Tao, you might say, and 'form' it in 'molds' of seven types so that it has specific 'shapes' — qualities and characteristics. Besides the Michaelian teachings analogy of Casting the substance of Tao in a mold, another analogy often used for emanation is

that the primordial Source is like white light being passed through a prism, causing it to differentiate into the seven colors of the rainbow. The problem with the mold metaphor and the prism metaphor is that, in them there are only two steps in the process from Source to Oneness to Sevenness. However, in reality there are four steps in the process from Source to Oneness to Twoness to Sevenness; refer to the section further on in this chapter for some explanation of this cosmogony: "The Significance of Number".

Interestingly enough to Michaelian students, the Theosophists have applied the seven Rays to seven basic human personality types that they call Temperaments. The resemblance to Roles is unmistakable, as we see in this chapter. I am not the first to note the similarity of Rays and Temperaments in emanationist cosmology and the Michaelian teachings. José Stevens, in his book *The Michael Handbook*, uses the prism analogy for the differentiation of Tao into Roles in his chapter on Roles, and in a drawing on page 78 of *TMH*.

Michaelian students typically characterize these seven fundamental emanations with the names of the seven Roles, rather than the names that Theosophy gave to the seven Rays. This use of "Role" was not initiated in the original Michaelian group; the Role was just another one of the seven Overleaf categories. However, in subsequent Michaelian teachings groups, the names of the Roles became the shorthand, the stand-in designations, for the seven fundamental emanations or Rays. Refer to Chapter 4C in Part Four, "Which Trait Septenaries are Overleaves?", for documentation about, and refutation of, this transformation. In my view, it would be better to give the seven fundamental emanations — the Rays — names that are synonymous with but distinct from the names of the Roles, and I do that in a subsequent section of this chapter.

Furthermore, my view is that Roles are far down the process of the fragmentation of Rays into sub-Rays, into sub-sub-Rays, into sub-sub-sub-sub-Rays, et cetera. In my cosmology, I say that the seven so-called "planes" are the first septenarian emanation, the seven sub-planes are a second-tier septenarian emanation, the seven (what-I-call) "Aspects" of Personality (the seven Overleaf categories) are a third-tier septenarian emanation, and the Roles are a fourth-tier septenarian emanation. Readers not familiar with planes can refer to the Wikipedia wiki: >https://en.wikipedia.org/wiki/Plane_(esotericism)<. They can also refer to Chapter 1A above and Chapter 4E in Part Four in this History book, and in a chapter in my book The Tao of Cosmogony.

The Book of Temperaments

The book from which I took the following descriptions is *The Seven Human Temperaments (TSHT)* by Geoffrey Hodson. There is a Wikipedia entry on this person: >https://en.wikipedia.org/wiki/Geoffrey_Hodson<. The book was first published in 1952, and it had several editions up to 2006, a Kessinger Publishing reprint. I own a used copy, and other used copies are available via online booksellers. However, you do not need to purchase a copy for yourself; a freely downloadable ePub version is available on the internet at this website: >https://www.theosophy.world/resource/ebooks/seven-human-temperaments-g-hodson< and as a PDF at this website: >www.mysticknowledge.org/09-The_Seven_Human_Temperaments.pdf<. This type of unencumbered availability leads me to believe that the book is now in the public domain, so I quote from it freely and extensively in this section and in following sections.

On that Theosophy World website you can read this brief introduction to the book:

In the esoteric tradition, the number seven occurs frequently. The Seven Rays refer to seven different human temperaments. The author describes the characteristics of people in each of these rays, their strengths and weaknesses, ideals and methods. He also points out that most people show forth in daily life the characteristics of several Rays. Ultimately, we must develop the qualities of all the Rays, although the unique characteristics of one of them will predominate.

The Michaelian teachings echoes several statements in this quotation: 1) Temperaments have good sides and bad sides, not unlike the Positive and Negative Poles of the Roles; 2) People exhibit the characteristics of several Rays, not unlike how Casting and other Overleaves color and flavors people's Roles; 3) Take note of the statement that "we must develop the qualities of all the Rays". This injunction does not differ from the Michaelian teachings and its injunction to become "balanced": to be fluid enough to express the appropriate behavior, feelings, and thoughts for the situations we find ourselves in, and that includes flexibility in expression outside of our default Role or Casting identities.

Some members of the original Michaelian group knew about Theosophy, because it is mentioned in the channeling session transcriptions. However, Theosophy is not mentioned very often, and it was not discussed in detail. This is unlike their relationship with Gurdjieffian teachings, which was discussed repeatedly and in detail, because some of the founding members had been members of a local Gurdjieff group. It is extremely

unlikely that the group members knew about this particular book, so it is not likely that Sarah Chambers in her channeling was subconsciously regurgitating Theosophical ideas based on her understanding of the Temperaments. (I mention this because I have reason to believe that subconscious regurgitation, rather than valid channeling, happened with respect to some Gurdjieff ideas.) Nevertheless, the descriptions of the Temperaments are remarkably similar to the Roles, so we know that the two sources, Theosophy and the Michaels, are talking about the same fundamental Personality archetypes.

To some extent, Theosophy, like the Michaelian teachings, is a channeled teaching. The similarity of the characteristics and the nature of both teachings indicate to me that the source is from the plane beyond the Astral Plane. Actually, the Michaelian teachings has more similarities to Theosophy than it does to the Gurdjieffian teachings, but this fact is not well known in the Michaelian teachings community. I call attention to their similarities again and again in my various books.

So let's get started with the description of the seven human Temperaments.

Introduction to the Temperaments

In the descriptions quoted from the *TSHT* book that follow in this chapter, we see that the Rays are more like what I call the "Processes" and the "Aspects" and the "Septenarian Attributes" of my "Process/Aspect System" than just the Roles. Therefore, I say that the Rays manifest in all of the other Aspects — aka Overleaf categories — Goal, Mode, Chief Feature, Age/Level, Attitude, and Center of the Overleaf System. Some of this presentation in this chapter might be too brief for you to understand this, but in other chapters of this book these ideas are clarified, and in my other books the elucidation goes even further. For here and now, and for your convenience in understanding my perceptions and correlations, this information is tabulated in Table 1Fa.

| Table 1Fa — CORRELATION of RAYS, ROLES, PROCESSES, ASPECTS, and ATTRIBUTES | | | | | | | |
|--|---------------|-------------|------------------------|--------------------------|-----------------------|---------------|---------------------|
| RAY RANK | FIRST | SECOND | THIRD | FOURTH | FIFTH | SIXTH | SEVENTH |
| THEOSOPHY RAY NAME | Will or Power | Love-Wisdom | Active Intelligence | Harmony thru Conflict | Concrete Knowledge | Devotion | Ceremonial Order |
| WITTMEYER RAY NAME | Energy | Love | Truth | Beauty | Mentality | Emotionality | Physicality |
| ROLE | King | Priest | Sage | Scholar | Artisan | Server | Warrior |
| PROCESS | Origination | Evolution | Synthesis | Combination | Analysis | Involution | Termination |
| ASPECT | Mode | Role | Center | Age/Level | Attitude | Chief Feature | Goal |
| DIALECTIC ATTRIBUTE | Cardinal | | | Neutral | Ordinal | | |
| AXIAL ATTRIBUTE | Action | Inspiration | Expression | Assimilation | Expression | Inspiration | Action |

My comments on this table are as follows:

- This table is worth studying if you really want to understand what I am saying in this chapter. Furthermore, its contents and correlations are to be found throughout this *History* book and my other books. It would ease your journey through this *History* book if you studied this table, or if you at least bookmarked the page for future reference as you read further on in the book.
- This table is structured in what I call the Natural Sequence. Any seven items in a list can be arranged in any one of seven factorial (7! = 5040) ways, but Theosophy and the Michaelian teachings agree on the particular arrangement shown in this table it is very special in both systematic cosmologies. A Cardinal triad and an Ordinal triad are on two sides of a Neutral; Action, Inspiration, and Expression dimensions are in mirrored or reversed order in the triads.

- RAY RANK: In the first row, the Rays are ranked from first to seventh. As you can see by comparing it
 with the other rows, this ranking sequence is the reverse of the way it is done in the Michaelian
 teachings.
- RAY NAME: The second row shows some of the names of the Rays as given in Theosophy. For alternative names, refer to >https://en.wikipedia.org/wiki/Seven_rays<. That article has several tables showing many sources and many alternative names.
- WITTMEYER NAME: The third row shows what I regard as the best single-word names for the Rays.
 They are not far from the names or descriptions given in Theosophy, as we see in this chapter.
 Michaelian students who read this chapter will find the names to be familiar.
- ROLE: The fourth row shows the seven "Roles" which, in the Michaelian teachings, have become a sort of a 'stand-in', or 'personification' of the seven Rays. (In my opinion, it is not proper to make Role = Ray; there is only a correlation; there is not an identification; this is explained elsewhere in several places in my books.) The Theosophical concept of Temperaments appears to be somewhat equivalent to the concept of Roles in the Michaelian teachings. The Michaelian teachings community has gone much further in its explanation and description of Roles than Theosophy has in describing Temperaments in the TSHT book. The seven Temperaments are an instantiation of the seven Rays in the same way that the seven Roles are an instantiation of the seven Rays. Thus, Roles and Temperaments are two names for the same phenomenon.
- PROCESSES: The fifth row shows the seven "Processes" in Personality that correlate with the Rays. What I refer to as Processes are just one-word descriptions of the "Septenarian Attributes", which are the composite of Dialectic and Axial Attributes.
- ASPECTS: The sixth row shows the "Aspects" in Personality that correlate with the Rays. Note that the seven Aspects have the same Septenarian Attributes as the seven Processes.
- DIALECTIC: The seventh row shows the names of the Dialectic Attributes, the names given in the Michaelian teachings. It will be demonstrated in subsequent sections that the first three Rays are the mirror image of the last three Rays, the pivot being the Fourth Ray. That is why Cardinal is the opposite of Ordinal in this table; refer to explanation below. This is a claim of both Theosophy and the Michaelian teachings. Theosophy does not use the words "Cardinal" and "Ordinal", but it does use the words "Upper" and "Lower". Refer to >https://www.uppertriad.org/main.html< for a huge amount of information on the Rays. Theosophists did not understand the Axes of Action, Inspiration, Expression and Assimilation as we do in the Michaelian teachings, but they did understand the Dialectic attributes of Cardinal, Ordinal, and Neutral.
- AXIAL: The eighth row shows the names of the Axial Attributes, the names given in the Michaelian teachings. The combination of the names of the Dialectic Attributes and the names of the Axial Attributes generates the names of the Septenarian Attributes. The names of the Septenarian Attributes provide the characteristics of the named things in the same column.

In other chapters of this book, there is discussion of the colors of the rainbow ascribed to the seven Rays, and the Rays are correlated with the seven primary chakras, and with the seven planes.

With that introduction behind us, we are now ready to start looking at the book *The Seven Human Temperaments*, hereinafter abbreviated to *TSHT*.

In the quotations to follow, as you read the descriptions of the Temperaments, one thing you might notice is that it is sometimes difficult to discern that Warrior is Seventh Ray and King is First Ray, that Server is Sixth Ray and Priest is Second Ray, that Artisan is Fifth Ray and Sage is Third Ray. This is the case even though the text clearly states that the first and seventh Rays are complementary; the second and sixth Rays are complementary; the third and fifth Rays are complementary. As stated above, Theosophists did not understand the Axial Attributes of Action, Inspiration, and Expression as we do in the Michaelian teachings, but they did get the Ordinal and Cardinal pairings in those Axes correct.

"The Significance of Number"

That is the title of the initial chapter of the book *TSHT*. In that chapter, it is stated explicitly that in Theosophy, numerical considerations underlie the systematic part of Theosophy. Perhaps it has not been stated quite that explicitly in the Michaelian teachings, but there are clues that the Overleaf System also has mathematical underpinnings. For instance, "Cardinal" and "Ordinal" are math terms in number theory. "Axis" is used in

geometry, as in the "x" and "y" and "z" axes which define three-dimensional space in the Cartesian coordinate system. (This is explained in my book *The Tao of Personality*.)

Here is an introduction to this concept on page one of that chapter of *TSHT*:

Is there any key by means of which human nature may be understood, and this infinite variety and vast potentiality of man be comprehended and reduced to order? Theosophy answers "Yes", and further says that the key is numerical, the governing number being seven. Thus there are seven main types of human beings, each with its outstanding natural attributes and qualities. All qualities and powers are with every human being, but in each of the seven main types there is a preponderant tendency. Knowledge of these seven types and their corresponding attributes provides a key to the understanding of human nature. [TSHT, p. 1]

The content and import of that brief intro is familiar enough to students of the Michaelian teachings, but the following derivation of the significance of the number seven is not familiar, unless they have read Part One of my book *The Tao of Personality*. In that book, I quoted Chapter 42 of the *Tao Te Chinq*, as follows:

The <u>Tao</u> produced the <u>One</u>. / The One produced the <u>Two</u>. / The Two produced the <u>Three</u>. / The Three produced <u>all</u> things. / All things carry the *yin* and embrace the *yang*. / Through the blending of the *chi* they achieve harmony.

It seems to me that the following statements from the *TSHT* book, page 2, intentionally or not, are a commentary on Chapter 42:

Numerically, the active Source of all life and all form is represented by the number One, and the passive source, negative existence, the Absolute, by Zero, No-thing. [TSHT, p. 2]

In Michaelian teachings terms, what is here termed "the One", an "active" Source, is the Tao in its *immanent* (revealed, Cardinal) aspect. What is here termed the "Absolute/Zero/No-thing", a "passive" Source, "negative existence", is the Tao in its *transcendent* (concealed, Ordinal) aspect. (Or, arguments could be made that the Cardinal/Ordinal poles should be switched.) This distinction between the transcendent and immanent aspects of Tao is not something that has been made clear in the Michaelian teachings community, so far as I know, but it is made clear in my *Tao of Personality book* and in my book *The Tao of Cosmology*. The point is that a distinction is made between 'everything' and 'nothing', and "Tao" occupies both in the Michaelian teachings, "Source" occupies both in Theosophy, and various esoteric cosmologies have other names for it.

The story of creation does not stop with the distinction between the Cardinal and Ordinal aspects of the One, the Tao; the next step of the primordial differentiation process is the bifurcation of the manifest Tao into another Cardinal–Ordinal split:

According to occult cosmogony, the next step in the creation process is the emergence from the One of Its inherent positive and negative aspects, or masculine and feminine potencies. The One becomes Two or androgyne. [TSHT, p. 2]

If you are not familiar with the term "cosmogony", check out >https://en.wikipedia.org/wiki/Cosmogony<. Basically, a cosmogony is a story about creation. Besides the One being equated with Tao, the One here is also equivalent to the Neutral Assimilation aspect of the Natural Sequence in the Michaelian teachings. The Two here ('masculine' and 'feminine', 'positive' and 'negative') is equivalent to what are referred to as 'Cardinal' and 'Ordinal' in the Michaelian teachings. Thus, Neutral \rightarrow Cardinal/Ordinal. So here, with the One and the Two, we have the Dialectic Attributes. These are discussed in Chapter 2B in Part Two, "Attributes of Overleaves". The Dialectic Attributes are shown in Table 1Fa above, the next to last row.

Continuing with another quotation from *TSHT*:

These Two interact to produce the Third Aspect of the threefold manifested Logos. The Three in turn unite in all their possible combinations to produce seven groups of three. In three [of seven] of these groups, one of the three predominates; in three others, two predominate and in the seventh, all are equally manifest. [TSHT, p. 2]

I get that Two produces Three as it says in this quote, but I have not been able to make sense of the statements about what Three produces. Three "in all their possible combinations" in math-speak is 3! (the exclamation mark means "factorial") which equals 6 ways to arrange three items, not "seven groups of three" or 7x3=21. My own understanding from the Michaelian teachings conceptualization is that the Two (Cardinal and Ordinal) produces the Three (Axes), meaning that there are three aspects of Cardinal and three aspects of Ordinal, and we in the Michaelian teachings know these as the three Axes of Action, Inspiration, and Expression. These Axial Attributes are shown in the bottom row of Table 1Fa.

After that brief description of the derivation of Sevenness in the Theosophical conceptualization, there follow a few pages in the remainder of Chapter One of the *Temperaments* book. These brief descriptions serve as introductions to the extensive descriptions of each Ray in subsequent chapters of the book. Following are the 'cherry-picked' statements that I believe are relevant to this *History* book. Within the quotations I have inserted some comments in [brackets] that provide clarification and/or the Michaelian teachings equivalents to the terms used.

Notice that there is a pairing of First and Seventh Rays; of Second and Sixth Rays; of Third and Fifth Rays. This is per the Natural Sequence. There are hints of the Axial Attributes of Action, Inspiration, and Expression, but the casual reader who had no understanding of the Michaelian teachings would probably not notice this if it were not pointed out. <u>Underlines</u> are mine.

The first and the seventh [Rays] are the Alpha [Mode Aspect] and Omega [Goal Aspect] of manifested Life. ... The first [Ray] is the primordial Source, the point, the positive power [Energy: Hence the name 'Energy' for my name for the First Ray] of the universe [the Origination Process personified as the King Role]. In the Logos [Michaelian teachings = "Tao"], it is omnipotence; in man, it is will.

The <u>seventh</u> [Ray] ... is power in action [the Termination Process personified as the Warrior Role], will in motion [Moving Center], omnipotence made manifest. Within the universe, the seventh is physical material [Physical Plane]. ... In the Logos, it is the universe [Physical Plane]; in man, it is the physical body.

The second and the sixth notes [Rays], representing respectively Life and its expression, are also paired. Life is all-pervading, omnipresent — the unifying principle of the universe, the Spiritual Sun; its expression is localized as the vital principle in matter, the vitalizing principle in Nature [Involution Process] and the physical sun [Solar Body Type]. In the universe, the <u>second</u> note [Ray] is Life; ... in man, it is love [hence the name I chose for the Second Ray: Love]; in developed or spiritual man it is wisdom and universal love, from which spring compassion and selfless service [the Evolution Process personified as the Priest Role].

The <u>sixth</u> note [Ray] in the universe is form, shape, organized matter. In the Logos, it is His "body" of the universe with its heart of fire [Emotional Center] — the sun — whose life-giving principle appears as roseate fire and, on earth, as an atom of solar vitality. In man, it is one-pointedness; in developed man, it is inspired devotion [the Involution Process personified as the Server Role].

The third and fifth notes [Rays] also represent complementary attributes. The third [Ray] is the ... principles governing the manifestations of Spirit and Life through matter and form, the Archetypes of all the resultant forms [Synthesis Process], truth [hence my name for the Third Ray: Truth] and the keys of knowledge — all these are connoted by the third. In the universe, the third note is creative energy directed by Universal Mind. [Higher Intellectual Center] ... In man, it is conscience and idealism, morality and truth; in developed man, it appears as comprehension and abstract intelligence, from which spiritual intuitiveness is born [the Synthesis Process personified by the Sage Role].

The <u>fifth</u> note [Ray] is ... the progressively developing form of a single Archetype [Analysis Process]. ... In man, it is the brain and the analytical intelligence [Intellectual Center]; in developed man, it becomes as a crystal lens through which the principles of the third note are projected as Rays and are focused by it into the brain as illumination, genius and inspiration [the Analysis Process personified as the Artisan Role].

The <u>fourth</u> note [Ray] is the middle unit, the pivot, the fulcrum, the stable point of rest, the lowest point in the swing of the pendulum of Life between the primordial three pairs of opposites. It is the state of perfect interrelation, of balance, of the highest area of self-expression, of harmony between Life [Cardinal] and form [Ordinal], vehicle [Ordinal] and consciousness [Cardinal]. It is the point of rest at which the pendulum of manifested life makes an apparent pause in its everlasting swing between Spirit [Cardinal] and matter [Ordinal]. [Goal of Stagnation, Flow, Equilibrium — whatever you want to call it.] In that "momentary pause" of ultimate stability, perfect equipoise, the beauty of the Supreme is revealed. In the universe, it is the beauty of Nature. In the Logos, it is Beauty's Self. [Hence my choice of the word Beauty for this Ray.] In man, it becomes love of the beautiful; in developed man, it is the faculty of perceiving and portraying the beauty of the Supreme. [The Combination Process personified by the Scholar Role.]

In this exposition the Manifestations of the One, the Three and the Seven as human temperament and faculty are chiefly considered, though some information is also offered concerning color, jewel, and other correspondences. ... As stated later in this book, the pure Ray type is rare, admixtures with consequent modification of ideal, temperament and method being the rule. For purposes of exposition, however, relatively pure Ray types are described. The evolutionary position or "age" of the Spiritual Self [Soul Age] usually decides the degree in which

the Ray qualities and virtues are displayed and the defects and limitations are overcome. As a general rule, the more advanced the Ego [Essence], the more readily discernible in the personality is the primary Ray. [TSHT, pp. 4–8]

With that, the first chapter of the book ends. The description of each Ray is short in that chapter, but seven subsequent chapters in *TSHT* are devoted to a lengthy description of each Temperament. Whatever doubt you may have that Theosophy and the Michaels are speaking of the same Natural Sequence should be dispelled with a reading of those chapters.

Take a look at the description of each Ray in the quotations below, and compare it with the lineup of Overleaves as well as the names given to the Septenarian Attributes, the Processes, and the seven Aspects of each Process. The <u>underlines</u> are my own; they emphasize the keywords in the descriptions that best indicate the correlation of the Theosophical Temperaments with the Michaelian teachings descriptions. I believe that you will agree with my perception that the correspondence of each Ray with the Septenarian Attributes is solid.

I am only going to quote the parts of each chapter on the other Rays that are relevant to the correlation of Rays with the Septenarian Attributes in general and the Roles in particular, as they are generally thought of as the 'personifications' of the seven Aspects of Personality. My comments are shown in [brackets].

The First Ray — "Will/Power" — "Energy"

Chapter 2 starts on page 9 of the TSHT book and goes to page 18.

Septenarian Attribute = Cardinal Action; Process = Origination; Aspect = Mode.

Overleaf Traits = Dominance Goal, Aggression Mode, Impatience Chief Feature, King Role, Realist Attitude, Higher Moving Center, Infinite Soul Age, Seventh Level.

Notice how these Traits show up in the descriptions below. In my view, the underlined words fit best with the "Cardinal Action" factors in the Michaelian teachings. Most of the other words are appropriate, but not as much.

[KING Role:] The first Ray corresponds to the First Aspect, God the Father, the Creator [Origination Process]. The preponderant qualities of first Ray men are will, power, strength, courage, determination, leadership, independence, dignity rising on occasion to majesty, daring and executive ability. This type of man is the natural ruler and leader, the statesman, the empire-builder and colonizer, the soldier, the explorer and the pioneer. Alexander the Great was typical of his Ray when he wept for more worlds to conquer. In the early stages [younger Soul Ages] of evolution these activities are largely physical. In the later phases [older Soul Ages] they become mental and spiritual. The will is then exerted not so much as personal effort and strain, but in effortless, frictionless expression of the One Will [Essence].

[The Positive Pole of King is "+Mastery":] The ideal of the Ray is strength, the first Ray man greatly appreciating the presence of this quality, indeed tending to judge the value of all conduct and achievement according to the measure of strength employed. He fights to the end, and is able to condone almost any act if the quality of strength shines through it. He finds it difficult to tolerate weakness in any form and tends to despise those who give in. For him God, or the highest good, is the Principle of Power in all things. The greatest evils are weakness and surrender. The driving impulse is to attain and to conquer and such men are often seen at their best in adversity. The highest attainment is victory and the greatest interior experience comes from the exhilaration of power, kingship, dominion.

[The Negative Pole of King is "-Tyranny":] Among the defects of the first-Ray displayed in the earlier stages of evolution [younger Soul Ages] are ruthlessness, hardness stubbornness, pride, superciliousness, unadaptability being ready to work only on lines which appeal personally, indifference to and even scorn of the opinions, rights and feelings of others, tyranny, thirst for power, egotism, braggadocio, extravagance, aggressiveness, willfulness, assumption of superiority, individualism, mental rigidity and making final pronouncements upon debatable freedom of inquiry. Dogma, or supposedly authoritative statements, sometimes without regard to inherent truth or reasonableness, is used as a bludgeon to stun into silence inquiring minds. Recognition of the importance of authority in the maintenance of order can cause first Ray people to use both personal position and dogma to forbid further investigation. This is done, whether consciously or unconsciously, to crush opposition and restore personal prestige and dominance. ...

The corresponding color in the spectrum, generally present in the aura, is white tinged with electric blue at Egoic [Essence] levels, and bright vermilion [crimson red] in the personal aura. ... Of the arts, dancing represents the first Ray and those in whom that Ray predominates ... [Higher Moving Center]

If a chart of the seven Rays be folded, using the fourth as a hinge, the horizontal columns of the first and seventh Rays will come into contact with each other and the natural correspondences between the Rays will be revealed. The seventh Ray may be regarded as a manifestation in [physical] form of the first [Ray, which is abstract principle], or as representing power in action.

After this, there were several pages of examples of alleged first Ray people of historical importance doing heroic things: Douglas MacArthur, Winston Churchill, Robert Scott, Ernest Shackleton, and George Patton. The naming of exemplar characters is also common in the Michaelian teachings community.

The Second Ray — "Love-Wisdom" — "Love"

Chapter Three of TSHT begins on page 19 and ends on page 25.

Septenarian Attribute = Cardinal Inspiration; Process = Evolution; Aspect = Role.

Overleaf Traits = Growth Goal, Passion Mode, Arrogance Chief Feature, Priest Role, Spiritualist Attitude, Higher Emotional Center, Transcendental Soul Age, Sixth Level.

Notice how these Traits show up in the descriptions below. In my view, the underlined words fit best with the "Cardinal Inspiration" factors in the Michaelian teachings. Most of the other words are appropriate, but not as much.

The second Ray corresponds to the Second Aspect of the Blessed Trinity, God the Son, the Preserver. The special qualities of the Ray are wisdom, <u>love</u>, intuition, <u>insight</u>, <u>philanthropy</u>, a sense of unity, <u>spiritual sympathy</u>, <u>compassion</u>, loyalty and generosity. The type of man is the sage, the philanthropist, the <u>reformer</u>, the teacher, the <u>inspirer</u>, the humanitarian, the [psychological and spiritual] <u>healer</u> and the servant of men, imbued with a universal love which often overflows to the lower kingdoms of Nature.

The ideal of second Ray man is impersonal, universal love founded upon recognition of the unity of life. When highly evolved [older Soul Age], he is intuitive and aspires to radiate upon the world, without thought of return or reward, wisdom and love which will <u>uplift</u> and <u>inspire</u> all whom they reach. He also becomes moved to develop to their highest degree as positive powers the spirit of service and the qualities of purity, refinement, gentleness, tenderness, <u>charity</u>, <u>goodwill</u>, <u>benevolence</u>, harmony and protectiveness. Loyalty in both friendship and love is one of his greatest <u>virtues</u>, friendship being a veritable <u>religion</u>, and loyalty, especially in the face of failure and disloyalty, its highest expression. The phrase, "Love is not love which alters when it alteration finds", partly expresses the second Ray ideal of love.

For the second Ray man, God is the Principle of Wisdom, of universal, <u>radiant love</u> and of self-sacrifice. He sees the divine creative act as a continuous, voluntary and <u>sacramental</u> sacrifice, in which God perpetually surrenders His life that all may live. He judges all conduct and achievements according to the measure in which they are founded upon and display these qualities. He is able to <u>forgive</u> even evil conduct if motivated by love.... Indeed, when well developed he is able always to love, and so to forgive, the sinner, even whilst denouncing and combating the sin. The greatest evils for this type are hatred, separateness, selfishness, cruelty and disloyalty. The driving impulse is <u>to save</u>, to teach, to serve, <u>to heal</u>, to share, to give happiness and to create and maintain harmony. The highest attainment of second Ray people is the full realization and expression in conduct of unity. To extend the range of such realization and expression is their supreme preoccupation. They aspire also successfully to impart wisdom, to <u>illumine</u> others from within.

The second Ray man does not seek to overcome, override or crush enemies by superior force; he prefers to dissipate their enmity, which he feels acutely, to change it when possible into co-operation, to win their <u>sympathy</u> and to turn them into friends. He exercises <u>intuitive insight</u> and perception and seeks <u>self-illumination</u> when in the presence of enmity or obstruction. Non-resistance and turning the other cheek are natural to him, and his method of fighting is rather to wrestle with the opponent than to strike him down. He is also very ready to negotiate, and prefers an agreed to [rather than] an enforced solution.

As teacher, he freely shares all knowledge which can be helpful, accentuates the values of <u>self-illumination</u> from within, <u>encourages</u> the use of the <u>intuition</u> and bestows <u>happiness</u>. The qualifications, personal nature and motive of the teacher are regarded as of great significance, the profession ideally having been chosen as a true vocation rather than a means of livelihood alone. He warns against confusing education with training in which memory and imitation are accentuated. He constantly seeks to wake the inherent capacities of his pupils, especially the urge to produce that which is beautiful.

He believes in the provision of interest, and a sufficiency of permissible activities into which the boundless energy welling up in the child, for example, can flow <u>without restriction</u> or so-called naughtiness. <u>Psychological integration</u> is regarded as an essential part of the process of education.... To these educational ideals might be added: to help the Inner Self to achieve the fullest self-expression: to produce <u>enlightened</u> citizens; to produce workers for world <u>welfare</u>, <u>high-minded</u> servants to their fellow men....

For the second Ray man, his apotheosis is omni-presence, which means to be consciously self-identified with the <u>divine</u> Life in all Nature and in all beings, and so <u>mystically</u> present wherever that Life is manifest. Christ and the Lord Buddha are the great Exemplars of this perfection....

[Negative Pole of the Priest = –Zeal:] Among the defects of the type are sentimentality and sensuality, <u>self-righteousness</u>, <u>hyper-sensitivity</u>, self-pity, despondency, the habit of brooding upon, and nursing grievances and difficulty in forgiving sins against the second Ray code. Judgment is often in danger of being obscured by the emotions, especially those of <u>compassion</u> and love.... Second Ray people are prone to <u>impracticability</u>, and to immense self-sacrifice for others, sometimes undermining the self-reliance and increasing the selfishness of those on whose behalf such sacrifices are made. They are inclined to over-accentuate the life side of their work to the neglect of the necessity for an equal perfection of form.

The greatest suffering can come from heart-break, discordance in close human relationships, broken faith and trust, misjudgment, coldness, isolation and exclusion, loneliness, and neglect.

Buddhism, as its name suggests, is predominantly a second Ray religion. The doctrinal, theological (where the theology is founded upon truth), redemptive, saving and teaching aspects of all World Faiths represent the second Ray influence in them.

The Ray correspondence [the complementary Temperament on the other side of the Inspiration Axis] is with the sixth Ray [Server], through which is manifested more individually and emotionally the universal love and capacity for self-sacrifice and self-surrender in devotion to a leader and a Cause typical of the second Ray.

The Lord Christ, in His perfect wisdom, His universal love and His boundless compassion, tenderness and pity for all that lives, especially for all that suffers, is a great Exemplar of the qualities of the second Ray.

My guess is that the author was a Priest, considering the depth and breadth of his description of the Second Ray Temperament; it exceeded the treatment that he gave to the other Rays. That identification also makes sense based on his biography.

The Third Ray — "Active Intelligence" — "Truth"

Chapter Four of TSHT begins on page 26 and ends on page 34.

Septenarian Attribute = Cardinal Expression; Process = Synthesis; Aspect = Center.

Overleaf Traits = Acceptance Goal, Power Mode, Greed Chief Feature, Sage Role, Idealist Attitude, Higher Intellectual Center, Old Soul Age, Fifth Level.

Notice how these Traits show up in the descriptions below. In my view, the underlined words fit best with the "Cardinal Expression" factors in the Michaelian teachings. Most of the other words are appropriate, but not as much.

[Higher Intellectual Center:] The qualities of character are comprehension — especially of <u>fundamental principles</u> — understanding, a deeply penetrative and interpretative mind, adaptability, tact, dignity, the sense of which is very strong and recognition of the power and value of silence. Capacity for <u>creative ideation</u> is one of the characteristic powers. The types of men are the <u>philosopher</u>, the organizer, the <u>diplomat</u>, the strategist, the tactician, the scholar, the economist, the banker, the chess player, the judge, the allegorist, the interpreter and the cartoonist.

[The Positive Pole of Sage is +Communication:] Full comprehension is the ideal. God being regarded chiefly as the Principle of Truth. Untruth, intellectual obtuseness and lack of comprehension are the greatest evils. The driving impulse is wholly and impersonally to grasp all the fundamental principles and factors of a subject and to combine and apply them to its perfect comprehension and application. The highest attainment is the full and perfect perception of truth and genius partly arising from an overflow of contemplation.

To me, this description of the Third Ray is more similar to the Higher Intellectual Center than it is to the Sage. As pointed out elsewhere in these descriptions, one can see many of the other Overleaves in the same Process as the Role/Temperament.

Unlike either the first or second Ray types, in obtaining results the third Ray man tends to withdraw mentally, as does the hermit physically, from the problem or obstacle into the realm of <u>abstract thought</u>, there to ponder and meditate until complete enlightenment occurs. <u>Comprehension and synthesis</u> of all the factors involved is thus gained and as a result the solution of the problem is perceived. In his own life he ... discovers and applies the principles of that spiritual alchemy by which adversity is changed into happiness, and all that is base in human nature is transmuted into <u>wisdom</u> and power. As scientist he would be <u>alchemist</u> as well as chemist, astrologer as well as astronomer and <u>metaphysician</u> as well as physicist and mathematician. He achieves results by means of prolonged, sequential thinking and a perfection of both strategy and tactics. He skillfully employs the method of the trap and the net, being ready to use any appropriate method without regard for personal inclination. As <u>teacher</u>, he explains principles, encouraging the pupils to work out their application by their own mental efforts, often leaving gaps and even permitting perplexity in order to evoke inquiry and inspire to research. Impersonality in the approach to truth is inculcated.

This type feels greatly the necessity for complete comprehension in all the affairs of life, responds far less to an imposed ethical code than to interior realization of the valid reasons for particular kinds of conduct. He learns also to interpret and use circumstances as guides to conduct and wisely to wait upon the logic of events.

Among the defects of the type are coldness, individualism, selfishness, indecision through seeing too many sides, aloofness, intrigue, cruelty, unreadiness openly to adopt a cause, failure to support in a crisis, deliberately and unscrupulously to deceive ... insincerity, cunning and too great attention to form, detail and system to the neglect of the spirit and the larger purposes of life.

To me, this seems like the description of a Sage in the Negative Pole, which in the Michaelian teachings is said to be –Oration, but it is also apparent in other ways that a Sage can go astray: as a "snake-oil salesman", as a narcissist, as a self-absorbed, self-serving con artist.

Inversely, there is sometimes a proneness to live too much in the realm of principles, long range plans, schemes and ideals and consequently to become impractical and remote from the world.

Because the Sage is a Cardinal Role, such a person can become ungrounded, out of touch with the mundane. The principle of [the hu]man [as distinct from animal] is that of <u>abstract intelligence</u> [Higher Intellectual Center]or Higher Manas, "The mind", the mental faculty which makes of man an intelligent and moral being, and distinguishes him from the animal Esoterically, however, it means, when unqualified, the Higher Ego [Essence], or the sentient reincarnating Principle in man.

The color is emerald green, the jewel the emerald; the Ray correspondence [the complementary Temperament on the other side of the Expression Axis] is with the fifth Ray [Artisan], that of the concrete mind, and the symbol is the triangle. Whilst the [third Ray] man would be intellectually concerned with the great principles of life, with philosophy and metaphysics, the fifth Ray man [Artisan] would more readily pursue detailed scientific knowledge and seek to apply the results to physical life [= technology]. Of the arts, poetry, which is mental music, the perfect language, represents the third Ray.

The Chaldean religion, with its astrological basis and practice, is predominantly third Ray. The philosophical and metaphysical aspects of all World Faiths represent the third Ray influence in them.

The Fourth Ray — "Harmony through Conflict" — "Beauty"

Chapter Five of TSHT begins on page 35 and ends on page 40.

Septenarian Attribute = Neutral Assimilation; Process = Combination; Aspect = Age/Level.

Overleaf Traits = Equilibrium Goal, Observation Mode, Stubbornness Chief Feature, Scholar Role, Pragmatist Attitude, Instinctive Center, Mature Soul Age, Fourth Level.

Notice how these Traits show up in the descriptions below. In my view, the underlined words fit best with the "Neutral Assimilation" factors in the Michaelian teachings. Most of the other words are appropriate, but not as much.

Its qualities are creative ideation, harmony, <u>balance</u>, beauty and rhythm. The special faculty of the fourth Ray man is the power to <u>perceive</u> [Observation Mode] and portray, both through the Arts and through life, the "principle of beauty in all things" — Keats. He generally displays great <u>versatility</u> and sometimes the gift of mimicry. Even whilst not yet possessing them, he is able to display — one might almost say simulate — <u>the qualities of all the Rays</u>. He has a strong sense of form, <u>symmetry</u>, <u>equilibrium</u> and a sensitive taste for all that is beautiful in the Arts, in Nature and in life.

The type of man is the artist for whom God, or the highest good, is the principle of Beauty in the Universe, ugliness being regarded as the greatest evil. The mode of artistic expression and the choice of medium are influenced by the dominant sub-Ray. The driving impulse [Instinctive Center] is to release the influence of beauty upon the world, to mediate between the realms of pure beauty [Cardinality] and those of its imperfect expression [Ordinality], the Arts serving as links between the two. Those orators possessed of the art of rhythmic speech, capable of charming, persuading, captivating and carrying away an audience, the true spell-binders, display the quality of the fourth Ray.

I would have applied this last sentence to the Sage, or third Ray manifestation, more than the Scholar.

The fourth Ray standard and test of human beings, nations and civilizations is far more that of beauty than of temporal power, possessions, armaments and financial standing. Some artists can condone all conduct through which the light of beauty shines and are unable to forgive ugliness. They feel acutely the need for the presence of <u>harmony</u> and beauty in their surroundings and can suffer greatly from their absence.

The fourth Ray man obtains his results by markedly individual methods, success depending upon perfection of technique, whether in the Arts or in life. He is a natural <u>mediator</u> and <u>interpreter</u>. His apotheosis is to become a master artist, a genius in every Art, especially that of living, which for him includes full self-expression and the maintenance of perfect relationships. Evidence exists that the branch of the Arts chosen by those in whom the fourth Ray predominates may vary in successive lives, under the influence of a sub-Ray. They perceive and seek to portray in every thought, word and deed the divine Beauty which shines throughout the universe. They achieve their results by dramatization, illustration, and by the appeal of beauty, rhythm, perfection and charm, the means employed being enchantment and allurement. As teachers they illustrate and dramatize.

[Negative Pole:] Among the defects in the fourth Ray are instability, restlessness, <u>vacillation</u>, sensuousness, posing, self-conceit, self-indulgence, improvidence, cynicism concerning those more successful than themselves and a sense of superiority over less gifted individuals. They suffer alternation of moods. They can be elevated to lofty exaltation and cast down into depression and despair. ...

Fourth Ray people may also display a tendency to daydream, to live in a world of fantasy. [Negative Pole of Scholar is –Theory, aka –Speculation, –Conjecture, –Hypothesis.] Unless the will-force of the first Ray [Cardinal Action] is active in them, they experience vague yearnings for great things and yet fail of accomplishment. The greatest suffering is generally due to frustration and failure to achieve perfect self-expression. The principle of man is the <u>bridge between the Higher Self and the lower</u> [self], the antahkarana. ('Antahkarana', Sanskrit: *Antar* = middle or interior, and *karana* = cause, instrument. Technically used to refer to the bridge between the Higher and the Lower Minds, the internal instrument operative between them.) This principle "... <u>serves as a medium of communication between the two</u>, and conveys from the lower [personality] to the Higher Ego [Essence] all those personal impressions and thoughts of man which can, by their nature, be <u>assimilated</u> and stored [archived] by the undying Entity, and be thus made immortal with it, these being the only elements of the evanescent Personality that survive death and time." [*The Theosophical Glossary*, H. P. Blavatsky]

The mission of the artist would thus appear to be, by means of beauty, to elevate the consciousness of man. into realization of the beauty and the splendor of Nature and of God. Thus the truly great artist serves as priest and mediator between God and man. The color is a tawny bronze, the jewel is the jasper and the symbol is the square and compasses associated with Freemasonry. The fourth Ray may be regarded as a <u>lens through which the lights of all the Rays is focused</u>. Of the Arts, opera represents the fourth Ray, being a synthesis of various branches of Art.

The Orphic religion, with its keynote of Beauty, was predominantly fourth Ray, which also finds expression in every tendency towards colorful appurtenances and adornments and the use of the Arts in religious worship. The ... artist's view of life: attention to form, detail, and system to the neglect [in the Negative Pole] of the spirit and the larger purposes of life.

In my view, the emphasis here on the "Arts" is somewhat misplaced, being more the realm of the Artisan and the Sage and their province to *express*. And there is not enough of an emphasis on the academic studiousness of fourth Ray, aka Scholar, souls and personalities.

In my view, the Theosophists also made too much of the emphasis of the Neutral Ray on "beauty" in the realm of various arts. True, the corresponding Role, the Scholar, is concerned with being fair and just, and in its highest form that is an endeavor toward the manifestation of all things "beautiful". To the extent that the Scholar bridges the "Lower Mind" (Artisan) and the "Higher Mind" (Sage), then yes, the Scholar is concerned about bringing artistic beauty into the world. Also, one can understand the 'arts' as any endeavor that brings

ideas that exist in the abstract world down into the concrete world. That understanding helps make more sense of this description from Theosophy.

So, Beauty is not to be totally dismissed as a good name for the Neutral Ray; and to the above paragraph I would add the following. In the mainstream Michaelian teachings understanding, Beauty if often offered as a synonym for Energy in the triad of Truth, Love, and Energy, when referring to attributes of Cardinal planes (fifth plane, sixth plane, seventh plane respectively in the Michaelian teachings numbering convention; or first plane, second plane, third plane in the Theosophical numbering convention). This use of the word Beauty never made sense to me, but it does make some sense to me to use Beauty as an attribute of the Neutral Ray and Neutral plane, the balance point of the Natural Sequence, in that *symmetry* is one of the primary attributes of beauty; there is a mirror image symmetry between the Ordinal and Cardinal Rays and planes in terms of the Axial Attributes of Action, Inspiration, and Expression.

I would also call the readers attention to the phrase "Harmony through Conflict" as an allusion to what I call the Dialectic Principle; refer to Chapter 1K, "The Law of Three". It is also widely understood that the Heart Chakra is a bridge between higher and lower chakras, making the Heart Chakra about harmony.

The Fifth Ray — "Concrete Knowledge" — "Mentality"

Chapter Six of TSHT begins on page 41 and ends on page 45.

Septenarian Attribute = Ordinal Expression; Process = Analysis; Aspect = Attitude.

Overleaf Traits = Rejection Goal, Caution Mode, Self-destruction Chief Feature, Artisan Role, Skeptic Attitude, Intellectual Center, Young Soul Age, Third Level.

Notice how these Traits show up in the descriptions below. In my view, the underlined words fit best with the "Ordinal Expression" factors in the Michaelian teachings. Most of the other words are appropriate, but not as much.

The special qualities of the fifth Ray are those typical of the <u>analytical</u>, <u>deductive</u>, formal mind, the whole interest and ideal of people of this Ray being the acquirement and, where the second [Priest] Ray is also well developed, the dissemination of factual knowledge. In this pursuit, those in whom the fifth Ray is very dominant are capable of displaying unwearying patience and the extreme of <u>thoroughness and method</u>, particularly in the repeated examination and the classification of intricate and minute <u>details</u>.

The type of man is the scientist, the mathematician, the lawyer and detective [and *engineer* and *architect*]. In the early stages of development the chief interest is in <u>physical science</u>, this being later extended into the domain of the occult and the metaphysical. The fifth Ray mind is brilliant, flashing, swift, witty, <u>technical</u>, <u>analytical</u>, <u>accurate</u>, positive, and possesses great capacity for <u>specialization</u> and <u>grasp of detail</u>. As ideals it highly prizes truth, <u>mental detachment and accuracy</u> of observation, of <u>deduction</u> and of <u>exposition</u>. God is regarded as the principle of Truth, and untruth, ignorance, inaccuracy, and a biased mind are the greatest evils.

[Skeptic Attitude, Positive Pole of +Investigation:] The driving impulse of fifth Ray man is to <u>discover</u> knowledge, to reach truth. This, however, must be demonstrable as, for example, by correct prediction, based upon acquired data. He obtains his results by means of the brilliant and patient use of the <u>mind</u>. He <u>thinks</u>, seeks, searches, probes, <u>experiments</u>, patiently observes and calculates and then makes accurate <u>deductions</u> from his discoveries. He uses his mind like an auger to bore to the heart of problems, always adhering to the scientific method.

This is described by Anton J. Carlson as "rechecked observations and experiments, objectively recorded with absolute honesty and without fear or favor". This preoccupation sometimes tends to make his mind so inelastic and his methods so rigid and unadaptable that full achievement is denied him. When, however, the third Ray [Sage] aspect of his nature, with its characteristics of adaptability and philosophic thought, begins to influence his concrete mind, as would seem to be occurring in the case of many modern scientists, this, combined with the magnificent qualities already referred to, ensures his success as a great discoverer and revealer of knowledge to man.

As a teacher, he elucidates logically and fully, fills in details, uses <u>diagrams</u> and inculcates <u>accuracy</u>. The apotheosis is to become a master scientist, a genius of <u>intellect</u> in every branch of science, physical and super-physical, success in the latter field, and sometimes in the former, leading to the exhilaration of <u>mental</u> mastery. With his brother of the third Ray [Cardinal Expression], he ultimately becomes one with the Major Mind, and so attains perfection both in [abstract] knowledge itself, and in the practical application of the scientific principles upon which the Universe is founded.

This last sentence looks to me like the mutual work of Task Companions, of opposite Roles.

[Negative Poles of various Ordinal Expression Overleaves:] Among the defects are <u>separateness</u>, emotional <u>coldness</u>, destructive <u>criticism</u>, mental rigidity and one-track-mindedness, a tendency to perceive and unduly accentuate the faults in others, <u>iconoclasm</u> which is not supplemented by readiness or ability to construct, wounding by telling "your faults for your own good "and being too unfeeling to soften the blow or endeavor to be tactful, pleasure in "pricking bubbles" (often a useful if disconcerting function), inability to "suffer [tolerate] fools gladly", <u>intolerance</u> of everything emotional, mystical, and intuitional, <u>skepticism</u>, <u>materialism</u> and pride. Other faults are self-centredness, smallness of vision, <u>prying</u> curiosity and inquisitiveness, meanness demanding a quid pro quo, becoming excessively <u>pedantic</u>, and accentuating form [Ordinality] to the neglect of life [Cardinality].

[Young-soulish manifestations:] On occasion this type displays an almost childlike lack of wisdom and effectiveness in the conduct of life, sometimes due, perhaps, to proverbial <u>absent-mindedness</u>. In religion, where this is accepted, the fifth Ray man is inclined to be dogmatic and curiously unreasoning. In excessive preoccupation with tradition, dogma, doctrine, creed and form, he not infrequently loses sight of the inner life and of the necessity for interior experience and enlightenment. This type is frequently very selfish and acquisitive and, unless the character is modified by the presence of the qualities of other Rays [due to Casting and/or Overleaves], notably the second [Cardinal Inspiration], third [Cardinal Expression], and sixth [Ordinal Inspiration], tends to keep its discoveries and possessions to itself, e.g., to <u>patent inventions</u> [thus Artisan-ish].

The developed [older Soul Age] second [Cardinal Inspiration] or sixth [Ordinal Inspiration] Ray man, on the other hand, delights, to share all discoveries and gifts, world welfare being the motive for all research and all endeavor. The complete reliance of the spiritually unawakened fifth Ray man upon analytical processes and demonstrable proof is inclined to render him somewhat blind to the great principles behind manifestation and impervious to inspiration and intuition. The greatest suffering can be experienced when proven at fault and especially when, proven in error, he is made the subject of ridicule or scorn. Such mental defeat and dishonor deeply wound the nature of fifth Ray man.

The more active and most used principle of this type of man is the <u>mental body</u> [Intellectual Center] or lower Manas. The color is lemon-yellow, the jewel the topaz, and the symbol the five- pointed star. The fifth Ray is in correspondence [complementarity on the Expression Axis] with the third [Ray], of the qualities and attainments of which it is the concrete expression [rather than the abstract]. Ultimately the two are blended into a single instrument of consciousness, displaying the highest qualities of both of the vehicles and both of the Rays. Of the Arts, <u>painting</u> represents the fifth Ray. The Egyptian religion, with the Hermetic philosophy as its heart and its keynote of Truth, was predominantly fifth Ray, as is the scholastic aspect of every World Faith.

The vivid deductions of Sherlock Holmes, as also of all other <u>detectives</u>, and the <u>cold, precise reasoning</u> of the legal mind, are all examples of the activity of the formal mind which is generally accentuated in fifth Ray man.

In my view, this description of the personality dominated by fifth Ray is extended beyond the Artisan Role and is more inclusive of the Analysis Process (Ordinal Expression) Overleaves, more than happened with the descriptions of the other Rays, Temperaments, Roles.

The Sixth Ray — "Devotion" — "Emotionality"

Chapter Seven of TSHT begins on page 46 and ends on page 48.

Septenarian Attribute = Ordinal Inspiration; Process = Involution; Aspect = Chief Feature.

Overleaf Traits: Reduction Goal, Repression Mode, Self-deprecation Chief Feature, Server Role, Stoic Attitude, Emotional Center, Baby Soul Age, Second Level.

Notice how these Traits show up in the descriptions below. In my view, the underlined words fit best with the "Ordinal Inspiration" factors in the Michaelian teachings. Most of the other words are appropriate, but not as much.

The special qualities of the sixth Ray are sacrificial love, burning enthusiasm for a cause, fiery ardor, one-pointedness, single-mindedness, selfless <u>devotion</u>, adoration, an intense <u>sympathy for the sufferings of others</u> even to the extent of reproducing them as in the stigmata, idealism expressed as practical <u>service</u>, and loyalty, "the marrow of honor" (Von Hindenburg). The type of man is the mystic, the <u>devotee</u>, the saint, the active philanthropist, the martyr, the evangelist, the missionary and the reformer. Examples are Brother Lawrence, St. Francis, St. Clare, St. Teresa (third and sixth Rays), and General Booth [founder of the Salvation Army] (sixth and first Rays).

The ideal is complete self-consecration, self-sacrifice even unto death for an ideal, a cause or a leader. Selfless service in relief of the sufferings of the world, most keenly felt, is the driving impulse behind the life of the developed sixth Ray man, for whom God is the principle of Self-Sacrifice, Love and Goodness. Whether as soldier, lover, philosopher or scientist, to this ideal he is "faithful unto death". Selfishness, individualism, divided loyalty, disloyalty, betrayal of individual and of public trust, and hate are the greatest evils.

The sixth Ray person obtains his results by the extreme of one-pointedness; he carries his devotion to such lofty heights that he loses himself in his ideal, becomes its veritable incarnation. In the fire of his enthusiasm, he burns up both the defects of his own character and the outer obstacles which stand in the way of the fulfillment of his ideal. As teacher he inspires, enfires and, among other qualities, evokes hero-worship and loyalty in his pupils. The apotheosis is selfless and perfect service of the will of God.

The Negative Pole of the Server is –Bondage, and the Negative Poles of the other Ordinal Inspiration Overleaves are well represented in the following paragraph:

Among the defects of the type are emotionalism, sensuality, fanaticism, obsession, susceptibility to glamour, intolerance and the extreme of blind hero-worship. Acute suffering is caused by the disloyalty of loved and trusted friends and by being misunderstood and misjudged, particularly as to motives. The principle of man is the astral body (Astral Body: the vehicle of human emotions built of the first type of matter more subtle than physical ether, denominated "astral" because self-radiant), the color roseate fire. The jewel is the [dark red] ruby and the symbol the rose of four petals in the form of an equal-armed cross. The correspondence [counterpart on the other side of the Inspiration Axis] is with the second [Priest] Ray, of many of the qualities of which the sixth Ray is an active expression. Among the Arts, architecture — frozen music — represents the sixth Ray. The Christian religion, especially in its devotional and mystical aspects, is predominantly sixth Ray.

The seventh [Warrior] Ray is, however, well represented in its ceremonial forms of worship, perhaps reaching its culmination in High Celebrations of the Holy Eucharist, Coronations and the ceremonies of the Ordination of Priests and the Consecration of Bishops. World figures who displayed the qualities of the sixth Ray are referred to in the Chapter on blended Rays.

In my view, these descriptions have a hefty dose of Priest Role incursion into the Server Role/Temperament.

The Seventh Ray — "Ceremonial Order" — "Physicality"

Chapter Eight of TSHT begins on page 49 and ends on page 52.

Septenarian Attribute = Ordinal Action; Process = Termination; Aspect = Goal

Overleaf Traits = Submission Goal, Perseverance Mode, Martyrdom Chief Feature, Warrior Role, Cynic Attitude, Moving Center, Infant Soul Age, First Level.

Notice how these Traits show up in the descriptions below. In my view, the words that I underlined fit best with the "Ordinal Action" factors of the Michaelian teachings. Most of the other words are appropriate, but not as much.

The special qualities of the seventh Ray are nobility and chivalry both of character and conduct, splendor of estate and person, ordered [regimented] activity, precision, skill, grace, dignity, great interest in politics, the arts, ceremonial pageantry, magic, the discovery, control and release of the hidden forces of Nature and co-operation with the Intelligences associated with them. The type of man is the politician, — in the true meaning of the word — stage director, pageant master, ritualist, magician, occultist, and Priest in ceremonial Orders.

The meaning of the word "magic" here is not what you might think. It refers to someone who does practices and/or rituals and/or ceremonies to bend the universe to their will, to get what they want. Think of rain dances and incantations and human sacrifices and sorcery; do not think of Houdini and 'sleight of hand'.

The ideals are power perfectly and irresistibly made manifest, true aristocracy both of body and mind, <u>physical</u> efficiency, perfection, matter-of-factness ["get to the point"] and <u>order</u> in all the conduct of life, perfect tidiness of appointments, unquestioned <u>power to control</u> and direct the hidden forces of the person's own nature and of <u>Nature</u> herself, the whole being inspired and rendered irresistible by the force of a will which is relatively omnipotent. A seventh Ray motto would be: "If a thing is worth doing, it is worth doing well." This would apply equally to a picnic or a pageant, a poem or a parade, a <u>military</u> tournament or a magical <u>rite</u>. God, for the seventh Ray man, is the principle of <u>Order</u> in all things, and chaos is the greatest evil. The driving impulse is to <u>harness</u> and make manifest with precision according to a design the forces and intelligences of <u>Nature</u>.

[Goal- and achievement-orientation:] Results are obtained by synthesizing a number of factors to produce a clearly conceived result. The formation of groups of people to be <u>trained</u> and led in <u>coordinated</u> activity in

politics, in various branches of the arts, in pageantry, the drama and opera, is an example of this method, as also in the use of vestments, colors, symbols, and of signs and words of power in ceremonial [sic]. As teacher, he makes full use of the drama, both in personal presentations and in school technique. He also employs the methods of the first [King] Ray. The apotheosis is dual, namely, to become a spiritual magician, and to live perfectly down to the smallest detail. Freemasonry is both a ceremonial and a practical expression of one attribute of the seventh Ray, which is also represented in the rituals of all World Faiths.

It is surprising to me that the military manifestation of this Ray was not emphasized, although the description certainly fits well, especially the paragraph above. One of the best words to describe what a Warrior does is "regimentation".

[Negative Pole:] Among the defects of the [seventh Ray] type are ostentation, pretentiousness, unscrupulousness, love of power and office, readiness to use people as tools, "dead letter" formalism and the mechanical performance of ceremony to the neglect of its spiritual significance, and a tendency to descend into black magic, sorcery, necromancy and the baser forms of priest-craft. Seventh Ray people can suffer acutely under humiliation, loss of outer power, adverse criticism, particularly from one of a lesser degree, and subjection to rude behavior.

They demand respect and obedience to law.

The principle of man is the <u>physical</u> body. The correspondence [complementary opposite on the Action Axis] is with the first Ray, the seventh representing the [abstract] <u>power</u> [or energy] of that [first] Ray expressed in <u>physical action</u>. Of the Arts, sculpture — frozen dancing — represents the seventh Ray. The general influence of the seventh Ray upon humanity is said now to be displacing that of the sixth, with consequent tendencies in science to explore the normally invisible universe, as by the radio telescope, to investigate the extra sensory powers and psyche of man as in ESP (Vide *The Reach of the Mind*, J. B. Rhine) and psychosomatic medicine, and to tap and use the hidden forces of Nature as in nuclear fission.

In public life this influence is observable in the prevalent liking for pageantry and ceremonial [sic]. In the Christian religion the effect of the seventh Ray is discernible in the movement towards High Church as in Anglo-Catholicism, in a deepening recognition of the spiritual significance and efficacy of ceremonial [sic], in movements towards co-operation between sects and in attempts to establish a brotherhood of World Faiths or Parliament of Religions (2nd Ray — co-operation, 7th Ray — co-ordination). In world affairs, as the qualities of the second and third Rays are also developing, the growing influence of the seventh Ray increases the tendency to substitute arbitration and co-operation for force as a means of settling disputes. As the influence of the Ray grows stronger and is supplemented by an appropriate development of the higher, synthesizing mind of man, these tendencies will become stronger, eventually making fully effective the ideals upon which UNO and such subsidiaries as UNESCO and UNRRA, and Marshall Aid, local Defense Pacts and World Conferences are founded.

Overall, the description of this Ray is of a "control freak" when expressed in its negative manifestation. This is the Warrior way.

Blended Rays

Chapter Nine of *TSHT* begins on page 53 and ends on page 64. Its title is "Blended Rays". Obviously this is equivalent to Role and Casting in the Michaelian teachings, and how they bear on the Personality self. So far as I know, Theosophy did not know about Casting, and it did not know about the fact that a preponderance of Overleaves in one Process can give one the appearance of a particular Role/Temperament.

Readers who, by the application of this information to their own personalities as they know them, having been endeavoring to discover their own Rays, will possibly find themselves to be displaying the qualities of more than one, no special Ray characteristics appearing to predominate. If, however, they will examine themselves closely, they will generally find that, in the means by which they obtain desired results, they tend to employ fairly consistently the method of one or other of the Rays.

As has been suggested, affinities or correspondences exist between the Rays. The first and the seventh Rays are intimately associated, as also are the second and the sixth, and the third and the fifth. In addition, the first three Rays, which are [abstract, Cardinal] life Rays, may be regarded as the spiritual ensoulment of the last three, which are Rays of [concrete, Ordinal] form. The fourth Ray corresponds to the natural bridge or pathway, both between each related pair and the two sets of three.

Since the goal is the full development of all the qualities of all the Rays, it is, however, necessary that the activities and developments of the long series of lives on earth [reincarnation] should include all of their characteristics [many of which are experienced via the Overleaves that are in the same Process as a Role/Temperament].

Thereafter in the chapter there were examples of blending of Rays in many historical figures.

Summary of Rays

Chapter Ten — "The Personal Ray" — of TSHT begins on page 65 and ends on page 76.

Take a look at the brief description of each Ray in the quotations below, and compare it with the lineup of names given to the Septenarian Attributes, and the Processes, and the Overleaves. I believe you will agree with my perception that the correspondence of each Ray with the Septenarian Attributes, particularly the Role, is solid. My names for the Rays are in quotation marks following the rank of the Ray. The underlined words are my way of pointing out the very best words to correlate the Ray/Temperament with the Role.

First Ray = "Energy"

Cardinal Action = Origination Process = the Overleaves of Dominance Goal, Aggression Mode, Impatience Chief Feature, **King Role**, Realist Attitude, Higher Moving Center, Infinite Soul Age, Seventh Level.

If the following attributes of first Ray people are notable features of a person's character, then it would be fair to assume a first Ray individuality: will power, determination, and a tendency to override the wishes and limit the freedom of others; ardent wish for positions of power and a natural capacity to <u>rule</u> and <u>lead</u>; the use of superior <u>force</u> in most emergencies, often without regard for the feelings of others, and a tendency to sulk when obstructed.

Second Ray = "Love"

Cardinal Inspiration = Evolution Process = the Overleaves of Growth Goal, Passion Mode, Arrogance Chief Feature, **Priest Role**, Spiritualist Attitude, Higher Emotional Center, Transcendental Soul Age, Sixth Level.

Recognition of the fact that happiness depends upon <u>freedom</u> of thought and action; readiness to grant that freedom; a capacity to make wise decisions and plans; a universality of affection; a great desire to <u>save</u>, <u>uplift</u> and bestow happiness upon others, particularly by sharing possessions; a gift of <u>teaching</u> and a preference for winning enemies over so that they become friends and collaborators, and the weaknesses of sentimentality and sensuality — if these are displayed in any one person, then they may fairly be regarded as being on the second Ray.

Third Ray = "Truth"

Cardinal Expression = Synthesis Process = the Overleaves of Acceptance Goal, Power Mode, Greed Chief Feature, **Sage Role**, Idealist Attitude, Higher Intellectual Center, Old Soul Age, Fifth Level.

If the ready comprehension of <u>abstract</u> ideas and of the meaning, intention and character of people; the faculty of impartial examination; adaptability and tact; capacity to organize, plan and order with farseeing intelligence and play a good game of chess; the love of <u>philosophy</u>; admiration for great philosophers and strategists; a readiness to <u>comprehend and explain</u> varied phenomena by reference to a fundamental <u>principle</u>; ability to engage in prolonged <u>contemplation</u>, and, on occasion, indecision, aloofness and a tendency to intrigue even to the extent of unscrupulous deceit, are marked characteristics of one's nature, then one is probably on the third Ray.

Fourth Ray = "Beauty"

Neutral Assimilation = Combination Process = the Overleaves of Stagnation Goal, Observation Mode, Stubbornness Chief Feature, **Scholar Role**, Pragmatist Attitude, Instinctive Center, Mature Soul Age, Fourth Level.

If love of beauty and <u>harmony</u>, and a natural sense of <u>rhythm</u> and <u>balance</u>; a life devoted to one or other of the Arts; an aspiration to shed <u>beauty</u> upon the world; a tendency to dramatize and illustrate expounded ideas with rhythmic forms; a certain power of allurement, and the weaknesses of self-conceit, self-indulgence and surrender to moods, are outstanding qualities, then the fourth Ray is indicated.

Fifth Ray = "Mentality"

Ordinal Expression = Analysis Process = the Overleaves of Rejection Goal, Caution Mode, Self-destruction Chief Feature, **Artisan Role**, Skeptic Attitude, Intellectual Center, Materialism (Young) Soul Age, Specialization (Third) Level.

If the mind is <u>analytical</u> and legal, prizing <u>logic</u> above all else; the <u>scientific</u> method of <u>thought</u> strongly appeals and the establishment of incontrovertible facts is a driving impulse; <u>charts</u> and <u>diagrams</u> are used in study and teaching; and the analytical mind is used in perpetual <u>probing</u> and <u>searching</u> for ultimate fact, and the weaknesses of <u>egoism</u>, excessive <u>criticism</u> of others, self-righteousness, pedantry, narrowness, <u>materialism</u>, and prying <u>inquisitiveness</u>, are marked characteristics, then fifth Ray qualities are being displayed.

Sixth Ray = "Emotionality"

Ordinal Inspiration = Involution Process = the Overleaves of Reduction Goal, Repression Mode, Self-deprecation Chief Feature, Server Role, Stoic Attitude, Emotional Center, Baby Soul Age, Second Level.

If fiery enthusiasm; a strong sense of <u>loyalty</u>; a certain single-mindedness in everything that is thought and done; and capacity for <u>devotion</u> and self-sacrifice, particularly in <u>service</u>; if resolve burns within one as an irresistible spiritual power, and the weaknesses of <u>emotionalism</u>, impulsiveness, fanaticism and <u>sensuality</u> are consistently displayed, then the sixth Ray predominates.

Seventh Ray = "Physicality"

Ordinal Action = Termination Process = the Overleaves of Submission Goal, Perseverance Mode, Martyrdom Chief Feature, Warrior Role, Cynic Attitude, Motion Center, Infant Soul Age, First Level.

If one is attracted to occult science and its expression through <u>ceremonial</u> and magic and has a highly developed sense of order, system and method; if one likes to combine a number of influences in order to give expression to ideas and successfully appeal to the <u>senses</u> and intellect; if grace and splendor and the ideals of <u>chivalry</u> and <u>knightliness</u> make strong appeal; if the instinct to <u>harness</u> invisible forces for the fulfillment of human needs, and the weaknesses of <u>formalism</u> and of love of <u>power</u> and office are all marks of one's nature, then one is evolving, at least for the time being, on the seventh Ray.

Concluding Remarks on Rays and Temperaments

In my view, the descriptions of Temperaments given in Theosophy are unmistakably talking about the same things, Roles, as are discussed in the Michaelian teachings. However, I would also say that the Theosophists would have had a deeper and more definitive understanding and description if they had known about the other six Overleaf categories to compare and contrast with the Temperaments. It can be said that the Michaelian teachings added to, and improved on, Theosophy and Neo-Theosophy with their names and descriptions of the seven Roles.

Another unmistakable conclusion from the Theosophical conception of Temperaments is that they follow the Natural Sequence, not one of the other sequences discussed in Chapter 2C in Part Two, "Sequences of Overleaves".

It is obvious from reading these detailed descriptions that the author of the *TSHT* book was basing his descriptions on actual observations of people with various Temperaments, and that he was seeing the same characteristics in people that Michaelian students see when observing various Roles.

We saw early on in this chapter that people do not just have one Temperament; there is a primary, but also a secondary and maybe a tertiary Temperament; we are all mixtures of Temperaments — and Roles. This mixing of types potentially makes the descriptions ambiguous, especially if one is going by observation of people rather than by an understanding of the pure abstract archetype and its Attributes. The mixing of types has obscured the characteristics of the pure type. With a deep understanding of the Overleaf System as a whole, we gain a much clearer picture of Roles and Temperaments.

My perception is that if the Theosophists had understood the logical underpinning and mathematical framework of the Rays, they would have gotten the descriptions of them more archetypal and less ambiguous, with less overlap of one Ray/Temperament with another. To reveal and explain that foundation is one of the purposes served by my books *The Tao of Personality* and *The Tao of Cosmogony*.

One way that the Theosophists differ from the Michaels is that Theosophists number the Rays starting with the King-ish end of the spectrum and end with the Warrior-ish end of the spectrum, whereas the Michaels (per the Natural Sequence) start the numbering of the Roles at the Warrior end of the spectrum and end at the King end. This tells us that numbers *per se* are not attached to the Rays or the Roles. However, this difference between Theosophy and the Michaels brings to mind what I refer to as the "Taijitu Tango Principle". I introduced this Principle in Chapter 1B in Part One, "personality typology", and I have more to say about it

here, and I discuss it at even greater length in other places in this *History* book and in some of my other books. This is the way the Michaels introduced this Principle:

You can perceive that [from the point of view of space, being, noun] while one is ordinal and seven is cardinal, that [from the point of view of time, doing, verb] the first half is cardinal and the last half is ordinal — in other words, the pattern "doubles back on itself". This is what is implied by the "yin-yang" symbol, and it would probably be of use to keep the "yin-yang" in mind while considering what we tell you of the function of levels and numbers." [MMFM, p. 189]

The oriental name for the yin-yang symbol is "taijitu". As for "tango", this alludes to the aphorism that "it takes two to tango". These phrases becomes a Principle when one knows about and understands the deep philosophical insight called "relationalism" (>https://en.wikipedia.org/wiki/Relationalism<). Basically and briefly, relationalism states that everything is known because it is defined by its opposite. The Taijitu symbol graphically represents this philosophy by showing an interrelationship of yin and yang. This is not just an idea in the mind of philosophers. The most fundamental yin-yang dichotomy in the physical world is that between space—noun—being and time—verb—doing. Translating into the terms of the Overleaf System, yin = Ordinal and yang = Cardinal. Per the Taijitu Tango Principle, Ordinality and Cardinality run counter to each other in the septenary. In other words, Cardinal—Space—Noun—Being starts out with an Ordinal-most component and ends with a Cardinal-most component, whereas Ordinal—Time—Verb—Doing starts out with a Cardinal-most component and ends with an Ordinal-most component. By numbering King as first, Theosophy violates the Principle; by numbering the Warrior as first, the Michaels abide by the Principle. I suggest that this is one of the improvements that the Michaels have made to Theosophy.

Chapter 1G

SEVEN PHILOSOPHIES — SEVEN ATTITUDES

This is the fourth chapter in a series of five chapters on precursors to the seven Overleaf System categories, the five categories that had precursors — Center, Soul Age, Role, Attitude, and Chief Feature; if Goal and Mode had precursors in other teachings or psychologies, whether esoteric or exoteric, I have not yet discovered them. These five are being presented in the order in which they were revealed to the original Michaelian group. In three previous chapters, we reviewed Center, Soul Age, and Role. In this chapter we review seven formal philosophies, which I perceive to be precursors to the seven Attitudes of the Michaelian teachings.

For a thorough explanation of each of the seven Attitudes in Michaelian teachings, you can refer to the chapter on Attitudes in my book *The Tao of Personality*. And, of course, there are other Michaelian teachings resources — books and websites — that explain the Attitudes. The story of how the Michaels revealed the Attitudes to the original Michaelian group is documented in Chapter 2A in Part Two, "Revelation of Overleaves".

Technically, your Attitude is the internal 'filter', so to speak, that biases how you view the external world. By "bias", I mean that your Attitude emphasizes and de-emphasizes what you see and what you do not see out there; it skews how you perceive the world. For instance — this is such a cliché — the Idealist metaphorically sees the world through 'rose-colored glasses'. What 'color' 'glasses' are *you* wearing? Your Attitude colors your approach to everything, from moral behavior to a pair of shoes.

Another way — other than 'filter' — to explain and describe Attitude is to say that your Attitude is your 'philosophy' of life. From the beginning of my study of the Michaelian teachings, it looked to me as though the Michaels intentionally named each Attitude after a formal philosophy from ancient and modern times. They did not take terms from all of the formal philosophies out there. In contrast to the viewing of the universe through the Septenary structure in the Michaelian teachings, philosophy has not limited itself to merely seven approaches to viewing the world. Looking over the philosophical "-isms" that have been put forward over the centuries, one finds not only such Michaelian-adopted terms as "stoicism" and "pragmatism" but terms that they did not adopt, such as "relativism" and "existentialism". Also, the strongest proponents of a given philosophy tend to urge it as the one philosophy for everyone, though of course historians of philosophy recognize them all as existing side-by-side, the way the Michaelian teachings sees the seven Attitudes as simultaneously existent in the general population. But as philosophers have sought to understand the world, their philosophical systems have made use of "lenses" and "filters" that can be seen as precursors to the understanding of Attitudes in the Michaelian teachings.

By the way, this seems like an appropriate place to define what philosophy is. The following is the first result from an online query:

Philosophy: the study of the fundamental nature of knowledge, reality, and existence, especially when considered as an academic discipline.

Obviously, this is not quite what Attitude means in the Michaelian teachings as described above, but the connection between philosophies and Attitudes (besides having the same names) is that both are concerned with the world as it appears to us; they are both about our understanding of, and interpretation of, the world we find ourselves involved in.

At this point I should point out the difference between *ontology* and *epistemology*. These are two branches of philosophy that both study the same thing — "reality" — but in two different ways or from two different perspectives. 'Ontology' is about what *is* fundamentally real, what the nature of reality *is*. On the other hand,

'epistemology' is about our *knowledge* of reality; it is about how we come to *perceive* reality. The seven *philosophies* that we discuss in this chapter are about various proposed ontologies — what *is* reality — whereas the seven Attitudes of the Michaelian teachings that we discuss in this chapter are about epistemologies — our *perceptions* of reality, how we *understand* reality to be. Ontology seeks an *objective* view of the world, presumably as it *actually* is; the Attitudes provide views of the world that are in fact *subjective*. Another way to say this is that ontology is the study of 'being', and epistemology is the study of 'knowing'. As we see in this chapter, there is a correspondence between the two; hence the names of the philosophies and the Attitudes from the same Latin root words.

At this point I should also mention the "Axial Age", because it was a time in the history of humankind that most of these Philosophies/Attitudes were first formulated and disseminated. The Axial Age was the transition between ancient ways of being and knowing and more modern ways of being and knowing. The transformation happened in the centuries from about 800 BCE to about 300 BCE. The new age was implemented and fostered by major luminaries such as the Infinite Souls Siddhartha Gautama (ca563 – ca483 BCE) and Lao Tzu (601 – ca530 BCE), and the Transcendental Souls Socrates (ca470 – 399 BCE) and Confucius (551 – 479 BCE). It was also heralded by lesser luminaries, such as the Greek philosophers in the few hundred years either side of Socrates. (Those ancient Greek philosophers were the formulators of three of the philosophies reviewed below.) Heady times indeed. This was one of the most transformative periods in the history of humankind, perhaps even more transformative than the Renaissance–Reformation–Enlightenment period of the last few hundred years. Wikipedia has an entry on the Axial Age that is, of course, illuminating to the subject of this chapter: >https://en.wikipedia.org/wiki/Axial Age<:

Axial Age (also Axis Age, from German: Achsenzeit) is a term coined by German philosopher Karl Jaspers in the sense of a "pivotal age" characterizing the period of ancient history from about the 8th to the 3rd century BCE. During this period, according to Jaspers' concept, new ways of thinking appeared in Persia, India, China and the Greco-Roman world in religion and philosophy, in a striking parallel development, without any obvious direct cultural contact between all of the participating Eurasian cultures. Jaspers identified key thinkers from this age who had a profound influence on future philosophies and religions, and identified characteristics common to each area from which those thinkers emerged.

Jaspers' approach to the culture of the middle of the first millennium BC has been adopted by other scholars and academics, and has become a point of discussion in the history of religion. Jaspers argued that the Axial Age gave birth to philosophy as a discipline. He argued that during the Axial Age, "the spiritual foundations of humanity were laid simultaneously and independently in China, India, Persia, Judea, and Greece. And these are the foundations upon which humanity still subsists today". [retrieved 11 June 2019]

The following quotes, in the following sections on each Attitude, have been extracted from Wikipedia wikis on each philosophy. I used this source because it is readily accessible, and because there are no concerns about copyright. There is much more that you can read about each of these philosophies in the referenced wikis, their history and their tenets, but from the general descriptions I have selected the statements that are most congruent with the Attitudes. Obviously, the reader can research each of them much further by using the search engine of their favorite internet browser.

In the following sections, I present the philosophies in the Natural Sequence, as is my custom in my books. The first three appeared in ancient Greece, when there was so much new philosophizing happening. These three have a "negative", or at least "narrowing", cast to them, being of the Ordinal persuasion. The other four are more recent developments, being of the Neutral and the Cardinal persuasion. The name of each philosophy, the "-ism", is used here, rather than the name of the Attitude, the "-ist". In the following quotations, the underlines are mine, the words called out for the purpose of emphasizing the similarity of the philosophy with the Attitude.

Cynicism Philosophy — Cynic Attitude

Let's first take a look at the dictionary definition of the word "cynic", which is pretty much the Michaelian teachings definition of the Cynic Attitude, from

>https://www.merriam-webster.com/dictionary/cynic#etymology<:

- : a person who has negative opinions about other people and about the things people do;
- : a person who believes that people are selfish and are only interested in helping themselves;
- : an inclination to believe that people are motivated purely by self-interest;

: a faultfinding captious critic.

The first Attitude in the Natural Sequence is also the first formal philosophy in history that has a corresponding Attitude, namely Cynicism. An introduction can be found in Wikipedia, of course: >https://en.wikipedia.org/wiki/Cynicism_(philosophy)<:

Cynicism (Ancient Greek: κυνισμός) is a school of thought of ancient Greek philosophy as practiced by the Cynics (Ancient Greek: Κυνικοί, Latin: Cynici). For the Cynics, the purpose of life is to live in virtue, in agreement with nature. As reasoning creatures, people can gain happiness by rigorous training and by living in a way which is natural for themselves, rejecting all conventional desires for wealth, power, sex, and fame. Instead, they were to lead a simple life free from all possessions.

The first philosopher to outline these themes was Antisthenes, who had been a pupil of Socrates in the late 5th century BC. He was followed by Diogenes, who lived in a ceramic jar on the streets of Athens. Diogenes took Cynicism to its logical extremes, and came to be seen as the archetypal Cynic philosopher. He was followed by Crates of Thebes, who gave away a large fortune so he could live a life of Cynic poverty in Athens. Cynicism spread with the rise of the Roman Empire in the 1st century, and Cynics could be found begging and preaching throughout the cities of the empire.

Cynicism gradually declined and finally disappeared in the late 5th century, although similar <u>ascetic</u> and rhetorical ideas appear in early Christianity. By the 19th century, emphasis on the negative aspects of Cynic philosophy led to <u>the modern understanding of cynicism to mean a disposition of disbelief in the sincerity or goodness of human motives and actions.</u>

Cynicism is one of the most striking of all the Hellenistic philosophies. It offered people the possibility of happiness and freedom from suffering in an age of uncertainty. Although there was never an official Cynic doctrine, the fundamental principles of Cynicism can be summarized as follows:

The goal of life is eudaimonia [happiness, well-being] and mental clarity or lucidity ($\dot{\alpha}\tau u \dot{\phi} u \dot{\alpha}$) — literally "freedom from smoke ($\tau \dot{u} \dot{\phi} o \dot{c}$)" which signified false belief, mindlessness, folly, and conceit.

Eudaimonia is achieved by living in accord with Nature as understood by human reason.

Arrogance $(\tau \dot{\psi} \phi c)$ is caused by false judgments of value, which cause negative emotions, unnatural desires, and a vicious character.

Eudaimonia, or human flourishing, depends on self-sufficiency (αὐτάρκεια), equanimity (arete), love of humanity (parrhesia), and indifference to the vicissitudes of life (adiaphoria $\dot{\alpha}\delta$ ιαφορία).

One progresses towards flourishing and clarity through ascetic practices ($\mathring{\alpha}\sigma\kappa\eta\sigma\iota\zeta$) which help one become free from influences — such as wealth, fame, and power — that have no value in Nature. Examples include Diogenes' practice of living in a tub and walking barefoot in winter.

A Cynic practices <u>shamelessness</u> or <u>impudence</u> (αναιδεια) and <u>defaces the *nomos* of society; the laws, customs, and social conventions which people take for granted.</u>

Thus a Cynic has no property and rejects all conventional values of money, fame, power and reputation. A life lived according to nature requires only the bare necessities required for existence, and one can become free by unshackling oneself from any needs which are the result of convention. The Cynics adopted Heracles [Hercules] as their hero, as epitomizing the ideal Cynic. Heracles "was he who brought Cerberus, the hound of Hades, from the underworld, a point of special appeal to the dog-man, Diogenes." According to Lucian, "Cerberus and Cynic are surely related through the dog."

The Cynic way of life required continuous training, not just in exercising judgments and mental impressions, but a physical training as well:

"[Diogenes] used to say, that there were two kinds of exercise: that, namely, of the mind and that of the body; and that the latter of these created in the mind such quick and agile impressions at the time of its performance, as very much facilitated the practice of virtue; but that one was imperfect without the other, since the health and vigor necessary for the practice of what is good, depend equally on both mind and body."

None of this meant that a Cynic would retreat from society. Cynics were in fact to live in the full glare of the public's gaze and be quite indifferent in the face of any <u>insults</u> which might result from their <u>unconventional behavior</u>. The Cynics are said to have invented the idea of cosmopolitanism: when he was asked where he came from, Diogenes replied that he was "a citizen of the world, (kosmopolitês)."

The ideal Cynic would evangelize; as the <u>watchdog</u> of humanity, <u>they thought it their duty to hound people</u> <u>about the error of their ways</u>. The example of the Cynic's life (and the use of the Cynic's biting <u>satire</u>) would dig up and expose the pretensions which lay at the root of everyday conventions.

Although Cynicism concentrated primarily on ethics, some Cynics, such as Monimus, addressed epistemology with regard to tuphos $(\tau \tilde{U} \phi o \zeta)$ expressing skeptical views.

Cynic philosophy had a major impact on the Hellenistic world, ultimately becoming an important influence for Stoicism. The Stoic Apollodorus, writing in the 2nd century BC, stated that "Cynicism is the short path to virtue."

The classical Greek and Roman Cynics regarded virtue as the only necessity for happiness, and saw virtue as entirely sufficient for attaining it. Classical Cynics followed this philosophy to the extent of neglecting everything not furthering their perfection of virtue and attainment of happiness, thus, the title of Cynic, derived from the Greek word $\kappa \dot{\omega} \omega \nu$ (meaning "dog") because they allegedly neglected society, hygiene, family, money, etc., in a manner reminiscent of dogs. They sought to free themselves from conventions; become self-sufficient; and live only in accordance with nature. They rejected any conventional notions of happiness involving money, power, and fame, to lead entirely virtuous, and thus happy, lives.

The ancient Cynics rejected conventional social values, and would criticize the types of behaviors, such as greed, which they viewed as causing suffering. Emphasis on this aspect of their teachings led, in the late 18th and early 19th centuries, to the modern understanding of cynicism as "an attitude of scornful or jaded negativity, especially a general distrust of the integrity or professed motives of others." This modern definition of cynicism is in marked contrast to the ancient philosophy, which emphasized "virtue and moral freedom in liberation from desire." [retrieved 11 June 2019]

I dare say that the modern definition of cynicism, as distinct from the ancient philosophy, is because of the existence of the Cynic Attitude as an inborn personality trait, rather than as some aspiration for a more authentic life that one learns along the way. I would also dare to say that the ancient teaching of the Cynics is reminiscent of the Positive Pole of the Cynic Attitude, namely +Contradiction, whereas the modern definition of cynicism is more reminiscent of the Negative Pole of the Cynic Attitude, namely -Denigration.

Wikipedia has more to say about the modern manifestation of the Cynic philsophy, and that does indeed look more like the Cynic Attitude as Michaelian students understand it. Following are some quotations from >https://en.wikipedia.org/wiki/Cynicism_(contemporary)<:

Cynicism is an attitude characterized by a general distrust of others' motives. A cynic may have a general lack of faith or hope in the human species or people motivated by ambition, desire, greed, gratification, materialism, goals, and opinions that a cynic perceives as vain, unobtainable, or ultimately meaningless and therefore deserving of ridicule or admonishment. Cynicism is often confused with skepticism, perhaps due to either inexperience or the belief that man is innately good. Thus, contemporary usage [of the term "cynicism"] incorporates both a form of jaded prudence (when misapplied) and realistic criticism or skepticism. The term originally derives from the ancient Greek philosophers, the Cynics, who rejected all conventions, whether of religion, manners, housing, dress, or decency, instead advocating the pursuit of virtue in accordance with a simple and idealistic way of life.

By the 19th century, emphasis on the ascetic ideals and the critique of current civilization based on how it might fall short of an ideal civilization or negativistic aspects of Cynic philosophy led the modern understanding of cynicism to mean a disposition of disbelief in the sincerity or goodness of human motives and actions. Modern cynicism is a distrust toward professed ethical and social values, especially when there are high expectations concerning society, institutions, and authorities that are unfulfilled. It can manifest itself as a result of frustration, disillusionment, and distrust perceived as owing to organizations, authorities, and other aspects of society.

As noted in the Wikipedia quotations above, Cynicism is similar to a couple of other philosophies that also have their roots in ancient Greece: Stoicism and Skepticism. The similarity is that they are all basically negative in their outlook on life and their fellow humans. In the Michaelian teachings, this type of negativity is called Ordinality.

Stoicism Philosophy — Stoic Attitude

Let's first take a look at the dictionary definition of the word, which is pretty much the Michaelian teachings definition of the Stoic Attitude, extracted from >https://www.merriam-webster.com/dictionary/stoicism<:

- : indifference to pleasure or pain;
- : impassiveness; forbearing, long-suffering, uncomplaining;

: not affected by or showing passion or feeling, especially firmly restraining response to pain or distress;

: the quality or behavior of a person who accepts what happens without complaining or showing emotion.

In my reformulation of the Michaelian teachings, the Stoic Attitude is said to be the antithesis of the Emotion Center on the Expression Axis of the Aspects of Personality. Several times in the quotations above and below, the lack of emotionality of Stoics is remarked upon; Stoics have a "deadpan" or "wooden" expression.

Throughout the following lengthy quotation on Stoicism, taken from the Wikipedia article on the subject, >https://en.wikipedia.org/wiki/Stoicism<, you will see both the Positive Pole and the Negative Pole of the Stoic Attitude, namely +Tranquility, and -Resignation. As with the ancient philosophy of Cynicism, the modern definition of stoicism is a little different from the ancient philosophy, yet, the resemblance is unmistakable; hence the reason that the Michaels chose the name they did for this Attitude.

Stoicism is a school of Hellenistic philosophy founded by Zeno of Citium in Athens in the early 3rd century BC. Stoicism is a philosophy of personal ethics informed by its system of logic and its views on the natural world. According to its teachings, as social beings, the path to eudaimonia (happiness) for humans is found in accepting the moment as it presents itself, by not allowing oneself to be controlled by the desire for pleasure or fear of pain, by using one's mind to understand the world and to do one's part in nature's plan, and by working together and treating others fairly and justly.

The Stoics are especially known for teaching that "virtue is the only good" for human beings, and that external things — such as health, wealth, and pleasure — are not good or bad in themselves (adiaphora), but have value as "material for virtue to act upon". Alongside Aristotelian ethics, the Stoic tradition forms one of the major founding approaches to Western virtue ethics. The Stoics also held that certain destructive emotions resulted from errors of judgment, and they believed people should aim to maintain a will (called *prohairesis*) that is "in accord with nature". Because of this, the Stoics thought the best indication of an individual's philosophy was not what a person said, but how a person behaved. To live a good life, one had to understand the rules of the natural order since they thought everything was rooted in nature.

Many Stoics — such as Seneca and Epictetus — emphasized that because "virtue is sufficient for happiness", a sage would be emotionally resilient to misfortune. This belief is similar to the meaning of the phrase "stoic calm", though the phrase does not include the "radical ethical" Stoic views that only a sage can be considered truly free, and that all moral corruptions are equally vicious.

Stoicism teaches the <u>development of self-control</u> and fortitude as a means of overcoming destructive emotions; the philosophy holds that becoming a clear and unbiased thinker allows one to understand the universal reason (logos). A primary aspect of Stoicism involves improving the individual's ethical and moral well-being: "Virtue consists in a will that is in agreement with Nature." This principle also applies to the realm of interpersonal relationships; "to be free from anger, envy, and jealousy," and to accept even slaves as "equals of other men, because all men alike are products of nature".

The Stoic ethic espouses <u>a deterministic perspective</u>; in regard to those who lack Stoic virtue, Cleanthes once opined that the wicked man is "like a dog tied to a cart, and compelled to go wherever it goes". A Stoic of virtue, by contrast, would <u>amend his will to suit the world</u> and remain, in the words of Epictetus, "sick and yet happy, in peril and yet happy, dying and yet happy, in exile and happy, in disgrace and happy," thus positing a "completely autonomous" individual will, and at the same time a universe that is "a rigidly deterministic single whole". This viewpoint was later described as "Classical Pantheism" (and was adopted by Dutch philosopher Baruch Spinoza).

The Stoics held that <u>all being</u> (οντα) — though not all things (τινά) — <u>is material</u>. They accepted the distinction between Abstract and concrete bodies, but rejected Aristotle's belief that purely incorporeal being exists.

According to the Stoics, the Universe is a material, reasoning substance, known as God or Nature, which the Stoics divided into two classes, the active [Cardinal] and the passive [Ordinal]. The passive substance is matter, which "lies sluggish, a substance ready for any use, but sure to remain unemployed if no one sets it in motion". The active substance, which can be called Fate or Universal Reason (*Logos*), is an intelligent aether or primordial fire [energy], which acts on the passive matter.

Stoic theology is a <u>fatalistic</u> and <u>naturalistic</u> pantheism: God is never fully transcendent but always <u>immanent</u>, and identified with Nature.

The ancient Stoics are often misunderstood because the terms they used pertained to different concepts in the past than they do today. The word "stoic" has come to mean "unemotional" or indifferent to pain because Stoic ethics taught freedom from "passion" by following "reason". The Stoics did not seek to extinguish emotions; rather, they sought to transform them by a resolute "askēsis" that enables a person to develop clear judgment

and <u>inner calm</u>. Logic, reflection, and concentration were the methods of such self-discipline, temperance is split into self-control, discipline and modesty.

One must therefore strive to be free of the passions, bearing in mind that the ancient meaning of "passion" was "anguish" or "suffering", that is, "passively" reacting to external events, which is somewhat different from the modern use of the word.

The idea was to be free of suffering through apatheia (Greek: $\dot{\alpha}\pi\dot{\alpha}\theta\epsilon\iota\alpha$; literally, "without passion") or <u>peace of mind</u>, where peace of mind was understood in the ancient sense — being objective or having "clear judgment" and the maintenance of equanimity in the face of life's highs and lows.

Modern usage: The word "stoic" commonly refers to someone indifferent to pain, pleasure, grief, or joy. The modern usage as "person who represses feelings or endures patiently" was first cited in 1579 as a noun, and 1596 as an adjective. In contrast to the term "Epicurean", the Stanford Encyclopedia of Philosophy's entry on Stoicism notes, "the sense of the English adjective 'stoical' is not utterly misleading with regard to its philosophical origins." [Retrieved 22 June 2019]

The original, ancient version of Stoicism as a formal philosophy — one could also call it a lifestyle — mostly died out in the first few centuries of the Common Era, but there have been a couple of attempts to revive Stoicism as a living philosophy in more modern times. One of them was in the 17th Century; it has been dubbed "Neostoicism". Wikipedia has a wiki on it at this URL, >https://en.wikipedia.org/wiki/Neostoicism<. The following quote is all I have to say about it; the reader can pursue it at the internet link provided:

Neostoicism was a syncretic philosophical movement, founded by Flemish humanist Justus Lipsius, that attempted to combine the beliefs of Stoicism and Christianity. In his seminal period in the Northern Netherlands (Leiden, 1578–1591), Lipsius published two most significant works: *De Constantia* (1583) and *Politica* (1589). Not to be confused with modern Stoicism, a similar movement in the early 21st century. [retrieved 24 June 2019]

An even more modern version of Stoicism is discussed in another wiki, and I am not going to quote from it:_>https://en.wikipedia.org/wiki/Modern_Stoicism<. The gist of it is that modern psychologists have examined ancient Stoicism and reinterpreted it in the light of modern psychological science and the modern cultural milieu. It is an interesting read.

For another comment on Stoicism, let me quote the so-called "Serenity Prayer" as a succinct statement of the Stoic philosophy:

God, grant me the serenity to accept the things I cannot change, the courage to change the things I can, and the wisdom to know the difference. Living one day at a time, enjoying one moment at a time; accepting hardship as a pathway to peace; taking, as Jesus did, this sinful world as it is, not as I would have it; trusting that You will make all things right if I surrender to Your will; so that I may be reasonably happy in this life and supremely happy with You forever in the next. Amen. –Reinhold Niebuhr

"Serenity" is synonymous with the Positive Pole of the Stoic Attitude, +Tranquillity. "Surrender" is synonymous with the Negative Pole of the Stoic Attitude, -Resignation. This prayer is especially good advice for a Spiritualist such as myself, who needs to be reminded more than once in a while to gracefully and graciously accommodate the "slings and arrows of outrageous fortune" (Shakespeare).

Skepticism Philosophy — Skeptic Attitude

Let's first take a look at the dictionary definition of the word, which is pretty much the Michaelian teachings definition of the Skeptic Attitude, from >https://www.merriam-webster.com/dictionary/skepticism<:

- 1 : an attitude of doubt or a disposition to incredulity either in general or toward a particular object;
- 2a: the doctrine that true knowledge or knowledge in a particular area is uncertain;
- 2b: the method of suspended judgment, systematic doubt, or criticism characteristic of skeptics;
- 3: doubt concerning basic religious principles (such as immortality, providence, and revelation);

Synonyms: distrust, distrustfulness, doubt, dubiety, incertitude, misdoubt, misgiving, mistrust, mistrustfulness, query, reservation, suspicion, uncertainty.

Recall that the Positive Pole of the Skeptic Attitude is +Investigation and the Negative Pole is -Suspicion. Notice how both of these Poles are described in the following quotations extracted from the Wikipedia entry found at this URL: >https://en.wikipedia.org/wiki/Skepticism<:

Skepticism (American English) or scepticism (British English, Australian English, and Canadian English) is generally a questioning attitude or doubt towards one or more items of putative knowledge or belief or dogma. It is often

directed at domains, such as the supernatural, morality (moral skepticism), theism (skepticism about the existence of God), or knowledge (skepticism about the possibility of knowledge, or of certainty). Formally, skepticism as a topic occurs in the context of philosophy, particularly epistemology, although it can be applied to any topic such as politics, religion, and pseudoscience.

Philosophical skepticism comes in various forms. Radical forms of skepticism <u>deny that knowledge or rational belief</u> is possible and urge us to <u>suspend judgment on many or all controversial matters</u>. More moderate forms of skepticism claim only that <u>nothing can be known with certainty</u>, or that we can know little or nothing about the big questions in life, such as whether God exists or whether there is an afterlife. Religious skepticism is "<u>doubt</u> concerning basic religious principles (such as immortality, providence, and revelation)". Scientific skepticism concerns testing beliefs for reliability, by subjecting them to systematic investigation using the scientific method, to discover empirical evidence for them.

In ordinary usage, skepticism (US) or scepticism (UK) (Greek: 'σκέπτομαι' skeptomai, to search, to think about or look for; see also spelling differences) can refer to:

- 1. an attitude of doubt or a disposition to incredulity either in general or toward a particular object;
- 2. the doctrine that true knowledge or some particular knowledge is uncertain;
- 3. the method of <u>suspended judgment</u>, systematic <u>doubt</u>, or <u>criticism</u> that is characteristic of skeptics (Merriam–Webster).

In philosophy, skepticism can refer to:

- 1. a mode of inquiry that emphasizes critical scrutiny, caution, and intellectual rigor;
- 2. a method of obtaining knowledge through systematic doubt and continual testing;
- 3. a set of claims about the limitations of human knowledge and the proper response to such limitations.

[Retrieved 24 June 2019]

The Wikipedia article has sections on philosophical skepticism, which traces the history of the attitude back to ancient Greece and India, during the so-called "Axial Age", when humankind was experiencing a sort of Renaissance of consciousness, which has been compared to the Renaissance–Reformation–Enlightenment transition–transformation of a few hundred years ago. The formalization of Skepticism by philosophers was more or less contemporaneous with the formalization of Cynicism and Stoicism during the Axial Age.

Other than the philosophy of skepticism, the Wikipedia article addressed some other varieties:

Religious skepticism generally refers to doubting given religious beliefs or claims. Historically, religious skepticism can be traced back to Xenophanes, who doubted many religious claims of the time. Modern religious skepticism typically emphasizes scientific and historical methods or evidence, with Michael Shermer writing that skepticism is a process for discovering the truth rather than general non-acceptance. For example, a religious skeptic might believe that Jesus existed while questioning claims that he was the messiah or performed miracles (see historicity of Jesus). Religious skepticism is not the same as atheism or agnosticism, though these often do involve skeptical attitudes toward religion and philosophical theology (for example, towards divine omnipotence). Religious people are generally skeptical about claims of other religions, at least when the two denominations conflict concerning some stated belief. Additionally, they may also be skeptical of the claims made by atheists. The historian Will Durant writes that Plato was "as skeptical of atheism as of any other dogma".

A scientific or empirical skeptic is one who <u>questions beliefs on the basis of scientific understanding and empirical evidence</u>. Scientific skepticism may <u>discard beliefs pertaining to purported phenomena not subject to reliable observation and thus not systematic or testable empirically</u>. Most scientists, being scientific skeptics, <u>test the reliability of certain kinds of claims by subjecting them to a systematic investigation using some type of the scientific method</u>. As a result, a number of claims are considered as "pseudoscience", if they are found to improperly apply or ignore the fundamental aspects of the scientific method.

Professional skepticism is an important concept in auditing. It requires an auditor to have a "questioning mind", to make a critical assessment of evidence, and to consider the sufficiency of the evidence. [retrieved 24 June 2019]

As mentioned, the Positive Pole of the Skeptic Attitude is +Investigation and the Negative Pole is -Suspicion. You can see both of those Poles in evidence throughout the descriptions of the skeptic philosophy. In this case, the philosophy and the Attitude are very much aligned, more so than for most cases reviewed in this chapter.

The remaining four formal philosophies do not have as strong a correlation with the remaining four Attitudes of the Michaelian teachings, but nevertheless you will see the similarities, and I will point out the

similarities, even though the descriptions are not as lengthy. I think the reason for the disconnect is that these philosophies are not as grounded as the Ordinal philosophies/Attitudes that we reviewed above.

Pragmatism Philosophy — Pragmatist Attitude

Let's first take a look at the dictionary definition of the word, which is pretty much the Michaelian teachings definition of the Pragmatist Attitude, from >https://www.merriam-webster.com/dictionary/pragmatism<:

: a practical approach to problems and affairs;

: an American movement in philosophy founded by C. S. Peirce and William James and marked by the doctrines that the meaning of conceptions is to be sought in their practical bearings, that the function of thought is to guide action, and that truth is preeminently to be tested by the practical consequences of belief.

The key word that connects the philosophy of pragmatism and the Pragmatist Attitude is "practicality" — does it work or not? In fact, the Positive Pole of the Pragmatist Attitude is +Practicality, whereas the Negative Pole is -Dogma, which is being opinionated about what is and what works.

The following quotation is from the Wikipedia article, >https://en.wikipedia.org/wiki/Pragmatism<: Pragmatism is a philosophical tradition that began in the United States around 1870. Its origins are often attributed to the philosophers Charles Sanders Peirce, William James, and John Dewey. Peirce later described it in his pragmatic maxim: "Consider the practical effects of the objects of your conception. Then, your conception of those effects is the whole of your conception of the object."

Pragmatism considers words and thought as <u>tools and instruments</u> for prediction, problem solving and action, and rejects the idea that the <u>function</u> of thought is to describe, represent, or mirror reality. Pragmatists contend that most philosophical topics—such as the nature of knowledge, language, concepts, meaning, belief, and science—are all best viewed in terms of their <u>practical uses and successes</u>. The philosophy of pragmatism "emphasizes the practical application of ideas by acting on them to actually test them in human experiences". Pragmatism focuses on a "changing universe rather than an unchanging one as the idealists, realists and Thomists had claimed".

Pragmatism, both as a philosophy and as an Attitude, has the most objective, undistorted view of the world. It looks at what is, sees it as it is, and makes adjustments as appropriate.

The Pragmatist Attitude is the Neutral Attitude; the remaining three Attitudes/philosophies are Cardinal, or positive, or broad overview, outlooks on life.

Idealism Philosophy — Idealist Attitude

Let's first take a look at the dictionary definition of the word, which is pretty much the Michaelian teachings definition of the Idealist Attitude, from >https://www.merriam-webster.com/dictionary/idealism<:

- : the attitude of a person who believes that it is possible to live according to very high standards of behavior and honesty;
- : the practice of forming ideals or living under their influence;
- : one that places ideals before practical considerations;

Synonyms: dreamer, fantasist, romantic, romanticist, utopian, visionary.

The ancient and modern philosophy that is called "idealism" is not quite the same thing that is the Idealist Attitude in the Michaelian teachings, or in the common vernacular. Both the philosophy and the Attitude have concerns about the nature of the world: the philosopher is concerned about the nature of reality itself, while the Attitude is concerned with how things *should* be different from what they are, should be *better than* they are, should be closer to some imagined *ideal* than they actually are. Some parts of idealism as a philosophy do overlap with the Idealist Attitude in the Michaelian teachings, as we see in the following quotation from Wikipedia, as usual: >https://en.wikipedia.org/wiki/Idealism<. Note in this quotation that idealism is contrasted to realism, skepticism, and pragmatism.

Idealism is a term with several related meanings. It comes via idea from the Greek idein ($i\delta\epsilon\tilde{\nu}$), meaning "to see". The term entered the English language by 1743. In ordinary use, as when speaking of Woodrow Wilson's political idealism, it generally suggests the priority of ideals, principles, values, and goals over concrete realities. Idealists are understood to represent the world as it might or should be, unlike pragmatists, who focus on the world as it presently is. In the arts, similarly, idealism affirms imagination and attempts to realize a mental conception of beauty, a standard of perfection, juxtaposed to aesthetic naturalism and realism.

Any philosophy that assigns crucial importance to the ideal or spiritual realm in its account of human existence may be termed "idealist". Metaphysical idealism is an ontological doctrine that holds that reality itself is incorporeal or experiential at its core. Beyond this, idealists disagree on which aspects of the mental are more basic. Platonic idealism affirms that abstractions are more basic to reality than the things we perceive, while subjective idealists and phenomenalists tend to privilege sensory experience over abstract reasoning. Epistemological idealism is the view that reality can only be known through ideas, that only psychological experience can be apprehended by the mind. [Retrieved 24 June 2019]

In the above quotation, there are hints of the Positive and Negative Poles of the Idealist Attitude, +Coalescence and -Abstraction respectively; -Abstraction is mentioned explicitly, but the idea that beauty, perfection, and aesthetics are components of +Coalescence is not so explicit.

Philosophical idealism does not have enough in common with the Idealist Attitude to allow me to easily expand on the overlap beyond what I have said above, so let's move on to the next Philosophy/Attitude.

Spiritualism Philosophy — Spiritualist Attitude

Let's first take a look at the dictionary definition of the word 'spiritualism', which is pretty much the Michaelian teachings definition of the Spiritualist Attitude, from >https://www.merriam-webster.com/dictionary/spiritualism<:

: the view that spirit is a prime element of reality.

The Attitude of Spiritualist is the Attitude with the least connection to any formal philosophy in the Western tradition. However, the Spiritualist Attitude is inspired by the 'philosophy' of religion, spirituality, and mysticism. Thought of in that light, it might just be the oldest formal philosophy discussed in this chapter, because religion originated in prehistory and has been with humanity ever since. It is therefore and obviously a very well-developed worldview or outlook on life. If the word "philosophy" does not fit well for this viewpoint, then perhaps the study known as theology is more appropriate.

The Wikipedia article on "spiritualism" is about a religious movement in America from about the 1840s to the 1920s, and that is not really what we are looking for. Rather let's take a look at this Wikipedia article on spirituality, >https://en.wikipedia.org/wiki/Spirituality<:

The meaning of spirituality has developed and expanded over time, and various connotations can be found alongside each other.

Traditionally, spirituality referred to a <u>religious</u> process of re-formation which "aims to recover the original shape of man", oriented at "the image of God" as exemplified by the founders and sacred texts of the religions of the world. The term was used within early Christianity to refer to a life oriented toward the Holy Spirit and broadened during late medieval times to include mental aspects of life.

In modern times, the term both spread to other religious traditions and broadened to refer to a wider range of experience, including a range of esoteric traditions and religious traditions. Modern usages tend to refer to a subjective experience of a sacred dimension and the "deepest values and meanings by which people live", often in a context separate from organized religious institutions, such as a belief in a supernatural (beyond the known and observable) realm, personal growth, a quest for an ultimate or sacred meaning, religious experience, or an encounter with one's own "inner dimension".

In the Michaelian teachings, the Spiritualist Attitude has a Positive Pole of +Verification and a Negative Pole of -Faith. Personally, I prefer the words +Aspiration and -Superstition. The Positive Pole is characterized by a visionary look to the beyond, to the transcendent, to the higher, to the better, to the noble, to the good, to enlightenment. One can see glimpses of that in the quoted description, but not much, really. I would point to the word "experience" in the quote, with spiritual experiences as the proper method of +Verification for a Spiritualist. The Negative Pole of -Superstition is often characterized by the worst manifestations of organized religion and New Age hocus-pocus, both of which are often unencumbered by the +Verification process.

Realism Philosophy — Realist Attitude

Let's first take a look at the dictionary definition of the word, which is pretty much the Michaelian teachings definition and description of the Realist Attitude per >https://www.merriam-webster.com/dictionary/realism<:

1 : concern for fact or reality and rejection of the impractical and visionary;

2a: a doctrine that universals exist outside the mind; specifically, the conception that an abstract term names an independent and unitary reality;

2b: a theory that objects of sense perception or cognition exist independently of the mind — compare nominalism;

3 : the theory or practice of fidelity in art and literature to nature or to real life and to accurate representation without idealization;

Synonyms: literalism, naturalism, representationalism, verisimilitude, verismo.

- : the quality of a person who understands what is real and possible in a particular situation and is able to deal with problems in an effective and practical way;
- : the quality of being very much like real life;
- : the quality of seeming to be real;
- : a style of art or literature that shows or describes people and things as they are in real life;
- : willingness to face facts or to give in to what is necessary. [retrieved 28 June 2019]

Not unlike Spiritualism, Realism is not a formal philosophy that has an exact resemblance to the Realist Attitude. In the descriptions of philosophical realism, realism is often contrasted to idealism and skepticism, whereas the Realist Attitude in the Michaelian teachings is contrasted to the Cynic Attitude. Even so, for the Wikipedia article on Realism, we can see that the philosophy and the Attitude are in the same 'ballpark', so to speak, and it is obvious why the Michaels chose the name that they did for the Cardinal Action Attitude; it is the closest they could get.

The following quote is taken from >https://en.wikipedia.org/wiki/Philosophical_realism<:

In metaphysics, realism about a given object is the view that this object exists in reality independently of our conceptual scheme. In philosophical terms, these objects are ontologically independent of someone's conceptual scheme, perceptions, linguistic practices, beliefs, etc.

Realism can be applied to many philosophically interesting objects and phenomena: other minds, the past or the future, universals, mathematical entities (such as natural numbers), moral categories, the physical world, and thought.

Realism can also be a view about the nature of reality in general, where it claims that the world exists independent of the mind, as opposed to non-realist views (like some forms of skepticism and solipsism, which question our ability to assert the world is independent of our mind). Philosophers who profess realism often claim that truth consists in a correspondence between cognitive representations and reality.

Realists tend to believe that whatever we believe now is only an approximation of reality but that the accuracy and fullness of understanding can be improved. In some contexts, realism is contrasted with idealism. Today it is more usually contrasted with anti-realism, for example in the philosophy of science.

The oldest use of the term "realism" appears in medieval scholastic interpretations and adaptations of ancient Greek philosophy.

Naive realism, also known as direct realism, is a philosophy of mind rooted in a common-sense theory of perception that claims that the senses provide us with direct awareness of the external world. In contrast, some forms of idealism assert that no world exists apart from mind-dependent ideas and some forms of skepticism say we cannot trust our senses. The naive realist view is that objects have properties, such as texture, smell, taste and colour, that are usually perceived absolutely correctly. We perceive them as they *really* are.

Scientific realism is, at the most general level, the view that the world described by science is the real world, as it is, independent of what we might take it to be. Within philosophy of science, it is often framed as an answer to the question "how is the success of science to be explained?" The debate over what the success of science involves centers primarily on the status of unobservable entities apparently talked about by scientific theories. Generally, those who are scientific realists assert that one can make reliable claims about unobservables (viz., that they have the same ontological status as observables). Analytic philosophers generally have a commitment to scientific realism, in the sense of regarding the scientific method as a reliable guide to the nature of reality. The main alternative to scientific realism is instrumentalism. [retrieved 28 June 2019]

The remainder of the Wikipedia article on the Realist philosophy traces the history from the ancient Greeks, particularly Plato and Aristotle, then to medieval European philosophers influenced by the Catholic Church, then to Renaissance philosophers, then to modern Western philosophers. One of the phrases that turns up often is "common sense" — there is an emphasis on what the five senses obviously tell us, apart from

interpretations that we might put on them, for one thing, and an emphasis on what the collective perceptions of humanity tell us for another thing. For instance, there is this statement:

The roots of Scottish Common Sense Realism can be found in responses to such philosophers as John Locke, George Berkeley, and David Hume. The approach was a response to the "ideal system" that began with Descartes' concept of the limitations of sense experience and led Locke and Hume to a skepticism that called religion and the evidence of the senses equally into question. The common sense realists found skepticism to be absurd and so contrary to common experience that it had to be rejected. They taught that ordinary experiences provide intuitively certain assurance of the existence of the self, of real objects that could be seen and felt and of certain "first principles" upon which sound morality and religious beliefs could be established. [retrieved 28 June 2019]

The main thing about the Realist Attitude is that, being on the Action Axis, it mostly sees what is happening out there in the real world as conveyed to us by our physical senses — unembellished and unflavored and uncolored by interpretations of emotions and thoughts. This is like the realist philosophy in that such a realist would not tend to notice, or would tend to denigrate, the phenomena of emotions and thoughts — or morals and aesthetics, those being the higher expressions of emotions and thoughts. Spiritualists and Idealists tend to regard Realists as shallow, because Realists are not attuned to, or are somewhat oblivious of, these extra dimensions of the psyche.

Simply stated, Realists prefer to focus on and pay attention to what is *objectively* true out there in the real world, in the consensus reality agreed upon by the scientific method. This they prefer over what might be *subjectively* true, inside the private emotional and mental space of individuals, because the subjective world is not as amenable to scientific methods of inquiry. Subjective reality might be real, but in any case it is less real than objective, consensus reality.

Concluding Remarks on Philosophies and Attitudes

- 1. One weakness in the correlation of formal philosophies to Attitudes is that there are numerous Dozens? Scores? Hundreds? of examples of the former but only seven of the latter.
- 2. The fact that these particular philosophies exist and function and have recurrently been argued about since ancient times might be an indication that there is something real about the Attitudes.
- 3. By the way, other than 'philosophy', another potential synonym for Attitude is 'WorldView' the meaning is very similar, and I like it. However, some Michaelian teachings sources when it is expedient to not bring psychological maturity or reincarnation into the discussion prefer to make 'WorldView' a substitution for Soul Age. In that context, my preference is also to make the synonym for Soul Age to be "Worldview". This is what I did in my *Tao of Personality book*.
- 4. My expectation is that by reading this chapter, Michaelian students might come to a greater appreciation of the depth and breadth of the Overleaf System bequeathed to us by the Michaels.
- 5. If you do an internet search on any one of the seven Michaelian teachings Attitudes, or any one of the formal philosophies after which the Attitudes are named, you will get thousands of hits. Somewhere high up in the results you will find an Michaelian teachings website. This bodes well for spreading parts of the Michaelian teachings into the mainstream consciousness. This is already happening. If you do an internet search on the names of all seven Attitudes at once, you will be led to various Michaelian teachings websites, of course, but you will also be led to some non-Michaelian teachings websites, where people have borrowed the basic idea of seven Attitudes, and put it into their own words.
- 6. It can be very valuable to your own perspective on things to know about these various philosophies and Attitudes. It can move you to realizing that other people do not see things the same way you do, and therefore nudge you to realize that your own viewpoint is very likely biased, and that it is not necessarily better than the other person's viewpoint.
- 7. The other important value of knowing about various philosophies and Attitudes is to emulate the complementary philosophy/Attitude when you find yourself in the Negative Pole of your Attitude.

Chapter 1H

CHIEF FEATURES AND THE SEVEN DEADLY SINS

This is the fifth chapter in a series of five chapters on precursors to the seven Overleaf System categories, the five categories that had precursors: Center, Soul Age, Role, Attitude, and Chief Feature; if Goal and Mode had precursors in other teachings or psychology, whether esoteric or exoteric, I have not yet discovered them. These five are presented in the order in which they were revealed to the original Michaelian group. In the previous chapters we reviewed Center, Soul Age, Role, and Attitude. In this chapter we review the medieval teaching about "Seven Deadly Sins", which can be vaguely regarded as a precursor to the Michaelian teachings view of Chief Features, and Gurdjieff's teaching about Chief Features from early in the 20th Century, which is regarded as a direct precursor to the Michaels' teaching about Chief Features.

First we will look at the ancient Greek idea of *character flaws*, then we will look at the Christian idea of the so-called "seven deadly *sins*" and related concepts, then we will look at Gurdjieff's *Chief Features*, and then we will look at Carl Jung's concept of *shadows*. The point of this discussion is to realize that people have understood for centuries — millennia even — that there are various ways for us humans to 'miss the mark' of perfection in our behaviors, emotions, and thoughts. There has been an ongoing effort to catalog these flaws, and the spiritual paths of various religions or spiritual traditions usually engage a plan to help mitigate the flaws.

Ancient Greeks and Character Flaws

One website that I found compared the Chief Features to the Greek myth of the "Achilles heel", the only vulnerable part of this hero's entire body. The website is this: >https://ggurdjieff.com/chief-fault/<. This is still today a metaphor for weak spots in personality and character. I am reminded of a common theme that is dramatized in Greek theatrical "tragedies", namely that the main character, the "hero", has a flaw that leads to his downfall. "Comedies" were the opposite of this: the hero succeeded in overcoming his flaw and winning his endeavor. Those plays were the 'morality tales' of the day. As Greek plays, Greek myths, and Greek philosophy have embedded themselves in Western thinking for two and a half millennia, their musing on character flaws may be considered precursors to the Chief Feature concept. Gurdjieff (whom we will discuss further on) and the Michaelian teachings have the Chief Feature as part of its 'morality tales' of our day: "you can do better than that". By the way, the Greek idea of bad character traits even applied to their deities.

Some of the ideas about psychology from ancient Greek philosophy found their way into the early Christian churches (>https://en.wikipedia.org/wiki/Christianity_and_Hellenistic_philosophy<) and some of those ideas can still be seen in Christianity in modern time. In my Christian days during my youth, there was an emphasis on "character development". The idea was that when you die, "you cannot take it with you" in terms of material possessions, but what you can take with you into the afterlife was your spiritual development, your "character"; this was from, for instance, the Bible verse quoting Jesus that says "lay up treasure in heaven, not on earth" (Matthew 6:19–20). This is not unlike the spiritual path in esoteric teachings in all times. In the Michaelian teachings, the injunction to develop one's character has a different terminology, but the principle applies: mitigate the Chief Feature, Negative Poles, and False Personality. I would go so far as to say that building character, by whatever name you call it, is the purpose of life on the Physical Plane, in reincarnation, if you define character as what survives from incarnation to incarnation.

Christian Hamartiology

Whether or not you have ever been a believing/practicing Christian (as I was in my youth), perhaps you have heard of the 'seven deadly sins'. Immediately after I started researching that phrase on the internet, I found

that it was embedded in a larger topic: Christian Hamartiology — the study of "sin". It should surprise no one that there is a Wikipedia entry on the subject: >https://en.wikipedia.org/wiki/Hamartiology<.

Hamartiology (from Greek: ἁμαρτία, hamartia, 'missing the mark, error' and -λογια, -logia, "study"), a branch of Christian theology, is the study of sin. [retrieved 10 June 2019]

In the church that I belonged to for twenty years, we were made aware that the Biblical Greek word translated "sin" in English meant "missing the mark", and the metaphor was of a shot arrow missing the target. Hitting the target was of course "righteous". Further research reveals that there are several subcategories in Hamartiology, and those are briefly discussed in the following subsections. I start with the "seven deadly sins" because my guess is that it is the most well-known.

The Seven Deadly Sins

Naturally, we look to Wikipedia for an introduction to the seven deadly sins, as found on this web page: >https://en.wikipedia.org/wiki/Seven_deadly_sins<. The underlined words are my own, the words that best correlate with Chief Features in the Michaelian teachings.

The seven deadly sins, also known as the capital vices, the seven traits of man, or cardinal sins, is a grouping and classification of vices within Christian teachings. Behaviors or habits are classified under this category if they directly give birth to other immoralities. According to the standard list, they are pride, greed, lust, envy, gluttony, wrath and sloth, which are also contrary to the 'seven heavenly virtues'. These 'sins' are often thought to be abuses or excessive versions of one's natural faculties or passions (for example, gluttony abuses one's desire to eat).

This classification originated with the desert fathers, especially Evagrius Ponticus, who identified seven or eight evil thoughts or spirits that one needed to overcome. Evagrius' pupil John Cassian, with his book *The Institutes*, brought the classification to Europe, where it became fundamental to Catholic confessional practices as evident in penitential manuals, sermons like "The Parson's Tale" from Chaucer's *Canterbury Tales*, and artworks like Dante's *Purgatory* (where the penitents of Mount Purgatory are depicted as being grouped and penanced according to the worst capital sin they committed). The Catholic Church used the concept of the deadly sins in order to help people curb their inclination towards evil before dire consequences and misdeeds could occur; the leader-teachers especially focused on pride (which is thought to be the sin that severs the soul from Grace, and the one that is representative and the very essence of all evil) and greed, both of which are seen as inherently sinful and as underlying all other sins to be prevented. To inspire people to focus on the seven deadly sins, the vices are discussed in treatises and depicted in paintings and sculpture decorations on Catholic churches as well as older textbooks.

The seven deadly sins, along with the 'sins against the Holy Ghost' and the 'sins that cry to Heaven for vengeance', are considered especially serious in the Western Christian traditions. [retrieved 09 June 2019]

A similarity here with the Chief Features of the Michaelian teachings is that the seven deadly sins are said to underlie, or "give birth to" the more individual acts of sin, or "immoral behaviors", just as Chief Features are said to trigger the behaviors that result in karmic ribbons or patterns of self-karma. But a dissimilarity appears in what is said to underlie a deadly sin or a Chief Feature. The above-quoted passage ascribes the seven deadly sins to "abuses or excessive versions of one's natural faculties or passion" and also to an "inclination to evil". The Michaelian teachings does not posit an "inclination to evil" in human nature. In the Michaelian teachings it is an underlying fear that inclines toward a Chief Feature. The above discussion of the seven deadly sins says nothing about the human inclination to or reaction to fear.

In terms of equating the traditional seven deadly sins with the Chief Features, "Pride" obviously correlates with the Chief Feature of Arrogance, and "Greed" obviously correlates with the Chief Feature of Greed; some might say that "Gluttony" is a variation on Greed. The Michaelian teachings talks about Greed having a variety of possible 'fixations" and Gluttony would be a fixation on fear of not getting enough food and drink. "Wrath" might not so obviously correlate with the Chief Feature of Impatience; my rationale is that the Negative Pole is —Intolerance, and that often shows up as anger, which is similar to Wrath. I realize that the next is a forced correlation, but "Sloth" vaguely reminds me of the Chief Feature of Stubbornness because of its resistance to change in the *status quo*. Even more forcing cannot make "Envy" and "Lust" correlate with a Chief Feature, in my opinion.

In researching this topic, it quickly became apparent that the 'sins against the Holy Ghost' was a better match for some of the Chief Features than are some of the seven deadly sins. Therefore the discussion and comparison in the following subsection is about them.

Sins Against the Holy Ghost

At the beginning of looking at this topic, basic searches on the term seem to indicate that it is Catholic teaching that thinks of the "sins" against the Holy Ghost in the plural, sins that thus give a feeling of being precursors to the concept of Chief Features. Protestants in general seem to have searched for a single (unpardonable) "sin" against the Holy Ghost, without always being in agreement with each other about what it is. As one example, the website at >https://www.gotquestions.org/blasphemy-Holy-Spirit.html< concludes its arguments by stating that the "unpardonable sin is continued unbelief".

But let's take a look at the sins against the Holy Ghost as listed in Wikipedia in a wiki where multiple such sins are cited here: >https://en.wikipedia.org/wiki/Eternal_sin<. Underlined words are my emphasis:

In Christian hamartiology, eternal sins, unforgivable sins, or unpardonable sins are sins which will not be forgiven by God. One eternal or unforgivable sin (blasphemy against the Holy Spirit) is specified in several passages of the Synoptic Gospels, including Mark 3:28–29, Matthew 12:31–32, and Luke 12:10.

In Catholic teaching there are six sins that blaspheme against the Holy Spirit. They are:

Despair (believing that one's evil is beyond God's forgiveness);

<u>Presumption</u> (glory without merit, that is, hope of salvation without keeping the Commandments, or expectation of pardon for sin without repentance);

Envying the goodness of another (sadness or repining at another's growth in virtue and perfection);

<u>Obstinacy</u> in sin (willful persisting in wickedness, and running on from sin to sin, after sufficient instructions and admonition);

Final impenitence (to die without either confession or contrition for our sins);

Impugning the known truth (to argue against known points of faith, and this includes misrepresenting parts or all of the Christian faith to make it seem undesirable). [retrieved 09 June 2019]

The most obvious fit here of the sins against the Holy Ghost with Chief Features is that "Obstinacy" correlates with the Chief Feature of Stubbornness. "Presumption" is vaguely like the Chief Feature of Arrogance, and "Despair" is somewhat like a combination of the Chief Features of Self-deprecation and Martyrdom. Even more vague would be the correlation of "Impenitence" with the Chief Feature of Stubbornness, which could be seen as an unwillingness to "repent", aka to change one's ways, even if it is for the best. I do not see a correlation with the remaining sins against the Holy Ghost, "Envy" and "Impugning known truth".

It is not a complete stretch of credulity for me to claim that the seven deadly sins and the sins against the Holy Ghost were precursors to at least the concept of the Chief Feature as a serious problem in the human psyche, even if the particular "sins" and Chief Features are not well correlated.

So now let's take a look at the originator of the term "Chief Feature", Georges Gurdjieff; we have seen him before, and we will see him again, repeatedly, in this *History* book.

Gurdjieff and the Chief Features

In the context of having reviewed Roman Catholic teaching about the seven deadly sins, we could ask if Gurdjieff, brought up in the Russian Orthodox Church, had been exposed to a similar teaching. It is suggested by an internet commentary on the topic by a Canadian archbishop within Orthodoxy that he likely had not been so exposed. Commentary is found at >https://www.orthodoxcanada.org/ga_archives/question1.html<, where the concept of "seven sins" is ascribed to "the legalistic mind of Roman Catholicism". From the discussion at that website, it may be concluded that the Orthodox recognize sins but not seven overarching "deadly" sins. Those with an interest may do further internet searches on this subject. But we will note in the following discussion that the parallel idea of many differing "Chief Features" and not a select list of seven overarching Chief Features is the approach Gurdjieff took with his students.

Quoting Gurdjieff, Ouspensky has this to say about the Chief Feature in his book *In Search of the Miraculous* (*ISM*):

... there are certain individual conditions which are given to each person separately and which are generally connected with his "chief fault", or "chief feature". This requires some explanation.

Every man has a certain feature in his character which is central. It is like an axle round which all his "false personality" revolves. Every man's personal [spiritual] work must consist in struggling against this chief fault.... One man talks too much; he must learn to keep silent. Another man is silent when he ought to talk and must learn to talk; and so it is always and in everything.... The struggle against the "false I", against one's chief feature or chief fault, is the most important part of the work (ISM, pp. 226 and 228]

Important as it allegedly was in the Gurdjieffian teachings, not much more than this was said about it in *ISOTM*. There were few examples of specific Chief Features in *ISM*: one person had no conscience; another person had no shame; another person was "never at home" (probably meaning that he had no True Personality or Essence apparent). A website dedicated to the Gurdjieffian teachings identified "haunted by the past" as a specific Chief Feature; refer to: >http://www.josephazize.com/2017/03/04/chief-feature/<. Surprisingly, a brief internet search turned up only one more specific Chief Feature. The story is that a guy was complaining about not being able to figure out what his Chief Feature was, only to be told that it was that he was always complaining about everything. Ha ha. The conclusion to be had from this dearth of specific Chief Features is that Gurdjieff teachers in practice identified a separate, distinctive problem characteristic for each individual student, rather than having the sort of "umbrella" characteristics represented by either the Seven Deadly Sins of Catholicism, or the seven Chief Features of the Michaelian teachings.

The best list of Chief Features that I have been able to find comes from a cartoonist named Harold Wirk. He was a member of the Fellowship of Friends in its very early days, the early 1970s. This was at the same time that original Michaelian group members attended the Fellowship of Friends — before they founded the original Michaelian group, that is. (These cartoons are available on the internet.) The cartoons filled an entire sheet, and described various aspects of the Fourth Way teaching. One of them was on the Chief Features. Following is a list of examples of Chief Features that he provided on the sheet. The bracketed comments are mine; they point out correlations with the Chief Features of the Michaelian teachings, and also with some Negative Poles of a few Overleaves:

Seeing the faults of others and not our own, laziness [Stagnation –Inertia], arguing [Cynic –Denigration], excessive talk [Sage –Oration], too much family [Server –Bondage], poverty [Self-destruction], knows everything [Scholar –Theory], no conscience, home too much [Retardation –Withdrawal] or too little [Growth –Confusion], lack of pride [Self-deprecation], consider people too much, think [their] Level of Being is as high as anyone's [Arrogance], being "cool", self-pity [Self-deprecation], greed [Greed], vanity [Arrogance], inner considering, naive [Idealist –Naivety], fear [Caution –Phobia], weak or timid [Martyrdom], likes to be right [Arrogance], stubbornness [Stubbornness], no shame, nicknames, power [Power –Oppression], selfish [Greed], identification with knowledge [rather than Being] [Scholar –Theory].

Although this particular cartoon sheet on Chief Features was not found among the original Michaelian group materials given to the Center for Michael Teachings, Inc., as the Body Type cartoon sheets were, it seems likely that original Michaelian group members were familiar with it; during the months of run-up to the revelations of the official list of seven Chief Features, several of the names of Chief Features found on this list were ascribed to various original Michaelian group members; refer to Chapter 2A in Part Two, "Revelation of Overleaves", for a review of that history. The only Michaelian teachings Chief Feature not listed here with a name or a description or a synonym is Impatience.

Carl Jung and the Shadow

Over the decades, Michaelian students have found the original name inadequate. Originally, in the Gurdjieffian teachings, the "Chief" Feature was just the foremost "Feature" among others that a person might have — in the realm of defects and deficiencies at the core of False Personality, as quoted in a section above. Gurdjieff was multilingual, speaking Armenian, Turkish, and Russian in childhood and adding other languages, as French and English, later. What reason he had to name character flaws "features" is not obvious to the average English speaker, and in fact the above-noted website oriented to the Gurdjieffian teachings calls them "faults" rather than "features". Likewise, Michaelian students have often preferred to rename the Chief Feature to something more descriptive to them of its nature and function.

In the original Michaelian group, another name sometimes used was "Obstacle", which says something about its nature and function. Some Michaelian students add the word "negative" between the words "Chief"

and "Feature" in order to be more descriptive about its nature and function. José Stevens wrote an entire book, *Transforming Your Dragons*, where he referred to them as "Dragons" and provided prescriptions for "transforming" them — metaphorically turning these apparent 'lemons' into 'lemonade', aka "turning a weakness into a strength". Personally, while also looking for a better name, I toyed with potential synonyms such as "Ego" and "Persona" and "Image" and "Mask" and "Defense Mechanism" and "Devil's Advocate". These words provide a view of the Shadow which is useful and not inaccurate.

The Chief Feature can exist and function as all of those — my sense of the situation with Chief Features is that there might not be a perfect word for the phenomenon — but I settled on the name "Shadow" for use in my books on the Michaelian teachings. Where might you have heard that term before? Perhaps from Carl Jung, who famously had a lot to say about the Shadow. Internet resources on the topic are abundant, and the subject is deep and broad, so I prefer not to go into it here; I refer the reader, for starters, to: >https://en.wikipedia.org/wiki/Shadow_(psychology)<. This one also looks good to me: >https://www.thesap.org.uk/resources/articles-on-jungian-psychology-2/about-analysis-and-therapy/the-shadow/<. When I read about the Shadows decades ago, I saw that they have a lot in common with the description of the Chief Feature category of the Overleaf System, even if the Shadows are not specifically named or described in the Jungian material as they are in the Michaelian teachings. This research led me to prefer the word "Shadow" over the phrase "Chief Feature".

Jung's ideas about the Shadow originated in the early and middle years of the 20th Century, so the concept can legitimately be regarded as a precursor to the Michaelian teachings revelation of Chief Features.

The basic point of "shadow work" in psychotherapy is not that dissimilar to the psychotherapeutic aspects of the Michaelian teachings; both enjoin us to become aware of the negative, unhealthy, dysfunctional, dishonorable, hurtful aspects of ourselves. The Chief Features were said to manifest in, and to exacerbate, several other compartments of the Michaelian teachings psychology: the Michaels referred to them as False Personality, the Negative Poles of our Overleaves — and the Chief Features.

The point is that Michaelian students do well to come to understand that the Chief Feature is the core of the 'dark side of the force' within each of our 'hearts'. "Who knows what evil lurks in the hearts of men? The Shadow knows." (A famous saying from the 1930s, in crime novels by Walter Gibson, and a radio show adaptation of those novels.) It is a key component in our spiritual path to understand this. The Chief Features are metaphorically 'the devils whispering in one ear as the angels whisper in the other ear', so that free will is maintained; it is our free-will *choice* to follow the counsel of the 'angels' and do the opposite of the counsel of the 'devils'.

Recall that, in my reformulation of the Michaelian teachings, I refer to the seven Overleaf categories as "Aspects" of Personality. In that reformulation, I regard the Chief Feature/Shadow as the Ordinal Aspect, and Role as the Cardinal Aspect, on the "Inspiration Axis". As such, the Chief Feature (the 'devil') can be just as valuable as the Role (the 'angel') is, for "inspiration" — in the sense that the Role tells you who you really are, whereas the Chief Feature tells you who you really aren't. We need both the 'carrot' and the 'stick' to impel and guide and inspire us on the path to a better life. Carl Jung tells us to "integrate the Shadow", and the Michaels enjoin us to "Photograph" (pay attention to) the Chief Feature; it is not something to be denied or ignored or impugned as if it were a "sin". This process of 'integrating the Shadow with our Role is according to the same principle as completing Monads, as joining Ordinal with Cardinal to arrive at the Neutral at a higher level of Being. Refer to Chapter 1K, coming up later in Part One, "Gurdjieff's Law of Three", for a more thorough discussion of this point.

Just as the Gurdjieffian teachings did not have a list of specific Chief Features (that I could find in a few books and on a few websites), so Jung did not have a list of specific Shadows that I could find on the internet. That task was fulfilled by the Michaels. I count that revelation of specific Chief Features as a significant development in the history of psychotherapy. And I count what the Michaels did as a significant development in the history of hamartiology — a catalog of "sins", which were derived from some Biblical statements — because the Michaels' contribution was part of a systematic psychology and cosmology; the Michaels did not just have a list of "sins", they revealed the pattern at the root of the problem, which was part of a larger pattern that we refer to as the Overleaf System. That was very deep of them.

Concluding Remarks on Character Flaws and Chief Features

It seems that this chapter should be longer because I believe it is an important subject, but this is all I have for now.

- 1. As usual in this book and my other books, I feel that my chapters just 'scratch the surface' of a subject. They are mere introductions to areas for further research. Some budding psychology student would do well to write a Master's thesis or a Doctoral thesis, covering the items discussed in this chapter, and so much more; it deserves that kind of treatment in the counseling psychology field.
- 2. The concept of Chief Feature fits within a much larger context; it is a 'piece' of a much larger 'picture', metaphorically speaking. The history and diversity of the concept of the dark side of the human heart and mind is found in various cultures and various times. The concept of 'good and evil' figures into religions, theologies, philosophies, psychologies all have their versions of explaining the 'problem of evil'. It is not in the purview of my book or of this chapter to explore the ramifications.
- 3. Chapter 1B above, "Personality Typologies", discusses several personality systems, and the majority of them provide descriptions of negative personality and/or character traits, some of them similar to or identical to Chief Features and the Negative Poles of the Overleaves.
- 4. José Stevens has written a book on the Chief Features for the general public, *Transforming Your Dragons*. It is an outstanding treatment of the subject.
- 5. Even though the listing of seven Chief Features is a new thing, revealed as it was with the Michaelian teachings in the mid-1970s, the concept of something like the Chief Feature has been around for Millennia, at least since the Axial Age in ancient Greece (800s to 300s BCE); observations and dramatizations of "character flaws" were a part of budding speculations about human nature and human psychology.
- 6. What Gurdjieff called "Chief" Feature was just the primary character flaw; he said there were lesser "Features" in False Personality. This appears to be because he saw many, many discrete character flaws in the people he observed. In the Michaelian teachings, it is said that there are but a canonical seven Chief Features as umbrellas to all character flaws, and an individual can be identified with a primary and a secondary and a tertiary Chief Feature: *Michael's People*, pp. 51–52.
- 7. Many Michaelian students have felt the need for a better name. In the original Michaelian group they were also referred to as "Obstacles"; Stevens refers to them as "Dragons" in his book *Transforming Your Dragons*. Personally, I prefer the name "Shadows" because of obvious similarities to Carl Jung's adoption of that term for the "dark side" of the human heart and mind.
- 8. So many of the negative aspects of the human condition are driven by the existence of the Chief Features, by whatever name you call them.
- 9. Gurdjieff's descriptions were vague but they had certain characteristics, saying, for instance, that they form the core of the False Personality, and that they are mostly invisible to the hosts; people are oblivious of them.
- 10. In the Gurdjieffian teachings, so far as I have found, there was no structure to Chief Features as there was with other aspects of Gurdjieff's teaching, such as the Law of Three and the Law of Seven. Likewise, with the 'Seven Deadly Sins' and the 'Sins Against the Holy Ghost', there was no systematic pattern to them that I could discern. It took the Michaels to put the Chief Features into the context of a system, a pattern. Therefore, the Gurdjieff view of the Chief Features only has a vague resemblance to the Chief Features of the Michaelian teachings.
- 11. Gurdjieff himself only listed a few examples of Chief Features, and none of them are the same as the seven overarching Chief Features of the Michaelian teachings. It may be that the Gurdjieff communities have not developed any systematic understanding of the topic. One would think, for instance, that the Chief Features could be related to the Centers i.e. the negative Poles of the Centers were known and understood (see previous chapter). This did not happen with Chief Features until the Michaelian teachings.
- 12. In the Gurdjieffian teachings, the Chief Features were opposed to Essence, just as False Personality was opposed to Essence. In my formulation, the Chief Features are the "counterparts" of the Roles; they are the Ordinal Inspiration Aspect to the Cardinal Inspiration Aspect called "Role". In this sense, in my version of the Michaelian teachings, the Chief Features are opposed to Essence Role.

- 13. As do all of the Overleaf categories, the Chief Feature 'flavors and colors' all of the other Overleaf categories; the Chief Features augment the Negative Poles of the Overleaves. That is one good reason to mitigate the influence of the Chief Feature, so that the Overleaves can express purely, in the Positive Poles.
- 14. One of my goals in my books is to help Michaelian students appreciate the profound understanding that the Michaels revealed in their teaching, the existence and function of the Chief Features being one of the most significant.

This chapter is the last of the five chapters that discuss precursors to the Overleaf categories that have precursors. Two of these chapters heavily reference the Gurdjieffian teachings and its influence on the Michaelian teachings. More of those Gurdjieffian teachings influences are documented in subsequent chapters.

Chapter 1J

GURDJIEFF'S LEVELS OF BEING

Among the concepts that the Michaels adopted and adapted from elsewhere during the original Michaelian group was "Level of Being". It came from the Gurdjieffian teachings, and the original Michaelian group members learned about it from Robert Burton, the leader of a local Gurdjieffian study group that called itself the Fellowship of Friends, and from various books about the Fourth Way teaching. So, first let us take a look at what Gurdjieff meant by it, then take a look at the instances where the phrase occurred in the original Michaelian group transcriptions.

Levels of Being in Gurdjieff

Gurdjieff taught that there were seven stages in the development of awareness or consciousness on the spiritual path, which he called Levels of Being. The middle or fourth stage was said to be transitional between the "lower" and the "higher" stages, and the key descriptive word for it was "Balanced". The fourth stage was also described as the first stage of genuine Self-awareness, "awakeness", or higher/wider consciousness. Before this stage, people were said to be "mechanical" and "asleep". The following quote is from Gurdjieff's best-known pupil, P. D. Ouspensky.

Man number one, number two, and number three: these are people who constitute mechanical humanity on the same level on which they are born.

Man Number ONE means man in whom the center of gravity of his psychic life lies in the MOVING CENTER. This is the man of the physical body, the man with whom the moving and the instinctive functions constantly outweigh the emotional and thinking functions.

Man Number TWO means man on the same level of development, but man in whom the center of gravity of his psychic life lies in the EMOTIONAL CENTER, that is, man with whom the emotional functions outweigh all others; the man of feeling, the emotional man.

Man Number THREE means man on the same level of development but man in whom the center of gravity of his psychic life lies in the INTELLECTUAL CENTER, that is, man with whom the thinking function gains the upper hand over the moving, instinctive, and emotional functions; the man of reason, who goes into everything from theories, from mental considerations. (P. D. Ouspensky, *In Search of the Miraculous*, p. 71)

The first three categories are practically on the same level. Man Number 1: a man in whom the moving or instinctive centers predominate over the intellectual and emotional — Physical Man. Man Number 2: a man in whom the emotional center predominates over the intellectual, moving, and instinctive — Emotional man. Man Number 3: a man in whom the intellectual center predominates over the emotional, moving, and instinctive — Intellectual man. In ordinary life we meet only these three categories of man. Each one of us and everyone we know is either Number 1, Number 2, or Number 3. There are higher categories of man, but men are not born already belonging to these higher categories. They are all born Number 1, Number 2, Number 3 and can reach higher categories only through [spiritual] schools.

Man Number FOUR is not born as such. He is a product of [esoteric] school culture. He differs from man Number 1, Number 2, and Number 3 by his knowledge of himself, by his understanding of his position, and as it is expressed technically, by his having acquired a permanent center of gravity. This last means that the idea of acquiring unity, consciousness, permanent 'I', and will. That is, the idea of his development has already become for him more important than his other interests. It must be added to the characteristics of Man Number 4, that his functions and centers are more balanced, in a way in which they could not be balanced without work on himself, according to school principles and methods.

Man Number FIVE is a man who has acquired unity and self-consciousness. He is different from ordinary man, because in him, one of the higher centers [the Higher Emotional Center] already works, and he has many functions and powers that an ordinary man — that is, Man Number 1, Number 2, and Number 3 — does not possess.

Man Number SIX is a man who has acquired objective consciousness. Another higher center works in him [the Higher Intellectual Center]. He possesses many more new faculties and powers, beyond the understanding of ordinary man.

Man Number SEVEN is a man who has attained all that a man can attain. He has a permanent 'I' and free will. He can control all the states of consciousness in himself and he already cannot lose anything he has acquired. Understanding this division of man into seven categories is very important, for the division has very many applications in all possible ways of studying human activity. It gives, in the hands of those who understand it, a very strong and very fine instrument or tool for the definition of manifestations which, without it, are impossible to define.

Take, for instance, the general concepts of religion, art, science, and philosophy. Beginning with religion, we can see at once that there must be a religion of man number one that is all forms of fetishism, no matter how they are called. A religion of Man Number 2 is emotional, sentimental religion, passing sometimes into fanaticism, the crudest forms of intolerance, persecution of heretics, and so on. A religion of Man Number 3 is theoretical, scholastic religion, full of argument about words, forms, rituals, which become more important than anything else. A religion of Man Number 4 is a religion of man who works for self-development. A religion of Man Number 5 is the religion of a man who has attained unity and can see and know many things that Man Number 1, 2, and 3 can neither see nor know. Then there is a religion of Man Number 6 and a religion of Man Number 7, about neither of which can we know anything. The same division applies to art, science, and philosophy. You must try to find examples of these for yourselves. [P. D. Ouspensky, *The Psychology of Man's Possible Evolution*, pp. 53–56]

From this brief description of Levels of Being we can take away two important conclusions. First, the Levels of Being adhere to the Law of Three: they have Ordinal ("lower") and Cardinal ("higher") components separated by a Neutral. (Refer to Chapter 1K, coming next after this one, "Gurdjieff's Law of Three".) Second, in the Gurdjieffian teachings, the Levels of Being are generally related to the Centers. The Centers were the only Overleaf category that Gurdjieff knew about, but if he had known about the six other Overleaf categories, one wonders if he would have related them to the Levels of Being. Refer to Chapter 1D above, "The Seven Centers", for more information about the Centers.

Seven Categories of Man in the Fellowship of Friends

The founding members of the original Michaelian group got much of their understanding of the Gurdjieff—Ouspensky teaching from the Fellowship of Friends, which was founded in the Bay Area in 1970 by Robert Burton, and which continues under his leadership to the time of this writing (2019). Many of the basic features of the G–O teaching were illustrated by Harold Wirk in cartoon sheets that can be found on the internet. The sheet pertinent to this chapter was titled "The Seven Categories of Man". The following text was extracted from that document. The underlines are my emphasis, to point out the Center associated with the Level of Being.

MAN #1: The Moving or Instinctive Centers predominate over the Intellectual and Emotional ... Physical Man.

MAN #2: The Emotional Center predominates over the Intellectual, Moving, and Instinctive ... Emotional Man.

MAN #3: The Intellectual Center predominates over the Emotional, Moving, and Instinctive ... Intellectual Man.

MAN #4 is not born as such. He is a product of school culture. Differs from Man #1, #2, or #3 by: (1) knowledge of himself; (2) understanding of his position; (3) having acquired a permanent 'center of gravity', the idea of acquiring unity, consciousness, permanent "I", and will has become more important to him than all his other interests; (4) his Centers and functions, which are more <u>balanced</u> due to work on himself.

MAN #5 is a man who has acquired unity and self-consciousness. He is different from ordinary man, because in him <u>one of the higher Centers</u> already works, and he has many functions and powers that Man #1, #2, or #3 does not possess.

MAN #6 is a man who has acquired objective consciousness. <u>Both higher Centers</u> work in him. He possesses many more new faculties and powers, beyond the understanding of an ordinary man. (Man #6 differs from Man #7 only by the fact that some of his properties have not yet become permanent.)

MAN #7 is a man who has attained all that a man can attain. He has a permanent "I" and free will. He can control all the states of consciousness in himself and he cannot lose what he has acquired. His is immortal within the limits of the solar system.

The Seven categories of man determine the general concepts of religion, art, science, and philosophy. (A religion of Man #1 consists of all forms of fetichism; #2 of sentimental religion, and so on.)

Every man is born Number 1, Number 2, or Number 3. Without efforts of a definite character, these are people who constitute mechanical humanity, who stay on the same level on which they are born.

The documents quoted in this section and the previous section give the readers of this *History* book a good idea of what original Michaelian group members understood about the spiritual path. As you can see, Gurdjieff had high expectations for his students, and he was a hard-driving spiritual taskmaster. During the original Michaelian group, the Michaels were willing to go along with these aspirations to some extent, as we see in the next section.

Man Numbers in the Original Michaelian Group

The description of Levels of Being in the section above mentions "Man Number" this and that. This terminology for the seven steps or stages or levels on one's spiritual path also appears in the original Michaelian group transcriptions, beginning two months after the Michaels first revealed themselves:

When love is turned on, this in itself puts you on a high. Maybe that's "Man #4" [Balanced Man] according to Gurdjieff and it is not permanent. [SJC, 06 October 1973] ... Robert was a "Man #5" — full of mystery and charisma. Should we wait until we are [before we presume to spread the Michaelian teaching]?

He did not wait. He was confident that such evolution would occur, and on this basis made his decision.... [S/C, 20 October 1973]

I would like to know if the Gurdjieff idea of Man #1 [physically focused], Man #2 [emotionally focused], Man #3 [mentally focused] is correct and if so, at what level am I?

It is valid when the Man Number Six is thought of as the Transcendental Soul. You are [still Man #3 but you are] going toward Balance [Man #4]. Fear of emotional abandon holds you back — the fear of losing emotional control. [SJC, 20 October 1973]

Agape love sputters for only fifteen seconds and it does not happen often. Is this moving toward a #4 [Balanced] person? We agree. It is a difficult place to be, but definitely rewarding. [SJC, 03 March 1974]

How does the Adept, Occult Master correlate to the #4, #5 and #6 Man of Gurdjieff?

They are not precisely the same, although the Adept is usually crystallized Number Four. The Occult Master has use of Higher Centers at will. It merely means that this soul is in Balance [or beyond] with no danger of backsliding. [SIC, 03 March 1974]

As we will see in Part Three, original Michaelian group Overleaf Chart #3 puts the Adept at Man #5 and the Occult Master at Man #7, so "not precisely the same" is indeed ambiguous. Refer to the table further on in this section.

If we just go along reincarnating, it is okay, but if we are in this teaching, we should be changing. It does not seem that Michael is getting us to be conscious [Men #5] or even Number Four [Balanced Man] people. Life goes on the same old dreary way, and it doesn't appear that it will change. [SJC,14 April 1974]

Michael has a job to do, too, as I see it, and that is to produce #4 and #5 people in his teaching. ... If Michael is sensitive, he will help us solve our internal problems. The discovery track of what we are has to be complete before becoming a #4 or #5 Man. Comment, please.

We have given you the tools by which you can discover these within yourself. Telling you where the problem areas are would produce the same initial hostility and resentment as hearing it from a psychologist would. When you discover them within yourself, you also at that time verify them for yourself, and then they are truth for you. Until then, they are merely the opinions of another. Pointing to the tools is sometimes not enough, and the path is agonizingly slow. We would say that the conscious beings you have mentioned (Jesus, Fulton Sheen, Gandhi, *etc.*) were not given more than the tools in the beginning. As you begin to use the tools, then you are given more material to work on. Only then can the path be trodden in a straight line. Until you begin to use the tools, all you have is information, and more information can hinder your growth rather than help it, if all previous data has not been assimilated. One of the things you have not verified to your satisfaction is your own ability to change some of your uncomfortable Overleaves, and until you do, all

lessons concerning the how to of more difficult tasks would be in vain. All is changeable. Nothing is stationary. [SJC, 03 September 1974]

Gurdjieff says that Mechanical Man has no will (a Man #1, #2 or #3). He may start out to pursue a course, but will succumb to societal pressures, fears, habits, *et cetera*. Gurdjieff says in order to become conscious, one must attach himself to a man with "C" influence [have direct contact with an enlightened person], and allow him to function as his will. Michael cannot function in this capacity as he needs a medium [channel]... [SJC, 21 September 1974]

From these comments we understand that the Michaels considered these seven stages of spiritual development spoken of by Gurdjieff to be valid, or at least useful.

The following tabulation of Man Numbers with descriptions was among the original Michaelian group documents given to the Center for Michael Teachings, Inc., and dated March 1975:

| Table 1Ja — GURDJIEFF'S LEVELS of BEING | | | | |
|---|------------------|----------------------------|----------------------------|------------------------------|
| RANK | LEVEL OF BEING | COMMENTS ON THE PAGE | GURDJIEFF'S CORRELATION | EVENTUAL CORRELATION |
| 1 | MAN NUMBER ONE | Instinctive-Moving Man | Moving Center | Lower Moving Center |
| 2 | MAN NUMBER TWO | Emotional Man (feeling) | Emotional Center | Lower Emotional Center |
| 3 | MAN NUMBER THREE | Thinking Man | Intellectual Center | Lower Intellectual Center |
| 4 | MAN NUMBER FOUR | Balanced Man | unspecified | Impulse (Instinctive) Center |
| 5 | MAN NUMBER FIVE | Integrated Man (the Adept) | Higher Emotional Center | Higher Intellectual Center |
| 6 | MAN NUMBER SIX | Conscious Man | Higher Intellectual Center | Higher Emotional Center |
| 7 | MAN NUMBER SEVEN | Perfected Man (the Master) | unspecified | Higher Moving Center |

My comments on this table are as follows:

- RANK: These numbers in the first column were not shown on the original Michaelian group sheet; they are shown only for comparison with other septenaries shown in other tables in this book.
- LEVEL OF BEING: The second column shows the Man Numbers shown on the original Michaelian group sheet.
- COMMENTS ON PAGE: The third column reproduces the comments that were on the original Michaelian group sheet. This, of course, reflected the state of the original Michaelian group understanding at the time, which was really just the Gurdjieffian understanding. More is said about this column in the next section of this chapter. In an original Michaelian group quotation, a Transcendental Soul is regarded as a Man #6.
- GURDJIEFF'S CORRELATION: The fourth column shows the Centers that correspond to the Man Numbers, aka Levels of Being, in previous columns. This column was not shown on the original Michaelian group table; the information was extracted from the quotations of the Gurdjieffian teachings in the previous two sections.
- EVENTUAL CORRELATION: The last column shows the understanding that the Michaelian teachings has evolved toward, subsequent to the original Michaelian group. This is the Natural Sequence. All three columns are reviewed in greater detail in various chapters in this *History* book.

Other than Chart #3, the Poles of the Overleaves, reviewed in Part Three, the Level of Being category does not show up on any original Michaelian group Charts (or subsequent Overleaf Charts) that we review in Part Three. However, the Centers — with which the Levels of Being are correlated — are always on the Charts.

So far as I have been able to determine, Gurdjieff did not correlate all of the Levels of Being with particular Centers, probably because he did not understand that there were seven separate Centers. As we saw in Chapter 1D above, "The Seven Centers", Gurdjieff considered the Instinctive and Sexual Centers to be mere Parts of the Moving Center, and not separate Centers. However, in the original Michaelian group they are distinct Centers. The original Michaelian group started the process of correlating all Centers with Levels of Being by first defining seven Centers.

Through the history of the Overleaf Chart subsequent to the original Michaelian group we find that progress was made in the sequencing and the nature of the Centers and their correlation to the Levels of Being. As shown in subsequent chapters, this background information is important for establishing the proper order of the "Septenarian Attributes", the "sevenness" of the Michaelian teachings.

Level of Being in the Original Michaelian Group

Members of the original Michaelian group were very interested in advancing on a spiritual path. Consequently, a question about Level of Being came up in one of the earliest channeling sessions, and then came up repeatedly thereafter. Here are the instances:

I have a question. It has to do with the fact that I have only known one living master [Robert Burton of the Fellowship of Friends], and when it comes to patterning my behavior, I have only this one model, and my tendency is, as the Level of Being goes up, to follow this model that I already know. Is this correct?

The pattern is a good one.... [SJC, 26 August 1973]

The pattern of the Levels of Being may have been a "good one", but it was improved upon in the Michaelian teachings during the original Michaelian group, and further improved in subsequent decades.

How? How? How can this [concept of Monads] solve the reason to be?

If the Personality can take leave long enough to consider the task of the soul, then this will be clear. The task on the Physical Plane is to experience "all of life". Many Monads are not completed for many centuries [in many incarnations]. Others must be completed before the soul can perceive at a higher Level of Being. The Monads are the only reason to be that we know of. [SJC, 17 March 1974]

No. That is just the way it is. I need more passion. It seems that Robert was in a Power Mode, and he was extremely patient. He attracted people by his Level of Being. If one is to be a spreader of the Logos, one has to be a high person, probably in an Exalted Role [Sage, Priest, King]. It bugs me to be told to bring new people, then they pop in and out. To spread the Logos as Robert does, you must have a Level of Being to attract people. You must be integrated [#5] and mysterious [#6].

You almost have to have some type of mystery, yes — we agree with that. Most people do seek a teaching, and this includes organized religion that introduces some intrigue into their lives. The teaching, thereby, becomes exciting. Many do it with gimmicks; others with what you call charisma. It only works because it provides that special hint of the mysterious realm beyond the five senses to which you as the teacher have access, and that they can someday hope to glimpse. We are not opposed to this as long as the teacher does not begin to believe in his own magic. [SJC, 14 April 1974]

So, enticement to raise one's Level of Being might start out with charisma and mystery, but it cannot stay there.

Can we ever experience total death of the False Personality? Are there lapses [back into False Personality]? Does it always continue? There are instances which we remembered well where there has been total death or extinguishment of the False Personality, concomitant with the emergence of True Personality of the Essence. This was indeed gratifying to behold, but it happens rarely on the Physical Plane, even in Adepts who are at a high Level of Being. They must be constantly alert to prevent the instinctive behavior reactions of the False Personality from sneaking in. [SJC, 25 January 1975]

A spontaneous healing appeared to have occurred with a lady afflicted with numerous physical ailments, including arthritis. What happened here?

What occurred here was a transfer of higher hydrogens [a Gurdjieff concept] by a person well able to transfer. This, incidentally, is what happens when spontaneous healings occur.... When you give higher hydrogens, they do produce remarkable phenomena. For instance, the man Edgar Cayce was able to remain in trance for prolonged periods during which the personality was deactivated. He received much high hydrogen during that time and was able to transfer these, but as he never received any in return, his own Level of Being never changed and he remained Secondary Man [Gurdjieff's "man # 2" — primarily emotional] throughout his life. [S/C, 15 April 1975]

In all of these quotes from the original Michaelian group transcriptions, there is no indication that the Michaels taught the Levels of Being differently from the way that Gurdjieff taught it: they are stages in the development toward becoming a fully enlightened person.

Concluding Remarks on Levels of Being

There are various ways and means to raise one's Level of Being. These were espoused by Gurdjieff, and by the Michaels during the original Michaelian group. These methods have not gained much traction in the Michaelian teachings because, for the most part, they require an intense, concentrated, and intimate environment, with committed students living and working together to apply the tools of spiritual development in a "school" founded and intended for this very purpose. Monasteries and communes have historically been established to foster spiritual growth. That situation does not (yet) exist in the Michaelian teachings community because the community is dispersed all over the world. Consequently, the modern Michaelian teachings community has pretty much lost sight of, or lost interest in, the whole concept of Level of Being and the techniques for raising it in oneself and in others. In the unlikely event that such an interest is ever resurrected, it is explored at length and in depth in my book *The Tao of Relationships: The Chemistry and Alchemy of Service and Intimacy,* and in the Part on "Stages of Enlightenment" in my book *The Tao of Cosmogony.*

There is a correlation of Levels of Being with other septenaries in the Overleaf System. This is all explained in other chapters of this *History* book and in my other books. Yet other septenaries that correlate with Levels of Being are explored in my book *The Tao of Cosmogony*.

Chapter 1K

GURDJIEFF'S LAW OF THREE

Nearly every Overleaf Chart that we examine in Part Three applies the Attribute "Ordinal" or "Neutral", or "Exalted/Cardinal" to each Overleaf. These are referred to as the Dialectic Attributes in this *History* book. What do these terms mean? Where did this convention come from? Why are they applied to the Overleaves?

These three words have a strong similarity to a component of the Gurdjieffian teaching, with which some of the original Michaelian group founding members were familiar as a result of their participation in a local Gurdjieffian study group that called itself the Fellowship of Friends. Gurdjieff taught an idea that he called the "Law of Three"; it defined how "passive–negative–denial" and "neutral–reconciliation" and "active–positive–affirmation" forces are necessary for anything to happen. Gurdjieff taught in the first half of the 20th Century but the Law of Three concept itself is actually quite ancient. For instance, in an Oriental philosophy, the synonymous words were "yin", "chi", and "yang"; Wikipedia has an entry on the concepts behind those words: >https://en.wikipedia.org/wiki/Yin_and_yang<. In more modern times, the words sometimes used as equivalent in meaning to the Dialectic Attributes and the Law of Three are "thesis", "antithesis", and "synthesis"; this is explained here: >https://en.wikipedia.org/wiki/Thesis,_antithesis,_synthesis<. If you read those Wikipedia articles, you will have a good foundation for understanding concepts that are important to an understanding of the Overleaf System, and of the Michaelian teachings in general.

The similarity of these various triads of words to Ordinal–Neutral–Cardinal in the Michaelian teachings should be obvious to the reader without explanation, but far be it from a Scholar–Artisan–Priest–Sage (*moi*) to not provide explanations. The terms used in the original Michaelian group (Cardinal, Ordinal, Neutral) have the same meaning as the terms in the previous paragraph. However, they appear not to have come from Gurdjieff or these other philosophies; they came from the Michaels themselves. The Michaels started out using this triad of words in reference to a phenomenon they called "Monads". They described Monads as necessary experiences, consisting of complementary opposites, to advance a soul on its spiritual path. The growth process consisted of having Ordinal experiences and the opposite, Cardinal experiences, such that when completed, the experience was Neutral. When the soul has experienced both sides of all of the necessary Monads and thereby Neutralized them, then the soul is complete as far as the Physical Plane is concerned, and can move on to higher realms of experience, where the process continues according to the same pattern of reconciling opposites in the process of learning. For the whole story about that, refer to the chapter on Monads in my book *Study Papers on the Original Michaelian Group*.

It is not coincidental that the Overleaf System uses the same terminology as the Dialectic terminology, because the Overleaf System is all about experiencing Ordinal and Neutral and Cardinal personality traits in various lifetimes. When all of the Overleaf traits have been experienced in various lifetimes, the soul is complete as far as the Physical Plane is concerned, and the soul can move on to higher realms of experience. Hence, the application of Dialectic Attributes to the Overleaf System. Refer to Chapter 2B in Part Two, "Attributes of Overleaves", for a complete listing of the synonyms of the Dialectic Attributes.

The purpose of this chapter is to put the Gurdjieffian teachings about the Law of Three and the original Michaelian group transcriptions together to show the applicability of these terms and this concept to the Overleaf System, the subject of this *History* book.

Gurdjieff's Law of Three

In the very first session of the original Michaelian group in which the Michaels appeared, one of members asked the Michaels about other sources on their teaching about Monads:

Has anybody ever written about this [subject of Monads] on our plane?

Many knew: [Teilhard de] Chardin, [Georges] <u>Gurdjieff</u>, [Aldous] Huxley. [John] Lilly knows too. [SJC, 12 August 1973]

Having some acquaintance with these authors can support a more thorough understanding of this subject, but we investigate only Gurdjieff. Although there are similarities between the Michaels' teaching about Monads and Gurdjieff's teaching about the Law of Three, they do not seem to be quite the same thing. Monad — the word itself — refers to "oneness", and obviously the Law of Three refers to "threeness". To quote Gurdjieff's student Ouspensky:

The number of fundamental laws which govern all [time-like] <u>processes</u> both in the world and in man is very small. Different numerical combinations of a few elementary forces create all the seeming variety of phenomena. In order to understand the <u>mechanics of the universe</u> it is necessary to resolve complex phenomena into these elementary forces. The first fundamental law of the universe is the law of three forces, or three principles, or, as it is often called, the law of three. According to this law every action, every phenomenon in all worlds without exception, is the result of a simultaneous action of three forces — the <u>positive</u>, the <u>negative</u>, and the <u>neutralizing</u>. [P. D. Ouspensky, *In Search of the Miraculous*, p. 122]

The Law of Three, in a short description, means that three 'forces' enter into every manifestation, into every phenomenon and every event. They are called (but these are only words, because they do not express their qualities) positive, negative and neutralizing, or active, passive and neutralizing, or still more simply they may be called first force, second force and third force.... Everything in the world, all manifestations of energy, all kinds of action, whether in the world or in human activity, whether internal or external, are always manifestations of three forces which exist in nature. [P. D. Ouspensky, *The Fourth Way*, pp. 16 and 189]

This website, >https://en.wikipedia.org/wiki/Fourth_Way_enneagram<, had this to say about the Law of Three:

The Law of Three holds that three forces act on any event, which can be called <u>Active</u>, <u>Passive</u>, and <u>Neutralizing</u> forces, or simply First, Second, and Third forces respectively. These three forces can appear in any order, 123 for example or 312, giving 6 possible "triads" of forces describing 6 very broad types of events. Humanity is said to be "third force blind", to have difficulty recognizing the third force, which may appear to us in the guise of a result or of a background environment. "People cannot perceive the third force directly any more than they can spatially perceive the 'fourth dimension'" Gurdjieff is quoted as saying. [retrieved 11 July 2019]

Another Wikipedia article, >https://en.wikipedia.org/wiki/Fourth_Way<, says this about the Law of Three: The Law of Three is described by Gurdjieff as "the second fundamental cosmic law". This law states that every whole phenomenon is composed of three separate sources, which are Active, Passive and Reconciling or Neutral. This law applies to everything in the universe and humanity, as well as all the [space-like] structures and [time-like] processes.... Gurdjieff taught his students to think of the law of three forces as essential to transforming the energy of the human being. The process of transformation requires the three actions of affirmation, denial and reconciliation. [retrieved 10 September 2019]

Underlines in all of these quotations are my own emphasis. Their correlation with the Michaelian teachings is as follows:

- What the Michaels referred to as Ordinal, Gurdjieff referred to as passive and negative and denial.
- · What the Michaels referred to as Cardinal, Gurdjieff referred to as active and positive and affirmation.
- What the Michaels referred to as Neutral, Gurdjieff referred to as neutralizing and reconciliation.

These quotations describe what Gurdjieff meant by the Law of Three. The Michaels, when talking about Monads, were referring to life experiences that are part of a required curriculum in reincarnation; these consist of an Ordinal Pole and a Cardinal Pole (the opposite of the Ordinal Pole), which gives a complete understanding of the experience because one sees it from both sides. When both poles are experienced, and therefore Neutralized, one advances to another experience of Polarity. This also goes somewhere in life, namely, toward cycling off the Physical Plane. The same Law of Three applies to the Overleaf System, because it is has "structures and processes" built on that law.

Note that, per Gurdjieff, the Law of Three applies to the entire Cosmos (not just to human experience), so it includes both the structure of space in levels as well as the structure of time in stages. Subsequent chapters will point out that this makes sense in terms of the Overleaf chart, which has seven space-like "Aspects" (Goal, Shadow, Attitude, Soul Age, Center, Role, Mode) and seven time-like "Processes" (Termination, Involution, Analysis, Combination, Synthesis, Evolution, Origination).

The Law of Three in the Fellowship of Friends

In the early days of the Fellowship of Friends, a fellow named Harold Wirk drew many cartoons to illustrate features of the Gurdjieffian teachings with graphics and text. These cartoons were known to founding members of the original Michaelian group; they can now be found on the internet, as well as in Volume 2 of *Michael Speaks — The Legacy of Sarah Chambers*. The cartoon on the Law of Three has this text (underlines are my emphasis):

The first thing to remember is that everything in the world — all manifestation of energy, all kinds of action, whether in the world or human activity, whether <u>internal [personality]</u> or <u>external [universe]</u> — are always manifestation of three forces which exist in nature: Active, Passive, and Neutralizing.

When three forces meet together (triad) things happen! If they do not come together, nothing happens.

These two do not differ from one another as activity and passivity differ in our ordinary understanding of these terms. Active and Passive forces are both active, for a force cannot be passive. But there is a certain difference in their activity, and this difference makes all the variety of phenomena that exist in the world.

In ordinary thinking we realize the existence of two forces, <u>action</u> and <u>resistance</u>, <u>positive</u> and <u>negative</u> electricity, and so on. But in this state of consciousness we do not see that three forces are always present in every event, every phenomenon, and that only a conjunction of three forces can produce an event.

Suppose you want to study something — some "I's" want to [= Yes], that is, and some "I's" don't [= No]. They represent active and passive forces. Suppose that this study produces some emotion in you. That emotion would be the neutralizing force, and then you could study. If emotion does not come, the "I's" will continue to argue, and nothing will happen.

Two forces will not produce anything; they cannot. They will only turn round one another without any result. For some reason we are "third force blind", although we can observe it in many chemical and biological phenomena.

Why study these forces? Behind all things are <u>cosmic laws</u>. You cannot understand why things happen in one way or another unless you know these laws.

In the Work you can see 2 forces: the ideas of the System and your own resistance, your own sleep. A third force will enter and help one side or the other.

- Three forces exist in Nature and in Man.
- They should be studied psychologically by means of self-observation. One must observe 1st and 2nd force before one can see 3rd force.
- In making aim, 2nd force must be calculated; otherwise the aim will be impractical. Aim (1st force) makes 2nd force appear.
- A force is invisible and our more direct contact with what is invisible is by means of self-observation.
- Forces are not things. A desire is a force, not a thing. For example:
 - Life is the neutralization force which keeps personality active.
 - The Work is the neutralizing force which activates essence.

As stated there, the Law of Three is a "cosmic law". In the microcosm, in the realm of the atom, the science at the time of Gurdjieff in the early 20th Century found that atoms consisted of electrons, which were assigned a 'negative' charge, and protons, which where assigned a 'positive' charge, and neutrons that had no electrical valence. In the macrocosm, the realm of the cosmos, the science at the time of Gurdjieff came to a new understanding of the attractive force of gravitation via Einsteinian Relativity, and Edwin Hubble discovered the opposite of gravity, the repulsive force causing the expansion of the universe. Considered together, the three forces provide a dynamic equilibrium in the universe that drives the formation of all structure in space and time.

In terms of the Overleaf System, the human personality is intermediate in space-like scale and time-like duration between the microcosm and the macrocosm, and it is also structured according to the Law of Three, with its Dialectic Attributes of Ordinal, Cardinal, and Neutral; let me explain that in the next section. The key to understanding is simply that the same three concepts apply to both, although different words are used.

The Law of Three in the Original Michaelian Group

Gurdjieff's teaching about the Law of Three is pretty close to the Michaels' teaching on Monads. A much more extensive explanation — too long to repeat here — of the Law of Three appears in Ouspensky's book *In Search of the Miraculous* on pages 77–81, and it is almost certain that the founding members of the original Michaelian group were familiar with it. However, the phrase, "Law of Three", does not occur in any of the original Michaelian group transcription that The Center for Michael Teachings, Inc., has acquired. There are a few references to positive and negative "forces" at work, but these seem to be influences or pressures not related to the Law of Three. There are a few instances in the original Michaelian group transcriptions that do seem to reference the Law of Three, and some of them even use the same word, "force", the same word that Gurdjieff and Ouspensky used, as quoted above. For instance:

Could you elaborate on the third chapter of Genesis about what the knowledge of good and evil is?

Knowledge of positive and negative force. [S/C, 22 November 1973]

This is quite a common correlation, equating "good and evil" to "positive and negative". From the Fourth Way quote above, we see that "positive and negative forces" are the same thing as "first and second forces". We shall see that the Michaels use these very terms when referring to the Ordinal and Cardinal poles of the Monads. Therefore, even though it is not quite explicit, there obviously is a correlation of Gurdjieff's Law of Three and the Michaels' Monads.

In another original Michaelian group transcription, Gurdjieff's word "force" is used, and this time it is the "third force":

We asked for a comment about the "third force" of which Gurdjieff spoke; the need of this [third force] to go [progress] from Personality to Essence.

We have spoken many times of the <u>neutral</u> universal flow. This is what they [Fourth Way teachers] try to put into words as the force acting upon you. Yes, this does exist, and yes, does have the influence that the student is trying to explain. When the fulcrum tips too widely to one side or the other though, the neutral force has no effect on the action. Only when the middle ground is reached, or at least approached, can this [force] be effective. This is why it is so difficult for students to put [it] into words. It is illusively [elusively?] felt by all but the most powerful Adepts [who feel it strongly because they are so close to Balance]. It is almost never recognized by the others [non-Adepts] who come into its range unaware. In other words, although they are benefited, they do not know why. They only feel the neutralizing effect, but cannot describe the feeling. [S/C, 07 December 1974]

Based on this endorsement of Gurdjieff and the Law of Three, the reader is encouraged to research the Fourth Way teaching on the Law of Three for further understanding. The Michaels here equate the "Balancing" force with Gurdjieff's third force, the Neutralizing force. Third force is not a static condition between first force and second force; it is a force of its own that, as stated above, has benefits on the spiritual path, progress in the Levels of Being from Personality to Essence. Using another term mentioned above, it is the "synthesis" force, the force that seeks to reunite what was fragmented in the primordial schisms of Tao-Consciousness. Without this force, there would be no progress. There would only be an eternal stale-mate in the war between light and dark, good and evil, positive and negative, active and passive, and so on. (Note that the closer one comes to resolving the conflict, the more powerfully one feels the force of progress to the next stage of the overall journey.)

More was said about forces a month later:

There was a discussion regarding "neutralizing force" or forces — one flows into the other — has part of another within — there is no "control" — positive force, use of the Intellectual Center to start the Moving Center, et al.

... we have no quarrel with the need for [a] <u>neutralizing</u> force in actions involving the Centers. All <u>yin-yang</u> activities do require this neutralizing force for stability. [SJC, 12 January 1975]

So, there is yet another terminology for the cosmic principle — this time an ancient oriental terminology — for the Law of Three: yin, yang, chi. Putting this statement together with the one a month earlier quoted above, we note again that neutralizing–synthesizing force is the same as Gurdjieff's third force in the triad.

One of the functions of third force is to keep the metaphorical 'train' of progress from 'going off the rails' on either the yin (negative) side or the yang (positive) side of the 'tracks'. And, specifically in regard to Centers, the above is another advocacy statement for becoming Balanced in the Neutral Center; refer to Chapter 4 in Part Four, "The Instinctive Center". The stability achieved by Balanced Man is not the static end of the spiritual path, however. It is a precondition to progressing ever onward and upward, to becoming an Adept and then a Master in the higher Centers, at Levels of Being beyond Man # 4, Balanced Man as described in the previous chapter of this *History* book.

The Law of Three forces apply to an entire group of people on their spiritual quest, as well as to individuals on their spiritual path:

[In the original Michaelian group] three forces have come together and asked for cosmic influence. We [the Michaels] are to provide that and pass [on] the system by which you must teach and learn truth in [Level of] Being. If you lose one of these [forces], you will also lose your effectiveness and eventually also lose contact [with cosmic influence] and be left with a false teaching — an incomplete system. [S/C, 01 April 1975]

"Teach" and "learn" are poles of a Monad that results in spiritual growth. Spiritual paths are not true unless they consist of the three forces: learning, teaching, and growing. Refer to the previous chapter, Chapter 1J, "Gurdjieff's Levels of Being", for more information on what the Michaels meant by the word "Being" in the quote above. Recall that Gurdjieff and Ouspensky said that all three forces are necessary to make anything happen. This Michaelian quote agrees with that.

For the convenience of the reader, the following table of correspondences for Law of Three and Monads and Dialectic Attributes is provided.

| Table 1Ka — CORRESPONDENCES to the LAW OF THREE | | | | | | |
|---|----------------------------|---------------------------|-----------------------------|--|--|--|
| LAW OF THREE | Negative, Passive, Denying | Neutralizing, Reconciling | Positive, Active, Affirming | | | |
| DIALECTIC ATTRIBUTES | Ordinal | Neutral | Cardinal | | | |
| ORIENTAL TERMS | Yin | Yin Chi | | | | |
| PHILOSOPHICAL TERMS | Thesis | Synthesis | Antithesis | | | |

My comments on this table are as follows:

- LAW OF THREE: The first row shows some of the descriptive words given to the three laws in the Gurdjieffian teachings.
- DIALECTIC ATTRIBUTES: The second row shows the names given to the Law of Three in the Michaelian teachings. These are applied to the experiential Monads that a soul completes in its journey of reincarnation. The words and concepts also apply to the Overleaf System.
- ORIENTAL TERMS: The third row shows the names given to the three laws in Oriental philosophy. Recall Chapter 42 of the *Tao Te Ching* that I quote a number of times in this book: "All things carry the Yin and embrace the Yang / Through the blending of the Chi they achieve harmony." That is the Law of Three, known from ancient times, and in many cultures, by various names.
- PHILOSOPHICAL TERMS: The fourth row shows the names given to Gurdjieff's Law of Three in Hegel's dialectic philosophy. A brief overview of this formulation of the concept is provided in the next section of this chapter.

The Dialectic Principle

What Gurdjieff called a "law" I call a "principle". What the Michaels refer to as Ordinal, Neutral, and Cardinal, I refer to as the Dialectic Attributes. What is going on with all that? The word "dialectic" is a term found in philosophy, and, as usual, Wikipedia has somewhat to say about it:

Dialectic ... also known as the dialectical method, refers originally to dialogue between people holding different points of view about a subject but wishing to arrive at the truth through reasoned argumentation. Dialectic resembles debate, but the concept excludes subjective elements such as emotional appeal and rhetoric. It has its origins in ancient philosophy and continued to be developed in the Middle Ages.

Hegelianism refigured "dialectic" to no longer refer to a literal dialogue. Instead, the term takes on the specialized meaning of <u>development</u> by way of <u>overcoming internal contradictions</u>.... Dialectic implies a <u>developmental process</u> and so does not naturally fit within classical logic. Nevertheless, some twentieth-century logicians have attempted to formalize it.

It is the Hegelian meaning of the word and concept that I equate with Gurdjieff's formulation of the Law of Three and the Michaelian notion of Monads. Thus, the Dialectic Principle is a theory of process or progress or development or evolution over time, where seemingly contradictory but actually complementary ideas interact until they resolve their differences at the next space-like 'higher' level or time-like 'later' stage of understanding and integration, so let's take a closer look at that.

After that brief introduction, the Wikipedia article continues with a history of the dialectic concept starting with the ancient Greek philosophers and continuing through medieval times, and then has this to say:

The concept of dialectics was given new life at the start of the 19th century by [German idealist philosopher] Georg Wilhelm Friedrich Hegel, whose dialectical model of [space-like] nature and of [time-like] history made dialectics a fundamental aspect of reality.... Hegel was influenced by [another German idealist philosopher] Johann Gottlieb Fichte's conception of synthesis, although Hegel didn't adopt Fichte's "thesis—antithesis—synthesis" language.... ...rather, Hegel ... saw his own dialectic as flowing out of "the inner life and self-movement" of the content itself [as distinct from the outer context].

At various places in these explanations of the Law of Three and Monads and the Dialectic Principle one can find references to three dimensions of contraries. This is an appropriate place in this chapter to note that the Michaelian teachings refers to these dimensions as the three Axes of Action, Inspiration, and Expression. For instance, Action consists of "active" and "passive" poles; Inspiration consists of "attraction" and "repulsion" in regard to "good" and "evil" poles; Expression consists of "inner" and "outer" realms, or "content" and "context" realms, or "implicit" and "explicit" realms. Notice those three Axes or dimensions in the following quotations:

The Hegelian dialectic describes <u>changes</u> in the [abstract] forms of thought through their own internal contradictions into [external] concrete forms that overcome previous oppositions.

In that paragraph, I correlate the "concrete forms" with the Ordinal Pole of the Expression Axis and "abstract forms" with the Cardinal Pole of the Expression Axis.

This dialectic is sometimes presented in a <u>threefold</u> manner, as first stated by Heinrich Moritz Chalybäus, as comprising <u>three dialectical stages of development</u>: a <u>thesis</u>, giving rise to its reaction; an <u>antithesis</u>, which contradicts or negates the thesis; and the tension between the two being resolved by means of a <u>synthesis</u>.

As described in a previous section, in the Gurdjieffian teachings, the Law of Three consists of three forces: passive/negative/denying versus active/positive/affirming and neutralizing/reconciling. As described in a previous section, in the Michaelian teachings, a Monad consists of a new human experience that typically arrives in the Negative Pole, and that person passes through the experience to arrive at the Positive Pole, and the reconciliation of the poles of the experience makes for a complete understanding of the experience. As described by Wikipedia, in early versions of this concept, these three were called "thesis" versus "antithesis" reconciling in their "synthesis".

By contrast, the terms <u>abstract</u>, <u>negative</u>, and <u>concrete</u> suggest a flaw or an incompleteness in any initial thesis. For Hegel, the concrete must always pass through the phase of the negative, that is, mediation. This is the essence of what is popularly called Hegelian dialectics.

Similarly, in the Michaelian teachings per the Taijitu Tango Principle, the "concrete" side of a Monad is Ordinal in space-like being and Cardinal in time-like doing, and the "abstract" side of the Monad is Cardinal in space-like being and Ordinal in time-like doing, and to completely experience both sides of the Monad is the reconciliation of the two in the Neutral zone.

To describe the activity of <u>overcoming the negative</u>, Hegel often used the term *Aufhebung*, variously translated into English as "sublation" or "overcoming", to conceive of the working of the dialectic. Roughly, the term indicates preserving the true portion of an idea, thing, society, and so forth, while moving beyond its limitations. What is sublated, on the one hand, is overcome, but, on the other hand, is preserved and maintained.

The basic notion here is that each successive time-like stage in a natural developmental process includes the previous stage or stages while it also transcends it or them. In other words, in a natural time-like edifice or structure, a succeeding stage is necessarily built upon the foundation of previous stages. The "negative" is in

the past and the "positive" is in the future and the "neutral" is in the now, the now being held in suspension between the two poles of any process of "overcoming".

As in the Socratic dialectic, Hegel claimed to proceed by making <u>implicit</u> contradictions <u>explicit</u> [Expression Axis]: each stage of the <u>process</u> is the product of contradictions inherent or implicit in the preceding stage. On his view, the purpose of dialectics is "to study things in their own [space-like] being and movement [time-like doing] and thus to demonstrate the finitude of the partial categories of understanding".

The "Socratic dialectic" mentioned in that quote is a process, formalized by Socrates, of asking questions about an issue until one arrives at a final answer, where possible. The implicit question is regarded as a negative and the explicit answer is regarded as a positive; the process of alternating the two 'drills down to bedrock'. Similarly, in the Michaelian teachings, the implicit/questioning side of a Monad is Ordinal, and the explicit/answering side of the Monad is Cardinal. Typically, in the septenarian version of this Dialectic Principle, the progress of this process passes through a central Neutral stage between the minor stages of alternations, and passes through another major Neutral stage from one septenary to the next.

For Hegel, even [time-like] <u>history</u> can be reconstructed as a unified dialectic, the major stages of which chart a <u>progression</u> from self-alienation as servitude to self-unification and realization as the rational constitutional state of free and equal citizens. [>https://en.wikipedia.org/wiki/Dialectic< — retrieved 22 March 2024]

Hegel proposes that the unequal space-like stratification of political and socio-economic class structures tend to get resolved over time, meaning that they become more equal or level or Neutral in terms of those same structures. The Wikipedia article continues with a discussion of the work of Marx and Engels, who expanded this Hegelian insight into an effort to force exactly that transformation of politics and society and economics from a more primitive condition of being and doing to a more mature condition of being and doing.

The Wikipedia article does not say so, but I understand the Hegelian version of dialectic as another way of framing the tension between the ontologies of Relationalism versus Substantivalism. Basically and briefly, Relationalism is the notion that everything is known via contrast with an opposite, whereas Substantivalism is the notion that everything has an essential identity in terms of space-like existence and time-like function. One may read about that stuff in other Wikipedia articles: >https://en.wikipedia.org/wiki/Relationalism< and >https://en.wikipedia.org/wiki/Philosophy_of_space_and_time<. The dialectic reconciliation of these two opposing ontologies would be to say that they are both true: an oscillation between the two points of view drives the space-like aspect of the universe ever outward/inward and drives the time-like evolution of the universe ever forward/backward. To explain that further here would be to 'wade deeply into the weeds' of heavy-duty philosophizing, but that is too lengthy for this document, so I do exactly that in two of my other books, *The Tao of Cosmology* which covers the space-like Aspect of the Cosmos, and *The Tao of Cosmogony* which covers the time-like Process of the Cosmos.

Concluding Remarks on the Law of Three

So what more did the above have to do with the Overleaf System? It may have seemed like a diversion, but it is Good Work to recognize that the Overleaf System applies Attributes to the personality traits, namely Ordinal, Neutral, and Cardinal. The same principles, using different words, apply to the fundamental 'laws' and 'forces' of nature, as Gurdjieff said. In fact, it can be said that the Overleaf System is a subset of Nature, and therefore that the two follow the same pattern. The Overleaf System is like a map of personality traits, and the same features of the map, the Dialectic features, are also the features of Nature as a whole.

Let's put it this way:

- The Law of Three is fundamental to all that exists and functions, all being and doing, all space and time, as claimed by Gurdjieff.
- The Law of Three as described by the Michaels is fundamental to the Monads, the soul's journey through life. The subject of Monads leads naturally into the subject of the Dialectic Attributes (Ordinal, Cardinal, Neutral) which are applied to each Overleaf and which show up on practically every Overleaf Chart reviewed in Part Three. There is a great deal more information about that in Chapter 2B in Part Two, "Attributes of Overleaves".
- The Law of Three as described by the Michaels is fundamental to the Overleaf System. When I say that the Overleaf System is based on logical principles, I refer to such logical operations as Yes, No, Both, Neither, and Maybe. This logic is explained in Part One of my book *The Tao of Personality*.

• Even though the Gurdjieffian Law of Three and the Michaelian Monads are different words based on different numbers, we see that they do point to the same fundamental phenomenon.

The Dialectic Principle is one way of framing the notion that the space-like existence and the time-like function of the Cosmos is all about the learning process of the Tao, meaning that the Tao must first "forget" itself, and then second must "remember" itself, in order to arrive at a 'higher' space-like level and a 'later' time-like stage than it was in its more primitive existence and function. Recall the Natural Sequence of Tao's Template: the Tao produces the One, the One produces the Two, the Two produces the Three, the Three produces the All, the All produces the Three, the Three produces the Two, the Two produces the One, the One produces the Tao. Although the Dialectic Principle as commonly formulated recognizes the Ordinal and Cardinal (and Neutral) phases of the learning process, it does not recognize the Threeness (and thus the Sevenness) of the entire cycle as formulated in the Gurdjieffian teaching as the Law of Seven (see next chapter) Levels of Being (see previous chapter), and in the Michaelian teaching as what I call the Natural Sequence, which is scattered throughout this *History* book.

The Law of Three is a very deep 'rabbit hole', one of the deepest 'rabbit holes' that is explored in science and philosophy and theology. The whole shebang is explained in my books *The Tao of Cosmology* and *The Tao of Cosmogony*. There is also a chapter on the subject of Monads in my book *Study Papers on the Original Michaelian Group*. In that book there is also a chapter on "Balance", which is the Michaels' name for the Third Force of Gurdjieff.

Chapter 1L

GURDJIEFF'S LAW OF SEVEN

The previous chapter discussed Gurdjieff's teaching about the Law of Three, and we saw that there was a correlation to the Michaels' teaching about Monads, and to the structure of the Overleaf System. Gurdjieff's "Law of Seven", or "Octaves", is often mentioned in conjunction with the Law of Three, and both laws are said to be fundamental to the working of the universe and the working of personality. Every Michaelian student knows that 7 is a very important number in the Michaelian teachings. Some of the founding members of the original Michaelian group were familiar with the Gurdjieffian teachings, and there are some significant similarities between the two. Is there a relationship between the Gurdjieffian understanding of sevenness and the Michaelian presentation? The answer to that question is the subject of this chapter.

Law of Octaves

In the Gurdjieffian teachings, the Law of Seven is also called the Law of Octaves. "Octave" is, of course, a word that refers to the number eight. The reason for this choice of words is that Gurdjieff relates this alleged law of the universe to one particular phenomenon of it, namely the musical scale of the western tradition, in which there are eight notes divided into seven intervals, with the last (higher) note being twice the vibration speed of the first (lower) note, ad eternum from the slowest possible vibration to the fastest possible vibration. Gurdjieff claimed that truths about the workings of the cosmos, from slow to fast and including human experience, are embodied in the workings of the music scale; refer to pages 124–137 and pages 285–294 of Ouspensky's book, In Search of the Miraculous for that story. The relevant sentences expressing some principles of the Law of Seven were extracted from those pages in the following quote:

The number of fundamental laws which govern all processes both in the world and in man is very small. Different numerical combinations of a few elementary forces create all the seeming variety of phenomena. In order to understand the mechanics of the universe it is necessary to resolve complex phenomena into these elementary forces... The next fundamental law of the universe is the law of seven or the law of octaves. In order to understand the meaning of this law it is necessary to regard the universe as consisting of vibrations. In this connection according to the usual views accepted in the West, vibrations are continuous. This means that vibrations are usually regarded as proceeding uninterruptedly.... So that one of the fundamental propositions of our physics is the continuity of vibrations.... In this instance the view of ancient knowledge is opposed to that of contemporary science because at the base of the understanding of vibrations, ancient knowledge places the principle of the [step-wise] discontinuity of vibrations. The principle of the discontinuity of vibration means the definite and necessary character of all vibrations in nature ... to develop not uniformly but with periodical accelerations and retardations.... In order to determine these moments ... the lines of development of vibrations are divided into periods corresponding to the doubling or the halving of the number of vibrations in a given space of time... This means that within vibrations other vibrations proceed, and that every octave can be resolved into a great number of [fractalic] inner octaves. Each note of any octave can be regarded as an octave on another plane.... We have spoken earlier of the law of octaves, of the fact that every process, no matter upon what scale it takes place, is completely <u>determined</u> in its gradual <u>development</u> by the law of the <u>structure</u> of the seven-tone scale.

The underlined words are my emphasis. They reveal four *principles* of the Law of Seven. If one were to read all of the pages of that book that discuss the Law of Seven, one would see that several of the particulars of Gurdjieff's teaching about the Law of Seven have not come into the Michaelian teachings, but four principles have, and these are as follows:

1. The Law of Seven expresses a step-wise rather than a smooth, continuous development.

- 2. The development is an unalterable, pre-determined sequence with certain characteristics of each step that unfolds over time.
- 3. The Law of Seven applies to all of time (not space), from the shortest to the longest spans.
- 4. The Law of Seven is fractalic; that is, it is a repeating nested pattern, each octave nested inside the next higher octave, with variations within each octave because of the differing conditions of that octave.

The Law of Seven was significant in the Gurdjieffian teachings in several ways, among them the seven Centers and the seven Levels of Being, as explained in previous chapters. It is also significant that it shows up in many other esoteric cosmologies, as one can find from reading >www.kheper.net<, a veritable encyclopedia of introductions to esoteric cosmologies. Another one of my books, *The Tao of Cosmogony*, discusses many of these esoteric cosmologies that are based on the number 7.

It is well known among Michaelian students that the number 7 is also rather common in the structured component of the Michaelian teachings, such as that Fragments devolve and evolve through seven levels in each plane — of which there are seven — and that each Soul Age — of which there are seven — consists of seven Levels, and that the seven Internal Monads or Life-Stages consist of seven sub-stages. These are manifestations of the fractalic nesting mentioned above. It also shows up as the seven categories of Overleaves, which I refer to as Aspects. The number 7 occurs in many other contexts in the Michaelian teachings, generally having to do with a repetition in the course of time of the seven archetypal characteristics. Instantiations of Sevenness are discussed in many places in this *History* book.

Cycle

In the original Michaelian group transcriptions, the word "cycle" is often used as synonymous with what Gurdjieff called The Law of Seven. Like so many other words in the Michaelian teachings, it is capitalized in my books to call attention to the fact that it has a special meaning in the Michaelian teachings.

The word Cycle first appeared in the descriptions of Soul Ages in late August of 1973. It appeared many times thereafter in the transcriptions of the original Michaelian group, usually in the context of Soul Age, because each Age consisted of seven Levels, but sometimes in the context of the entire Cycle of reincarnation through seven Soul Ages. Many times the word Cycle was used in place of the word Level, referring to the seven Levels within each of the seven Soul Ages.

Among instances of the occurrences of the word Cycle, we find a clue that the Soul Ages (and by extension, the Levels), participate in the Dialectic Attributes:

A question was asked about all of us being Old Souls.

The Exalted [Cardinal] Cycles are sparsely populated. Sarah is right about the bell curve. [SJC, 26 August 1973]

The clue is the word Exalted, which typically refers to the Cardinal Overleaves. The use of this word implies that there are Ordinal Cycles and a Neutral Cycle. Therefore we can infer that the Infant, Baby, and Young Ages are Ordinal Cycles, Mature Soul Age is Neutral, and Old Soul Age is Cardinal.

Another use for the word Cycle during the original Michaelian group was in the case of what has become known as the Grand Cycle in subsequent Michaelian groups. This usage is also appropriate because it involves evolution through the seven planes. There is that number 7 again:

Is this a process of growth and evolution, and for what purpose, or just indigenous or if that is so, why?

To ensure the continuous creative force is the only purpose we know. The Entities no longer earth-bound experience lengthy periods on the high [three Cardinal] planes, and at the end reunite with the primeval force that is creation. Thus, the created becomes the creator and the [Grand] Cycle repeats itself *ad infinitum*. This is infinity. [SJC, 08 October 1973]

All of these uses of the word Cycle at various time scales — seven within seven within seven — indicate the fractal, nested, repetitious, recursive, nature of creation with regard to time. Note that in this passage, the word "high" is synonymous with the words Exalted and Cardinal.

Concluding Remarks on the Law of Seven

On page 286 of Ouspensky's book *In Search of the Miraculous* we find a description of how Gurdjieff ingeniously combined the Law of Three and the Law of Seven to come up with the Enneagram, which is a geometric figure

based on the number 9. In this *History* book, there is an introduction to the Enneagram in Chapter 1B above, "Personality Typologies". The Enneagram also makes an appearance in the subject of Body Types, as documented in chapters in Part One and Part Four of this *History* book. An internet search will provide a thorough description of the Enneagram. The Enneagram is not something that was even mentioned in the original Michaelian group transcriptions, let alone discussed. Instead, the Michaelian teachings combines threeness and sevenness in a different way, which in my books are called the Septenarian Attributes. This is discussed at length in other chapters of this *History* book and in my other books.

Gurdjieff taught that one of the fundamental aspects of reality was the existence of vibration, or frequency, and he proposed that the musical scale was an aspect of this law of nature. He read a lot into this notion that has not come into the Michaelian teachings. For instance, the notes of the scale are distinct so that there is an obvious difference between do and re and mi and fa and so and la and ti. The intervals between the notes are not all equal, so as to preserve harmonies between them; otherwise the music would be very disharmonious. However, if one were to try to relate the characteristics of, for instance, the seven Roles to the notes of the music scale, it obviously fails to account for the difference between a Warrior and a Slave and an Artisan and a Scholar and a Sage and a Priest and a King. Therefore, whatever legitimacy there might be in the way Gurdjieff understood the Law of Seven, that is not the way it is understood in the Michaelian teachings.

How is the Law of Seven to be understood in the Michaelian teachings? My book *The Tao of Cosmology* explains the Law of Seven as it applies to nature in general: space, time, and dimension. My book *The Tao of Personality* explains the Law of Seven as it applies to the Overleaf System. My book *The Tao of Cosmogony* explains the Law of Seven as it applies to time, at various time scales, from brief to eternity, and in various realms of nature and supernature. Portions of the understanding of Sevenness/septenary are found in this *History* book, but the presentation in those three books is much more extensive.

The Law of Seven is very important in mystical cosmologies, more so in Theosophy than in Gurdjieff, actually. I direct the reader to these internet resources:

https://en.wikipedia.org/wiki/Septenary_(Theosophy)

Chapter 1M

THE SEVEN BODY TYPES

In Part Three of this *History* book, many Overleaf Charts are reviewed, and many of those Charts have a category called Body Type. Although Body Type information was used in the original Michaelian group, this category did not originate within the original Michaelian group or any Michaelian group that followed the original Michaelian group. Rather, the original Michaelian group inherited information about Body Types from the Fellowship of Friends, the Fourth Way (Gurdjieffian teachings) group that some founding members attended in the two years immediately before becoming the original Michaelian group; subsequent Michaelian groups adopted the information from the original Michaelian group sources and/or the Fourth Way information. In this chapter we cover the history of the creation of this identity factor, and a little bit about the physical and personality characteristics of the Body Types as the original Michaelian group understood them. Chapter 4D in Part Four, "Body Types", explores the evolution of the understanding of this subject in the decades subsequent to the original Michaelian group.

History of Body Types

The Michaelian books authored by Chelsea Quinn Yarbro mention that there are Body Types, but they say nothing about the names or characteristics of Body Types. Several of the non-Yarbro Michaelian books do expound on Body Types, but none of them (except Hoodwin's *The Journey of Your Soul*, 1995) explains where the concept and categories and characteristics came from. This chapter expands on what Hoodwin had to say in more detail, and refers the reader to books and internet resources that complete the history of Body Types.

So let's get started on the history of Body Types with this fellow:

William Sheldon

As stated in the introductory paragraph of this chapter, the concept of Body Types was not revealed by the Michaels. One precursor was that of an endocrinologist in the 1920's, and another was the work of Rodney Collin — and we will get to those further on — but it had one well-known simple precursor in the work of a psychologist named William Sheldon in the 1940's. Following is some of his story, copied from a website: >https://britannica.com/biography/William-Sheldon#ref784523<.

William Sheldon, (born November 19, 1898, Warwick, Rhode Island, U.S. — died September 16, 1977, Cambridge, Massachusetts), American psychologist and physician who was best known for his theory associating physique, personality, and delinquency.

Sheldon attended the University of Chicago, where he received a Ph.D. in psychology in 1926 and an M.D. in 1933. In 1951, after having worked at various universities, Sheldon joined the University of Oregon Medical School, where he became distinguished professor of medicine and director of the constitution clinic, which examined the relationships between physical characteristics and disease; he remained there until his retirement in 1970. Also in 1951 he became director of research at the Biological Humanics Foundation in Cambridge, Massachusetts.

Influenced by the pragmatism of American philosopher and psychologist William James and by his background as a naturalist who had also studied animals, Sheldon became convinced that the psychological makeup of humans had biological foundations. He constructed a classification system that associated physiology and psychology, which he outlined in *The Varieties of Human Physique* (1940) and *The Varieties of Temperament* (1942). Sheldon classified people according to three body types: endomorphs, who are rounded and soft, were said to have a tendency toward a "viscerotonic" personality (i.e., relaxed, comfortable, extroverted); mesomorphs, who are square and muscular, were said to have a tendency toward a "somotonic" personality (i.e., active, dynamic,

assertive, aggressive); and ectomorphs, who are thin and fine-boned, were said to have a tendency toward a "cerebrotonic" personality (i.e., introverted, thoughtful, inhibited, sensitive).

Interested persons can do an internet search on those three terms — endomorph mesomorph ectomorph — and learn a lot more about them. You will have noticed that there are three types, but because the description here is so meager, you might not have noticed that the three types correlate with the three Axes of Inspiration, Action, and Expression respectively. It might be easier to realize this if these three types are correlated with the common ordinary lower Centers:

Mesomorphs have heavy-duty muscular bodies that are built for activity in the Moving Center.

Endomorphs have bodies that are fatty and therefore built for comfort in the Emotional Center.

Ectomorphs have bodies that are light duty and built for emphasis on the Intellectual Center.

This fact was noticed and documented in the Fourth Way group where founding members of the original Michaelian group were introduced to Body Types, as we shall see further on in this little history of the subject. It might also have been noticed by an original Michaelian group member and commented on by the Michaels, as recorded in this Q&A exchange:

Can Intellectually Centered people be obese? Are most people who are obese, Emotionally Centered?

They could, but the [light-duty] framework [of Intellectually Centered people] usually only stretches so far, and Emotionally Centered souls have more framework to work with. Yes, all joking aside, most obese souls are Emotionally Centered. [S/C, 03 January 1974]

This answer might be referring to the body type system originating with Dr. Sheldon: Mesomorphs (muscular), Endomorphs (fatty), and Ectomorphs (skin and bone). These correlate with Moving-, Emotionally-, and Intellectually-Centered individuals. Body Type and Centering appear to be intimately related, as noted here and in other sections in this chapter, and in other chapters of this *History* book.

In fact, Dr. Sheldon's understanding of body types is presented in the chapter on Body Types in Part Four as a potential better fit with the Overleaf System than another body type system developed in the 1950s. A far more significant influence on Body Types than Dr. Sheldon, as understood in the Michaelian teachings, was this fellow:

Rodney Collin

Moving on from Dr. Sheldon with his three primary body types in the 1940s, the next evolution in the concept came a decade later via Rodney Collin. He proposed seven Body Types in a book first published in 1958, called *The Theory of Celestial Influence (TCI)*. It was a crude model, and the development of it did not end there; a person by the name of Joel Friedlander has perhaps written the definitive book, named, of course, *Body Types*. It was first published in 1986, then updated in 1993, and then updated again in 2009. (I have the 1986 version.) Another book, *Human Types* — *Essence and the Enneagram*, was written by Susan Zannos and published in 1997. (Both Friedlander and Zannos were at one time or another members of the Fellowship of Friends.) If this subject fascinates you, then by all means purchase and study those three books. Apparently the subject is an evolving topic outside the Michaelian teachings, and as we shall see, it is an evolving topic inside the Michaelian teachings.

Friedlander says that Gurdjieff and Ouspensky never taught about Body Types. The Body Type concept as Michaelians have come to understand it was invented by Rodney Collin, a student of Ouspensky. He cobbled together his ideas about Body Types from four sources and wrote them up in his book *TCI*. Here is what Friedlander says about that, with my comments in [brackets]:

One of the chief contributions Collin made in his description of types was to assemble a mass of apparently unrelated knowledge in one place. He rediscovered the work of Dr. [Louis] Berman, and connected the insights of modern endocrinology to the lore of archaic priests and shamans... In [his 1968 book] *Theory of Celestial Influence*, Collin set out the analogy that lies behind the theory of body types. In its present form, this analogy compares four different levels: [1] the action and the interaction of the [endocrine] glands, [2] the [Astrological] characteristics of the [seven visible] planets [of our solar system]; [3] the traits and ties of the archetypal [Greek and Roman mythological] gods, and [4] the work and relationships of men [I don't know what this means for sure, but it might have something to do with the Enneagram.]. The shape of this analogy was formed by the parallels Collin found among its parts. Its force was supplied by the similarities in its disparate worlds of planets, gods, men, and glands. [Friedlander, *Body Types*, 1986, p. 22]

Regarding [1], Louis Berman was a medical doctor and researcher, a pioneering endocrinologist who lived in the first half of the twentieth century. Searching the internet for 'Louis Berman endocrinology' you can find information about his theory that the relative strengths of seven endocrine glands affect body types and personality types. The book is out of copyright and can be found for free on the internet if you are really interested and do a search for it. If not, then for an introduction to Berman's work, then check out this link: >http://www.redorbit.com/news/science/908843/endocrinology_and_expectations_in_1930s_america_louis_ber mans_ideas_on/index.html<.

Regarding items [2] and [3] in the quoted paragraph, western astrology has more or less adopted the Greek and Roman mythology for the physical and personality traits of the seven planetary deities for which the Body Types are named. (Other ancient cultures assigned other attributes to the planets and had a different astrology.) If you are not already familiar with astrology, you can of course freely research the subject on the internet. See, for instance, this Wikipedia link: >http://en.wikipedia.org/wiki/Planets_in_astrology<.

Regarding item [4] in the quoted paragraph, the structure and application of the Enneagram is discussed in Chapter 1B above, "Personality Typologies". Its relationship to Body Types is discussed in Chapter 4D in Part Four, "Body Types".

So there we have a brief introduction to the history of seven Body Types prior to the original Michaelian group. The system of Body Types as we in the Michaelian teachings understand it is mostly adopted and adapted from Rodney Collin, not Gurdjieff or Ouspensky. Collin cobbled his theory of Body Types together from four seemingly unrelated realms that he nevertheless correlated, not claiming any inspiration from supernatural sources.

Rodney Collin's Body Types

On this website, >http://cura.free.fr/xv/11craig.html<, we see a description of the personality traits attributed to the various Body Types, as follows:

SUN ("Positive/Active"): Child-like, Creative, Excitable, Gullible, Imaginative, Naive, Over-sensitive, 'Sunny'.

SATURN ("Positive/Active"): Austere, Cautious, Cold, Controlled, great powers of Endurance, Impartial, Moderate, Patient, Paternal, Somber, Wise.

JUPITER ("Positive/Passive"): Ambitious, Benevolent, Creative, Dramatic, Extravagant, Gregarious, Maternal, Proud, Refined, Vain.

MARS ("Negative/Active"): Aggressive, Blunt, Bold, Competitive, Courageous, Daring, Destructive, Honest, Loud, Passionate, Rough, Strong.

VENUS ("Positive/Passive"): Accepting, Charming, Gracious, Indecisive, Lazy, Nurturing, Over-indulgent, Sensual, Slow, Sympathetic, Vague, Vegetative, Voluptuous.

MERCURY ("Negative/Active"): Agile, Boastful, Critical, Dexterous, Fast, Fastidious, Fickle, Impatient, Intellectual, Manipulative, Perceptive, Restless, Talkative, Volatile, Witty.

MOON ("Negative/Passive"): Aloof, Cool, Dark, Dependable, Eccentric, Dreamy, Instinctive, Moody, Orderly, Pessimistic, Practical, Secretive, Suspicious, Timid, Uncommunicative.

In attempting to match these Body Types to the Overleaf categories, the following concerns came to my mind:

- 1. How does this Body Type system fit with the Dialectic (Cardinal, Ordinal, Neutral) Attributes? That is, does the correlation fit better with Active or Positive being what the Michaels call Exalted, aka Cardinal? Does the correlation fit better with Passive or Negative being what the Michaels call Ordinal? Where does the Neutral Assimilation fit? What makes this difficult if not impossible is that both Mars and Mercury are "Negative/Active"; both Jupiter and Venus are "Positive/Passive"; both Sun and Saturn are "Positive/Active"; there is only one "Negative/Passive".
- 2. All of these Body Types are either Positive or Negative, Active or Passive none are Neutral. Presumably, the Neutral Body Type, if it existed in the Collin schema, would be a blend of all the others in a way that washes out all the extremes of characteristics. This is a major problem when attempting to correlate with the Overleaf System. Nevertheless, let's ask, which of these would best fit the Neutral Assimilation, if we were to attempt to correlate Body Types with the Overleaf System?
- 3. Do all of the personality traits listed for each planet make coherent sense? That is, do they fit the lineup of Overleaves correlated with each Role? Or do they seem scattered over the Overleaf Chart?

For instance, for Mercury, "Impatient" is Cardinal Action (King-ish) but "Intellectual" is Ordinal Expression (Artisan-ish) and "Talkative" is Cardinal Expression (Sage-ish). That being the case, how can one possibly correlate Mercury with an Overleaf category? A similar exercise with other planets indicates a similar confusion with respect to attempts to correlate Body Types with Overleaves. It is as if each Body Type overlaps some Overleaf categories, indeed, very different Overleaves, or each Body Type covers factors outside the Overleaf System.

- 4. How does this Body Type system fit with the Axial Attributes? That is, do any two of these Body Types fit better in Action, and another two in Inspiration, and another two in Expression, and one in Neutral Assimilation?
- 5. It wasn't in the quote above, but in the documents there was said to be a "circulation" from Moon to Venus to Mercury to Saturn to Mars to Jupiter with Solar outside the circulation. Can this fit with the Overleaf System, which has a progression in the Septenary from Warrior to Server to Artisan to Scholar to Sage to Priest to King (or the reverse of this)?

After doing this exercise, it was obvious to me that the Body Types in this original form definitely do not fit with the Overleaf System. Body Types with these descriptions and attributes are one of those septenaries (collections of seven elements) that are obviously not a Natural Sequence. So, Body Types in this form can be interesting and informative among students who agree on these descriptions and attributes, but it has no fundamental cosmic significance as the Overleaves, a Natural Sequence, do. Rodney Collin cobbled his Body Type characteristics together from four different sources into a pattern that made sense to him, but the way he did it does not make sense within the Overleaf System. Nevertheless, in Chapter 4D in Part Four, "Body Types", I show how various Overleaf Chart—makers attempted to integrate the two systems. It is a forced fit, a Procrustean exercise in cutting and stretching to correlate two systems that do not fit well together.

The conclusion of this section is that Body Types as originally formulated by Rodney Collin in *TCI* are only similar to the Overleaf System in one parameter: there are seven elements. A considerable number of adjustments must be applied in order to morph Body Types into an Overleaf category. That process seemed to have started in the 1970's, but with dubious results.

Next we cover the understanding of Body Types in the Fourth Way group led by Burton that the original Michaelian group members were familiar with in the very early 1970's.

Body Types in the Fellowship of Friends

As noted in various places in this *History* book, the founding members of the original Michaelian group attended a Fourth Way (Gurdjieffian teachings) group (during 1971 and 1972) before they struck out on their own and later made contact with the Michaels in 1973. This group called itself the Fellowship of Friends. What was known about Body Types in the original Michaelian group came from that group and perhaps from Rodney Collin's book published in the previous decade. (One wonders if this 'pre-history' of the original Michaelian group had not happened, would the Body Types have become a part of the Michaelian teachings.) We know that they knew about Collin and his TCI book because it is mentioned a couple of times in the channeling transcriptions, as we see in a subsequent section. The original Michaelian group certainly also used a bundle of ten sheets that originated with the Fellowship of Friends. (We know this because The Center for Michael Teachings, Inc., was given those sheets by two of the original Michaelian group members.) This collection of sheets is transcribed and inserted below, starting with a verbal description that accompanied some cartoon depictions of each Body Type. The bundle is dated November 1971, which is about one year before the founding members of the original Michaelian group departed the Fellowship of Friends, almost two years after the Fellowship of Friends was founded, and more than a year before the original Michaelian group first convened. This document and the cartoons speak of a "progression" in Body Types, from Lunar to Venusian to Mercurial to Saturnian to Martial to Jovial. This progression is related to the Enneagram — refer to this Wikipedia article for more information: >https://en.wikipedia.org/wiki/Enneagram_of_Personality<. Notice that many of the spiritual-path components of this document foreshadow components of the Michaelian teachings.

>>> Beginning of Document <<<

MISCELLANEOUS INFORMATION ABOUT TYPES (Not in any particular order)

If you cannot determine a type, determine at best what the person in question is not. If they are a couple: (a) birds of a feather flock together; (b) if an older couple, they may be of the same type or one may be a step ahead or half step ahead of the other; (c) opposites attract (in male-to-male and female-to-female relationships). Maximum attractions (Mercury–Jovial) usually have a fiery relationship; the most enduring relationship is when one is a type ahead of the other [in the Enneagram 'progression'].

The Lunar, Venusian, and Jovial types are <u>passive</u> in their nature. General idea of beauty shifts between them.

Mercurial, Martial, and Saturnine represent the three active types.

One must learn to be his or her type.

Pure types are rare.

Combinations of maximum attractions: Saturn — Lunar; Jovial — Mercurial; Martial — Venusian.

Man contains all affinities within him and these are established in the different organs.

Everyone may be regarded as in movement between one type and the next (inner circulation).

<u>Centers are related to types: Thin = Intellectual Center; Soft-fleshy = Emotional Center, Muscular = Instinctive-Moving Center.</u> [I see this as an allusion to Dr. Sheldon's Ectomorph–Endomorph–Mesomorph typology.]

In life, when one party is a full step ahead, this will make for the most enduring, successful relationship. Both must continue to move for a successful relationship.

Souls seek the other half from which they were severed at creation, seeking the perfect whole. (p. 306 [Collin, *TOCI*])

Different types are equally essential, but completely different functions. Each functions with its own innate capacities, potentialities, weaknesses and with an affinity for a different and distinct part of the universe.

Moon, Venus, Mercury, Saturn, Mars, Jupiter [Solar] represent an order of circulation [around the Enneagram]. Free circulation brings health and growth. a) Some circulation connects all mankind, flows through all types of which it is composed, but in a definite order. This circulation is not a temporal one; it does not develop through time, but criss-crosses time and joins all parts and ages of the life of humanity together. b) Circulation refers to the possibility of movement for men, the possibility of escape from the limitation of their type and a passage to a different function of mankind. c) This circulation must refer to some cosmic motion on the scale of all mankind, and in an individual man would appear only as a tendency. But this tendency implanted in him by the cosmic circulation of mankind will represent for him personal improvement, the direction of development.

Types do not mean that some types are objectively better than others (although they may be objectively ahead), that men of the type ahead of mine in general are more advanced than those of my type. The next type is only ahead for each person on his or her personal path.

All types are equal, necessary, and enjoy the same opportunity of movement or stagnation.

It is important not to be of this type rather than that, but to be sound of one's type, recognizant of others, and un-crystallized in any.

Helpful to visualize persons as shifting triads of three types with their center of gravity in the intermediate (Lunar — VENUSIAN — Mercurial or Saturnine — MARTIAL — Jovial).

People, as planets, are also moving, or potentially moving, either towards brilliance or towards invisibility.

Personality often interferes with essence selection of type.

Types must have their food.

Evolving men cut themselves free of mechanical features of types.

Painful to move from type to type. a) In moving, he loses nothing but his limitation; b) Movement of types is a gathering of experience for the expansion of consciousness.

The true movement for Jovial type is not back to Lunar but on to the Neptunian type. Neptunian man: A new type of man who actually remolds his body in accordance with new powers and the effects of their use.

Movement is the path towards consciousness of a soul — a soul unites all types; gives understanding of the parts and of the whole.

The man who is moving consciously towards invisibility is the man who withdraws from the world, retreats, learns to achieve, act, and accomplish invisibility without external means. The man moving consciously towards brilliance is the man who is projected into a role of greater and greater external achievement, which is in accord with some higher plan. The two lines cross. The path of invisibility fuses all, and free from all, understand all, and are all. The point of intersection is symbolized by death; implies death.

Solar type: a) Milk and roses skin; b) Delicate teeth and bones; c) Air of fragility; d) Peter Pan, Snow White type. Pineal Gland: a) Buried at focal point of the brain; b) Connected with man's most delicate psychic system; c) Single gland; d) Unity achieved — oneness.

>>> End of Document <<<

There are two broad types of categorization described in this document. I underlined them in the document. They prefigure the two types of Attributes found in the Michaelian teachings: Dialectic and Axial.

One categorization divides six Body Types into two kinds, "active" and "passive": Jovial, Lunar, and Venusian are "passive"; Martial, Saturnian, and Mercurial are "Active". The cartoon that accompanied the document used the words "feminine" and "masculine" for these same Body Types. This information was adopted from Collin as seen in the previous section, and by the original Michaelian group Chart–makers, as we see in the following section, where "passive" and "feminine" correspond with Ordinal, and "active" and "masculine" correspond with Exalted, aka Cardinal.

The other categorization in this document foreshadows what later became known as the Axial Attributes (Expression — Inspiration — Action). That is, there was a correlation of Body Types with the Lower Centers: Thin Body Types = Intellectual Center (Expression); Fatty Body Types = Emotional Center (Inspiration); Muscular Body Types = Moving Center (Action). In the body type system invented by Dr. Sheldon, mentioned two sections above, these are referred to as ectomorph, endomorph, and mesomorph respectively. Unfortunately, there was no follow-through in this document or in the cartoons that accompanied the document: the six Body Types are not actually corresponded to a Center in the document, and I cannot figure out how to do it accurately, on account of the Body Type descriptions are most often mixtures of these three components and other characteristics in a way that makes the correlation dubious if not impossible.

Seven "cartoon" pages accompanied this typewritten documentation. There was no cartoon for the Solar Body Type, but there was a description on the sheet that accompanied the six Body Type cartoons. These cartoons were reproduced in Volume 2 of *Michael Speaks: The Legacy of Sarah Chambers*. In the lists of characteristics, I have italicized the words (muscular, fat, thin) that implicitly refer to the three Centers, Moving, Emotional, and Intellectual respectively. I have also underlined the words that explicitly refer to the qualities of 'passive/feminine' and 'active/masculine'. These are presented in the Enneagram sequence.

LUNAR TYPE (pancreas)

- Cool, instinctive certainty
- Obstinate, should acquire warmth and sympathy of Venusian.
- Diana [Greek goddess] represents the ideal Lunar woman.
- Meek, round, pale, full, timid.
- Midmost point of femininity.
- Tendencies of male homosexuality found among Lunars (because of being at mid-most point of femininity: Jovial — LUNAR — Venusian.)
- <u>Passive</u>, moody, introspective.
- · Watery element, flux and instability
- Lunars maximum attraction is a Saturn.

VENUSIAN TYPE (parathyroid)

- Warm and passive.
- Feminine role of growth in inactivity.
- Flesh and blood earthy
- Steadiness and tone of muscle and nerve.
- Sympathetic.
- Lazy, slothful.
- Should cultivate Mercury's quickness and agility.
- Aphrodite [Greek goddess] represents the ideal Venusian woman.
- Langorous (dullness, sluggishness).
- Copper has a subsidiary sensitiveness to Venus.
- Vegetative life.

- · Sensuous.
- Venusians maximum attraction is a Martian.
- Venus tends to promote physical growth and hold back sexual differentiation.

MERCURIAL TYPE (thyroid)

- Must learn the breadth and wisdom of a Saturnine.
- Quick, agile.
- Hermes (Greek god) represents the ideal Mercury.
- Sweet-toned and powerful voice.
- Mercuries [are] repelled by Martians.
- Perceptive.
- Mercuries maximum attraction = Jupiter.
- Aimless movement, impulsive, tend to explosive crises.
- Lean, clearcut, thick hair, bright eyes, even teeth.
- Restless, insomniac, and inexhaustible.
- Airy, sanguine, abundant and active circulation of the blood.
- "Sunshine" people.
- Unnecessary movements (face, gestures, etc.)

SATURNINE TYPE (anterior pituitary)

- The bone people: long head, rugged face, projecting cheek bones, prominent nose, large straight teeth, square jaw.
- Lanky, long-boned, strong frame and large firm muscles.
- Dominant, conquest
- Breadth and wisdom (inventions and discoveries)
- · Introspective, masterfulness
- Saturnians must achieve the courage and vigor of Martials.
- Inner preoccupation.
- Ascetic.
- Mid-point in masculinity (Mercury SATURN Mars)
- Saturnine women tend to lesbianism.
- Metals have a general affinity for Saturn.
- · Comprehending mind, ability to learn.
- Vague Speculation.
- Phlegmatic (slow-moving).
- Kingpin controlling gland of the endocrine system.
- Saturnians maximum attraction: Lunar
- Capacity for self-control and rule over his environment.
- Sit; don't tend to move.

MARTIAN TYPE (adrenal)

- Traditional warrior small and fierce
- Low hairline. Hair of unusual color: black among Scandinavians; yellow among Latins; red among others. (However, unusual hair-color not always present.)
- Swarthy or freckled skin, sharp teeth, hairy face and body
- · Short and fiery.
- Extroverts, courage and vigor.
- Destructive Martians must acquire the ease and attraction of the Jovial.
- Ares (Greek god of war) represents the ideal Martian.
- Adrenals, glands of passion self-preservation.

- Martials and Mercurials repel like adrenals and pancreas repel and complement each other (underactivity of adrenals = Addison's disease → hyper pigmentation of skin.
- Maximum attraction = Venusian

JOVIAL TYPE (posterior pituitary)

- Ease and attraction.
- Intriguing, maternal affection.
- Must acquire cool, instinctive certainty of a Lunar.
- Juno (Greek goddess) represents the ideal Jovial woman.
- Flamboyant (Santa Claus or Falstaff type).
- Short, rounded, stout, with large head.
- Cheerful, gay, and tolerant.
- Falstaff (Shakespearean character) = classical Jupiter.
- Connection to hypothalamus.
- Jovial's maximum attraction is the Mercurial.
- Santa Claus nose.
- Inclining to paunch and little hair on the body.
- Leans to poetry and music.
- Periodicity.
- Tendency to baldness in males

SOLAR TYPE

- Milk and roses skin
- Delicate teeth and bones
- Air of fragility
- Peter Pan, Snow White type.

The Enneagram figure on each cartoon page shows a "progression" through the Body Types that is alleged to occur in successive reincarnations. The progression was from node to node per 1 > 4 > 2 > 8 > 5 > 7, or, Lunar > Venusian > Mercurial > Saturnine > Martial > Jovial (> Solar). This feature of the Body Type system prefigures the progression of Soul Levels within the Soul Ages, but I have been unable to make the correlation between the description of Body Types and the description of Levels sensible.

Another cartoon graphic in the set includes these six planets and adds three more: Solar was at the beginning of the progression, plus Uranus and Neptune were at the end. There was mention of this in the original Michaelian group transcriptions — refer to a subsection further on; the Michaels

more or less negated it. Notice that this progression has nothing to do with the distance of the planet from the Sun. If it did, the progression would be: Sun > Mercury > Venus > Moon > Mars > Jupiter > Saturn > Uranus > Neptune. More is said about the Enneagram, its history and application, in a previous chapter, Chapter 1B, "Personality Typologies".

Based on what was said in the document quoted above and in the cartoons, the following table is my best attempt to correlate how the Body Types were understood in the Fellowship of Friends.

| Table 1Ma — BODY TYPES per the FELLOWSHIP OF FRIENDS | | | | | | | | |
|--|------------------------------|-----------|--------------|--------------|-------------------------------|----------------|-------------------|--|
| CENTER | Moving | Emotional | Intellectual | Balance | Hi'r Moving | Hi'r Emotional | Hi'r Intellectual | |
| SEQUENCE | First | Second | Third | Fourth | Fifth | Sixth | Seventh | |
| ATTRIBUTES | Passive & Feminine [Ordinal] | | | Intermediate | Active & Masculine [Cardinal] | | | |
| BODY TYPE | Jovial | Lunar | Venusian | Solar | Martial | Saturnian | Mercurial | |
| ENNEAGRAM | Lunar | Venusian | Mercurial | Saturnian | Martial | Jovial | Solar | |

My comments on this table are as follows:

- CENTER: On the first row, the Centers are shown in the Gurdjieffian Sequence from left to right. (More is said about this sequence in Chapter 2C in Part Two, "Sequences of Overleaves".) I did this because of the reference in the Fellowship of Friends documentation to characteristics of three categories of Body Types as related to Moving Center, Emotional Center, and Intellectual Center.
- SEQUENCE: On the second row, I show the rank order sequence of the Centers in the Gurdjieffian Sequence. This was done in order to contrast it with the Body Types in the Enneagram Sequence in row five.
- ATTRIBUTES: On the third row, I show the names of the attributes used by Collin and the Fellowship of Friends. Michaelian students will recognize these as corresponding to the Dialectic Attributes: Ordinal, Neutral, and Cardinal respectively.
- BODY TYPE: In the fourth row, I show my best guess at which Body Type best fits the Centers shown on the first row, but this is very dubious because the Body Type descriptions don't match with the Centers very well at all. My sense of this situation is that the Centers stand on a much firmer foundation than the Body Types. My guess is that the Fellowship of Friends could not actually reconcile the Enneagram with the Law of Seven. (Neither can I.)
- ENNEAGRAM: In the fifth row, I show the Body Types in the Enneagram progression. Notice that it matches the fourth row in only one instance.

It looks to me as if the Fellowship of Friends saw hints that there were some common features of the Enneagram and Gurdjieff's "Law of Seven" (discussed in a previous chapter), but they did not pursue a thorough reconciliation. However, attempts in that direction were made in the Michaelian teachings — with very poor results, as documented and commented in Chapter 4D in Part Four, "Body Types".

Other than the documents from the Fellowship of Friends — cartoon charts and the page of description — and the book by Rodney Collin, we have no other clues about what the original Michaelian group members might have known about Body Types before they received some channeling on the subject. The next section quotes from a document produced by the original Michaelian group, and from the original Michaelian group transcriptions.

Body Types in the Original Michaelian Group

Following is a transcription of a one-page document that was found among the transcriptions of the original Michaelian group. It was either adopted from the Fellowship of Friends, or written by one of the members of the original Michaelian group to bring new members up to speed about this information. I suspect the latter because it appeared in an edited compilation of the Michaelian sessions held in 1973, and it begins with the words, "We have been told ..." implying, told by the Michaels. The information was obviously taken directly from the documents discussed in the previous section, but the information was morphed to fit the Dialectic Attributes: Ordinal, Exalted (Cardinal), Neutral; this is not something that the Fellowship of Friends knew about, or that Rodney Collin knew about.

The information in the following document does not appear to be channeled, by the Michaels or anyone else.

We have been told that the physical body is influenced by the position of the planets at the instant of conception. Those planets providing maximum influence are Mercury, Venus, Mars, Jupiter and Saturn, also our satellite, the Moon, and, of course, the Sun. Various conjunctions of these planets occur, causing crossed influences.

The Passive Body Types:

LUNAR: This is the midmost point of femininity. Lunars have round, pale, and full faces. The Goddess Diana represents the ideal Lunar woman. The Lunar gives the impression of coolness and smoothness (no rough edges). This student has found most Lunars to have a look of shining cleanliness and to be relatively small-boned.

VENUSIAN: Aphrodite represents the ideal Venusian woman. They are warm and passive and usually sluggish; they have steadiness and tone of muscle and nerve. They are round and plump-appearing, though not necessarily obese (fleshy).

JOVIAL: These are short, rounded, stout, with a large head. Falstaff was the classical Jupiter. Juno represents the ideal Jovial woman. There is a tendency toward baldness in the male. The Jovial person usually develops paunchiness and has little body hair.

The Active Body Types:

MERCURIAL: These are quick, agile people, with thick hair, bright eyes and even teeth. They are characterized by many unnecessary movements (gestures, etc.). Many have powerful voices for their small statures.

SATURNINE: These are the so-called "Bone People". Saturnine people have long heads, rugged faces, projecting cheek bones, prominent noses, large straight teeth and square jaws. They are normally lanky, long-boned with strong frames and large, and firm muscles. They are slow-moving and have a tendency to sit quietly.

MARTIAL: These people are characterized by a low hairline, hair of unusual color (black among the Scandinavians, yellow among Latins, red among others — but this is not always present). They usually have swarthy or freckled skin, sharp teeth, and they are hairy of face and body. Those under the influence of Mars are normally short.

An Intermediate Body Type:

 ${\tt SOLAR:}$ Pure solar types have milk and roses skin, delicate teeth and bones and an air of fragility — the Snow White type.

Combinations of maximum physical attraction are:

Saturnine + Lunar

Jovial + Mercurial

Martial + Venusian

Pure types are exceedingly rare. Most of us are a combination of the above.

>>> End of Document <<<

In the first Overleaf Chart made by the original Michaelian group (Chart #1, reviewed in Part Three), the types called Passive and described as feminine in the above document are labeled "feminine" and the types called Active and described as masculine in the above document are labeled "masculine", and the Intermediate is labeled "genderless" and "modifying". This identification matches the gender of the people shown in the cartoons drawn by Harold Wirk, a member of the Fellowship of Friends.

Comparing this document with the material in the two previous sections, it seems likely it was adapted from the Fellowship of Friends, with modifications that seemed appropriate to members of the original Michaelian

group. The Dialectic Attributes can be seen in the words Passive — Active — Intermediate. These Dialectic Attributes were known to the original Michaelian group from the Gurdjieffian teachings, as explained in Chapter 1K above, "Gurdjieff's Law of Three". This also matches the Axial pattern of an Ordinal triad, a Neutral, and a Cardinal triad. We do not know if this was understood in the Fellowship of Friends, but it was in the original Michaelian group.

Comparing the above information with Rodney Collin's original information, we see that the Passive and Active Attributes for each planet were retained, but Positive and Negative Attributes were ignored by whoever created this text; and the Sun — which Collin attributed as Positive Active — is here attributed as Intermediate. The Sun does not appear on the perimeter of the Enneagram along with the other six planets, so that is probably why it was placed in the Neutral position in the original Michaelian group septenary. The quoted document appears to be an attempt to selectively adapt, and then force fit, Collin with the Dialectic Attributes of the Overleaf System.

The above are descriptions of physical traits only, not personality traits. There is a passage in the original Michaelian group transcriptions where it was said by the original Michaelian group members, not the Michaels, that the Body Types do not have personality traits. However, the Friedlander and Zannos books are full of personality traits, and so is the material from the Fellowship of Friends. The explanation for this discrepancy has not been discovered among the original Michaelian group materials that have become available to the subsequent Michael community.

With the help of Chart #1 from the original Michaelian group (reviewed in Part Three), we can construct the following table:

| Table 1Mb — BODY TYPES per the ORIGINAL MICHAELIAN GROUP | | | | | | | | |
|--|-----------|----------|-------------|------------|------------------|--------------|------------|--|
| DIALECTIC | Ordinal | | | Neutral | Exalted/Cardinal | | | |
| BODY TYPE | 1. JOVIAL | 2. LUNAR | 3. VENUSIAN | SOLAR | 1. MERCURIAL | 2. SATURNIAN | 3. MARTIAL | |
| ATTRIBUTES | Pas Fem | Pas Fem | Pas Fem | Genderless | Act Mas | Act Mas | Act Mas | |

My comments on this table are as follows:

- DIALECTIC: The first row shows the Dialectic Attributes.
- BODY TYPE: The second row shows the Body Types with the numbers that were appended to the Body Type names on Chart #1. The significance of those numbers was not stated, and I have not figured out if they even had any significance. A comparison of the other Overleaf categories, which also had numbers appended to the names of the traits in the Ordinal and Cardinal triads, shows that there was no understanding of the Axial Attributes (Action, Inspiration, Expression), because they are uncorrelated; refer to Chapter 2B in Part Two, "Attributes of Overleaves".
- ATTRIBUTES: The third row shows the Attributes of the Body Types from the document quoted above, with Passive, Feminine Body Types in the Ordinal triad and Active, Masculine Body Types in the Cardinal (Exalted) triad. As for the sequence of Body Types within the triads, I have not been able to find a way to actually correlate them with the Axial Attributes based on information from the original Michaelian group or its precursors. However, Chapter 4D in Part Four, "Body Types", shows that subsequent to the original Michaelian group, various sources have proposed various sequences.

Now let's examine the transcriptions of the original Michaelian group to see what the Michaels had to say about Body Types.

Channeling on Body Types in the Original Michaelian Group

In various places in the first three Yarbro books (*Messages from Michael (MFM)*, *More Messages from Michael (MMFM)*, *Michael's People (MP)*), there is mention of Body Types, but no naming or description of the seven Body Types we are familiar with from the non-Yarbro contingent of the Michaelian teachings. This topic is discussed on the following pages of the 'Classic' editions, not the 25th Anniversary Editions: *MFM* p. 227; *MMFM* pp. 45, 80–81, 201, 225; *MP* pp. 102, 108, 145, 175.

However, portions of the original Michaelian group transcriptions provide far more information on Body Types than provided by the Yarbro books. The previous section reproduces a document of uncertain origin that

was found among the original Michaelian group transcriptions. Following are some quotes from those transcriptions. Body Types are said to be related to astrological/astronomical phenomena. Explanatory comments in [brackets] have been interspersed, without which one might have a harder time understanding the information.

The first mention of Body Types actually appeared in the sessions with Tomas and Soleal before the Michaels appeared on 12 August 1973.

In that [Fellowship of Friends] teaching there were teachings of certain Body Types, and influences of planets. Is this true?

[Tomas:] You are under the influence of all planets, as they are in you. The planets or planet that controls you the most strongly therefore is the most strong in you, was your type. I assume I have that right. It is true if that is the way it was stated. The types are a generalization of the common things, habits, personality traits in most people, and can resemble astrology. It can be well used if [it is consistent with reality and] not in imagination.

Which planet am I most influenced by?

[Tomas:] You are most influenced by Venus, sometimes Mercury. When you are [actively] jumping right in there and using a suggestion I have given you, you are in Mercury, all right. When you are [passively] sitting and eating, you are in Venus. You are more Venus, though you follow instructions like a Mercury. That can give me an ego problem, he reacts so suddenly.

Is it useful to use this information? Can it be used to take us to higher states or through several Body Types in one lifetime? [Tomas:] It is useful to use the types, so that you may see things in yourself that need work, or things in another planet control type that you wish to have, such as patience, energy, et cetera. It is a good exercise for the mind, and leaves you open if you use it right, and can lead to the allowing of a higher state... [S/C, 10 July 1973]

These passages tell us that the seven Body Types have different characteristics with their positive and negative sides, their strengths and weaknesses. Knowing what the negatives are makes one more aware of what "needs work" to overcome them, if, of course, one is interested in self-improvement.

Following is a lengthy Q&A exchange that took place on 22 September 1973, the first of several that began a few weeks after the Michaels appeared on 12 August. Evidently, members of the original Michaelian group wanted to review what they had been taught by Robert in the Fellowship of Friends about Body Types, and they regarded the Michaels as a better source of information than Tomas:

Is it necessary to experience life in all of the various Body Types?

Yes, you must complete the Cycle. It is important that you experience life from all of the vantage points. Venus-influenced females can be quite strong emotionally.

What is the nature of the influence? I mean, what comes from Venus?

A specific type of energy is emanated by the planet. Each one of the planets in this solar system has a very different atmosphere, and exerts a different influence on the others. Those with that planet high [near zenith/midheaven] will be influenced by that particular energy.

If by "atmosphere" something like "energetic aura" is meant, then in my opinion this passage would make more sense; the planets are millions of miles from each other, so planetary atmospheres do not make contact. According to Michel Gauquelin's research (see below), traits were influenced (statistically significant, not determined) by planets just above the eastern horizon at time of birth, or near the other quarter-points of the circle.

At what point does that influence take place? I mean when is it put into the genetic code? Also, what does the expression "planet high" mean?

The planet [or planets] at mid-heaven at the time of conception.

This contradicts Gauquelin's (hotly disputed) finding that the planet just above the ascendant horizon at time of birth had the most influence. Based on what is channeled elsewhere, I infer that if there is one planet at or near the mid-heaven the Body Type is "pure"; if more than one planet, the Body Type is mixed.

Is astrology as we know it valid? Also is the Gurdjiefian [Enneagram?] system valid?

[Astrology is] not [valid] as you know it, although you have good beginnings. Gurdjieff did see this. Ouspensky rejected astrology. If you construct charts for entire families, you will find striking similarities.

See below for an explanation of astrology according to original Michaelian group transcriptions. Based on what is said elsewhere, this must refer to conception times, not birth times, which makes it practically

impossible to construct actual charts. Conception can take place in the range of minutes to hours after intercourse. Or perhaps it refers to Enneagram charts rather than conception charts?

[Michel] Gauquelin said a male child is conceived at the same time that the male parent was conceived, the female at the time of the female parent. Some studies proved blood plasma changes with ionization in the atmosphere and there is a correlation. [Gauquelin said] The planet on the [eastern] horizon (the ascendant) is the important one genetically. The soul could influence its structure.

If you do an internet search on Gauquelin you will see that in the latter half of the twentieth century he made an attempt to scientifically study whether or not the positions of the planets at the time of birth had any affect on personality and/or life path. He found no correlation with traditional astrology, but he came up with some other correlations. The results were affirmative (that astrology has validity) but of course controversial and perhaps refuted by later studies. Refer to the Wikipedia biography of this man.

[Not so because] Souls enter the Physical Plane at different times [than the sperm-egg conceptions]. [Elsewhere it was channeled that the body was usually ensouled at or near birth, not at conception.] That is not valid in that sense. The body, being physical, or organic if you will, is influenced by the celestial bodies [not by the soul].

There are components of "True Personality" that are attached to the physical body and there are components of "True Personality" that are attached to the spiritual soul.

Then Body Typing is not genetically determined?

Yes, they are [genetically determined]. Each strand of deoxyribonucleic acid [DNA] is totipotential [it can develop into almost anything]. This allows for the [planetary] influence [at conception]. This is why we say that astrology as you know it is largely invalid [because it is based on time of birth, not time of conception or ensoulment]. However, ironically, we might add, it does work backwards, unless you are dealing with a premature child.

That last sentence means that you can calculate the approximate date of conception by subtracting the usual nine months from the date of birth. If you keep records, you will know even more accurately when you had sex midway between the female menses.

Then astrology would be valid if we knew the moment of conception?

Yes. The time of birth is also important. [S/C, 22 September 1973]

May I add that, if there is any validity to the whole notion of planetary influence on, or coordination of, Body Types with the soul's preferences, then the time of ensoulment is also important, and that is as unknowable as the time of conception.

This discussion continued in another long series of Q&A exchanges in the next session, on 27 September 1973:

The teaching of Michael seems closer to Rodney Collin than that of Georges Gurdjieff or Peter Ouspensky.

Gurdjieff was misunderstood by Ouspensky, not so much by Rodney.

Endocrinology in Rodney Collin's book is in dire conflict with modern day endocrinology.

Yes, it is. He misunderstood the limits of planetary influence where diet and inborn genetic errors are concerned.

One of the four foundations of Collin's invention of Body Types was endocrinology, based on pioneering endocrinologist Dr. Louis Berman's theory, which has apparently not survived the march of science in the hundred years since then.

If Michael is correct, it invalidates a third of Rodney Collin's book [The Theory of Celestial Influence].

That is not necessarily valid. Certain Body Types are far more prone to specific endocrinologic disorders than others. However, the Age of the Soul comes into play at this level.

Does this mean that the older the soul, the more resistant it is to endocrinologic disorders?

What about Solar Body Types?

If sun spot activity was great at the time of conception, the Body Type will be archetypal. The body will also be powerful.

So there will allegedly be more archetypal (pure) Body Types conceived when the sunspot cycle is near maximum rather than near minimum during its eleven-year cycle.

Gauquelin says that sun spot activity is related somehow to the position of the other planets. Is this so?

Yes.

All astrological things are functions of sun spots and sun spots determine the function of the other planets on the ionization of the

Heavy planets [Jupiter and Saturn — see below] at aphelion [furthest from sun] cause increase in sun spot activity and therefore velocity of solar wind.

This might be dubious channeling unsupported by scientific evidence. However, it can be said that Sarah Chambers, the channel, majored in astronomy at UCLA. "Aphelion" is the point in the elliptical orbit of a planet which is farthest from the sun.

Is the sun the key or the catalyst for planetary influence?

Being the largest of the nearby celestial bodies, this small star exerts the most powerful influence physically. Electrically yes (solar plasma wind), gravitationally no — the moon produces higher tides.

Is the influence of Jupiter upon us through the sun or is it direct?

It is mitigated by the Sun and the position of the other larger bodies. Saturn and Jupiter exert a powerful [gravitational?] influence on each other to the extent that the satellite of Saturn closest to the orbit of Jupiter has an atmosphere [garnered from Jupiter?].

Dubious channeling. Titan is the only satellite of Saturn that has a significant atmosphere, and it is not the furthest from Saturn = closest to Jupiter; there are many other moons of Saturn that are far outside the orbit of Titan. Furthermore, Saturn is almost as far from Jupiter as Jupiter is from the Sun, so "influences" other than gravitational are unscientific, or metaphysical at best.

Are these physical influences we can measure? We know the planetary [gravitational] effect is inversely proportional to the square root of the distance between them — Kepler's Law. Is it something else, like ionization?

The drag of the heavy bodies has a magnetic effect on the star's ability to burn hydrogen [fuse hydrogen into helium]. When these planets are at aphelion [furthest from sun], the drag is less and sunspot activity increases.

More dubious channeling, or negligible effect because the eleven-year sunspot cycle is apparently not related to the twelve-year Jupiter or twenty nine-year Saturn revolutions around the sun.

Ionization occurs in the atmospheres of Venus, Earth and Mars, to a lesser extent on Mercury since that atmosphere is more tenuous. Organic life is extremely sensitive to minute changes in ionization.

Alleged planetary influences such as ionization, gravity, and air pressure are negligible compared to the fluctuations of these things on Earth itself apart from planetary influence, so this channeling is very dubious.

Could you comment on the virtue of astrology and the validity to this discussion?

The position of all of the planets and their position in relation to the sun and to each other must be taken into consideration. For instance, Venus without the influence of Mars exerts much more influence than when Mars is in opposition on the far side of earth.

What is the affect of the DNA on conception? Is it influenced by ionization?

The ribonucleic acids [RNA] (are affected) not the deoxyribonucleic acids [DNA]. In other words, the messenger, not the message.

Does each strand of DNA have the potential of becoming anything it is encoded with?

No.

Would two people conceived in the same room at the same time have the same Body Type?

Yes.

Is ionization the key?

Atmospheric changes.

Are these chemical or potential changes?

Real, not potential.

We are dealing with very minute molecules and every particle of DNA will be affected. I want to know what the planetary affect is.

The ionization is only one factor. There are also minute changes in air pressure and in the force of gravity. There are also fluctuations in the chemical composition of the atmosphere itself. All of these together produce a stamping effect on the encoding apparatus of all organic life. We speak of only the physical unit now.

How do these influences affect us?

They only influence the soul to the extent that they influence False Personality. The soul is not under physical influence. [SJC, 27 September 1973]

That was the end of the Q&A exchange in the session of 27 September 1973. The subject did come up on other scattered occasions.

The Body Types refer to characteristics that belong to False Personality. It is in the same category as saying, "I am a typical Leo or Taurus". If you believe yourself to be a victim of your Body Type, you are. In fact, you are virtually imprisoned by it. Anything that is tied to the temporal Physical Plane deals with False Personality. That which exists spiritually and independent of the physical is of the Essence. [S/C, 06 October 1973] [Joe Namath has a] Venusian Body with lots of Saturn thrown in.... The concept of Venusian–Saturn is new to you only. It is possible to go from Mars to Saturn, from Lunar to Mercury. This influence is not typical but does occur in some bodies. This is the problem in many of the persons you cannot identify. [S/C, 20 November 1973]

Per Rodney Collin (TCI, p. 90), there was said to be a progression from one planet to another planet in a certain order from lifetime to lifetime. If one was not a pure Body Type, then one had to be a mixture of the primary planet and the planet on either side of the primary in this sequence. The progression is: Moon \rightarrow Venus \rightarrow Mercury \rightarrow Saturn \rightarrow Mars \rightarrow Jupiter \rightarrow Sun \rightarrow Moon again. (This sequence was adopted in *Michael, The Basic Teachings*, p. 135.) Because they are out of "proper" sequence, you see why the Michaels said the Venus–Saturn and the Mars–Lunar and Moon–Mercury Body Types were unknown to students.

One mention of Body Types comes from the Michaels a few months later. Besides overcoming weaknesses of one's Body Type in one lifetime, it also advances the soul to experience different Body Types in different incarnations:

I would like to know if when we "experience life", it is necessary to incarnate into each Body Type, each Center (Moving, Emotional and Intellectual) and Roles, and then if we don't learn something, have to go over the same thing again?

This is essentially valid. It is possible to experience all of life from one Body Type, but the experience is richer if the change is made. Most souls do choose different dates of birth. That gives the necessary change in planetary influence. [S/C, 13 December 1973]

Here is another long Q&A sequence about Body Types from 17 April 1974:

Can black people be Solar?

(Solars were said to have "milk and roses skin" in the description quoted in a previous section — not something you would say about a Negro.)

There are many black people born during periods of intense sunspot activity. The influence is the same [even though one cannot see the fair skin].

Are there any that we would know?

We would point out that the [Negro] singer, Nat [King] Cole, was a Lunar-Solar, Emotionally Centered, in a Passion Mode.

Are there any pure Solars we would know?

Not close at hand. There are a few. This is a rare occurrence.

Not often are there no planets in the vicinity of the Sun. Mercury hugs it most closely, and Venus next so. Not often are planets isolated either, hence rarely are there pure Body Types. I would also bet that relatively few conceptions occur at noon, when the sun is at mid-heaven to allegedly influence the Body Type to be Solar; see below.

Is Mia Farrow a Solar?

Lunar Solar. This generally produces an exceptionally physically attractive body.

Audrey Hepburn?

Mercury Solar. [SJC, 17 April 1974]

That was another out-of-sequence type.

Body Types do not change. They are fixed at birth. [SJC, 24 April 1974]

Not conception? Here the birth date is said to be influential. However, in previous channeling it said birth time is not determinative of Body Type; conception time is determinative. Apparently this is a contradiction.

Another exchange in another session:

What part of Overleaves are in Essence and what are in Personality?

All of these Overleaves are geared to the Physical Plane and thus primarily of the False Personality. Of course, you cannot alter your Body Type or Role except by subtle extinguishment, and this is achieved only after all

else is Balanced. Thus the Role can still manifest in one acting primarily out of Essence, but not to any measurable extent in the occult Master. [SJC, 25 June 1974]

Note that this understanding was altered or clarified in later channeling: the Role and Overleaves are said to be immutable in a lifetime, and a distinction is made between immutable True Personality and mutable False Personality within a lifetime. This later conceptualization is a more conservative view than we find in the original Michaelian group, and it might or might not be more accurate; I cannot say.

After this session in late June 1974 there was no more discussion of Body Type, although whenever Overleaves were channeled, the Body Type was included in the information.

Concluding Remarks on Body Type Theories

- 1. There is not much in this channeling that confirms (or refutes) the physical and psychological traits associated with certain planets according to Rodney Collin.
- 2. The alleged "progression" along the lines of the Enneagram (connecting node to node) from one lifetime to the next does not square with the observed mixture of Body Type influences in actual people, which can be any mixture of any two or three Body Types.
- 3. Because the time of conception is unknown, this information about planetary influences cannot be validated as true or invalidated as bogus. However, because so many of the statements in the channeling on this subject are demonstrably bogus and others are at least dubious, it seems reasonable to suspect the statements about planetary influence at conception are bogus channeling. In my mind, the entire assertion of planetary influence on Body Type is suspect; it is just a holdover from Rodney Collin, who made the whole thing up from pure speculation. It all made theoretical sense to him, but it does not hold up under scrutiny in the actual world.
- 4. Despite the dubiousness about the cause of different Body Types, Michaelian students can still use Body Type jargon to communicate meaningfully and usefully with each other if they agree on the physical and personality descriptions. However, it is apparent that there is no Revealed Truth on the subject.
- 5. We have a record that Sarah Chambers channeled more about the Body Types and their attributes in the 1990s. This is reviewed in Chapter 4D in Part Four, "Body Types". Spoiler alert and par for the course, they disagree in some respects with the original Michaelian group understanding.
- 6. This chapter chronicled the history of a teaching about Body Types. The idea of seven Body Types named after the planets appears to have originated with Rodney Collin in the 1950s. It was modified by the Fellowship of Friends in the early 70's, and the original Michaelian group modified it further in the mid-1970s to suit their understanding. There is another chapter about Body Type in Part Four. It chronicles the history of the Body Type teaching among Michaelian students subsequent to the original Michaelian group. There is enough disagreement among the sources to reinforce what I say in this chapter, that Body Types do not belong in the Overleaf System; despite all attempts to make it fit, it does not without extreme violence.
- 7. An Overleaf Chart from the original Michaelian group dated March 1975 provides Positive and Negative Poles for the Body Types. These are discussed in the chapter about Body Types in Part Four.

CONCLUSION TO PART ONE

What is said in this Part of the book could be expanded into many books because there are so many things about the Michaelian teachings that are reflected in the world's esoteric, spiritual, and philosophical teachings. If readers enjoy study, they are invited to pursue the subjects introduced here. And some of my own books explore these subjects in greater detail.

What those other teachings do is supplement and clarify what we find in the Michaelian teachings. The Michaelian teachings has not covered every subject in exhaustive detail and with perfect clarity — those two aspirations are not realistically possible. But it is possible to build on the Michaelian teachings foundation considerably, and make it more accurate, with the help of numerous other teachings, even beyond the Gurdjieff and Theosophical and other teachings briefly touched on here in Part One of this book. We will return to the aspiration of expansion and clarification (and dare I say it, correction) of the Michaelian teachings in Part Four, but first we will examine the revelation of the Overleaf System to the original Michaelian group in Part Two, and then we will review more than twenty versions of the Overleaf Chart in Part Three of this *History* book.

Part Two

WHAT DID THEY KNOW AND WHEN DID THEY KNOW IT?

INTRODUCTION TO PART TWO

In Part One there are chapters that present components of some of the precursor teachings that carried over into the Michaelian teachings regarding the Overleaf System. From that information we can say that the Michaelian teachings is a legitimate adjunct to, and/or successor to, those other teachings. Here in Part Two there are chapters that compile material from the original Michaelian group transcriptions — hence, what did they know and when did they know it — as follows:

Chapter 2A — REVELATION OF OVERLEAVES: The Michaels launched into a revelation of their Overleaf System almost immediately after they revealed themselves to the original Michaelian group, but it took more than seven months to reveal them all. This chapter records and summarizes that series of revelations. All Overleaf Charts made by the original Michaelian group members and subsequent Michaelian students are ultimately traced to these revelations, even with their modification and additions.

Chapter 2B — ATTRIBUTES OF OVERLEAVES: Not only was each Overleaf category and each Overleaf revealed over a period of months in the original Michaelian group, but the Dialectic Attributes (Ordinal, Neutral, Cardinal) were either revealed or were obvious. On the other hand, the Axial Attributes (Action, Inspiration, Expression, Assimilation) were not revealed until after the original Michaelian group disbanded, but this chapter chronicles some of the post-original Michaelian group revelation anyway, as preparation for the examination of the Overleaf Charts in Part Three.

Chapter 2C — SEQUENCES OF OVERLEAVES: During the original Michaelian group there was apparently no effort to discern or assign a proper sequence of the (Dialectic + Axial =) Septenarian Attributes, but post-original Michaelian group there have been at least six proposals put forward in the Michaelian teachings community. I have named them thus: Gurdjieff, Vibration, Michael Math, Hoodwin, Matrix, and Natural. This chapter briefly introduces them, and refers the reader to other places in this book and in my other books for further information. All of them play some part in the Overleaf Charts reviewed in Part Three, and in the issues discussed in Part Four.

Chapter 2A

REVELATION OF OVERLEAVES

Within about two weeks of the appearance of the Michaels to the original Michaelian group on 12 August 1973, the Michaels launched into a systematic revelation of a part of their teaching that they called "Overleaves". This was not an aspect of the human experience that was totally unfamiliar to them. As stated previously, in the Fellowship of Friends, a Gurdjieffian teachings group, they learned about Centers and Body Types and Chief Features. It is argued in Chapter 4C, "Which Trait Septenaries are Overleaves?", whether or not the Michaels considered Body Types to be a separate Overleaf category among the seven Overleaf categories, but Centers and Chief Features definitely were, as we see further on. These pre-original Michaelian group aspects of the human experience are thoroughly covered in three chapters in Part One: Chapter 1D, "The Seven Centers", Chapter 1H, "Chief Features and the Seven Deadly Sins", and Chapter 1M, "The Seven Body Types".

The following sections of this chapter cover the general topic of Overleaves, then cover the documentation of each Overleaf in the chronological order that they were revealed.

Except for Soul Age (unfortunately — see Chapter E2), the Dialectic Attributes were applied as each Overleaf was revealed in one way or another. Recall that the Dialectic Attributes are named Ordinal, Exalted (aka Cardinal), and Neutral. The Axial Attributes are Action, Inspiration, Expression, and Assimilation. The names and natures of the Axial Attributes were not revealed to the original Michaelian group, but they were revealed in Messages from Michael (MFM) in 1979. Subsequent to MFM, Dialectic and Axial Attributes have always been combined into the Septenarian Attributes and applied to each Overleaf trait. For instance, the Goal of Submission has the Septenarian Attribute of Ordinal Action. The next following chapter, Chapter 2B, "Attributes of Overleaves", delves into this subject in more detail.

Overleaves

The dictionary defines the word "Overleaf" as an adverb, not a noun, and as shorthand for the phrase "on the other side of the page". Personally, I do not see how this relates to the Michaels' use of the word. Post-original Michaelian group, it was said that the soul or Essence is the intrinsic core of the self, and while incarnate it is 'covered' over by the personality traits collectively called Overleaves. So perhaps the word Overleaves is synonymous with the word "overlays". In fact, the word overlays was used as a synonym for Overleaves in this (and only this) original Michaelian group passage:

All of these overlays [Overleaves] come into play. You must learn their significance. A byproduct of this will be a far deeper understanding of the others, which must be learned before you can truly feel Agape. [SJC, 23 October 1973]

Whatever the meaning and whatever the Michaels intended, they started using the word Overleaf about a month after their first appearance to the original Michaelian group, and, so far as we know from available transcriptions, never defined it — during the original Michaelian group, that is. Here is what was said in their first use of the word as recorded in the original Michaelian group transcriptions that have become widely available:

Gene: All of a sudden, we're having this huge body of information about souls [Ages] and it must be important, and I would like an overview. Is this information going to be practical to me? Can I use it? Why this topic?

This [Soul Age] is another [in addition to Center and Body Type already known from Fellowship of Friends and Gurdjieffian teachings] Overleaf and integration must take place before you are able to perceive The Synthesis, which, of course, must precede perception of the Tao. Yes, it can be of great value to you. Body

Typing answers some questions. This [information about Soul Age] answers still another set of questions. This [Soul Age] is a broader Overleaf [than Body Type], and there are more [Overleaves]. [SJC, 18 September 1973]

By the way, notice that an integrated understanding of the Overleaf System is a step on the path to understanding "The Synthesis", which is the name/description that the Michaels themselves gave for their teaching; and notice that understanding The Synthesis is a step on the path to perceiving the Tao. One of the functions of my books is to provide Michaelian students some integrated understanding of the Overleaf System, and if this passage is to be believed, then it is not an unimportant aspiration for me to do that. It is also significant that I present the Overleaf System as an instantiation of what I refer to as Tao's Template. You have seen that previously in this *History* book, and you will see it again ... and again. (One point of my books is that the Michaels never explained the structure and meaning of the Overleaf System, but I do it repeatedly.)

In the quote above it would seem that Body Types are included among the Overleaf categories, but this is disputable for various reasons. The topic of what should be included among the Overleaf categories is examined in great detail in Chapter 4C in Part Four, "Which Trait Septenaries are Overleaves?". Evidence is presented in that chapter that the Michaels considered Body Types and Centers to be counted as one Overleaf, but they did not explain why. If that is not legitimate, then other evidence indicates that Body Types are not an Overleaf category. For a thorough examination of what the Body Types are all about, refer to Chapter 1M in Part One, "The Seven Body Types", and Chapter 4D in Part Four, "Body Types".

Body typing appears to be useful information regarding coming to terms with our human condition, but it was not information originally revealed by the Michaels, and the Body Type System as currently formulated simply does not fit within the Dialectic and Axial and Septenarian pattern of the Overleaf System ... without considerable Procrustean cutting and stretching, a significant departure from its origin with Rodney Collin and embellishment in the Fellowship of Friends. For these reasons, I do not regard the Body Type system, in its usual understanding in the Michaelian teachings community, as an Overleaf category, and therefore there is no discussion of Body Types in this chapter. With a reformulation, I believe it can be added to the Overleaf System as the "zeroth" Overleaf category, and/or integrated into the Overleaf System as an outgrowth of the Centers Overleaf category. If that assertion seems a bit cryptic, then you may look forward with eagerness to the explanation in the chapters referenced.

So, now let's take a look at each Overleaf category, in the order in which they were made known to the original Michaelian group.

Centers

The first for-certain Overleaf category was the seven Centers given in the Gurdjieffian teachings decades before the original Michaelian group convened. This Overleaf category was adopted from Gurdjieff and adapted in the original Michaelian group with some modifications. Refer to Chapter 1D in Part One, "The Seven Centers", for a review of the Gurdjieffian teachings on Centers and an introduction to the original Michaelian group understanding of Centers. Briefly restated, the original Michaelian group named the seven Centers the same as the Gurdjieffian teachings, and there were "lower" and "higher" Centers in both the Gurdjieffian teachings and the original Michaelian group — therefore they are assigned with the usual Dialectic Attributes throughout the Michaelian teachings communities.

Per the original Michaelian group transcriptions, the Michaels basically endorsed the Gurdjieffian teachings about the Centers, but the Michaels initiated some differences from the Gurdjieffian teachings version:

We have assumed our understanding of the Centers is the same as Gurdjieff describes. Are they talking of the same things, or is there some modification?

The information [about Centers] perpetuated by Georges Gurdjieff is valid. This concept can be extrapolated quite nicely out to whole [populated] worlds, as well as cities and countries. [S/C, 25 December 1973]

The data concerning internal Centers of gravity presented by these gentlemen [Ouspensky and Gurdjieff] is, of course, valid... [S/C, 08 February 1974]

On the other hand:

It is important to remember the differences which we have explained to you concerning the internal energy Centers. [S/C, 03 July 1974]

So, it was said that the Michaels' presentation of some information about Centering differed from the Gurdjieffian teachings. The Gurdjieffian teachings is certainly different from what appeared in MFM, and what

appeared in MFM is different from what can be found in the original Michaelian group transcriptions. These differences and discrepancies and others are covered in three chapters about the Centers in Part Four, Chapter 4F, "The Instinctive Center", Chapter 4G, "The Higher Centers", and Chapter 4H, "The Action Centers". The reason I bring this up, in this introduction to this section, is to emphasize that the understanding of Centers was a work in progress subsequent to Gurdjieff's death, and the understanding of Centers has been a work in progress within the Michaelian teachings communities over the decades, even to the present day, including my own contribution to the subject.

Anyway, there are many Q&A exchanges that mention individual Centers. Those have been extracted and placed into the following subsections. The order in which I list them is per the Natural Sequence.

As you read about the Centers in the following original Michaelian group quotations, recall that in the Michaelian teachings each of the three lower Centers (Moving, Emotional, Intellectual) is said to be divided into three Parts that are also the three lower Centers; e.g. the Emotional Center has Moving, Intellectual, and Emotional Parts. Also recall that a person who is "Balanced" responds purely to situations from the purely appropriate Center for that situation; e.g. the person responds from the Moving Part of Moving Center, feels from the Emotional Part of Emotional Center, and thinks from the Intellectual Part of Intellectual Center, as appropriate. If a person reacts inappropriately with regard to their Centering, that means they are coming from the inappropriate Center, or the inappropriate Part of a Center. Such a person is said to be "Trapped" if their habitual reaction is other than pure and appropriate. Such a reaction is regarded as "wrong use of Centers", and this results in an "energy leak" from one Center to another, and the person is ineffective and inefficient in their journey through life.

Moving Center

Remember that yours is a Moving-Centered, masculine world. [SJC, 16 December 1973]

Hyperactive children normally are Moving-Centered ... [SJC, 27 December 1973]

Moving-Centered souls have great difficulty with meditation and usually must preface it with some definite exercise in concentration just to take the Moving Center out of gear. [S/C, 20 February 1974]

Emotional Center

Only many subjective minds that grow from Emotional Center need to keep the closeness of the physical contact. [S/C, 03 July 1973]

When you teach, teach impartially and without emotion. The truth is not to be learned through Emotional Center. [undated quotation from Soleal]

Only Emotionally Centered beings suicide. You can only reach them emotionally, of course. Suicide is quite romantic to them; also retaliation. [S/C, 26 August 1973]

Centering is important also, and most late Cycle Old Souls choose Emotionally Centered bodies, as this is the Center easiest to work with. [SIC, 13 December 1973]

If Scholars who are not Emotionally Centered have trouble with their emotions, how can we overcome that part in us?

First, you must wish this. Most Scholars have little regard for emotional entanglements, unless they happen to be Emotionally Centered. Most Scholars would prefer not to be bothered with the responsibility that goes along with these intrigues. The way you can handle it is to become Balanced and thus come into contact with the Emotional Center and learn to control the output. Right now, there is sporadic high output with little insight — it resembles volcanic eruptions. [SJC, 27 December 1973]

In order for this group to achieve the cohesion necessary to provide growth, a level of intimacy and trust far exceeding what you now have must be reached. This cannot be achieved through dialogue. Dialogue is false personality's defense against Emotional Center. [S/C, 31 January 1974]

Could we have something on the Moving Part of Emotional Center?

The "love of action". These souls make ideal spectators and will yell themselves hoarse at all spectator events. They rarely participate, but will drive hundreds of miles to spend a weekend at a ski lodge. The romance of movement prevails here with little active participation.

It has been said [in the Gurdjieffian teachings] that the Intellectual Part of Emotional Center is the seat of the "magnetic center" for [spiritual] teachings. Is this so?

That is valid. It also produces the top historians and social scientists, most writers and journalists, many war correspondents, anthropologists and archaeologists. In this Part [Intellectual Part of Emotional Center], the intellect is romanticized. [S/C, 03 March 1974]

What are the characteristics of the Moving Part of Emotional Center?

It is movement romanticized. The movement becomes the love-object. Most dancers, such as the man Rudolph Nureyev [outstanding Russian ballet member] are Trapped here.

Are those who sit around and watch Trapped here?

Many times this is true — depending on the energy level present. The spectators do draw though from the action on the field. By the same token, some Movers [those with the Moving Center], such as again professional dancers, are trapped in the Emotional Part of Moving Center, where emotion must be expressed through movement. [SJC, 27 March 1974]

The Intellectual Part of Emotional Center has produced some sensitive moving contributions to this world, such as those of the poet Stephen Vincent Benet and the man Robert Frost. [S/C, 01 May 1974]

The Intellectual Part of Emotional Center happens to be the one that attracts students to a [spiritual] School. [S/C, 07 December 1974]

Intellectual Center

The keynote with Intellectual Center is, of course, rationalization. The Intellectual Part, of course, is capable of objective rationalization, the Emotional Part of subjective rationalization and the Moving Part of practical, materialistic rationalization. The person trapped in the Moving Part of Intellectual Center is usually practical to a fault and whatever fruits are harvested are usually in this vein. Whatever they pursue — whether it be medicine, the law or housewifery — these souls are prepared through meticulous research for any and all eventuality. They spend much energy in their researches and not even the simplest task is performed without the ritual of researching them carefully. All of their intellectual endeavors must be immediately or at least clear-cut utilitarian value. On the other hand, the soul trapped in the Intellectual Part of Moving Center "attacks" knowledge with a vigor that is virtually unexcelled. Knowledge is a mountain to be scaled and conquered. [SJC, 27 March 1974]

Two Intellectual Centers cannot come into rapport with each other. [SJC, 11 January 1975] Intellectual Center cannot experience anger. [SJC, 21 March 1977]

Instinctive Center

... the Instinctive Center, which malfunctions only during organic illness. There is now a brightening of the aura also in the region of the Instinctive Center as it digests your dinner. This will only last while the most significant work is being done, not while the contents are being dehydrated [in the large intestine]. [SJC, 16 June 1974]

... Instinctive Center needs — warmth, comfort, a full stomach and passive entertainment. The Instinctive Center functions only because of interest when the other Centers are inactivated or have been satisfied. [SJC, 21 February 1977]

Higher Intellectual Center

Can this lady be healed?

She could be much better as a result of the transfer. Working with her would eventually be more effective. The higher the transfer, the more healing can occur. If the highest attainable level can be reached — that is, Higher Intellectual Center — then healing can be complete. This is how the masters do it, but the transfers from transient higher states are quite effective. [SJC, 15 April 1975]

Higher Emotional Center

Your Repression [Mode] lifted in the face of contact with Higher Emotional Center, as it always would. [SJC, 14 April 1974]

Until you have sufficiently detached yourself from the mundane [lower Centers] and can come to the higher Centers. [SJC, 03 March 1974]

Sexual Center

References to the Sexual Center in the original Michaelian group transcriptions are too numerous to list here, and they need a great deal of explanation, so that has been accomplished and located elsewhere. They were extracted and discussed in the Interlude of my book *The Tao of Relationships: The Chemistry and Alchemy of Service and Intimacy*, and the same was accomplished in the chapter "Sexuality" in my book *Study Papers on the Original Michaelian Group*.

The Sexual Center also has a history unlike the other Centers, in that subsequent to the original Michaelian group, it has undergone significant name changes and descriptions, namely: Physical Excitation, Kinesthetic, Physical, Higher Moving, and Excitation. The story begins in Part Three with the parade of Overleaf Charts, then the story is told in detail in Chapter 4H in Part Four, "The Action Centers".

Many Q&A exchanges that discuss Centers cannot be disentangled into separate subsections, one on each Center, as the above were, so they have been extracted from the original Michaelian group transcriptions, and gathered into the next subsection, and placed in chronological order.

General Comments on Centers

Sexual energy, when used to express higher Centers, can be incredibly strong. When the energy is relegated downward [to lower Centers], it results in an energy leak. That is sometimes why you want to sleep after physical union. You fed lower Centers — sometimes the Moving Center and the Essence is exhausted, so the body goes to sleep to free the Essence. When you use [second tier] Emotional Center to express [first tier] Moving [Center] needs, don't you feel the [downward] leak? So, if you feel that, just stretch your mind. Right now, you are all using Emotional Centers to satisfy Moving [Center] needs and this is a result that is culturally induced — that you feel something uplifting each time you have a physical union. That is absurd! It just is not possible. The body is not capable of experiencing ecstasy; only the Essence can experience ecstasy. The body does not even come close with its sensual pleasures. [SIC, 03 July 1973]

Transcendental Meditation?

There is a very good form of meditation where you actually meditate upon the chakras and bring the aum up through them. You cannot transmute any energy you are not in touch with, however, so if you suddenly find yourself unable to continue, that is why [you] need to get in touch with Moving Center and Intellectual Center [lower Centers] before she can think about transmuting [energy to higher Centers and chakras]. [S/C, 21 August 1973]

Do you have any suggestions for my changing attitudes in work? Is there anything I could bring into my grasp right now? You are beginning to understand the concept of maya. This will automatically aid you in your practice. Structural Integration [deep tissue massage] is valid only for Emotionally Centered souls who are out of contact with intellect and alienated from their bodies. Gestalt [psycho-]therapy is valid for Intellectually Centered souls who need to contact their emotions. Hypnosis is most valuable for Moving Centered souls. None of this will be successful if you are not dealing with Mature Souls (middle Cycle) [or older]. [S/C, 04 September 1973]

Seems I have one foot in religion and one foot in science, and they do not fit together. Could you comment, please?

There is no conflict. Religion is from the Emotional Center. Science must be approached through intellect[-ual Center]. If there is Balance, there will be no conflict. Understanding scientific principles is a way to Higher Intellectual energy, just as feeling religion is the way to Higher Emotional Center. It is dogma [not religion or science] that comes from False Personality and has no place in this discussion. [SIC, mid September 1973]

I am in my head [Intellectual Center] at the hospital, in Moving Center playing golf, Sexual Center in sex, but my Emotional Center is always "playing background music". The Emotional Center seems to pull in the opposite direction [as the other Centers].

This is the sensation that accompanies the beginning of the moving toward harmony and Balance [of Centers]. This sensation, however unpleasant it may seem, heralds being able to bring all Centers into play during all activity, so that the situation can be assessed [Intellectual Center], felt [Emotional Center] and acted upon [Moving Center]. Not in everyone it does, but in you, the Emotional Center has come in for the strongest barrage of work. You must be able to see intellectually, feel emotionally and act with Moving Center almost instantly in order to be working out of Essence through intuition. [SIC, 16 December 1973]

Can Intellectually Centered people be obese? Are most people who are obese, Emotionally Centered?

They could, but the framework usually only stretches so far and Emotionally Centered souls have more framework to work with. Yes, all joking aside, most obese souls are Emotionally Centered.

Cravings?

Cravings are solely emotional. Moving Centered individuals give in to food cravings, on the whole, less than Emotionally Centered souls but it is one way that they have to express an emotion that they are afraid of and cannot express through the normal channels. [SJC, 03 January 1974]

Tears?

Tears are, of course, the outward manifestation of a working Emotional Center. If the tears are shed for no reason — in other words, they are 'crocodile tears' — you can be sure that the soul is Emotionally Centered. Intellectually Centered souls simply do not cry from Intellectual Center no matter how trying the situation might be. In adolescent females on this planet, the tears are sometimes a learned response and have nothing to do with emotions. This is not to say that unbalanced Emotionally Centered souls cannot cry for [a] good reason; it is simply that this is their most frequent response and sometimes is equivalent to the boy 'crying wolf' so many times that eventually no one answers — the wolves gobbled him up. [SJC, 20 February 1974]

Gurdjieff said that the only way to consciousness was through the Moving Center. When Ouspensky was nearing his death, he had premonitions of it [his death] and revisited old places. And, he advised everyone to abandon the [Gurdjieff] system and start a new system based on what you want. Are there any comments?

The man Georges [Gurdjieff] was accurate in assessing the needs of most students. Yes, this [Moving Centered approach] can be a way toward Balance. The man Peter [Ouspensky] glimpsed the truth in the need for a living teacher who can render the teaching dynamic. He saw change in the attitudes and the "wants" of his students. This was an Intellectually Centered teacher with mostly Emotionally Centered students. The man Georges was Moving Centered in the beginning and had mostly Intellectually Centered disciples. This helped him to verify the need for Balance. He and Peter both had a tendency to deprecate Emotional Center, and the man Peter went even further and refused to acknowledge the very real need to grow to the point where sexuality can be expressed through the Sexual Center [rather than through the Instinctive-Moving Center as he conceived it]. This was due, for the most part, to guilty inhibitions. The man Georges did not have this handicap, but did not give Emotional Center quite the status it deserved. Balance is just that — a balance of all Centers. But, yes, most of you are suffering from physical inertia. [S/C, 27 February 1974]

Can people be Trapped in sub-groups [Parts] of Centers, as symbolized in the deck of cards, [depicting the Centers, as] illustrated by Harold [Wirk]?

This is valid. Alice is Trapped in the Emotional Part of Intellectual Center. Cheryl was in touch with the Moving Part of Emotional Center; is now moving toward Balance; needs to contact the Emotional Part of Emotional Center. The Emotional and Intellectual Parts of Intellectual Center; also the Moving Part of Moving Center. The tennis helps in this; also the reading. [S/C, 27 February 1974]

For instance, many who are Trapped in the Intellectual Part of Intellectual Center must involve themselves only in intellectually stimulating and rewarding experiences. Many Trapped in Moving Center are constantly "doing things" and consider all else rather frivolous. Souls Trapped in Emotional Center find it difficult to sit through an evening of "head stuff", or they also dislike the modern dancing where there is little body contact and much wild gyrations. [S/C, 03 March 1974]

What is the work necessary for me to becoming untrapped in Essence?

The work for you includes moving. Your dance is an excellent place to start, preceded by your period of meditation, with the thought of preparation for the dance. We see emotional involvement. The way through to Intellectual Center is, of course, the rendering of this type of input neutral. The inability to accept input in a detached fashion separates you from the Intellectual Part of this Center, and thus there is a barrier to Intellectual Center. The love of the movement, or more accurately, the exhilaration you feel when moving, creates a barrier to Moving Part of Moving Center. All students must discover their area of entrapment and work from there, emulating the energy Center toward which they are moving. Students Trapped in the Emotional Part of Intellectual Center rationalize all technical material well, but romanticize all other input, trying to find that completely personal slant. There is "love" of literature and words in these souls. They are normally exceedingly verbose in tutorial positions, not so much in others. These souls find the romance of the Logos so alluring that this entrapment is among the most difficult to scale. Most souls Trapped in the Moving Part of Intellectual Center are veritable whirlwinds of intellectual activity. They spend the entire [incarnation] interval collecting facts, sometimes in a random fashion and sometimes to negligible results. On the other hand, many inventors, such as the man Thomas Edison, were Trapped here.

Are some intellectual Scholars Trapped in the Intellectual Part of Intellectual Center?

It is possible to be Trapped here, and yes, you are right. Many of the theoretical scientists are indeed immured [trapped/confined] in the Intellectual Part of Intellectual Center. This is a route to Higher Centers when there is Balance [of lower Centers]. [S/C, 03 March 1974]

What are the characteristics of the Moving Part of Emotional Center?

It is movement romanticized. The movement becomes the love object. Most dancers, such as the man Rudolph Nureyev are trapped here.

Are those who sit around and watch trapped here?

Many times this is true — depending on the energy level present. The spectators do draw though from the action on the field. By the same token, some Movers [those with the Moving Center], such as again professional dancers, are trapped in the Emotional Part of Moving Center, where emotion must be expressed through movement. [SJC, 27 March 1974]

What is the relationship to kundalini here?

This is the highest form of movable energy you have at your disposal and therefore, that which you can utilize for each: the emotional states or Higher Emotional Centers, Higher Intellectual Centers, which are synonymous with subjective consciousness [and] objective consciousness respectively.... The lower Centers are fixed and the energy is like a closed system. The higher Centers are capable of ecstasy or bliss; the lower Centers are not. The Sexual Center or the kundalini force can only be breached by bringing the lower Centers into harmonious Balance. In other words, in separating from the maya or illusions for glamour of the Physical Plane and by giving up your expectations of what a sexual experience should be. [SJC, 24 April 1974]

Give an example of what happens in the Emotionally Centered person.

The Emotionally Centered individuals often complain of "butterflies" in the stomach in times of stress or excitement. Many times, intestinal cramps follow extreme stress; more susceptible to diarrhea and constipation, also. Intellectually Centered souls often cough in moments of stress, clear the throat, etc. Moving Centered souls take it [stress], but on the integument: itching, burning, blushing, sweating, shakiness in the limbs, etc. [S/C, 16 June 1974]

I have a heavy Scholar for a mother. She is in the Intellectual Part of the Emotional Center. Therefore, I felt I was a failure. This week, I realized intellect does not make one a Scholar. I am realizing now something about how intellect works in me.

The "intelligence" that most Fragments exhibit in this culture is a matter of exposure and education, coupled with an innate ability to retain facts, since this is what this culture requires above all. However, this is not intelligence on a cosmic level; this is data gathering. As to the different Roles and other Overleaves, the possibilities are many. For instance, the Intellectually Centered Sage is usually extremely erudite. For instance, Dag Hammarskjöld and Abba Eban are examples of this. The "golden-voiced orator," Emotionally Centered Sages, often express their intelligence on the stage. Intellectually Centered Warriors make fine tacticians, planners, [and] administrators. Intellectually Centered Scholars spend their lives gathering data with usually no more of a goal than to acquire knowledge. Most Moving Centered souls manifest their intelligence in practical "doing" ways. If the [Moving Centered] Scholars gather facts, it is toward a purpose, such as writing a book, proving a hypothesis, etc.

I am interested in my Balance — Emotional Part of Moving Center — so I need to find Intellectual Center. I have some idea what it is but am not sure what Intellectual Center is.

Intellectual Center, when working without interference or energy leaks [downward to lower Centers: Emotional and Moving], has the capacity to record and process data in a detached and non-judgmental fashion. From the Moving Center, this looks like learning without necessarily doing. In other words, learning for the pleasure of learning, without the proviso of application attached. Emotionally Centered souls or those working through Emotional Center, operate on intuition, and feel — rather than think — through a problem. Moving Centered souls or those working through Moving Center, are concerned with the action and read with this in mind, with always an eye toward later application. A word about [the meaning of] Balance for the new students: this means simultaneously utilizing the Moving part of Moving Center, the Emotional part of Emotional Center and the Intellectual part of Intellectual Center, and in a split second, differentiating which applies in a given situation with no consequent energy leak [to some Part of the Center or to another Center]. [SIC, 10 July 1974]

I would like to ask how to bring the perceptions of the Emotional Center and those of the Intellectual Center together to be Balanced. Perceptions seems so limited: there is so much input and only one thing seems to get through.

Of course, the perceptions of one Trapped in the Intellectual Center are going to be based upon what is thought and will be largely analysis of the perception rather than a perception at all. The perception itself will

be lost in the analysis. The perceptions of one lost in the Emotional Center will be swamped by the feelings surrounding the moment and again the perception itself will be lost to sight. This is what is meant, of course, by not experiencing one's experiences. Those Trapped in the Moving Center will be already planning or carrying out some action surrounding the perception before it has time to register. No ["sleep-walking", unevolved] Mechanical Man is able to appreciate any experience fully because of this. All perceptions are, of course, stored, and can be recalled by the Balanced Man if need be. In order to perceive and experience a moment in time, all Centers must be working (correctly).

Something will happen and later I will think about it and evoke emotions that were not there in the original happening. How is it that I can have emotions in retrospect? It must be that they are there to begin with, but I don't feel them.

Most of the feelings you describe come from the Emotional Part of Intellectual Center, which is always involved in analysis in your case.

I've read that, in Zen, once one has reached satori, he realizes he's always been there. [I take this to mean that] All the Centers are operating all the time, but we are not aware of them.

All Centers are not working in Mechanical Man. They are only potentially workable. This is why perceptions of man are so inaccurate and so scattered. This is the reason that criminal identification is so fraught with error; no two souls perceive the moment in precisely the same way, unless, of course, you happen to have two Balanced Men.

Should the proper role for the Intellectual Center for a Balanced person be shut down until there is an actual problem to be solved?

The Intellectual Center should be functioning as a decision-making partner in the process. The Emotional Center cannot make decisions properly, as it cannot think out the ramifications of any given situation with the speed necessary to make a valid, split-second decision. The Intellectual Center works at a far greater speed than does the Emotional Center when the soul is in Balance. In Mechanical Man, the Moving Center takes over the rapid functions. This is, of course, necessary for survival of the body, as when a hand is removed from a hot stove by the Moving Center in cooperation with the Instinctive Center. In Balanced Man, the Intellectual Center claims its rightful functioning and becomes the decision-maker. In other words, Balanced Man chooses to remove the hand.

It seems to me that the Emotional Center knows the truth better than the Intellectual Center.

Essence knows truth and Essence most often manifests through Emotional Center in good students. This is primarily because "truth" is not often readily believed by Intellectual Center; it is just not rational. [SJC, 17 September 1974]

How can I get in touch with Intellectual Center?

This will be the most difficult for you and for all others in the Centering you are in, as it involves single-minded concentration and application of non-judgmental logic. Reading very studious works has done it for other students. Continuous study will also do it. The determining factor is the boredom factor. As soon as boredom creeps in, the Emotional Center has crept in too. Boredom is simply not intellectually possible; it is a lower emotional function. Most of the time, in fact, it is a function of the Emotional Part of Moving Center. [S/C, 28 September 1974]

Dick asked about Centers ... disturbed that his concept of Centers is so hazy. What part of the brain would correspond to the Centers? Is it a set [part], a gestalt [whole]? Or what?

More than anything, this [Centering per se] can be seen as an appropriate reaction to the situation. In the case of the lower Centers, it means that there is no leaking of energy and fatigue buildup as a result.

You see, if you respond to an intellectual situation with an emotional reaction, it is usually totally inappropriate and it comes not from Emotional Center, but usually from the Emotional Part of the Center in which you spend your life.

If you respond to an emotional situation in a Moving Centered way, there is a tremendous downward relegation of energy and fatigue follows. You can readily determine wrong use of Centers in yourself by the way that you feel after the situation has passed. If you are tired, angry or any of those negative things, you can be sure that wrong use of Centers is to blame. If you feel high, elated, joyous, *et cetera*, then perhaps good use of Centers has occurred. Any situation that produces a negative reaction is wrong use of Centers and therefore Wrong Work for students on this path. This is why we ask that you look at your negative reactions, even in retrospect, and determine what happened to your energy when you expressed.

Centering or Balance is, above all, appropriate. That is what it means — the loss of all of these unreasonable lapses in the volition. When you react negatively, you are certainly not in control — your False Personality is in

control. The True Personality of the Essence merely looks at the script and makes the appropriate response at the moment it is called for — from the Center equipped to handle that situation with dispassion. [SJC, 25 January 1975]

Discipline must occur on all three levels [lower Centers] if it is to be effective. It cannot merely be the discipline imposed by Intellectual Center. It must also involve shutting down the artifact and experiencing Emotional Center as a barometer. It must involve Moving Center as the acting out Center and not as the Thinking Center.

For clarity's sake, we would have given the Parts of other Centers as "Thinking, Reacting, and Acting" Parts. Then Emotional Center doesn't have these Parts?

Not in a true sense, no; neither does the Sexual Center. Instinctive Center does express itself, usually through the Acting Part of the Moving Center, but at times through the Thinking Part. Then, this carries more of a wallop.

What do we mean by "reacting"?

Reacting means acting again. In other words, playing a Tape made during a previous occasion.

Am I in Emotional Center when I am meditating? It seems like I am simply perceiving.

Sometimes it is Higher Emotional Center.... Emotional Center, when it is not the Trap, acts merely as a barometer, sensing the variances around. This includes the dangers and the anger, the joy and the pain being beamed about. This Center makes no judgment on this information and cannot react to any situation when it is being used in tandem with the other Centers. When it is the Trap, it is utilized much as the other Centers, having then a Thinking, Reacting, and Acting Part.

Please, students, think! This does not differ from the other Centers. Balanced Man thinks with the Intellectual Center, perceives with Emotional Center and acts with the Moving Center. The divisions no longer hold [when you are in] in Balance.

Then it is not Emotional Center that feels "happiness" when I see a beautiful sunset? The group thought, no, that it came from Intellectual Center making the judgment of beauty.

Do not misunderstand, there is no Bad Work connected with judging a sunset as beautiful. It is simply not the work of a barometer, but of the Reacting Part of Intellect [Center] that prefers sunsets to dead rats.

Are there any other surprises in Centers?

Negative reactions of any type are [inauthentic, anomalous] artifacts, and need not be experienced nor acted upon by advanced students. There are no surprises other than what we have given. Stoics who are Trapped in the Emotional Center react very differently than do, say, Idealists. Look to the [Negative Poles of the] Overleaves when reactions occur first. Chances are that the [False] Personality is to blame and not the Center.

Many reactions to the past and the glories of it are from the [Negative Poles of the] Overleaves, not the Centers — all Tapes, in other words. In fact, any rumination about the past or the future must come from the [False] Personality. [S/C, 15 April 1975]

The Intellectual Center cannot perceive God. The Intellectual Center is not interested in this perception; it does not count it as a loss [to not perceive God]. Only the Higher Centers long [yearn] for the Tao, through the Emotional Center. The desire for human closeness and exclusive relationships derives from this [Emotional Center yearning]. [SIC, 12 December 1976]

We talked about the critical nature of clarity of perception, being able to see what's happening — everything starts with what you see.

The Intellectual Center, when it perceives hostility, retreats. The Emotional Center sulks, and only the Moving Center moves toward the source. In other words, each of the Overleaves perceives the situation in quite a different light. As you move toward more understanding, then the perceptions become more unified and many times more accurate, as the Overleaves come together on a perception. This accounts for such experiences as you have described. The Moving Centered Warrior in the Younger Cycles will react to hostility with a well-aimed punch in the nose, while the Older Intellectually Centered Scholar will attempt to obscure with a smoke screen of verbal trivia. [SJC, 21 March 1977]

That pretty much covers the revelation of Centers where more than one Center is mentioned in a Q&A exchange.

A chapter with sections on each of the Centers is found in my book The Tao of Personality.

Soul Ages

The first new Overleaf revealed by the Michaels was that of the Ages of the soul. The first mention of Soul Age came in the second-ever session with the Michaels, the 17 August 1973 session:

Regarding earlier [comment about] growth of group: We've had requests [to join]. Gene has misgivings about the group growing.

Those who should be part of this [group] will not need a lengthy invitation. They will arrive easily. Be careful of luring anyone in with glamour. This [group] could be devastating to Young Souls.

Are we Young Souls?

You are not Young Souls. [S/C, 17 August 1973]

This was a hint of things to come. The exact date of the revelation of the Soul Ages is not recorded, but it apparently happened between the sessions of 21 August and 26 August of 1973. There were several pages of description of these seven Ages in an edited compilation, made by an original Michaelian group member, of selected portions of all the channeling sessions conducted in 1973 after the Michaels appeared. The book Michael Speaks — The Legacy of Sarah Chambers, Volume 1, tells the story. Much of the material on the Ages quoted below has been published in Messages from Michael, pages 69–80 of the classic edition and pages 61–69 of the 25th Anniversary Edition.

The Michaels regarded their revelation of the Soul Ages to be important for their students:

You have verified for yourself the truth of the Centers. Now, you must verify the truth of the [Soul Age] Cycles. This is practical knowledge for the older soul [Fourth Level Mature and older], not just idle chatter. It supersedes all previous information. This is the lesson you must learn. The approach must be governed by what you sense intuitively, given this special skill [of discerning a person's Soul Age]. [S/C, 04 September 1973]

Unlike the Centers, revealed in the Gurdjieffian teachings decades before, the information about Soul Ages was new to the original Michaelian group. However, it was not new to the world: refer to Chapter 1E in Part One, "The Seven Soul Ages", to read about three precursor sources for this concept.

The following ten pages are compilations according to subject category, rather than according to Soul Age. After that are a couple more pages of compilations according to Soul Age rather than category; these extracted quotations were scattered among the original Michaelian group transcriptions.

Perception:

The approximate age of the soul can be determined by its perception of itself and the world around it.

The <u>Infant</u> or "first born" Soul perceives itself and the world around it simply as "me" and "not me". In this Cycle, there are no racial memories. If "not me" is perceived as hostile and unkind early in life, withdrawal occurs and a condition known as autism often results. If this perception occurs later, the Infant Soul may react with unchecked violence: sadism, murder without visible provocation, acts of unbelievable cruelty. The Infant Soul truly does not know the difference between right and wrong action, but it can be taught the laws of common sense and decency.

The <u>Baby Soul</u> perceives itself and the world around it as "me" and "many other me-s". The Baby Soul forms strong beliefs early in childhood, borrowed from those around it, and these are literally unshakable and incorruptible. The Baby Soul is normally agreeable, a pillar of the community — until an opposing viewpoint is expressed. Then, inwardly the Baby Soul is bewildered, baffled by the difference. Outwardly, it will express anger, hostility, negative emotional energy, belligerence.

The <u>Young Soul</u> perceives itself and the world around it in quite a different manner than in the preceding Cycles. It perceives itself as "me" and it perceives you as "you," but it perceives "you" as different from "me" and experiences the need to change you — to bring you around to its point of view.

The <u>Mature Soul</u>: this is the most difficult Cycle of all, for the Mature Soul perceives others as they perceive themselves. Because of these perceptions, the Mature Soul will often seek to sever relationships seemingly for no reason or by the same token, seek to perpetuate outwardly inappropriate relationships. If you and I are both Mature Souls, within this framework are also your experiences of me. In other words, while I am experiencing you, you are also experiencing me and at the same time, you are aware of my experience, and upon this deeper awareness, you and I will base any future social intercourse.

The Old Soul perceives others as a part of something greater that includes itself.

The <u>Transcendental Soul</u> experiences others as itself. Telepathic rapport and psychic union occur. These exalted souls seldom seek reincarnation in the physical body. If they do, it is usually because of the spiritual

and/or philosophical ennui existing on the planet, and then they normally precede the descent of the realized masters [Infinite Souls] by less than one hundred years. The Transcendental Soul can enter the physical body and displace an Old Soul at any time during the life Cycle. It has happened that the presence of the Transcendental Soul alone was enough to provoke the needed spiritual, philosophical or cultural revolution [so that an Infinite Soul was not necessary].

The Infinite Soul perceives the Tao.

Sexuality:

The Infant Soul perceives love only in the form of lust. It performs the sex act with all the frenzy of a wild animal, completely dependent upon some innate estrus lost to higher Cycles. It is powerless to change this. The Baby Soul views its own sexuality with a vague uneasiness, and if the culture fosters such, will think of it as somehow shameful. The Baby Soul will be embarrassed by overt displays of honest sexuality, and it will strive to keep the others around it bound down by its own reprehensible moral code. Behind closed doors, the Baby Soul is more often than not quite as prudish as it is in public and seldom sustains any sort of sensual pleasure. Not having experienced such, it naturally does not "believe" in the existence of the experience. If the Young Soul's own personal opinion of sex is rather low, it will do its best to convince those around it that sex is evil and should be eschewed. Renunciate monks and nuns are quite often Young Souls. They renounce loudly and take every opportunity to remind the world around them that they have renounced. On the other hand, the Young Soul can be an equally zealous proponent of total sexual freedom. The Young Soul perceives love as Eros, solely predicated upon those expectations it has of the others around it. If the others fail to live up to those expectations, the Young Soul can hate with equal zest. Sexual conflicts can be agonizing in this Cycle — early training versus internal urge.

With the right partner (another <u>Mature Soul</u> who has become centered or an older soul), the Mature Soul can be an ardent lover. The love is deep and lasting, for Agape is possible during this Cycle if the inner conflicts are resolved. With the wrong partner, there is apathy, impotency, frigidity, infidelity. This soul has more of a tendency to "mate for life" than any of the other Cycles, providing a comfortable mating occurs.

The <u>Old Soul</u> is casual about sex in the earlier Levels because erotic love begins to lose its charm. In the final Level, the Old Soul often does not participate for lack of purpose (sex adds nothing to its life). The Old Soul is intensely sensual, however, and does enjoy close physical contact. The Old Soul is usually an experienced and exciting partner for a soul in an earlier Cycle, but can be a very disappointing lover because of its nonchalance.

Neither the <u>Transcendental Soul</u> nor the <u>Infinite Soul</u> pursues physical union. Quite often, however, the high Causal [plane] body or the high Mental [plane] body displaces an older soul, and at that time of the manifestation, the sexual activity ceases. These souls are not challenged by Maya.

Education:

Let it be known that intellect is not a factor in any of these Cycles. Intellect is a product of culture, and even firstborns and <u>Infant Souls</u> can be taught to read, write and compute arithmetically. Infant Souls rarely seek higher education unless forced. They are bewildered and hostile in strange situations.

The <u>Baby Soul</u> occasionally seeks higher education — does well in small, conservative liberal arts colleges, trade schools — learns "proper" subjects, is often the "good student".

The <u>Young Soul</u> almost always seeks higher education, usually graduate degrees. The Young Soul is a tireless worker for its cause and will go through unbelievable hardship to bring this cause to bear; education can be an example of this.

The <u>Mature Soul</u> always seeks higher education, although not always in an institutional setting. It is often too uncomfortable in a school setting. The Mature Soul makes massive contributions to knowledge, both philosophical and scientific. Karl Marx, Alfred Adler, Fritz Perls, Sigmund Freud, Emmanuel Kant, Aristotle, and Albert Einstein were all Mature Souls.

The <u>Older Soul</u> usually enjoys hard, manual labor, but seldom works as an artisan. It may or may not seek higher education. If pressure is exerted by the guru, it will, or if it senses that its task somehow involves the necessity for obtaining the proper credentials.

The <u>Transcendental Soul</u> seldom "seeks" any sort of formal education, although it will go along with what is forced upon it cheerfully unless it interferes too greatly with its purpose. Then the Transcendental Soul will gently but firmly balk.

The Infinite Soul has direct access to all knowledge and has no need for education of any type.

Religions:

The <u>Infant</u> Soul adopts the religion of its parents without modification, although its interest is cursory and its understanding poor.

The <u>Baby Soul</u> tends to be fundamentalistic in its religious beliefs. Personification of the godhead is the strongest in this Cycle. The Baby Soul believes in the forces of evil.

The <u>Young Soul</u>, if religiously inclined, tends toward orthodoxy in the extreme. It will campaign tirelessly against all religious reform. If the Young Soul is atheistic, it will be equally as tireless in its efforts to wipe out the orthodoxy of others.

Religion becomes self-motivated in the <u>Mature Soul</u> Cycle. The Mature Soul seeks quiet faiths — Quakers, Unitarians, Buddhism.

The religion of the <u>Old Soul</u> is expansive and includes unorthodox rituals. Groves of trees become cathedrals, and the presence of the Realized Masters is often felt by Older Souls. The Synthesis is perceived in the final Cycle, and Old Souls seldom cling to dogma.

The <u>Transcendental Soul</u> perceives the Synthesis and teaches it as such — will not espouse popular dogma and does not affiliate with organized religion.

The religion of the Infinite Soul is the Logos.

Employment:

<u>Old Souls</u> are gardeners. <u>Young Souls</u> with fabulous estates pay them well to exercise this inborn talent. The money thus gained is used by the mid Causal body to perpetuate its influence on the Physical Plane.

Many nurseries are schools run by mid Causal teachers. The teaching there is nonverbal and extremely subtle, but it is easily recognized.

Food:

<u>Infant Souls</u> and <u>Baby Souls</u> cook and eat to survive, and the food is usually tasteless and overcooked. The Baby Soul is fearful (of almost everything), and her kitchen is usually antiseptically clean.

Early Cycle Young Souls tend to adhere to the food patterns learned in childhood. In the middle of this Cycle, experimentation is rampant, but the appetite is generally poor. Late Cycle Young Souls continue to experiment with food and foreign food fetishes often develop. Racial memories are stronger now and the $d\acute{e}j\grave{a}$ vu draws them to certain types of foods.

<u>Mature Souls</u> make fine chefs. They enjoy precision cooking and gourmet dining. Their Hollandaise sauce does not curdle — it would not dare. Wine fetishes are at their height in this Cycle. A Mature Soul would never serve a Zinfandel with lobster. An Old Soul would not hesitate a moment, if Zinfandel happened to be his favorite wine.

<u>Old Souls</u> are casual cooks; they use recipes as guidelines rather than the gospel. They tend to use spices and herbs freely, and will cut mold from cheese, and rotten spots in fruits.

Animals:

<u>Infant Souls</u> are often bitten by dogs who have no previous history of biting, simply because of their inordinate fear.

Baby Souls do not like longhaired cats as a general rule.

Young Souls often own status pets, such as ocelots and Lhasa Apsos.

The pets belonging to <u>Mature Souls</u> will most often reflect their owner's personalities. Many winners of obedience trials belong to Mature Souls.

Most shaggy dogs belong to <u>Old Souls</u>. Old Souls begin to relate to wild animals and often have an affinity for all living creatures.

Baby Souls and Infant Souls would not be caught dead on horseback. Young Souls ride the rodeo, Mature Souls ride to the hounds, Old Souls ride the trails. Most Allergies to animals are denials. [SJC, late August, 1973]

That is the end of the original revelation about Soul Ages. The following sections are extractions from within the remainder of the original Michaelian group transcriptions that were made available to The Center for Michael Teachings, Inc. It is divided into subject matter.

Eyes:

Infant Souls manifest fear. This can be seen in their eyes. This fear is out of proportion to the situation. The whole business of living is fearful to them. Baby Souls are guileless and this shows in their eyes. Young Souls are in a state of unrest. This often shows up in erratic eye movements: the inability to hold eye contact for long. But then the Mature Souls find it difficult to maintain eye contact because of discomfort. Old Souls have a direct, penetrating stare absent in earlier Cycles. Wisdom is reflected there. [SJC, 18 September 1973]

Complexity:

Internally, I have, and I assume others have also, a great deal of pulling and shoving, sometimes like I'm composed of many different people. Some are in charge at one time and others are in charge at other times. Up until now, I had always assumed that this was the many "I's" in False Personality [as taught by Gurdjieff]. Is it this or is it the many Fragments or is it a mixture?

It is an admixture of both [sub-personalities of past lifetimes, and other kindred-soul Fragments].

Is this why, when you see an Infant or Baby Soul, you see simplicity there? It is just one Fragment? And then with Old Souls, you sense a complexity and then in between, you see mixtures? Is this because the Fragments are unified all along the line, beginning with the Infant Souls?

That is valid to a point. Not much uniting occurs in Infancy.

Would this have any influence on Mature Souls?

Yeah, that's what I was saying, because all along the line you seem to see more complexity.

Then perhaps the impact is greater at the level of the Mature Soul than anywhere else. Is that valid?

Not really. Their perceptions are sometimes erroneous. [S/C, 08 October 1973]

Perceptions:

(Question lost in tape ending . . . something to do with being able to tell the difference in soul levels.)

There is a difference; finer; it must be verified, but 'perception' is the concept that separates the [Soul Age] Cycles. [S/C, 08 September 1973]

Watch for the perceptions of others. If they differ greatly from those [in the majority, Young Souls] involved, you are probably dealing with a Mature Soul [in the minority]. [S/C, 08 September 1973]

Richard then asked for a statement on war, wondering why it was necessary and why it was imposed on us.

The high bodies impose nothing. The Cycles impose their own karma. The reasons for this become crystal clear when one studies the perceptions of the world and self through the Cycles. Many nations are now heavily populated with early Cycle Young Souls. Your own is the prime example. Other nations are heavily populated by Mature Souls. These are the nations who chose neutrality in World War II. Old Soul nations are actively pacific and submit to domination rather than fight.

Could we stop all wars?

You cannot do it. There would be minimum cooperation and you would just become a needless Martyr.

We all have negativity and there is all this evil. What do we do with it? How do we handle it?

Evil per se exists only in the minds of those perceiving an action. If you happen to be a Young Soul, your

desire will be to change that evil to good, "to right the unrightable wrong." You will not hesitate to wipe out the lives that stand in your way. After all, are they not evil? Mature Souls often perceive evil in themselves and seek to exorcise this. Young Souls perceive the differences in people often as evil. The Old Soul ordinarily does not perceive evil as such. He perceives the cause and does not seek to eradicate the agent. This is what is meant loosely by "acceptance". [S/C, 08 October 1973]

The only souls who would really benefit from this [alternative health] approach would, of course, be Mature Souls and Old Souls. Young Souls do not possess a developed sense of self and could not direct the knowledge inward. Also, their belief system would mitigate against their acceptance. [SJC, 15 November 1973]

I become irritated when I [a Young Soul] hear Older Souls talking down Young Souls. I hear what they say and it makes me mad. You can hear the knowledge. Most Young Souls [such as yourself] are unwilling to devote themselves to the life of contemplation that is necessary to cause the words to [come to] fruition. This is an active Cycle, the one in which the most valuable lessons are learned and most of the mistakes are made. It is like any system of learning: the Infant Soul is in kindergarten, the Baby Soul is [in] life's elementary school, the Young Soul in gymnasia [high school], the Mature Soul in college, and the Old Soul is out in the world. [SJC, 22 November 1973]

When two or three individuals view one thing, is how each views the thing correct? Or, is one more correct than the other?

Within the Cycles [Soul Ages], there is a vast difference in perception. Each perceives to the limit imposed by the age of the soul. The Mature Soul often views others in error, from one point of view: that being, that others around him will perceive another soul in quite a different way. There is, of course, an ultimate perception that is the Synthesis. This, of course, is "Truth". Older Souls have a tendency to be less harsh in their perceptions and as growth occurs, this gentleness grows, also. [SJC, 20 January 1974]

Is there any relation between super maya, Goals and Roles?

Of course, souls in the various Goals will create specific sets of obstacles and barriers — in other words, maya — and the older the soul, the more exalted the maya becomes, and finally, it even comes around to masquerading as spiritual growth, the most super refined maya of all. When you have learned to differentiate between this and the genuine article, you will have arrived at the point where you can no longer slip back into old, safe patterns and, therefore, must go forward. The awareness groups are, of course, super maya groups of Mature Souls, the political action groups of the Young, and splinter religious quackery groups of the Babies. It all comes back to the lack of inner purpose and the knowledge of the trapped Essence. Many Young and Mature Souls actively practice witchcraft and black magic in answer to the increased perceptions that they encounter in themselves but are unwilling to investigate at a deeper level. Many Old Souls dabble in Orientalia for the same reason. [SJC, 24 February, 1974]

Some students have used the word Perception as an alternative to Soul Age when presenting the concept to a mainstream, non-Michaelian student, readership and/or audience.

Population:

The Exalted Cycles are sparsely populated. Sarah is right about the bell curve. The majority of all Creatures of Reason are Young and Mature right now because of the closeness of the manifestation of the high Mental body [the Infinite Soul]. [SJC, 26 August 1973]

What are the relative quantities of Old Souls. It seems there should be more. There seems to be a minute number in relation to the total population.

It now happens that on this planet the vast majority of souls are Young and Mature Souls, well over one and one half billion [each]. The Baby Souls and Infant Souls together equal the number of Old Souls now. [~10% each] This has not always been, but life on this planet is evolving to the point where there will be no more Infant Soul Entities cast into this frame. At this point, the majority will be either Mature or Old Souls, as it is now on Soleal's world. There is, of course, an end point to all worlds when the star exhausts itself. The evolution of life within a given solar system is always geared to not exceed the life of the star. In other words, all life on this planet will have evolved and completed long before this star expands to become a red giant and eventually shrinks into a remnant dwarf. There are approximately eighty thousand Sixth and Seventh Level Old Souls extant [still living] on the Physical Plane at the present time, seventy thousand approximately Fifth Level Old Souls, [and] thirty thousand Fourth Level. And so, as you can see, this is a small company when you take the world population into consideration. We have detected some disbelief and yet you were all Young Souls at one time. There is a Fragment living quietly in Sussex now, an Old Soul, who was in the past nine times the mayor of London. [S/C, 15 November 1973]

Troubled souls:

I'd like to bring up the subject of "heaviness" that I find reading all these esoteric books and Hindu books. So far, in these systems, I've found so little of the ordinary type of joy. I'd like to buy a toy boat, just lie in the bath tub and putt around.

You would probably benefit much more from that activity than from reading fifty philosophical texts. These are nothing more than another Old Soul expounding on half-acquired enlightenment. Enlightenment is not ponderous. As I said before, as growth progresses, the soul seeks simplicity. This is one good way to discern whether a particular piece of literature will be of any help to you. If it is merely an exercise in vocabulary and rhetoric, then abandon it. Some very wordy material comes from Young Souls. Be wary of this in selecting reading material. Most of those involved in the teaching profession — academic, that is — are either Young or Mature Souls, and their system of ethics is erroneously based upon their own fears of physical death and the nothingness — annihilation of the soul. [SJC, 26 August 1973]

I have a question about this problem of "troubled souls" [that] Michael has mentioned several times and it seems to me that all souls are troubled. This sounds like an area we ought to ask about. Are there untroubled souls?

Few Baby Souls are ever truly troubled. They rarely question their motivation and everything that happens to them is either because they were bad and are being punished, or because they were good and are being rewarded. Think of the two and three year old child when you think of Baby Souls. Think of the bright, lovable, overly energetic, quick, inquisitive eight to twelve-year-olds when you think of Young Souls. Think of

the emotionally disturbed teenager when thinking of Mature Souls. [Think of] the wiser young adult in [thinking about] the Old Souls. [S/C, 20 October 1973]

Why is it that Old Souls with united Fragments are not superior in competence to Young Souls who have a smaller amount of united Fragments?

The Old Soul, at a deeper level, realizes the futility and temporary nature of material achievements, and, therefore, lacks the drive to accomplish this. You are all extremely competent, even in Roles that are out of Essence. The drive is now for spiritual evolution in all of you. Therefore, you are inclined to let the rest slide. Any one of you could achieve anything you wish to do. Why didn't you? For instance, Edgar uses poverty as an excuse, but this is invalid. Many poverty-stricken Young Souls have achieved wondrous things through sheer struggle. Sarah uses the same excuse. [SJC, 22 November 1973]

Headaches:

My patients have headaches and I have no inkling of why they have chronic ones. Some I just don't understand at all. I can't figure out why they have headaches all the time.

Headaches are repressed emotions. Many things can be said through the painful head. Most frequently, a weariness of the body coupled with a bored, trapped Essence will produce the worst headache. Young Souls frequently have migraine headaches. They do not attempt to understand the treadmill they are on. Mature Souls frequently have tension headaches from being surrounded by uncomfortable souls all day. Mature Souls in close contact with Baby Souls and many Young Souls tend to have the most frequent and severe headaches. You can treat their headaches by helping them see the source. With Young Souls, you can only treat the pain. [SJC, 04 September 1973]

Astral interval:

The Young Soul is much attached to the physical body and lessons are often not learned even in the Astral interval. The Young Souls seek to return a soon as possible. Being out of the body is unpleasant for the Young Soul; it is terrifying for the Baby Soul, interesting for the Mature Soul, and welcomed by the Older Soul. [S/C, 08 September 1973]

Acceleration:

The Mature Soul can also accelerate within the Cycle. Young Souls can burn karmic Ribbons rapidly sometimes and accelerate. Elizabeth Blackwell and Florence Nightingale are examples. Louis Pasteur, Walter Reed, Marie Curie, [and] Frank Lloyd Wright accelerated. [SIC, 18 September 1973]

Home:

Are towns segregated by age of souls?

Baby Souls tend to congregate in mid-America towns. This to them represents the "good life." Young Souls like the urban life or the country. The Mature Souls seek tranquility and if this means isolation, then so be it. Old Souls live all over. [S/C, 06 October 1973]

Social & Cleanliness:

The social behavior of Baby Souls is normally a dead giveaway. They have none of the smoothness of the older Cycles. New situations frighten them. Change of any type is threatening. The Young Soul is usually polished and poised socially. The Mature Soul is sometimes nervous in crowds if the vibrations are bad, but they are exacting in their social relationships. The Old Soul is casual about everything. Baby Souls tend to be immaculate about person and home — have strong feelings about hygiene. They live by standard clichés and, after all, "cleanliness is next to godliness". The Young Soul often keeps external appearances: shoves everything into the closet before the company comes. The Mature Soul goes in spurts: one day clean, the next day, not too clean. The Old Soul usually does not bother to shove anything in the closet — who cares? The Baby Souls regularly clean drawers, cupboards and the tops of refrigerators. [SJC, 17 October 1973]

Casting:

About the Tao as mother — the Infant Soul is symbiotic.

No and yes. The Casting is not Casting out, but rather Casting into. The Tao is not just the mother, but you know this. The Infant Soul is close, but furthest from the goal. The ladder must be climbed and the Infant [Soul] is aware of this; its closeness comes from this knowledge. Beyond this, the knowledge is not expanded. The Infant Soul is in this way unique and it is as close to its 'mother' as the infant man who wanders to the Astral Plane continually and loses contact immediately. In the Casting, the total awareness is lost, but not the feeling of loss. The Infant Soul then experiences the loss and the closeness simultaneously. The Infant Soul is again unique in this sense of loss and must start the sorting that later becomes the seeking of the Tao. The

confusing life of the Mature Soul will, and indeed does, balance this great sense of loss in the Infant [Soul]. The sense of loss is not present in the Mature Soul, and this "heavy" involvement into the life stream will help the Infant [Soul] to learn to seek what it has lost. This is what is meant by balance. [S/C, 08 November 1974]

Illness:

Is there a commonality of Soul Level, Role, Goal, in different types of handicapped people such as deaf, blind, mentally retarded, emotionally retarded, those with learning disabilities, etc.? Are they definable as a group?

Sensory deprivations such as deafness and blindness often are karmic. However, there is much commonality within the emotional disorders. For instance, manic-depressives are always Mature, Emotionally Centered souls. Schizophrenics are Mid-Cycle [Fourth Level] Mature Souls who have ego disintegration without the corresponding spiritual growth. Hyperactive children normally are Moving Centered Mature Souls with Retardation Goals. Specific learning disorders, such as agraphia are sometimes karmic, but this is rare. It normally points to a Mid-Cycle [Fourth Level] Mature Soul who has a Retardation Goal. On the other hand, gross mental retardation is enhanced by bad genes, although this is chosen for growth. The disintegration of the Personality, however false, is not something that the individual can handle without the corresponding liberation of the Essence. Childhood schizophrenia or autism is quite different and should not be compared to the adult psychosis. These children are Infant Souls who have perceived the "not me" as hostile at an extremely early stage, sometimes shortly after birth, or even during actual birth and have subsequently withdrawn. Children who exhibit unwanted hostility, and are subject to loud outbursts and antisocial behavior, are normally Infant Souls of Exalted Roles with Dominant Goals, who also perceive the "not me" as hostile. Emotional disorders occur for the most part during the Mature Cycle and are related to the soul's perception of those around it, however erroneous that might be. This causes an enormous buildup in guilt and also hostility. We can give you an excellent example of a relatively frail, Intellectually Centered, young child, a Mid-Cycle [Fourth Level] Mature Scholar, born into a family of achievement-oriented Warriors with dominant Goals. The child reacts time and time again with failure. [S/C, 27 December 1973]

Dreaming:

I would like to ask "'how" to apply the knowledge to the work I am doing at the hospital and if people's style of dreaming has in it a clue to their soul.

No, but their ability to recall and describe is. Much of the time spent in "dreaming" is, in reality, time spent on the Astral Plane. The amount of dreaming actually increases as the soul ages and the ability to recall becomes acute in the Mature and Old Cycles. Most souls who have definitely recurring dreams are Mature and Old Souls. Baby Souls dream mundane dreams, as this is the style of their lives. Young Souls dream exciting and often romantic dreams, [in] which they are often the "dragon slayer". The Mature Souls often dream dreams of violence and death, and many times their dreams are replete with religious symbolism. Old Souls often dream of incidents from their remote past [past lives]. [S/C, 24 January 1974]

Crime:

Is the prison population mostly Baby Souls? The Mature Cycles commit the crimes of passion (murder, etc.)

Old Souls rarely commit violent crime. They simply do not care that much. Infant Souls almost never commit premeditated crimes. Most of their transgressions concern striking back at the hostile environment. Baby Souls often commit group crimes such as the Ku Klux Klan was famous for, and most of their crimes are directed by prejudice. The smart criminals are really Young Souls in the first Cycle. The crimes of passion fall in the later part of this Cycle and in the Mature Cycle. Old Souls are noted for bad checks. [SJC, 06 February 1974]

Choices:

Joan said something about the soul choosing on the Astral Plane.

We would agree with the lady Joan. (It chooses) without interference of maya. The Infant Soul is able to make the choices on the Astral Plane, but the quality of those choices is often poor.

Do some make choices to work out certain things while on the Astral level?

This is agreed upon Astrally. This does not appear as difficult as it becomes on the Physical Plane. The Mature Soul is often one who must complete the parent Pole. Infant Souls are given to Mature Souls for growth.

Who makes the choice?

The Mature Soul often, who must complete the parent Pole [of the Parent–Child Monad]. [SJC, 03 April 1974]

Following are the descriptions of each Soul Age extracted from scattered places in the original Michaelian group transcriptions.

Infant Souls:

What are Infant Souls?

Sarah: Infant Souls perceive their environment as "me and not me" and if "not me" is hostile, they withdraw or get into all sorts of trouble. If everything outside "me" is not okay, they are hostile. Things to the Older Soul are not as big a shock as to the new soul. Everything to them is new and they experience it as a shock.

Infant Souls are often given to Mature Souls for growth.

Given in what way? Are they led to you as children?

The souls between physical lives choose to have this experience. [S/C, 08 September 1973]

We would say a few words on a subject that has not been broached. We feel that you need to know about [it], and perhaps it will give rise to some questions. When the life Cycle is thrown in motion on any given world, it is left alone for many centuries to evolve unmolested and undisturbed. When a dominant species finally stabilizes, we begin to monitor this species. When the animal becomes sufficiently domesticated and is taught basic survival techniques, Infant Souls are cast. The dinosaur did not emerge as the dominant species. Instead, a carnivore, a mammalian, upright ape did. The Infant Souls were not initially cast until the dominant creature had evolved into one where the cerebral capacity was sufficient for learning. [S/C, 24 January 1974]

Baby Souls:

The Baby Soul has such a strong sense of right and wrong, and his opinion of himself is often exalted. [SJC, 18 September 1973]

Most Baby Souls somatize. Any patient who fixates on a particular organ system can usually be categorized immediately. For instance, all elderly ladies with bowel fixations are Baby Souls. Most Baby Souls somatize [have psychosomatic illnesses].

Can you suggest any approach to this problem?

Reassurance is the only route we are aware of, but please make sure there is freedom from real disease. Baby Souls use the courts excessively when their sense of justice has been outrageously insulted. [SJC, 02 October 1973]

The rituals derived from the religions are Good Work. They produce a group high, which is the only way that Baby Souls ever experience a high; that is, vicariously (through others). [S/C, 24 January 1974]

Young Souls:

We cannot reach the Young Souls. They are in charge of your world. [SJC, 08 September 1973] People with money are Young Souls. That is what their goal is.

It happens because Young Souls are in the majority on your world. They are largely motivated by the desire for material achievement. This is an alienating goal. Young Souls quite often have very literal concepts of "heaven" and "hell". They must experience this [in the afterlife], as they create it [in their imaginations] out of Astral matter. [S/C, 08 September 1973]

Young Souls who lose a child through trauma or illness often seek to replace that child, and in so doing make life miserable for the second child, who does not, of course, replace the lost one. [SJC, 22 September 1973]

Young Souls do not hear the [psychotherapeutic] message and the hypnotist would have to be exceptionally experienced, with much teaching knowledge in order to help a Young Soul. [SJC, 20 November 1973]

Those in the Passion Mode, as Young Souls, often undertake jihad or the holy war. [S/C, 03 April 1974]

Usually, toward the end of the Young Soul Cycle, the choices become better and the soul chooses to review the past with far more thoroughness and attempts to strive toward completion of the Monads. [SJC, 17 April 1974]

The way of peace is far too slow for most Young Souls, and if they are politically involved, they usually temper their mercy with a little blood at the end. [SJC, 19 June 1974]

Young Souls involved with ecology legalization will often feel surges of emotionalism when confronted with a pacific [peaceful], woodland environment. [SJC, 17 September 1974]

Mature Souls:

What is a Mature Soul?

A Mature Soul perceives others as they perceive themselves. Sometimes, this makes living difficult. The Mature Soul is not as open to the occult as the Older Soul. The Mature Soul perceives beauty with a clarity not found in earlier Cycles. At the end of the Cycle, the Mature Soul begins to perceive truth. This prepares the soul for the search. This Cycle is really fraught with maya, more so than any other, because the perception of the Older Soul begins to emerge, but the understanding does not. The Mature Soul feels all of the hostile vibrations around them. They have a need to remove themselves from this, but are too caught up in the traditional mores to remove themselves entirely. They feel a certain sense of duty that does not dissipate until the transition [to Old Soul] is made. This is why a skilled therapist would be of help in this Cycle. The goal [of reincarnation] does not become clear to other than Older Souls. That is why the penitent orders are almost entirely composed of Mature Souls. They perceive the collective guilt of the world around them and assume that it is they who have sinned. There is no sin, only karma, as there is no evil, only maya. When the Mature Soul perceives the unhappy ones, the desire is to shield the self from the unpleasant vibrations. [SJC, 08 September 1973]

Mature Souls are disturbed by secrets. Mature Souls do not usually "enjoy" life unless they are surrounded by souls in bliss. This is a difficult Cycle. We must emphasize this difficulty. The Mature Soul is beset with many problems, all intrinsic. The only way you can help is to make the environment non-stressful, so that she has sanctuary. The Mature Soul often seeks professional help on its own. [S/C, 18 September 1973]

Mature Souls often torch-burn for their entire lives. [S/C, 22 September 1973]

You failed in your perception of Mature Souls in the throes of an emotional crisis. This can be mistaken for the drive and vigor of the Young Soul. [S/C, 08 November 1973]

Not all Mature Souls are troubled. Some are quite creative within a nurturing environment, with avoidance of stress and hostility in the family members. [SJC, 27 December 1973]

Usually, the Mature Soul at that point seeks therapy. Whether this is effective depends upon the skill of the therapist. The same goes for the skill of the teacher in the school such as this. [S/C, 08 May 1974]

In the Mature Cycle, there is acute perception of the veil that lies between the real and artificial space, and as never before, the longing to penetrate this veil and go beyond the [physical] senses to [intuitively] glimpse the pan-dimensional. To know that you are not alone in the void, you must walk out on the thin ice, and that way test the physical universe and its response to your plea. Most Mature Souls feel this, and in some way translate it into dreams of incredible strength and strange beauty. Not many, unfortunately, retain the memory of these dreams or question its meaning. The hallmark of the Mature Soul is the ability to perceive others as they perceive themselves. [SJC, 08 February 1975]

Old Souls

All Old Souls have this [ability to become an Adept] within their grasp. Whether or not it is achieved depends upon the soul's ability to burn karmas rapidly, and then pursue the [spiritual] path. [S/C, 26 August 1973]

[Werner Erhard] does have a workable system for Older Souls. Older Souls are capable of helping each other. In this [Old Soul] Cycle, the psychological becomes philosophical and this is the approach needed. This is why you all discovered Gurdjieff. [S/C, 04 September 1973]

All Old Souls see the Synthesis. [SJC, 08 September 1973]

The knowledge of reincarnation comes in some way to all Old Souls. Prior to that, it is only a matter of chance, such as birth in a country such as India where this is the accepted theology. [SJC, 22 September 1973]

Depression, by the way, is one of the only neurotic manifestations left to the Old Soul. Even Jesus felt it. [SJC, 02 October 1973]

You do not feel the desire to seek the remaining Fragments of your Entity until the last physical Cycle [Old Soul Age]. Then at that time, there is almost a compulsion. You do not always know why, but you always do seek. Kurt Vonnegut is an Old Soul who knows this dimly, but does not know the reason. [He] does know the thirst and he has come close, very close in his writing. He feels the compulsion but does not understand the reasons for it. He has come close several times in his fictional works. [SJC, 06 October 1973]

If we have led you to think that being an Old Soul means being on the gravy train, that is your misinterpretation. It is probably the most difficult [Cycle] of all. The only thing that makes it better is your

own readiness to stand apart from the mainstream and begin to verify. This, of course, makes you even odder than ever. [SJC, 06 October 1973]

When Carl Jung described the collective consciousness, he was describing his own apprehension of the collective Fragments residing in his body. He was describing a direct confrontation with his own soul. This has become known popularly as the subconscious, simply through misunderstanding. Through the ages, there have been Old Souls making this confrontation and attempting to describe it. He came closer than most Westerners. Mysticism has never been a compelling force in Western philosophy. [SIC, 08 October 1973]

None other than Old Souls normally have an affinity for all living things. The perceptions of children are surprisingly keen. Abused and troubled children often know where to find an Old Soul. Children feel much more acutely than adults. This can be either positive or negative. [S/C, 13 October 1973]

Most Old Souls are rather sloppy. The tendency toward simplicity is Good Work; being a menace to public health is not. Sometimes the casualness provides an excuse to vegetate. [S/C, 10 November 1973]

What is the purpose of my searching? I have had this questioning mind since I was a small child.

The seeking, Edgar, comes about without your knowledge or necessarily your consent. The seeking usually starts actively when the transition between Mature and Old Soul take place. Those who seek are afflicted with an uncontrollable restlessness that will not subside until they have searched and found a cadre. [SJC, 31 December 1973]

Old Souls [such as yourself] do not normally incur heavy karma. They know better. [SJC, 24 January 1974] Old Souls do not choose Baby Souls for parents. [SJC, 20 February 1974]

If the Old Soul pursues anything, he normally has some successes. [S/C, 10 March 1974]

Few Old Souls are super parents. Most are negligent [toward] children. [S/C, 03 April 1974]

Prejudice is cultural and does not always dissolve in the Old Soul Cycle, although it is usually not manifested aggressively. [SJC, 15 May 1974]

Does cowardliness have anything to do with Old Souls?

Not much. Some Old Souls have 'yellow streaks'. This does not necessarily mean that they will be cowardly, just very cautious. [S/C, 15 May 1974]

Debts of great consequence are rare in Old Souls. [S/C, 07 July 1974]

When you strip down to the Old Soul's perceptions of others — that is, as a part of something and make note of that "a part" — only a minute part of something greater that includes self. [S/C, 14 September 1974] If you meet with extremely Old Souls in Exalted Roles, you are certain to notice that their goals seem no longer earth-bound and temporal, and there is a steady increase in otherworldliness in their behavior. Sometimes, this succeeds in setting them completely apart from the mainstream. It is unusual for these Exalted ancients not to seek some type of esoteric teaching. Many devote their entire lives to this pursuit and their capacity for dedication is very great. [S/C, 01 October 1974]

Transcendental Souls

The Transcendental Soul has manifested through Socrates, Zarathustra, through Muhammed, and through Mohandas Gandhi. The High Causal body [Transcendental Soul] has no attachment for the Physical Plane. [S/C, 18 September 1973]

The Transcendental Soul displaces an Older Soul when it manifests. [SJC, 02 October, 1973]

There was discussion about the Transcendental and Infinite Souls, and their place on the reincarnational Cycle; about the possibility of the Transcendental Soul manifesting through Robert [Burton], etc.

That is oversimplification. The Transcendental Soul is only such when it is manifest on the Physical Plane, as is the Infinite Soul. The high Causal body [Transcendental Soul] is capable of displacing many souls at once. This will occur within the next decade. Many must sit at the feet of living masters. You are now living in a large, complex society. A Jewish carpenter [Jesus] would hardly be apropos.

Will he be a Russian?

The high Mental body will manifest. Look around you; do you not think that this is necessary? There is social and political unrest, internecine [mutually destructive] and interracial wars, religious schism — all existing simultaneously in a powder keg of nuclear power. The manifestation will be a very different type. The problems are not so different as they are more dangerous. [SIC, 08 September 1973]

Infinite Souls

The Infinite Soul manifested through the physical forms of Lao Tsu, Sri Krishna, Siddhartha Gautama and Jesus — no others. [SJC, September 18, 1973]

There has been some significant difference of opinion, and clarification, and evolution in understanding in regard to these seven Ages after the original revelation; Chapter 4M in Part Four, "The Seven Soul Ages", is dedicated to the subject.

Levels

Within each Soul Age there are seven Levels. We were informed of this in channeling subsequent to the original Michaelian group. However, this was never explicitly stated in the original Michaelian group transcriptions that have become generally available; it was implied. A person's Level was given nearly every time that a person's Overleaves were obtained. Only First through Seventh Levels were ever mentioned. Sometimes the word "final" was used, apparently indicating the Seventh Level. Sometimes the Fourth Level was referred to as "Mid-Cycle". This word "mid" implies that there were "lower" and "earlier" Levels (First through Third) and "higher" and "later" Levels (Fifth through Seventh) — the same words used with the seven Ages and the seven planes. Some references to Levels explicitly use the words "lower" and "earlier", and "higher" and "later". Thus, during the original Michaelian group, the Levels were understood to have Dialectic Attributes, the same condition as the other Overleaves.

But in all those dozens and scores of personality profiles, there was never any description of what the Levels were like. Descriptions were not given until *Messages from Michael* in 1979, page 82 of the classic edition. Perhaps Quinn Yarbro asked for this information in one of the special sessions she had with Sarah Chambers during the writing phase of *MFM*. All we ever see is words to the effect that "so and so is a [First to Seventh] Level something or other", but what it was like to be at that Level was not revealed.

The word Level as applied to distinct stages within the Soul Ages first appeared in the block of channeling about Ages that apparently occurred between the sessions of 21 and 26 August of 1973, noted in the previous section:

The Old Soul is casual about sex in the earlier Levels because erotic love begins to lose its charm. In the final Level, the Old Soul often does not participate for lack of purpose (sex adds nothing to its life). [SJC, ~23 August 1973]

The name Level next appeared a couple of weeks later:

Alice: How old a soul am I?

Alice is a Second Level Older Soul. [S/C, 04 September 1973]

Either the revelation about the existence of Levels was given in the original Michaelian group channeling that did not find its way to the Center for Michael Teachings, Inc., or the original Michaelian group members were so accustomed to the concept of Levels from the Gurdjieffian teachings (e.g. Level of Being) that they did not think to ask for an explanation. (The concept of seven levels within each plane was not introduced until the session of 18 September 1973, unless they were already familiar with that idea from Theosophy.)

To elaborate on what was said above, besides the numbering, the only other distinction about the Levels that we find in the original Michaelian group transcriptions is that there were "early" Levels (such as at their first appearance above) and "late" Levels, and a "mid" Level. Sometimes the Seventh Level is referred to as the "final" or "last" Level. Sometimes the Fourth Level is referred to as "mid". Revelations subsequent to the original Michaelian group — the "Michael Math" chapter of *More Messages from Michael* (1986) — indicate that the Levels have Dialectic and Axial Attributes according to the Law of Three and the Law of Seven. Hence the pattern is Ordinal and Cardinal triads on either side of the Neutral in the middle of the Septenary. This is discussed in detail in two chapters in Part Four, Chapter 4K, "The Names of the Levels", and Chapter 4L, "The Mid-Cycle Discrepancy".

Roles

After discussing Soul Age with the Michaels for four sessions, during several subsequent sessions there was a run-up to the revelation about the next Overleaf, and then other Overleaves beyond that:

All of a sudden, we're having this huge body of information about souls [Ages] and it must be important, and I would like an overview. Is this information going to be practical to me? Can I use it? Why this topic?

This [Soul Age] is another Overleaf [in addition to Center/Body Type] and integration must take place before you are able to perceive the Synthesis, which, of course, must precede perception of the Tao. Yes, it can be of great value to you. Body Typing answers some questions. This [information about Soul Age] answers still another set of questions. This is a broader Overleaf [than Center/Body Type], and there are more [Overleaves]. [S/C, 18 September 1973]

The first occurrence of the word "Role" — the second Overleaf revealed by the Michaels themselves — occurred two months after the Michaels' first appearance:

I would like to know what the nature of the next Overleaf is?

We were hoping to tie those you already have [Center/Body Type, Age, Chief Feature] together before going on. However, there are <u>four</u> more [Role, Goal, Attitude, Mode] influences [Overleaves] that come into play and determine the roles that are chosen and how the actors perform in them. There are seven major life Roles. [S/C, 17 October 73]

There is a need to explain the Overleaf categories that I show in brackets in the quoted passage above. At this stage in the original Michaelian group transcriptions, there is doubt about the total quantity and the identification of Overleaf categories. What is not in doubt is that when the "final" Overleaf category, Mode, was revealed on 03 April 1974, it was said to be the "seventh" (see below). What is in doubt (at this point in the narrative) is whether Body Type is an Overleaf category. A section on the subject of Centers in Chapter 4C in Part Four, "Which Trait Septenaries are Overleaves?", reveals that the Michaels counted Centers and Body Types as one Overleaf category. (That might seem surprising to some readers, but I explain it in that section of that chapter.) The Chief Features were discussed extensively starting in late September and continuing into mid-October, before the discussion of Roles began; however, they were not officially added to the list of seven Overleaf categories until 27 February 1974 — see section below. That makes three Overleaf categories revealed at this point in the narrative: Center/Body Type, Chief Feature, and Age. The remaining four were Role, Goal, Attitude, and Mode, which were revealed at approximately one-month intervals.

With that numerical accounting settled, we can now move on to the narrative of the revelation of Roles.

Dick: The question I have concerns alchemy. This past week I became aware that there is a quality in people that is beyond Body Types and soul Cycles and has to do with coarseness and refinement, and as I understand it this has to do with a metal, either gold, silver, copper, or lead. The reason that I saw this is because I have so many coarse and unrefined patients, who are probably people of lead.

The difference you perceive pertains to the next major Overleaf, that of Roles. [SJC, 20 October 1973]

This comment by the Michaels explicitly states that Roles are an Overleaf category, but students who did not have access to the original Michaelian group transcriptions have come to doubt it for "reasons"; refer to chapter 4C in Part Four, "Which Trait Septenaries are Overleaves?"

This comment by the Michaels led to speculation about what these Roles might be:

Alice: Is there anything that he can say about the fineness or coarseness of people?

Dick: He [Michael] says that has to do with the next Overleaf. The past week, I've had the feeling that I'm a doctor for "slaves". I know that they are not literally slaves, but this is what kept popping into my mind: they should be slaves. And I had this one "warrior" — just spectacular. He had this cold, intent look in his eyes and he was a warrior. I just sensed that he was. You know when people were captured, there were obviously all kinds of people and they all became slaves. You can't say that a person is a slave just because he is coarse.

Sarah: I wish he'd tell us about the Roles now. He keeps mentioning them.

Dick: Let's see if we're smart enough to figure it out. We have one of them (Slave) and I'm sure there's Warrior. There must be a Scholar. I don't know if I'm ready to ask for them or not. [SJC, 20 October 1973]

So here one of the members speculates about the Roles Overleaf category. He guessed three of them correctly: Slave, Warrior, and Scholar. There were subsequently objections to the word Slave, as we will address at the end of this section.

Dick: I would like to know if part of the discomfiture Richard and I have is due to our Roles?

Yes, the Roles you chose are no longer met in the professions you follow. There was a time when medicine was an art.

Dick: Well, is my Role as an artist?

As an Artisan, yes. This [Role] includes all art forms. [S/C, 20 October 1973]

We've been given only three Roles so far: Warrior, Artisan, and Slave.

The other Roles are: Scholar, Sage, Priest, King. [S/C, 23 October 1973]

Could we ask for their definition of his Role of Sage?

The Sage accumulates knowledge like a sea sponge. The Sage is normally an excellent extemporaneous orator and wishes to share all knowledge acquired with all those within hailing distance.

How does the Role of Artisan apply to me?

You can bring a great deal of creative talent to all that you do, but you do not do this consistently. You need time to yourself alone to indulge in fanciful activity to bring this out. You are right about the music. This could be a great avenue. The Artisan brings to life freshness of approach and originality. The true Sage brings wisdom. In this [American] society, the predominating Roles are Artisan and Warrior. The next time you [medically] examine a downtrodden, middle age female with lifeless eyes, dull hair, soft voice, dumpy clothes, [and] a tyrant for a husband, think "Slave".

I think I know [what the essence of Artisan is]. It's one who makes something for the good of all or does something creative for social good.

At a much deeper level, this includes all services performed for the good of mankind. These services include the healing arts and all forms of self-expression where a tangible result is produced, either in the form of a material monument or the more intangible values, such as health. [S/C, 23 October 1973]

The date and circumstances of the following transmission are unknown. It is not a compilation from other sessions in our possession. It was found in the edited compilation of the 1973 sessions made by a member of the original Michaelian group. In that document, it was placed inside the October 20 session — when Roles were first mentioned. However, it was not part of the full transcript of that session, which we have. It fits best here, after the October 23 session, because the names of all the Roles were given therein.

There are seven major Roles in Essence. These are chosen at the time the Entity is first born or cast from the Tao and followed throughout. It is possible to experience all of life within the confines of these Roles. They are: Slave, Warrior, Artisan, Scholar, Sage, Priest and King.

The Priest is the Slave exalted. These Roles express themselves in service to mankind: humanitarian ideals. In the Priest, there is a sense of God-consciousness, otherworldliness. Physician can be in Essence for either Slaves or Priests, as can social work, nursing and the clergy.

The Sage is the Artisan exalted. These Roles manifest through self-expression. Artisans bring to life freshness and originality; Sages [bring] innate wisdom and sagacity.

The King is the Warrior exalted. These Roles express themselves through leadership and the ability to influence motivation. The King takes charge through knowledge and inherent power; the Warrior [takes charge] through an instinctive drive.

The Scholar is an intermediate Role. He is an observer rather than a participant. All of life is vicarious rather than experiential, regardless of the cycle or gender of the soul. No Scholar will ever be "gushy", no matter how young a soul. Enthusiasm can be genuine, but will be subdued. All reactions are low key: grief, joy, pain, pleasure. The Old Scholar is detached, aloof, and often arrogantly intellectual. [undated, late October 1973]

Notice that the Dialectic Attributes are noted in the text above, with Priest, Sage, and King being Exalted, making Server, Artisan, and Warrior to be Ordinal; The Scholar is herein referred to as "Intermediate", obviously corresponding to the Neutral Attribute, always placed in the middle of the Septenary. The Dialectic arrangement was confirmed later:

With the seven Roles, there are three leadership Roles. [Sage, Priest, King] [S/C, 16 December 1973] Of all the Roles, is there one Role that predominates?

In this [American] society, the predominating Roles are Artisan and Warrior. [*SJC*, 23 October 1973] There was some repetition and also some expansion of descriptions in a later session:

I would like a definition of any Role and how it is assigned.

It is not assigned. Nothing is — all is chosen.

The Slave is a service role in a menial sense. However, it is possible to experience all of life within this framework. The Slave will always look rather woebegone regardless of station in life and will appear poor regardless of material wealth. The manifested Slave makes a good but busy host as they worry about the comforts of those around. The Slave in Essence identifies with the wrongs of humanity and tries to bring comfort in a material sense to many.

The Priest is the Slave exalted. The Priest is born with a sense of God-consciousness or 'other worldliness'. The Priest in Essence chooses a life role where it is possible to bring comfort to many in a spiritual sense.

How is Role chosen?

Knowledge of all Essence Roles is accessible to the un-fragmented Entity. This sometimes results in a hasty choice, but regardless of this haste, it is always possible to experience all of life in each of these Roles.

The Warrior is a leadership Role. The Warrior leads instinctively. There is an inner drive to lead. The Warrior is purposeful in voice and action, often powerful physically even though small in stature.

The King is the Warrior exalted. These souls lead through inner knowledge that they were meant to lead. They, like the Warriors, are regal in appearance regardless of size. The King commands your interest when he walks in the room. The manifested King is always the dominant partner in any relationship, whether sexual or professional, as is the manifested Warrior. This results in many divorces and other broken contracts in early middle age for both [at the time of the Fourth Life-Stage]. [SJC, 15 November 1973]

Compatibility in relationships is very often affected by the Dialectic Attributes of Roles:

If both are primarily in Essence, then two with the same Role are most compatible and there is much cooperation. Many do well if the Exalted [Cardinal] Roles are mated with their counterparts in the Ordinal Roles. Scholars do badly as a general rule in the interpersonal relationships, but sometimes are fairly tranquil with Priests and Warriors. [SIC, 16 December 1973]

There is a natural affinity for the Ordinal and Exalted Roles: i.e., Sages and Artisans are generally attracted to one another, as are Priests and Slaves, Warriors and Kings. These Roles naturally complement each other and good teamwork can result. [S/C, 03 January 1974]

Note also that the sequence of revelation of the Roles was first noted in the text as Slave > Warrior > Scholar > Artisan > Sage > Priest > King. When the Michaels first listed them together, they were in this order: Slave > Warrior > Artisan > Scholar > Sage > Priest > King. Neither of these sequences were completely in accordance with the Natural Sequence, which I define as, Warrior > Server > Artisan > Scholar > Sage > Priest > King. Refer to my book *The Tao of Cosmogony*, which is all about the Natural Sequence.

Another way, other than Dialectic Attributes, that the Roles have attributes was revealed in this Q&A exchange:

The Warriors, Scholars, Kings, and Sages are masculine Roles.

Then Priests, Artisans and Slaves are feminine?

Yes. [SJC, 22 November 1973]

No reason was given, here or elsewhere, for the assignment of masculine and feminine attributes that do not align with the Dialectic Attributes, but to me it seems to be more *cultural* than structural, the Dialectic Attributes being structural.

Question about procrastination.

This is usually the major part of friction for Saturnine individuals and also with all but Priests, Slaves, Warriors and Kings. They cannot procrastinate, as it goes against their Essence more than other Roles. Scholars, Sages and Artisans do not hesitate to put off things indefinitely, in hopes that some miraculous solution will suddenly appear all by itself, and then this Saturnine creature can just sit back and wait for the '[mill] wheels of the gods to grind'. [S/C, 14 December 1973]

Refer to >https://en.wikipedia.org/wiki/Mills_of_God< for an explanation of this allusion. As a Scholar–Artisan, I can validate the truth of the propensity for these Roles to wait for God to take care of things.

Do the various Roles have influence on the manner in which Goals are acted out. For example, does a Priest pursue the Goal of Acceptance in the same way a King in Acceptance would?

There is a marked difference. For instance, Samuel Goldwyn was a King in Acceptance.

The Priest in Acceptance seeks to provide all those around him with a modicum of spiritual comfort. Most of the time, this comes out as sympathy in the lower Cycles.

The King in Acceptance makes those around him content by providing some form of excitement and a display of leadership that is for the most part "display" in the early Cycles.

Norman Vincent Peale [author of the book *The Power of Positive Thinking*] was a Priest in Acceptance.

Could you capsulize on various Roles and how they approach life?

Yes. Both Artisan and Sage approach life artistically and with much innovation and originality, sometimes whimsically, the Artisan manually and the Sage verbally, the Artisan through instinct and the Sage through innate wisdom.

The Warrior approaches life with vigor, as does the King, both with tremendous vitality — not much analysis but much need to forge ahead.

The King manifests a tremendous need to lead others. The Warrior, while often an excellent leader because of the instinctive drive, can be a solitary fighter for a cause. We almost hate to say that the Warrior faces life combatively, but that is essentially valid.

Both the Priest and the Slave face life in a servile manner, the Slave with a desire to wait upon man, the Priest with the drive to wait upon the gods. Both may manifest this as tireless service to mankind.

Can you compare a King in lower Cycles [younger Soul Ages] to that of one in a higher Cycle?

The man Samuel Goldwyn was a second level Young King. The Young King is usually "flashy". The Old King regardless of Goal is usually known for altruism and excellence in leadership, often magnanimous and with a readily discernible aura of greatness. [S/C, 20 February 1974]

How does Bacchus, the god of wine, fit into Eleusinian mysteries?

It has been said by us before that rituals unify and bring together many who otherwise would not be able to participate. The same goes for festivals. They provide an excellent opportunity to play the fool in a controlled, safe environment, which is necessary for all souls in Ordinal Goals and Roles. Sages and Priests normally need no special invitations to be hams, but the same is not true for many Artisans and Warriors. Many Artisans are essentially nonverbal, except for those few who are like you, Dick, [who are] Intellectually Centered. Warriors fear the loss of respect that accompanies the loss of dignity. Timid souls often blossom during festivals. This was known in the ancient times, more so than today. The Bacchanalian cults arose from the celebration of the harvest and were sponsored at first by Attic vintners. This was so much fun that the cults spread and took on additional significance. There is nothing dull about spiritual growth. The need is to become more joyous and expansive, not more somber and introverted. [S/C, 10 January 1974]

Is DL a Warrior or a King?

There is a certain aura of noble tranquility present in Kings that is notably lacking in Warriors. The King commands respect by his presence alone, the Warrior often by force of personality. Warriors are generally much more loud; Kings normally speak softly.

This man has a regal bearing, but it is his dynamic personality that attracts. The followers of Kings are loyal to a great degree and it does not depend usually on their agreement with the cause. Many who followed Alexander [the Great] to battle did not agree with him, but would have followed him into exile just as willingly. Warriors can only lead as long as their cause is a popular one. [S/C, 10 January 1974]

The Kings have always picked out the enemy, the Scholars planned the siege and the Warriors then have gone in with the action. [SJC, 13 February 1974]

Sexuality is interesting and, in itself, presents many contradictions and paradoxes. For instance, most female Kings spend a lifetime searching for the ultimate sexual experience, most of the time feeling a sharp post-orgasmic sadness due to the unfulfilled expectations. Male Priests and some female Priests must attach great emotional significance to the sexual act or feel somehow cheated. It must "mean" something to them. Most female Sages must be the initiators or they are often unsatisfied by even the most virile male. Often, the dissatisfaction manifests in bitchiness. [SIC, 17 March 1974]

Could we have an interpretation of the [Jesus] parable about the man carrying a stone and asking for help and having to carry the stone twice as far? I can see a Slave saying, "Yes, I'll carry it", a King saying, "Carry it yourself"; a man in Power would hit him, etc. Could we have a comment on this parable in relation to Roles?

Humility, when coming from an enlightened viewpoint, can enable even a Young King to go the extra mile. Even the Indians of this country [Native Americans] espoused this philosophy before the coming of the white man to this continent and they were, for the most part, Mature Warriors and Artisans with some Mature and Old Priests intermingled. This is a lesson to be learned, as are all of the others.

Yes, it does take some longer to learn this [humility service] than others. Usually, the Roles of Warriors, Kings, and Sages are among the last to learn this and must go through a life in Acceptance on the Old Cycle before there is even a glimmer of the true meaning of humility. It is only when you can make carrying the rock meaningless that you can carry the rock without hostility. As long as carrying the rock evokes emotion, then it will be difficult for you to carry it in the dispassionate manner that true humility requires. [SJC, 17 April 1974]

Is it the egotism of the Intellectual Center not to like housework or is it a cultural thing?

This has little to do with culture, surprising enough. The Exalted [Cardinal] Roles [Sage, Priest, King] find mundane chores distasteful, particularly those not in the Moving Center. The Ordinal Roles [Warrior, Slave,

Artisan] accept them in more grace, but there again, they are often preferred by Warriors and Scholars simply because they point to efficiency and therefore to winning. [SJC, 17 September 1974]

[Presumed question about the professions that the Roles might choose.]

Priests who choose to be editors use this as their pulpit much of the time and gather great satisfaction from protecting the public from the evils of bad literature.

Scholars rarely pursue this field of endeavor, even though it is they who could provide the advice and sound criticism that would help those who write to promulgate their messages.

Warriors almost never pursue this and they would also do well.

Young [Soul Age] Priests and Sages often scurry into those fields that provide the most opportunity for censorship — this more so in the case of Priests. It is more a case of retardation of careers with regard to Sages. Young [Soul Age] Sages often become theatrical entrepreneurs and get their "jollies" by destroying other Sages on their way up. Again, this is not conscious. Rarely do they decide to destroy a career or reject a good book. They do it instinctively as a mechanism for keeping the Overleaves in charge. There is rarely enmity involved.

Most managers, agents and the like who are even moderately successful are either Warriors, Kings, or Scholars [the "masculine" Roles]. No other Role provides the tenacity and drive for managing that these do.

The Artisan mystique forbids most of the phony enthusiasm that all new inductees feel when face to face with something that at once mystifies them and at the same time defies their type of logic and causes much skepticism to arise, even in the most flagrant Idealist. The Artisan often prefers to test and choose before he commits himself even to the questioning. Artisans often feel inadequate in the face of verbal exuberance. This inadequacy will be read as contempt even for the Fragment itself. It will feel that it is contemptuous, while it is really a bit envious, but it would be most dissatisfied to find itself in the position of having to be bright and glib and phony after a lifetime of contemplation of vivid imagery that constitutes its true Essence makeup.

[Presumed question about the Roles in Essence versus Personality]

Please remember that the Role is in Essence, not in Personality. All the other Overleaves [other than Role] are in Personality. Only the Role gives you a glimpse of the Essence. When the Fragment is pursuing a more Essence-related life, the frustrations therein are likely to be more related to Chief Feature than those awesome frustrations that arise when a Fragment pursues a task totally out of Essence.

Your culture has placed intuition very low on its list of priorities. Therefore, the artist who must operate solely by intuition cannot expect the adulation of the crowds. True artists who express the Logos in their works do, however, derive the satisfaction of having done so.

Do not confuse the Role [of] Artisan with the life role of artist, even though they often dovetail. Ideally, Artisans would pursue creative endeavors, but this is certainly not [always] the case. Most musicians for instance are Scholars and most soloists are Kings and Sages. Most successful writers are Scholars, Warriors and Slaves, except in the case of sacred literature of a moralistic bent, which is mostly drivel and composed by Young [Soul Age] Priests on a crusade. Most painters and sculptors are, however, Artisans. This solitary form of creative expression just does not appeal to the more verbal Roles. [SJC, 01 October 1977]

Before moving on to the next Overleaf revealed to the original Michaelian group, one other item of business regarding Roles will be addressed. That is the matter of the name of the Role originally named Slave. A few pages back you find how this name came about: it was the brainchild of one of the members of the original Michaelian group. Subsequent Michaelian groups preferred to change the name to Server, not knowing — because the transcriptions were not publicly available until the mid-1990s — that the Michaels suggested that very name during the original Michaelian group:

Would it not be a good idea to have a different name than Slave for this Role?

Do you approve of "Servers"? [SJC, 10 January 1974]

The Yarbro contingent of the Michaelian teachings continues to prefer the word Slave, but the non-Yarbro contingent has adopted the suggested change, apparently without having this transcription in hand.

Other comments about the seven Roles were extracted from the original Michaelian group transcriptions as follows:

Warrior Role:

There seems to be a conflict of my [Warrior] Role and my present state of work. Am I in the wrong thing professionally?

Your [Warrior] Essence would be more at peace in a leadership role, yes. You dislike being subordinate. Being self-employed has always been your role before. Warriors do not as a rule accelerate [spiritually] rapidly. The Warriors, Scholars, Kings, and Sages are masculine Roles. You [a Warrior] do not like being female either. [S/C, 22 November 1973]

Warriors find the [spiritual] "path" especially steep and rocky. [SJC, 29 November 1973]

Having your Role manifest and searching for enlightenment are quite different. Baby Warriors do not search [spiritually] but they do manifest [their Role]. [S/C, 20 December 1973]

This lady is Intellectually Centered — hard to detect in Young Warriors. [SIC, 25 December 1973]

Do Warriors who incarnate in females sometimes have bodily qualities of men?

Most chose circumstances that will give strong bodies, natural inclinations such as outdoors activities and the rest. We know of no Dominant lady Warriors who are frail. [SJC, 30 December 1973]

Is it possible for a Warrior [like me] to do psychotherapy in Essence?

It is usually not possible. [SJC, 22 January 1974]

What is in Essence for Warriors besides fighting?

Many positions involving administrations and leadership. Even supervisory positions in public recreation areas. We know of many Mature and Old Warriors in this country now working as park rangers and their Essences are not bored. [S/C, 05 June 1974]

We did not say that administrative positions were the only course of action open to Warriors. Most Old and Mature Warriors have had their fill of that type of hustle and bustle. Intellectually Centered Warriors make fine tacticians, planners, [and] administrators. [SJC, 10 July 1974]

Server Role:

I would have guessed Slaves — workers. (Discussion as to what was meant by "Slave" led to the next comment.)

The next time you [medically] examine a downtrodden, middle age female with lifeless eyes, dull hair, soft voice, dumpy clothes, [and] a tyrant for a husband, think "Slave". [SJC, 23 October 1973]

Could we have a comment on Slave Roles?

Their purpose is to serve their master. If they change masters, they will only find another. In a master-slave relationship, the master does not always have to be a person. It can be the church or humanity at large. One way or another, they will serve. [SJC, 10 November 1973]

Particularly devoted parents are usually [Slaves]. [S/C, 10 November 1973]

Your [Slave] Role demands that you supervise the physical needs of many and thus satisfy it fully. [SJC, 28 September 1974]

As regards the Role of Slave, why associate this with weakness? There is weakness only in the connotations that your society has mistakenly given to the word. There is no inborn weakness in the Role. Being sold into slavery has nothing to do with the Role of Slave, as given in this teaching. All of you here present have experienced bondage.... [SJC, 30 January 1975]

Artisan Role:

Well, is my Role as an artist?

As an Artisan, yes. This [Role] includes all art forms. [S/C, 20 October 1973]

How does the Role of Artisan apply to me?

You can bring a great deal of creative talent to all that you do, but you do not do this consistently. You need time to yourself alone to indulge in fanciful activity to bring this out. You are right about the music. This could be a great avenue. [S/C, 23 October 1973]

What does Artisan mean?

I think I know. It's one who makes something for the good of all or does something creative for social good.

At a much deeper level, this includes all services performed for the good of mankind. These services include the healing arts and all forms of self-expression where a tangible result is produced, either in the form of a material monument or the more intangible values, such as health. [S/C, 23 October 1973]

The Artisan brings to life freshness of approach and originality. [S/C, 23 October 1973]

No, in spite of your Chief Feature [Self-Deprecation], you are a true Artisan and could express this from Essence either through music or through many media. [SJC, 23 October 1973]

Is it a general principle that female Artisans do not relate well with males?

No. Female Artisans are far more equipped to relate to males than male Artisans are able to relate to females. [S/C, 10 March 1974]

Artists [Artisans] have a marked tendency to seek this form of communication, of course, more so than the other Roles; although Kings and Warriors also see the possibilities, but more in the sense of control than of inter-relating. In other words, the Artisan seeks to communicate non-verbally because he finds other forms of communication incomplete and unsatisfactory. The Warrior and King often see nonverbal communication as a means to control others. [SJC, 21 October 1977]

Scholar Role:

Scholars do badly as a general rule in the interpersonal relationships, but sometimes are fairly tranquil with Priests and Warriors. [SJC, 16 December 1973]

May we have the definition of Scholar?

We have given this but we will repeat. This is an intermediate Role where reason and logic are the foundations upon which life is built. We did not say that Scholars were emotionally bereft, just a little more discreet about displaying. Edgar and Ellis were both born into emotional cultural environments and both display more emotionality than the average Scholar, but still do not approach the sheer emotional extravagance of other Roles such as Priests and Sages. [S/C, 15 November 1973]

Scholars do not like being female and do not choose this often. [SJC, 22 November 1973]

Scholars sometimes have difficulty expressing themselves in an erudite fashion. The knowledge is there but there is a misconnection between cerebrum and vocal cords. [SJC, 13 December 1973]

Most Scholars have little regard for emotional entanglements, unless they happen to be Emotionally Centered. Most Scholars would prefer not to be bothered with the responsibility that goes along with these intrigues. [S/C, 27 December 1973]

Scholars do not usually like to work and will prostitute themselves in various ways for the quick kill in order to leave time for their own solitary pursuits. [S/C, 27 December 1973]

The thirst for pure data accumulation is almost insatiable in the older Scholar. [SJC, 31 December 1973] Is Michael aware of something I should be asking?

Yes. We are in contact with a great deal of information that will no doubt "blow your mind". One of the obstacles for you now is your Impatience. This is one thing that Scholars have in common. The [mill] wheels of the gods do not grind fast enough. [SJC, 31 December 1973]

Concerning Sarah being a Scholar and yet having an affinity for Warriors.

There is a natural affinity between the Scholars and the Warriors. This has been always. The Scholars have always mapped out the action and have shown conspicuous valor on all battle fields. [SJC, 13 February 1974] Intellectually Centered Scholars spend their lives gathering data with usually no more of a goal than to acquire knowledge. Most Moving Centered souls manifest their intelligence in practical "doing" ways. If the [Moving Centered] Scholars gather facts, it is toward a purpose, such as writing a book, proving a hypothesis, etc. [SJC, 10 July 1974]

Who does the Scholar seek? The nearest Scholar?

All seek to exalt their Roles to the nearest power.

The nearest power?

The one with the closest affinity in the Exalted Roles is sought by the Balanced soul with an Ordinal Role. Since the Scholar does not have a particular affinity for any of the Exalted Roles, the seeking, like the Role itself, is peculiar to this Role. This is a neutral, genderless Role. As you already know, coupled with other genderless Overleaves, this can be an excellent platform from which to begin the search; but often this very genderlessness causes multiple diversions into more exotic pursuits before the goal is reached. [SJC, 01 October 1974]

Most Scholars do retreat from intimacy.... [S/C, 01 February 1975]

Sage Role:

Could we ask for their definition of his Role of Sage?

The Sage accumulates knowledge like a sea sponge. The Sage is normally an excellent extemporaneous orator and wishes to share all knowledge acquired with all those within hailing distance. [S/C, 23 October 1973] The true Sage brings wisdom. [S/C, 23 October 1973]

Newly recovered alcoholic living in my home: Mature Sage or Priest in Submission?

Many, yes, do have this [alcoholism] problem, sometimes due to the extremely false facade of the life they lead on stage or as a "famous personage". The alienation again drives them into an escape route that often ends in degradation.

Sages, because of their flair for the dramatic, usually at one time or another, choose this type of life [alcoholism]. [SJC, 19 June 1974]

... the Intellectually Centered Sage is usually extremely erudite. For instance, Dag Hammarskjöld and Abba Eban are examples of this. The "golden-voiced orator", Emotionally Centered Sages, often express their intelligence on the [theatrical] stage. [S/C, 10 July 1974]

Priest Role:

No more descriptions of the Priest Role were found in the original Michaelian group transcriptions than comments quoted above.

King Role:

The King is valuable for attracting and holding many subjects [in a group]. [S/C, 27 October 1973] Kings do not like being females; Scholars do not, either. [S/C, 10 November, 1973]

There is something pathetic about a King in Retardation. It reminds one of a peacock who has been in a hailstorm. [SJC, 30 December 1973]

The Kings have always picked out the enemy, the Scholars planned the siege, and the Warriors then have gone in with the action. [SJC, 13 February 1974]

An Old King in a Power Mode could be a great motivator for a group. [S/C, 03 April 1974]

The King [Role] often gives the illusion of Power Mode, especially when young. [S/C, 19 November 1974]

Refer to Chapter 1F in Part One, "The Seven Temperaments", for the Theosophical precursor to the seven Roles. The similarity is undeniable and remarkable.

Goals

The next Overleaf to be revealed was called Goals. It was first mentioned about one week before the seven Goals were named, and there was a run-up to their full revelation.

We have discussed Souls [Ages] and Roles. Next, we discuss Goals, but not tonight. We are speaking of life Goals, not those goals which immediately facilitate the upward climb [of spiritual evolution]. [SJC, 16 December 1973]

Then in the next session, there was this Q&A exchange about Goals:

Could you give us the Goal (next Overleaf), or one Goal? Is there one Goal for one Role?

Not necessarily. The Goals are chosen with the idea of completing a specific Monad.

Is there a different Goal in each life?

Yes, usually you do [choose a different Goal]. There are seven, and you must necessarily repeat them [because you live hundreds of lifetimes], but how you repeat them in conjunction with the Center of gravity and the Body Type determines the success you have [in completing Monads].

Could you give me mine?

Obviously, one of them is Growth. This is the <u>antithesis</u> of another [Retardation]. There is a stable Neutral Goal [Stagnation], just as there is stable Neutral observant Role [Scholar]. [SJC, 20 December 1973]

This passage showed correspondences and complementarities ("antithesis") within the categories of Overleaves that are due to the Dialectic Attributes: Ordinal, Neutral, Cardinal.

The Goals did not get revealed in that session, but they did in the next session, on Christmas Day:

Could we have the Goals tonight, or is that the next Overleaf?

Yes, this is the next Overleaf, and yes, you may hear the information tonight. They determine the success with which the Role is manifested. They do not concern False Personality, but do determine how you move

through life. Goals determine how successfully the Roles are played [on the stage of Earth theater]. [SJC, 25 December 1973]

If there is one Goal per Role, it wouldn't work. There has to be a finite variety among men (and women and children).

There are three Exalted Goals. They are: Dominance, Acceptance, [and] Growth. There is an intermediate, Neutral Goal, which for the time being we can call Stagnation. There are three Ordinal Goals, which are the antitheses of the Cardinal Goals. They are: Submission, Rejection, [and] Retardation. Most attorneys and politicians are those who have chosen the Neutral Goal — lawmaking is a Stagnation Goal. One of the better examples in history is one you were discussing earlier, Alexander the Great: a Young male King, Dominant. He could not fail. [SJC, 25 December 1973]

The Michaels conveniently indicated the Dialectic Attributes, but inconveniently did not mention the Axial Attributes.

What is the meaning of Dominance and Acceptance?

We think that the one Goal for one Role controversy probably arose over the similarity of some of these Goals to the archetypes [Roles]. For instance, when one thinks of a King, one thinks of Power and Dominance. When one thinks of a Priest, one thinks of Acceptance; and the Sage, with his expansive outlook and natural ebullience, makes one think of Growth. The introspective Scholar is often thought Stagnant. The dejected and Rejected Slave presents a graphic illustration. Of course, this is not true, for there are Kings now living with Rejection as their goal, just as there are Dominant Slaves. [SJC, 25 December 1973]

Note that the transmission was garbled here. Growth goes with Priest, not Acceptance; Acceptance goes with Sage, not Growth; Rejection goes with Artisan, not Slave, Power goes with Sage, not King. The proper correlations were not revealed until *Messages from Michael* was published in 1979, probably as a result of Quinn Yarbro querying the Michaels through Sarah Chambers in the late 1970s. This passage shows that their understanding of the overall pattern inherent in the Overleaf System was nonexistent at this time, and this channeling did not clarify it; it actually confused it. Tsk, tsk, Michael.

After this session, the personality profile was called SRG, the acronym for Soul—Role—Goal. Attitudes were revealed next, so then the personality profile was called SRGA for a while. But then Chief Features were added, and finally Modes, so the acronym for a personality profile was typically reduced back to SRG.

[Knowledge of] These Goals will aid you greatly in your studies. They fit some of the other pieces [of the picture-puzzle image] together. The puzzle [of Overleaves] is now half complete.

Of the seven Overleaf categories, Age/Level, Role, and Goal had been revealed by the Michaels up to this point, with Centers/Body Types inherited from the Gurdjieffian teachings. Yet to be revealed over the next three months are Attitude, Chief Feature, and Mode. That seems to be what they meant by "half complete". (I find it interesting that the Overleaf System as a whole is metaphorically compared to the image in a picture puzzle. I see the Overleaf System as a specific type of picture puzzle: when properly understood in terms of its logical symmetries and mathematical progression, the Overleaf System is like a mandala, reminiscent of the multi-colored sand paintings done by Buddhist monks.)

Sprinkled through the remainder of the original Michaelian group transcriptions, we find these descriptions of the seven Goals in general:

The Goals ... deal with pretty overt behavioral tactics... Most Ordinal Roles who have dominant [Dominance? Or Cardinal?] Goals can be backed into a corner by any Exalted [Cardinal] Role whether or not the Goal is dominant [Dominance? Or Cardinal?]. Even dominant Warriors can be dominated by Accepting or Submitting Kings. [SJC, 30 December 1973]

The Goals are intimately linked with the Roles, so that a dominant King needs subjects to rule; the dominant Sage requires an audience; the dominant Scholar, a group of students; the dominant Slave, a willing master. Some of the most flagrant sadomasochistic relationships are engineered by dominant Mature Slaves. [SJC, 03 January 1974]

In the new Overleaf of Goals, I hear them as judgmental in that there are three "exalted" Goals and three "subordinate" Goals, and a "neutral" Goal.

This [Dialectic Attribute pattern] is true of all of the Overleaves. It [different Goals in different lifetimes] normally gives all souls the opportunity to experience all of life in the Roles, which are stationary [don't change from lifetime to lifetime]. It [Ordinal/Cardinal in Goal] does not have quite the same impact as in the other Overleaves; it simply means that the souls in Ordinal Roles tend to be the doers rather than the sitters and thinkers [as the Cardinal Roles are]. [S/C, 10 January 1974]

Trust is most difficult for souls in Acceptance, Submission and Rejection. [SJC, 27 March 1974]

Now as to the responsibility, you students have the responsibility for self and no others. If you take this responsibility seriously and respond appropriately from the proper Center, you will not be negating any responsibility that you might feel for those around you. In fact, you will in truth be giving them the space to take responsibility for their selves. This is important, students. Whenever you arbitrarily take on responsibility for the actions of others, you rob them of growth. This happens every time you hinder rather than help by taking the responsibility out of their hands. For those whose Goal is Acceptance, this only appears more difficult. It is equally difficult for those in Dominance, who like to be in charge; for those in Growth, who like to take the responsibility for the level of growth within the group; for those in Ordinal Goals [Rejection, Retardation, Submission] who feel much responsibility for the miseries around them and feel it is their life task to mitigate it. So the Goal of Acceptance is no different than the others in this, although those in Acceptance are quite often more verbal about their feelings of responsibility than others. Those in Growth tend to act theirs out and those in Dominance even more blatantly act out the need to take responsibility. [SJC, 08 February 1975]

Sprinkled through the original Michaelian group transcriptions, we find these descriptions of the seven Goals:

Submission

This Goal [Submission] demands that you not assert yourself and that you constantly take a back seat, deferring to the opinions of those around you. [SIC, 25 December 1973]

The Goal of Submission suggests that the soul involved will perform many tasks where no inner desire exists, regardless of how distasteful they may be to the soul. As he sees it, his role in life [is] to submit to the powerful forces pinning him to these circumstances. Forbearance is one of the hallmarks of this Goal. Many will bear their burdens in virtual silence simply because they feel that it is beyond them to change their lot or that the losses they might suffer for their emancipation would not be worth the gain in independence. [S/C, 03 January 1974]

Why her choice of a Submission Goal?

This Goal is almost necessary with so many Exalted children.

She seems to fight the Submission.

That is not entirely valid. Those to whom she has had to submit have also fought her Submission. It is not necessary that she experience dejection in order to fulfill this Goal. Now that she is able to look at this, she may wish to alter it. The dynamism around you has made you resent the Goal from the beginning. Those strong souls have also been able to fend for themselves to a remarkable degree. Also what we mean is that the soul in Submission need not appear as an object of pity. This usually points to the one who is willing to sweep up the pieces after the fracas, and this you have done. [SJC, 18 May 1974]

Retardation

Retardation brings little success either in health or in wealth. [S/C, 25 December 1973]

Hyperactive children normally are Moving Centered Mature Souls with Retardation Goals. Specific learning disorders, such as agraphia are sometimes karmic, but this is rare. It normally points to a Mid-Cycle [Fourth Level] Mature Soul who has a Retardation Goal. On the other hand, gross mental retardation is enhanced by bad genes, although this is chosen for growth. [SJC, 27 December 1973]

There is something pathetic about a King in Retardation. It reminds one of a peacock who has been in a hailstorm. [SJC, 30 December 1973]

Is she selecting to pay back the debt by choosing a Retardation Goal? Can you be in physical retardation as well as mental?

She can.... The retardation can be solely physical and for that reason, genetically inferior stock is selected. (Purely physical retardation, any unusual disease appearing in a young person that usually happens to older people.) [SJC, 24 January 1974]

His Goal [of Retardation] holds him from achievement. [S/C, 27 January 1973]

Souls who choose the Goal of Retardation as a means of burning karma deliberately choose parents with known genetic faults. For instance, not all women over forty produce retarded children, as with several members of this group, and yet some do. They choose parents who have poor circulatory systems and hereditary disorders that are harbingers of early death. [SJC, 03 March 1974]

Why did the boy choose Retardation?

In order to experience this dependence. [S/C, 30 May 1974]

Retardation often does [take this form of hypochondria], however. [S/C, 19 October 1974]

Wants to know what percentage of people in the Goal of Retardation are actually mentally or physically retarded.

In this culture, almost 90% of those who choose the Goal of Retardation are mildly to severely mentally deficient. This deficiency ranges all the way from perceptual disorders to the more severe manifestations. Congenital heart difficulty is another example of the physical Retardation, also children born with sensory difficulties of a severe nature and without limbs. [SIC, 22 October 1974]

Rejection

People with Rejection as their Goal set themselves up for misfortune and would not recognize a great spiritual teacher if one crossed their path. Erotic love is full of Rejection for those who have this as their Goal. They automatically chose an unsuitable object as their love object because they know that they will ultimately be rejected. Fortunes have been left to people with Rejection as their Goal and these fortunes have been quickly mishandled with bad investments and ill-fated ventures, or simply "blown". [SJC, 30 December 1973]

... those in Rejection Goals, who often become massively obese... [S/C, 03 January 1974]

Souls in Rejection many times choose super genetic heritages only to destroy their bodies during the physical interval. [SJC, 03 March 1974]

The soul in Rejection does not seem to fit into the mold no matter what the activity. In discussions, they will often turn a relatively mild topic into royal imbroglio before you can blink your eyes. The soul in Rejection is not necessarily passive. That depends upon other Overleaves, but is usually argumentative in most situations. Souls in Rejection often remind one of the people who are always in the right place a day late. If the emphasis is on punctuality, the soul in Rejection will inevitably be hours late. The reverse of this is also true. If one is offended by crude humor, the soul in Rejection will inevitably trot out the most rank bathroom jokes in the book. If there is emphasis on this type of humor, the soul in Rejection will set himself above this. The soul in Rejection who suddenly finds himself on the road to success will often develop prematurely crippling disorders that baffle even the medical profession. Then the soul can throw up his hands and say, "Well, what more can I do? I have this awful disease." [SJC, 13 March 1974]

Those who are in Rejection coming from an Aggression Mode can be among the most obnoxious souls of all. [S/C, 03 April 1974]

A soul with a Goal of Rejection and in the Power Mode will often be quite violent in his request for Rejection, while the soul who has Rejection as the Goal with a Repression Mode may be only forlorn and steeped in self-pity. [SJC, 03 July 1974]

The soul in Rejection is at the same time saying, "I will make you reject me no matter how hard you try to accept me, for my pain is more important than your pleasure." [S/C, 01 October 1974]

Rejection seldom takes this form [hypochondria], as these souls tend to reject also the medical profession along with everything else. [SJC, 19 October 1974]

Stagnation

Most attorneys and politicians are those who have chosen the Neutral Goal — lawmaking is a Stagnation Goal. [S/C, 25 December 1973]

Some choose Stagnation and sit out several levels in a [Soul Age] Cycle — plateauing-out on life — but this is usually after some particularly stormy [incarnation] sessions. [SJC, 20 February 1974]

This [Goal of Stagnation] often obscures the Role. [S/C, 03 March 1974]

Not all advocates are in Stagnation; it is just a rather logical choice for those who are. [SJC, 19 June 1974] The softness you see is the Goal of Stagnation. [SJC, 02 January 1975]

Acceptance

Acceptance as a Goal accounts for much maneuvering. [S/C, 25 December 1973]

On the other hand, people with Acceptance as their goal have managed to avoid tortures quite successfully. [S/C, 30 December 1973]

Acceptance as a Goal causes the soul involved to go through various machinations in order to find their special niche in life. This also in turn causes them to excuse the faults of others, since they themselves recognize their own imperfections. This is the proverbial "nice guy". [S/C, 31 December 1973]

Do the various Roles have influence on the manner in which Goals are acted out. For example, does a Priest pursue the Goal of Acceptance in the same way a King in Acceptance would?

There is a marked difference. For instance, Samuel Goldwyn was a King in Acceptance. The Priest in Acceptance seeks to provide all those around him with a modicum of spiritual comfort. Most of the time, this comes out as sympathy in the lower Cycles [younger Soul Ages]. The King in Acceptance makes those around him content by providing some form of excitement and a display of leadership that is for the most part "display" in the early Cycles. Norman Vincent Peale [author of the book *The Power of Positive Thinking*] was a Priest in Acceptance. [SJC, 20 February 1974]

The Acceptance [Goal], of course, is your strongest Overleaf. Why does it matter to you whether you are universally liked? That, given Mechanical Man's motives for liking, simply is not possible. Your homework would be to perceive your voracious need in this area, and try to satiate it once and for all. [SJC, 21 September 1974]

The Acceptance [Goal] combined with the Caution Mode have been, in the past, your primary stumbling block, and until six months [ago] would have been obvious as your prominent Overleaves. Now, the Acceptance commands the forefront as you have attempted work with your Caution [Mode] and have managed to throw caution to the winds in several instances. By doing so, you have almost rendered this Overleaf neutral and workable. The Acceptance [Goal] can be quite positive, yes, but it must come from what you have learned to call "external consideration" [which is active and positive] and not from the Personality's "internal consideration" [which is passive and negative]. When the manifestation comes from Personality, it can be very negative in terms of the energy drain to you.

It seems like I've given up Acceptance and not given up the Caution. Like "less caution about saying no."

Please don't misunderstand us. Acceptance is not a negative Goal. It is a powerful, Exalted Goal and can be particularly useful in the realm of external consideration. [S/C, 01 October 1974]

Growth

... Growth as a Goal ... makes ... a fine [spiritual path] seeker. [S/C, 25 December 1973] Those with Growth as their Goal grew spiritually in Auschwitz. [S/C, 30 December 1973]

The Goal of Growth causes the soul to search, sometimes restlessly, for the answers to questions of a philosophical and religious nature almost from the time the first breath is drawn. In the early Cycles, this sometimes causes grief and guilt, as there is often a split with family members over untenable views held by them. The "review" is a phenomenon that we believe to be universal in the older Cycles. We see this in all of you, but far more pronounced in those in Growth. This endless searching often produces both Acceptance and Submission; then when the flash [of insight] comes, the student in Growth often becomes temporarily Dominant in order to spread the word he has received. This is entirely natural. [S/C, 03 January 1974]

I'm curious about the Negative Pole of Growth [-Confusion].

A scattering of attention, the relentless search for the answer to a not-yet-formulated question, the quest for spiritual experiences without any clear-cut feeling or intuition as to what that might be. Students in the Negative Pole of Growth often go from group to group for many years not knowing for certain what it was that the experience lacked, but knowing that they did not find it. Many in the Negative Pole of Growth become quite prominent philosophers; the man Emmanuel Kant, for example. Many others go from religion to religion for surcease from their internal torture. In addition, they fight any real growth within themselves, with the degree of strength provided by the Mode. [SJC, 19 January 1975]

Dominance

The Goal of Dominance suggests that the soul involved will tend to try to dominate all life situations. It is much deeper than this, however, and results in frustration if the opportunity does not present itself in the earlier Cycles. This results in wars and other controversies of a serious nature. The Goals are intimately linked with the Roles, so that a Dominant King needs subjects to rule; the Dominant Sage requires an audience; the Dominant Scholar, a group of students; the Dominant Slave, a willing master. Some of the most flagrant sadomasochistic relationships are engineered by Dominant Mature Slaves. [SJC, 03 January 1974]

Sages in Dominance have a 'hard row to hoe' [because of so many weeds in the garden]. [SJC, 17 January 1974]

Most retired military officers are in Dominance. [S/C, 20 February 1974]

Those in Dominance do the least internal considering [concern for what other people think]. [S/C, 03 March 1974]

What is the difference between Dominance [Goal] and Power [Mode]? I can't tell.

They are not that similar. Often the Dominant person does not carry over beyond the first focus. In other words, this is not the only soul you would consult for a leadership role. The Dominant soul dominates the immediate situation only. [The Power Mode dominates all situations.] [S/C, 03 April 1974]

[With your Goal of Dominance,] You still do seek to dominate the physical environment around you. [SJC, 24 September 1974]

The Dominance is the Goal that gets in the way of Stubbornness. [S/C, 08 November 1974]

What characterizes the Negative Pole of Dominance [-Dictatorship].

First of all, the soul in the Positive Pole of Dominance [+Leadership] is quite a nice soul to be around during a crisis, as this is the quiet, take-charge, do-the-job type of Dominance; the one who can come in, size up a situation and restore order out of chaos and then fade away. The soul in the Negative Pole of Dominance merely blindly seeks to dominate the immediate situation: his relationship with others, all facets of his life. He is unhappy if he feels that he is not 'captain of his own ship'. He is skeptical of the decisions of others, and usually unwilling to act upon the suggestions of others, preferring his own, even though they might be disastrous. The woman in the Negative Pole of Dominance is the most tenacious of all in hanging on to the control of her children long after they cease to need even any advice. She seeks to mold their lives and their character, convinced that she is right. The soul in Dominance finds it difficult to delegate authority, even if it means more work for himself. [SIC, 19 January 1975]

The Goal of Dominance will often display the confusion in the Role of Slave. [S/C, 30 January 1975]

Attitudes

Someone anticipated the name of the next Overleaf category two days after the Goals were revealed:

Is the next Overleaf Attitudes?

Essentially [yes], but we would prefer not to plunge into that at this time. We feel that time is necessary for assimilation [of the understanding of Goals]. [SJC, 27 December 1973]

The names of the Attitudes were revealed nearly one month later:

Sarah handed out a typed list of "Attitudes" for us to ponder about for the next Overleaf. (They just appeared in the middle of a page she was typing about something else and she had to retype that page.)

Stoic, Skeptic, Cynic, Pragmatist, Realist, Idealist, Spiritualist.

Are there three Exalted Attitudes?

[That is] valid. [SJC, 22 January 1974]

Note that in this septenary the Ordinal triad was given first, then the Neutral in the middle, then the Cardinal triad was listed last. Such is the norm for the Law of Three in combination with the Law of Seven. Note also that the Axial pairs were mirrored this time, thus: Stoic versus Spiritualist, Skeptic versus Idealist, and Cynic versus Realist. This is the only time in the revelation of Overleaves that this symmetrical pattern in terms of Axial Attributes happened.

One astute original Michaelian group member promptly postulated that entire cultures and nations can have a predominating Attitude in the group as a whole:

Are there Attitudes in groups such as the Indians?

Yes. Whole nations, as a matter of fact, can [have an Attitude]. This nation [the United States], which is Idealistic, for instance, is now in the process of ousting its Pragmatic ruler [Richard Nixon].

Is Japan Stoic?

Yes. The whole of India has a Spiritual[ist] flavor. Russia tends toward Realism. France is Pragmatic. England is Cynical. Spain is Idealistic. Germany is Pragmatic. Italy is Idealistic. The Scandinavian countries are Cynical, except for Finland, which is Stoic. Scotland is more Cynical than England. The Tahitian islands are consummately Spiritualistic (fun-loving). Israel is Cynical — the flavor is that of bitter Cynicism. Egypt

changed radically when Alexander [the Great] came through, from Spiritualism to Realism. [S/C, 22 January 1974]

There is very little said about the Attitudes in the original Michaelian group transcriptions besides this Q&A exchange a few days after they were first revealed:

Can karmic Ribbons be cut by changing Attitudes?

Yes, they can, but this only comes about when the soul recognizes both the Ribbon and the Attitude. If a soul in Cynicism realizes this Cynical Attitude and its applications in a life situation, then this [change from one Attitude to another] can be accomplished.

Do Attitudes complement one another in the perfect pair-bonding?

Yes, usually with the combination of Idealist–Realist being among the best, Cynic–Spiritualist among the worst. The Pragmatist can generally exist well with all others.... [S/C, 09 February 1974]

One other significant fact about the Attitudes is found in the original Michaelian group transcriptions:

- ... those Attitudes in the Overleaves, the predominant philosophical flavor. [SJC, 24 April 1974]
- ... knowing your Role and your philosophical Attitude has helped ... [S/C, 24 September 1974]

These two comments hint what is obvious about the Attitudes, that some of them are named after formal philosophies that originated in ancient Greece, and later. One can look up these names with an internet search and verify this statement. To some extent I have already done that research for you, and it is documented in Chapter 1G, "Seven Philosophies — Seven Attitudes".

There is very little explanation of these Attitudes to be found in the original Michaelian group transcriptions; following is what I found.

Cynic

A Cynic thinks everyone has an ulterior motive. [SJC, 24 January 1974]

Actually, to me that description seems more like a Skeptic in the Negative Pole of –Suspicion. Skeptics and Cynics are often mistaken for each other; it is Good Work to know and discern the difference when you see it in the flesh.

Stoic

In the true Stoic, there is detached acceptance of the controlling forces of the universe. [S/C, 22 January 1974]

I would like to ask, since being told I was a Stoic and have looked back over my life, about times as a child when my other brothers and sisters were so upset that they could not eat their meals. Is being a Stoic why I could always eat, no matter what upsets were going on around me?

This is, in part, due to the Stoicism, but also to Intellectual Center's stronghold. There was no rational reason why you should not eat. Stoics are not devoid of all feelings; they can merely detach themselves in a fairly lofty manner from the pain involved. Of course, they also detach themselves from much of the pleasure also. It [Stoic Attitude] serves as a mitigating factor [to the Emotional Center] and allows for better contact with [the] Intellectual Center. [SJC, 24 January 1974]

The significance of the comment about Stoic Attitude mitigating Emotional Center is not explained in the original Michaelian group transcriptions until about a year later, when the concept of Axes between the Overleaf categories was introduced. Thus, Goal and Mode are Ordinal and Cardinal Poles on an Action Axis, Chief Feature and Role are Ordinal and Cardinal Poles on an Inspiration Axis, Attitude and Center are Ordinal and Cardinal Poles on an Expression Axis. Therefore, when an Attitude and a Center are complementary, they tend to Neutralize each other. More is said about this in Chapter 2C below, "Attributes of Overleaves". This aspect of the Overleaf System is explained in great detail in my book *The Tao of Personality*.

Stoics are not always heavy into the negative.... Traditionally, the Stoic has always represented the eye in the hurricane. At least to us, if this is negative, our perceptions are quite at variance. [SJC, 09 November 1974]

Skeptic

This male is trying to control his life and will not presently admit the presence of outside influences because then he would not be in control. That explains his Skepticism. [SJC, 17 March 1974]

Pragmatist

This [Pragmatist] Attitude emphasizes the practical, "real" side of nature, many times to the point of denying the existence of other external forces. [SIC, 24 January 1974]

Idealist

You [an Idealist] perceive the world in terms of its ideal state and base your actions therein. It is not naivety, no. [S/C, 22 January 1974]

[Romanticism is] not always [Idealism]. [S/C, 24 January 1974]

I [an Idealist] expect people to perform a certain way and never can quite see that they do not mean what I hear them to say. I see Idealism as being able to perceive things as they could be and trying to pursue that.

That is valid. [S/C, 24 January 1974]

Spiritualist

What is a Spiritualist?

It enables the soul to look beyond the physical reality for the answers. More than that, it normally compels the soul to search in this fashion [beyond the physical reality]. It also results in a feeling of oneness with the cosmic. [SIC, 24 April 1974]

Spiritualists, even though they may never meet with a teaching, somehow know that this [physical world] is "certainly not all there is". [SJC, 18 May 1974]

Realist

The Realist perceives the situation at hand in an almost intellectual clarity, and subconsciously applies all of the alternatives with lightning speed, coming up with a workable solution within an extremely short period of deliberation. The Realist has few expectations of fanciful nature, and as would be expected, is grounded in reality. [SJC, 24 April 1974]

Watch, this trap [the differentiation between Rejection and Dominance] is as hard as the Realist / Pragmatist to differentiate. [S/C, 17 July 1974]

Chief Features

The term "chief feature" was borrowed by the Michaels from the Gurdjieffian teaching. Gurdjieff did not have a list of seven of them, but he did put forward the general idea that every person had a central and/or predominant character flaw. This history was documented in Chapter 1H in Part One, "Chief Features and the Seven Deadly Sins".

The Michaels' revealed their list of seven Chief Features on 27 February 1974, but as early as five months before that happened, there were several occasions recorded in the transcriptions where the subject came up. (This was after Soul Age and before Roles were revealed.) Some of these are recognizable as in the list of seven, and some are not, possibly because some original Michaelian group members were still thinking from the perspective of Gurdjieffian teachings concepts. These mentions are as follows:

Richard: What is my Chief Feature?

Misguided concern; better known in some circles as "hidden hypocrisy". You are not aware of the hypocrisy. It appears to you as concern.

Sarah: What is my Chief Feature?

Arrogance.

Alice: And what is mine?

Endless self-analysis.

Dick [Alice's husband]: But she is also always giving advice, to me and to everyone else.

This is a feature of the False Personality. The Self-deprecation is a part of karma for the Essence.

Dick: I would like to know about my Chief Feature.

You still have some elements of self-pity [Self-deprecation], not as pronounced as before. They are now confined to the emotional experience we discussed earlier and your job. This is markedly improved.

Sarah: What should I do about my Chief Feature? I don't know about it unless someone photographs me. Richard [Sarah's husband]: I did photograph you and you got uptight.

That is a good way. Sarah does an excellent put-down and she should be called on it when it occurs.

Richard: Is this a karmic thing?

Yes. You were very Arrogant before. Sarah was not. [SJC, 22 September 1973]

Dick: How about the putting of herself down?

Self-deprecation is [the] Chief Feature for Alice. [SJC, 27 September 1973]

Richard: Are the karmic ribbons influenced by False Personality?

Yes. Entrapment in the body and the Chief Feature are karma for Essence. [S/C, 17 October 1973]

In my understanding of the Overleaf categories as three complementary pairs on the Action, Inspiration, and Expressions Axes (and a Neutral), I regard Chief Feature and Role as Ordinal and Cardinal contraries on the Inspiration Axis. That is one way to interpret this passage about Chief Feature and Essence.

Kathryn: What is [roommate] Ramona's Chief Feature?

Ramona has jealousy. This is manifested as possessiveness [an aspect of Greed].

Kathryn: What is mine?

Your Chief Feature is false modesty [an aspect of Arrogance]. We have told you this before.

Kathryn: What is Randy's Chief Feature?

He has a King [Chief] Feature [Impatience], exalted [Cardinal] self-image. His Role is Scholar.

This is some support for my perception that the Chief Feature (Overleaf category) is the "shadow", aka the "dark side", of the Role (Overleaf category), even darker than the Negative Poles of the Roles. I regard Chief Feature as the Ordinal side of an Inspiration Axis, and Role as the Cardinal side of an Inspiration Axis. Goal and Mode are an Action Axis; Attitude and Center are an Expression Axis; Age/Level is an Assimilation Axis. This is shown on my version of the Overleaf Chart, presented in all its symmetry in Part Three.

Could you comment on Sarah's feelings of being right? [She has a Chief Feature of Arrogance.]

Sarah would rather be silent than wrong. This is not Bad Work, but her put-downs are. This is improving some. A bachelor's degree is no longer the 'price of admission' [to the superiority club]. [SJC, 10 November 1973]

[question missing]

Can you now see a correlation between the Chief Feature and the Goal? Vanity and Arrogance are both Chief Features found in Dominant souls. [S/C, 03 January 1974]

Some of the above are recognizable as the Overleaf System Chief Features, but the Michaels narrowed this concept down to seven in the following Q&A exchange:

Does the next Overleaf have to do with outlooks?

That is close, but was not the one we would give next. We would tell you tonight that there are primarily seven negative outlooks, or what you have been calling Chief Features. All variations [that Gurdjieff mentioned] are merely permutations of these.

May we have the next Overleaves?

These Chief Features can be stated as: Impatience, Arrogance, Greed, Stubbornness — which includes tenacity — Self-deprecation, Martyrdom, Self-destruction. [S/C, 27 February 1974]

Whereas the Traits of the previous Overleaf category, Attitudes, were revealed in the order of Ordinal triad — Neutral — Cardinal triad, the Chief Features were revealed in the order of Cardinal triad — Neutral — Ordinal triad. These Dialectic Attributes did not escape notice by one of the original Michaelian group members, who commented:

Half are outwards and half are inwards. [SJC, 27 February 1974]

Regarding the Dialectic Attributes, what this person here called "outward" and "inward" elsewhere in the original Michaelian group were called "Exalted" and "Ordinal" respectively. The Cardinal Chief Features are Impatience, Arrogance, and Greed, whereas the Ordinal Chief Features are Self-deprecation, Martyrdom, and Self-destruction. The Neutral Chief Feature is Stubbornness.

Regarding the Septenarian Attributes, there was neither repetition nor mirroring of Action — Inspiration — Expression Attributes on either side of Assimilation. Thus, it was up to the original Michaelian group members to discern this, if they could. Evidence from Overleaf Charts that were created during the original Michaelian group is that they were not entirely successful in this; refer to Part Three for a look at the Charts that were created during the original Michaelian group.

As this particular session progressed, more information was given about the Chief Feature:

Can these be changed in our lifetime? Can you get rid of them?

You must grow to extinguish this.

Comment: In other words, we must go through our Chief Features to arrive at Agape.

You must grow to the point where this [Chief Feature] is no longer a barrier to Agape.

What function does Chief Feature have and what role does it play?

We would say an enormous part. Often, it alone prevents the soul from operating out of the Role in Essence.

When one understands that the Overleaf categories of Chief Feature and Role are Ordinal (negative) and Cardinal (positive) Poles of an Inspiration Axis — and thus in direct opposition to each other — this statement makes excellent sense.

How does it come to be in our lives? Do we choose it?

It is chosen, yes, as is everything.

It was said my Chief Feature was Vanity. Is this so?

Vanity is a part of Arrogance. We agree with that. Self-pity is a part of Self-Deprecation.

Is that my Chief Feature as was said by Robert [Burton of the Fellowship of Friends]?

We see in you a great deal of Impatience.

Is that typical of those in Growth?

Yes.

What is my Chief Feature? (Martyrdom was suggested by group members.)

We agree with that.

Is there a sub-feature?

Self-effacement (aspect of Self-deprecation).

What is Cheryl's Chief Feature?

Self-deprecation.

Is her sub-Feature self-effacement — taking a back seat, lacking in self-confidence?

Cheryl has a tendency to fade away in crowds. Also, [she] has many negative reactions to rather ambivalent statements about Young Souls. What does this suggest?

Comment: Non-existence (self-effacement).

There are many remnants in Cheryl, but she is close to extinguishment [of the Chief Feature]. That is valid. [S/C, 27 February 1974]

The term "Chief" Feature implies that there are "sub" Features, or what in the Michaelian teachings community came to be called Primary and Secondary and Tertiary Chief Features.

Refer to Chapter 1H in Part One, "Chief Features and the Seven Deadly Sins", for a look at precursors to this Overleaf category to be found in the Gurdjieffian teachings and elsewhere.

There is a significant amount of explanation of these Chief Features to be found in the original Michaelian group transcriptions; following is what I found.

Martyrdom

Is suicide common in Martyrs?

Yes. [SJC, 10 Mach 1974]

There is an element of Martyrdom in the motherhood role of the [American] culture, which is unnecessary. It is not at all good to put off self-growth until the children are grown. [SJC, 16 June 1974]

Most underdogs are Martyrs; they simply cannot win. You see, the Martyr says to the world, "Just look at the enormous cross I bear." [S/C, 01 October 1974]

Since she has a Chief Feature of Martyrdom, she is especially difficult to penetrate. Her suffering is so splendid at the present. [S/C, 19 October 1974]

Self-deprecation

What is an obstacle for me?

Alice has an obstacle in Personality, not Essence. That is the necessity to put herself down in front of others [Self-deprecation] and thereby gain the reassurance [from others that she is better than she feels about

herself]. You can overcome that by realizing that the Personality is a hindrance and that its "needs" need not be fulfilled. [SJC, 17 August 1973]

Some Michaelian students have adopted the word Obstacle to replace the phrase Chief Feature. This is not the only place that the word appears; see further on.

The Self-deprecation is also used to gain approval, or, in some instances, permission. [SJC, 22 September 1973]

She has had the Self-deprecation Feature as an obstacle to growth before. The Slave cannot rise above this. [S/C, 27 October 1973]

Slave and Self-deprecation are the Aspects on the opposite sides of the Inspiration Axis and therefore reinforce each other. Roles other than Slave would not be so encumbered by a Chief Feature of Self-deprecation.

Self-pity is a part of Self-deprecation. [S/C, 27 February 1974]

Timorousness [is] a part of Self-deprecation. [S/C, 17 March 1974]

The Chief Feature of this [original Michaelian] group is timidity, which is a part of Self-deprecation. [SJC, 21 September 1974]

The Self-deprecation is strong, and in this Cycle can sometimes be confused with "passion" in the ordinary sense of the word [as "suffering"].

Has [my] Chief Feature changed? Feels strongly, was Self-deprecation.

It may seem that way to you, but it is merely the continued dissolution of the Self-deprecation and this [is] giving you more confidence [that] looks like vanity [Arrogance]. Caution: don't just trade Chief Features; one is not preferable over another; work to dissolve it altogether.

Whatever Chief Feature you have, it makes you believe you have too much of the opposite Chief Feature, so you avoid it. In the case recorded here, the person who was dissolving Self-deprecation began to perceive herself as Arrogant; this was a subtle deception of her Chief Feature.

We thought dissolving would seem be to experiencing both sides of it, therefore, change.

If she dissolves her Self-deprecation, she will have some –Vanity [the Negative Pole of Arrogance]. You all have some of all of these [Chief Features]. The *Chief* Feature is just that; the most prominent behavior you exhibit. [S/C, 08 October 1974]

A person with a particular Chief Feature has a fear of expressing too much of the opposite Chief Feature.

Self-destruction

Self-destruction is normally manifested in a more subtle manner than overt suicide. [SJC, 10 March 1974] The fragility you sense comes from the Chief Feature of Self-destruction.

I would like more information on Chief Feature and how it differs from Goal. Self-destruction is more subtle than Martyrdom.

She [her friend] will allow this (Self-destruction). Many drink [alcohol] to excess. Many take [psychotropic] drugs, but most are more subtle and merely flagellate themselves with an emotional bullwhip. This is natural to them: all is pain; nothing is pleasure. There are so many no's in their lives that they are almost paralyzed.

The soul with a Chief Feature of Self-destruction usually is passive. They are introspective to a fault; [then] will look for an opening in the conversation and turn it to their inner pain and suffering. This pain is always so close to the surface that it fairly spills over every time you look at them. [SJC, 13 March 1974]

Patient with a perfect marriage and home life, who cries all the time. Is she in the Passion Mode, a Mature Artisan, a Spiritualist, in Self-destruction?

The goal is Growth and this lady's perfect marriage is boring her to death, quite literally. Since her [Chief] Feature is Self-destruction, she sees no way out and the alternatives now existing is that she will make a gesture. This lady has been a fine artist in the past and could be something more than her present life allows. Yes, she is in the Passion Mode. All else is valid.

Why choose Self-destruction?

Self-destructors sabotage themselves in many other ways than actually pulling the trigger [suicide]. Often, they have continuously poor health. They deliberately make themselves unattractive and at times obnoxious. They show up late for important appointments, never with a good reason, and are completely shattered when the other person reacts unfavorably to this. Self-destructors will often ruin perfectly harmonious

relationships with cool deliberation on a subliminal level. This can be readily differentiated from Rejection, though. [S/C, 08 October 1974]

Stubbornness

Richard wanted to know what his obstacles were.

Richard's main obstacle is misdirected tenacity [a form of Stubbornness].

[Please] elaborate on Richard's obstacle.

Stubborn clinging to values you have already verified as fallacy.

An essentially passive resistance to change [Stubbornness] is his chief obstacle. [S/C, 17 August 1973]

In Edgar, we see an almost dogged persistence, which is definitely a part of Stubbornness. [SJC, 03 March 1974]

We see more Stubbornness than anything else — a bulldog tenacity. [S/C, 13 March 1974]

Stubbornness can sometimes be a powerful incentive when others wander off the beaten path. [SJC, 17 April 1974]

With [the] Stubbornness Chief Feature, there can be a tendency to prolong actions for the satisfaction it gives the Fragment with this Chief Feature. [S/C, 01 October 1977]

Greed

What is [roommate] Ramona's Chief Feature?

Ramona has jealousy. This is manifested as possessiveness [an aspect of Greed]. [SJC, 10 November 1973] In the Greedy, there is the desire to accumulate or acquire whatever the greatest need dictates, the motto being, "More, please." [SJC, 20 March 1974]

Arrogance

What is mine?

Kathryn, your Chief Feature is false modesty [an aspect of Arrogance]. [S/C, 10 November 1973]

Could you comment on Sarah's feelings of being right? [She has a Chief Feature of Arrogance.]

Sarah would rather be silent than wrong. This is not Bad Work, but her put-downs are. [S/C, 10 November 1973]

Vanity is a part of [the Negative Pole of] Arrogance. [S/C, 27 February 1974]

Are false humility and false modesty features of Arrogance?

That is valid. Pride also [is a part of Arrogance, the Positive Pole]. [S/C, 27 February 1974]

What would you be without a Chief Feature? Blah? There was a discussion about Balance: appropriate amount of Chief Feature — quit reacting and act — inordinate amount of self love; Chief Features as defenses.

We would prefer to hear Vanity defined as inordinate self adoration than as self love, for the latter is a by-step on the path while the former is defensive shielding against the possible external blemishes.

Gurdjieff said Pride and Vanity [the Positive and Negative Poles of Arrogance] are the two shields leading/pushing others out of the way. [SJC, 08 October 1974]

Jim has the Chief Feature of Arrogance, along with his haughtiness that perceives the smallest slight, real or imagined. Much depends upon his maintaining his image of being a "man". This is not unusual. [SJC, 13 March 1974]

Inordinate fear of failure is a part of Arrogance. [SJC, 17 March 1974]

She had a strong Chief Feature of haughtiness [Arrogance]. [S/C, 30 May 1974]

The Chief Feature of Arrogance carries with it an almost overpowering desire not to fail and, along with this, a strong sense of impending doom usually accompanies all travel and encounters with those who control success. To those with a strongly-in-control Chief Feature of Arrogance, even death of an accidental nature is viewed as failure. [SIC, 01 October 1977]

Impatience

Souls with the Chief Feature of Impatience always feel that their growth is slow and they need constant photographs of their progress, but what is standing in their way more than anything else is their own expectations of where they should be. It is like a nice, juicy fruit hanging on a branch way above your head.

You cannot be content with the fruit on the lower branches as long as that prize is just out of your reach. [S/C, 01 February 1975]

Modes

The seventh and final Overleaf category was mentioned a couple of weeks after the Chief Features were revealed. Previously, the Michaels gave the original Michaelian group at least a month to digest one new Overleaf category before revealing another. Perhaps because the original Michaelian group members were already familiar with Chief Features, there was no need to dwell on them, as was the case with the new Overleaf categories. Whatever the case, here is how the final Overleaf category was revealed. There was a runup to the revelation; the name "Mode" was used almost a month before the seven Modes were revealed:

There is a softness in Gene that seems unusual for Saturns [Body Type].

Which also pertains to the <u>final</u> Overleaf, which we do not intend to give today. He is in a passive Mode. [SJC, 10 March 1974]

Note that even before the Modes are named, there are "passive" Modes, which implies "active" Modes, so we see here other synonyms for Ordinal and Cardinal. In fact, when Cardinal and Ordinal were defined in *More Messages from Michael*, page 26, –Activity was said to be the Negative Pole of Cardinality and –Passivity was said to be the Negative Pole of Ordinality.

The next appearance of the word Modes came with the revelation of all seven of them:

Sarah received the seventh [and final, see previous quote] Overleaf, which she shared, and it consists of Modes:

Power, Aggression, Passion, Observation, Caution, Repression, and Perseveration. [S/C, 03 April 1974]

As usual, there are seven personality traits in this Overleaf category. Notice that Mode is said to be the "seventh" and "final" Overleaf category, and note that no other Overleaves have been revealed since then. That number seven should come as no surprise to Michaelian students, seeing that there are many septenaries in the Michaelian teachings. However, by the way, and contrary to these original Michaelian group transcriptions, there is disagreement in the Michaelian teachings about which of the personality septenaries should be called Overleaves. Refer to Chapter 4C in Part Four, "Which Trait Septenaries are Overleaves?", for a discussion of this disagreement, and a proposed resolution of the disagreement.

Note that what is called Perseverance in subsequent Michaelian teachings communities was originally called Perseveration. This was the case throughout the original Michaelian group. It was Yarbro in *Messages from Michael* (1979) who changed it to Perseverance.

Sprinkled through the remainder of the original Michaelian group transcriptions, we find some descriptions of the seven Modes, as follows:

These Modes are the way in which life and change are approached. [SJC, 03 April 1974]

All of these Modes can be used to varying degrees to prevent the acceptance of Agape. In particular: [the Ordinal and Neutral Modes] Repression, Caution, Perseveration, and Observation. But the powerful [Cardinal] Modes [Power, Passion, Aggression] can be also used to startling effectiveness. [SIC, 25 June 1974]

The Mode is the way in which the Fragment approaches life. [S/C, 03 July 1974]

The Goal may be negative [Ordinal], yes, but it is still doggedly pursued by the Fragment. For instance, a soul with a Goal of Rejection and in the Power Mode will often be quite violent in his request for Rejection, while the soul who has Rejection as the Goal with a Repression Mode may be only forlorn and steeped in self-pity. Observation [Mode] often also enables other more timid souls to look unfettered. [SJC, 07 July 1974]

Naturally, those in Caution or Repression and, of course, those in Observation, will continue to put a distance between themselves and the experience. Those in Passion will perhaps experience more, sooner than the others, but sooner or later, students will be able to work through the barriers. [SIC, 26 November 1974]

Those souls with their Mode in Passion-Repression Axis tend to be more cyclic than any others, but depression is not limited to this Axis. [SJC, 01 February 1975]

After that general introduction. let us see what was said about the seven Modes individually in the original Michaelian group transcriptions.

Perseveration

Perseveration deals with the compulsive repetition of worn out and unsatisfactory patterns and habits. [SJC, 03 April 1974]

Perseverators are unable to give up old, worn out habits, even though they recognize their futility. They say, "But I can't do it because I never did it before, and I'm too old to change." They are too old to change the day they are born. [SJC, 28 September 1974]

Perseveration has held him back from acknowledging understanding that has come about in his studies. [SJC, 09 January 1975]

Repression

Those in Repression may be only mildly repressed and experience little pleasure in their interpersonal relationship, or [they may] be severely repressed and be virtually anhedonic. [S/C, 03 April 1974]

Those coming out of the Repression Mode, often do so explosively and with much resentment over all that they have missed. Your Repression lifted in the face of contact with Higher Emotional Center, as it always would.

How can I get out of Repression? It is stronger than Agape.

We know of only one effective method to break the thread and that is through a marathon type of experience where there is a total breakdown of the defenses to almost the psychotic point. [SJC, 14 April 1974]

On the Astral Plane, you agreed to experience the frustrations of one seeking love through the Repression Mode, to learn the lesson of sadness, which you had not experienced previously. The true feeling of poignancy of sadness only comes to those in this Mode. Other emotions simply mock this. It is a necessary part of life, in order that you experience [its opposite] joy. [S/C, 15 May 1974]

The one area where your Repression has done you in during this life is the normal verbal exuberance of the Sage. [S/C, 05 June 1974]

Repression Mode — people do not feel Agape?

They do not ordinarily allow themselves this, you are right. The Repression [Mode] can certainly be used for the impetus to propel a soul forward. The sadness of Repression is a powerful motive for seeking a teaching. [SJC, 25 June 1974]

Remember, when you become your Essence, there will not be the 'albatross' [encumbrance] of Repression [Mode] to deal with. [S/C, 14 September 1974]

Souls in the Repression Mode are unable to experience either joy or sadness to any noticeable extent. There is an air of poignancy or wistfulness about them that is unmistakable. They say to you, in effect, "Make my life more." [S/C, 28 September 1974]

Repression [Mode] automatically erects a barrier between you and the Positive Pole of your Goal [Acceptance]. To scale this barrier is a significant feat. You have begun to feel this change and are on the way to verification. It is not an easy lesson. The block or barrier stems from the Mode of Repression. Even the Acceptance of one who has chosen this Mode is repressed. To find the ability within to feel Agape in spite of this, [is a] formidable task. [S/C, 16 January 1975]

The joy one experiences when the Twin Essences come in contact is not wanted by the Repression Mode. [SJC, 21 October 1977]

Caution

The word Caution needs little definition. People in Caution therefore approach all new situations with considerable forethought, and are not given to spontaneity unless some growth [beyond it] has taken place. [S/C, 03 April 1974]

Souls in Caution approach all new things with timidity. They are the Englishman who carries an umbrella even though the skies are cloudless, because it might rain. They are usually well prepared for all contingencies and have an alternative plan for everything. They require much deliberation. They are saying, "Slow down; you are moving too fast for me." [SJC, 28 September 1974]

Without actually naming them, this passage hints that there are Positive and Negative Poles of the Caution Mode, namely +Deliberation here called +Forethought, and -Phobia here called -Timidity.

Joan asked if fear is a part of the Caution Mode.

Caution could, of course, be interpreted as fear, yes, but it is so much simply the fear of risk-taking rather than what most think of as fear, that it is distinctly different. Most souls in Caution are not truly frightened by much. [SJC, 27 November 1974]

Observation

Souls in Observation are the only souls we know of who can speak of their own lives in the third person. They are distinguished by a slightly remote but polite detachment and a sense of noninvolvement, offering logical but not consoling advice. They are very good in crisis situations, even if the crisis is their own, because they can usually stand outside of it and observe. [SIC, 28 September 1974]

Power

An Old King in a Power Mode could be a great motivator for a group. Those in the Power Mode approach life from the top down. [S/C, 03 April 1974]

The soul in Power [Mode] has an outward appearance of strength, and inspires confidence in others because of this. The soul in Power, in order to be in Essence, must be at or near the top in all situations, even if this means creating a brand new situation. These souls are the innovators, the inspirational people. Souls in Power are very apparent; they stand out in a crowd. Souls in Power offer a rock-like shoulder for the world to cry on. [SIC, 28 September 1974]

One quibble about a confusion in this passage is to say that "souls in Power" are "the *inspiration* people". It was not known at the time, but the Power Mode is actually on the Cardinal side of the *Expression* Axis. It is Passion Mode that is on the Cardinal side of the Inspiration Axis, so it would have been more appropriate to link Passion with inspiration.

Speaking of Passion Mode...

Passion

The soul in the Passion Mode alternately smolders and glows. Those in the Passion Mode, as Young Souls, often undertake jihad or the holy war. [SJC, 03 April 1974]

Souls in the Passion mode approach life with more enthusiasm than any other Mode, which is why they often appear to be suffering more than any other souls. In life, their expectations of others are tremendous, and consequently more often dashed than in other Modes. Their innate capacity for warmth is sometimes smothering in close interpersonal relationships, especially in the younger Cycles.... Souls in Passion expect others to give their "all" and expect that all to equal their own. The disappointment therein is not too surprising. [SJC, 28 September 1974]

Aggression

Those in this [Aggression] Mode play to win at any odds. [S/C, 03 April 1974]

Those souls in Aggression often appear to be plowing uphill against the wind. They will pursue their own ambitions with a dogged determination that puts all other souls to shame. The only problem is the poor souls who stand in their way — they often get plowed under, especially in the early Cycles. Interpersonal relationships are stormy for souls in this Mode. [SJC, 28 September 1974]

Mode is the last of the Overleaf categories. Now let's have a look at the Poles of the Overleaves.

Positive and Negative Poles of Overleaves

In the Gurdjieffian teachings about Centers, much was said about the "negative half" or "negative side" of the Centers. For instance:

In the first place it must be noted that normally in the sex center as well as in the higher emotional and the higher thinking centers, there is no negative side. In all the other centers except the higher ones, in the thinking, in the emotional, in the moving, in the instinctive, in all of them there are, so to speak, two halves — the positive and the negative; affirmation and negation, or yes and no, in the thinking center; pleasant and unpleasant sensations in the moving and instinctive centers. [P. D. Ouspensky, *In Search of the Miraculous*, p. 257]

This passage is evidence that, contrary to Yarbro, Gurdjieff regarded the Sexual Center as a higher Center; this discrepancy is discussed in Chapter 4H in Part Four, "Action Centers". The other comment to be made about this passage is that the negative half/side of Centers in the Gurdjieffian teachings is a precursor to the understanding of Positive and Negative Poles in the Michaelian teachings. Let's follow the steps of the Michaels' revelation of this idea in the transcriptions of the original Michaelian group.

The first passage has to do with Centers, and not the Overleaves in general. That probably happened because original Michaelian group members knew about the negative side of Centers, but not about the Positive and Negative Poles of Overleaves in general.

Does a child choose the culture in which it will be raised (before birth)?

Not so. The child is born with predominant Centering and the chance to go either way. With negative reinforcement, the child will usually become stuck in the Negative Pole of the Center by late adolescence.

If there is no negative reinforcement, do you get stuck in the positive half of the Centering?

These same Overleaves become positive.

Which is best, negative or positive?

The positive half is a whole lot less violent.

Do Overleaves affect negative and positive Centering? Is it what goes out rather than what goes in?

Some souls are incapable of violence on the basis of the Soul Levels and other Overleaves, but those who are capable [of violence], generally will [do violence] if given negative reinforcement. Old [Soul] Sages, Slaves and Artisans are generally incapable of violence.

Cynthia: No one in the [Michaelian] group could be in the negative...

The lady Cynthia is correct. Souls in the negative part of Centers are unstable. [SJC, 01 May 1974]

That was the first mention of this topic, about a year after the founding of the original Michaelian group. The next mention came a full six months later, and it included the Overleaves in general, not just the Centers, in the idea of Positive and Negative Poles:

Things have been happening which seem to point to me changing Modes. What is the outlook? Is it Growth?

This is a continuation of the growth process and means that you are moving into the Positive Poles of your Overleaves, prior to final manifestation of the Old Artisan. [S/C, 01 October 1974]

That is the first use of the phrase "Positive Poles of Overleaves" in the transcriptions. One wonders if the Michaels were starting to give the original Michaelian group hints.

Someone else heard about the Negative Poles of the Overleaves from the Michaels, as well as the Positive Poles, a month afterwards:

Leslie asked if her Goal had changed from Acceptance to Growth. She is a Mid-Cycle [Fourth Level] Mature Warrior in Acceptance, Intellectual Part of Moving Center, Idealist, Passion Mode, Stubbornness as Chief Feature, Body Type Mars/Lunar.

As we have told you before, the Goal of Acceptance is in itself a powerful Exalted Goal from which spiritual enlightenment can spring. With this, there is no need for a switch in Overleaves — merely extinguishment of the Negative Pole, which in this case is the desperate need to be accepted universally by others. In exchange for this, you come into the Positive Pole, which is, of course, the unqualified Acceptance of others, just as the Negative Pole of the Growth Goal involves tremendous scattering of energies as the soul rushes from School to School searching feverishly for that illusive "way". [SJC, 09 November 1974]

In this passage, there are hints in the descriptions for the names of the Positive Pole of Acceptance (+Agape) and the Negative Pole of Growth (-Confusion). To me, this indicates that the names were not yet given at this time in the revelation of this concept.

Then another month after that, this showed up in an answer:

Of course, you can use the Negative Pole of all Centers to accomplish the reverse of that which can be accomplished by utilizing the Positive Pole. The Intellectual Part of Emotional Center happens to be the one that attracts students to a School. The reverse can be true using the Negative Pole of this Center's Part. [SJC, 07 December 1974]

At this point in time, I still do not get the feeling that the Poles of the Overleaves had been channeled.

Bill asked about his relationship with his sister-in-law. He has much negativity toward her. She is psychic. What is their conflict? Is it from the past? It is a strongly negative reaction.

This is a very interesting example of an extremely exalted soul who is expending much of her psychic energy uselessly by working out of the Negative Poles of Exalted Overleaves. For instance, the scattering comes from the Negative Pole of Growth [–Confusion], the hostility from the Negative Pole of Passion [–Identification]. The Exalted Overleaves in the Negative Pole will resemble the corresponding Ordinal Overleaves at their strongest manifestation. In other words, Passion at its most Negative point will be almost Repression; Growth with this amount of scattering, will amount to some degree of Retardation. This student here present (Bill)

operates close to the mid-line and sometimes far to the Positive Poles of Growth and other Overleaves, especially the Passion Mode. [S/C, 14 December 1974]

At this point in time, I still do not get the feeling that the Poles of the Overleaves had been channeled.

Just imagine how easy it would be for you to accept Robert's Rejection were it not for the Mode you selected. Repression [Mode] automatically erects a barrier between you and the Positive Pole of your Goal [Acceptance]. To scale this barrier is a significant feat. You have begun to feel this change and are on the way to verification. It is not an easy lesson. The block or barrier stems from the Mode of Repression. Even the Acceptance of one who has chosen this Mode is repressed. To find the ability within to feel Agape in spite of this, [is a] formidable task and it requires a yardstick to measure the progress. The ideal yardstick, of course, is the polar opposite, in this case, one in Rejection [Robert's Goal]. For you to go to and remain in the Positive Pole of Acceptance [+Agape] requires much work and you are still not entirely able to work from there. This is simply another Balancing tool that Older Souls often choose. It would be possible, for instance, for Robert to choose to utilize the same tool [Acceptance] were he so inclined. This is usually possible in all Sequences; that is, the motive can become easily the motivator. Of course, the hallmarks of the Negative Pole of Acceptance (–Ingratiation) are conciliation, placation, and ingratiation. Do you now have the feeling for the fact that in most souls not acquainted with a [spiritual] teaching that the Mode stands forever as a barrier between the Positive and Negative Poles of the Goal? No matter how exalted that Goal may be, this principle stands between all Modes and Goals. We would say so, yes. [S/C, 16 January 1975]

I understand the pairing of Goals and Modes to be that they are complementary Aspects (Overleaf categories) on the Action Axis, with Goal being the Ordinal Aspect and Mode being the Cardinal Aspect. This is explained in Part One of my book *The Tao of Personality*.

In this channeling there are revelations not only about the interactions of the Positive and Negative Poles of Overleaves, but also the Cardinal and Ordinal Overleaves on an Axis, in this case Acceptance and Rejection.

At this point in time in the revelation, it is still not clear that the Poles of the Overleaves had been channeled. Same comment with the passages to follow, in the session three days after the previous session:

I'm curious about the Negative Pole of Growth.

A scattering of attention, the relentless search for the answer to a not yet formulated question, the quest for spiritual experiences without any clear-cut feeling or intuition as to what that might be. Students in the Negative Pole of Growth [–Confusion] often go from group to group for many years not knowing for certain what it was that the experience lacked, but knowing that they did not find it. Many in the Negative Pole of Growth become quite prominent philosophers; the man Emmanuel Kant, for example. Many others go from religion to religion for surcease from their internal torture. In addition, they fight any real growth within themselves with the degree of strength provided by the Mode.

What characterizes the Negative Pole of Dominance.

First of all, the soul in the Positive Pole of Dominance [+Leadership] is quite a nice soul to be around during a crisis, as this is the quiet, take-charge, do-the-job type of Dominance; the one who can come in, size up a situation and restore order out of chaos and then fade away. The soul in the Negative Pole of Dominance [which is –Dictatorship] merely blindly seeks to dominate the immediate situation: his relationship with others, all facets of his life. He is unhappy if he feels that he is not 'captain of his own ship'. He is skeptical of the decisions of others and usually unwilling to act upon the suggestions of others, preferring his own, even though they might be disastrous. The woman in the Negative Pole of Dominance is the most tenacious of all in hanging on to the control of her children long after they cease to need even any advice. She seeks to mold their lives and their character, convinced that she is right. The soul in Dominance finds it difficult to delegate authority, even if it means more work for himself. [SJC, 19 January 1975]

Still no definite indication that the Poles had been channeled, but one wonders why by now, months after the first hint, it would not have become obvious that names needed to be given.

Joan asked if the Essence has a Personality. Does this relate to the Positive Poles [of the Overleaves]?

In order for the True Personality to emerge, the student must be in a firm state of Balance, and if the Centers are Balanced, all work will be from the Positive Poles of all Overleaves. In fact, at that moment, the whole concept of Overleaves becomes obsolete. Balanced Man is not a victim of his Overleaves any longer. This is, of course, why the work is to strive for Balance and why we attempt to effect those exercises that will allow you to choose the work you need tailor made. [S/C, 25 January 1975]

In the original Michaelian group, unlike the understanding after the original Michaelian group, the Overleaves (except for Role) were considered to be a part of False Personality, along with acculturation and maya; refer to the chapter on True and False Personality in my book *Study Papers on the Original Michaelian Group*. More is said about Balanced Man in Chapter 4F in Part Four, "The Instinctive Center". Getting to that Level of Being is just the first step in the mastering and then the transcending of the Overleaves. The point is that on the spiritual path, one first gets into the Positive Poles of the Overleaves and then, beyond that, one uses them, or not, at will.

In reading Penthouse Magazine, I had a negative reaction . . . I felt wrong . . . seeing the Negative Pole of Sexual Center?

We would agree with that, but also the most Negative Pole of Emotional Center. [SJC, 25 January 1975]

Recall from the quotation at the beginning of this section that according to Gurdjieff the Sexual Center had no negative part/side. Therefore, this passage *might* be a clue that the Negative Poles of the Overleaves *might* have been channeled by this time, because the Negative Pole of the Sexual Center was said to be –Eros, and this would be the Pole that was aroused by "reading" Penthouse Magazine. (And by the way, the Higher Emotional and Higher Intellectual Centers were also said to have Negative Poles in the channeling, contrary to Gurdjieff.)

I feel the only route to Positive Pole of Sexual Center [+Amor] is love.

We have no quarrel with that, either. The only ecstasy that we know of occurring during the sexual act has occurred in Adepts who are Balanced and who do express Agape. [S/C, 25 January 1975]

How can one tell whether one is in a Negative Pole of an appropriate Center, or if one is in the wrong Center entirely?

Whatever portion of a Center provides an entrapment for the soul who is still a victim of his Overleaves becomes the Negative Pole of that Center. All Creatures of Reason have this in common — you are not alone. This is, for many, a no-exit situation and becomes Wrong Work, but still not wholly inappropriate, as in the example given. It is still an emotional reaction to an emotional situation or a sexual reaction to a sexual situation. We would call it unschooled rather than inappropriate. It is not inappropriate, for instance, for your children in this culture to giggle at salacious pictures and this is an appropriate reaction from an unschooled Center.

In order to become successful in life in this culture, it is usually absolutely necessary to act out of the Negative Poles of Centers. In order to survive, some of the Negative Poles of the Overleaves produce behavior that is laudable by the culture. For instance, mothers in the Negative Pole of Dominance [–Dictatorship] are often admired for their unflagging devotion to their children. However, what produces success in life produces failure in a teaching, for the very visible reason that the goals are diametrically opposed. [SJC, 25 January 1975]

It is still not certain that the Poles of the Overleaves were channeled at this point in the history of the original Michaelian group, because they are not named; they are merely referred to with a description. It is certain that the Poles were channeled by March of 1975, because we of the Center for Michael Teachings, Inc., were given a graphic Overleaf Chart of them, dated that month; refer to Chart #3 in Part Three of this *History* book. The last session of the large original Michaelian group was on 22 February, and the Chart of Poles of Overleaves was made by Richard Chambers in March, so it seems likely to me that the Poles were not given in a regular meeting of the original Michaelian group.

The following passages from one and two years later also do not name the Poles.

(We talked of changing the Overleaves and the Teacher's mention of "quieting" them.)

"Extinguishing" was the word used, but perhaps this is a harsh word as "quieting" does sound easier. The Positive Poles of the Overleaves — this is the goal. Once reached, you are in Essence. All is equal. Study again the words we gave you in defining the action of the Positive Poles of the Overleaves. There is no qualitative difference [between that and being in Essence]. [S/C, 12 December 1976]

At this point, we talked about lack of readiness.

You are not disgusted enough with the power the ego, or Personality, has over you.... No one of you is willing to take a long, searching look at those Overleaves that are holding you to your stasis. You can move to those Positive Poles. All of you are in love with your current Personalities to a certain extent. In some, this is a controlling interest. [SJC, 10 April 1977]

We have stressed friendship as a preliminary stepping-stone — not the superficial friendship of the Overleaves, but the sometimes harsh and unremitting friendship of those in your own pathway who will Photograph your Overleaves in both their Negative and Positive Poles, and this must be an almost constant phenomenon or it

will not be successful. Positive Poling is required for this relaxation to occur, and in most physical relationships, there is too much Negative Poling. For instance, spiritual evolution cannot occur in the presence of jealousy, envy, or greed. As long as the Chief Feature rules you, there will be no change. Perhaps you may wish to look at the way the Chief Feature rules each of you in this room. [S/C, 30 September 1977]

This seems like an appropriate place to end this chapter on the revelation of the Overleaves.

Conclusion of Chapter 2A

That covers the revelation of the names and the descriptions of the seven Overleaves during nine months of the original Michaelian group as they were revealed, and another year in which they came up for discussion. There is much more to learn about them, apart from their names and descriptions. Because the Overleaves are part of a system, each Overleaf has Attributes that define each Overleaf as part of the system. These Attributes are to be found in the names that head up the columns and rows on the typical Overleaf Chart. Explaining these Attributes is the subject of the next chapter.

Chapter 2B

ATTRIBUTES OF OVERLEAVES

In the chapters on the Gurdjieffian, aka Fourth Way, precursors to components of the Michaelian teachings, we read about Attributes found in the Law of Three and the Law of Seven. This chapter is a compilation of synonymous terminology and related concepts as found in the transcriptions of the original Michaelian group. The reason that I devote an entire chapter to this subject is that, in my estimation, the *context* of the Overleaf System (the names of Attributes at the headings of rows and columns on Overleaf Charts) has been neglected, while the focus as always been on the *content* of the Overleaf System (descriptions of the Traits of the Overleaf System).

First let's have a brief review. The Law of Three states that all completed events consist of three components: a thesis, an antithesis, and a synthesis. Those words were rarely used in the original Michaelian group. Instead, other words for this concept of phenomena in opposition were usually used, such as: positive versus negative; lower versus higher; yin versus yang; active versus passive; masculine versus feminine. (Various names for the third factor in the triad were: neutral, intermediate, chi, and mid.) The two complementaries of opposites were also referred to as an "Axis" or a "Polarity". The Michaels substituted the name "Monads" for Gurdjieff's Law of Three. Three particular words show up on almost all Overleaf Charts during the original Michaelian group and subsequent to it: Ordinal — Exalted or Cardinal — Neutral. Henceforth in this *History* book these three are referred to as the Dialectic Attributes, whatever their names. (Recall that I prefer the word Cardinal over the word Exalted, as introduced by Yarbro in *More Messages from Michael* in 1986, and as explained in Chapter 1K in Part One, "The Law of Three".)

Briefly, the Law of Seven states that certain processes over time consist of seven steps in a specific order, each step having specific qualities. The word for this concept commonly used in the Michaelian teachings is Cycle. Personally, I prefer to use the word "Septenary" for all examples of this pattern given in the Michaelian teachings and elsewhere. The word is capitalized to distinguish it from collections of seven items that do not follow the special pattern. (Wikipedia has an entry on that word, but there it applies to any collection of seven components or elements.) The Michaels often used the word Cycle to refer to the seven Ages and seven Levels because there is repetition of the pattern from one Cycle to the next. A passage in *Messages from Michael* (1979, page 43) provided words for the attributes of these special steps: Action — Inspiration — Expression — Assimilation. Henceforth in this *History* book these four are referred to as the Axial Attributes.

Note that the terms, Ordinal — Cardinal — Neutral, and the terms, Action — Inspiration — Expression — Assimilation, fall under the general heading of what I call "Attributes" with a capital A. These are the subject of this chapter, hence the chapter title, "Attributes of Overleaves". Because there are only four Axial Attribute names, the Dialectic Attribute names must be combined with them to make the septenary of Attributes complete. When Axial Attributes are combined with Dialectic Attributes, these are hereinafter called "Septenarian Attributes". They are: 1) Ordinal Action — 2) Ordinal Inspiration — 3) Ordinal Expression — 4) Neutral Assimilation — 5) Cardinal Expression — 6) Cardinal Inspiration — 7) Cardinal Action. Note that the sequence of the Ordinal Septenarian Attributes is the reverse of the Cardinal Septenarian Attributes. This specific sequence is the only pattern that merits the name Septenary with a capital S in my books. Any other sequence of these Septenarian Attributes is not a true Septenary; it is just a septenary. The arguments and evidences for the legitimacy of this particular Sequence are presented in my book *The Tao of Cosmogony*. Other proposed sequences for the Septenarian Attributes are discussed in the next following chapter, Chapter 2C, "Sequences of Overleaves". It can be said that the Attributes of a Trait refer to the space-like component of each Trait, and the Sequence of the Trait in the septenary refers to the time-like component of each Trait.

Thereby every Trait has a space-like being and a time-like doing attached to it, same as every other subjective and objective phenomenon in the known universe.

In my way of thinking, this is one of the most important chapters in Part Two, so I am going to bang on about this importance for another paragraph.

The context of the Overleaf System has been neglected by many Michaelian students because of their emphasis on content rather than context. As stated in the Introduction to this History book, the Michaelian teachings is systematic — there is a pattern, an organization — it is a "cosmology". Most Michaelian students have become plenty familiar with the content of the Michaelian teachings because it involves the details of their daily mundane real-world lives: dealing with themselves and other people and their jobs and their desires, and so on. The abstract cosmology is not generally appreciated because it is not 'in their faces' all the time, and their brains are not typically structured to normally think about the big overarching concepts, the context in which the content of their lives is contained. However, this chapter on the Attributes of Overleaves points out how often and how much the Michaels were concerned to reveal the context of their cosmology, which shows up most obviously as the Attributes of the Overleaf System. In my opinion, context has not been emphasized as much in groups subsequent to the original Michaelian group as it was in the original Michaelian group, and this reflects a loss rather than a gain in understanding. My books in general also have an emphasis on the context of the Michaelian teachings, apparently because my brain is structured to think about the big overarching concepts, and make sense of them in terms of logic, mathematics, and physics. In this chapter we get back to those fundamental concepts found in the Attributes of the Overleaf System.

The context concepts of the Overleaf System often shows up in the words in the headers of the columns and the rows on the Overleaf Charts discussed in Part Three; for instance, Role, Goal, Cardinal, Inspiration — these are all context words.

This chapter presents the results of word searches in the original Michaelian group transcriptions for the following terms: yin, yang, thesis, antithesis, synthesis, ordinal, neutral, intermediate, exalted, lower, higher, masculine, feminine, active, passive, axis, axes.

First we are going to look at mentions of yin and yang because here the information applies to more abstract philosophical ideas that are more fundamental than physical manifestation in such things as the Traits in the Overleaf System.

Yin — Yang

First, let's have a definition and description from Wikipedia:

In Chinese philosophy, yin and yang ... is a concept of dualism in ancient Chinese philosophy, describing how seemingly opposite or contrary forces may actually be complementary, interconnected, and interdependent in the natural world, and how they may give rise to each other as they interrelate to one another. In Chinese cosmology, the universe creates itself out of a primary chaos of material energy, organized into the cycles of Yin and Yang and formed into objects and lives. Yin is the receptive and Yang the active principle, seen in all forms of change and difference such as the annual cycle (winter and summer), the landscape (north-facing shade and south-facing brightness), sexual coupling (female and male), the formation of both men and women as characters, and sociopolitical history (disorder and order).

There are various dynamics in Chinese cosmology. In the cosmology pertaining to Yin and Yang, the material energy, which this universe has created itself out of, is also referred to as qi. It is believed that the organization of qi [aka chi] in this cosmology of Yin and Yang has formed many things. Included among these forms are humans. Many natural dualities (such as light and dark, fire and water, expanding and contracting) are thought of as physical manifestations of the duality symbolized by yin and yang. This duality lies at the origins of many branches of classical Chinese science and philosophy, as well as being a primary guideline of traditional Chinese medicine, and a central principle of different forms of Chinese martial arts and exercise, such as baguazhang, taijiquan (t'ai chi), and qigong (Chi Kung), as well as appearing in the pages of the I Ching.

The notion of a duality can be found in many areas, such as Communities of Practice. [This notion has a Wikipedia entry: >https://en.wikipedia.org/wiki/Community_of_practice<] The term "dualistic-monism" or dialectical monism has been coined in an attempt to express this fruitful paradox of simultaneous unity and duality. Yin and yang can be thought of as complementary (rather than opposing) forces that interact to form a dynamic system in which the whole is greater than the assembled parts. According to this philosophy, everything has both yin and yang aspects (for instance, shadow cannot exist without light). Either of the two major aspects

may manifest more strongly in a particular object, depending on the criterion of the observation. The yin yang (i.e., taijitu symbol) shows a balance between two opposites with a portion of the opposite element in each section.

In Taoist metaphysics, distinctions between good and bad, along with other dichotomous moral judgments, are perceptual, not real; so, the duality of yin and yang is an indivisible whole. In the ethics of Confucianism on the other hand, most notably in the philosophy of Dong Zhongshu (2nd century BC), a moral dimension is attached to the idea of yin and yang. [>https://en.wikipedia.org/wiki/Yin_and_yang< — retrieved 20 September 2019]

This quotation, and the remainder of this Wikipedia article, are very useful for understanding Gurdjieff's Law of Three and the Michaels' Monads, which were presented together in a chapter in Part One. Notice in this quotation that many of the synonyms are discussed in this chapter.

These oriental terms occur numerous times in the original Michaelian group transcriptions, and they have exactly this original meaning. Yin and Yang are broadly synonymous with Ordinal and Cardinal respectively. As it says there, the goal of understanding yin–yang is to achieve a state of balance, aka Agape, which also happens to be one of the goals of the Michaelian teachings.

The first mention of yin and yang in the original Michaelian group transcriptions was in the very first channeling session in which the Michaels appeared:

Why did they go to the trouble to design such a complex body just to have it wear out over and over?

The answer is, of course, the primary plan. It is the best example of the yin and yang we can think of. [SJC, 12 August 1973]

What the Michaels are referring to is that the Physical Plane experience (incarnation) for the soul is the yin side of the life—afterlife cycle and the Astral Plane (between incarnations) experience for the soul is the yang side. Assimilation of both experiences results in soul evolution, which ultimately results in an end to the cycle of reincarnation. This is the Dialectic Principle that rules the reincarnation learning process, and all other learning processes, and that the Michaels referred to as "Monads":

Discussion concerning Monads: sacred/profane, profound/superficial, the yin and yang duality, infinite complexity/infinite simplicity. [SJC, 12 August 1973]

The details of the discussion were not recorded, but notice from these examples that everything in this world is defined by its opposite — what it is not as well as what it is. Also note that 'sacred', 'profound', 'yang', and 'simplicity' are Cardinal, whereas 'profane', 'superficial', 'yin', and 'complex' are Ordinal.

The next appearance of yin and yang happened about a month later:

Is the number seven important, as important as has been implied through automatic writing?

Yes, but so are other odd numbers. These point to the yin and the yang and the completed Monad in the center. Seven is important to those on the Physical Plane. Nitrogen, for instance, is number seven. All physical things — living organisms — are part of the nitrogen cycle. [S/C, ~13 September 1973]

This answer is brief and its meaning is obscure until you have some background information, namely, what Gurdjieff called the "Law of Three" and the "Law of Seven". You may refer to the previous chapters in this book by those names for an expanded explanation, but here is the summary: Three is the first odd number and this quantity of items can represent the essence of the Law of Three, namely that yin is on one side of the Monad and yang is on the other side. Five can have the same property, but the pattern is yin1—yin2—Monad—yang2—yang1. Seven of course adheres to the same principle: yin1—yin2—yin3—Monad—yang3—yang2—yang1. A group of seven items is referred to as a septenary throughout this book, and a true Septenary must embody this pattern in a certain way, namely the yin—yang mirror way of ascending and descending dimensionality. This Q&A exchange is a major clue about the structure of valid Septenaries throughout the Michaelian teachings — and elsewhere. If collections of seven items do not have this structure, they do not conform to the Law of Three combined with the Law of Seven; they are not Septenaries with a capital S.

An entire year passed before the subject of yin and yang came up again. This time it was in the context of a physical manifestation rather than in the context of an abstract principle:

Are there different kinds of energy flowing through men than through women?

There is yin and yang throughout the physical universe. Even worlds have yin and yang. This world has a decidedly masculine [yang] essence, which explains the cultural oppression of those in feminine [yin] bodies. Believe it or not, albeit today [this situation] has largely been perpetuated by those with masculine Essence

[Role] trapped in feminine bodies — in other words, Warrior [and Scholar and Sage and King] mothers. [S/C, 17 September 1974]

The Michaels do not really directly answer the question about male and female "energy". However, it is addressed at length in my book *The Tao of Relationships: The Chemistry and Alchemy of Service and Intimacy*. The Michaels here did make the point that the abstract principle of yin–yang manifests itself in physical realities all up and down "the great chain of being", as some perennial philosophers like to call it. Whole planets and whole cultures can be attributed as either yin or yang, as well as the male and female genders and Roles and individuals. In subsequent revelations, individuals were said to have a ratio of "male/female" energy. Elsewhere in the original Michaelian group transcriptions it is said that Warrior, Scholar, Sage, and King are masculine-yang Roles and Slave/Server, Artisan, and Priest are feminine–yin Roles. The explanation for this does not appear until the "Michael Math" chapter of *MMFM*, but requires some modification. That is, per the Taijitu Tango Principle (discussed in various places in this *History* book) the Warrior is the most Ordinal Role, but it is at the Cardinal end of the Septenary; the King is the most Cardinal Role but it is at the most Ordinal end of the Septenary; the Scholar is in the middle or turning point of the Septenary. I elaborate on this notion considerably in my book *The Tao of Cosmogony*.

In this same session, the subject of yin and yang came up again:

Are people more masculine than the earth?

We would not go so far as to ascribe consciousness as you know it to the celestial bodies. However, the composite of influences living upon the body do give it yin and yang. The man Georges (Gurdjieff) sensed this. There is a preponderance of Warriors and Sages upon this body [planet earth]. [SJC, 17 September 1974]

Subsequently it was said that Servers and Artisans are the most common Roles, which has been verified by Michaelian students in subsequent decades, so this early passage appears to be in error.

Are there lines and areas of questioning that we are presently capable of, but very seldom voice, which would make your teachings more available to us? If so, what can you tell us about them?

... The level of curiosity concerning the yin yang combinations is relatively low, connoting a lack of understanding... [SJC, 24 September 1974]

Michaelian students expressed a curiosity and gained a more complete understanding of polarity subsequent to the original Michaelian group. This book, *A History of the Overleaf System*, chronicles that increasing comprehension and might even be considered a culmination of it.

(There was a discussion ... regarding sexuality of Essences. Since it has been said that Essence is neither masculine nor feminine, why does Michael speak of the masculine or feminine Essence in Roles? It was compared to the yin and yang polarity, often times the way a Role is played out, an identity word, a cultural thing.) [SJC, 22 October 74]

The attributes of feminine and masculine are a subset of, or a mundane manifestation of, the universal abstract attributes of yin and yang. This is explored in the next section of this chapter.

Even though the following question was only about the Overleaf System, elsewhere it is said that manifestation itself requires a polarity of some kind; nothing would exist without it.

Leslie asked if other Overleaves, aside from Goals, contain the Poles (Positive and Negative) found in Goals.

We have told you that there is yin and yang in everything — polarity if you will. Therefore, yes. [SJC, 26 November 1974]

Here the Michaels used the words yin and yang as synonymous with the words negative and positive. This was the first explicit reference to the Positive and Negative Poles of the Overleaves in the original Michaelian group transcriptions. The name of each Overleaf is to be regarded as the Neutral position between these Poles. Several of the Overleaf Charts reviewed in Part Three show the name of each Overleaf sandwiched between the Positive Pole on top and the Negative Pole on bottom. This is a meaningful pattern.

Previously, as each Overleaf category was revealed, the original Michaelian group members were told, as if it were not obvious, that all the Overleaves have Dialectic Attributes. Refer to the previous chapter here in Part Two, "Revelation of Overleaves". Some of the Overleaf Charts show the Ordinal triad of Overleaves on one side and the Cardinal triad of Overleaves on the other side with the Neutral sandwiched in between. This is a meaningful pattern.

The Wikipedia article on yin-yang said that the oriental philosophers did not think of yin-yang as evil-good, but in the following quoted passage, the Michaels apparently did make the correlation:

The yin-yang is a most valid symbol to ponder and learn to comprehend. All exists within you — the capacity for goodness and the capacity for evil. The choice is always yours. [SJC, 28 December 1974]

This might have been a reference to the Positive and Negative Poles of the Overleaves, which were under discussion and revelation about this time in original Michaelian group history. Negative does not necessarily mean evil, but in the case of the Negative Poles in their extreme manifestations, it does apply. It is Good Work for every Michaelian student to notice (and neutralize) whenever he or she is in any Negative Pole of any Overleaf, not just the Overleaf they normally live in.

Speaking of neutralizing, this transmission came through in the next session:

Incidentally, we have no quarrel with the need for neutralizing force [another Gurdjieff concept] in actions involving the Centers. All yin–yang activities do require this neutralizing force for stability. [SJC, 02 January 1975]

A chapter in Part One, "The Law of Three", covers the explanation and use of "neutralizing force." Briefly, this is the synthesis influence, between and beyond the polarities of thesis and antithesis. The Neutral Assimilation Overleaves are manifestations of this fundamental force or influence, a gestalt which is more than the sum of the parts.

In one of the original Michaelian group sessions, they experimented with physically sensing the yin/yang ratio of individuals:

There was a question regarding part of the group which experienced something with hand clasping to tell whether they were predominantly yin or yang.

It is a phenomena [sic] of genetics such as the others suggested. In this group, there is much more yang influence than yin. Therefore, if your hypothesis were correct, there would be a higher proportion of the opposite phenomenon. [S/C, 25 January 1975]

Maleness and femaleness are stereo-typically equated with yang and yin respectively, but the "energy" of the Body Type and Overleaves of the Personality do not always correspond to the gender of the body. In Michaelian groups subsequent to the original Michaelian group, a factor called "focused or convergent (male) / creative or divergent (female) ratio" has been used to quantify the phenomenon introduced in this passage. This component shows up on some Personality Profile charts, separate from Overleaves. It is explained at length in my book *The Tao of Relationships*.

The next mention of yin and yang comments on the group progress in specific, then goes on to comment on the world, and worlds, in general:

At this point, many felt the presence of Soleal, and asked him if he wished to speak.

[Soleal:] The teacher [Michael] has only begun to stress the importance of polarity to you now and the use of the most Positive Pole of the axes for the [spiritual] Work. But it is simply astonishing to me the progress that has been made here. I would be the first to admit that I did not think that it would be possible, given the orientation of your world. It is true that whole worlds are victims also of their Overleaves, and often this serves to prevent any upward swing for many centuries — more like millennia for the most part. Ours is an Intellectually Centered world, but there is more yin than yang, thus the cold cerebration has been modified by the feminine essence. Yours is a Moving Centered world, with far more yang than yin. But what is seen now is what we can only call the vibration of potential — in other words, the chance for change — and this is being manifested primarily in the youth of your society. They no longer feel duty-bound to cling to the primary Mode manifested by your world, that of Perseveration, and are now moving into the upward spiral. [S/C, 12 February 1975]

The first Chart from the original Michaelian group showing the Positive and Negative Poles of the Overleaves was dated March 1975, the next month after this session.

[Soleal:] There is a word in my language for one who takes the road of least resistance, and I see this in many students here. This is fine, but it certainly is not conducive to enormous leaps of growth. To feel the resistance is to feel the polarity, to feel the yin and yang of the Tao. [S/C, 16 February 1975]

In the O2 January 1975 session the value of experiencing the Neutral was mentioned. In this session, the value of experiencing the polarities is mentioned. Put both passages together and we see that it is all valuable for gaining a complete understanding and advancing on the spiritual path. The original Michaelian group broke up shortly after this, when positive and negative influences fermenting among the members produced an explosion in this spiritual crucible and blew the whole endeavor apart. There might be a lesson in their experience about managing all three forces.

In this section, we reviewed the use of the words yin and yang as applied to the Attributes and other factors that appear in the Overleaf System. In the next section, we examine the use of the words masculine and feminine as they apply to the Overleaf System.

Masculine — Feminine

Femininity and masculinity often appear in the original Michaelian group transcriptions in conjunction with yin and yang, and these instances are reported in the previous section. However, there are some other instances where they appear alone. These give us another context for understanding the Michaels' view of fundamental polarities.

The Warriors, Scholars, Kings, and Sages are masculine Roles.

Then Priests, Artisans, and Slaves are feminine?

Yes.

If a Scholar, Sage, Warrior, and King Role are masculine, why is it that a female would choose any of these Roles? Does this mean that I've been male more often than not? Is this why I have a tendency toward "cool" thinking and not being a giving person? I do not have love to express.... I am cold and analytical... I feel the male is more aggressive than the female. (Roles in the soul are masculine and feminine, not the soul.) [SJC, 22 November 1973]

Remember that yours is a Moving Centered, masculine world. Soleal's planet is an Intellectually Centered, feminine world... ... Emotionally Centered, masculine world: they are volatile, explosive and kind all at the same time. [S/C, 16 December 1973]

The masculinity or femininity that is ascribed to certain Roles does not correlate with the Cardinality or Ordinality or Neutrality that is ascribed to the Roles, nor with the Inputs that are ascribed to the Roles, but there are some similarities, per this tabulation:

| Table 2Ba — FOUR CLASSES of ATTRIBUTES ASCRIBED to the SEVEN ROLES | | | | | | | | | | |
|--|---------------------|-----------------------|---------------------|-----------------------|---------------------|---------------------|--|--|--|--|
| WARRIOR | SERVER | ARTISAN | SCHOLAR | SAGE | PRIEST | KING | | | | |
| Ordinal | Ordinal | Ordinal | Neutral | Cardinal | Cardinal | Cardinal | | | | |
| Masculine | Feminine | Feminine | Masculine | Masculine | Feminine | Masculine | | | | |
| One Input | Two Inputs | Five Inputs | One Input | Three Inputs | Two Inputs | One Input | | | | |
| one- dimensional | two- dimensional | three- dimensional | pan- dimensional | three- dimensional | two- dimensional | one- dimensional | | | | |

My comments on this table are as follows:

- ROLES: The first (subtitle) row shows the name of each Role, listed in the Natural Sequence.
- DIALECTIC: The second row shows the Dialectic Attributes for each Role.
- GENDER: Regarding the third row of Attributes, the rationale for the gender assignments to the Roles given in the original Michaelian group transcriptions is somewhat obscure. Perhaps it is more a human physiological, cultural, or societal thing than a fundamental yin-yang cosmological thing. If the Sage had been said to be feminine it would be more tidy and make more sense of the second row of attributes.
- INPUTS: Regarding the third row of Attributes, no explanation for the quantity of Inputs assigned to the Roles was presented upon publication (*MMFM*, p. 59) or afterward, but it is similar enough to the "dimensionality" of the Axial Attributes that it would provide a complete explanation if the Artisan were said to have three Inputs rather than five. For a discussion of Inputs, refer to a section on Inputs in the Prologue of my book *The Tao of Cosmogony*, chapter E-2 near the end of this *History* book.
- DIMENSIONALITY: Regarding the fourth row of attributes, refer to my book *The Tao of Personality* for an explanation of dimensionality as it applies to the Overleaf System. Basically, the Action Axis is identified as one-dimensional, the Inspiration Axis is identified as two-dimensional, the Expression Axis is identified as three-dimensional, and Assimilation is identified as pan-dimensional. Basically, these "dimensions" of Personality are an instantiation of abstract geometric figures: the line, the plane, and the solid.

In the next section, we examine the use of the words pole, polar, and polarity as they apply to the Overleaf System.

Pole and Polar and Polarity

This section is the result of a word search for these terms in the original Michaelian group transcriptions.

The Overleaf System is full of obvious polarities: Ordinal and Cardinal Overleaves, Positive and Negative Poles of Overleaves. There is a lot more said about abstractions of polarity in Part Four of this book, but in this section, we mostly deal with the concrete manifestations in our personalities and in our relationships.

The concept of polarity was present at the end of the original Michaelian group with the revelation of the Positive and Negative Poles of Overleaves as we saw in the previous section; it was also present at the beginning. In the very first session with the Michaels, they broached the subject of polarity, and they provided some examples:

The desire is polar, too. Everything in the universe is, of course. Along with the desire is always the dread. The choice does not become clear to you until you have experienced the desire from another [higher] dimension [that reconciles the poles]. You must stand and observe the desire from the shadows of dread. Wishes, like everything, have positive and negative poles. There must be attraction and repulsion or nothing exists because no energy is being generated. [S/C, 12 August 1973]

Polarities mentioned here are: desire versus dread, positive versus negative, attraction versus repulsion. The universe is governed by polarities of positive and negative, from electricity to magnetism to gravitation. The polarities inherent in the Overleaf System create attraction and repulsion (abrasion) between people. (This latter subject is covered in Part Three of my book *The Tao of Personality*.

It seems that the unification of Fragments goes on inter-life [between lifetimes]. You can't do it here [on the Physical Plane while incarnate], can you?

You can, but it is difficult. It requires psychic union, and that by definition requires that you be an Adept. That [psychic union] is always polar. It is usually done between lives. [SJC, 06 October 1973]

This is an indication that Ordinal (Warrior, Server, Artisan) and Cardinal (Sage, Priest, King) Roles as souls unite on the Astral Plane. There is attraction on the Physical Plane as well. Similar attractions can be said about Personality traits other than Roles.

The following exchange occurred about the subject of twin souls rather than complementary Roles, but the universal principle of polarity applies:

We hear so much about twin souls and I would like to know about that.

Dyadic union occasionally occurs while the principals are still on the Physical Plane. This is exceedingly rare and happens only among Fragments of the same Entity. These unions are always polar and it is a devastating experience. Souls so united are truly one flesh.

Why is this devastating? What do you mean by "polar"?

There is complete psychic union. There are no longer any individual perceptions. There is a total loss of identity. All of you will escape this fate in this lifetime, for your strongest attractions within the group are for those of the same sex. [SJC, 08 October 1973]

Twin soul polarity does not show up in the structure of the Overleaf System, but it does show up in the "Casting" structure of the Entity, which has similarities to the Overleaf System. This is not a subject expounded in this book, but note that the polarity principle applies to it as well. Sexual attraction between genders is of course another major polarity that we deal with during incarnation, but which is not present between lifetimes.

The following exchange produces an abundance of insights about the nature of polarity in general, even though it was about Centers in specific:

I would like comments on energies used by various energy Centers.

All of this energy is psychic energy.... We wish to remind you that there are two very specific types of reactions: implosion and explosion; also, two specific charges in polarization: negative and positive. A great deal of the energy utilized by the lower Centers [Moving, Emotional, Intellectual] in life situations are implosion reactions with negative charges. Controlled reactions of this type do not ever become as spectacular as their antitheses [the higher Centers]. [SJC, 27 December 1973]

Various synonyms or manifestations of "poles" are used in this passage: positive and negative; lower and higher; thesis and antithesis; implosion and explosion. It was known from the Gurdjieffian teachings that there were "lower" and "higher" Centers.

It was hard for me to leave Robert's group, and I never understood why, but I had to leave. Is there a comment here for me? He was not your [true] teacher, and at another level you knew this and left to search again.

Why was he not my teacher?

There was not sufficient polar attraction.

Would this have to do with Body Types or what?

This takes into consideration all of the Overleaves. [S/C, 20 January 1974]

This is yet another indication that polarity creates energy exchanges between people with complementary Overleaves, on opposite sides of a Cardinal—Ordinal Axis. The type mentioned above is attraction, and with polarities such as this it is possible to do transformative spiritual work. My book *The Tao of Relationships* explains this in considerable detail in terms of the male–female polar attraction, but really the 'chemistry' and 'alchemy' of polarity applies to all kinds of intimate and meaningful relationships.

Polarity does not only create attraction; "Overleaves that abrade" are documented in another section, further on.

.... What was different for most of you in that life besides Soul level [Age] was the Mode. Most of you were in the beginning of that life in your present Mode's polar opposite. Something in that life caused you to change Modes. For instance, the experience that Claudia had in Jerusalem caused the swing from Repression to Passion. [S/C, 12 January 1975]

This "swing" from one Overleaf in a lifetime to its opposite is part of completing a "Monad." For a thorough discussion, refer to the chapter on "Monads" in my book *Study Papers on the Original Michaelian Group*.

The continuity [oneness or unity] is as immutable as the polarity [twoness or duality]. [SJC, 08 February 1975] The word 'continuity' here probably refers to Neutral Assimilation as the synthesis of thesis and antithesis, or 'polarity'.

A specific manifestation of the principle of polarity is discussed in the next section.

Ordinal — Intermediate/Neutral — Exalted/Cardinal

This section informs the reader what the Michaels meant by those words, which we see in context below. The terms were never actually defined; the reader must surmise the meaning of the words from their context. One wonders if original Michaelian group members were already familiar with the terms and did not need to have it explained to them. These terms are explained in Part One of my book *The Tao of Personality*.

In the following quotations, I substitute the word "Cardinal" for the word "Exalted". Yarbro introduced the substitution of Cardinal for Exalted in *MMFM*; not all contingents of the Michaelian teachings community adopted her preference, but I have, because they are both mathematical terms. Simply and succinctly stated, Ordinality is enumeration as a quantitative sequence, such as first, second, third; Cardinality is enumeration as qualitative principles, such as Oneness, Twoness, Threeness.

The first hint that there was a type of polarity embodied in the words Ordinal and Cardinal came at the time that the seven Soul Ages were revealed, shortly after the Michaels revealed themselves:

The tape recorder was turned off for a moment, but a question was asked about all of us being Old Souls.

The Cardinal Cycles are sparsely populated. Sarah is right about the bell curve. The majority of all creatures of reason are Young and Mature right now because of the closeness of the manifestation of the high Mental body [the Infinite Soul]. [S/C, 26 August 1973]

Then in a session where the nature of each Role was explained, we find this:

The Priest is the Slave exalted... The Sage is the Artisan exalted... The King is the Warrior exalted... The Scholar is an intermediate Role. [S/C, ~25 October 1973]

This is another instance that hints of the Ordinal triad being separated from the Exalted–Cardinal triad by an "intermediate" zone.

The first mention of Ordinal and Cardinal together came several months after the beginning of the Michaels' appearance, and it had to do with Roles:

Many do well if the [three] Cardinal Roles [King, Priest, Sage] are mated with their counterparts in the [three] Ordinal Roles [Warrior, Slave, Artisan]. [S/C, 16 December 1973]

As in the first instance shown above, the term, Cardinal, is used to refer to older souls:

... The group now has more Cardinal [Old] souls than originally. These people bring dynamicism and cause certain things to happen merely by their dynamicism. [S/C, 20 December 1973]

Cardinal Roles can get into power struggles with each other, even with siblings, or maybe especially with siblings:

CH: Where does the conflict between [my sister] KH and me originate?

This conflict is only in part karmic. It mostly stems from the race for power between two strong, Cardinal Roles [Young Priest and Old King] souls who live under the same roof. Someone must emerge victorious, and in this case, both are determined, very strong souls. The struggle for supremacy has been the hallmark of the relationship. So far, both understand that the power can be theirs. KH, at a deeper level, knows that she is to lead; CH, also.

AH [their mother]: Does that mean that "CH knows that KH will lead?"

CH will lead in the spiritual sense. [Their father] RH is correct in saying that this is an ancient struggle. Compare the struggle between the chief [King] and the medicine man [Priest].

The next time Ordinal and Cardinal are mentioned, it had to do with the next Overleaf that was revealed:

There are three Cardinal Goals. They are: Dominance, Acceptance, Growth. There is an intermediate, Neutral Goal, which for the time being we can call Stagnation. There are three Ordinal Goals, which are the antitheses of the [three] Cardinal Goals. They are: Submission, Rejection, Retardation. Most attorneys and politicians are those who have chosen the Neutral Goal — lawmaking is a Stagnation Goal. One of the better examples in history is one you were discussing earlier, Alexander the Great: a Young male King, Dominant. He could not fail. [S/C, 25 December 1973]

Notice again that by the use of the term, Intermediate, coupled with the term, Neutral, the form of the septenary is hinted at, with the Ordinal and Cardinal triads on both sides of the Neutral in the middle.

Children who exhibit unwanted hostility and are subject to loud outbursts and antisocial behavior are normally Infant Souls of Cardinal Roles with Dominant Goals, who also perceive the "not me" as hostile. [SJC, 27 December 1973]

After the seven Goals were revealed that Christmas, with their Ordinal and Cardinal pattern, this resulted in a number of questions.

CH and I attempted to type some of the people at the party of eight thousand people. It was not easy.

Soul levels [Ages] are the most difficult to gauge in crowds. In fact, we would say impossible, since there is a definite crowd behavior that sweeps them along. Roles are easier, especially the Cardinal Roles. The Ordinal Roles are more difficult. The Goals should have much more to say than either of the other two [Overleaves thus far revealed, Soul Age and Role] in a crowd situation since they deal with pretty overt behavioral tactics. [SIC, 30 December 1973]

Ordinal Roles in Dominance are hard to discern from dominant (Cardinal) Roles in Submission.

Most Ordinal Roles who have dominant [Cardinal] Goals [and other Overleaf categories, not yet revealed] can be backed into a corner by any Cardinal Role whether or not the Goal is dominant [Cardinal]. Even dominant Warriors can be dominated by Accepting or Submitting Kings [Acceptance and Submission being the most passive Goals]. There is something pathetic about a King in Retardation [an Ordinal Goal]. It reminds one of a peacock who has been in a hailstorm. [S/C, 30 December 1973]

I am trying to synthesize the material; I have thought of people in each Role and I classify them. I find that I have a hatred toward Dominant Warriors. I am attracted to female Kings, but do not care for male Kings in Dominance. I am attracted to Sages, neutral toward Priests and Artisans, and look down on Slaves.

There is a natural affinity for the Ordinal and Cardinal [with each other]: i.e., Sages and Artisans are generally attracted to one another, as are Priests and Slaves, Warriors and Kings. These Roles naturally complement each other, and good teamwork can result. The same goes for the [complementary] Goals [and other Overleaves]. The gender [distinction] should be negated. [S/C, 03 January 1974]

How does Bacchus, the god of wine, fit into Eleusinian mysteries?

It has been said by us before that rituals unify and bring together many who otherwise would not be able to participate. The same goes for festivals. They provide an excellent opportunity to play the fool in a controlled,

safe environment, which is necessary for all souls in Ordinal Goals and Roles. [Cardinal] Sages and Priests normally need no special invitations to be hams, but the same is not true for many [Ordinal] Artisans and Warriors. Many Artisans are essentially nonverbal, except for those few who are like you, Intellectually Centered. [SJC, 10 January 1974]

What is GS? Is he a Sage or an Artisan?

Sages are far more exuberant [than Artisans], even those in Rejection. Sages in Ordinal Goals sometimes are obnoxious. This produces many Martyrs, needlessly, particularly with Sages in Submission. This man is in Acceptance; that is valid. [SJC, 10 January 1974]

In the new Overleaf of Goals, I hear them as judgmental in that there are three "exalted" Goals and three "subordinate" Goals, and a "neutral" Goal.

This is true of all of the Overleaves. It [variation of Goals in different lifetimes] normally gives all souls the opportunity to experience all of life in the Roles, which are stationary [don't change from lifetime to lifetime]. It [Role] does not have quite the same impact as in the other Overleaves; it simply means that the souls in Ordinal Roles tend to be the doers rather than the sitters and thinkers [like the Cardinal Roles]. [SJC, 10 [anuary 1974]

One might think from the use of the word "subordinate" by the questioner, that this is the origin of the name of the Attribute, Ordinal. Apparently the questioner was mistaken in that assumption, because when the word "Cardinal" was introduced as the replacement for the word "Exalted" a few years later in *More Messages from Michael*, it became obvious (to me at least) that the names Ordinal and Cardinal were chosen because of their mathematical significance. This is explained in my book *The Tao of Personality*.

When the next Overleaf was given, the pattern of Ordinal triad — Neutral — Cardinal triad continued:

Stoic, Skeptic, Cynic, Pragmatist, Realist, Idealist, Spiritualist.

Are there three Cardinal Attitudes?

[That is] valid. [SJC, 22 January 1974]

The following series of questions and answers are presented without comment. The reader can discern more fully the meaning of Ordinal and Cardinal and Neutral from the context in which the words are used.

Why are some children imprinted less than others?

Children in Cardinal Roles and dominant Goals are not easily imprinted. [S/C, 03 March 1974]

Is the work ethic a carry-over from a past life?

We would see it as one of the most tenacious barriers you must scale. In some instances, the man Robert [leader of the Fellowship of Friends] was right about this. We feel, however, that you should discharge your obligations made in good faith, whether or not the respondents are in the teaching or not. Whoever is beyond this, we see no real obligations. We would see you pursuing some form of relaxation every day, even though this may at first seem like work for you. The relaxation obtained with the marijuana is all right. Just resting is all right, also. The penchant to "do" is part of friction for the Ordinal Roles. [SJC, 27 March 1974]

It was said before that I was to lead. Is that in a spiritual way? [My daughter] too?

Both of you could; the choice is yours. Yes, in a spiritual sense, and, yes, you are right. Those in Ordinal Roles would gain more from your teaching [because you are an Artisan], but the majority of mankind is in Ordinal Roles.

There seems to be geographic concentrations of Cardinal Roles. In Michigan, I observed so many Baby Slaves, it must be a geographic thing. [SJC, 14 April 1974]

Are Ordinal Roles as important as Cardinal Roles?

If this planet were entirely populated by [Cardinal Roles] Kings, Priests, and Sages, there would be little progress — much leadership, religion, and oratory, but no progress. [S/C, 23 June 1974]

I do well with knowing people's Centers and Modes, but poorly with the Roles. (He was afar on Gretta's Role and wanted some information that might help in this area for him.)

This young lady's Role is muted now because of her youth and the fact that it is not a Cardinal Role. Eugene does far better with the Cardinal Roles.

Yes, there is some work that can be done that will help perfect these skills. Try the "large crowd" approach. It inevitably works where other approaches sometimes fail. It is a saturation technique and sometimes effective. Go for the Ordinal Roles first and, if necessary, work from eliminating [what they are not] first. [SJC, 17 July 1974]

Is it the egotism of the Intellectual Center not to like housework or is it a cultural thing?

This has little to do with culture, surprising enough. The Cardinal Roles [Sage, Priest, King] find mundane chores distasteful, particularly those not in the Moving Center. The Ordinal Roles [Warrior, Server, Artisan] accept them in more grace, but there again, they are often preferred by Warriors and Scholars simply because they point to efficiency and therefore to winning. [SJC, 17 September 1974]

How can a Warrior evolve to a King? I thought we could not change Roles.

Usually, those who chose Ordinal Roles come to this realization at a later time than those in Cardinal Roles, but this is not always the case, especially if the Ordinal soul meets with the proper teaching. [SJC, 17 September 1974]

JH [a Priest] asked the group to please not fail to photograph her as she is very open for it. Prompted by information indicating group was timid to photograph those in a Cardinal Role.

What does the Scholar seek?

The Scholar seeks to define the Logos.

Priest?

The Priest seeks — as the King and the Sage — the Tao.

Artisan?

The Sage.

Server?

The Priest.

(The Warrior seeks the King.)

Who does the Scholar seek? The nearest Scholar?

All seek to exalt their Roles to the nearest power.

The nearest power?

The one with the closest affinity in the Cardinal Roles is sought by the Balanced soul with an Ordinal Role. Since the Scholar does not have a particular affinity for any of the Cardinal Roles, the seeking, like the Role itself, is peculiar to this Role. This is a neutral, genderless Role. As you already know, coupled with other genderless Overleaves, this can be an excellent platform from which to begin the search; but often this very genderlessness causes multiple diversions into more exotic pursuits before the goal is reached. If you meet with extremely Old Souls in Cardinal Roles, you are certain to notice that their goals seem no longer earth-bound and temporal, and there is a steady increase in other-worldliness in their behavior. Sometimes, this succeeds in setting them completely apart from the mainstream. It is unusual for these Cardinal ancients not to seek some type of esoteric teaching. Many devote their entire lives to this pursuit, and their capacity for dedication is very great. [SJC, 01 October 1974]

WL asked about his relationship with his sister-in-law. He has much negativity toward her. She is psychic. What is their conflict? Is it from the past? It is a strongly negative reaction.

This is a very interesting example of an extremely Cardinal soul who is expending much of her psychic energy uselessly by working out of the Negative Poles of Cardinal Overleaves. For instance, the scattering comes from the Negative Pole of Growth [–Confusion], the hostility from the Negative Pole of Passion [–Identification]. The Cardinal Overleaves in the Negative Pole will resemble the corresponding Ordinal Overleaves at their strongest manifestation. In other words, Passion at its most Negative point will be almost Repression; Growth with this amount of scattering, will amount to some degree of Retardation. [S/C, 14 December 1974]

... for those in Ordinal Goals who feel much responsibility for the miseries around them and feel it is their life task to mitigate it. [S/C, 08 February 1975]

Forgiveness is really no more than the utter willingness to accept responsibility for one's own life and this is why it is so difficult for those in Ordinal Roles when their own existences seem so pale beside the more Cardinal Roles. In truth, the Cardinal Roles are more able to take the responsibility. Of course, they are. It is easy to take responsibility in the Power Mode, and a King finds it easy to excuse the behavior of a Slave. However, it is far from impossible for those in Ordinal Roles to go through the process of learning to take responsibility for their wins as well as their losses. Failure is an easy way out, and those in Ordinal Roles love to fail because it takes so little effort and the blame can be placed on those in "power". But, truthfully, no one in an Ordinal Role loses unless he wishes — any more than do those in Cardinal Roles. This country has had leaders in Ordinal Roles who have been exceptionally effective. [SIC, 03 September 1977]

Lower — Neutral — Higher

The words "lower" and "higher" are usually applied to Centers (as well as planes) in the original Michaelian group transcriptions. They are synonyms for Ordinal and Cardinal as applied to other Overleaves, and for Negative and Positive when applied to Poles of Overleaves and of Axes. These are all synonyms for the abstract concept of yin and yang as indicated above. These terms are all just variations on what in my books are termed the Dialectic Attributes. As indicated elsewhere in this *History* book, in the original Michaelian group, there were three lower Centers (Moving, Emotional, Intellectual), a Neutral Center (Instinctive), and three higher Centers (Sexual, Higher Emotional, Higher Intellectual).

Let's take a look and see what we can learn from a search for these terms in the original Michaelian group transcriptions.

Both Richard and Sarah felt strong negative pull over the last few words, then the dictation continued:

[Soleal:] Not that I am willing, but I mean that it is still a part of growth for me and a route of expression with those to whom nonverbal expression of higher emotions is difficult. You do not have to concentrate on the knowledge that the partner is operating out of lower Centers — just express yourself. Good work results when you give the gift of higher expression.... Love, to mean anything in the line of consciousness, cannot be predicated on anything material. It must come from higher Centers. That comes about when you finally give up non-verbal expectations about the actions of those around you and begin to accept them without modification in your fantasies. Sexual energy, when used to express higher Centers, can be incredibly strong. When the energy is relegated downward, it results in an energy leak. That is sometimes why you want to sleep after physical union. You fed lower Centers — sometimes the Moving Center and the Essence is exhausted, so the body goes to sleep to free the Essence. To get to higher Centers, do what Jesus did: fasting, meditation and agonizing self-appraisal. Exercise the body, learn to love unselfishly. [S/C, 03 July 1973]

But I'm not talking about that. I mean, you feel better all the time if you are sexually turned on. I wonder if we have to pay for that? You only pay in the [blocking of] access to higher Centers.

But I've felt that at the times that I have been turned on, I've been much closer to higher Centers and actually zoomed into them part of the time. In fact, the turning off leads into a depression for me and at that time, one is as far from one's higher Centers as one can ever be.

That is different. Then you are using the Sexual Center as access to the higher Centers. The physical act itself can be performed with little loss of energy. [S/C, 12 August 1973]

When I do that, it feels like "me." Some of the information has been contradictory. I wonder if it's my "many I's"?

Many times the strong intellect takes command and forces us out. We [the Michaels] come only through higher Centers. [S/C, 08 September 1973]

Dick stated that he felt only rejection, sorrow and loss, and that he could see those blocking his ability to love (fear of this happening over again).

In that relationship, you were able to give the gift of higher expression. It was not reciprocal because she was not in touch with higher Centers, but she has also memories. This is often the case. You could not recapture that experience, but you could duplicate the Higher Emotional energy output — now especially. [SJC, 22 September 1973]

A great deal of the energy utilized by the lower Centers in life situations is implosion reactions with negative charges. Controlled reactions of this type do not ever become as spectacular as their antitheses [the higher Centers]. [SIC, 27 December 1973]

The source for the [psychic] energy is the same. The speed that it is burned as fuel is faster when utilized by the Higher Centers.

[Please] clarify this.

The fuel is the same for all Centers. It is the [Level of Being of the] consumer that is different.

The production of fuel: does it have anything to do with self-remembering? In order to Balance the Centers, we have to have a larger supply to reach higher Centers.

An analogy would be an old fashioned stove with insufficient insulation, a leaky chimney and an inefficient flue compared to a brand new radar [microwave] oven. Moments of pure consciousness do produce contact with Higher Centers, yes.

Is self-remembering the way to produce psychic energy?

Not the way, simply the byproduct. The self-remembering must be produced first through those methods we have outlined to you [meditation, concentration, fasting, study]. Then as you go progressively toward balance, you automatically will have more and more flashes of consciousness, opening the door to higher expression. [S/C, 09 February 1974]

[Soleal:] ... the concept of Agape requires the actions of a closely-knit group of supportive students in order to come to reality. No one can feel Agape in an ivory tower. It can only be felt when Higher Centers are contacted in the course of close association with others. There is no way to do this alone that I know of. [SJC, 18 February 1974]

Are some intellectual Scholars trapped in the Intellectual Part of Intellectual Center?

It is possible to be trapped here, Dick, and yes, you are right. Many of the theoretical scientists are indeed immured [trapped/confined] in the Intellectual Part of Intellectual Center. This is a route to Higher Centers when there is Balance. [S/C, 03 March 1974]

If you are Emotionally Centered and going to Balance, you have to be able to use Intellectual Center and Moving Center in the right way. You continue until you have access to all lower Centers.

Until you have sufficiently detached yourself from the mundane and can come to the higher Centers. The occult master has use of Higher Centers at will. It merely means that this soul is in Balance with no danger of backsliding. [S/C, 03 March 1974]

Moses raised the serpent. Jesus said, "If I be lifted up," etc. What is the relationship to kundalini here?

Yes, this is the highest form of movable energy you have at your disposal and therefore, that which you can utilize for each: the emotional states or Higher Emotional Centers, Higher Intellectual Centers, which are synonymous with subjective consciousness [and] objective consciousness respectively. Also, with the same had lust described by the yogi [sic]. The lower Centers are fixed and the energy is like a closed system. The higher Centers are capable of ecstasy or bliss; the lower Centers are not. The Sexual Center or the kundalini force can only be breached by bringing the lower Centers into harmonious Balance. In other words, in separating from the maya or illusions for glamour of the Physical Plane and by giving up your expectations of what a sexual experience should be. [SIC, 24 April 1974]

Dick visioned that life should contain joy and rapture. He felt that no barriers were between us and that experience [except] imaginary ones created by us.

True. You can have it any time you wish. It is not a difficult transition, but it requires that you cease denying yourself the pleasure. You see, this culture places pleasure on a high shelf marked "reward" and it must be earned. Ironically, man is totally unable to experience this as joy and continues to strive toward an elusive goal that always remains just beyond the fingertips. This is truly sad, Dick, perhaps the only sadness on the Physical plane, for it is really within your grasp all the time. Give up the idea that joy must come as a reward for faithful service. This is nonsense. You can have it free.

When Mechanical Man expresses verbally a negative emotion, you see, there is a compounded energy leak. It is fine to just admonish you all not to express, but we understand that you must know why. When you compound the leak, you step completely back and allow the lower Centers full control and it is a soulless, automatic response and much overloading of the circuitry occurs. However, when you merely acknowledge to yourself that you are having a negative reaction, why then you are immediately reducing the force of the reaction, simply by the internal photograph and also by sending the reaction up a notch instead of downward.

In other words, this process requires, in and of itself, the use of Intellectual Center in order to photograph the inappropriate action. This enables the hot wires to cool down a bit and allows the time to formulate a dispassionate response. This also many times results in a cooling off of the trigger. Also, when that happens, there is a neutral energy flow and this in time can provide access to Higher Centers and, therefore, positive energy.

The only positive energy we know of is that which we have elected to call Agape. Other sources may be either neutral or negative. The high states are free of the complexity found in the lower states. This should explain the purity of the energy flow. The lower states, being more complex, require more complex emotions to feed upon and be fed upon. [S/C, 05 October 1974]

This book is not the place to discuss the understanding of the Centers; it is only to point out the structural Attributes of the Centers in terms of higher and lower. The place where I provide a lengthy description of each Center is in my book *The Tao of Personality*.

Negative — **Positive**

The words "Negative" and "Positive" refer to yet another manifestation of the Ordinal and Cardinal aspects of The Law of Three, aka the Monad. Those words appeared very early on in the transcriptions; in fact, in the very first session when the Michaels manifested, which goes to show how important in their teaching an understanding of polarity is:

The question was asked concerning the decision to go on in the search for spiritual enlightenment — on to becoming an adept. What do you do when you get so far and are not too sure you want to continue? We wondered if the Masters picked those in whom the desire for "psychic experiences" was quite strong to become adepts.

The desire is polar, too. Everything in the universe is, of course. Along with the desire is always the dread. The choice does not become clear to you until you have experienced the desire from another dimension. You must stand and observe the desire from the shadows of dread. Wishes, like everything, have positive and negative poles. There must be attraction and repulsion or nothing exists because no energy is being generated. [SJC, 12 August 1973]

Could you elaborate on the third chapter of Genesis about what the knowledge of good and evil is?

Knowledge of positive and negative force. [S/C, 22 November 1973]

The word "force" here is a reference to Gurdjieff's Law of Three discussed in a previous chapter.

I would like comments on energies used by various energy Centers.

All of this energy is psychic energy.... We wish to remind you that there are two very specific types of reactions: implosion and explosion. Also, two specific charges in polarization: negative and positive. A great deal of the energy utilized by the lower Centers in life situations are implosion reactions with negative charges. Controlled reactions of this type do not ever become as spectacular as their antitheses [explosion reactions in the Higher Centers]. [SIC, 27 December 1973]

Is good and evil the fulfillment of karma with a promise to return to "paradise" after this fulfillment?

That question was raised in a spirit of wishful poignancy and concerned missing certain aspects of life on the Physical plane such as sunlight filtering through the trees, *et cetera*. However, you are right, Edgar, the good and evil mentioned in that paradise refers to negative [Ordinal] and positive [Cardinal] poles of the Monads. [S/C, 27 January 1974]

Monads are covered in a chapter in my book Study Papers on the Original Michaelian Group.

The revelation about specific names of Positive and Negative Poles of Overleaves did not happen until the end of 1974 or the beginning of 1975, but there were indications of it months before. The following Q&A exchanges had to do with Centers, but it seems to foreshadow the subject of Positive and Negative Poles of all Overleaves:

Could Michael comment on the negative sides of Centers? Is there a negative side to each Center?

This is, of course, valid... All of the psycho-neuroses are directly related to the negative half of the Centering: that which leads souls to live above and outside the law of the land, all of the violence directed against other creatures.

Fear and guilt prevent one from experiencing new things. Is this due to the negative side of Centers working?

Most of them, yes. [S/C, 06 March 1974]

The Personality has an extremely limited capacity for experiencing positivity. Whenever you experience unsolicited pleasure, you are experiencing it from Essence. This is why the extinguishment of negativity is so vital to spiritual growth. If you have not guessed this yet, the Personality is the Negative Pole of a Monad [and Essence is the Positive Pole]. [SJC, 17 March 1974]

I have a question about the negative half of Centers, because of there is confusion in my mind about how people get into the negative half, what the negative half is, et cetera.

For instance, the Intellectual Part of Emotional Center has produced some sensitive moving contributions to this world, such as those of the poet Stephen Vincent Benet, and the man Robert Frost. It has also produced the Germans [Hermann] Goering [one of Hitler's generals] and [Otto von] Bismarck.

What puts one in the negative or positive half of a Center?

Usually the Cardinal Modes [Power, Passion, Aggression put you in the Positive half of a Center]. The man George Wallace is another — a Baby Priest in the Passion Mode. The Soul Level predicts that he will be on the self-righteous side; coupled with the Passion Mode and the Emotional Centering, one gets a firebrand. The man Goering was in the Aggression Mode, a Second Level Mature Priest with a Chief Feature of Greed.

Do we get stuck in the negative or positive half, or does it fluctuate?

Most are stuck. This is not a growth-producing sequence. Again, for instance, souls trapped in the Moving Part of Intellectual Center can be rather cold and ruthless, given Neutral Overleaves.

Is this chosen ahead of time?

Much of this is, unfortunately, culturally induced. Scholars in Stagnation can be induced to respond to positive reinforcement.

Does a child choose (before birth) the culture in which it will be raised?

Not so. The child is born with predominant Centering and the chance to go either way. With negative reinforcement, the child will usually become stuck in the Negative Pole of the Center by late adolescence.

If there is no negative reinforcement, do you get stuck in the positive half of the Centering?

These same Overleaves become positive.

Which is best, negative or positive?

The positive half is a whole lot less violent.

This puts an awful load on parents, doesn't it?

Not so. You do not choose [before incarnation] your neighbor and teachers in the public school, nor do you choose the editor of the local newspaper or those who schedule the video.

Do Overleaves affect Negative and Positive Centering? Is it what goes out rather than what goes in?

Some souls are incapable of violence on the basis of the Soul Levels and other Overleaves, but those who are capable [of violence], generally will [do violence] if given negative reinforcement. Old [Soul] Sages, Servers, and Artisans are generally incapable of violence.

No one in the group could be in the Negative.

The lady is correct. Souls in the negative part of Centers are unstable.

In the Gurdjieffian teachings, what are called the negative "parts" of Centers, in the Michaelian teachings are called the "Negative Poles" of Centers.

We seem to be getting voluntary information on violence. Is there a statement about this?

Only that violence is culturally induced, yes. It is wholly a part of False Personality. The Essence is pacific. Violence is truly the dark side of the soul. No one comes onto the Physical Plane violently. How violently one completes the Monad is a choice made at the moment of truth. [SJC, 01 May 1974]

From this exchange we gather that violence is one of the phenomena potentially associated with the Negative Poles of Overleaves.

.... you are moving into the Positive Poles of your Overleaves [SIC, 01 October 74]

This was said before the names of the Poles were revealed, and so was the following:

As we have told you before, the Goal of Acceptance is in itself a powerful Cardinal Goal from which spiritual enlightenment can spring. With this, there is no need for a switch in Overleaves — merely extinguishment of the Negative Pole, which in this case is the desperate need to be accepted universally by others [later officially named –Ingratiation]. In exchange for this, you come into the Positive Pole, which is, of course, the unqualified acceptance of others [later officially named +Agape], just as the Negative Pole of the Growth Goal [later officially named –Confusion] involves tremendous scattering of energies as the soul rushes from school to school searching feverishly for that illusive "way." [SJC, 09 November 1974]

Even before the names of the Poles were revealed, the "extinguishment" of the Negative Pole was recommended for people who wished to grow spiritually.

These clues over the previous few months prompted someone to ask the following:

Do other Overleaves, aside from Goals, contain the Poles (Positive and Negative) found in Goals?

We have told you that there is yin and yang in everything — polarity if you will. Therefore, yes. [SJC, 26 November 1974]

Based on what is said over the next few months, these Positive and Negative Poles were channeled soon after this, but we do not know exactly when. We have a Chart of them dated March 1975, but not a session transcription when they were revealed.

Of course, you can use the Negative Pole of all Centers to accomplish the reverse of that which can be accomplished by utilizing the Positive Pole. The Intellectual Part of Emotional Center happens to be the one

which attracts students to a [spiritual] School. The reverse can be true using the Negative Pole of this Center's Part. [SJC, 07 December 1974]

This is a very interesting example of an extremely exalted soul who is expending much of her psychic energy uselessly by working out of the Negative Poles of Cardinal Overleaves. For instance, the scattering comes from the Negative Pole of Growth [–Confusion], the hostility from the Negative Pole of Passion [–Identification]. The Cardinal Overleaves in the Negative Pole will resemble the corresponding Ordinal Overleaves at their strongest manifestation. In other words, Passion at its most Negative point will be almost Repression; Growth with this amount of scattering, will amount to some degree of Retardation. This student here present operates close to the mid-line and sometimes far to the Positive Poles of Growth and other Overleaves, especially the Passion Mode. There is much negative attraction here as a result of this. [SJC, 14 December 1974]

The fact that these Poles are not named in this answer might indicate that their names were not yet revealed. However, the following passage implies that the names of the Poles might have been revealed, and the Michaels were explaining the usefulness of this information:

Just imagine how easy it would be for you to accept [your husband]'s Rejection [Goal] were it not for the [Repression] Mode you selected. Repression [Mode] automatically erects a barrier between you and the Positive Pole [+Agape] of your Goal [of Acceptance]. To scale this barrier is a significant feat. You have begun to feel this change and are on the way to verification. It is not an easy lesson. The block or barrier stems from the Mode of Repression. Even the Acceptance [Goal] of one who has chosen this Mode is repressed. To find the ability within to feel +Agape [the Positive Pole of Acceptance] in spite of this, [is a] formidable task and it requires a yardstick to measure the progress. The ideal yardstick, of course, is the polar opposite, in this case one in Rejection [your husband's Goal]. For you to go to and remain in the Positive Pole of Acceptance required much work and you are still not entirely able to work from there. This is simply another balancing tool that older souls often choose. It would be possible, for instance, for [your husband] to choose to utilize the same tool [achieving Balance via moving toward Acceptance Goal] were he so inclined. This is usually possible in all Sequences; that is, the motive can become easily the motivator. Of course, the hallmarks of the Negative Pole of Acceptance are conciliation, placation and ingratiation. Do you now have the feeling for the fact that in most souls not acquainted with a teaching that the Mode stands forever as a barrier between the Positive and Negative Poles of the Goal? No matter how Cardinal that Goal may be, this principle stands between all Modes and Goals. We would say so, yes. [S/C, 16 January 1975]

The fact that the names of the Positive and Negative Poles of Acceptance are used in this session might or might not indicate that all their names had been revealed by this time. (This passage indicates a special affinity or connection between Goal and Mode that are clarified in my book *The Tao of Personality*. Briefly, there is an Ordinal–Cardinal polarity between Goal and Mode on an Action Axis; there is an Ordinal–Cardinal polarity between Shadow and Role on an Inspiration Axis; there is an Ordinal–Cardinal polarity between Attitude and Center on an Expression Axis; the Neutral Assimilation Overleaf category is Level–Age.)

The following Q&A exchanges also might imply that the names of the Poles were known at the time, and now the Michaels were explaining the usefulness of this information:

Does the Essence have a personality? Does this relate to the Positive Poles?

In order for the True Personality to emerge, the student must be in a firm state of Balance, and if the Centers are Balanced, all work will be from the Positive Poles of all Overleaves. In fact, at that moment, the whole concept of Overleaves becomes obsolete. Balanced Man is not a victim of his Overleaves any longer. This is, of course, why the work is to strive for Balance and why we attempt to effect those exercises that will allow you to choose the work you need tailor made.

In reading Penthouse Magazine, I had a negative reaction. I felt wrong. Was I seeing the Negative Pole of Sexual Center [–Eros]? We would agree with that, but also the most Negative Pole of Emotional Center [–Sentimentality].

I feel the only route to Positive Pole of Sexual Center [+Amor] is love.

We have no quarrel with that, either. The only ecstasy that we know of occurring during the sexual act has occurred in Adepts who are Balanced and who do express Agape. [SJC, 25 January 1975]

In this case, unlike the instance quoted above, "Agape" is almost surely not referring to the Positive Pole of the Goal of Acceptance, but the goal of the spiritual path in general.

How can one tell whether one is in a Negative Pole of an appropriate Center, or if one is in the wrong Center entirely?

Whatever portion [aka "Part"] of a Center provides an entrapment for the soul who is still a victim of his Overleaves becomes the Negative Pole of that Center. All creatures of reason have this in common — you are not alone. This is for many a no-exit situation, and becomes wrong work, but still not wholly inappropriate, as in the example given. It is still an emotional reaction to an emotional situation or a sexual reaction to a sexual situation. We would call it unschooled rather than inappropriate. It is not inappropriate, for instance, for your children in this culture to giggle at salacious pictures, and this is an appropriate reaction from an unschooled Center. In order to become successful in life in this culture, it is usually absolutely necessary to act out of the Negative Poles of Centers. In order to survive, some of the Negative Poles of the Overleaves produce behavior that is laudable by the culture. For instance, mothers in the Negative Pole of Dominance [–Dictatorship] are often admired for their unflagging devotion to their children. However, what produces success in life produces failure in a teaching, for the very visible reason that the goals are diametrically opposed. [S/C, 25 January 1975]

Something significant about Negative Poles in general was revealed in this answer, namely that they are part of culturally-induced False Personality.

The last mention of polarity in the original Michaelian group transcriptions was this one:

At this point, many felt the presence of Soleal, and asked him if he wished to speak.

[Soleal:] The teacher [Michael] has only begun to stress the importance of polarity to you now and the use of the most Positive Pole of the Axes for the work. [SJC, 12 February 1975]

Refer to subsequent sections in this chapter for more instances of the word Axes to refer to complementary Overleaves. This has considerable bearing on the pattern of the structure of the Overleaf System.

Active — Intermediate — Passive

The two words, Active and Passive, are mostly used in the original Michaelian group transcriptions to refer to Body Types, but in *MMFM*, p. 29, –Activity was said to be the Negative Pole of Cardinality, and –Passivity was said to be the Negative Pole of Ordinality. Therefore, it seems appropriate to mention these two factors in relation to the personality system, the Overleaf System, in general.

The Passive Body types: The Active Body types: An Intermediate Body type. [S/C, late September 1973]

Notice that, what in other contexts is referred to as Neutral, is here referred to as Intermediate in the case of Body Types. This would seem to be an "averaged" Body Type, with no emphasis on any particular characteristic, such as muscle, fat, or bone. People with an Intermediate Body Type are generally regarded, by themselves and others, as "symmetrical" and "beautiful".

Depression is normally the passive Personality's only channel through which it can express hostility. The anger can be self-directed, but does not have to be. [SJC, 02 October 1973]

If a soul has chosen a passive Role and Body [Type], the pressure can become intolerable, especially if poor environmental choices are made. [SJC, 20 October 1973]

In these two references we have the Personality (Role) and the Body Type described in terms of Activity and Passivity. The same connection between Personality and Body Type and Activity and Passivity is made in the following reference:

Can passive Body Types be a Warrior?

Yes. The passive Body Type is something that does not stay with you [from one lifetime to another]. The Role does. William is not a passive Body Type. [SJC, 23 October 1973]

In the original Michaelian group transcriptions, there are a few other uses of the word passive that are contrasted with some opposites: active, aggressive, and violent. All of these instances are expressions of the general principle of Ordinality/Cardinality by which we make distinctions between things and their opposite, without which there would be no cosmos; there would be no orderly system of being and doing.

Outward — Inward

The words "outward" and "inward" were used in conjunction with the Overleaf System only once, regarding the Chief Feature, but in actual fact, these opposites are another type of instantiation of Ordinal and Cardinal respectively. Therefore, I regard it as useful to extract pertinent quotations from the original Michaelian group transcriptions.

Just as the level of soul [Age] manifests inwardly as perception, so the major Role in Essence manifests outwardly in attitudes and behavior. [S/C, late October 1973]

Can you discuss energy and the concept of the pyramid?

What we just discussed is the pyramidal effect or the channeling of the energies from the wide dispersion at the base to the narrow flow at the top. The theory behind the pyramid is, of course, symbolic. However, many cannot work without a concrete physical model representing the symbols. This is not Bad Work, necessarily, but you should learn to be a bit more abstract.

The literalness of your culture is an obstacle to true spiritual growth. At the time of the building of the great pyramids in Egypt, the Brotherhood was almost solely concentrated there. They represent the outward symbol of the inner strength. [S/C, 27 December 1973]

Half are outwards and half are inwards. [Said regarding Chief Features.] [SJC, 27 February, 1974]

Besides space and time, what are some of the other dimensions we commonly experience?

In the first place, time as you experience it does not exist in the pan-dimensional universe. Time in the Physical Plane is seen as that stationary plane, through which, around which, beneath which, the physical universe revolves. Space is a concept limited to the three-dimensional physical universe. The present moment contains all of the past. The present moment can be expanded to encompass all that has gone before. The pan-dimensional universe embraces both the concepts of infinity [in space] and eternity [in time] — limitlessness and expansion outward, as well as a contraction inward. [SJC, 26 December 1974]

Concrete — Abstract

The words "concrete" and "abstract" were not used in conjunction with the Overleaf System, but in actual fact, the concepts do apply, to Ordinal and Cardinal respectively. Therefore, I regard it as useful to extract pertinent quotations from the original Michaelian group transcriptions.

Could you comment on the "second coming" being in the clouds?

He [Jesus] was warning them not to expect any physical help from him. They could not conceive of the help in the abstract and to have told them that in two thousand years, he would repeat this performance would have been meaningless. [SJC, 22 November 1973]

Can you discuss energy and the concept of the pyramid?

What we just discussed is the pyramidal effect or the channeling of the energies from the wide dispersion at the base to the narrow flow at the top. The theory behind the pyramid is, of course, symbolic. However, many cannot work without a concrete physical model representing the symbols. This is not Bad Work, necessarily, but you should learn to be a bit more abstract. The literalness of your culture is an obstacle to true spiritual growth. At the time of the building of the great pyramids in Egypt, the Brotherhood was almost solely concentrated there. They represent the outward symbol of the inner strength. [SJC, 27 November 1973]

One hundred of your years far exceeds the life expectancy of the physical body and, as we said before, the Personality cannot conceive of an abstract beyond its five senses, and so one hundred years is meaningless on this plane. [SJC, 17 April 1974]

The Meaning of Cardinal and Ordinal

These two words, Cardinal and Ordinal, have a meaning in mathematics, but that fact is probably unknown to most Michaelian students. In the previous sections, we discussed several of the synonyms for these terms as they are encountered outside the world of mathematics and in the world of the Michaelian teachings, and therefore not unknown to most Michaelian students. For your convenience, these are tabulated below, and then briefly described.

| Table 2Bb — TABULATION of ORDINAL/CARDINAL SYNONYMS | | | | | | | |
|---|-----------------|----------------|--|--|--|--|--|
| ORDINAL | NEUTRAL | CARDINAL | | | | | |
| Yin | Chi/Qi | Yang | | | | | |
| Feminine | Androgynous | Masculine | | | | | |
| Negative (no) | Neutral (maybe) | Positive (yes) | | | | | |
| Lower | Balanced / Mid | Higher | | | | | |
| Outward/Outer | Equilibrium | Inward/Inner | | | | | |
| Concrete | _ | Abstract | | | | | |
| Objective | Omni-jective | Subjective | | | | | |
| Passive | Intermediate | Active | | | | | |
| Figure | Interface | Ground | | | | | |

My comments on this table are as follows:

- ORDINAL NEUTRAL CARDINAL: In the first row, the header row, the words used in mathematics
 and in the Michaelian teachings are shown. The essence of Ordinality in mathematics is the sequence
 of numbers, as in First, Second, Third ...; the essence of Cardinality in mathematics is the meaning of
 numbers, as in Oneness, Twoness, Threeness ...; the essence of Neutral is zero and infinity, nothing
 and everything, undifferentiated and all inclusive. The words in the columns below these words are to
 some extent or another synonymous, or they are specific instantiations of the general principles of
 Ordinal Neutral Cardinal.
- YIN CHI/QI YANG: In the second row, these Chinese words are the conceptual equivalent words that have found their way into the Occidental world and consciousness.
- FEMININE ANDROGYNOUS MASCULINE: One should set aside cultural stereotypes for women and men for these words shown in the third row. Gender distinctions have some correlation with the archetypal principles, and there has been a division of labor between males and females during the evolution of the human species, generally speaking, but one should not read too much into it in the case of any specific person. This factor shows up in the Michaelian teachings as masculinity or femininity ascribed to each of the Roles according to cultural norms.
- NEGATIVE NEUTRAL POSITIVE: The fundamental principles that are instantiated as positive and negative electric ions, and as the north and south poles of a magnet, are also instantiated as personality traits that result in attraction and repulsion between people. The fundamental, primordial conceptual dichotomy NO and YES, with MAYBE in between. This is shown in the fourth row of the table. This terminology shows up in the Michaelian teachings as the Negative and Positive Poles of each Overleaf, but there is a general application to other physical and personality phenomena.
- LOWER BALANCED HIGHER: Regarding these three words shown in the fifth row, in the Michaelian teachings these are generally applied to the seven Centers (and the seven planes and the seven levels within the planes). The reason for this might be because of the correlation of Centers with chakras, which are plexi located on the physical body from low to high. There is also the analogy of "energy vibrations" from low to high that are typically metaphorically associated with the Centers and chakras. A "Balanced" psyche has access to all Centers at will, and uses the chakras appropriately.
- OUTWARD EQUILIBRIUM INWARD: The sixth row shows that there is a world outside of us and there is a world inside of us and this fact has a correlation with Ordinality and Cardinality. The boundary between inner and outer worlds can be regarded as the Neutral. By the way, the Neutral is also polarized in the sense that, from the Ordinal point of view, the boundary *separates* inner and outer realms; from the Cardinal point of view, the boundary *joins* them. By the way, the Gurdjieffian meditation-concentration that he called "Self-remembering" involves holding both outer and inner

- reality in one's awareness at the same time. The tendency of the undisciplined mind is to flip back and forth between the two, but when one's awareness is 'in the zone', then one transcends the dichotomy of inner–outer, and ascends to the next higher level: awareness of awareness per se.
- CONCRETE ABSTRACT: Examples of this dichotomy are: the tangible and the intangible, the quantitative and the qualitative, the body and the mind, the universe and the laws of the universe, being and doing these are words and concepts that instantiate Ordinal and Cardinal in various realms of the reality system in which we find our consciousness embedded.
- OBJECTIVE OMNI-JECTIVE SUBJECTIVE: This row of words is predicated on the understanding that the cosmos is *derived* from "Consciousness", aka Tao, aka the Omni-jective, aka "the Mind of God". By "derived", I mean that Consciousness makes and breaks distinctions in its belief system, value system, and behavior system, and these distinctions are all there is to the cosmos. Each distinctive cell in the cosmos partakes of the being and the doing of the ultimate Consciousness. The essence of the concept of Consciousness *per se* is that there is awareness of a dichotomy between the objective world out there, and the subjective world in here; they are separated by a boundary; the self is like a cell with an *inside* and an *outside*, as in a previous row in this table. This is the primordial distinction where/when the One produces the Two. In terms of Consciousness, the One (omni-jective) becomes self-aware (subjectivity) and other-aware (objectivity). This row provides words for where/when the One perceives that there is a Self and a not-Self or another Self.
- PASSIVE INTERMEDIATE ACTIVE: These word are just another example of how Ordinality and
 Cardinality manifest in certain instantiations. Yarbro even used –Passivity and –Activity as names for
 the Negative Poles of Ordinality and Cardinality respectively. In the Michaelian teachings, it is
 usually applied to Body Types and Personality traits; thus, the Overleaf System in general.
- FIGURE INTERFACE GROUND: These are not words used in the Michaelian teachings in the context of Polarity, but the concept embodied in these words is important for understanding Ordinality and Cardinality. In other sections of this *History* book, I discuss the "Taijitu Tango Principle" and the "Cardinality-Ordinality Ratio". The general principle is that each "thing" is known by contrast with its opposite; nothing exists *per se*; everything exists as "figure" (what it appears to be) and "ground" (what it appears to not be). I also refer to this concept as *content* versus *context*. The "interface" is the boundary that *separates* reciprocal conjugates, or *joins* them, depending on your perspective on what the boundary does; either one's interpretation and perspective is that the boundary *connects*, or that it *disconnects*, the figure and the ground; the former is the Cardinal perspective; the latter is the Ordinal perspective. The cosmos is a product of Tao-Consciousness and is derived *entirely* from point-of-view = the Tao experiencing Itself *as if* it were not Itself = the magic show that we call existence is 'smoke and mirrors' all the way down and all the way up. This is discussed at length in my books *The Tao of Cosmology* and *The Tao of Cosmogony*.

There are other synonyms for Ordinal and Cardinal listed in Part One of my book *The Tao of Personality* that are not used in the Michaelian teachings or in the Overleaf System.

Axis and Axes

These words, "Axis" and "Axes", have been used numerous times in previous sections and chapters of this *History* book, referring to the Attributes of Overleaves. Recall that the Axial Attributes are named Action, Inspiration, Expression, and Assimilation. Recall that three of the Axial Attributes have Cardinal and Ordinal Poles, such that there is Cardinal and Ordinal Action, Cardinal and Ordinal Inspiration, Cardinal and Ordinal Expression. Recall that Assimilation is Neutral: it does not have Polarity. This section is about Axial Polarities. The information herein is important because it introduces an additional type of Axial Polarity, not generally recognized by Michaelian students.

These two words, Axis and Axes, showed up in the original Michaelian group transcriptions in early 1975. Yarbro was not a member of the original Michaelian group, but she did have possession of these transcripts. However, she never used these terms in her published books. Louise and Leslie Briggs, members of the original Michaelian group in 1974 and 1975, also had possession of the transcripts, and they used the Axis terminology in their channeling sessions in the early 1980s. From the Briggs group the terms passed into the wider Michaelian community via a couple of its members, José Stevens and JP Van Hulle — they wrote books that used these terms. Other channels who were friends of Stevens and Van Hulle in the Bay Area also learned

about Axes. Finally, Shepherd Hoodwin, borrowing from the Stevens and Van Hulle books, also used these terms in his 1995 book *The Journey of Your Soul*. Thus, the terminology has become familiar to Michaelian students in general. We will see below that these terms are used to refer to phenomena in the Michaelian cosmology that have to do with a specific type of Polarity in the structure of the Overleaf System.

The first appearance of the Axis terminology is found in the following Q&A exchange. For context, note that this is shortly after the Positive and Negative Poles of the Overleaves were introduced and discussed in late 1974 and early 1975.

We asked for an SRG on ER — Perseveration, Self-destruction, Late Young Scholar, a Skeptic?

What you see here are Overleaves in conflict, and you are right that this man is currently transitioning the cycles [from Young to Mature]. He is a Seventh Level Young Scholar. The most horrendous conflict lies in the <u>Goal–Mode Axis</u>, that of Growth [Goal] against, yes, Perseveration [Mode]. This has held him back from acknowledging understanding that has come about in his studies. This is a Skeptic, yes, but his Chief Feature is not Self-destruction — that is far too strong. The man is basically Impatient, but appears on a self-destructive bent now to you, primarily because of his steadfast refusal to listen to the inner call. [SJC, 09 January 1975]

Here is mention of the Polarity between two Overleaf categories: "the Goal–Mode Axis". My book *The Tao of Personality*, identifies Goal as the Ordinal Pole and Mode as the Cardinal Pole on the Action Axis of the Overleaf categories. The book also identifies Attitude as the Ordinal Pole and Center as the Cardinal Pole on the Expression Axis. The book also identifies Chief Feature as the Ordinal Pole and Role as the Cardinal Pole on the Inspiration Axis. Finally, it identifies Age/Level as the Neutral Overleaf category, completing this Septenary. Thus, the Law of Seven applies to the Overleaf categories. Thus, the forty-nine Overleaves when shown in a grid of boxes on a Chart have a symmetry of Attributes on both the horizontal and vertical axes of the Chart.

There is another mention of the Goal–Mode Axis in a subsequent session. Although the phrase is not used, the principle applies:

Do you now have the feeling for the fact that in most souls not acquainted with a teaching that the <u>Mode</u> stands forever as a barrier between the Positive and Negative Poles of the <u>Goal</u>? No matter how exalted that Goal may be, this <u>principle stands between all Modes and Goals</u>. We would say so, yes. [*SJC*, 16 January 1975]

A similar conflict on the Goal–Mode Action Axis was mentioned in *MFM*, page 110, where Growth Goal and Repression Mode create internal struggles in a Personality. Similar statements can be made about the Inspiration (Chief Feature and Role) and Expression (Attitude and Center) Axes of Overleaf categories. Because of these Axial polarities, Overleaves can abrade internally (with oneself) as well as externally (with other people). All such situations and many more are covered in Part Four of my *Tao of Personality book*.

In addition to the Axes of Overleaf categories (Goal versus Mode, Chief Feature versus Role, Attitude versus Center), there is the Axis of complementary Overleaves. This type is rather better known to Michaelian students because it is obvious from the oppositeness of the names of the Overleaves: Acceptance versus Rejection Goals, Passion versus Repression Modes, Realist versus Cynic Attitudes, and so on. This structural feature of the Overleaf System is hinted at in some passages from the original Michaelian group:

... we would sometimes applaud a little <u>Skepticism</u> on the part of this cadre's <u>Idealists</u>. [SJC, 25 January 1975] Bill: Should I [who have a Goal of Acceptance] be [concerned about what other people think or feel]?

[Soleal:] It would be better for [spiritual] growth if you were not [concerned]. Rejection comes from negative spaces and who cares? I can do without false affection [-Ingratiation] given from bad spaces, and so can you if you are rejected, and it will have nothing to do with your spaces, only the one doing the rejection. Unless you fall so far from the [+Agape] path that you commit some unsociable act, that is highly unlikely given your Overleaves. [Old Priest, Acceptance, Observation, Spiritualist, Intellectual, Impatience.] Those souls with their Mode in Passion–Repression Axis tend to be more cyclic [bipolar] than any others, but depression is not limited to this Axis. I can remember slipping down [from Power Mode] into an extremely Cautious [Mode] space not long ago myself, and for a few hours it was a damned good retreat. [SIC, 01 February 1975]

I'd like to ask about the Negative Pole of Acceptance (Rejection). [SJC, 01 February 1975]

So here we see another type of Axis, different from the previous type, that exists between Ordinal and Cardinal Overleaves within the same Overleaf category. The questioner had a Goal of Acceptance, on the other side of the Expression Axis from the Goal of Rejection. Similar problems can be created by Overleaves in

opposition on the Action Axis, such as Realist versus Cynic Attitudes, or Spiritualist versus Stoic Attitudes. Typically there is friction between two people who are on the opposite sides of any kind of Axis, especially when the Negative Poles are involved.

Mentioned for the first time in the original Michaelian group is what came to be called "sliding" in the post-original Michaelian group Michaelian teachings. However, two other words were used above for this phenomenon: a) there was the "cyclic" swing between the Passion Mode and the Repression Mode on the Inspiration Axis; b) there was the "slipping" from Power Mode to Caution Mode on the Expression Axis. One can use this phenomenon consciously to mitigate Negative Pole manifestations, as explained in *The Michael Handbook* (1986), page 286. It is also explained in *MMFM* (1986) page 211, under the name "hands-across".

A couple of weeks later, the same subject came up again:

Dick stated that he was surprised by his painting ability, that years ago he could not paint that well. He seems to be improving all the time. He wonders if he has been given the gift of higher expression by the teacher, or wonders if the energy of the group has anything to do with this.

The gift of higher expression is there, but you are wrong about the source. You see, when the action occurs in Real Space and is work of the Essence, then it always takes place at the most Positive Pole of the <u>Axis</u>. When you paint now, you not only have moments of Passion [Mode], but hours. This can be sustained now because you also see the results, not from [your usual] <u>Repression</u> [Mode], but from <u>Passion</u>... [SJC, 12 February 1975]

Dick was in the Repression Mode, which is on the Ordinal side of an Inspiration Axis, so the Cardinal Pole of the same Axis is the Passion Mode. This is the same type of Axis as mentioned in the preceding passage.

In the following passage taken from the same session, there is another mention of the rub between opposite Polarities on an Axis:

At this point, many felt the presence of Soleal, and asked him if he wished to speak.

[Soleal:] The teacher [Michael] has only begun to stress the <u>importance of polarity</u> to you now and the use of the most positive [Cardinal] pole of the <u>Axes</u> for the [spiritual] Work. But it is simply astonishing to me the progress that has been made here. I would be the first to admit that I did not think that it would be possible, given the orientation of your world. It is true that whole worlds are victims also of their Overleaves, and often this serves to prevent any upward swing for many centuries — more like millennia for the most part. Ours is an [Ordinal] Intellectually Centered world, but there is more yin than yang, thus the cold cerebration has been modified by the feminine essence. Yours is a [Ordinal] Moving Centered world, with far more yang [masculine] than yin [feminine]. But what is seen now is what we can only call the vibration of potential — in other words, the chance for change — and this is being manifested primarily in the youth of your society. They no longer feel duty-bound to cling to the primary Mode manifested by your world, that of [Ordinal] Perseveration [Mode], and are now moving into the upward spiral [into Cardinal Aggression Mode]. [SJC, 12 February 1975]

This statement was made at a time in the Michaelian teachings when it was said that a person could change their Overleaves. Soleal here seems to be recommending that a person with an Ordinal Overleaf make efforts to switch to a Cardinal Overleaf. In subsequent Michaelian groups, starting with *Messages from Michael* in 1979, this idea was changed to getting out of the Negative Pole and into the Positive Pole of whatever Overleaf one may have. The existence of Positive and Negative Poles of the Overleaves had just been revealed in the preceding couple of months, and they did not appear on an Overleaf Chart (Chart #3) until the next month, March. The rub between Overleaves on the opposite sides of an Axis is, of course, exacerbated by Negative Poles.

Unable to surmount the conflicts within their own Overleaves and conflicts with other people's Overleaves, particularly Negative Poles of Overleaves, the original Michaelian group collapsed down to a core group about two weeks after the session quoted above. Thus, the members of the original Michaelian group did not get very far into an investigation of Polarity; that has been left to subsequent channeling. The original Michaelian group transcriptions contain ample information about the Law of Three — Ordinal, Cardinal, Neutral — discussed in Chapter 1-K. However, there is no presentation about why there are three Axes with three Ordinal and three Cardinal Poles, which is necessary to understand if one is to understand the Law of Seven. This understanding had to wait for Quinn Yarbro to ask the right question and get an answer from Sarah Chambers, and then publish it in *Messages from Michael*. That one-paragraph answer says:

Seven is the closest thing we know of to a "universal" number. It expresses not only the three aspects of duality, but the resolution [assimilation] of the dualities. It is thesis, antithesis, and synthesis. In the dualities,

or polarities, there are those that are concerned with Expression, Action, and Inspiration, and the seventh is Assimilation. Consider Expression, which makes things accessible, either through the act of creating things, building things, and shaping things with its higher polarity, which is the realization of the thing built, created, or shaped. In Action, there is the action itself, the exploration, the extension, and the cohesion of the results of the exploration and extension. In Inspiration there is the lifting up, and the pursuit of that beyond what has been lifted up. And then, there is the contemplation and understanding of the dualities in a single experience. [MFM, p. 42]

So what is the meaning of "the three aspects of duality". The answer given above is obscure, but I have a suggestion for demystifying it.

I suggest that there was a foreshadowing of the "three aspects of duality" known as Action, Inspiration, and Expression in that there are three types of yin/yang mentioned in the transcriptions of the original Michaelian group, as documented in previous sections and shown in Table 2Bb above. The first, which belongs to 1-D Action, is that there is a "positive" or "active" and a "negative" or "passive" duality, which translates into "yes" versus "no" action, which I call the Origination and Termination Processes and the Mode and the Goal Aspects. The second, which belongs to 2-D Inspiration, is that there is a "higher" versus "lower" duality, which I call the Evolution and Involution Processes and the Role and Shadow Aspects. The third, which belongs to 3-D Expression, is that there is an "inner" versus "outer" duality, which I call the Synthesis and Analysis Processes and the Center and Attitude Aspects.

So what do I mean by 1-D and 2-D and 3-D in the previous paragraph? I suggest that, like the terms, Ordinal and Cardinal, "Axis" is borrowed from mathematics, as it should have been, mathematics being an ontological primitive in both the objective phenomena of physics nature and the subjective function of human nature. Mathematicians have a way of graphically illustrating physics phenomena, such as motions, as vectors or paths on a three dimensional grid, with a horizontal "x" axis, a vertical "y" axis that is perpendicular to the "x" axis, and a "z" axis that is perpendicular to both the "x" and "y" axes. (This is called the Cartesian coordinate system, named after the French mathematician who developed it, René Descartes; you can read more about that at >https://en.wikipedia.org/wiki/Cartesian_coordinate_system<.) Typically, this is shown with the "x" axis as a one-dimensional line going left and right; the "y" axis is shown as a line going up and down, crossing the "x" axis at the "origin" and perpendicular to it; thus the "y" axis defines a two-dimensional plane when added to the "x" axis; the "z" axis is shown as a line that crosses the origin perpendicular to the "x" and "y" axes, thus defining a three-dimensional object in space. The way to show three dimensionality on a two-dimensional sheet is

three dimensionality on a two-dimensional sheet typically done per the graphic at right.

When the axes are used to show numbers, the origin is usually set at zero. In that case, notice that there are "positive" (+1, +2, +3 ... > infinity) and "negative" (-1, -2, -3 ... > minus infinity) directions. If the origin point is set to the number 1, then the "positive" or Cardinal direction shows whole numbers (2, 3, 4 ... > infinity) and the "negative" or Ordinal direction shows fractions (1/2, 1/3, 1/4 ... > zero). In terms of the Overleaf System, this latter scheme, where the origin point is set to the number 1, makes more sense. One reason I say this is that the Cardinal planes are holistic or unitary, as are whole numbers with a nature of Oneness, Twoness, and Threeness, whereas the Ordinal planes are fragmentary, as in fractions or pieces of unity, with a nature of

-Z -Z Origin

Firstness, Secondness, and Thirdness. The Michaels refer to human souls as "fragments" because they are fractions of the Tao on the Ordinal side of the Septenarian story arc of spiritual evolution.

The above paragraph is an introduction to the analogous meaning of Positive/Cardinal and Negative/Ordinal on my version of the Overleaf Chart; the three Axes are One-dimensional Action, Two-dimensional Inspiration, and Three-dimensional Expression. You can think of the "origin" on the Cartesian coordinate system, when set to 1, as the Neutral Assimilation Process/Aspect; this is my preferred way to relate the Cartesian coordinate system to the Overleaf Chart.

The following table is another way of showing how the Cartesian coordinate system is analogous to the structure and features of the Overleaf Chart. It does not suit my purpose in this *History* book to explain all of this table here; that happens in my book *The Tao of Personality*. This table serves as a teaser for that book, which contains a thorough explanation of the structure and meaning of the Overleaf System, an explanation of how the Overleaf System is the product of a logical, mathematical, and physics algorithm. Compare this table with Table 2Bb above and you will see some of the same words used by the Michaels as synonyms for Ordinal and Cardinal.

| Table 2Bc — PROCESS/ASPECT SYSTEM and TIME/SPACE GEOMETRY | | | | | | | | | | |
|---|-----------------------|-------------|-----------------------|------------|-------------------------|------------|------------------|--|--|--|
| AXIAL | ACTION | | INSPIRATION | | EXPRESSION | | ASSIMILATION | | | |
| CARTESIAN | "X" | | "X" + "Y" | | "X" + "Y" + "Z" | | ORIGIN | | | |
| DIMENSIONALITY | ONE-DIMENSIONAL (1-D) | | TWO-DIMENSIONAL (2-D) | | THREE-DIMENSIONAL (3-D) | | PAN-DIMEN. (P-D) | | | |
| MOTION | 1-D TRANSLATION | | 2-D VIBRATION | | 3-D ROTATION | | P-D SCALAR | | | |
| DIALECTIC | -ORDINAL- | +CARDINAL+ | -ORDINAL- | +CARDINAL+ | -ORDINAL- | +CARDINAL+ | =NEUTRAL= | | | |
| DIRECTIONALITY | BACKWARD | FORWARD | DOWNWARD | UPWARD | OUTWARD | INWARD | HYPER-COMPLEX | | | |
| PROCESS/TIME | TERMINATION | ORIGINATION | INVOLUTION | EVOLUTION | ANALYSIS | SYNTHESIS | COMBINATION | | | |
| ASPECT/SPACE | GOAL | MODE | SHADOW | ROLE | ATTITUDE | CENTER | WORLDVIEW | | | |

My comments on this table are as follows:

- AXIAL: The first row shows the names of the Axial Attributes. These were not known to the original Michaelian group; they were first revealed in *MFM*.
- CARTESIAN: The second row shows the way that mathematicians designate three mutuallyperpendicular "axes" in the Cartesian coordinate system. The meaning of the three "Axes" shown in the first row is precisely an allusion to this mathematical system.
- DIMENSIONALITY: The third row shows another way to understand the relationship of the Axial Attributes shown in the first row and the Cartesian coordinate system shown in the second row.
- MOTION: The fourth row shows the type of motion in objective space/time that correlates with the items in the three rows higher than the fourth row. An Axial Attribute is actually a 'motion' in subjective time/space that correlate to these objective motions in space/time. The inherent 'motion' of a personality trait explains the subjective attraction and repulsion that trait has for other personality traits, analogous to attraction and repulsion of 1-D ions and 2-D magnets and 3-D masses in objective space/time; refer to Part Four of my book *The Tao of Personality*.
- DIALECTIC: The fifth row shows the Dialectic Attributes. Add the Axial Attributes and we have the Septenarian Attributes.
- DIRECTIONALITY: The sixth row shows the directions of the Cartesian coordinates in the graph, but with a little thought, one should see that they are a metaphor for the characteristics of the Dialectic Attributes.
- PROCESS/TIME: The seventh row shows my names for the seven Processes, aka functions of time.
- ASPECTS/SPACE: The eighth row shows the names of the Aspects, aka functions of space. Each
 personality Trait is at the intersection of a Process and an Aspect, so each Trait is a type of "motion"
 in subjective time-space, even as the Cartesian coordinate system is used to graph motion in objective
 space/time. The point is that subjective and objective domains are joined by mathematics.

Conclusion of Chapter 2B

It is my impression that the vast majority of Michaelian students are content with learning the *descriptions* of the Personality Traits of the Overleaf System, and have little or no interest in understanding the *explanation* of the structure and meaning of what I call "Attributes", the context of the Overleaves. I have never been content with a shallow description without a deep explanation, and I have not been shy about mentioning that there is a logical and mathematical description and explanation for the Attributes. This Chapter 2B was only an

introduction; descriptions and explanations are presented in much more detail in my books *The Tao of Cosmology* and *The Tao of Cosmogony* and *The Tao of Personality*.

The final chapter here in Part Two, "What Did They Know and When Did They Know It", is the next chapter, "Proposed Sequences of Overleaves". It describes and explains another component of the *context* of the Overleaf System, beyond the *content* of the Overleaf System. Heretofore we have discussed the Dialectic Attributes and the Axial Attributes; now we will discuss the ordering of the combination of Dialectic and Axial, the Septenarian Attributes. As with so many other components of the Overleaf System, the various sequences proposed by Michaelian sources are not consistent, coherent, and consilient, except for one.

Chapter 2C

PROPOSED SEQUENCES OF OVERLEAVES

In the previous chapter, the Septenarian Attributes were documented and discussed. Recall that the Septenarian Attributes are a combination of Dialectic (Ordinal — Neutral — Cardinal) and Axial (Action — Inspiration — Expression — Assimilation) Attributes. We find no evidence, in the original Michaelian group transcriptions that have become available to us, that during the original Michaelian group there was any interest in discerning a sequential pattern to the Septenarian Attributes, and hence a pattern to the Overleaf System — interest either from the teacher or from the students. However, subsequent to the original Michaelian group, there have been at least six ways that the Septenarian Attributes have been sequenced in the Michaelian teachings community; those sequences are the subject of this chapter.

Ordinarily, here in Part Two — "What Did They Know and When Did They Know It?" — information has not been presented that did not come from sources prior to the original Michaelian group, or during the time of the original Michaelian group. However, in Part Three, where Overleaf Charts are reviewed, there are numerous occasions where it is expedient to point out the sequences of the Septenarian Attributes and the Overleaves. That is, of course, because subsequent to the original Michaelian group there has been some interest in finding some pattern to the sequencing of them, and these Sequences are shown on the Charts. This chapter serves the purpose of introducing the reader to the various proposed Sequences that will be encountered in Part Three.

Overleaf Revelation Sequences

A word search of the original Michaelian group transcriptions on the words "Action, Inspiration, Expression, Assimilation" reveals that no clues whatsoever were given in the original Michaelian group about the existence or nature of the Axial Attributes. So, although the Dialectic Attributes of Ordinal — Neutral — Cardinal were always clear during the original Michaelian group, the Axial Attributes were not even revealed. (The Dialectic Attribute named Neutral is the same as the Axial Attribute named Assimilation.)

We can look at the sequence of Axial Attributes when each of the Overleaves were first revealed by the Michaels, and if they had been consistent that might have been a clue to a proper sequence. However, there was no consistency beyond the Dialectic Attributes. In the following list, A = Action, I = Inspiration, E = Expression, N = Neutral. The orders of revelation are:

- SOUL AGE/LEVEL: (Late August 1973) Soul Ages and Levels were not ascribed Axial Attributes until *More Messages from Michael* was published in 1986. (Their Dialectic Attributes were shown on original Michaelian group Charts #1 and #4.)
- ROLE: Slave, Warrior, Artisan (20 October 1973), Scholar, Sage, Priest, King (23 October 1973). Thus I—A–E–N–E–I–A. There is neither mirror nor repeat of the Ordinal and Cardinal triads, but the Neutral is in the middle.
- GOAL: Dominance, Acceptance, Growth, Stagnation, Submission, Rejection, Retardation (25 December 1973). Thus A-E-I-N-A-E-I. The Cardinal triad is repeated by the Ordinal triad with the Neutral in the middle. In every other Overleaf category, the Ordinal triad was listed before the Cardinal triad.
- ATTITUDE: Stoic, Skeptic, Cynic, Pragmatist, Realist, Idealist, Spiritualist (22 January 1974). Thus, I–E–A–N–A–E–I. The pattern of the Ordinal triad is mirrored by the Cardinal triad in this case, with the Neutral in the middle.

- CHIEF FEATURE: Impatience, Arrogance, Greed, Stubbornness, Self-deprecation, Martyrdom, Self-destruction (27 February 1974). Thus A-I-E-N-I-A-E. The Cardinal triad neither repeats nor mirrors the Ordinal Triad, but at least the Neutral is in the middle.
- MODE: Power, Aggression, Passion, Observation, Caution, Repression, and Perseveration (03 April 1974). Thus E-A-I-N-E-I-A. The Cardinal triad neither repeats nor mirrors the Ordinal Triad, but at least the Neutral is in the middle.
- CENTERS: Instinctive, Moving, Emotional, Intellectual, Sexual, Higher Emotional, Higher Intellectual (16 June 1974). Thus N-A-I-E-A-I-E. After Instinctive Center, the Ordinal triad is repeated by the Cardinal triad. This sequence of the Centers is based on a correlation of Centers with chakras, from the lowest to the highest on the physical body, provided by the Michaels in an original Michaelian group session on the date shown in parentheses. There is some support for it from the Gurdjieff Sequence discussed in the next section.

Notice that the sequencing of the seven Overleaves typically has the Neutral in the #4 central position, with Cardinal on one side and Ordinal on the other. This is a mirroring of Cardinal and Ordinal that was common each time each Overleaf category was revealed. Therefore, with respect to the *Dialectic* Attributes the pattern of Ordinal and Cardinal triads on both sides of the Neutral is fairly consistent. However, there is no consistency beyond the Law of Three, which proposes that everything partakes of positive, negative, or neutral "force". The conclusion therefore is that in their original revelation, the Overleaves show no definite pattern with respect to the *Septenarian* Attributes.

In Part Three, we will see that the Dialectic pattern is shown on the very first Overleaf Chart from the original Michaelian group, but the sequencing within the triads of the seven Overleaf categories is not consistent with respect to the Axial Attributes. Looking at their sequencing on all of the four Charts that were made during the original Michaelian group, we see that the lack of pattern prevails there also. This confirms the statement in the Introduction to this chapter that there was no clue given or requested about arranging the Overleaves in some kind of pattern other than the Dialectic. Two septenarian sequences preceded the original Michaelian group, namely the Gurdjieff Sequence for Centers (see next section), and the Enneagram Sequence for Body Types; these were covered in chapters in Part One. Subsequent to the original Michaelian group, six sequences have appeared. Some of them respect the Dialectic pattern known to the original Michaelian group and some of them do not.

The Gurdjieff Sequence

In the several chapters that present information from the Gurdjieffian teachings (especially "The Seven Centers" and "Gurdjieff's Levels of Being") we were able to discern a sequence that went like the following when correlated with the Septenarian Attributes:

1 = Ordinal Action, 2 = Ordinal Inspiration, 3 = Ordinal Expression
 4 = Neutral Assimilation
 5 = Cardinal Action, 6 = Cardinal Inspiration, 7 = Cardinal Expression.

Notice that the Cardinal triad repeats the Ordinal triad in the same order, and that the Neutral is in between the two triads. This pattern is repeated on the two "Ordering of the Cosmos" Charts from the original Michaelian group as shown in Part Three of this book. It also appears in channeling by Sarah Chambers correlating Centers with chakras. (Refer to the chapters on chakras in both Part One and Part Four.) Other than that, this sequence does not appear on any of the Overleaf Charts reviewed in this book. Nor have I found any evidence of it or for it in esoteric cosmologies outside of the Gurdjieffian teachings and the original Michaelian group. Nor have I seen it in any of my scientific and logical and mathematical investigations of Nature as reported in my book *The Tao of Cosmogony*. It would thus appear that the Gurdjieff Sequence has no 'legs to stand on or run with', metaphorically speaking. Therefore I personally do not lend it much credence; it makes no sense to me; it does not have a scientific or logical or mathematical foundation upon which I could build a consistent Michaelian teachings cosmology.

Another reason to have reservations about the cosmic significance and validity of the Gurdjieff Sequence is that the pattern shown above does not seem to be well-supported in the Gurdjieffian teachings itself, at least not so far as I have been able to discover it. I cobbled it together from various statements about two different subjects, 1) Centers, and 2) Levels of Being, which were sorta kinda correlated with Centers. Refer to the chapters in Part One on those two subjects, and you will see what I mean. A brief review follows.

The 4th Level of Being was called Man #4, Balanced Man, and this fits the description of the Neutral Assimilation Center, which in the Michaelian teachings we call the Instinctive Center, but in the Gurdjieffian teachings and the original Michaelian group, the Instinctive Center is considered to be the physiological component of the Moving Center, the lowest Center, the Ordinal Action Center — it had nothing to do with personality as it does in the Michaelian teachings. After Gurdjieff, some of his students made the Instinctive Center (and the Sexual Center) to be separate Centers from the Moving Center, but I have yet to find documentation that the Instinctive Center was equated with Balanced Man as it sorta kinda came to be in the original Michaelian group and the Michaelian teachings. And I have yet to find documentation that the Sexual Center became a higher Center subsequent to Gurdjieff as it did in the original Michaelian group, although there are hints in the Gurdjieffian teachings that it belongs there.

There is also some doubt about how the Gurdjieffian teachings ranked the higher Centers. The Higher Intellectual Center was always ranked higher than the Higher Emotional Center when it came to the Levels of Being, but there is the question of where the Sexual Center fit with those two, or even if it did fit with those two. In the Gurdjieffian teachings, so far as I have been able to determine by reading Ouspensky, the Higher Emotional Center was the abode of Man #5, and the Higher Intellectual Center was Man #6. This leaves Man #7 to abide in the Sexual Center in its energetic manifestation, not its animal reproductive manifestation, but I have found no evidence that this correlation ever happened in the Gurdjieffian teachings groups.

This confusion speaks against lending credence to any alleged legitimacy and validity of the Gurdjieff Sequence. Let's keep trying to find an Overleaf sequence that has credibility.

The Vibration Sequence

The first publication in the Michaelian teachings community of what is, in this *History* book, called the "Vibration Sequence" came from *The Michael Handbook* (*TMH*), written by José Stevens and Simon Warwick-Smith and published in 1986:

Where do the Roles come from? When pure essence, the spark or soul of consciousness, is <u>cast out</u> from the Tao so that it can have its own unique experience, it adopts a role. Essence <u>leaves</u> the Tao like pure white light. White light traveling through a prism is refracted into the seven colors of the spectrum (frequencies). In a similar way the essence, as white light, is refracted into one of seven frequencies or roles upon leaving the Tao. (*TMH*, p. 74)

Right off the bat, an objection to this prism-spectrum analogy comes to mind: it is just not an accurate way to analogize the differentiation of Roles from Tao. The error arises partly as a misunderstanding of the word "Casting" that pervades the Michaelian teachings. I believe the correct understanding is per MFM, p. 43, "The casting is not casting out, but rather casting into." In my conceptualization of the process (that other esoteric teachings call "emanation" — see below), the seven archetypal forms are not "cast out" from the Tao; they never "leave" the Tao. Rather, they are differentiated within the Tao. The Michaels use the same word that Stevens uses — "Casting" — but with a different meaning. The metaphor is that the undifferentiated "substance" of Tao, like molten metal, is shaped in a mold — it is "cast" into different forms. (As explained in my Tao of Personality book, the seven archetypal forms are analogous to one-dimensional wires, twodimensional sheets, three-dimensional solids, and pan-dimensional hyperspheres.) Another metaphor used by the Michaels is of the water of an ocean being sealed in test tubes — MFM, pp. 63-64 — it is still water, but it takes a different form in different containers. Another mistaken metaphor that is often used in the Michaelian teachings community for Casting is that of casting roles as in a theatrical production. This error was probably fostered by the word "Role" for one of the Overleaf categories. But "Role" properly only refers to the Personality; the word used in emanationist cosmologies has been "Ray" for millennia. (I also regard Ray as a misleading term for the actual process of Tao differentiating itself into seven types.) Anyway, the topic of Casting is covered in detail in Chapter 4N in Part Four, "Casting Concerns", and in chapters in my book Study Papers on the Original Michaelian Group.

Stevens continues with his prism-spectrum metaphor a few pages further on. On page 78, there is a graphic depiction of this concept, with the words:

Each role has a vibrational rate of its essence. That primary vibrational rate accounts for the differences in roles. Fragments are <u>cast off</u> from the Tao like white light. When white light passes through a prism it refracts into seven frequencies, the seven colors of the spectrum. Similarly, the seven roles are created, each of a different frequency.

Even though this text only applies the spectrum to the Roles, in subsequent Charts attributable to Stephens through Barbara Taylor (refer to the analysis of Stevens Chart #16 and Taylor Chart #17 in Part Three), this Sequence, and the colors that go with it, is applied to the entire set of Overleaves. In terms of correlating with the Septenarian Attributes, the graphic translates into this:

1 = Ordinal Action (Red); 2 = Cardinal Action (Orange); 3 = Neutral Assimilation (Yellow); 4 = Ordinal Inspiration (Green); 5 = Cardinal Expression (Blue); 6 = Ordinal Expression (Indigo); 7 = Cardinal Inspiration (Violet).

Note that the colors of the rainbow are presented in their proper sequence: red — orange — yellow — green — blue — indigo — violet, and the rank-order numbering is from #1 at the red end of the spectrum to #7 at the violet end of the spectrum. I have no quarrel with that ... as a convenient metaphor and *only* as a metaphor, because it does not actually describe the actual Role-casting process.

However, note that the Action and Neutral Septenarian Attributes are at the low frequency end of the spectrum, and there is an alternating of Ordinal and Cardinal at the high frequency end of the spectrum. The graphic does not have the two groups of triads with the Neutral in the middle as the Gurdjieff Sequence does, as the Michael Math Sequence does, as the Die Quelle Matrix Sequence does, and as the Natural Sequence does, as presented in other sections of this chapter, thus making the Vibration Sequence an unexplained anomaly when compared with other presentations of the Overleaf System. To me, this scheme makes no sense in terms of a unified, structured, systematic pattern. It is oblivious of the Dialectic and Axial Attributes, which are necessary to understand the nature and characteristics of the Roles and other Overleaves. If there is any validity to the Vibration Sequence, then it must be a factor that is in *addition* to the Overleaf System, not a factor that *explains* the Overleaf System and Roles as Stevens alleges.

No source or rationale for this method of sequencing the Roles is given by Stevens; it is simply presented as a dogma. The fact that the word "frequency" is used by Stevens might lead one to believe that it comes from the Gurdjieffian teachings about the Law of Seven and its relation to frequency as discussed in Chapter 1L in Part One, "Gurdjieff's Law of Seven". However, Gurdjieff refers to some patterns in the notes on the Western musical scale and Stevens refers to colors that have no such pattern.

So what about the colors? In the Vibration Sequence, the complementary Roles (Warrior versus King, Server versus Priest, Artisan versus Sage) do not have complementary colors: Warrior Red is not versus King Orange, Server Green is not versus Priest Violet, Artisan Indigo is not versus Sage Blue. So, no sense-making there.

The fact that Stevens assigns colors to correlate with the Roles might lead one to believe that he is here referring to some esoteric understanding of the colors. If so, I do not know what it is. What I do know is that Stevens's Vibration Sequence does not follow the sequence of the seven Rays, an esoteric teaching correlating colors with other phenomena; refer to Chapter 1F in Part One, "The Seven Human Temperaments", and Chapter 1C in Part One, "The Chakras". The subject of the Rays even has a Wikipedia entry, which one may refer to here: >http://en.wikipedia.org/wiki/Seven_rays< — and that has been correlated with colors. The esoteric seven Rays follow the Natural Sequence (see below), not the Vibration Sequence. One can also find the application of colors to the Overleaf System in the writings of Terri Benning and Troy Tolley (who also have Overleaf Charts examined in this book), and their correlation of colors with Septenarian Attributes does not follow the Vibration Sequence; refer to Chapter 4P in Part Four, "Color Assignments". So, no sense-making there.

The use of the word "frequency" in the context of Role differentiation should not be confused with another use of the word in the Michaelian teachings, where "frequency" is alleged to be an attribute of the soul or Essence or Spark, apart from whatever defines its identity outside the Overleaf System and other Casting factors. Low frequency people are said to be slow and grounded; high frequency people are said to be quick and ungrounded. The scale is calibrated from a low of "1" to a high of "100", and there is a "bell curve distribution", with most people being near the hump of the curve. Hoodwin in his 2013 book *JOYS* covers this in Chapter 14, "Frequency" (*JOYS*, pp. 212–214). He describes the various types of "frequencies" one finds in the Michaelian teachings — allegedly of souls and Body Types as well as of Roles — to make it clear that discerning a person's frequency is very iffy because the body and Personality factors distort or obscure the alleged Role frequency proposed by Stevens.

I am at a loss to figure out where Stevens came up with the Vibration Sequence. For instance, it does not match the table of proposed correlations of Centers — Chakras — Roles shown on page 214 of *TMH* except in three places: Instinctive — First — King, Higher Moving — Second — Artisan, Moving — Third — Warrior,

Emotional — Fourth — Server, Intellectual — Fifth — Sage, Higher Intellectual — Sixth — Scholar, Higher Emotional — Seventh — Priest.

The Vibration Sequence has not gained a following among Michaelian students other than Barbara Taylor and Shepherd Hoodwin, so far as I have been able to determine. I have never seen this particular sequence outside the Michaelian teachings, so I assume its origin is likely with Stevens. Because of the lack of corroboration from outside sources or methods, I have not been able to Validate this Sequence to my personal satisfaction; it might or might not be true, but for the time being it makes no sense to me, so I ignore it until actual evidence or corroborated sound argument appears. And by "evidence" I mean that I can discern where a person's "frequency" originates: in body, in Role, in soul, or in other Overleaf System Personality factors.

Even though Stevens does not reveal a prior source, if any, of this particular sequence, the *basic concept* is not unknown. It is generally called "emanationism" in esoteric cosmologies, and it has a long history from ancient times. The Seven Rays mentioned above are an emanationist cosmology. Emanationism even has a Wikipedia entry, which will lead you to considerable reading material. An internet search on emanationism will lead you to many additional resources. Among these sources, I have found this introduction to be very informative: >http://www.kheper.net/topics/worldviews/emanationism.htm<. Basically, emanationism (top–down influence, involution) is the antithesis of reductionism (bottom–up influence, evolution) and these are related to the phenomenon of 'emergence'. Emergence is a very deep philosophical and scientific matter that appears in the Michaelian teachings as Fragmentation and Reintegration. This is a subject covered in Chapter 4N in Part Four, "Casting Concerns", and it is also covered in my book *Study Papers on the Original Michaelian Group*.

Metaphors and analogies are often used to explain a lesser-known phenomenon by comparison with a better known phenomenon, but in this case, the prism spectrum analogy is way more misleading than it is helpful. As I see it, one problem with the Vibration Sequence is that it potentially leads students to believe that "vibration" explains the differences between the Roles, and hence the Overleaves. It does no such thing, and that is why it is misleading. In my opinion, the structure and meaning of the Overleaf System, including the Roles, is best explained by correlation with the Cartesian Coordinate System, as explained in the previous chapter, in the section "Axis and Axes".

In my view, if there is any value in the concept of 'frequency' for understanding Michaelian teachings stuff, it is that students do well to realize that phenomena almost always appear somewhere on a spectrum; nothing is metaphorically 'black or white'; everything comes in a 'shade of gray'. The Overleaf System has tidy boxes with well-defined words in them, but the reality is that where we actually live, the reality of the fundamental archetypes known to the Michaelian teachings is blurred and blended and mixed.

If the Vibration Sequence has any validity in explaining the underlying structure of the Overleaf System, I have not been able to discern it. Let's keep looking for something better.

The Michael Math Sequence

The first explicit mention of this particular sequence for the septenary is in the "Michael Math" chapter of *More Messages from Michael* (1986), beginning on page 188. It is similar to the Natural Sequence (see below) except the Cardinal triad is not symmetrical with the Ordinal triad. Thus:

```
1 = Ordinal Inspiration, 2 = Ordinal Expression, 3 = Ordinal Action
4 = Neutral Assimilation

Condinal Expression 6 Condinal Inspiration 7 Condinal Action
```

5 = Cardinal Expression, 6 = Cardinal Inspiration, 7 = Cardinal Action.

This sequence might have been hinted at with the percentages of the seven Roles in the world population, first mentioned in *MFM* (1979) on page 96, and quantified more exactly in *MMFM* (1986) on page 26. That is, Servers 25%, Artisans 22%, Warriors 17%, Scholars 14%, Sages 10%, Priests 8%, Kings 4%. (This information was probably not known to the original Michaelian group.) Numerous Overleaf Charts examined in this book have lent their credence to the Michael Math Sequence in the way they arrange the groupings of Overleaves on the page.

Personally, I have not been able to Validate this sequence in any way. That is to say, it does not meet my credibility criteria of 1) consistency, 2) coherence, and 3) consilience:

1. Consistency: As I said, the Michael Math Sequence is not symmetrical in the Ordinal and Cardinal triads (as the Natural Sequence is). This contradicts the Taijitu Tango Principle (discussed elsewhere in this *History* book), which was also introduced in this very same Michael Math chapter, and which *is*

- symmetrical. It was said that the Michael Math Sequence follows the Taijitu Tango Principle, which was said to "double back on itself" ... but then the Michael Math Sequence doesn't, a blatant contradiction.
- 2. Coherence: Many septenaries are revealed in the Michaelian teachings, the foundation of them all being the seven Planes, which are said to follow what I have come to refer to as the "Natural Sequence". In the Michael Math chapter, it is said that Ages and Levels follow the Michael Math Sequence. However, Levels are a subset of Ages, and Ages are a subset of Planes in terms of the development of the story arc of creation, so one would naturally surmise that Ages and Levels should follow the Natural Sequence. The Michael Math Sequence is blatantly incoherent in this regard, meaning that it does not follow the pattern established at creation.
- 3. Consilience: I have not seen the Michael Math Sequence in any natural or historical phenomenon, and I have seen dozens of septenaries in those realms of objective scientific knowledge. Furthermore, the Michael Math Sequence is not to be found in any esoteric teaching outside the Michaelian teachings that I have encountered, and I have seen dozens of septenaries in those realms of subjective experiential knowledge. The scientific and philosophical principle of consilience suggests that evidence and argument from various realms of knowledge should converge on a common pattern.

Thus, there is no corroboration for the Michael Math Sequence that I know of, and I have looked and looked. Personally, I need more than this channeling and copycat repetition in the Michaelian teachings community to lend it any credibility.

The Prologue of my book *The Tao of Cosmogony*, which appears as Chapter E-2 in the Appendix of this *History* book, examines the evidence for and against the idea that the Michael Math Sequence is fundamental. The conclusion there is that it has a possible limited applicability, and even that is dubious. Therefore, let's continue to look at what other sequences have been proposed.

The Hoodwin Sequence

In the Glossary of his book *Journey of Your Soul* (Second Edition, 2013), in the entry for Overleaves on page 406, Shepherd Hoodwin proposes a sequence that is unlike any other reviewed in this chapter (underline is my emphasis):

Overleaves: Seven types of personality traits that "overlay" the essence [Role], chosen to facilitate the purposes of the lifetime. From innermost to outermost, they are: [Role,] goal, attitude, mode, center, obstacle, body type, and soul age.

The metaphor is obvious: Overleaves are overlays — metaphorically like an onion with seven layers that cover the core, which is Essence/Role. According to this sequence, in the case of the personality traits, the innermost core of Essence Role is first overlaid by Goal, then Attitude, and so on down the list of Overleaves, surrounding each other in successive layers. Another metaphor would be nested Russian dolls. The idea could be drawn as concentric circles, with Essence/Role in the center and Soul Age in the outermost circle and the other Overleaves in the other circles between the innermost (Role) and outermost (Soul Age). According to Hoodwin, this information was channeled. As usual with channeling, no rationale or explanation, no evidence or argument, is offered for this sequence that I have found in the book, meaning that it was simply delivered as a dogma-doctrine, par for the course.

This same sequence shows up on page 248 of the same book, but if it is an *explanation* of the sequence, I do not understand it:

The goal influences what we do; the attitude, why we do it; the mode, how we do it; the center, the part of self from which we do it; and the obstacle(s), what tends to block or distort our doing. Body Type embodies our doing, and Soul age is its perspective, based on the current focus of our development.

It sorta kinda makes sense when Shepherd strings together the phrases the way he did in the quotation, from innermost Essence to outermost Soul Age. But if we were to string the same statements together in some other sequence, would it make less sense or more sense? And on what basis would it make more or less sense? Is there a necessity that all actions must emerge from Essence in this pattern? Or are there suppositions about what people see first, second, third ... last when interacting with another person? Pondering this alleged sequence, I cannot figure out any rationale for it. This would seem to be a *structural* arrangement of the Overleaves, but if there is some meaning to this alleged onion–like structure, then what is it? I am open if someone can show me how this increases understanding of *what is* and *how it works*.

Also, there is no independent corroboration that I know of from other sources, whether channeling or mystical insights or other metaphysical teachings or anything. Channeling, because of numerous discrepancies, has proven itself to be inadequate in establishing legitimacy or validity. Consequently, I am not willing to accept the Hoodwin Sequence on "faith"; I put it in the dogma–doctrine category of unsupported assertions.

The Hoodwin Sequence — which is similar to the Vibration Sequence in this regard — if it has an explanation that was just not stated, then in any case it does not get to the metaphorical 'trunk' of the explanatory 'tree'. As you know by now, or will know by the end of this book, my explanatory 'tree' is Tao's Template. It manifests the universe, including the Overleaf System, as an emanation based on a raional framework of logic and mathematics. If the Hoodwin and Vibration Sequences have any validity, then they are perhaps something other than logical and mathematical explanations. For instance, take a look at the ideas in the following paragraphs.

One need not be completely dismissive of the Hoodwin Sequence, because *in principle* (not in practice or in particulars) it is consistent with other systematic esoteric cosmologies known as the "Great Chain of Being" (GCB) and the "Great Nest of Being" (GNB). The GCB is an idea that goes back to antiquity, and the graphic representation of the GCB is a 'ladder from earth to heaven'. The GNB is a variation on the GCB by modern-day philosopher, Ken Wilber. The graphic representation of the GNB is ever-larger concentric circles, which is the same graphic as the Hoodwin Sequence for the Overleaves as overlays like the layers of an onion or a Russian doll. Wikipedia has an entry on the GCB, and the article is complete with graphic images of the 'stairway to heaven': >https://en.wikipedia.org/wiki/Great_chain_of_being<. Another esoteric website has more information on the GCB: >http://www.kheper.net/topics/greatchainofbeing/introduction.html<. >Kheper.net< also has a web page on the GNB, complete with a graphic image of concentric circles with names of the levels: >http://www.kheper.net/topics/Wilber/Great_Nest_of_Being.html<. An internet search will reveal many other graphics of the GCB and the GNB.

The Great Chain of Being is an ancient way of systematizing nature; in modern times the phenomenon goes by the name "emergence"; it is the same concept, but with scientific support. The basic idea here is that nature is arranged in layers; each layer is in a hierarchy; the "higher" layers of the hierarchy include the "lower" layers; each layer is *influenced* by the other layers up or down the hierarchy but not *governed* by them; each layer operates under some different rules from all of the other layers, yet all of the layers are based on a consistent foundation. As usual, you may refer to Wikipedia: >https://en.wikipedia.org/wiki/Emergence< for more information. 'Bottom—up' emergence is the mirror image of 'top—down' emanation but the same general description and function of layering applies to both; refer to >https://en.wikipedia.org/wiki/Emanationism< for more information about that. Both emergence and emanation show up in subsequent chapters of this *History* book. One of the manifestations in the Michaelian teachings is known as the fragmentation and reintegration of the Oversoul; refer to Chapter 4N in Part Four, "Casting Concerns". Yet other names, used in the scientific and philosophical realms are "reductionism" and "holism" and "supervenience". All of those names are just manifestations and instantiations of what the Michaelian teachings calls Ordinality and Cardinality.

I do not see how the Hoodwin Sequence of the Overleaves fits with these other systems mentioned in this chapter. One might think that because the Soul, the etheric body on the Cardinal levels of the Physical Plane, is a Fragment of successively larger Composites of souls on the higher planes (refer to Chapter 4M in Part Four, "The Seven Soul Ages") that can be graphically represented as successively larger concentric circles (refer to Chapter 4N, "Casting Concerns"), that the Overleaves of the Personality on the Physical Plane would be the mirror image or the repetition of the higher planes. I do think that there is something to be said for that idea, but I do not understand how the Hoodwin Sequence properly represents the idea. In the Natural Sequence (see subsequent section), the Overleaf categories are arranged from most Ordinal to most Cardinal as follows: Goal, Shadow, Attitude, Age, Center, Role, Mode. In my view, this is the proper nested hierarchy of overlays of the Essence, and it follows the Natural Sequence, not the Hoodwin Sequence.

More will be said about the Natural Sequence after the next section, which conveniently provides an intermediate step between the Hoodwin Sequence and the Natural Sequence.

The Die Quelle Matrix Sequence

As you will see in Part Three, there is an Overleaf Chart, Chart #14, from a German channel, Varda Hasselmann. Subsequent to reading Yarbro's books Messages from Michael and More Messages from Michael in

the mid-1980s, Hasselmann became a channel for "Die Quelle" — The Source — which claimed to be a sibling Entity to the Michaels in the same Cadre. Their teachings are very similar, so I included Die Quelle's version of the Overleaf System in this *History* book. They call their version the "Matrix". Two out of nine of Hasselmann's books have been translated from the German language into the English language. The Matrix Chart is shown on a two-page spread, 16-17, of the book *Archetypes of the Soul*. I redrew it for this *History* book.

On Chart #14, the names of the Overleaf categories are shown in the second column, and they are sequenced with Roman numerals, from 'I' in the next-to-bottom row up to 'VII' in the next-to-top row of the Chart. The Overleaf categories from the next-to-bottom row to the next-to-top row are I-Soul Role \rightarrow III-Fear [Chief Feature] \rightarrow III-Goal \rightarrow IV-Mode \rightarrow V-Mentality [Attitude] \rightarrow VI-Center \rightarrow VII-Soul Age. These Overleaf categories are not in the same order as presented in *Messages from Michael* or in *More Messages from Michael*. Nor is this sequence found on any other Overleaf Chart reviewed in this book. Varda told me that she intentionally avoided reading books other than those first two Yarbro books so as not influence her channeling (but I say "Too late!! — you already read *MFM* and *MMFM*"), so this difference from them is to be expected. There is no explanation in the text of the *Archetypes* book for why the Roman numerals are assigned to the Overleaf categories the way that they are on Chart #14.

Along the bottom of this chart there is a row labeled "Energy" which shows numbers, from 1 to 7, applied to the seven columns that contain the names of the Overleaves. Looking at the traits in these columns, we see that this numbered lineup is per the Michael Math Sequence, which was revealed in *MMFM*, and which is discussed two sections above.

I did not tumble to the realization that there might be a correspondence between the vertical and horizontal numbers, so I asked Varda about the Roman numerals, and she wrote this to me:

You ask about the order of the Roman numbers in our system. We are working with an energy Matrix, that means that we need to have two energy axes. Our Quelle told us many years ago that the fears come second (energy 2/II) the goal third, etc. I cannot explain more. [personal communication, 23 September 2021]

Dope slap to forehead! Dummy me that I did not see this. Now I can explain more (because I have had the same understanding since 1981), even though Varda cannot explain more. This answer means that, on Chart #14, the vertical axis of seven Overleaf categories (called "Elements" in the Die Quelle teaching) that have Roman numerals is correlated with the horizontal axis of seven "Energies" that have Arabic numerals, and they both allegedly follow the Michael Math Sequence; hence the reason to call this the "MATRIX" — a grid of 49 traits with the same meaningful pattern on vertical and horizontal axes. Using Septenarian Attributes to correlate the vertical with the horizontal, we see that 1/I-Role = Ordinal Inspiration $\rightarrow 2/II$ -Fear = Ordinal Expression $\rightarrow 3/III$ -Goal = Ordinal Action $\rightarrow 4/IV$ -Mode = Neutral Assimilation $\rightarrow 5/V$ -Attitude = Cardinal Expression $\rightarrow 6/V$ I-Center = Cardinal Inspiration $\rightarrow 7/V$ II-Age = Cardinal Action. This is the Matrix Sequence. Unfortunately, only one of these correlations is correct, of Goal with Ordinal Action; see next section. This type of error is so typical of channeling about the structural components of the Michaelian teachings, or in this case the Die Quelle teachings, as we see in Part Four of this *History* book.

My redrawing of the Matrix Chart, #14, shows the Axial Attributes, but the original that was published in Varda's book does not show the Axial Attributes (Action — Inspiration — Expression — Assimilation). However, the last chapter of the *Archetypes* book, "The Energy Structure of the Number 7", does mention them on page 407, thus:

Positions 7 and 3 represent the principle of <u>Action</u>, 6 and 1 that of <u>Inspiration</u>, 5 and 2 that of <u>Expression</u>. Thus Expression, Inspiration, Action and <u>Assimilation</u> describe the four basic development and growth possibilities or, as we call it, the four Levels of Being Alive.

This is per the Michael Math assignment of numbers. Beyond that statement, there is not much if any expansion of the meaning of the names of the Axes elsewhere in the book. There are Charts for each Overleaf category at the beginning of each chapter on that Overleaf category, and they show the "Expression Level, Inspiration Level, Action Level, and Assimilation Level", but the text of the chapter does not elaborate. This neglect reflects a typical lack of attention to detail in the study of the structure of the Overleaf and Matrix Systems; all of the explanation is typically directed to the *content* of the Overleaves rather than to the *context* of the Overleaves, the context being the Attributes and their structure and their meaning.

My redrawing of the Matrix Chart, #14, shows the Dialectic Attributes, but the original that was published in Varda's book does not show the Dialectic Attributes (Ordinal — Neutral — Cardinal) either, although it shows the Ordinal triad on the left side of the Chart, the Neutral in the middle, and the Cardinal triad on the right

side of the Chart, which is the same as numerous other Charts. As I said above, this is the Michael Math Sequence. The last chapter of the *Archetypes* book, "The Energy Structure of the Number 7", page 409, does mention them and describe them, but does not name them (e.g. "Ordinal" and "Cardinal"), thus:

The archetypical energies of the Artist (2), Healer/Helper (1) and Warrior (3), all belonging to one side of the duality are directed within; they are receptive, withdrawn, passive, not *per se* but in relation to the energies of their dual Archetypes, the Sage (5), Priest (6) and King (7). The latter are outgoing, dominating, giving, active, far-reaching. They relate to one another like the male and female principle, like Yang and Yin, they correspond like willpower and willingness, making events happen and letting them happen, pushing and resisting.

Beyond that statement, there is not much if any expansion of the meaning of the Dialectic Attributes elsewhere in the book. This neglect reflects a typical lack of attention to detail in the study of the structure of the Overleaf and Matrix Systems; all of the explanation is typically directed to the *content* of the Overleaves rather than to the *context* of the Overleaves, the context being the Attributes and their structure and their meaning.

With the information presented above, I was able to add the Matrix Sequence to summary Table 2Cb below, along with the other proposed sequences of Overleaf categories.

The final proposed Overleaf sequence to be introduced here was invented by the Tao, in my informed opinion, not by some person or via some alleged channeling. Unlike the five sequences described above, I have noticed a sequence that has not gained much traction within the Michaelian teachings, but it is corroborated by independent sources to such an extent that I have written another massive tome about it. You might have seen it mentioned already in this *History* book; the name of that book is:

The Tao of Cosmogony — The Natural Sequence of the Cosmic Septenary

In terms of the Septenarian Attributes, what I have come to call the "Natural Sequence" goes like this:

1 = Ordinal Action, 2 = Ordinal Inspiration, 3 = Ordinal Expression

4 = Neutral Assimilation

5 = Cardinal Expression, 6 = Cardinal Inspiration, 7 = Cardinal Action.

Notice that the Cardinal triad is the mirror image of the Ordinal triad, and that the Neutral is in the middle between them. This is the only Septenarian Attribute sequence that I personally have been able to Validate, and that Validation has been accomplished in numerous ways. Besides evidence from nature itself, there is corroboration from several esoteric cosmologies. The other sequences, listed above, come from unvalidatable sources such as channeling, and are not corroborated by other means that I know of.

It is universally agreed in the Michaelian teachings that the seven planes and the seven levels within each plane follow the Natural Sequence. However, its relevance to numerous other septenaries — inside and outside the Michaelian teachings — has not been generally recognized — because that relevance has been usurped by the illegitimate Michael Math Sequence. Because of its importance to an understanding of, not only the Overleaf System, but also many other aspects of the septenarian cosmology of the Michaelian teachings, the entirety of my book *The Tao of Cosmogony* is dedicated to the revelation and explication of the Natural Sequence. The Natural Sequence also relates to Tao's Template and the Taijitu Tango Principle, explained in various places in this *History* book and in my other books.

There are several chapters in this *History* book where the septenary under discussion follows the Natural Sequence. For instance, besides Planes, there are Soul Ages, Levels, Life-Stages, Rays/Roles/Temperaments, Chakras, and Centers. These are tabulated below.

| | Table 2Ca — The NATURAL SEQUENCE | | | | | | | | | | | | |
|-------------------|----------------------------------|-------------|-----------------------|--------------------------|------------------------|--------------|---------------|--|--|--|--|--|--|
| DIALECTIC | ORDINAL | | | NEUTRAL | | CARDINAL | | | | | | | |
| AXIAL | ACTION | INSPIRATION | EXPRESSION | ASSIMILATION | EXPRESSION | INSPIRATION | ACTION | | | | | | |
| PROCESS | TERMINAT' | INVOLUTION | ANALYSIS | COMBINAT'N | SYNTHESIS | EVOLUTION | ORIGINAT'N | | | | | | |
| ASPECT | GOAL | SHADOW | ATTITUDE | SOUL AGE | CENTER | ROLE | MODE | | | | | | |
| RANK | FIRST | SECOND | THIRD | FOURTH | FIFTH | SIXTH | SEVENTH | | | | | | |
| PLANE | Physical | Astral | Mental | Buddhic | Spiritual | Divine | Logoic | | | | | | |
| SOUL AGE | Infant | Child | Young | Mature | Senior | Elder | Ancient | | | | | | |
| LEVEL | Resolution | Immanence | Separation | Experience | Unification | Transcendenc | Activism | | | | | | |
| LIFE-STAGE | Infancy | Childhood | Youth | Middle-Age | Seniority | Elderhood | Dying | | | | | | |
| TEMPERA- MENTS | Ceremonial Order | Devotion | Concrete Knowledge | Harmony thru Conflict | Active Intelligence | Love-Wisdom | Will or Power | | | | | | |
| CHAKRAS | Groin | Navel | Plexus | Heart | Throat | Brow | Crown | | | | | | |
| CENTERS | Motion | Emotion | Intellect | Impulse | Concept | Sympathy | Excitation | | | | | | |

My comments on this table are as follows:

- The top five rows below the title row show the Attributes and correlates of the seven components of the Natural Sequence shown in the Natural Sequence from left to right.
- DIALECTIC: The second row shows the Dialectic Attributes. Refer to Chapter 2B, "Attributes of Overleaves".
- AXIAL: The third row shows the Axial Attributes. Combine Dialectic and Axial Attributes and we have the Septenarian Attributes. Refer to Chapter 2B, "Attributes of Overleaves".
- PROCESS: The fourth rows shows the names of the seven time-like types of changes that happen in nature. These are the archetypal "verbs" of the Natural Sequence. Note that they correspond to the "nouns" of the Overleaf System in the next row below.
- ASPECT: The fifth row shows the names given by the Overleaf System to the seven space-like types of "being". The Processes and the Aspects are shown in the headers of the horizontal and the vertical axes of my versions of the Overleaf Chart.
- RANK: The sixth row shows the numerical rank designations that apply to the seven vertical columns.
- PLANE: The seventh row shows the names of the seven planes as Theosophy prefers to name them and which I have adopted. Refer to Chapter 1A in Part One and Chapter 4E in Part Four, "The Seven Planes".
- SOUL AGE: The eighth row shows the names of the seven Soul Ages as I prefer to name them. Refer to Chapter 1E in Part One and Chapter 4M in Part Four, "The Seven Soul Ages".
- LEVEL: The ninth row shows the names that I have given to the seven Levels; recall that each Soul Age consists of these seven Levels. Refer to Chapter K in Part Four, "The Seven Levels".
- LIFE-STAGE: The tenth row shows the names that I have given to seven stages that a person goes through during an ideal full lifetime. In the Michaelian teachings, these are usually called Internal Monads, but because I have Validated some differences from the prevailing orthodoxy, I give this septenary the name that developmental psychologists give this phenomenon. Refer to Chapter 4Q in Part Four, "The Seven Life-Stages".
- TEMPERAMENTS: The eleventh row shows the names of the seven Temperaments of Theosophy, which is the precursor to and the equivalent of the Roles in the Michaelian teachings. Refer to chapter 1F in Part One, "The Seven Human Temperaments".

- CHAKRAS: The twelfth row shows the names of the seven chakras. Refer to Chapter 1C in Part One and Chapter 4J in Part 4, "The Seven Chakras".
- CENTERS: The thirteenth row shows the name of the seven Centers. Refer to Chapter 1D in Part One, "The Seven Centers".

Many chapters in many other of my books reinforce my conclusion that the Natural Sequence is *the* sequence that rules them all; all others are variations on that theme.

Conclusion of Chapter 2C

The Enneagram Sequence (discussed in Part One and Part Four) cannot be correlated with the Septenarian Attributes; it is a system of three items, six items, and nine items, not seven. There are other structural components of the Enneagram Sequence that are not compatible with the Septenarian Attributes.

The six Sequences found in the Michaelian teachings community that can be correlated with Septenarian Attributes are shown in the following table:

| | Table 2Cb — PROPOSED SEQUENCES of OVERLEAVES | | | | | | | | | | | |
|-----------------|--|--|--|--|-----------------------------------|--|---|--|--|--|--|--|
| RANK | FIRST | SECOND | THIRD | FOURTH | FIFTH | SIXTH | SEVENTH | | | | | |
| GURDJIEFF | Ordinal Action [WARRIOR] | Ordinal Inspiration [SERVER] | Ordinal Expression [ARTISAN] | Neutral Assimilation [SCHOLAR] | Cardinal Action [KING] | Cardinal Inspiration [PRIEST] | Cardinal Expression [SAGE] | | | | | |
| VIBRATION | Ordinal Action WARRIOR | Cardinal Action KING | Neutral Assimilation SCHOLAR | Ordinal Inspiration SERVER | Cardinal Expression SAGE | Ordinal Expression ARTISAN | Cardinal Inspiration PRIEST | | | | | |
| MICHAEL MATH | Ordinal Inspiration SERVER | Ordinal Expression ARTISAN | Ordinal Action WARRIOR | Neutral Assimilation SCHOLAR | Cardinal Expression SAGE | Cardinal Inspiration PRIEST | Cardinal Action KING | | | | | |
| Rows o | above this row o | do not correlate | entire Overleaf | categories with S | eptenarian Att | ributes; rows be | elow do. | | | | | |
| HOODWIN | ROLE Cardinal Inspiration PRIEST | GOAL Ordinal Action WARRIOR | ATTITUDE Ordinal Expression ARTISAN | MODE Cardinal Action KING | CENTER Cardinal Expression SAGE | SHADOW Ordinal Inspiration SERVER | AGE Neutral Assimilation SCHOLAR | | | | | |
| DIE QUELLE | ROLE Ordinal Inspiration SERVER | FEAR Ordinal Expression ARTISAN | GOAL Ordinal Action WARRIOR | MODE Neutral Assimilation SCHOLAR | ATTITUDE Cardinal Expression SAGE | CENTER Cardinal Inspiration PRIEST | AGE Neutral Assimilation KING | | | | | |
| NATURAL | GOAL Ordinal Action WARRIOR | SHADOW Ordinal Inspiration SERVER | ATTITUDE Ordinal Expression ARTISAN | AGE Neutral Assimilation SCHOLAR | CENTER Cardinal Expression SAGE | ROLE Cardinal Inspiration PRIEST | MODE Cardinal Action KING | | | | | |

Following are my comments on this table:

- RANK: The first row shows the rank order sequence as headers to the seven columns.
- GURDJIEFF: The second row row shows the names of the Roles in brackets because Gurdjieff did not know about them, but he did know about Centers, so the Roles that correspond to his sequencing of the Centers are shown. This row shows the Cardinal triad as the same order (Action, Inspiration, Expression) as the Ordinal triad. Therefore, this sequence respects the symmetry of the Dialectic pattern, but does not respect the symmetry of the Axial pattern.

- VIBRATION: The third row shows José Stevens's lineup of the Septenarian Attributes of the corresponding Roles that he sequenced. It is almost completely random when compared to the others. It has no respect for the usual patterns of Dialectic and/or Axial Attributes. If it has any validity, then it is not as an explanation of the structure of the Overleaf System; it is something else entirely.
- MICHAEL MATH: The fourth row shows the sequence that most Michaelian students are familiar with, and that they have canonized as if it were fundamental, when in fact it is not. It respects the symmetry of the Dialectic pattern, but does not respect the symmetry of the Axial pattern.
- HOODWIN: The fifth row is different from the other sequences in that, in order for me to show this sequence in this table, it required that I assign Septenarian Attributes to the Overleaf categories, which I did, using the Natural Sequence. The assignment of Septenarian Attributes to Overleaf categories is introduced in Chapter 1B in Part One, "Personality Typologies". It is explained in more detail in my book *The Tao of Personality*. The alleged "innermost" Overleaf category is at the left end of the sequence, and the alleged "outermost" Overleaf category is at the right end of the sequence. Body Type was included in Hoodwin's list, but it is omitted from this sequence because it is not an Overleaf category (unless it is conflated with Centers; refer to chapters on Body Type), and therefore does not have the Septenarian Attributes that the other Overleaf categories have been assigned in my system. The Hoodwin Sequence is almost but not completely random when compared to the others. Its alleged structure, visualized as concentric circles, does not respect the natural symmetry of the Dialectic pattern; nor does it respect the natural symmetry of the Axial pattern.
- DIE QUELLE: Other than my Process/Aspect System, the Matrix system is the only one to explicitly assign Septenarian Attributes to the Overleaf categories. A careful reading of Archetypes of the Soul, and a note from Hasselmann herself to me personally, reveals this. Having adopted the Michael Math Sequence, it respects the symmetry of the Dialectic pattern, but it does not respect the symmetry of the Axial pattern. Thus, in my opinion, the Matrix Chart is a step in the right direction, but falls short. The next sequence goes all the way with symmetry. The Matrix Sequence is slightly reminiscent of Hoodwin's sequence of Overleaves from "innermost" to "outermost", but Hoodwin's sequence is not the same ordering as Hasselmann's.
- NATURAL: The sixth row shows the Cardinal triad in the reverse order of the Ordinal triad; so it respects the symmetry of both the Dialectic and the Axial pattern. Thus, the Natural Sequence is symmetrical on either side of Neutral Assimilation. This one is beautiful; the others are ugly. That is not the only reason to prefer it, as documented elsewhere.

It is interesting to me that the Matrix Chart pairs the Overleaf categories per my Process/Aspect System schema, namely Inspiration (Role and Fear), Action (Goal and Mode), Expression (Attitude and Center), and Assimilation (Age/Level). Apparently this was done intentionally by Die Quelle. However, the use of the Michael Math Sequence on the horizontal axis of the Matrix Chart was the original error. This reveals a lack of appreciation of the symmetry of both Dialectic and Axial Attributes.

Other than Hoodwin, Die Quelle, and Wittmeyer, Chart-makers have not presented a rationale for sequencing the Overleaf categories; apparently, only Hoodwin, Die Quelle, and Wittmeyer have realized that there must be some ordering principle for the Overleaf categories. Hoodwin did not realize that it was the same ordering principle as used on the other axis of the Overleaf Chart, the Septenarian Attributes; Die Quelle did realize that, but was misled by the Michael Math Sequence, which it took to be fundamental, but it is not. The fundamental ordering principle in the universe, and in the Overleaf System, is the Natural Sequence characterized by logic (yes, no, maybe) and math (one, two, three) embodied in the Septenarian Attributes.

In the Appendix of this History book, in Chapter E2, "The Natural Sequence of the Cosmic Septenary", there is a review of many of the septenaries that have been proposed by various Michaelian channels over the decades, and it demonstrates that they are 'all over the map' in terms of their sequencing of the Septenarian Attributes; just as in Table 2Cb above, there is no consistency. To the extent that there is consistency, it appears that, in the belief system of many Michaelian students, the Michael Math Sequence has usurped the status of the Natural Sequence. I regard this as unfortunate because it obscures the pervasive presence of the Natural Sequence in many realms of nature, not just in the structure and meaning of the Overleaf and Matrix Systems.

Obviously, as shown here in this chapter of this *History* book, we see discrepancies between various Michaelian students and teachers on the subject of sequencing Septenarian Attributes in the Overleaf System. More will be said about these various sequences if and when appropriate in the remainder of this *History* book.

In Part Three, they are pointed out when they are encountered in the analysis of the Overleaf Charts. In Part Four, some of the discrepancies between the various sequences are examined in detail.

CONCLUSION TO PART TWO

For most Michaelian students, this Part of the book probably provided a lot of new information for them to absorb. Nowhere else in the published Michaelian teachings literature has the descriptions of each Overleaf, as found in the original Michaelian group transcriptions, been compiled. This compilation provides a good introduction to the *content* of the Overleaf System. Nowhere else in the published Michaelian teachings literature has the synonyms for the Dialectic Attributes, as found in the original Michaelian group transcriptions, been compiled. This compilation provides a good introduction to the *context* of the Overleaf System. Nowhere else in the published Michaelian teachings literature have the variety of proposed Overleaf sequences been compiled. This is a good introduction to another aspect of the *context* of the Overleaf System, the Septenarian Attributes.

Part One, "Precursors to the Overleaf System", was also a good introduction to both the content and the context of the Overleaf System. That was also a considerable amount of new information for Michaelian students to absorb. These two Parts serve as a robust and comprehensive introduction to the Overleaf Charts that are reviewed in Part Three. This is all part of my plan, devised to help Michaelian students derive as much understanding from the Overleaf Charts as it is reasonably possible to do.

Part Three

THE OVERLEAF CHARTS

INTRODUCTION TO PART THREE

In this Part, we review twenty-three Overleaf Charts in the chronological order of their origination. Their dates span the entire history of the Michaelian teachings from early 1974 to the present day. Original Charts were redrawn rather than reproduced. In this Part each Chart is given a couple of pages of introductory commentary. Extensive commentary on issues raised by discrepancies between and among the Charts and their evolution is provided in Part Four.

We see that there have been additions and subtractions and revisions to the Charts all along the way. We see that various Chart–makers adopted and adapted the original and the new information to suit their own understanding, and to impart that understanding to others. For the most part, these chapters are intended as a historical record, but the information can be rendered useful if it increases the reader's understanding of their own and others' Overleaves, moving the Personality toward Agape, the purpose for which the Michaels revealed this System.

I suggest that as you read about these Charts in the following chapters, you take your time and think about what you are reading, and look back and forth from Chart to text. The more you actually *study* this material, the more you will get out of it. Reading this book is not the kind of project that is suitable for a fast and cursory scan. And it is not the kind of presentation you might be accustomed to. This is not about a description of each of the Overleaves themselves, such as you might find in other books. Rather, it is mostly an overview of the structure of each Chart, and a Chart-to-Chart comparison and contrast. Neither of these methods has previously been applied to a study of the Overleaf System, so if it is done carefully and thoughtfully, it might reward the reader with enlightening insights and epiphanies.

And there is even more to it than that. There is a reason that I point out the things that I do as I discuss these Charts. Please pay attention and follow my references. Many times throughout the commentary on each of these Charts, I refer the reader to other chapters in this *History* book. These chapters in this book are as pieces to a puzzle that when fully assembled I regard as a beautiful picture of the Overleaf System when understood in all its glorious symmetry. It actually takes all seven of my books to present all of the pieces of the puzzle and assemble the entire picture.

Many of these Charts were created by people who have deep knowledge and understanding of the Michaelian teachings, which can be seen in their books and websites. What little I have to say about their Charts is therefore a distorted and incomplete representation — misrepresentation? — of their work when considered as a whole. Readers of what I have to say are therefore encouraged to read *all* of what *they* have to say.

Charts Examined in Part Three

- #1 THE ORDERING OF THE COSMOS (1974): The first original Michaelian group Overleaf Chart we examined was titled "The Ordering of the Cosmos." It was apparently created by Richard Chambers, husband of Sarah Chambers, first and primary channel for the Michaels during the original Michaelian group. Eight components are tabulated. It included the Planes and Body Types which are not Overleaves but omitted the Modes. This is a clue to its date of creation, because Modes were the last Overleaf to be revealed, on 04 April 1974. This Chart arranges the Overleaves in Ordinal Neutral Exalted categories. This was a good start at presenting the pattern of the System. There was no understanding of the "Axes" of Action Inspiration Expression Assimilation.
- #2 THE SYNTHESIS (1974): The second original Michaelian group Overleaf Chart was titled "The Synthesis". It differed considerably from the first Chart in its looks and structure. The Synthesis Chart does not arrange the Overleaves in the Ordinal Neutral Exalted categories, or even hint at the Axes. It had all seven Overleaves including Ages, plus Body Type, but omitted Planes. This Chart appears to have been created in mid- or late 1974 because it had all of the Overleaves but not the Positive and Negative Poles. To call it "The Synthesis" was therefore false advertising, but the title tells us that the creator of the Chart had a glimmer that there was a System there somewhere, somehow.
- #3 POLES OF THE OVERLEAVES (1975): The third Chart also came from the original Michaelian group, but did not have a title. It was an eight-page bundle with one Overleaf on each page, plus a page for Body Types, plus a page showing Gurdjieff's seven "Man Numbers". This Chart shows the Positive and Negative Poles of all of the Overleaves and Body Types. It juxtaposes the three axes but does not name them, and it shows the two Poles of the Axes, but does not name them. It does not include Ages or Levels or Planes. This bundle is dated March 1975.
- #4 THE ORDERING OF THE COSMOS (1975): The fourth Chart was obviously derived from the first Chart and titled the same. It was created by original Michaelian group member Louise Briggs and another original Michaelian group member as part of a 42-page introduction to the Michaelian teachings titled A Cosmic Teaching. It added the Modes and made a few other minor changes and additions. It was created in early 1975, but it did not show the Positive and Negative Poles, which were known at the time.
- #5 MESSAGES FROM MICHAEL (1979): The fifth Chart comes from Chelsea Quinn Yarbro's book Messages from Michael (MFM), first published in 1979. It contains information drawn entirely from original Michaelian group transcriptions (1973–1975) and from ten special sessions with Sarah Chambers in 1977 and 1978. It makes some interesting changes to the original Michaelian group Charts, including changing a few names from those given in the original Michaelian group. It introduces and names the Axes: Action Inspiration Expression Assimilation, which so far as we know was something not revealed to the original Michaelian group. It also inexplicably switches Moving and Sexual Centers on the Action Axis the opposite of Gurdjieff and the original Michaelian group.
- #6 LOUISE BRIGGS (1980–1983): The sixth Chart comes from the Briggs group which met in the early 1980s. (The Briggs group was one of the successors to the original Michaelian group, the Yarbro group being another successor.) The Briggs group transcriptions mentioned *MFM*, and this Chart reflects the changes Yarbro made in *MFM* to the original original Michaelian group names, except that Briggs keeps the Moving Center on the Ordinal side of the Action Axis and the Sexual Center on the Exalted side. It also substitutes Server for Slave, a change never officially made in the original Michaelian group. The Axes are sequenced Expression Action –Inspiration.
- #7 MICHAEL EDUCATIONAL FOUNDATION (1984): JP Van Hulle and some of her friends attended the Briggs group from 1981 to 1983, then formed their own group. They created their own Chart in 1984. It is most similar to the Briggs Chart with some other similarities to the *MFM* Chart. It showed numerous name changes to Overleaves and Poles.
- #8 MORE MESSAGES FROM MICHAEL (1986): This Chart is derived from old and new information published by Yarbro in *More Messages from Michael (MMFM)*, in February 1986. A) It changed the word Exalted which had been used up until that time to Cardinal, while retaining the use of the word Ordinal. B) It introduced a consistent numerical sequence into the Overleaf septenaries, something that seems to have escaped attention previously. C) It gave names to the Poles of the Levels. This is the last

- Chart in history to make any significant structural improvements to the Overleaf System; all others follow this lead. Except that heretical rascal Phil Wittmeyer, that is.
- #9 JOSÉ STEVENS (1986–1989): This Chart comes from *The Michael Handbook (TMH)* by José Stevens and Simon Warwick-Smith, first published in late 1986. This was the first book to come from the non-Yarbro wing of the Michaelian teachings. Even though Stevens had transcriptions from the original Michaelian group, and even though he attended some Briggs sessions, and even though he had the first two Yarbro books, his Chart has some differences from those sources: it shows changes to some of the names of Overleaves and Poles, among other things. This contingent of the Michaelian teachings never did adopt Yarbro's change of wording from Exalted to Cardinal. Stevens sequences the Axes as Expression Inspiration Action. Stevens's next two books, *Tao to Earth (TTE, 1988)* and *Earth to Tao (ETT, 1989)*, have identical Charts. Stevens continues the practice, started in the Briggs sessions, of naming Slave as Server.
- #10 CAROL HEIDEMAN (~1988): This Chart was created by Carol Heideman in about 1988 and comes from her book *Searching for Light*. As one might expect in this time frame, it shows a blending of information from *MMFM* and *TMH*.
- #11 MICHAEL: THE BASIC TEACHINGS (1990): This Chart comes from *Michael: the Basic Teachings* (*MTBT*) (1988, 1990), by three authors from the Michael Educational Foundation. It does not include the Ages, Levels, or Poles of Overleaves. It departs from Stevens's Charts in that it sequences the Axes as Inspiration Expression Action. It also changes some Body Type correlations with other Overleaves. It continues the tradition started in the Briggs sessions of naming Slave as Server.
- #12 LARRY BYRAM (~1991): Larry is a channel and prolific writer about the Michaelian teachings and related systems of metaphysics from the mid-1980s to the present. This Chart was apparently created in the early 1990s. It is very much in alignment with the other Charts extant among the Bay Area channels up to this time. He sequences the Axes as Inspiration Expression Action *ala* Yarbro in *MMFM*.
- #13 STEPHEN COCCONI (1992): Cocconi has his own version of the Overleaf System and it is available on his website. It is obviously a derivative of the MTBT Chart, notable mostly for the fact that he shows a few name changes from its predecessor. He sequences the Axes as Expression Action Inspiration. It is dated 1992, but Cocconi says that it is still current.
- #14 VARDA HASSELMANN (1993): Varda is a German woman who read the Yarbro books in the 1980s, then became a channel for "Die Quelle" The Source which is said to be a mid-Causal Entity as the Michaels are. The Source provides information so similar to the Michaels that one can hardly tell the difference. At the time of this writing, two books of several that Varda has written in the German language along with her husband and co-worker Frank Schmolke have been translated into the English language. Both books have an identical Overleaf Chart that is reviewed here; it is most similar in characteristics to the Yarbro Charts.
- #15 SHEPHERD HOODWIN (1995): This Chart comes from his book *The Journey of Your Soul (TJOYS,* 1995) and *Journey of Your Soul (JOYS,* 2013). His Chart is most similar to the *MTBT* Chart. He sequences the Axes as Inspiration Expression Action *ala* Yarbro in *MMFM*.
- #16 JOSÉ STEVENS AGAIN (2009): This second version of Stevens's Overleaf Chart is from the book by Elizabeth Puttick, *Seven Personality Types*. It makes a few significant and interesting changes to the Charts he created and published in the 1980s, mostly name changes rather than structural changes, and the name changes seem to be motivated by the fact that the intended readership is the general public, not just Michaelian students.
- #17 BARBARA TAYLOR (~2005): Taylor's Chart can be found on her website, >www.itstime.com<. It is most similar to the Charts by José Stevens. In fact, she credits him for all of it. Her two Charts were conflated into one Chart for this *History* book.
- #18 STEVE "MATURE SCHOLAR" (2007 & 2009): Steve was or is a member of the Yarbro group. For almost three years he was moderator of an internet discussion group about the Michaelian teachings, and he published two Overleaf Charts thereon. They contain information not found elsewhere, no doubt because the secretive Yarbro group has taken off in different directions from the non-secretive, non-Yarbro Michaelian groups. His two Charts were conflated into one Chart for this *History* book.

- #19 TERRI BENNING (2009): Terri is a San Francisco Bay Area channel who has her own website about the Michaelian teachings. She has her own version of the Overleaf Chart on that website. She chose various features from other Charts to suit her own purposes and understanding.
- #20 PERSONESSENCE (2011). This Chart appeared in an ebook by the same name, written by José Stevens, with an intended readership of not-necessarily Michaelian students. It both builds on and departs from his previous published Charts, #9 and #16 in this series of chapters.
- #21 TROY TOLLEY (2012). Troy has been a Michaelian channel living in New York City since around 1990. This Chart is a combination of two Charts that I found on his >www.our.truthloveenergy.com< website. It has its greatest similarity to the Chart of Barbara Taylor, which has been derived from José Stevens's work.
- #22 STEPHEN COCCONI (2011). This Chart is a supplement to his earlier Chart, #13. It is derived from Cocconi's project to make the Overleaf System into a tool for divination and/or insight, which he named the "Michael Motivation Cards". These work somewhat like Tarot cards.
- #23 and #24 PHILIP WITTMEYER (1981 and 1986): These two Charts are presented out of chronological sequence with the other Charts. I did this because so many comments made about the previous twenty-two Charts serve as an introduction to information embodied in these two Charts. The first Chart is titled *Space Structure* and the second is titled *Time Structure*, a hint that they contain concepts not explicitly revealed in the Michaelian teachings. In fact, the structure of these Charts has their derivation in logic, mathematics, and physics. They also show otherwise unrecognized symmetries in the Overleaf System.

Chapter 25, the last chapter of Part Three, is a tabulation of all of the various names of Overleaves and the Poles of Overleaves that appear on these 24 Overleaf Charts.

THE ORDERING OF THE COSMOS (1974)

| | THE ORDERING OF THE COSMOS | | | | | | | | | | |

Introduction

The Chart shown above is a redrawing of the actual Chart, with all of the information of the original retained. The original Chart was on a sheet in 'landscape' orientation, whereas this Chart is in 'portrait' orientation. The original Chart is reproduced in Volume 2 of *Michael Speaks* — *The Legacy of Sarah Chambers* [SJC-2].

We actually have three versions of this Chart, and the one shown above (redrawn) appears to be the third version. The first version does not list the Chief Features, shown at the bottom. The second version has the Chief Features penciled in. This third version has the Chief Features typed in, with the Modes handwritten on the backside of the sheet. This gives us a clue as to when these versions of the Chart were created. Body Types and Centers were inherited from the Gurdjieffian teaching. Attitudes were revealed on 22 January 1974; Chief Features were revealed on 27 February 1974; Modes were revealed on 03 April 1974. Thus, a little more than a month passed between each revelation. These facts indicate that the Chart was in development during the winter of 1974.

(When the seven Modes were revealed, it was said to be the "seventh" and the "final" Overleaf category. The knowledge that there are seven Overleaf categories was not known until the mid-1990's, when transcriptions of the original Michaelian group sessions began to be released. This number should not be a surprise, because the number seven is prominent in the structured cosmology of the Michaelian teachings, as it is in the structured cosmology of many esoteric teachings. Decades after the widespread dissemination of this information, this fact has still has not been absorbed by the various Michaelian communities and individuals: Overleaf Charts and Michaelian books and websites, from the first to the last, differ about this definition. For my overview of the history of this subject, refer to Chapter 4C in Part Four, "Which Trait Septenaries are Overleaves?")

Note the Mode called "Perseveration". This was in fact the term used in the original Michaelian group and only in the original Michaelian group, and it is a real word that you can find in dictionaries. It appears several times in the transcriptions. No one in the Michaelian teachings has used it since; everyone now calls it "Perseverance", following its first publication in *Messages from Michael* in 1979.

All of the Overleaves shown on the Chart were typewritten. The bold text on the Chart obviously did not come from a typical typewriter. We have several other sheets with graphic elements and enlarged text on them, two of which are initialed by their creator, "RHC". This was Richard Chambers, husband of Sarah Chambers, an Artisan and a Civil Engineer. During the early days of the original Michaelian group, these two worked the Ouija board together, until Sarah was able to do it alone. Perhaps Richard had access to equipment that would produce the graphics and the enlarged text. Two other graphics of his were dated 1–74 and 3–74, the same time frame in which these Overleaf Charts appears to have been created, during the successive revelations of Overleaf categories during the last third of 1973 and the first third of 1974. Therefore we surmise that this first Overleaf Chart was created and updated by Richard Chambers over several months in early 1974.

- 1. If there is any significance in the fact that the Planes and the Chief Features are typed in lower case characters, whereas the other names are typed in upper case characters, I am unable to discern it.
- 2. We do not know the significance of the words "erotic" and "pedantic" that RHC added after the Emotional and Intellectual Centers, respectively. They do not come from the Michaels or from Gurdjieff, so far as we know. Could these be hints of Negative Poles? It was not until at least a half a year later that the subject of Negative Poles was formally introduced, although there were allusions to them earlier. Refer to Chapter 2A in Part Two, "Revelation of Overleaves", for more information.
- 3. RHC proposed a synonym for the Goal of Stagnation, namely "Resting". The name of this Goal is a favorite target for revisionists, as we see in subsequent Charts. It is variously called Relaxation or Flow or Equilibrium.
- 4. This Chart is not about the Overleaves only, because Planes and Body Types are included. The title, "The Ordering of the Cosmos", indicates that RHC realized that the entire System was a 'map' of more than mere human Personality. In other words, the body 'below' the Personality (Body Types) and the universe 'above' the Personality also have a 'personality', and the 7x7 matrix of Tao's Template applies to all three realms and to many other realms that do not show up on any of the Charts we review. Planes and Body Types are discussed in other chapters, in Part One, and in Part Four.

- 5. The most cosmic septenary ("septenary" = group of seven) on the Chart is the first one, Planes. Planes are not an Overleaf, and they do not show up on many other Overleaf Charts, but more is said about them in this series of chapters: refer to Chapter 1A in Part One, "The Seven Planes", which gathers and explains the original Michaelian group information on that subject; refer to Chapter 4E in Part Four, "The Seven Planes", which discusses that subject with information drawn from other teachings, as well as books about the Michaelian teachings published over two decades subsequent to the original Michaelian group.
- The least cosmic septenary on this Chart is Body Types. Chapter 1M in Part One, "The Seven Body Types", reviews teaching prior to the original Michaelian group and during the original Michaelian group. Chapter 4D in Part Four, "Body Types", reviews teachings that were given after the original Michaelian group. In the latter chapter, it is argued that Body Type does not fit with the Overleaf categories because there is no obvious, unarguable correlation with them. However, the original Michaelian group members made the attempt to correlate Body Types with Overleaves on the Chart shown above: the handwritten notes "Feminine or Passive, Genderless Modifying, Active or Masculine" next to the triads are an attempt to correlate Attributes of Body Types (as given by the original sources, Rodney Collin and the Fellowship of Friends) with the Dialectic Attributes Ordinal, Neutral, Exalted of the Overleaf septenaries.
- 7. The septenaries are listed in three columns, titled Ordinal Neutral Exalted. These Dialectic Attributes are reviewed in Part One in Chapter 1C, "Attributes of Overleaves", and in Chapter 1K, "The Law of Three". As indicated in Chapter 2A in Part Two, "Revelation of Overleaves", as each Overleaf was given, either the Michaels or original Michaelian group members noted that the seven traits were grouped into an Ordinal triad and an Exalted triad, with a Neutral trait in between. This Chart graphically represents those groupings. This arrangement of the septenary was known to Gurdjieff and other precursors to the Michaelian teachings, and appears to be a feature of many septenaries both inside and outside the Michaelian teachings. When this pattern occurs in a group of seven components, in this *History* book it is referred to as a Septenary with a capital S to distinguish it from a group of seven components that does not have the pattern. The Dialectic Attributes are shown on nearly every subsequent Overleaf Chart.
- 8. One sees by the numbers next to each Ordinal and Exalted trait that Richard Chambers was apparently attempting to: a) correlate the traits on either side of the Neutral trait; and b) arrange the triads in a sequence. This first attempt to do both of these things failed to one degree or another, based on what students learned subsequent to the original Michaelian group. The course of the improved understanding is chronicled in other chapters in this *History* book.
- 9. To "correlate" in Item #8a above means to match Overleaves with their Dialectic Attribute opposite on either side of the Neutral. Late in the original Michaelian group, early in 1975, we find that these Ordinal–Exalted pairings were referred to as "Axes". There was use of this concept in the Yarbro books, but not that word. The word itself was perpetuated in the non-Yarbro wing of the Michaelian teachings via Briggs, Stevens, and Van Hulle. Based on developments in understanding the structure of the System after the original Michaelian group, we see that RHC correctly matched Slave with Priest, Artisan with Sage, Warrior with King, Retardation with Growth, Rejection with Acceptance, Submission with Dominance, Stoic with Spiritualist, Moving with Sexual, Emotional with Higher Emotional, and Intellectual with Higher Intellectual. We find that RHC incorrectly matched Cynic with Idealist, Skeptic with Realist, Self-deprecation with Impatience, Self-destruction with Arrogance, and Martyrdom with Greed. That makes ten right and five wrong pairings. Regarding the erroneous pairings of the Attitudes and Chief Features, if one draws lines between the correct pairs, one sees that there is no pattern to the error.
- 10. To "arrange the triads" in Item #8b above means attempting to provide a consistent pattern in terms of the triads later named Action Inspiration Expression. This is another type of Attribute, the Axial Attribute type. These three Attributes were not terms introduced while the original Michaelian group was meeting, so far as we can determine from the transcriptions we have obtained. The terms were introduced by Yarbro in MFM (1979) on page 43. She assigned these Attributes to each Overleaf in her graphics of each Overleaf category. We assume this revelation came during the ten special sessions that Yarbro had with Sarah Chambers while Yarbro was writing MFM. Richard Chambers's Overleaf triads are scrambled in various sequences in terms of the Action Inspiration Expression

Attributes. That is, Roles = I-E-A-N-I-E-A; Goals = I-E-A-N-I-E-A; Attributes = A-E-I-N-E-A-I; Centers = A-I-E-N-A-I-E; Chief Features = I-E-A-N-A-I-E. This is partly because he did not get the Axial pairings right in some cases — see Item #9 above — and partly because RHC had no revelation from the Michaels about the Axial Attributes and their meanings, or which Attribute applied to which Overleaf. A proposed rationale for a consistent sequencing of these Attributes in a Septenary is presented in my book *The Tao of Cosmogony*.

- 11. The Overleaf category 'Centers' came from the Gurdjieffian teaching, and the sequencing appears to follow the teaching of Gurdjieff's successors with two possible exceptions: a) The Instinctive Center has moved from being a part of the Moving Center to being a Center of its own, and placed in the Neutral position between the Ordinal and Exalted triads. The ramifications of this change are examined in Chapter 4F in Part Four, "The Instinctive Center"; b) The Sexual Center has also been moved from being a part of the Moving Center to being a Center of its own, and placed in the Exalted triad. The ramifications of this change are examined in Chapter 4H in Part Four, "The Action Centers".
- 12. For sequencing of the Overleaf categories themselves, the Chart somewhat follows the chronological order from top to bottom as they were revealed in 1973 and 1974. That is, Soul Age was revealed in late August, Roles on October 23, Goals on December 25, Attitudes on January 22, and Chief Features on February 27. Body Types and Centers on this Chart are outside that chronological sequence. They existed in Gurdjieffian Fourth Way schools in the decades before the original Michaelian group. The knowledge of seven Planes also precedes the original Michaelian group by even more decades than Body Types and Centers. Other Overleaf Charts do not follow this chronological order. A way to organize the Overleaf categories in a logical-mathematical structure, complete with Dialectic and Axial Attributes, is found in my book *The Tao of Personality*.
- 13. The last two entries in the Souls row, Transcendental and Infinite, are not really part of the typical soul maturation process following the five Ages of Infant, Baby, Young, Mature, and Old. Many other Overleaf Charts also show the last two Ages as Transcendental and Infinite. This was perhaps because it was not clear to the original Michaelian group, and it was not made as clear as it could have been in MFM (1979). However, in MMFM (1986), these two Soul Ages were labeled "Astral" and "Causal" to go with the names of the planes where the last two stages of soul evolution allegedly occur before reabsorption of the Fragment soul into its Entity or Cadre or Oversoul. However, there are people both inside and outside the Michaelian teachings who say that souls might need to go through all seven Soul Ages on the Physical Plane. This shows up on the Charts created by them. Refer to Chapter 4M in Part Four, "The Seven Soul Ages", for a thorough discussion of this 'bone of contention'.

Concluding Remarks

This Chart showed promise as well as potential. It was a good first attempt, made only six months after the Michaels appeared and started giving scattered scraps of information about their System. Apparently the members of the original Michaelian group did not have the presence of mind and curiosity of heart to dig deeper into the structure of the System with the Michaels. Considering the amount of information they were attempting to assimilate, this failure is understandable. The satisfaction of figuring out the whole puzzle was left to their successors.

Introduction

The Chart shown above is a redrawing of the actual Chart, with all of the information of the original retained. A photocopy of the original is shown in Volume 2 of *Michael Speaks* — *The Legacy of Sarah Chambers [SJC-2]*.

The creator of this Chart probably chose this title, "The Synthesis", because the Michaels used it to refer to their teaching. Among other things, the Michaels said the Overleaf System was a central component of their comprehensive teaching, their *synthesis* of the meaning of life, the universe, everything. There is a chapter on The Synthesis in my book *Study Papers on the Original Michaelian Group*.

This Chart looks different from its predecessor, Chart #1, the *Ordering of the Cosmos*, but it is apparently based on it; it has most of the same structure, except the Trait categories were listed from top to bottom in the order in which they were revealed, unlike Chart #1. Also unlike its predecessor, it does not include the planes. The Modes were the last Overleaf to be revealed (03 April 1974), so this might be a clue to when this Chart was

created, apparently mid-1974. It was probably before the Positive and Negative Poles were revealed in very late 1974 or very early 1975, which show up in the third Chart we review, in the next chapter.

Unlike Chart #1, which was obviously created by Richard Chambers, there are no discernible clues to who might have been the author of this Chart. My guess is that it was made by one of the people in the typing pool for the session transcriptions.

- 1. Down the center, from top to bottom, eight categories are titled: Body Type, Center, Soul (that is, Soul Age), Role, Goal, Attitude, Chief Feature, and Mode. This is the sequence in which the original Michaelian group learned about them. Body Type and Center came from the Gurdjieffian Fourth Way group that founding members of the original Michaelian group were involved in before they were contacted by the Michaels.
- 2. The Chart includes Body Types, but, as indicated in the chapter above on Chart #1, they do not actually belong with the Overleaves of Personality. Soul Age was the first Overleaf that the Michaels revealed, and then added the six more shown on this Chart, in the order in which they are shown on this Chart. That is a total of seven Overleaf categories. It is appropriate that Body Type be listed first, however, since the body is necessary as a vehicle through which the Overleaves of Personality can manifest. Together, Body Type and Overleaves make an 'Octave'. The significance of this is explained in Chapter 4D in Part Four, "Body Types".
- 3. All of the Overleaf names used here are the original names that consistently show up in the original Michaelian group transcriptions, including the term "Perseveration". Even though the word processor may challenge the spelling of this word, it is a real word, mostly in use by professional psychologists. Per an online dictionary, it is "The tendency to continue or repeat an act or activity after the cessation of the original stimulus. The act or an instance of persevering; perseverance; persistence." Yarbro changed it to "Perseverance" in MFM, and that name has remained unchallenged in the Michaelian teachings community ever since.
- 4. One Chief Feature is given two names: Vanity and Arrogance. These two names were used interchangeably, both before and after Arrogance was officially revealed on 27 February 1974. On 03 January 1974, the Michaels said, "Vanity and Arrogance are both Chief Features found in dominant souls." Then on 27 February 1974 the Michaels said, "Vanity is a part of Arrogance." Then on 20 March 1974, the Michaels said, "... Arrogance with a sub Feature of Vanity." Then on 1 May 1974, the Michaels said, "Vanity as a sub Feature of Arrogance." Several more times throughout 1974, Vanity is used as a synonym for Arrogance by original Michaelian group members and the Michaels. Eventually, –Vanity was revealed as the Negative Pole of Arrogance in very late 1974 or very early 1975, and this convention was adopted in all subsequent Overleaf Charts.
- 5. The Dialectic words, Ordinal Neutral Exalted, were used on the preceding Chart, but not on this Chart. Unlike its predecessor, Chart #1, this Chart is not completely accurate when showing the Ordinal Neutral Exalted arrangement of the Septenary. It gets most of it right, but not all. Six of the seven Neutral traits are in the center column where they should be. Twenty of the twenty-one Exalted traits are on the left side, and nineteen of the twenty-one Ordinal traits are on the right. It would seem that the creator of the Chart did not completely understand where to put some of the traits, or was not being careful, or did not have access to Chart #1 as a guide.
- 6. As an exercise in gaining understanding, I suggest that you print this Chart and then draw pencil lines to show the connection between related traits in regard to the Septenarian Attributes of Exalted Action, Exalted Inspiration, Exalted Expression, Neutral Assimilation, Ordinal Expression, Ordinal Inspiration, Ordinal Action. As an example, notice the line that connects Higher Intellectual Old Sage Acceptance Idealist Greed Power. These are all Exalted Expression Overleaves. The line zigs and zags down the page rather than making a straight line. The other six lines connecting correlated Overleaves also zig and zag down the page, and not in any consistent pattern. This indicates that the creator of this Chart same as his or her predecessor with Chart #1 did not fully understand this correlation. Progress was made in MFM and more progress was made in MMFM. The complete correlation is shown in Wittmeyer's Charts, #23 and #24.

- 7. The Body Types cannot be shown with connecting lines to other traits because: a) They are not an Overleaf of Personality; b) There is disagreement among Michaelian teachings sources about their correlation with the Overleaves; c) There might not actually be any correlation, as explained in Chapter 4D in Part Four, "Body Types". On this Chart their names are an inconsistent mixture of nouns and adjectives, whereas on the preceding Chart they are all adjectives. Also, the way they are aligned with Overleaves on this Chart does not match the way they are aligned on the preceding Chart.
- 8. The Sexual Center is located on the Ordinal (right) side. One wonders if Yarbro saw this placement on this Chart and therefore showed the Sexual Center as Ordinal in *MFM*, as shown on Chart #5. The preceding Chart shows the Sexual Center as Exalted/Cardinal, as it seems to have been in the original Michaelian group transcriptions. This discrepancy is investigated in Chapter 4H in Part Four, "The Action Centers".
- 9. Only with the Centers do we see some Overleaves that are out of sync in terms of the Dialectic Attributes: Ordinal Neutral Exalted. Instinctive should be in the center column and Intellectual should be with the Ordinal triad on the right. This cannot be explained based on what we know from the Gurdjieffian teachings and the original Michaelian group transcriptions, or considering that the preceding Chart had it shown correctly; refer to Chapter 1D in Part One, "The Seven Centers". This probably reflects a lack of carefulness on the part of the Chart maker, rather than a regression or a progression in understanding.
- 10. Notice the Axial correlation from the Exalted to the Ordinal sides of the Chart from Role on down through the Overleaf categories. That is, King Sage Priest on the left repeats the Warrior Artisan Slave sequence on the right in terms of the Axial Attributes, Action Expression Inspiration. Chart #2 actually does better than its predecessor in that it only mis-aligns Modes whereas Chart #1 mis-aligns Attitudes and Chief Features. Does this reflect an actual improvement in understanding, or was it accidental? Perhaps the latter, based on what appears to be lack of carefulness in other regards.
- 11. Note that with Role and Goal, with respect to the Axial Attributes, Action Inspiration Expression, the left-to-right sequencing of the Exalted traits is the same as the left-to-right sequencing of the Ordinal traits. Only with regard to Mode does this pattern not apply. One wonders if this was a conscious arrangement on the part of the creator of this Chart. Another one of my books, *The Tao of Cosmogony*, proposes that the proper sequencing mirrors the Septenarian Attributes of the Exalted and Ordinal triads, rather than repeating them.
- 12. In the third row from the top, Soul (Age), the sequence from right to left is: Infant Baby Young Mature Old Transcendental Infinite. This is the only correct sequencing on the Chart, although it is shown in the opposite direction from every other Chart reviewed in Part Three.
- 13. The first two entries in the Soul row, Infinite and Transcendental, are not actually part of the typical maturation process. This was not made as clear as it could have been in the original Michaelian group or even *MFM*, but it was in *MMFM*, where these two Soul Ages were labeled "Astral" and "Causal" to go with the names of the Planes where the last two stages of soul evolution allegedly occur. Refer to Chapter 4M in Part Four, "The Seven Soul Ages".

Concluding Remarks

From our present vantage point, with our more complete understanding of the structure of the System, we see that in the original Michaelian group their understanding was incomplete and erroneous in some regards. This second Chart was not an advancement over the previous one. The next Chart is more advanced in that it shows the Positive and Negative Poles of the Overleaves and Body Types.

Introduction

The Chart shown above was compiled from an eight-page bundle received from a member of the original Michaelian group. The bundle is reproduced in Volume 2 of *Michael Speaks* — the Legacy of Sarah Chambers (SIC-2).

The bundle did not have a title, but it did have a purpose, to show the Poles of the Overleaves in graphic form. It is dated "3-75", which is obviously March 1975. In a session in late November 1974, Leslie Briggs asked the Michaels if there were Poles to all of the Overleaves as there were for the Centers — something known from the Gurdjieffian teachings — and the answer was affirmative. Therefore we know that sometime between then and March 1975, the Poles were channeled. We do not know exactly when, but obviously it must have been in very late 1974 or very early 1975. We do not have the transcript of the session or sessions when this happened, or even if it happened in a session; Sarah Chambers might have done it solo. All we have are these Charts. As we see below, there are some discrepancies between it and its two predecessors and a successor Chart created within the original Michaelian group.

The bundle of Charts, upon which this Chart is based, may have been created by Richard Chambers. There was some enlarged text similar to that found in Chart #1 and other documents that are initialed by "RHC", Richard Chambers. This indicates that he had access to a typesetting machine other than a typewriter.

- 1. Unlike Chart #1, "The Ordering of the Cosmos", Chart #3 does not show the Planes. Planes do have Ordinal and Exalted levels and a Neutral level, but this is not exactly the same thing as Poles, although they are both manifestations of the Dialectic principle. That is, the Neutral name of each Overleaf with its Positive and Negative Poles correspond to Neutral, Exalted or Cardinal, and Ordinal Attributes of other features of the System, including Planes. Refer to Chapter 4E in Part Four, "The Seven Planes", for more information about the Ordinal, Neutral, and Exalted or Cardinal levels of the Planes.
- 2. The fact that the form of this bundle of Charts is different from the previous two indicates that students still had no unified understanding of the structure of the System, and had not collectively settled on a preferred format. Chart #4 in the series, also from the original Michaelian group and created shortly after this Chart, indicates the same lack of consistency as its predecessors. A rationale for a preferred arrangement is presented in my books *The Tao of Personality* and *The Tao of Cosmogony*.
- 3. Not only is the form of the Charts on the eight pages inconsistent with the previous two Charts, which consisted of one page each, but the depiction of each Overleaf category is inconsistent in various ways. That is, some pages show six Overleaves and some show eight, and one page has all seven, the Neutral Overleaves. On some pages the name of the Overleaf category is on the long axis of the page and on others the name of the Overleaf category is on the short axis. There is apparently no significance to this other than an apparent lack of consistency on the part of their creator.
- 4. The convention of designating Positive and Negative Poles of Overleaves with plus (+) and minus (-) signs began with this first Chart that showed the Poles. The practice is universal with all subsequent Overleaf Charts.
- 5. The plus and minus signs indicating the polarity of the Poles are juxtaposed in an unusual way, compared to most other Charts. The Positive Poles and Negative Poles are placed in diagonal quadrants rather than opposite quadrants as shown on subsequent Charts. However, this same pattern appears on Chart #6, the Briggs Chart, created by a member of the original Michaelian group, Louise Briggs, who apparently had access to this Chart. This arrangement is explained by another member of the original Michaelian group, David Pearlman, on his website, paraphrased as follows (see paragraph at end of this chapter for entire text): Whatever one's Overleaf might be, when stressed, one will tend to "slide" out of the Positive Pole to the Negative Pole of that Overleaf. The conscious, self-aware, intentional way to get out of that Negative Pole is to continue to slide to the Positive Pole of the Overleaf on the same Axis, and then continue to slide to its Negative Pole, then slide back up to the Positive Pole of one's Overleaf. This procedure traces a square path on this version of the Overleaf Chart, and thereby thoroughly processes and assimilates the stressor that provoked that slide.

- 6. Soul Ages are not shown in this bundle, although they were shown on two predecessor Charts. Perhaps this was because there were no Poles given to this Overleaf at this time, and this bundle of Charts was mostly about Positive and Negative Poles. Poles for the Soul Ages are shown on subsequent Overleaf Charts by Hoodwin, Stevens, Taylor, SteveMS, and Wittmeyer.
- 7. Levels are not shown in this bundle, nor were they shown on the two predecessor Charts. Not until *MMFM* were names given to the Poles of the Levels, although no names were given to the Levels themselves at that time. Names for the Levels are proposed in Chapter 4K in Part Four, "The Names of the Levels". Included in that chapter are some names for the Poles alternative to those proposed in *MMFM*.
- 8. Some of the names on this Chart might be unfamiliar because they were changed by subsequent Chart–makers. There is one Overleaf with a name that appears on all four original Michaelian group Charts but that was changed in MFM: "Perseveration" was amended to "Perseverance." The same thing happened with three Poles: MFM changed –Voraciousness to –Voracity, +Practical to +Practicality, and –Dogmatic to –Dogma. This made adjectives into nouns, for the sake of consistency with the other nouns. On this Chart, the Negative Pole of Artisan has two names, –Deception being the primary and –Artifice the secondary. The Yarbro books have always preferred –Artifice, and Briggs did too, but others preferred some variation on the –Deception theme, as noted in subsequent chapters on other Charts.
- 9. The Body Types are shown juxtaposed on Ordinal and Exalted sides of the Axis, as shown on Chart #1, also apparently created by RHC, and not as shown on Chart #2. So far as we know, the existence and names of the Poles of Body Types did not come from any previous presenter on the subject. They are not a revelation of the originator of this system of classification, Rodney Collin, in his book *The Theory of Celestial Influence*. Refer to the chapters on Body Types in Part One and Part Four for more information about this history. Evidently then, these Body Type Poles were channeled along with the Poles of the Overleaves. Yarbro paid no attention to specific Body Types in her books. However, one successor group to the original Michaelian group, the Briggs group, did continue to pay attention, and passed the names of these Poles of Body Types on to the successor groups founded by JP Van Hulle and José Stevens, where they appear in their books and on their Charts. The channels changed some of the names of the Poles, as noted in Chapter 4D in Part Four, "Body Types".
- 10. The eighth page in the bundle lists the seven 'Man Numbers' from the Gurdjieffian teaching. This septenary is covered in Chapter 1J in Part One, "Level of Being". Man #1 was centered in the Instinctive-Moving realm. Refer to Chapter 4F, "The Instinctive Center" and Chapter 4H, "The Action Centers", both in Part Four, for more information about that. Man #4 was referred to as Balanced Man. There are chapters about Balanced Man and on Adepts (Man #5) and Masters (Man #7) in my book Study Papers on the Original Michaelian Group.
- 11. As with its predecessor, Chart #1, this bundle of Charts juxtaposes all Overleaves correctly with respect to the Dialectic Ordinal Exalted Axes. Those words do not appear on this Chart, but the Neutral category is so noted.
- 12. This set of Charts, in its original form, does not show the three Axes of Action, Inspiration, and Expression. However, unlike the two predecessor Charts, this Chart correctly juxtaposes each Overleaf with its complementary opposite on those three Axes. Chart #1 misaligned the Attitudes (Cynic versus Idealist, Skeptic versus Realist) and the Chief Feature (Self-deprecation versus Impatience, Self-destruction versus Arrogance, Martyrdom versus Greed) correlations; Chart #2 misaligned the Mode correlations (Passion versus Caution, Power versus Repression, Aggression versus Perseveration).
- 13. As usual with the original Michaelian group Charts, the Sexual Center is included with the Exalted Centers, not the Ordinal Centers. There is a disagreement among Michaelian students about this placement: Yarbro makes Sexual an Ordinal Center whereas most sources in the non-Yarbro contingent of the Michaelian teachings change Sexual to Higher Moving and make it an Exalted Center. This issue is discussed in Chapter 4H in Part Four, "The Action Centers".
- 14. Although it is not shown in this redrawing, the bundle of Charts shows no advancements in understanding the Axial Attribute sequence, Action Inspiration Expression, as evidenced by an inconsistency in their placements. The Overleaves are sequenced in three out of the six possible variations. However, with the Man Numbers, the sequence follows Gurdjieff, namely #1 = Action

- (Moving), #2 = Inspiration (Emotional), and #3 = Expression (Intellectual). A rationale for sequencing the Axial Attributes is presented in my other books.
- 15. There were numerous graphic icons of various kinds among the names. The planetary astrological symbols belong to their corresponding Body Type because these are named after planets in the solar system. However, it is not obvious that there is any significance to the other graphic emblems near the other names of the Overleaves. One may assume they are just for artistic expression and add no meaning to their nearby Overleaves. If this Chart, as speculated previously, was created by Richard Chamber who was an Artisan and an astrologer this would make sense.

Concluding Remarks

Besides adding the Poles of each trait, and by showing the correct complementary Overleaves, this Chart shows a definite improvement in understanding. One wonders if the lost session(s) that revealed the Poles also revealed the correct complementarities.

The following is the entire text of David Pearlman's explanation for the non-standard arrangement of traits on this Chart. It is taken from >http://www.floatingneutrinos.com/Message/overleaves/overleaves.html<.

There is movement back and forth across the axis in all the Overleaves except the Roles. *There is NO movement across the axis in the Roles*. Probably the greatest amount of movement takes place in the Modes.... The important thing to note here is that when you are moving up, meaning from more negative inner states to more positive ones, you move from the positive pole of the ordinal side to the negative pole of the exalted side, before you can move to the positive pole of the exalted side. So, in the Modes, for example, on the Caution–Power axis, you would move from Phobia to Deliberation and from there to Oppression and then to Authority. What's difficult about this is that although to the person in the Caution–Power mode, it feels better to be in Oppression than in Deliberation, to other people in the environment, it feels better for this person to be in Deliberation. So the tendency is to try to stomp them out of Oppression back down into Deliberation. Once you become aware of this pattern, however, it becomes easier to see ways of assisting the person to move on into Authority, rather than back down into Deliberation. (This same pattern applies to the other Modes as well.) In addition, a person in the Observation Mode has the capacity to 'borrow' any of the other Modes when moving from being neutral into being active. Quite often there will be a preference for one mode over the others in this process, frequently the mode of one of their parents. There is less movement across the axis in the Goals, Attitudes, and Chief Features. With Goals especially, cross-axis movement seems to take place only under extreme circumstances.

THE ORDERING OF THE COSMOS (1975)

| | THE ORI | DERING OF THE COSMOS | |
|------------|--------------------------|-------------------------|------------------------|
| | מ | The Overleaves | |
| | ORDINAL | NEUTRAL | EXALTED |

| | 1. Repression | | 1. Passion |
| MODE | 2. Perseveration | Observation | 2. Aggression |
| | 3. Caution | | 3. Power |

Introduction

The Chart shown above is a redrawing of the actual Chart, with all of the information of the original retained. A photocopy of the original is shown in Volume 2 of *Michael Speaks* — *The Legacy of Sarah Chambers [SJC-2]*.

This is the last Chart that we have from the time the original Michaelian group was meeting. It has the same name as the first Chart in this series of chapters, and it is almost identical to it in terms of content. The printed sheet orientation has been changed from "landscape" mode of Chart #1 to "portrait" for this Chart #4, apparently in order to contain more information. That first Chart was apparently created in the winter of 1974. This Chart was probably created about one year later. It was one sheet in a forty-two page document titled A Cosmic Teaching. This was an introduction to the Michaelian teachings intended to be given to prospective students, created by Louise Briggs and another original Michaelian group member. Her recollection, conveyed to me, was that it was written in early 1975, about the time the original Michaelian group was disbanded.

Readers should definitely read the commentary for Chart #1 before reading the commentary on Chart #4, because Chart #1 commentary is not repeated here.

This Chart was produced entirely on a typewriter, unlike Chart #1, which was partially produced on some other device that created enlarged text.

- 1. The previous version of this Chart had no subtitle, but this one is subtitled "The Overleaves". However, it includes categories that are not Overleaves, namely Planes and Body Types. These two categories are explained in chapters by those names in Part One and Part Four.
- 2. This is the first Chart that calls the categories Overleaves. There is disagreement among Michaelian students about which of the septenaries of traits are properly called 'Overleaves' some include or exclude Roles or Body Types or Ages. Chapter 4C in Part Four, "Which Trait Septenaries are Overleaves?" argues that Overleaf categories are yet another septenary. Thus, there are seven of them: Goal, Chief Feature, Attitude, Age/Level, Center, Role, and Mode.
- 3. Unlike its model, Chart #1, the Modes are included on the front of the sheet, not handwritten on the back. Modes were the last of the Overleaves to be revealed, on 03 April 1974.
- 4. Notice that "Souls" on Chart #1 are called "Soul Levels" on this Chart. By their names, we know this refers to the Soul Ages. The seven Levels within each Soul Age did not show up on any Chart from the original Michaelian group, even though they were known to them. The probable reason is that the characteristics of the Levels were never given to the original Michaelian group, so far as we know from transcriptions that have become generally available; apparently descriptions were channeled by Sarah Chambers for publication in *Messages from Michael*, page 82.
- 5. Regarding Body Types, some extra words (feminine, passive, genderless, modifying, active, masculine) were handwritten after the names of the Body Types on Chart #1. On this Chart, those extra words are typed above the names of the Body Types; this is more evidence that this version is derived from Chart #1.
- 6. In this Chart, only one name of an Overleaf is different from Chart #1: "Martyrdom" appears as "Martyr". This is perhaps a typing mistake or oversight, with no meaningful significance.
- 7. Notice that "Perseveration" is still being used on this last Chart that came from the original Michaelian group, not "Perseverance," the name introduced by Yarbro in *MFM* see next chapter.
- 8. The Sexual Center is still being shown as an Exalted Center, not an Ordinal Center, and the Moving Center is shown on the Ordinal side. This was the case throughout the original Michaelian group so far as we know. Yarbro switched these two in *MFM*. This is discussed at length in Chapter 4H in Part Four, "The Action Centers".
- 9. The word "Exalted" is still being used for the Dialectic Attribute that was changed to "Cardinal" in MMFM.
- 10. No progress from Chart #1 has been made in regard to understanding the Axial Attributes that *MFM* named Action Inspiration Expression Assimilation. We discern this because the A–I–E sequence is inconsistent on this Chart, reflecting Chart #1, whereas Yarbro made it consistent with the publication of *MFM*.

- 11. What was called Chief Feature in Chart #1 is here called Negative Outlooks, with Chief Feature in parentheses. There is some evidence for this naming convention in the original Michaelian group transcriptions, as discussed in Chapter 2A in Part Two, "Revelation of Overleaves". A few subsequent Chart makers substitute 'Outlook' for 'Feature', and José Stevens wrote the book *Transforming Your Dragons*, obviously referring to them as 'Dragons.' Other names proposed by other Chart makers are 'Obstacles' and 'Shadows'. Refer to Chapter 1H in Part One, "Chief Features and the Seven Deadly Sins", for more information.
- 12. In the case of Attitudes, two alignments from Ordinal to Exalted sides of the Chart have not been corrected from Chart #1. Idealist is not the opposite of Cynic, and Realist is not the opposite of Skeptic, as shown on both versions. We know the correct alignment by coming to an understanding of what they mean, as well as the revelation in *MFM*, where the correct alignment was first given, and followed in all subsequent Charts.
- 13. This Chart, as well as Chart #1, shows two of the three Chief Features improperly aligned from the Ordinal to the Exalted sides of the Axis. That is, Self-destruction is juxtaposed with Impatience and Martyr is juxtaposed with Greed. However, Self-deprecation is properly juxtaposed with Arrogance on both versions. This in another case where studious understanding and *MFM* revelation agree.
- 14. Note for future reference that Louise Briggs used 'Slave' for that Role in this Chart, but in her 1980s Chart she used 'Server.' The former is retained in the Yarbro contingent of the Michaelian teachings, but the latter has been adopted by the non-Yarbro branch of the Michaelian teachings.

Concluding Remarks

This, the last original Michaelian group Chart, was a copy of the first original Michaelian group Chart, and although it added Modes to the list of Overleaves, it added nothing to the understanding of the structure of the System. That understanding came with the publication of *MFM*; see next chapter.

Introduction

In 1979, Chelsea Quinn Yarbro published *Messages from Michael (MFM)* based on material taken entirely from transcriptions of the original Michaelian group plus ten special sessions that she had with Sarah Chambers

(MFM, p. 15). We believe we have practically all of the original Michaelian group transcriptions, but we have none of the special sessions, so we do not know how many of the changes that MFM made to the original Michaelian group Overleaf Charts came from these special sessions, and how many came from Yarbro's own understanding. Yarbro was not a member of the original Michaelian group, so she looked at the transcriptions with fresh eyes. Knowing that she had to make sense of it all for her readership, she filled in a lot of gaps with those ten special sessions.

The Chart shown above is obviously not one of the six Charts, one for each Overleaf category other than Age/Level, found in the pages of *MFM*. Nevertheless, it accurately depicts components of the structure of the System as given in *MFM*. (This is the form of the Chart as I first drew it in 1981.) Yarbro no doubt had access to the four previous Charts from the original Michaelian group, but *MFM* made a number of significant changes to what they showed.

- 1. One major departure that the *MFM* Chart made from the four original Michaelian group Charts is the omission of Body Types. In *MFM*, Yarbro mentions that Body Types are a factor in human relationships but she does not name them or their Positive and Negative Poles. Her perception apparently is that Body Types are not an Overleaf, at least not an Overleaf of Personality. This would seem to make seven Overleaves: Age/Level, Role, Goal, Mode, Attitude, Center, and Chief Feature. Not all Michaelian students agree, and this is discussed at length in Chapter 4C in Part Four, "Which Trait Septenaries Are Overleaves?".
- 2. A major improvement in understanding the structure of the System shows up first in *MFM*, the naming of the Axial Attributes: Action Inspiration Expression Assimilation. These names show up in most subsequent Charts. *MFM* properly Attributed Action, Inspiration, Expression, and Assimilation to each Overleaf. None of the original Michaelian group Charts understood this or depicted it accurately in every case. These four names were revealed on page 42 of *MFM*. The passage quoted there is not in the original Michaelian group transcriptions that we have obtained, so it likely comes from one of the ten special sessions Yarbro had with Chambers. No explanation for these words was given there, or in any subsequent book, Yarbro or non-Yarbro. However, an explanation is proposed in my book *The Tao of Personality*.
- 3. On all of the MFM Chart pages, the Expression (E) Overleaves are listed at the top, then down the sheet are Inspiration (I), then Action (A), then at the bottom is Assimilation. This is the way it is shown on the Chart depicted above. Other Charts either follow or do not follow this sequence or the reverse of it (A–I–E or E–I–A). For instance, some show E–A–I and some show I–E–A. Thus, there is no agreed-upon sequence for these Attributes in the Charts. However, a rationale for discerning the correct sequence is proposed in my book *The Tao of Personality*.
- 4. The Dialectic Attributes, Ordinal Neutral Exalted, are shown with each of the names of the Axial Attributes. The words for the Dialectic Attributes are not shown in the diagrams in MFM, but they are in the text. The new word "Assimilation" is shown as a synonym for "Neutral." This pattern, first revealed in MFM, continues throughout all subsequent Charts. With MFM we learn that all of the forty-nine Overleaves have both a Dialectic (Ordinal Neutral Exalted) Attribute and an Axial (Action Inspiration Expression Assimilation) Attribute. Combining the Dialectic and Axial Attributes we have the Septenarian Attributes. For example, Sage has the Septenarian Attribute of Exalted Expression.
- 5. Regarding the Dialectic Attributes on this Chart, Yarbro used the word 'Exalted' throughout *MFM* as the opposite of Ordinal, following its use in the original Michaelian group. However, in *MMFM* she changed this to 'Cardinal' without explanation. An explanation is proposed in my book *The Tao of Personality*.
- 6. Another major departure that the MFM Chart made from the original Michaelian group Charts is the sequence in which the Overleaf categories were presented. Following is the chronological sequence in which they were revealed to the original Michaelian group by Gurdjieff and the Michaels: Center Age/Level Role Goal Attitude Chief Feature Mode. The four original Michaelian group Charts followed this chronological sequence for the most part. MFM introduced them to us in this sequence: Age Level Role Goal Mode Attitude Center Chief Feature. This sequence

is followed in the Chart above, from left to right. One wonders why Yarbro changed the order in which the Overleaves were presented. Did she have a rationale or not? Perhaps so, speculation as follows. She started out with Age, Level, Role, and Goal — as did the Michaels in the original Michaelian group. The Mode is naturally allied with Goal because the former "defines the manner in which the Goal will be reached." (MFM, p. 110) In the original Michaelian group, Attitude was the next to be revealed, and so it was in MFM. "Attitude is the way you regard the world … the stance from which you look at things." (MFM, p. 111) The Center is naturally allied with the Attitude because the former determines "responses" to the world. (MFM, p. 113) The heavier grid lines therefore show Goal and Mode as a pair, and the heavier grid lines therefore show Attitude and Center as a pair. There also seems to be a natural affinity between Role as more real than this life, and the Chief Feature as less real than this life, but Yarbro did not juxtapose them in her presentation. More rationales and explanations for groupings of Overleaf categories are presented in my book *The Tao of Personality*.

- 7. *MFM* introduced the word 'Perseverance' for the Mode that the original Michaelian group consistently called 'Perseveration' in its Charts and in its transcriptions.
- 8. Further, *MFM* declared the Sexual Center to be Ordinal and the Moving Center to be Exalted, the opposite of the original Michaelian group Charts and transcriptions. This discrepancy is explored in detail in Chapter 4H in Part Four, "The Action Centers".
- 9. MFM also changed some adjectives to nouns for the names of Positive and Negative Poles given in Chart #3, obviously to provide a grammatical consistency. Thus +Practical was changed to +Practicality and -Dogmatic was changed to -Dogma for the Pragmatist Attitude, and -Voraciousness was changed to -Voracity as the Negative Pole of Greed. Yarbro settled on -Artifice as the Negative Pole of Artisan, rather than the alternative word -Deception, both names shown on Chart #3. Some subsequent Michaelian students preferred -Deception or some variation thereof in their Charts.
- 10. MFM made changes to names of a few Overleaves and Poles as indicated above, but no attempt was made to change or explain some of the obscure names of some Poles of Overleaves originally given to the original Michaelian group, such as +Atomic and -Anatomic in the Instinctive Center. It would have been convenient if this had happened during the ten special sessions that Yarbro had with Chambers before MFM was written. Students and other channels have been left to figure this out on their own, and come up with various names and descriptions that make sense to them. We will take note of these changes in subsequent chapters about other Charts.
- 11. On this Chart, Age and Level in the first two columns were not included under the Septenarian Attributes, which are shown in the third column; those Septenarian Attributes apply to all of the Traits shown to the right of the third column. Septenarian Attributes were applied to Age and Level seven years after this Chart, with the publication of *More Messages from Michael* in 1986; refer to the commentary on Chart #9 for more information.
- 12. Mottoes that the Michaels gave for each of five Soul Ages are shown on this Chart. The four Transcendental and four Infinite Souls are named. In MFM, it was not made as clear as it could have been that the sixth and seventh soul ages are not a continuation of the human soul evolution. In MMFM this was made clear, and the sixth and seventh Soul Ages are named 'Astral' and 'Causal.' Nevertheless, many subsequent Chart–makers continued to call the last two Ages 'Transcendental' and 'Infinite'. Some other Chart–makers propose seven Ages of evolution on the Physical Plane before graduation to the Astral Plane. These various proposals are discussed in Chapter 4M, "The Seven Soul Ages".
- 13. Several subsequent Charts propose names for the Ages that do not allude to maturation via reincarnation. Some of those Charts also propose Positive and Negative Poles for the Ages. This is covered in subsequent chapters in this *History* book.
- 14. The words in the boxes with the Levels are keywords extracted from the description of each Level on page 82 of *MFM*. These descriptions probably came from the ten special sessions that Yarbro had with Chambers, because they are not found in the original Michaelian group transcriptions that have become widely available. Seven years later, with the publication of *MMFM*, names for the Poles were proposed. This is discussed in Chapter 4K in Part Four, "The Names of the Levels".

Concluding Remarks

Chelsea Quinn Yarbro made few significant changes to the names used in the original Michaelian group. Her main contribution to an understanding of the System was in the structure of the System. She gave names to the Axial Attributes, Action — Inspiration — Expression — Assimilation. This improvement was adopted by all subsequent Chart–makers. The Dialectic Attributes, Ordinal — Neutral — Exalted, were understood by the original Michaelian group even before the Michaelian teachings was revealed, as a result of their studies of Gurdjieff and his predecessors.

Introduction

The Chart shown above is a redrawing of the actual Chart, with all of the information of the original retained. A photocopy of the actual Chart is shown on page 27 of *Michael Speaks* — *The Legacy of Leslie Briggs* [LSB].

Chart #4 was created by Louise Briggs in 1975. Some five or more years later, she created another Chart. It was used in the group that met in her home and other homes in the Bay Area from 1980 to 1983 and for which her daughter Leslie Briggs served as the channel for the Michaels. As we examine it, we will note that it has more similarities to the *Messages from Michael (MFM)* Chart, Chart #5, than Briggs's own Chart from years before. The reason for this is that this was after *MFM* was published in 1979, and *MFM* was assigned reading for members of the Briggs group, so apparently they accepted the improvements that Yarbro made.

Commentary

1. There is no title or subtitle on this Chart, perhaps for no other reason than that there was not enough space left.

- 2. This Chart limits itself to six of the seven Overleaves, leaving out Age/Level. It was not yet known what Septenarian Attributes to apply to Age/Level. Other items are missing that appeared on some previous Charts, namely, Planes and Body Types, neither of which are Personality Overleaves.
- 3. This Chart sequences the Overleaf categories from top to bottom in the chronological order in which they were revealed by the Michaels to the original Michaelian group: Role Goal Attitude Chief Feature Mode. Centers, at the bottom of the list, were known to Gurdjieff long before the original Michaelian group. Briggs preferred following this arrangement to following the new arrangement used by Yarbro in MFM: Age/Level Role Goal Mode Attitude Center Chief Feature.
- 4. The top line arranges the Axes as Expression Action Inspiration Assimilation from left to right. These names were first revealed in *MFM*, but the sequence does not follow *MFM*, which is Expression Inspiration Action Assimilation. Among the many Overleaf Charts reviewed in Part Three of this *History* book, there is no consistency for these Axes. For instance, some other Charts show I–E–A–A. However, a rationale for preferring a sequence other than the order in which they were revealed to the original Michaelian group is presented in my book *The Tao of Personality*.
- 5. 'Server' is here used rather than 'Slave' for the first time in any Chart we have seen so far. JP Van Hulle and José Stevens attended Briggs sessions in the early 1980s, and adopted 'Server' in their approaches to the Michaelian teachings. The Yarbro contingent has continued to use 'Slave' to the present day. The alternative name 'Server' was actually proposed almost as soon as the name 'Slave' was given, when an original Michaelian group member objected to the negative connotation of 'Slave'; refer to Chapter 2A in Part Two, "Revelation of Overleaves".
- 6. Briggs adopted 'Perseverance' from *MFM*, rather than retaining 'Perseveration' as used in the original Michaelian group.
- 7. The Positive and Negative Poles of the Overleaves on the Axes are juxtaposed on the diagonal rather than straight across from each other. This is the same pattern shown on the Chart #3 bundle, the first Charts that showed Positive and Negative Poles. This probably means that Briggs had the Chart #3 bundle in her possession. This pattern is intentional, and the reason for it is explained in the chapter on Chart #3. Everyone else prefers to place the Positive Poles and Negative Poles straight across from each other when paired on an Axis.
- 8. Recall that in Chart #3, the first Chart showing the Poles, two names were given for the Negative Pole of Artisan, namely –Deception and –Artifice. Briggs adopted –Artifice from *MFM*. Briggs also adopted the other two names that Yarbro changed from those given in the original Michaelian group, namely +Practical became +Practicality and –Dogmatic became –Dogma. That is, adjectives became nouns, no doubt in order for the whole Chart to be consistent in the use of nouns rather than adjectives. The only remaining inconsistency is the names of the Centers, which were adopted from Gurdjieff, and are adjectives rather than nouns. The names of all of the other traits are nouns.
- 9. Briggs continued to show Sexual as an Exalted Center, just as it was in the original Michaelian group, rather than as an Ordinal Center as shown by Yarbro in *MFM*. The Briggs Chart was created and in use before Yarbro suggested in *MMFM* that 'Physical Excitation' was more accurate than 'Sexual', and before Stevens and The Michael Educational Foundation suggested that 'Higher Moving' might also be better than 'Sexual'. These variations are examined in Chapter 4H in Part Four, "The Action Centers".

Concluding Remarks

This Briggs Chart incorporated the improvements made by Yarbro in *MFM* over what was originally given in the original Michaelian group, but did not add much in the way of improvements to the *MFM* Chart. In the next chapter, we see that the successor group to the Briggs group rethought some of the names of the Overleaves and their Poles.

Introduction

The Chart shown above is a redrawing of the actual Chart, with all of the information of the original retained. I cannot point to a publicly-available resource for a viewing of the original Chart.

In the lower right corner of this Chart there was the date 12/84. 1984 is the year that JP Van Hulle and Aaron Christeaan incorporated the *Michael Educational Foundation* (MEF). Starting in late 1981, JP attended channeling sessions in the Briggs group, and she honed her own channeling skills in that group for the next couple of years. So far as we know, the Briggs group disbanded in late 1983, and JP took up the channeling torch and continued with group meetings elsewhere. One of the products of MEF was this Chart, which is apparently derived from the Briggs Chart rather than the *MFM* Chart or the original Michaelian group Charts, but with a few revisions. For our commentary, we are comparing and contrasting MEF with Briggs.

- Unlike the Briggs Chart, which has no title, this Chart is titled "Overleaves". Like the Briggs Chart,
 this Chart limits itself to six of the seven Overleaves, leaving out Age/Level. Planes and Body Types,
 which were shown on some original Michaelian group Charts, neither of which are actually
 Overleaves, are also missing.
- 2. On the actual Chart, there was enough space above Roles for Ages and/or Levels to be included, but even if they had been shown, at this early stage of understanding there was no attempt to present how the Septenarian Attributes applied to soul maturity. And by the way, nor was there any attempt to provide Positive and Negative Poles to the Levels (or Ages); that did not happen until *MMFM* was published more than a year later, in early 1986.
- 3. What is called 'Exalted' (the opposite of 'Ordinal') on this Chart and previous Charts is called 'Cardinal' on the next Chart, *MMFM*. However, the MEF and those primarily influenced by the MEF contingent rather than the Yarbro contingent continue to use 'Exalted' to the present day.
- 4. Notice that the Emotional and Intellectual Centers, and the Higher Emotional and Higher Intellectual Centers, are switched on the Expression and Inspiration Axes, contrary to their placement on every other Overleaf Chart except for two: *Michael: the Basic Teachings* Chart, which was also published by MEF about six years later, and the Larry Byram Chart, which followed shortly thereafter. Therefore, this seems not to be a mistake but an actual difference in understanding, an understanding not shared by the great majority of Chart–makers. My opinion aligns with the majority; this switch is self-evidently wrong, so there is no chapter examining the discrepancy in this *History* book.
- 5. The MEF Chart sequenced the Overleaf categories from top to bottom in the same order as the Briggs Chart, which is good evidence that the former is derived from the latter. Neither the original Michaelian group nor the MFM Chart follows this sequence. In fact, there is very little consistency from Chart to Chart in this entire series of chapters in Part Three to the sequence in which the Overleaf categories are presented. If the sequence is identical in two Charts, this almost surely means the later version was copied from the earlier version. A rationale for standardizing the Overleaf category sequence is presented in my book *The Tao of Personality*.
- 6. However, the top line arranged the Axes from left to right as Expression Inspiration Action Assimilation, which is the sequence given in *MFM*, whereas Briggs places Action between Expression and Inspiration. Some other Charts in this series of chapters use one or the other of these two, or they use something different from either one. This is yet another example of the lack of consistency between Charts discussed in Part Three. A rationale for standardizing the Axial sequence is presented in my book *The Tao of Personality*.
- 7. In terms of the names of Positive and Negative Poles, whereas the Briggs Chart showed very few changes from the MFM Chart that preceded it, the MEF Chart made many more changes from the Briggs Chart:—Artifice becomes —Self-deception; +Expression becomes +Dissemination; —Bondage becomes —Frustration; —Theory becomes —Hypothesis; Rejection becomes Discrimination; +Discrimination becomes +Sophistication; —Prejudice becomes —Rejection; Retardation becomes Reevaluation; +Atavism becomes +Simplicity; +Comprehension becomes +Evolution; +Suspension becomes +Free-flowing; —Abstraction becomes —Naivety; +Contradiction becomes +Apprehension; +Perception becomes +Objective; —Supposition becomes —Subjective; +Practicality becomes +Practical; —Immolation becomes —Suicidal; +Egotism becomes +Appetite; +Reason becomes +Reasoning; +Integration becomes +Truth; +Empathy becomes +Love; Moving becomes Kinesthetic; +Enduring becomes +Productive; —Energetic becomes —Frenetic; Sexual becomes Higher Kinesthetic; +Amoral becomes +Beauty; —Erotic becomes —Desire; +Atomic becomes +Natural; —Anatomic becomes —Mechanical. Thus, the work that Yarbro did to exchange a few adjectives inherited from the original Michaelian group with nouns is here more than undone by changing many nouns to adjectives.
- 8. The change in names for the Poles of the Instinctive Center are examined in Chapter 4F in Part Four, "The Instinctive Center". The names for the higher Centers and their Poles are examined in Chapter 4G in Part Four, "The Higher Centers". The changes in the names for the Sexual Center and its Poles are examined in Chapter 4H in Part Four, "The Action Centers".
- 9. For a while in the mid-1980s, MEF called the Moving and Higher Moving Centers the Kinesthetic and Higher Kinesthetic Centers respectively. Notice that MEF referred to the Positive Pole of the Higher

Kinesthetic Center as Beauty. This was because they thought of Beauty as the third factor in the triad of Truth, Love, Energy–Beauty. The Beauty attributed to Cardinal Action never made sense to me, and MEF itself soon abandoned Kinesthetic and went to Higher Moving in subsequent Charts that were published in the MEF contingent of the Michaelian teachings in the next few years.

Concluding Remarks

One can easily perceive that the creator of this Chart was looking to change some of the more obscure or pejorative terms given in the original Michaelian group and MFM to something either more palatable or more easily understood or perhaps more accurate. Some of these changes were adopted in subsequent Charts and some are never seen again. One can say that this Chart depicts the first big experiment with proposing alternatives to the original names given in the original Michaelian group, but it is not the last. These variations to names of Overleaves and their Poles are tabulated in the last chapter of Part Three.

Introduction

In February 1986 Chelsea Quinn Yarbro first published *More Messages from Michael (MMFM)*, her second book on the Michaelian teachings. So far as we can tell — since we seem to have practically all of the original Michaelian group session material — none of the *MMFM* channeled material came from the original Michaelian group sessions. Some of it might have come from the ten special sessions Yarbro had with Sarah Chambers for *MFM*, and some might have come from the second Michael group that met from 1978 to 1985. Chambers was also the channel for this group, and Yarbro was a regular attendee, whereas she had not attended any original Michaelian group sessions. A member of this second Michael group (T2MG) informs us that Yarbro started her own group during the late 1970s, and they developed their own channels. It seems

likely that much of the channeled material in *MMFM* is from Yarbro's group and perhaps some of it is from T2MG.

With the publication of *MMFM*, three significant modifications were made to an understanding of the Overleaf system: a) In the "Michael Math" chapter of this book, names were given to Positive and Negative Poles of the Levels; b) the Levels and Ages were correlated in terms of Septenarian Attributes with the other six Overleaf categories; c) the word Exalted, the complement of Ordinal in all previous Charts, was replaced with the word Cardinal.

There was no Overleaf Chart, in part or in whole, published in *MMFM*, but the Chart shown above was derived from information contained in *MMFM*. Refer to Chart #18 for a Chart derived from actual unpublished Charts that did originate from within the closed Yarbro group. There is a resemblance in form and content to this Chart, Chart #8.

- 1. The word Exalted is used in all previous versions of the Overleaf Chart, but in *MMFM* the word Cardinal is substituted. Although Shepherd Hoodwin and Philip Wittmeyer adopted Cardinal, other Chart–makers did not. The meaning of Cardinal in the Overleaf System is discussed in my book *The Tao of Personality*.
- 2. The MFM Chart arranges the forty-nine Overleaf Traits by juxtaposing Dialectic Attributes, Ordinal next to Exalted. The MMFM Chart arranges the forty-nine Overleaves by separating the Dialectic Attributes, with the Ordinal Triad and the Cardinal Triad on either side of the Neutral. Thus, between these two books Yarbro produced two Charts, each arranged one of the two basic ways an Overleaf Chart can be arranged. Refer to Charts #23 and #24 for another example of these two different arrangements.
- 3. The MFM Chart juxtaposes Ordinal Exalted Axes in the following sequence: Expression Inspiration Action Assimilation. The MMFM Chart sequences the Septenary from top to bottom very differently: Ordinal Inspiration Ordinal Expression Ordinal Action Assimilation Cardinal Expression Cardinal Inspiration Cardinal Action. A brief explanation for this latter sequence is given in the "Michael Math" chapter of MMFM. An analysis of that explanation, together with more explanations, is presented in my book The Tao of Cosmogony.
- 4. The separation of the Ordinal triad from the Cardinal triad with Neutral in the middle of the Septenary is reminiscent of Charts #1, #2, and #4, all from the original Michaelian group. The Michaels did not reveal the Axial Attributes of Action Inspiration Expression to the original Michaelian group, so in their Charts they failed to properly Attribute each of the Overleaves accordingly, and they failed to place them in the proper sequence. Thanks to the work that Yarbro did with Chambers after the original Michaelian group, Attribution did happen with MFM in 1979, but a proposed sequencing did not happen then. After MFM perhaps Yarbro reconsidered those old Charts when writing MMFM, or perhaps additional channeling provoked an evolution in understanding.
- 5. MFM did not give any Attributes to Level and Age; that appeared in MMFM. In the "Michael Math" chapter of MMFM, the lineup shown in the Chart above was revealed. Infant Soul and First Level were said to be correlated with Ordinal Inspiration Overleaves; Baby Soul and Second Level with Ordinal Expression; and so on for the remaining five Overleaf categories. This lineup is examined in detail in my book The Tao of Cosmogony.
- 6. On page 277 of MMFM, there was some discussion about the Sexual Center. An alternative or more comprehensive name was proposed, namely Physical Excitation. That name did not appear elsewhere in the book, so apparently it was not an "official" change of name, just a clarification that this Center was about more than sex per se. One might think that with this expanded understanding of the nature of this Center, the Poles might also get better names, but none are proposed in MMFM. However, in the chapter on the previous Chart we see that even before MMFM was published, MEF proposed to call it Higher Kinesthetic Center. Then shortly after MMFM was published, José Stevens proposed to rename it 'Higher Moving Center'. And he changed its description even more, with an appropriate change in names of Poles. Other Chart—makers subsequently copied the Higher Moving terminology. This situation is discussed in detail in Chapter 4H in Part Four, "The Action Centers".

- 7. Even though the Sexual Center got a make-over in definition and description in *MMFM* compared to *MFM*, it was not relocated on the *MMFM* Chart; it was still identified as an Ordinal Center, contrary to its location in the original Michaelian group and Briggs and MEF as an Exalted/Cardinal Center. This discrepancy is discussed in detail in Chapter 4H in Part Four, "The Action Centers".
- 8. Other than the suggested name and description change for the Sexual/Physical Excitation Center, no other name changes occurred from *MFM* to *MMFM*. One other name change is shown on Chart #18, which originated with a member of the Yarbro group twenty years later.
- 9. In Chapter 2 of MMFM, "The Naming of Parts", the order in which the Overleaves are presented was Role Age Level Mode Goal Attitude Center Chief Feature. This sequence was followed in constructing the Chart shown above. This is different from the order in which they were revealed to the original Michaelian group, and different from the order in which they were presented in MFM. Whereas MFM presents Goal before Mode, MMFM presents Mode before Goal. There does not seem to be any obvious significance in this change, but one wonders if Yarbro saw some significance. Numerous sequences are shown on numerous Charts. A rationale for applying the Septenarian Attributes to the Overleaf categories is presented in my books The Tao of Personality and The Tao of Cosmogony, and a preview can be seen on Charts #23 and #24.
- 10. The MFM Chart and Charts #1, #2, and #4 from the original Michaelian group showed Transcendental and Infinite as the last two Soul Ages. However, the MMFM Chart shows Astral and Causal Planes. The Transcendental and Infinite soul levels are not generally and exactly understood as Ages or stages in the evolution of souls in the Michaelian teachings communities. This is evident from a careful reading of MFM (1979, p. 68), but was made clearer in MMFM (1986 pp. 44, 192). Souls allegedly complete the sixth and seventh stages of their evolution outside of the cycle of physical lives, on the Astral and Causal Planes. Some subsequent Chart–makers, however, show all seven Soul Ages completed on the Physical Plane. This subject is discussed in Chapter 4M in Part Four, "The Seven Soul Ages".
- 11. For the first time in the history of Overleaf Chart–making, names are given to the Poles of the Levels. No names for the Levels themselves are offered in *MMFM*. These names were adopted by some subsequent Michaelian teachings authors and Chart–makers. This subject is covered in detail in the Chapter 4K in Part Four, "The Names of the Levels".
- 12. Between the Third and Fourth Levels on this Chart there is a box with the word Mid-Cycle in it. Yarbro introduced and described this as an overlap of the two adjacent Levels. For a thorough discussion of this anomaly it is shown on no other Overleaf Chart refer to Chapter 4L in Part Four, "The Mid-Cycle Discrepancy".
- 13. This Chart was greatly expanded upon by the Yarbro group over the next couple of decades; refer to Chart #18 for details.

Like MFM before it, the publication of MMFM, specifically the "Michael Math" chapter, was a turning point in the understanding of the structure of the Overleaf System. Many books published after MMFM adopt the naming of the Poles of the Levels; even if they do not show these Levels on their Charts, they are shown on their websites. They also adopt what we may call the "Michael Math Sequence" of the Attributes as follows: Ordinal Inspiration — Ordinal Expression — Ordinal Action — Neutral Assimilation — Cardinal Expression — Cardinal Inspiration — Cardinal Action.

Introduction

The Chart shown above is a redrawing of the actual Chart, with all of the information of the original retained. The original Chart, dated 11-86, was published in Stevens's book *The Michael Handbook (TMH)*, near the back of the book. This was the first non-Yarbro book about the Michaelian teachings. There are identical Charts in his two other books published in the same decade, *Tao to Earth (TTE,* 1988) and *Earth to Tao (ETT,* 1989). Further on in this series of chapters, Chart #16 dated 2002 and Chart #20 dated 2011, we find that Stevens published Charts that did show some changes from this one.

To create his Chart, Stevens probably borrowed from and built upon most or all of the previous Charts that we have reviewed in this series of chapters. Although he did not attend the original Michaelian group sessions, he received transcripts from someone who did attend in 1974 and 1975. There was, of course, the first publicly-available MFM Chart from 1979. Stevens attended some of the Briggs sessions in the early 1980s, so it is likely

that he had the Briggs Chart. Stevens was also affiliated with JP Van Hulle's group, so he was surely familiar with the MEF Chart constructed in 1984. Finally, *MMFM* was published earlier in the same year that Stevens published *TMH*. There are enough similarities to these various Charts to suggest that Stevens used them as a guide, but enough differences to suggest that he was an independent and creative thinker.

- 1. The title says 'Overleaf Chart' but some Michaelian students contend that Role and Body Type are not Overleaves. This difference of opinion is discussed in Chapter 4C in Part Four, "Which Trait Septenaries are Overleaves?" My opinion, as argued and evidenced in that chapter in Part Four, is that Role is an Overleaf but Body Type is not, except to the extent that it is affiliated with Centers.
- 2. Age and Level are not shown on this Chart either, but in the chapter mentioned above I argue that together these constitute one Overleaf, making a total of seven Overleaves. Although Ages are not shown on the Chart, in the text of the *TMH* book, Chapter Three, the Soul Ages are the usual: Infant Baby Young Mature Old Transcendental Infinite.
- 3. As with several other Overleaf Charts, Soul Age and Level are not shown on this Chart, perhaps because of the awkwardness of having their sequence out of order with the other Overleaf categories. For instance, if they were shown on this Chart, the order from left to right would be: Young/Third Old/Fifth Baby/Second Transcendental/Sixth Infant/First Infinite/Seventh Mature/Fourth. My suspicion is that, because the Ages and Levels cannot be fit on their Overleaf Chart in proper sequence because of other structural features of the Overleaf System, it is deemed to be better to leave them off. The situation is that it takes two Chart types to do the Overleaf System justice; that is what Wittmeyer does, as we see further on.
- 4. *TMH* was published later in the same year that *MMFM* was published, 1986. Although *MMFM* presented names for the Poles of the Levels for the first time in print, on page 61 of *TMH*, Stevens wrote that it is not a good idea to apply these names to Levels. However, on page 105 of *Tao to Earth*, he lists the *MMFM* names of Poles of Levels and applies this information to the qualities of each Entity within its Cadre. Refer to that book for his explanation.
- 5. Note that Stevens used the same sequence of Overleaf categories down the left column as do the Briggs and MEF Charts. That is: Role Goal Attitude Chief Feature Mode Center. This is not the sequence given in MFM, which is Role Goal Mode Attitude Center Chief Feature. Nor is it the sequence given in the original Michaelian group. This is the feature of Stevens's Chart that suggests that though he may very well have copied Briggs and MEF, he obviously did not copy MFM in this regard. My book The Tao of Personality proposes a rationale for ordering and categorizing the Overleaf categories with the Septenarian Attributes: Ordinal Action, Ordinal Inspiration, and so on.
- 6. However, Stevens used the same sequence of Axes from left to right that MFM used from top to bottom, namely, Expression Inspiration Action Assimilation. In this regard, Stevens did not conform to the Briggs Chart, which followed the sequence: Expression Action Inspiration Assimilation. One wonders if Stevens had a rationale for which elements of which Chart he included. My books The Tao of Personality and The Tao of Cosmogony propose a rationale for ordering and categorizing the Overleaf categories. After MMFM was published, many Charts grouped the Overleaf categories this way: Inspiration Expression Action Assimilation. My suspicion is that this is because they accepted the Michael Math Sequence (Server/Ordinal Inspiration Artisan/Ordinal Expression Warrior/Ordinal Action) that was revealed in MMFM. I have been unable to find any evidence or even an obscure clue that Stevens accepted the Michael Math Sequence, and that includes the layout of his version of the Overleaf Chart.
- 7. Stevens received transcriptions from an original Michaelian group member while the group was meeting in 1974 and 1975, but he did not himself attend original Michaelian group meetings. On this Chart, Stevens shows the Body Types and their Positive and Negative Poles. Stevens did attend Briggs group meetings in the early 1980s, but Briggs did not show Body Types on her Chart. Although Louise Briggs gave The Center for Michael Teachings, Inc., everything that she had from the original Michaelian group, we did not get Chart #3 from her. This means that Stevens was almost surely in possession of Chart #3, and probably got it from the original Michaelian group rather than from

- Briggs. The MEF Chart from 1984 did not show Body Types either. Yarbro had nothing to say in any of her books about the names and Poles of the Body Types. Therefore it can be said that the information about the seven Body Types and their Poles came into the non-Yarbro contingent of the Michaelian teachings via Stevens.
- 8. Stevens changed the names of some of the Poles of the Body Types from those given in Chart #3 from the original Michaelian group: (Mercury) –Frenetic becomes –Nervous; (Jupiter) –Elephantine becomes –Overwhelming; (Venus) –Obese becomes –Sloppy; (Mars) +Wiry becomes +Agile, and –Muscle-bound becomes Impulsive. Refer to Chapter 4D in Part Four, "Body Types", for an extensive discussion about this subject.
- 9. Just as in the original Michaelian group and Briggs, Stevens used the word 'Exalted' rather than the word 'Cardinal' that Yarbro introduced in *MMFM*, published earlier in the same year as this *TMH* Chart. Refer to my book *The Tao of Personality* for a thorough discussion of this subject.
- 10. The MEF Chart from two years previous to this Chart made a significant number of changes to the MFM and Briggs Charts that preceded it. Assuming that Stevens borrowed most heavily from the MEF Chart, we can see the changes he made to it for his Chart. Stevens reverted to some of the names that preceded MEF: –Oration in MEF becomes –Verbosity in TMH; –Frustration reverts to –Bondage; the word –Hypothesis reverts to –Theory; –Subservience becomes –Exploited; –Faith becomes –Beliefs; +Apprehension reverts to +Contradiction; –Dogma becomes –Dogmatic; –Mortification becomes the word –Victimization; +Audacity becomes +Daring; Repression becomes Reserved; –Immutability becomes –Unchanging; +Thought becomes +Insight; +Sensibility becomes +Perception; +Beauty reverts to +Integration; +Natural becomes +Aware; Kinesthetic reverts to Moving; and Higher Kinesthetic reverts to Higher Moving. All of these changes indicate a continuing endeavor to come up with 'better' words for the more pejorative and obscure words originally given in the original Michaelian group.
- 11. The change from "Sexual Center" to "Higher Moving Center" is significant. In Gurdjieff, the original Michaelian group, *MFM*, and Briggs the label was Sexual, but in *MMFM* it was suggested that Physical Excitation was more accurate. Stevens went even further, and in keeping with the names of the three "lower" Centers, named their three complementaries "higher". MEF for a time went with Higher Kinesthetic, but like Stevens, went back to Higher Moving in *Michael: The Basic Teachings*, published by MEF in 1990. Suggestions for resolving these discrepancies are offered in Chapter 4H in Part Four, "The Action Centers".
- 12. Stevens keeps the Moving Center on the Ordinal side of the Axis as it was with Gurdjieff, the original Michaelian group, and Briggs, even though Yarbro moved it to the Exalted/Cardinal side. This discrepancy is also covered in Chapter 4H in Part Four," The Action Centers".
- 13. On page 78 of his book *The Michael Handbook*, Stevens assigns a color to each Role. This is discussed in Chapter 4P in Part Four, "Color Assignments". It is also discussed in Chapter 2C in Part Two, "Proposed Sequences of Overleaves". Look for the discussion on the "Vibration Sequence"; it is rather different from other septenaries, including those proposed by Stevens himself, as well as by other.

Other than changes to the names of some Overleaves and their Poles, there were no significant advances beyond previous Charts with the appearance of this Chart.

Introduction

The Chart shown above is a redrawing of the actual Chart, with all of the information of the original retained. This Chart was created by Carol Heideman in about 1988. Heideman is a long-time Michaelian student, channel, and author of the book *Searching for Light: Michael's Information for a Time of Change.* She lived then, and still lives, in Texas, not in the Bay Area, so this is the first Chart by an 'outsider'. As near as we can tell,

her sources for this Chart were the published books extant at the time: *MFM, MMFM,* and *TMH*. She added to and modified their Charts to suit her own understanding.

Commentary

- 1. This Chart was created a couple of years after Yarbro's *More Messages from Michael (MMFM)* and José Stevens's *The Michael Handbook (TMH)* were published in 1986. It is based primarily on *MMFM* information with very few departures therefrom. It follows the *MMFM* terminology except for a few names, which appear to have been adopted from Stevens's books. That is, Server is used instead of Slave; (Instinctive) +Aware instead of +Atomic; (Self-destruction) –Suicidal instead of –Immolation; and (Martyrdom) –Victimization instead of –Mortification. Heideman did not adopt several changes to the *MMFM* names that Stevens made in *TMH* and which are shown on Chart #9. Heideman made one variation from both *MMFM* and Stevens, namely, for the Instinctive Center she substituted the word –Automated for –Anatomic (*MMFM*) and –Mechanical (*TMH*). Heideman copied some items and did not copy others, so she, like others subsequent to the original Michaelian group, gave some thought about what they put on their Chart.
- 2. Notice the first row, titled Casting Position. This is a category not shown on any other published Overleaf Chart. There are, however, Charts that deal with the structure of Cadres, Entities, Greater Cadences, and Cadences the Casting categories. The numbers and words in this row come from the "Michael Math" chapter of MMFM, and show the Axial Attributes: Inspiration Expression Action Neutral. Heideman did not show the names of the Dialectic Attributes: Ordinal Neutral Cardinal/Exalted. To be consistent with the names of the Axial Attributes, she should have used "Assimilation" where she used "Neutral".
- 3. The word Action is used here just as it is in *MMFM* and elsewhere, but Expressive is used here instead of Expression and Inspirational is used here instead of Inspiration. Adjectives have taken the place of nouns. No other Chart–makers did this. Consistency is not a strong current among Chart–makers.
- 4. The numerical sequence given, one through seven, follows the "Michael Math" chapter of *MMFM*. The Axial Attribute triads are neither the repeat of each other as they are often shown on original Michaelian group Charts, nor a mirror symmetry on either side of the Neutral. This asymmetry is discussed in my book *The Tao of Cosmogony*.
- 5. This Chart does not show Body Types, which agrees with *MMFM* but not with Stevens, her predecessors.
- 6. The order of the Overleaf categories in the first (left) column is more similar to *MMFM* than to any other previous Chart, which indicates that Heideman probably relied more heavily on *MMFM* than on Stevens when she decided how to arrange them for her Chart. A rationale for ordering the Overleaf categories is presented in my book *The Tao of Personality*.
- 7. Heideman added a few convenient explanatory comments to her Chart: a) The mottoes for five Soul Ages are shown; b) The four Transcendental and four Infinite Souls are named; c) the underlying fears of the Chief Features are given. This is information adopted from *MFM* and *MMFM*.
- 8. Like others before her (except *MMFM*), Heideman showed the Transcendental and Infinite Souls as if they were the sixth and seventh stages of the soul's Physical Plane evolution. This is a disputable point; more will be said about it in Chapter 4M in Part Four, "The Seven Soul Ages". Briefly, according to Yarbro, the sixth and seventh stages are experienced on the Astral and Causal Planes, respectively.
- 9. Penciled in the left margin of my copy of the original Chart are Frequency and Masculine and Feminine percentages. This is information from Stevens, not from Yarbro. These concepts were introduced to the greater Michael community by Stevens in 1988 in his book *Tao to Earth*, Chapter 12.

Concluding Remarks

The primary value of this Chart as distinct from those that preceded it, is in the addition of the explanatory notes and proposals for alternative names for some Poles.

MICHAEL: THE BASIC TEACHINGS (1988, 1990)

Introduction

The Chart shown above is a redrawing of the actual Chart, with all of the information of the original retained. *Michael: the Basic Teachings* was first published in 1988, and a second edition was published in 1990, with the above Overleaf Chart. Its authors were JP Van Hulle, Aaron Christeaan, and M. C. Clark, founders of the Michael Educational Foundation (MEF). This Chart is very similar to the Overleaf Chart by José Stevens, which we reviewed in a previous chapter. That Stevens and the authors of this Chart were close friends in the Bay Area at the time may explain the similarities. Even though they probably compared notes and shared ideas, there are some differences, however. This chapter compares the above Chart with the Stevens Chart.

- 1. The title, "Roles, Overleaves, and Body Types", suggests that the Chart-makers did not consider Role and Body Type to be Overleaf categories. Some Chart-makers consider Role to be an Overleaf category, and some consider Body Type to be an Overleaf category. Ages, Levels, and Planes are not included on this Chart, whereas they are on some other Charts. Planes are obviously not an Overleaf, but what about Roles, Ages, Levels, and Body Types? This question is considered in Chapter 4C in Part Four, "Which Trait Septenaries are Overleaves?".
- 2. As with several other Overleaf Charts, Soul Age and Level are not shown on this Chart, perhaps because of the awkwardness of having their sequence out of order with the other Overleaf categories. For instance, if they were shown on this Chart, the order from left to right would be: Baby/Second Transcendental/Sixth Young/Third Old/Fifth Infant/First Infinite/Seventh —

- Mature/Fourth. My suspicion is that, because the Ages and Levels cannot be fit on their Overleaf Chart in proper sequence because of other structural features of the Overleaf System, it is deemed to be better to leave them off. The situation is that it takes two Chart types to do the Overleaf System justice; that is what Wittmeyer does, as we see further on.
- 3. The usual departures that the non-Yarbro contingent of the Michaelian teachings made to the names of the Overleaves are as follows: Slave becomes Server, Retardation becomes Re-evaluation, Rejection becomes Discrimination, Stagnation becomes Relaxation, and Sexual becomes Higher Moving.
- 4. This Chart differs from Stevens in that Stevens used Stagnation, as did the original Michaelian group, Briggs, and Yarbro. Stevens also changed Repression to Reserve, but this Chart retains the original name.
- 5. What Yarbro called Cardinal beginning with MMFM in 1986 is nevertheless called Exalted on this Chart in 1990. Exalted was the name used in the original Michaelian group and in the Briggs group that was founded by ex-original Michaelian group members. This may be because JP Van Hulle was a Briggs group member. The MEF contingent of the Michaelian teachings never has adopted the word Cardinal. This change in terminology is discussed in my book The Tao of Personality.
- 6. Unlike all previous Charts except MMFM, the sequence of the Axes shown along the top of the columns is: Inspiration Expression Action Assimilation. Presumably this order is deliberate, and following MMFM is intentional. This is one of the more confused components of Overleaf Charts, because various Chart-makers differ so much. A rationale for a meaningful order is proposed in my book The Tao of Personality.
- 7. This Chart has a unique sequence of Overleaf categories in the left-hand column. This sequence is not seen anywhere else. It is typical for Chart-makers to either copy from a predecessor, or to seemingly list them randomly. This indicates that Chart-makers probably have no idea that there might be a reason for arranging them in some meaningful pattern. A rationale for a specific order is proposed in my book *The Tao of Personality*, where they are given Septenarian Attributes as well.
- 8. The word Negative is inserted between Chief and Feature on this Chart. This form does not appear on any other Overleaf Chart, but it was not uncommon to state it this way in the original Michaelian group and Briggs channeling session transcriptions.
- 9. Positive and Negative Poles are not shown on this Chart, but they are mentioned in the text of the book. However, there was not just one name listed for each Positive and Negative Pole, but several synonyms. Therefore, it might be useful for you to read the book.
- 10. This Chart continues the practice started by Stevens of renaming what was the 'Sexual' Center in Gurdjieff, the original Michaelian group, Briggs, and Yarbro to 'Higher Moving' Center. Also, recall that Yarbro made the Sexual Center an Ordinal Center, whereas here the Higher Moving Center has become Exalted/Cardinal. Issues around this placement and renaming are covered in detail in Chapter 4H in Part Four, "The Action Centers".
- 11. One anomaly of this Chart and the Byram Chart reviewed in the next chapter (which appears to have been copied from this one) is that four Centers are switched with respect to their usual Axes. That is, the Intellectual Centers are shown on the Inspiration Axis and the Emotional Centers on the Expression Axis. One might think that this is an error on the part of the Chart–maker, but other graphics in the book repeat this anomaly. The anomaly is repeated yet again in the Glossary at the end of the book, e.g. "Expression Axis: Roles and overleaves noticeable because of their expressive quality. More emotional in nature. Flamboyant". There is no explanation offered for this alteration from the norm established by Yarbro and adopted by all others, including myself. And to me and to other chart-makers it is so self-evidently wrong that I do not bother to refute it in this *History* book.
- 12. Parts of Centers are listed for the first and only time on any Chart. This concept is ultimately derived from Gurdjieff, and it continued in the original Michaelian group, Briggs, Stevens, and MEF groups. The idea is that the three lower Centers are divided into three Parts; hence the Moving/Emotional/Intellectual Parts of the Moving, Emotional, Intellectual Centers. The usefulness of this concept is explained in the text of the various books.
- 13. The names of the three outer planets of the solar system appear for the first time in this listing of the Body Types. Thus, instead of seven, there are here ten Body Types. This is new information, and it is

explained in the text of this book. This subject is discussed in detail in the chapters on Body Types in Part One and Part Four.

Concluding Remarks

Michael: the Basic Teachings is an excellent introduction to the Overleaf System and other components of the Michaelian teachings. However, the accompanying Chart does not add anything significant to them.

Introduction

The Chart shown above is a redrawing of the actual Chart, with all of the information of the original retained. I cannot point you to a publicly-available copy of this Chart.

It is unlikely that most Michaelian students have heard of Larry Byram because he is no longer active in the Michaelian teachings *per se.* Refer to his website >http://www.higheralignment.com/<. He tells the story there about how he assimilated the Michaelian teachings in the 1980s, having previously assimilated other spiritual teachings, most notably Alice Bailey. He seems to have grafted the Michaelian teachings onto his previous studies, and he has also assimilated other metaphysical teachings since then. He lived in the Bay Area during the 1980s and became a Michaelian channel via contact with JP Van Hulle and José Stevens. Since the late 1990s he has lived in Boulder County, Colorado. There he continues to promulgate his greatly modified adaptation and extension of the Michaelian teachings. Thanks to Byram's efforts over the last couple decades, there is a greater density of people in that locale who know their Overleaves than any other place on the planet, although he does not call the traits Overleaves. The Chart above appears to have come from the early 1990s and may not reflect his current understanding — check his website.

- 1. This Chart is labeled "The Michael System". It is very similar to the other Overleaf Charts that appeared in the late 1980s in the Bay Area, no doubt because Byram was friends with those other channels and book authors. Byram appears to have borrowed from several other Charts while adding and modifying to suit his own understanding and sensibility.
- 2. This Chart seems to have been made in the early 1990s because it has its greatest similarity to the structure of the Chart that appeared in the book *Michael: the Basic Teachings (MTBT)*, published in 1990. Specifically, the sequence of Axial Attributes along the top follows *MTBT*: Inspiration Expression Action Assimilation. This came first from *MMFM* in 1986, and was adopted by the Michael Educational Foundation and Carol Heideman, and then apparently by Byram. It was not the sequence adopted by Stevens and shown on his Charts from books published in 1986, 1988, and 1989. Stevens maintained the *MFM* sequence. Byram preferred many of the names of Overleaves and Poles on the Stevens Chart to the names on the *MTBT* Chart.
- 3. The sequence of Overleaf categories down the left side is identical only to the *MTBT* Chart; no other they are mostly random from one Chart to another. Only Hoodwin (Chart #15) and Wittmeyer (Charts #23 and #24) have sought to find order in this part of the Overleaf System.
- 4. The only grouping of categories is that 'Essence Role' is separated from the others below by a horizontal line labeled 'Overleaves'. This indicates that Byram did not consider Role to be an Overleaf. Byram shows six Overleaf categories: Life Goal, Mode, Attitude, Chief Negative Feature, Centering, and Body Types.
- 5. Notice that Byram prefers to use the name Server rather than the name Slave for the Ordinal Inspiration Role.
- 6. Just below the Roles row is the Goals row. The names, Reevaluation and Discrimination, apparently copied from *MTBT*, are used instead of the original Michaelian group and Yarbro names Retardation and Rejection. However, Byram prefers to use the original Michaelian group and Yarbro word Stagnation the same as on the Stevens Chart rather than the word Relaxation as shown on the *MTBT* Chart.
- 7. Just below the Goals row is the Modes row. Notice that Byram prefers to use the adjective Reserved rather than the noun Repression. This is the same as the Stevens Chart.
- 8. There is nothing so unusual about the next two rows, Attitude and Chief Negative Feature, that merits a comment.
- 9. The next row is Centering, with the usual labels as they originally appear in *MTBT*. In fact, the same anomaly in *MTBT* of putting the Intellectual Centers on the Inspiration Axis and the Emotional Centers on the Expression Axis is repeated here. This makes one wonder if *MTBT* did that intentionally rather than by mistake. Every other Chart in this series of chapters shows them switched from this arrangement. This anomaly, even if intentional, is self-evidently incorrect and is not examined elsewhere in this *History* book.
- 10. The next row is Body Types; here again there is nothing unusual that merits a comment other than to say that it appears to have been copied from MTBT, except that nouns have been changed to adjectives, the names of the Poles have been added, and blanks to record the percentages of a person's Body Types are shown.

11. As with several other Overleaf Charts, Soul Age and Level are not shown on this Chart, perhaps because of the awkwardness of having their sequence out of order with the other Overleaf categories. For instance, if they were shown on this Chart, the order from left to right would be: Baby/Second — Transcendental/Sixth — Young/Third — Old/Fifth — Infant/First — Infinite/Seventh — Mature/Fourth. My suspicion is that, because the Ages and Levels cannot be fit on their Overleaf Chart in proper sequence because of other structural features of the Overleaf System, it is deemed to be better to leave them off. The situation is that it takes two Chart types to do the Overleaf System justice; that is what Wittmeyer does, as we see further on.

Concluding Remarks

Byram is a prolific writer. He has written thousands of pages about his version of the Michaelian teachings and put it in handouts in classes over the decades. Some of this information appears on his website, so you are invited to read it there and get a fresh perspective of the Michaelian teachings. Byram's early Chart, shown above, does not provide a fresh perspective on the Overleaf system, but his later writings do.

Overleaves are chosen by the Essence before birth. The Role is constant throughout lifetimes, yet one option from the remaining rows of Overleaf categories completes one Personality Matrix. Body types are chosen in combination for a variety of physical strengths, weaknesses, and predispositions to medical conditions. Overleaf energies enable karmas, agreements, life tasks, and lessons acting as promoters or inhibitors for evolutionary diversity.

Introduction

The Chart shown above is a redrawing of the actual Chart, with all of the information of the original retained.

Steve Cocconi is a Michaelian channel who got his start with the Michaelian teachings in the 1980s in the Bay Area and Sacramento, where he affiliated with students, teachers, and other channels. According to his website >www.themichaelteaching.com< what you see above is what Cocconi considers the fourth generation of the Overleaf Charts. In his words:

This is the fourth generation of the Overleaves Chart. The original was channeled by Sarah Chambers and popularized in the book *Messages from Michael* by Chelsea Quinn Yarbro (although original source material was produced by Sarah Chambers). The second was a collaborative effort by JP Van Hulle, José Stevens and Simon Warwick-Smith. It appears in the books *The Michael Handbook* by Stevens and Smith and *Michael: The Basic Teaching* by Van Hulle, Christaean [sic], and Clark. The third generation was done by Emily Baumbach in her book, *Michael's Cast of Characters*. There is a fifth generation by Shepherd Hoodwin in his book, *The Journey of Your Soul*. This fourth generation is the product of Stephen Cocconi and used since January 1992.

This Chart is available for download from Cocconi's website. There is no Chart in Baumbach's book or I would have included it in this *History* book. Cocconi did not mention the Briggs Chart, perhaps because he came into the Michaelian teachings after the Briggs group ceased operation.

- 1. The Chart is titled "The Overleaves", but Body Type is included and Soul Age is not. Refer to Chapter 4C in Part Four, "Which Trait Septenaries are Overleaves?", for a thorough discussion.
- 2. As with several other Overleaf Charts, Soul Age and Level are not shown on this Chart, perhaps because of the awkwardness of having their sequence out of order with the other Overleaf categories. For instance, if they were shown on this Chart, the order from left to right would be: Young/Third Old/Fifth Infant/First Infinite/Seventh Baby/Second Transcendental/Sixth Mature/Fourth. My suspicion is that, because the Ages and Levels cannot be fit on their Overleaf Chart in proper sequence because of other structural features of the Overleaf System, it is deemed to be better to leave them off. The situation is that it takes two Chart types to do the Overleaf System justice; that is what Wittmeyer does, as we see further on.
- 3. The Axial and Dialectic Attributes are shown across the top of the Chart. The left-to-right arrangement of the Axial Attributes of Expression Action Inspiration Assimilation differs from most other Charts. A rationale for sequencing the Septenarian Attributes is presented in my book *The Tao of Personality*.
- 4. In keeping with Cocconi's preference for non-Yarbro terminology, he uses 'Exalted' instead of 'Cardinal' as the complement of 'Ordinal' for the Dialectic Attributes.
- 5. As usual among the various Charts, the top-to-bottom arrangement of Overleaf categories is not grouped in any obviously systematic way. One rationale for grouping and ordering them is offered in my book *The Tao of Personality*.
- 6. Roles are separated from the traits below by a double line, probably indicating that Cocconi does not regard Roles as Overleaves, but does Body Types. Others differ on this, and this is covered in Chapter 4C in Part Four, "Which Trait Septenaries are Overleaves?".
- 7. The arrangement of this Chart actually resembles Briggs #6 from the early 1980s more than it does any of the other generations of Charts that Cocconi mentions in the Introduction. That is, the list of Overleaf categories down the left hand column is the same as the Briggs Chart, and the sequence of Axial Attributes at the top of the Chart is also the same as the Briggs Chart.
- 8. Other than this resemblance in layout to Briggs, we see changes from the Yarbro Overleaf names borrowed from other Bay Area Charts: Rejection becomes Discrimination; Retardation becomes Revaluation; Repression becomes Reservation; Stagnation becomes Relaxation; and Sexual becomes Higher Moving. The only genuinely new name is Reservation, but this is just a form of the word Reserve used by Stevens.
- 9. We also see numerous changes in the names of the Poles; many of them are different from those seen on any other Chart. Starting at the top left and reading to the bottom right, we find the following new names: (Artisan) –Self-delusion; (Server) –Manipulation; (Priest) –Righteousness; (Discrimination)

- +Differentiation, –Exclusion; (Acceptance) +Affiliation; (Relaxation) +Adaptability, –Stagnation; (Cynic) +Argument; (Realist) +Objectify, –Speculation; (Greed) –Gluttony; (Self-deprecation) +Self-effacing; (Stubbornness) +Willfulness; (Caution) –Paranoia; (Perseverance) –Monotony; (Intellectual) +Conceptualization, –Rationalization; (Higher Moving) +Harmony, –Lust; (Instinctive) +Essential; (Higher Emotional) –Sympathy.
- 10. Regarding the names of the Poles of the Body Types, Cocconi only made one change from his predecessor, José Stevens: (Mars) +Wiry becomes +Endurance.
- 11. As in the case of most Charts, the Ordinally–placed Sexual Center of Yarbro has been replaced with the Cardinally–placed Higher Moving Center. This variation in name and location is discussed in Chapter 4H in Part Four, "The Action Centers".
- 12. Going beyond the Briggs Chart general layout, Cocconi added Body Types and Exotic Body Types at the bottom of his Chart. These Exotic Body Types were shown on the Basic Teachings Chart, but Cocconi adds Positive and Negative Poles not shown on that Chart, and not found elsewhere in any Chart that I know of. However, *MTBT* provides several descriptive words for the Positive and Negative Poles of the exotic Body Types, and they are similar to the Poles given by Cocconi.
- 13. Although colors, sometimes assigned to the Overleaves, are not shown on this Chart, Cocconi did use them on his Michael Motivation Cards; refer to sections on Cocconi's color work in Chapter 4J in Part Four, "The Seven Chakras", and Chapter 4P in Part Four, "Color Assignments".

The Cocconi Chart stands out from others on a few counts: It ventures outside the norm on the names of many Poles, thus giving students more food for thought and observation; and it includes a couple of items not normally shown on other Charts, apparently because this Chart is used to record Personality Profiles, Cocconi's adaptation of the Overleaves to individuals.

Introduction

Varda Hasselmann is a German woman who read the first two Yarbro books in the mid-1980s, then became a channel for "Die Quelle" — The Source — which is said to be a mid-Causal Entity in the same Cadre as the Michaels' Entity. The Source provides information so similar to the Michaels that one can hardly tell the difference, so that is why I include it in this collection of Overleaf Charts. At the time of this writing, two books — of several that Hasselmann, along with her husband and co-worker Frank Schmolke, has written in the German language — have been translated into English. The two books are *Archetypes of the Soul* and *The 7 Archetypes of Fear*. Both books have an identical Overleaf Chart that is reviewed here, which I redrew. The German-language website is >http://www.septana.de/<; Google does a good job of translating it into English. The following quote reveals their connection to the original revelation:

Archetypes of the Soul provide extremely precise insights into the structure of the world of the soul. That such a structure may in fact exist was first revealed by another causal entity called Michael. The Michael messages have since been expanded upon, made clearer and deepened by other channeled information and especially by the entity called the SOURCE.... This is also intended as a token of profound gratitude for a publication which many years ago started us out on our spiritual journey. Messages from Michael by Chelsea Quinn Yarbro contained extremely fascinating information about the core and nucleus of what since then has become the purpose of our lives: the exploration of the structure of the soul. The mental revolution which in our view the Messages from Michael contained inspired us and led us to leave promising academic careers in order to pursue the study of what has since been revealed to us by a causal entity we call the SOURCE to be a complex system of soul archetypes. [Archetypes of the Soul, pp. 7, 11]

This Chart is complicated to explain, so take a good look at it before you read the Commentary.

Commentary

- 1. The title of the Chart is "Archetypes of the Soul". This is the same as the English translation of the name of the book in which it originally appeared. In their English translation, rather than use the word Overleaf, the word Archetype is used throughout the book, and the word Matrix is used for the entire grid of forty-nine personality traits.
- 2. The Archetypes book acknowledges Messages from Michael (MFM) as inspiration, and when it came to translating German words into English words, the words are usually but not always the same as we find in MFM. This is instructive if one seeks to extract as much meaning as one can from the underlying concepts, as words are sought to express them in various languages.
- 3. In my redrawing of the Matrix Chart, I show the Dialectic Attributes (Ordinal Neutral Cardinal) in [brackets] in the top row of the Chart. These are not shown on the chart in the *Archetypes* book, but it shows the Ordinal triad on the left side of the Chart, the Neutral in the middle, and the Cardinal triad on the right side of the Chart, the same as numerous (but not all) other Charts. The last chapter of the *Archetypes* book, "The Energy Structure of the Number 7", page 409, mentions the Dialectic Attributes but does not name them:

The archetypical energies of the Artist (2), Healer/Helper (1) and Warrior (3), all belonging to one side of the duality are directed within; they are receptive, withdrawn, passive, not *per se* but in relation to the energies of their dual Archetypes, the Sage (5), Priest (6) and King (7). The latter are outgoing, dominating, giving, active, far-reaching. They relate to one another like the male and female principle, like Yang and Yin, they correspond like willpower and willingness, making events happen and letting them happen, pushing and resisting.

Beyond that statement, there is little expansion of the meaning of the Dialectic Attributes elsewhere in the *Archetypes* book. This lack of elaboration is typical of the Michaelian teachings in general, where the *content* of the personality factors is thorough but the *context* of the personality factors — the Attributes — lacks elaboration and explanation. (My books provide the heretofore missing elaboration and explanation of the context of the Overleaf and Matrix Systems.)

4. In my redrawing of the Matrix Chart, I show the Axial Attributes (Action — Inspiration — Expression — Assimilation) in [brackets] in the second row of the chart. Notice that this lineup is per the Michael Math Sequence from left to right, which one could have reasonably expected from someone who was introduced to the Michaelian teachings via the Yarbro books. These are not shown on the chart in the

Archetypes book, but the last chapter of that book, "The Energy Structure of the Number 7", page 407, does mention them:

Positions 7 and 3 represent the principle of <u>Action</u>, 6 and 1 that of <u>Inspiration</u>, 5 and 2 that of <u>Expression</u>. Thus Expression, Inspiration, Action and <u>Assimilation</u> describe the four basic development and growth possibilities or, as we call it, the four Levels of Being Alive.

Beyond that statement, there is little expansion of the meaning of the names of the Axes elsewhere in the book. There are tables for each Overleaf category at the beginning of each chapter on that Overleaf category, and they show the "Expression Level, Inspiration Level, Action Level, Assimilation Level", but the text of the chapter does not elaborate. This lack of elaboration is typical of the Michaelian teachings in general, where the *content* of the personality factors is thorough and the *context* of the personality factors — the Attributes — lacks elaboration and explanation. (My books provide the heretofore missing elaboration and explanation of the context of the Overleaf System.)

- 5. In the next-to-bottom row, named ENERGY, we see that colors (and numbers) are assigned to the columns. There is no explanation for these color assignments in the text of the book; they are simply presented as a dogma-doctrine. Some of these color assignments are similar to color assignments given by other Chart-makers, and some are different, depending on the Chart-maker there is little consistency in the Michaelian teachings when it comes to assigning colors to the categories. This discrepancy is addressed in Chapter 4J in Part Four, "The Seven Chakras"; it is also addressed in Chapter 4P in Part Four, "Color Assignments". Notice that each Energy has a number assignment as well as the color assignment. Notice that this lineup is per the Michael Math Sequence from left to right, which one could have reasonably expected from someone who was introduced to the Michaelian teachings via the Yarbro books. However, the color assignments shown on this chart are not the same as the color assignments shown on the Yarbro Chart #18. This is also a common phenomenon when one channel does not know what another channel has provided, so I have learned to expect such discrepancies. What discrepancies indicate to me is that channeling is unreliable, so it needs to be examined, and corroboration needs to be sought.
- 6. Notice that, in the third column, in the cells with the names of the Overleaf categories, the Roman numerals start at the bottom and increment going up the column. I found no explanation in the text of the book for why the Roman numerals are assigned to the Overleaf categories the way they are, so I asked Varda about it and she responded:

You ask about the order of the Roman numbers in our system. We are working with an energy Matrix, that means that we need to have two energy axes. Our Quelle told us many years ago that the fears come second (energy 2/II) the goal third, etc. I cannot explain more. [personal communication, 23 September 2021]

Dope slap to forehead; dummy me for not tumbling to this realization. Now I can explain more (because I have had the same understanding since 1981), even though Varda cannot. This means that the vertical rows of seven Overleaf categories that have Roman numerals is correlated with the Arabic numerals in the horizontal columns of seven "Energies". This is the reason that Die Quelle calls this the "MATRIX" — it is a grid of 49 traits with the same meaningful pattern on both vertical and horizontal axes; it is a symmetrical matrix. Using (Dialectic + Axial =) Septenarian Attributes to correlate the vertical with the horizontal, we see that, alleaedly, 1/I-Role = Ordinal Inspiration $\rightarrow 2/II$ -Fear = Ordinal Expression → 3/III-Goal = Ordinal Action → 4/IV-Mode = Neutral Assimilation → 5/V-Attitude = Cardinal Expression \rightarrow 6/VI–Center = Cardinal Inspiration \rightarrow 7/VII–Age = Cardinal Action. What I find remarkable is that Hasselmann only got one of them right (Goal = Ordinal Action), which is about what one would expect from random chance. In my redrawing of the Matrix table, I showed these Dialectic and Axial Attributes in the first two columns, at the very left edge of the Chart: they were not in the table in the Archetypes book. This is the only source that I know of, other than myself, that recognizes that the horizontal rows and vertical columns on their Overleaf/Matrix Chart have the same pattern in terms of Septenarian Attributes. Per Die Quelle, they allegedly follow the Michael Math Sequence; per Wittmeyer, they allegedly follow the Natural Sequence; see Charts #23 and #24. One wonders if the Source would have arranged the Matrix differently if Varda and Frank had been introduced to the Michaelian teachings via myself, or a channel other than Yarbro, because the structure of the Overleaf Chart differs from student to student and channel to channel.

- 7. There are similarities and dissimilarities between Die Quelle and Wittmeyer in regard to the previous comment. The similarity in the arrangement of Overleaf categories on this Chart is that they both juxtapose Role and Chief Feature (Fear), Goal and Mode, Mentality (Attitude) and Centering. This Chart at least juxtaposes those pairs probably unwittingly something no other Chart does. The dissimilarity is that Wittmeyer puts Role and Chief Feature on the Inspiration Axis, Goal and Mode on the Action Axis, Mentality (Attitude) and Centering on the Expression Axis, and Soul Age is Neutral Assimilation. Die Quelle agrees with my schema in only one instance: Goal = Ordinal Action. Apparently Die Quelle did not explain their schema, or Varda might have had more to say. Thus, the information was delivered as yet another dogma-doctrine that has perhaps gone unquestioned. I question it, and I explain my version of the 7x7 symmetrical matrix grid in considerable detail in my book *The Tao of Personality*.
- 8. In the "Soul Role I" row, two names of Roles are different from those shown on any other Chart: Helper/Healer is substituted for Slave or Server, and Artist is substituted for Artisan.
- 9. In the "Fear: Chief Characteristic II" row, one name is different from the classical name: Self-sabotage is substituted for Self-destruction. The basic fear is also conveniently indicated, as on a few other Charts.
- 10. In the "Goal III" row, three names are different from those found in other Charts: Delay is substituted for what originally was called Retardation; Standstill is substituted for what was originally called Stagnation; Acceleration is substituted for what was originally called Growth.
- 11. In the "Mode IV" row, all of these names are found on other Charts.
- 12. Regarding the "Mentality V" row, on all other Charts this is called "Attitude". Notice that the names of the seven Mentalities are the same familiar adjective names turned into noun form; they are given as the names of philosophies or "-isms". Refer to Chapter 1G in Part One, "Seven Philosophies Seven Attitudes", for my exposition on this subject.
- 13. In the "Centering VI" row, the placement of the Sexual Center in the Ordinal Triad and the Moving Center in the Cardinal Triad is the same as in Yarbro, but the reverse of what is shown on most other Charts. This discrepancy is discussed at length in Chapter 4H in Part Four, "The Action Centers". Another departure from the norm is that the Higher Intellectual Center is here named "Spiritual" and the Higher Emotional Center is here named "Ecstatic". Refer to Chapter 4G in Part Four, "The Higher Centers", for a thorough discussion.
- 14. In the "Soul Age VII" row, the names of most are the same as seen elsewhere, except the Baby Soul is here named "Child Soul", the Transcendental Soul is here named "Transpersonal Ensoulment", and the Infinite Soul is here named "Transliminal Ensoulment". However, contrary to what one might expect, the description of those last two Soul Ages does not match the descriptions given in either Yarbro book, MFM or MMFM and those two books differ from each other. In the text of the Archetypes book, the Transpersonal soul is said to be the incarnation from the Astral Plane of hundreds of souls in one body, and the Transliminal Soul is said to be the incarnation from the Causal Plane of thousands of souls in one body. This concept among others that have been presented in the Michaelian teachings to describe and explain the last two Soul Ages is covered in Chapter 4M in Part Four, "The Seven Soul Ages".
- 15. The Chart does not show the Levels within the Soul Ages, but there is a chapter in the *Archetypes* book that describes them, "The Seven Stages of Development". They are not named, but they do have numbers as usual, and the descriptions are reminiscent of the Positive and Negative Poles as given in the "Michael Math" chapter of *More Messages from Michael*. A Chart that accompanies that chapter shows the Axial Attributes for each Stage, aka Level.
- 16. Body Types are not discussed or even mentioned anywhere in the *Archetypes* book. This is perhaps to be expected when they are not named in any of the Yarbro books, which books were the pre-Quelle source for Hasselmann, and those books apparently biased the mind of Varda to regurgitate the Yarbro version of the Michaelian teachings. Apologies if that sounds harsh, but other, and more obvious, instances of that phenomenon are documented elsewhere in this *History* book.
- 17. Note that the Positive and Negative Poles of the Overleaves are not given in noun form; they are presented as descriptive adjectives. Many of these are different enough from the usual names that one

- can perhaps learn a thing or two. The various names that Chart–makers have given to the Overleaves and Poles of the Overleaves are tabulated in the final chapter of this Part.
- 18. The bottom row shows the names of the chakras that Hasselmann correlates with the Centers. These were not shown on the original chart itself; they are sprinkled throughout the descriptions in the chapter on Centers, pages 248–294. Because they were not on the actual chart in her book, I show them in [brackets] in my redrawing of the matrix chart. Refer to the section on Hasselmann's coordination of Centers with chakras in Chapter 4J in Part Four, "The Seven Chakras".

In my opinion, the most important advancement made by the Matrix Chart in the history of the Overleaf Chart is the recognition that the Septenarian Attributes apply to both the horizontal rows and vertical columns of the grid of traits. More is said about this in the chapters on Wittmeyer's Charts.

To some extent, the Die Quelle information provides a different perspective on the Michaelian teachings, and that is a perspective that is well worth pursuing by Michaelian students. Would that more than two of the eight books published in the German language were translated into the English language. As is so often the case with different channels, however, some of the Die Quelle information is not completely congruent with the Michaelian teachings information — but then various contingents of the Michaelian teachings are not congruent either. Die Quelle is most congruent with Yarbro, because, according to what Varda told me, she only read the first two Yarbro books and did not read other Michaelian teachings books. Thus, Varda's belief system was seeded by Yarbro rather than by any other Michaelian source. If Varda had found some other Michaelian source only or first, one might reasonably wonder if the Die Quelle teaching would have looked different than it does now.

The Hasselmann books are worth purchasing if you want perhaps the most thorough description of each Trait that is available in the published Michaelian teachings library. Besides getting a thorough description, you will get a fresh and distinct description such that you will see things a bit differently.

Introduction

The Chart shown above is a synthesis of information from various tables in Shepherd Hoodwin's books. A few tweaks to the book information were found in the packet of information that Hoodwin provides to his clients.

In 1995 Shepherd Hoodwin published *The Journey of Your Soul (TJOYS)*. In 2013 he published the Second Edition, with many modifications, including a slight alteration to the title, *Journey of Your Soul (JOYS)*. In them he included his own version of the Overleaf Chart as it was at the time of publication. The Charts in those book were not suitable for reproduction here. They were spread over two pages and did not include the Positive and Negative Poles and some of the other information shown above. What we see here is a graphical representation of his information in the text of his books.

Unlike all other Overleaf Charts, Hoodwin did not show the Traits and their Attributes in boxes in a matrix. In my opinion, this reflects a lack of appreciation of the coherence of the Overleaf System, a lack of recognition that there is a pattern to the Traits and their Attributes.

In *TJOYS/JOYS* Hoodwin describes how he developed as a Michaelian channel in New York City beginning in 1986. Unlike so many others, he was not a member of the Michaelian community that began in the Bay Area. However, he was aware of them from early in his journey as a Michaelian student and channel. Thus, he knew of the Yarbro and the Stevens versions of the Overleaf Chart from early on, and other versions as they were published as the years went by.

- 1. Across the top of the Chart we see the Axial and Dialectic Attributes. The Axes are shown in the sequence: Inspiration Expression Action Assimilation. We have seen several other arrangements in previous Charts in this series of chapters; this is the sequence given in the "Michael Math" chapter of *More Messages from Michael (MMFM)*, in the Ordinal triad. (The Cardinal triad is Expression Inspiration Action.) Hoodwin says, "My reasoning for starting with Inspiration, then Expression, Action, and Assimilation is that Inspiration is innermost, Expression brings the inner out, Action is solely outer, and Assimilation sits outside." There is another rationale for ordering the Axes, and this is found in my book *The Tao of Personality*.
- 2. The first row, Essence Role, is so called because Hoodwin prefers to regard Role as not an Overleaf category. He also prefers to regard Body Type as an Overleaf category, making seven altogether. Others have a different opinion, and these are examined in Chapter 4C in Part Four, "Which Trait Septenaries are Overleaves?".
- 3. Hoodwin proposed a rationale for ordering the Overleaf Categories other than the sequence in which they were revealed to the original Michaelian group. Therefore his arrangement is not random as it seems to be in most of the other Charts. In the Glossary of his book JOYS, in the entry for Overleaves on page 406, Hoodwin proposes a sequence that is unlike any other reviewed in this chapter: "Overleaves: Seven types of personality traits that 'overlay' the essence, chosen to facilitate the purposes of the lifetime. From innermost to outermost, they are: [Essence Role,] goal, attitude, mode, center, obstacle, body type, and soul age." According to Hoodwin, this information was channeled; therefore no rationale or explanation is offered for that sequence, but the metaphor is obvious: Overleaves are overlays like an onion with seven layers that cover the core. In the case of the personality traits, the innermost core is Essence, and the Overleaves surround the core in successive layers. There is a discussion of this sequence, which I refer to as the "Hoodwin Sequence", in Chapter 2C in Part Two, "Proposed Sequences of Overleaves". Another proposal for sequencing the Overleaf categories is presented in my book *The Tao of Personality*. Because I did not channel that sequence, I provide a rationale and an explanation.
- 4. Hoodwin's sequence of Overleaves from "innermost" to "outermost" is reminiscent of Die Quelle's Matrix, Chart #14, but Hoodwin's sequence is not the same as the Matrix. Other than Hoodwin and Hasselmann and Wittmeyer, Chart-makers appear to have no rationale for sequencing the Overleaf categories the way that they show them on their Charts.
- 5. The correlation of Server with the First Level, Artisan with Second Level, and Warrior with Third Level is from Michael Math. There is a discussion of what I refer to as the "Michael Math Sequence" in Chapter 2C in Part Two, "Sequences of Overleaves". The Michael Math Sequence is explored in detail in my book *The Tao of Cosmogony*.

- 6. Practically all of the names of the Overleaves and their Poles were taken directly from Yarbro. Those changes that were made appear to have been borrowed from various Bay Area books: Server rather than Slave; Reevaluation rather than Retardation; Discrimination rather than Rejection; +Sophistication rather than +Discrimination; Reserve rather than Repression; -Dogmatism rather than -Dogma. None of these are new unless one counts a change from adjective to noun: Stevens's Reserved to Hoodwin's Reserve. Two names unique to Hoodwin are the Neutral Goal being named Flow rather than Stagnation, Relaxation, or Equilibrium, and the Ordinal Action Center being named Physical rather than Moving, Sexual, or Physical Excitation.
- 7. At the beginning of his chapters on the Overleaf categories of Age and Obstacle, aka Chief Feature, Hoodwin had some descriptive words for each Overleaf. These words are shown in italics in the same box as the Overleaf. Heideman did something similar in her Overleaf Chart in 1988.
- 8. Hoodwin proposes Positive and Negative Poles for the five Soul Ages that are said to manifest on the Physical Plane. (These are the names shown in the 1995 *TJOYS* edition, not the same as the names shown in the 2013 *JOYS* edition.) This is the first Chart to show them, but not the only Chart. A second naming of Poles of Ages appears on the next Chart in this series; and yet another set of names for the Poles of the Ages is proposed by Wittmeyer. Although there is some similarity along with some dissimilarity among them, there is more dissimilarity than the usual changes resulting from the search for words better than those originally given. Chapter 4M in Part Four, "The Seven Soul Ages", discusses this subject in detail.
- 9. Hoodwin lists Transcendental and Infinite as the last two Ages. Alternatives have appeared on other Charts, such as Astral Plane and Causal Plane shown on the *MMFM* Chart, or Elder and Master according to Stevens in his book *Transforming Your Dragons* (1994). These variations are discussed in Chapter 4M in Part Four, "The Seven Soul Ages".
- 10. For the Action Centers, Hoodwin preferred the Yarbro placement rather than the Bay Area placement. That is, the Moving Center is shown as the Cardinal/Exalted Center, and the Sexual Center, renamed "Physical" by Hoodwin, is shown as the Ordinal Center. These variations are discussed in Chapter 4H in Part Four, "The Action Centers".
- 11. Like some other Chart makers, Hoodwin has more recently substituted the word "Obstacle" for the original Gurdjieffian phrase, Chief Feature. Hoodwin added a descriptive phrase to each Obstacle, namely, the "fear" that was said to underlie each one: Self-deprecation being a "fear of inadequacy", and so on. Heideman did the same thing with her Overleaf Chart. There is very little difference between the two, no doubt because they were both adopted from the same source: MMFM, pages 38–41
- 12. Regarding Body Type, Hoodwin made changes to what his predecessors, Stevens and Cocconi, proposed. That is, he changed the noun names for the planets to adjectives. For instance, "Jupiter" becomes "Jovial." He also changed a few Poles, in particular: (Jovial) +Grandeur becomes +Grand and -Overwhelming becomes -Extravagant; (Mercurial) -Nervous becomes -Frenetic; (Venusian) -Sloppy becomes -Obese; (Martial) -Impulsive becomes -Muscle-bound. Most of these are a reversion to the names shown on original Michaelian group Chart #3, which first became available to the public in the year before the publication of *TJOYS* in 1995. Refer to Chapter 4D in Part Four, "Body Types", for a discussion of this subject.
- 13. Planes are shown on this Chart, as they were on the very first Chart, original Michaelian group Chart #1, "The Ordering of the Cosmos". However, the names are different from the two highest planes shown earlier, Buddhaic and Tao. Discrepancies such as this are discussed in chapters on the Planes in Part One and Part Four.
- 14. There are basically two ways to logically arrange the Overleaves on a Chart. Most Chart makers preferred to juxtapose Dialectic Attributes, Ordinal and Cardinal Overleaves, as shown on this Chart and others. However, this scrambles the numerical sequence of the Levels and Planes, as can be seen on this Chart. This is not a problem if Levels and/or Planes are not shown on a Chart, and typically they have been omitted. Only *MMFM* and Heideman and Wittmeyer elected to show the Levels, and to arrange their Charts per the numerical sequence thereof.

Hoodwin's method for producing his version of the Overleaf Chart seems to be similar to that of several others, namely to pick and choose whatever he preferred from the various predecessor Charts, changing and adding a little here and there to suit his personal inclinations, as do we all.

Introduction

The Chart shown above is a redrawing of the actual Chart, with all of the information of the original retained. This Chart came from Elizabeth Puttick's book 7 Personality Types, published in 2009, but one can see it originated with José Stevens, founder of "Pivotal Resources," and is dated 2002. This chapter is more about the changes Stevens made to his own previously published Charts than comparing and contrasting with the other Charts presented in this series. Comparing this version with Stevens's previous version from the 1980s, one sees

that although the form is basically the same, there are quite a number of subtle changes. It would be useful for you to review Stevens's Chart #9 before reading further.

- 1. This Chart is titled Personality Chart rather than Overleaf Chart as it was in the 1980s. No doubt this is because Stevens and Puttick were writing more for a general readership than for Michaelian students; the word Overleaves is not in everyone's vocabulary, and even when it is, it does not have the meaning that the Michaelian teachings attaches to it.
- 2. As usual, the Axial and Dialectic Attributes are arrayed along the top of the Chart. The four Axes of Expression Inspiration Action Integration head up the columns, but in the 1980s Chart the last column is headed Assimilation. When one no longer uses the original Michaelian group word +Integration for the Positive Pole of the Higher Intellectual Center, as Stevens does here, then it is freed up for use elsewhere.
- 3. Whereas Stevens used the original Michaelian group word Exalted in his 1980s version, this version uses the *More Messages from Michael (MMFM)* word Cardinal. The natures of Cardinality and Ordinality are discussed in detail in my book *The Tao of Personality*.
- 4. Seven categories are listed along the left side on both this Chart and the 1980s Chart, but at the bottom of the list, Perspectives (Soul Ages) in the latter Chart takes the place of Body Types in the earlier one, a switch evidently brought about because of the intended readership of this Chart, which is not necessarily Michaelian students, but rather a mainstream readership that might not be open to reincarnation and Soul Age.
- 5. The category of Levels is not included on either this Chart or the 1980s Chart. Recall that Stevens per the *The Michael Handbook* on page 61 did not favor the idea of giving names to the Poles of the Levels. However, he is not averse to naming Poles for the Perspectives, at least not in this Chart.
- 6. If there is any significance to the fact that Stevens shifted Mode from the fifth Overleaf category as shown on his earlier Chart to the third on this Chart, placing it next to Goal, it might be that Mode determines how the Goal is pursued.
- 7. What is called Chief Feature in Stevens's 1980s Chart is called Obstacle in this later version. We saw this variation (in Chapter 2A in Part Two, "Revelation of Overleaves") at the time the Michaels first revealed the names of these seven Overleaves on 27 February 1974, and Obstacle was also listed as an alternative in Chart #4 from the original Michaelian group. This is the only Overleaf category other than Age (see below) that people have wanted to rename. Stevens used the term Dragons in his 1994 book *Transforming Your Dragons*, instead of either Chief Feature or Obstacle. Another alternative name, proposed by Wittmeyer, is Shadow.
- 8. Stevens made two Overleaf name substitutions over the years. Reserved Mode became Reserve Mode. This changed an adjective into a noun to conform to all of the Overleaf nouns, appropriately. The original Michaelian group name was Repression. Stevens also changed the name for the Goal of Stagnation to Relaxation. The original name Stagnation has often been the target for a name change. Hoodwin calls it Flow and Wittmeyer calls it Equilibrium.
- 9. Stevens changed the names of several Poles from his 1980s version to this version. (Artisan) +Creation becomes +Creativity; (Sage) +Dissemination becomes +Communication; (Acceptance) +Agape becomes +Unconditional love; (Passion) +Self-actualization becomes +Self-realization; (Perseverance) -Unchanging becomes -Inflexible; (Spiritualist) -Beliefs becomes -Dogma; (Pragmatist) -Dogmatic becomes -Opportunist; (Greed) -Voracity becomes -Insatiability; (Higher Intellectual) -Telepathy becomes -Communication; (Instinctive) -Mechanical becomes -Automatic. This gives the Positive Pole of Sage and the Negative Pole of Higher Intellectual Center the same label. Notice the inconsistent mixture of adjectives and nouns in this Chart. The original Michaelian group did not do this, but others have.
- 10. Notice the last horizontal row headed up with the name Perspectives. These are elsewhere called Soul Ages. Stevens focuses much of his teaching toward non-metaphysically-minded people, so Perspectives works better than Soul Age for them. Because they are not likely to be open to the idea of reincarnation, such names as Baby Soul and Old Soul are better avoided. This is the first Chart to do that, but not the last.

- 11. There was no attempt to correlate the five Perspectives with other Overleaves as there was in the first original Michaelian group Chart, and with the *MMFM* Chart. The double line between the Perspectives and the Overleaves above them emphasizes that there is a disconnect between the two ways of structuring them. Another way to do this is to have two versions of the Overleaf Chart, each one emphasizing the two types of structure; Wittmeyer has chosen that path.
- 12. Stevens proposes names for the Positive and Negative Poles of the five Perspectives. Shepherd Hoodwin did the same thing in his book *The Journey of Your Soul,* but they are not all the same; refer to Chart #15 by Hoodwin.
- 13. Rather than five Perspectives as shown on this Chart, in his 1994 book *Transforming Your Dragons*Stevens lists and describes seven stages of human development or maturity. There he names them:
 Infant, Toddler, Child, Adolescent, Adult, Elder, and Master. He lists people in the last two stages who are not Transcendental or Infinite Souls as is typically done in the Michaelian teachings, nor Astral or Causal souls per Yarbro's understanding. These and other discrepancies in the Soul Age category are discussed in Chapter 4M in Part Four, "The Seven Soul Ages".

In this Chart, Stevens makes a few insignificant but nevertheless interesting changes from the Charts he created and published in the 1980s. Mostly there are name changes rather than structural changes, and the name changes are appropriate for an intended readership other than Michaelian students.

Introduction

This Chart (redrawn by myself) is the amalgamation of two Charts that can be found on Barbara Taylor's website, >www.itstime.com<. These Charts were created in the late 2000s. They have the note, "Adapted from Power Path Seminars (>www.powerpathseminars.com<)" at the bottom. This indicates that it is based on the work of José Stevens, with suggestions from the Michaels on how to adapt the Michaelian teachings to a mainstream audience. According to Taylor, she and Stevens have Student/Teacher and Teacher/Student Monads working in this lifetime. In other words, they teach each other and they learn from each other. This chapter is more about the changes and additions Taylor made to Stevens's two Chart versions reviewed in previous chapters, than about comparing and contrasting with other Charts. Comparing Taylor's version with Stevens's, we see that the form is basically the same, but there are some significant additions.

- 1. Taylor titled the Chart The Personality Game Board rather than Overleaf Chart because Taylor is aiming for a mainstream readership, not specifically Michaelian students, and the word Overleaves is not in the general vocabulary, and when it is, it does not mean the same thing as is meant in the Michaelian teachings. Refer to Taylor's website for extensive explanation about the Personality Game, based as it is on the Overleaf System.
- 2. As usual, the Axial and Dialectic Attributes are arrayed along the top of the Chart. The four Axes of Expression Inspiration Action Assimilation head up the columns. That sequence began with the *MFM* Chart and was copied by Stevens, and then Taylor. However, instead of the use of the words Ordinal and Exalted (or Cardinal), the explanatory words "Internal Narrow Focus" and "External Wide Focus" are used. Once again, this was no doubt done to avoid using here, for the general public, obscure words, familiar and understandable only to Michaelian students.
- 3. At the top of the columns, the numbers in parentheses (2) (5) (1) (6) (3) (7) (4) are the MMFM "Michael Math" sequence numbers that correlate with the Overleaves in the columns below them. They are scrambled out of numerical sequence because this Chart, like most others, is arranged to favor the juxtaposition of Dialectic Attributes (Ordinal Exalted) rather than the Soul Age/Level sequence. Refer to Chapter 2C in Part Two, "Sequences of Overleaves" for further information.
- 4. The seven columns are headed with the seven colors of the rainbow. This is one of five Charts that use colors to demonstrate one type of ordering or another. (The other four Charts are from Varda Hasselmann, Terri Benning, Troy Tolley, and Philip Wittmeyer.) There are three types of color schemes that show up on these three Charts, and this one happens to be the Vibration Sequence. The Vibration Sequence was introduced into the Michaelian teachings in Stevens's book *TMH*, page 78. Refer to Chapter 2C in Part Two, "Sequences of Overleaves" for further information about that. For more information about "Color Assignments", refer to the chapter by that name, Chapter 4P in Part Four.
- 5. There are seven categories, Role to Body Type, listed along the left side of the Chart. Their sequence does not match that shown on any other Chart reviewed in this *History* book. A proposed rationale for ending this inconsistency is found in my book *The Tao of Personality*.
- 6. Taylor copied verbatim the names of the Overleaves and their Poles from Stevens's 1980s Chart #9. She did not adopt the changes that Stevens made later and that are shown in Chart #16.
- 7. There are explanatory parenthetical words or phrases under the name of each Overleaf. This is a helpful feature found on this and some other Overleaf Charts.
- 8. This Chart uses both Dragon and Obstacle for the Overleaf category that is usually called Chief Feature in the Michaelian teachings and on most Charts. Once again this is a reasonable change considering that the intended readership is outside the Michaelian teachings. The word Obstacle was used at the time of the revelation of these seven Overleaves when they were first listed by the Michaels on 27 February 1974, and Obstacle was also listed as an alternative in Chart #4 from the original Michaelian group. Stevens used the term Dragon in his book *Transforming Your Dragons*, published in 1994. Other than Ages, this is the only Overleaf category that Chart–makers have renamed, perhaps with good reason. The name Chief Feature was borrowed from the Gurdjieffian teaching, where the meaning is not only not quite the same as in the Michaelian teachings but is too obscure a label for a personality factor.

- 9. The third-from-bottom row, Perspective, is a substitute name for Soul Age. Here is another change in terminology that makes sense because of the change in intended readership. People who are not likely to believe in reincarnation are also not likely to want to hear about Soul Age. It can even be difficult for some Michaelian students, who might get the feeling that their perceptions are denigrated just because they are mere Mature Souls. Thus, to circumvent reference to reincarnation, and to circumvent some of the potential sting of hierarchical considerations, the seven Soul Ages from Infant to Infinite have been renamed: Infant becomes Surviving; Baby becomes Rule-making; Young becomes Competing; Mature becomes Relating; Old becomes Teaching; Transcendental becomes Guru; Infinite becomes Spiritual Master. Refer to Taylor's website for further information about them. A discussion about the differences within the Michaelian teachings on this subject can be found in Chapter 4M in Part Four, "The Seven Soul Ages".
- 10. There is a double line in the table that separates Perspectives from the trait categories above it. This is to emphasize that the structural system is different on both sides of the double line; above the double line, the structure juxtaposes Cardinal and Ordinal in the Axes of Expression, Inspiration, and Action. Below the line, the time sequence of Soul Ages/Perspectives is scrambled because of the desire on the part of the Chart–maker to make the Attributes at the top of the columns apply all the way to the bottom of the Chart.
- 11. Besides being scrambled out of sequence per line #10, that the Perspectives have a sequential hierarchy (as is the case with Soul Age) is obscured by naming them this way rather than naming them Infant, Baby, and so on.
- 12. Poles for the Perspectives are included, and they are for the most part identical to the Stevens Chart #16. Hoodwin also proposes names for Poles of Ages, as does Wittmeyer. There are some differences among them, as one might expect from people who are independent and creative thinkers.
- 13. In the next-to-last row, in the category Perspective Levels, neither the names nor their Positive and Negative Poles are included on Taylor's Chart. Chapter 4K in Part Four, "The Names of the Levels" includes names for the Poles of the Levels. The sequence of the Levels, as in "First, Second" and so on, are not given here. Like Perspectives, the sequence of Perspective Levels is scrambled by adhering to the juxtaposition of Cardinal and Ordinal polarities in the three Axes: Expression, Inspiration, Action.
- 14. The bottom row of the Chart shows seven chakras. Above the Chakras row a double line is shown. This indicates that a different type of ordering exists between those categories above and below the double line. In other words, the progression from lowest chakra to highest chakra does not match the progression from youngest Age/Level to oldest Age Level. To my way of understanding, this is another scrambling of sequences that is misguided.
- 15. Notice also that the lowest row shows the Centers that are allegedly associated with the chakras in the same cell. Notice how this provides a disconnect with the Centers shown in the top division of the chart in four out of seven cases. This was done to accommodate Stevens's chakra/Center schema. One might reasonably ask if this is not a clue that Steven's chakra/Center correlations is also misguided.
- 16. The colors ascribed to the chakras (with their location names and descriptions shown), when arranged in the Vibration Sequence match the colors typically ascribed to those chakras in only three of the seven instances. This scrambling appears to be the result of Taylor ascribing the Michael Math numbers to the traditional chakra numbers while keeping the Stevens Vibration Sequence colors. Refer to Chapter 2C in Part Two, "Sequences of Overleaves" for a discussion of Stevens's Vibration Sequence, which scrambles the Roles with respect to any other sequence found in the Michaelian teachings. Refer to Chapter 4J in Part Four, "The Chakras" for a thorough discussion of that subject. There you will see that scrambling the sequence of Chakras and their commonly-associated colors is unnecessary.
- 17. It would take three different Chart layouts to actually make the three sequences shown on this Chart work right: 1) the Michael Math Sequence (top seven categories) with Dialectic Attributes juxtaposed; 2) alleged chakra sequence; 3) Soul Age (aka Perspective) sequence. Taylor had three divisions in her Charts to make this less confusing, but for me to have just one Taylor Chart, it was done with double lines separating the three sequences. Wittmeyer handles some of this by having two Overleaf Charts arranged in elegant ways. He handles the erroneous chakra/Center correlation by correcting it.

18. I did not make room for it in my redrawing, but on Taylor's website, there is an interesting addition on this Chart: the percentages of the population for each Overleaf. It is not made clear if these percentages come directly from channeling or indirectly as the accumulation of data from hundreds of channeled personality profiles: >http://itstime.com/gameboard.htm<

Concluding Remarks

In comparing this Chart to others reviewed in this series, it can be said that the two main contributions that Taylor has made are: 1) extending the Overleaf System to a "mainstream" readership; and, 2) adding population percentages for each of the Overleaves.

Introduction

This Chart is an amalgamation of two Charts created by a member of the Yarbro group who never revealed his last name on a public-facing website. One of the Charts was dated October 2007 and the other was dated August 2009. Preferring to remain anonymous, he called himself "Steve" and "Mature Scholar". His two Charts were posted on a Yahoo group list named >messagesfrommichael@yahoogroups.com<, which was active for more than three years, from 2007 to 2010, but is now defunct. One can see there is a lot of interesting information on this Chart that has not appeared on any previous Chart (or any subsequent Chart).

- In the first row, the Axes along the top of the sheet are ordered according to the first part of the
 Michael Math Sequence first published in More Messages from Michael, pages 188 to 192: Inspiration —
 Expression Action Assimilation. Refer to Chapter 2C in Part Two, "Sequences of Overleaves" for
 comparison of the Michael Math Sequence with other proposed sequences. Refer to an appendix in
 this History book, Chapter E2, "The Natural Sequence of the Cosmic Septenary", for more information
 about my repudiation of the Michael Math Sequence.
- 2. The Axial Attributes (Inspiration Expression Action Assimilation) are provided with Positive and Negative Poles. No other Overleaf Chart reviewed in this series shows any such thing. In spite of my multi-decade investment in understanding the Axial Attributes, I have not been able to make sense of these names for their alleged Poles; what about you?
- 3. In the second row, the Positive and Negative Poles of Cardinality and Ordinality were not actually shown on either of Steve's Charts, but page 29 of *MMFM* provided them and it seemed appropriate to add them to my redrawing of his Charts.

- 4. The third row, Levels, shows the Level numbers and the names of Poles that were first given in *MMFM*. This is another Chart that favors juxtaposing the Dialectic Attributes (Cardinal and Ordinal), which results in the numbers of the Levels being out of numerical sequence.
- 5. The numbers of the Levels are correlated to the Septenarian Attributes according to the Michael Math Sequence. That is, Level One is Attributed Ordinal Inspiration, Level Two is Ordinal Expression, Level Three is Ordinal Action, and so on. Note that the so-called "Mid-Cycle" is not shown between the third and fourth Levels; it was shown on Chart #8 based on information found in Yarbro's book *More Messages from Michael*. The Mid-Cycle is discussed in detail in Chapter 4L in Part Four, "The Mid-Cycle Discrepancy".
- 6. In the fourth row, the sixth and seventh Soul Ages are Astral and Causal rather than Transcendental and Infinite as shown on many Overleaf Charts. This is appropriate because Transcendental and Infinite souls are not generally considered to be a part of the Soul Age progression. This is discussed in detail in Chapter 4M in Part Four, "The Seven Soul Ages".
- 7. In the same boxes with the names of the Soul Ages one can find descriptions and characteristics that have not been published in any of Yarbro's four books on the Michaelian teachings. Some of the words are very unusual constructions, though within the rules for the inflection or derivation of English words. No Poles for the Ages themselves are shown, but the names of the Issues and the Fortes of the Ages seem to serve that purpose.
- 8. The fifth row shows the seven Roles, with percentage of the world population for each Role conveniently indicated.
- 9. In the same boxes with the names of the Roles are four characteristics that apply to them; namely: Focus, WorldView, Seeks, and Sense. Some of this information can be found in Yarbro's published books and some of it is new to the world outside the Yarbro group.
- 10. The Chart shows Goal Mode Attitude Center Chief Feature in the same sequence as originally given in *MFM*. However, Steve's two Charts did not follow this sequence, nor did they follow the same sequence as each other. Only Wittmeyer has a logical (Dialectic) and a mathematical (Axial) rationale for sequencing the Overleaf categories, and this is presented in my book *The Tao of Personality*.
- 11. The Yarbro group has not reverted to the original revelation and the mainstream view that the Moving Center is a lower Center and the Sexual Center (by whatever name you call it) is a higher Center. Refer to Chapter 4H in Part Four, "The Action Centers", for a thorough discussion of that discrepancy within the Michaelian teachings community.
- 12. In the same boxes with the names of the Chief Feature we find a couple of lines of explanatory information about them; namely: "Fear of" and "Collects". This information about Fears can also be found in *MMFM*, pages 38–40, and it has also shown up on the Heideman #10, Hasselmann #14, and Hoodwin #15 Charts.
- 13. This Chart is the first time Body Types are named in any material that has come from the closed Yarbro group into the open Michaelian teachings community. The names of the Poles are those given to the original Michaelian group, not the names used by Stevens and subsequently by others; refer to the chapters on Charts #3 and #9. This means that Steve had access to the original Michaelian group transcriptions, or access to someone who had access to the original Michaelian group transcriptions, probably Yarbro. This Chart correlates the Body Types with the same Roles as Stevens did, rather than the correlation made by some others. Refer to Chapter 4D in Part Four, "Body Types", for a through discussion of this subject and its numerous divergences of opinion regarding how to fit the Body Types into the Overleaf Chart.
- 14. The Negative Pole of Artisan is given as –Deception, which also came from the original Michaelian group, but which was not used in *MFM* or *MMFM*, but was by other Chart makers.
- 15. The Poles of the Pragmatist Attitude are given in their adjective form rather than the original original Michaelian group and MFM noun form. The Negative Pole of the Greed Chief Feature is given as Voraciousness rather than the original original Michaelian group and MFM –Voracity. One wonders if these were intentional or the result of a "brain fart". Otherwise the names and Poles of Overleaves are the same as those given in MFM.

- 16. The seven Internal Monads, aka Life-Stages, are named on this Chart, along with their Negative and Positive Poles. The Monads are out of chronological sequence for the same reason that the Ages and Levels are out of chronological sequence: refer to #4 above. This information was made public in an Overleaf chart in 2009, but we do not know when it was originally channeled, probably by a member of the Yarbro contingent of the larger Michaelian teachings community. Victoria Marina-Tompkins, who was at one time affiliated with the Yarbro contingent, published a book on the Internal Monads, Spiritual Turning Points, and she revealed the Poles of the Monads in that book, published in 2011.
- 17. Chakra colors also have a row dedicated to them, but they are almost entirely different from everyone else who assigns colors to Michaelian septenaries; refer to Chapter 4P in Part Four for a discussion of "Color Assignments". The chakras themselves and their location on the body and other characteristics are not named or described here. However, refer to Chapter 4J in Part Four, "The Seven Chakras" for thorough discussions of this subject.
- 18. There is a row dedicated to "Elements." What this is about is perhaps known only to the members of the closed Yarbro group.
- 19. The last two rows on the Chart, Conflict and Love, were not actually on either of Steve's Charts. However, the names shown are found in Yarbro's 1988 book, *Michael's People*, pages 54–57. These two rows are scrambled because they are placed to conform to the Dialectic Attributes rather than their natural chronological sequence. They would make more sense if they were arranged in ascending order, as would three other categories: Levels and Ages and Internal Monads. Rather than confusingly show these two types of structure on one Chart, for his own Charting of traits Wittmeyer chose to create two Charts, #23 and #24 further on.
- 20. Four times there is a repetition of the same word in two or three different columns on the Chart (which would normally signify different natures) and there is no discernible pattern to the ambiguity. This happens with Reciprocity, Experimentation, Integration, and Achievement. In other cases, words have been given unusual forms. For instance: Subsumation, Prescriptivation, Self-envelopation, Judgmentalization, and Prescriptiveness. Perhaps these irregularities underscore the difficulty of finding just the right word for some names of some components of the Overleaf System. The repetition of words and the invention of words could also indicate that this offering is primitive and preliminary; maybe it needs more work if it were ever to reach a mature formulation. Not that there is anything wrong with that; maturity and optimization of conceptualization is something that many of us aspire to. My understanding of the abstract structure of the Traits and their Attributes in terms of logic and mathematics and physics works to eliminate these kinds of ambiguities and inventions.

This Chart has a lot more information than the typical Overleaf Chart, and consequently it is in need of a lot of explanation that is not contained on the Chart itself. My hope is that the information generated by the closed Yarbro group will eventually be released to the public.

Introduction

The Chart shown above is a redrawing of the actual Chart, with all of the information of the original retained.

Terri Benning is a Michaelian channel and teacher of long standing. She lives in the Bay Area where the Michaelian teachings originated. One can see and download a copy of Benning's version of the Overleaf Chart, dated 2020, from her website >michaelmosaics.com/michaelteachings.html<. It is not suitable for reproduction here, so it was redrawn. Since the columns are colored to correlate with the colors of the chakras, which are correlated with the Roles, it was not suitable for reproduction as it stood. The three bottom rows, Chakra, Color, and Plane, plus the four additional horizontal rows in the Role category, are not shown on her downloadable Chart, but they have been added to this one, based on information shown on her website.

Commentary

- The top line shows the Axial Attributes according to the Ordinal triad of Yarbro's "Michael Math" sequence: Inspiration Expression Action. Presumably Benning chose this pattern intentionally as an acknowledgment of Yarbro's contribution; it was also used by Heideman, Michael: the Basic Teachings authors, and Hoodwin. Other sequences were chosen by other Chart makers, for a reason known only to them. This is one of the chaotic elements in the structure of the various Overleaf Charts. My book The Tao of Personality presents a rationale for a particular order in the Axial Attributes.
- 2. One very obvious clue that Benning used the Yarbro books in constructing her Chart appears in the second row, which is actually labeled Michael Math. The numbers along the row are taken from the "Michael Math" chapter of *More Messages from Michael (MMFM)*. In that chapter of that book, number One was associated with Ordinal Inspiration and Server, Two with Ordinal Expression, Three with Ordinal Action, and so on.
- 3. For the Dialectic Attributes, Benning used the terms Ordinal and Exalted, the original Michaelian group and *MFM* terms still used by many others, rather than Ordinal and Cardinal, the terms introduced by Yarbro in *MMFM* and followed by many others.
- 4. The sequence of Overleaf categories down the left-hand column is the same as that given in *Messages from Michael (MFM)*. This and the use of Michael Math is good evidence that Benning was indebted to the Yarbro books for her Chart.
- 5. Benning has several Charts on her website, and one of them shows four attributes for each Role. These have been added to this Chart for purposes of comparison.
- 6. Benning added Body Types to the bottom of the Chart, something Yarbro did not pay attention to. The names of the Poles given are the same as those used by Stevens originally and later adopted by Cocconi and to some extent by Hoodwin. Some of these names are not the same as given to the Poles originally by the original Michaelian group. Benning does not add the three outer planets to the Body Types such as are shown on Chart #11 from *Michael: the Basic Teachings*, or as Cocconi did, as shown in Chart #13.
- 7. Benning may have based the structure of her Chart on Yarbro, but names of Overleaves and their Poles that are different from Yarbro are copied from non-Yarbro Charts; that is, the Charts of those in the Bay Area who published Charts. For instance: (Sage) +Dissemination; (Reevaluation) +Simplification; (Discrimination) +Discernment and -Rejection; (Relaxation) +Free-flowing; (Reserved); (Spiritualist) -Belief; (Idealist) -Naiveté; (Higher Emotional) +Love and -Empathy; (Higher Intellectual) +Insight; (Moving) +Productive and -Frenetic; (Higher Moving) +Integration; (Instinctive) +Natural; (Martyrdom) -Victimization. There are no new names among them.
- 8. Benning used the word Dragon instead of the original Chief Feature or another alternative from the original Michaelian group itself, namely Obstacle. José Stevens wrote an entire book, *Transforming Your Dragons* (1994), about this Overleaf category.
- 9. In the Dragon category Benning added a line of text, phrases for the basic fear expressed by each Dragon. Heideman did the same thing in her version of the Chart. This information is taken from *MMFM*, pages 38–40.
- 10. The third-to-last and the second-to-last rows show a correlation of colors and chakras. This information is taken from her web page, >http://michaelmosaics.com/sevens/7sacredcenters.html<,

which is dedicated to an explanation and correlation of the chakras and colors. That color-chakra correlation is per the modern Western esoteric schema; this is what I showed on the Chart above. On another web page she shows Roles and Centers along with the chakras and colors shown in a table, >http://michaelmosaics.com/sevens/essentialsevens.html<, using the same color schema from red to violet. However, on that same web page there is another table that shows the Roles and six Overleaves without Centers, but it switches Server with Scholar in the sequence from red to violet, creating a self-contradiction. As early as the original Michaelian group, attempts have been made by Michaelian students to correlate the seven chakras with the Overleaves, particularly the Centers. Benning's correlations differ in some respects from all other Michaelian sources. Refer to Chapter 1C in Part One and Chapter 4J in Part Four for a discussion of chakras and colors and correlations with Overleaves. Refer to Chapter 4P in Part Four, "Color Assignments", for a discussion of discrepancies on that subject among Michaelian sources.

- 11. The last row on the Chart, Planes, shows the same names found elsewhere in the Michaelian teaching, but, in the Ordinal triad of planes, she correlated them incorrectly; she assumed that the Michael Math Sequence applied, rather than the Natural Sequence, whereas all other Michaelian sources and numerous other esoteric sources subscribe to the Natural Sequence for the seven planes. For a discussion of this subject, refer to Chapter 1A in Part One and Chapter 4E in Part Four, "The Seven Planes".
- 12. There is nothing on this Chart about Soul Ages or the Levels within Soul Ages or the Internal Monads, aka Life-Stages. Nor could I find anything on her website about those subjects. As we have seen with previous Charts, it can be awkward and confusing to show stages of development on the same Chart that shows the Dialectic Attributes juxtaposed, and the Axial Attributes in various sequences. This awkwardness and confusion is avoided in Wittmeyer's two Charts, as we see further on.

Concluding Remarks

There is nothing really new to be found with this particular Overleaf Chart. So far as I can tell, Benning simply chose the components from other Charts that seemed to work best for her.

Introduction

The Chart shown above is a redrawing of the actual Chart, with all of the information of the original retained. This Chart came from José Stevens's ebook, *Personessence*, published in 2011. This book is available from the website, >http://www.josestevens.com/personessence.php<. My discussion here is more about the changes Stevens made to his own two previously published Charts than comparing and contrasting with the Charts of

others. Comparing this version with Stevens's previous versions, Charts #9 and #16, we see that the form is basically the same. Some of the changes were motivated by the fact that Stevens focuses some of his educational work toward a mainstream readership, rather than just Michaelian students. Whereas his first Chart, #9, was intended for Michaelian students, this particular Chart #20, and his previous one, #16, are not.

Commentary

- 1. This Chart is titled Personessence Profile System rather than Overleaf Chart, a change from the 1980s nomenclature. No doubt this is because in his newer book Stevens was writing for a non-Michaelian student readership, and the word Overleaves is not in the general vocabulary.
- 2. The top line is labeled Axis and the familiar Axial Attributes are shown in this order: Expression Inspiration Action Assimilation. This sequence originally appeared in *MFM* but some other sequences have also been used on other Charts examined in this chapter. Usually the sequence is Inspiration Expression Action Assimilation, which is reminiscent of the Michael Math Sequence in the Ordinal triad (Server Artisan Warrior). In no version of his Overleaf Charts did Stevens use the latter sequence; he always used the former sequence. I have been unable to find evidence that Stevens adopted the Michael Math sequence anywhere in his expositions on the Overleaf system, but I could have missed something.
- 3. The second line is labeled Focus, and the words that head up the seven columns are obviously meant to be a substitute for the Dialectic Attributes as originally given. Whereas Stevens used the words Exalted and Cardinal in his earlier versions, here he uses the word Wide, and Ordinal becomes Narrow. The Dialectic Attribute words are unfamiliar and meaningless to other than Michaelian students, so it was expedient to use words that have meaning to the intended readership, non-students of the Michael teaching. However, Wide and Narrow, and the parallel terms he used in his book *Taming Your Dragons*, namely Fat and Skinny (Dragons), only begin to express the meaning contained in the concepts of Cardinal and Ordinal. This terminology and the concept behind it is discussed at length in my book *The Tao of Personality*.
- 4. This Chart is far more similar to Stevens's Chart #16 dated 2002 than to Chart #9 from the 1980s. This makes sense because the intended audience of the latter two is the same, namely a mainstream population, not Michaelian students.
- 5. The order of the list of Overleaf Categories down the left hand column is identical to Stevens's Chart #16, except for the Nine Needs listed near the bottom, separated from the main body to show that they are not part of the Overleaf System. There is no attempt to correlate them with the Overleaves, so they have no Axial + Dialectic = Septenarian Attributes. These Nine Needs do not appear on any other Overleaf Chart that is reviewed in this series of chapters. Because they are not a part of the Overleaf System, they are not reviewed in this *History* book; refer to other resources in the Michaelian teachings community for more information about them.
- 6. The explanatory word (Archetype) is found under the word Role. The archetypal nature of Role is generally understood by students of this personality system, but the word appears on no other Chart reviewed in this *History* book. Occasionally some student comes along and wants to change the names of Roles from these traditional and historical "archetypes", but it has never gained traction in the Michaelian communities as a whole. Only Slave has made the transition to Server in most communities.
- 7. Two names of Overleaves are changed from Chart #16, namely: Re-evaluation becomes Abbreviation, and Reserve becomes Reserved. Twelve names of Poles were changed from Chart #16, namely: (Artisan) +Creativity becomes +Creation; (Sage) +Communication becomes +Dissemination; (Acceptance) Unconditional Love becomes Agape; (Passion) +Self-realization becomes +Self-actualization; (Perseverance) –Inflexible becomes –Unchanging; (Spiritualist) –Dogma becomes -Beliefs; (Pragmatist) Practical becomes +Efficiency and –Opportunist becomes –Dogma; (Greed) -Insatiability becomes –Voracity; (Intellectual) –Reasoning becomes –Rationalize; (Instinctive) +Aware becomes +Automatic and –Automatic becomes –Impulse. There was no reason to change these names for the sake of a non-Michaelian-student readership, so perhaps these changes reflect an evolution in his understanding. There appears to be no end in sight to the endeavor and aspiration to find just the

- right name for the traits and their Poles; refer to Chapter 24 at the end of this Part for a tabulation of these attempts at the time of this writing.
- 8. Eight categories are listed along the left side on both Charts: Role Goal Mode Attitude Obstacle Center Needs Perception. As usual, there is no apparent attempt to group them in a meaningful pattern, and as usual the order is inconsistent with most of the other Charts. My preference is shown on my Charts further on, and a rationale for a pattern is presented in my book *The Tao of Personality*.
- 9. The category of Levels is not included on any of Stevens's Charts, and Body Types are shown only on the 1980s Chart, which was intended for Michaelian students. It makes sense not to include Body Types among a collection of personality traits. Even though Level does pertain to personality traits, the concept of Level is difficult to explain outside of the context of Soul Age and reincarnation, so it makes sense to leave it off of a Chart intended for mainstream readership.
- 10. What is called Chief Feature in Stevens's 1980s Chart is called both Obstacle and (Dragon) in this later version. We saw the word Obstacle at the time of the revelation of these seven Overleaves when they were first given to the original Michaelian group, and Obstacle was also listed as an alternative in Chart #4 from the original Michaelian group. Stevens used the other term Dragon in his book *Transforming Your Dragons*, published in 1994. Other than Age, this is the only Overleaf category that people have wanted to rename, and it is especially necessary to do it for a readership that does not know the history of the term Chief Feature in the Gurdjieff and Michaelian teachings.
- 11. Notice the last horizontal line, Perception. This differs slightly from the previous Chart, where it is named Perspective. Elsewhere in the Michaelian teachings these are called Soul Ages. Stevens focuses a lot of his teaching enterprises toward non-metaphysically minded persons, so the former name works better than the latter for them. Most are not likely to be open to the idea of reincarnation, so such names as Baby Soul and Old Soul are better avoided. The word (Values) below Perception adds a layer of explanation not found on any other Chart.
- 12. On neither this Chart nor the previous one where Perspectives/Perceptions are found does Stevens correlate them with the other Overleaves, which would give them Dialectic + Axial = Septenarian Attributes. Other Charts do make a correlation, and this is discussed in my book *The Tao of Personality*.
- 13. Stevens proposes names for Positive and Negative Poles of the five Perspectives, aka Soul Ages, but some of these are different from his earlier Chart. Thus, (Infant) –Ruthless becomes –Destroy; (Young) Competing becomes Success Oriented; +Competent becomes +Competitive; (Old) –Detached becomes –Uninvolved. Other Chart–makers have proposed names for the Poles, and these are discussed in Chapter 4M in Part Four, "The Seven Soul Ages".
- 14. In his book *Transforming Your Dragons*, Stevens lists and describes seven stages of human development or maturity rather than five as shown here. There he names them: Infant, Toddler, Child, Adolescent, Adult, Elder, and Master. People in the last two stages are not called Transcendental or Infinite Souls, nor Astral or Causal souls, as shown on other Charts. These and other differences in this category are discussed in Chapter 4M in Part Four, "The Seven Soul Ages".
- 15. The Nine Needs as personality factors were either originated by Stevens or brought by him into the Michaelian teachings, as well as into his Personessence system. Because there are nine of them, they do not fit within the Overleaf System, which is based on the number seven. Furthermore, some of the names are identical or very similar to names of Overleaves or their Poles. For these reasons, there is no chapter explaining them in this *History* book; please refer to other Michaelian teachings resources, books, and websites.
- 16. Refer to Chapter 4F in Part Four, "The Instinctive Center". It is one of the favorite targets for changing the names of the Poles, because the meaning of the names originally given, +Atomic and -Anatomic, is obscure.
- 17. The phrase Primary Communication Style is found under the word Center. One might need to read his *Personessence* book to understand what Stevens's intention is. It might be different from or supplemental to the usual understanding.
- 18. The names of the three higher Centers are shown differently here from what is on any other Chart. The text is not capitalized as the other Overleaf names, and no Poles are shown. Perhaps this is a way of depicting the Gurdjieffian and original Michaelian group doctrine that the higher Centers are

allegedly not an ordinary human experience. This doctrine is explored in Chapter 4G in Part Four, "The Higher Centers".

Concluding Remarks

This Chart makes a few interesting changes to Stevens's previous Charts. Most of these are name changes rather than structural changes, and the name changes are appropriate for a readership of non-Michaelian students. As with most other Charts, there is a minor mixture of nouns and adjectives in the names and description of the Poles.

Introduction

Troy Tolley has been a professional channel for the Michaels for at least a couple of decades at the time of this writing, and is now living in New York City. This Chart (drawn by myself) compiles information from two Charts that can be found on Troy's website, >our.truthloveenergy.com<. One Chart is mostly about the Overleaves and their Poles, and the other Chart, which was accompanied by some explanations, is about what Troy called Correlations, Qualities, Characteristics, Sequences, Resonations, and Extended Resonations. This is his proposal for reconciling and understanding various sequences that have been proposed for the structure of the Overleaf System, specifically the Natural Sequence, the Michael Math Sequence, and the Chakra/Center Correlation Sequence.

Commentary

- 1. The Dialectic (Cardinal Ordinal Neutral) and Axial (Inspiration Expression Action Assimilation) Attributes are arrayed in the first two rows along the top of the Chart. Those Attributes apply all the way to the bottom of the Chart; the attributes Quality and Color in the third and fourth rows do not apply all the way to the bottom.
- 2. That sequence, Inspiration Expression Action, began with the *More Messages from Michael* Chart and has been copied by numerous other Chart makers. Notice in the second row from the top, Tolley prefers the word Exalted, originally used in the original Michaelian group and *MFM*, over the word Cardinal, introduced by Yarbro in *MMFM*.
- 3. What is here named Quality was called Numerical Quality by Tolley, and he just used numbers (1, 2, 3, and so on). To emphasize the Quality concept, I changed the numbers to Oneness, Twoness, and so on, to distinguish this from sequences (first, second, third, and so on) further down the Chart. These Numerical Qualities apply to all of the Overleaves in the columns below them, down to the double lines below the Age category. They are out of numerical sequence because this Chart, like most others, is arranged to favor the pattern of Dialectic Attributes (Ordinal Exalted juxtaposed) rather than the Ages/Levels maturation sequence. This causes confusion unless there are two Charts, one that favors one meaningful arrangement, and another Chart that favors another meaningful arrangement.
- 4. The next row assigns a Color to each column, but the color shown in that row does not go all the way to the bottom. In fact, there are three color schemes that show up on this Chart. The top one correlates with the Michael Math Sequence, the middle one correlates with a proposed Chakra/Center Correlation Sequence, and the bottom one correlates with the Natural Sequence. Refer to Chapter 2C in Part Two, "Sequences of Overleaves", for further information. Double horizontal lines separate these three Color zones, which are meant to convey various types of correlations. Also refer to Chapter 4P in Part Four, "Color Assignments", for a comparison and contrast of Tolley's proposals with each other, and with various other proposals by other channels.
- 5. There are ten categories listed along the left side of the Chart: Role Goal Mode Attitude Chief Feature Body Type Age Center/Chakra and Plane. Their sequence does not match that shown on any other Chart reviewed in this series. A proposed rationale for ending this inconsistency is found in my book *The Tao of Personality*.
- 6. There are no names for Overleaves and Poles shown on this Chart that are not shown on someone else's Chart, except +Freedom for the Positive Pole of FLOW.
- 7. Refer to the chapters on Body Type in Part One and Part Four for a discussion of Body Types.
- 8. In the Age category, the two oldest Ages are called Transcendental and Infinite rather than Astral and Causal or something else. This is a choice that has varied from Chart-maker to Chart-maker. An extensive discussion about the differences within the Michaelian teachings on this subject can be found in Chapter 4M in Part Four, "The Seven Soul Ages".
- 9. On neither of his online Charts did Tolley list the Levels or their Positive and Negative Poles. Refer to Chapter 4K in Part Four, "Names of the Levels", for a discussion of this topic.
- 10. Axial Attributes are shown to be associated with certain Overleaf categories: Goal (Action); Mode (Inspiration); Attitude (Expression); Center (Assimilation). This idea is not found on any other Chart, except Wittmeyer, where it is shown correctly and developed more fully. That is: Goal and Mode are the Ordinal and Cardinal Poles of Action respectively; Chief Feature and Role are the Ordinal and

- Cardinal Poles of Inspiration respectively; Attitude and Center are the Ordinal and Cardinal Poles of Expression respectively; Soul Age/Level is the Neutral Assimilation Axis; refer to the next two chapters for an introduction to this concept.
- 11. Between the two sets of double horizontal lines, the Sequence and the Resonance shifts in order to accommodate the change from the Michael Math Sequence above this zone to a proposed Chakra/Center Correlation Sequence within the zone. The colors and numbers are those typically ascribed to those chakras, but the Chakra/Centers correlation shown is borrowed from José Stevens, the version on page 157 of his book *Earth to Tao* (not the version shown on page 214 of *The Michael Handbook*). Refer to Chapter 4J in Part Four, "The Seven Chakras", for a thorough discussion. Refer to Chapter 4P in Part Four, "Color Assignments" for a thorough discussion of that subject.
- 12. The last four rows, at the bottom of the Chart, shifts 'Sequence' and 'Resonance' again in order to accommodate the Natural Sequence. This is because the planes follow the Natural Sequence, which is not disputed by anyone in the Michaelian teachings that I know of. Refer to chapters on Planes in Part One and Part Four for further information about this topic. Notice that there are two colors associated with each plane, one being the 'Sequence' color and the other being the 'Resonance' color. Refer to Tolley's online resources for more information. Refer to Chapter 2C in Part Two, "Sequences of Overleaves", for several sequences that have been proposed for patterning components of the Overleaf System.

Concluding Remarks

Because of Tolley's goal of accommodating three different sequences commonly found in the Michaelian teachings, this is the most complex Chart of any. Apparently Tolley regards his effort as a clarification of a confusing situation, where the different septenaries are scrambled with respect to each other, in terms of Septenarian Attributes and other attributes applied. Students have proposed various other sequences for various components of the Overleaf System, as we see in various places throughout this *History* book. In my opinion, it would add to the absurdity of what may be called "the Tolley method" if one were to attempt to accommodate these additional variations in the same way. I suggest that if Tolley were to add some of these other proposed sequences found in the Michaelian teachings to his efforts, such as the Vibration Sequence proposed by José Stevens and adopted by Barbara Taylor, this Chart would need to indicate yet another layer of "Resonances". We saw a similar scrambling of Chart components with Chart #17 by Barbara Taylor. The same as Tolley, she used colors to code the attributes, but so far as I am concerned, the result is the same, more confusion rather than less. Furthermore, the difference between Tolley and Taylor with respect to color-coding the Overleaves are not the only ones; refer to chapter 4N in Part Four, "Color Assignments", for the whole story.

If I may be frank, this confusing accommodation of dubious channeling does not work for me. I suggest that there is a better way. Arguments and evidences for one consistent sequencing of Overleaf Chart elements are found in my books *The Tao of Cosmology* and *The Tao of Personality* and *The Tao of Cosmogony*. My Charts, Charts #23 and #24, are an introduction to a path out of the confusion wrought by discrepancies in channeling and Charting. Some metaphorical 'chaff' must be sorted from the 'wheat', and the logical and mathematical pattern that underlies the Overleaf System must be accepted and understood and appreciated if one is to arrive at consistency, coherence, and consilience. The contradiction and the incoherence and the confusion is all so unnecessary — and all so counterproductive to understanding the Overleaf System in its beauty and glory.

Introduction

Sometime in the early 2010s, Michael Consortium channel Stephen Cocconi got it in his head that the Overleaf System traits could be put on playing cards and used for divination or insight purposes, somewhat like Tarot cards are used. He manifested this with the help of artists, and one can purchase the deck and the instruction book on how to use the cards from his website: >https://www.themichaelteaching.com/tarot/<. The cards show images, symbols, colors, and key words. The textual information in the table above, Chart #22, was extracted from the cards by Nancy Gillpatrick Cross, the primary editor of this *History* book and my other books.

Commentary

- 1. This table can be compared with Cocconi's Overleaf Chart, #13, dated 1992, from about twenty years earlier. In fact, this table was modeled after Cocconi's earlier chart, so it has exactly the same format in terms of columns and rows. This makes comparison easy to do. I suppose that everything that is said about Chart #13 in that chapter can also be said about this Chart, #22.
- 2. Whereas there could have been improvement in terms of the use of nouns only during the twenty—year development of Chart #22, there is still a disconcerting indiscriminate mixture of nouns and adjectives which is disconcerting if one is a stickler for consistency, as I am.
- 3. The names of all of the Traits remained the same, but some of the Positive and Negative Poles on this Chart are changed from those shown in his Chart #13. Reading from the upper left to the lower right of the grid, changes include (Artisan) –Self-delusion > –Artifice; (Server) –Manipulation > –Bondage; (Discrimination) +Differentiation > +Discernment and –Exclusion > –Prejudice; (Reevaluation) +Simplification > +Simplicity; (Relaxation) +Flow > +Adaptability; (Realist) +Objectify > +Objectivity; (Spiritualist) –Beliefs > –Credulity; (Pragmatist) +Practical > +Practicality and –Dogmatic > –Dogma; (Self-deprecation) +Self-effacing > +Humility; (Intellectual) +Conceptualization > +Contemplation; (Higher Intellectual) +Truth > +Conceptualize; (Emotional) +Sensitivity > +Perceptive and –Sentimentality > –Sentimental; (Higher Emotional) +Love > Unconditional Love; (Mercury) +Agile > +Agility; (Venus) –Sloppy > –Slovenly; (Saturn) +Rugged > +Formidable; (Uranus) +Mutation > +Evolution and –Deformity > –Disruption.
- 4. In the very upper left cell of the Chart we find this note: "One of the underlying assumptions of this Chart is that the Axes order parallel the process of the Scientific Method HTRC". The cells to the right of this note reveal that (Expression) H = Hypothesis, (Action) T = Testing, (Inspiration) R = Results/Interpretation, and (Assimilation) C = Conclusion. It would appear that Cocconi used this "process of the Scientific Method" as a rationale for sequencing the Axial Attributes as Expression > Action > Inspiration > Assimilation rather than one of the three other sequences shown on other Charts, namely (1) Expression > Inspiration > Action > Assimilation and (2) Inspiration > Expression > Action > Assimilation and (3) Action > Inspiration > Expression > Assimilation. Cocconi is unique in his sequencing of the Axial Attributes, as the HTRC sequence is not shown on any other Chart. Personally, I don't see enough similarity in the meaning of the terms used, and I don't see the relevance of the HTRC to the Chart, so naturally I prefer my own rationale having to do with the geometric dimensionality of the Axes, which is shown on my charts (#23 and #24) and explained in my book *The Tao of Personality*.
- 5. The first row below the title row shows the Axial Attributes of Expression, Action, Inspiration, and Assimilation. The row below that row shows the Dialectic Attributes of Ordinal and Exalted, but Neutral is omitted. (The combination of Axial Attributes with Dialectic Attributes yields Septenarian Attributes.) The thing that is different about this Chart #22 from Cocconi's earlier Chart #13 is that names for Positive and Negative Poles for Axial and Dialectic Attributes are provided. The only other chart where this happens is Chart #18 from Mature Scholar Steve, a member of the Yarbro group. Comparing the two yields as much confusion as it does enlightenment unless one's word definitions are very semantically ambiguous. For instance, (Ordinal) +Responsiveness versus +Connectedness and -Passivity versus -Invisibility; for instance (Cardinal/Exalted) +Lucidity versus +Expanded and -Activity versus -Imposing; for instance, (Expression) +Declaration versus +Invention and -Distortion versus -Fantasy; for instance, (Action) +Deliverance versus +Engagement and -Incitement versus -Agitation (that is the only one that works for me); for instance, (Inspiration) +Investiture versus

- +Intention and –Misappropriation versus –Despondency; for instance, (Assimilation) +Crystallization versus +Inculcation and –Experimentation versus –Disintegration. These discrepancies are quite unlike instances where Chart–makers prefer to slightly tweak the name of one Pole or another, as shown throughout these Charts. My guess is that Old Sage Stephen was unaware of what Mature Scholar Steve had to say. (Except that the Poles of Ordinality and Cardinality were given in *More Messages from Michael* on page 29.) In Part Four, "Essays on Issues", I document numerous other instances where when one channel does not know what another channel has said on a subject, the answers are often as not divergent rather than convergent. These discrepancies call into serious question the validity of the whole channeling process; it is too unreliable to place much confidence in it. And then, these discrepancies throw the burden upon the students to "validate" stuff for themselves, which is Good WorkTM, and which is one of the primary motivations for writing this *History* book. Personally, I have not felt the need to think up appropriate names for Poles for Axial and/or Dialectic Attributes.
- The bottom row of this Chart, Soul Age, is not a Trait category that is shown on Cocconi's earlier Chart, Chart #13. Notice that these are not the names of the Soul Ages as originally and normally given by other Chart-makers. Cocconi discusses the Soul Ages on his website and the names used there are the usual: >https://www.themichaelteaching.com/michael/soul-ages/<. The names of the Poles given by Cocconi to these Soul Ages do not match the names applied by other Michaelian sources, not even those that were extant in the community at the time. The names used on Chart #22 appear to fit the so-called "Internal Monads" (what I call Life-Stages) better than they do the Soul Ages. But yet, the Internal Monads shown on the cards only partially resemble the Internal Monads described on Cocconi's website: >https://www.themichaelteaching.com/michael/internal-monads/<. Recall that the Internal Monads are the alleged stages that a person can go through in the course of a normal full lifetime. Life-Stages, including Cocconi's contribution, are discussed in this History book, in Chapter 4Q. There you will read that the names given to the Poles do not match those that other Michaelian sources have applied to the Internal Monads. Because of this apparent mixture of Soul Age and Internal Monads, I am not certain how to understand the bottom row of this chart. Therefore, I regard the contents of this row as just more of the same kind of confusion and ambiguity that is found in many other Michaelian sources when it comes to the systematic component of the Michaelian teachings. I blame this proliferation of confusion and ambiguity on the fact that the Michaelian channels do not actually understand the logical and mathematical structure that provides the framework for the Overleaf System. Decades after the System's original revelation, channels are still 'groping in the dark' when it comes to discerning its pattern and the meaning thereof.

Speaking of discerning the meaning of the pattern of the Overleaf System, lets now take a look, finally, at my suggestions for doing that, as indicated and introduced in the next two Charts.

Chart #23

Introduction

Heretofore I have examined various Overleaf Charts that were presented in two basic arrangements. Most of them have an arrangement similar to the above, where complementary Dialectic Attributes (Cardinal and Ordinal) are juxtaposed on their Axis, whether it be Action, Inspiration, or Expression, with Assimilation bringing up the rear. The other type arranges the Overleaves with the Neutral placed between the Cardinal triad and the Ordinal triad. For reasons that are explained in my other books, I refer to the former as *Space Structure* and the latter as *Time Structure*. Each arrangement emphasizes different things about the Overleaves, and each type can be used for different purposes. This Chart chapter and the next Chart chapter are bare introductions to my Process/Aspect System, a name that distinguishes it from the usual Overleaf System Charts. There are new and original ideas herein that you will not find elsewhere in the Michaelian teachings. Some of the new concepts have been alluded to in chapters on other Charts, but here they are graphically displayed. The evidences and arguments for the new concepts are all explained in numerous chapters further on in this *History* book, and in my books *The Tao of Personality* and *The Tao of Cosmogony*.

As you have seen in the series of Charts leading up to this chapter, the sequence of the seven Overleaf categories (Goal — Mode — Chief Feature — Role — Attitude — Center — Age/Level) has varied all over the place. So far as I know, Shepherd Hoodwin and Varda Hasslemann are the only people other than myself who has attempted to find a meaningful order for them. In my *Tao of Personality book*, arguments are presented that the Overleaf categories can reasonably be arranged as shown on this Chart, an insight that I had in 1981, immediately after I began to study the Overleaves. I quickly discerned that they form a pattern in a system, and the basis was logic and mathematics. The logic of the system is yes, no, and both/neither; the mathematics of the system is one-dimensional, two-dimensional, three-dimensional, pan-dimensional. Nothing in the Overleaf System is random or arbitrary. The Michaels did not make this Overleaf System up; the Michaels did not explain where this Overleaf System came from; that task has fallen to me; it comes from the Tao; it is Tao's Template. Because of the new and unusual features of this Chart, you might find it helpful to study the Chart before reading the Commentary below.

Commentary

- 1. The top four rows are Attributes in the Overleaf System and the Process/Aspect System. The Attributes apply to the entire column from top to bottom of the Chart. The Rank numbers are out of sequence because the Space Structure Chart juxtaposes the Dialectic Attributes (Ordinal Cardinal) of each Axis (Action Inspiration Expression). Combine a Dialectic Attribute with an Axial attribute and you have a Septenarian Attribute; for example, Ordinal Expression. The Dimension Attributes are the geometric abstractions of the Axial Attributes.
- 2. In a box near the upper left corner of the Chart just below the four Attribute rows, the word Process and the word Aspect appear. The seven Aspects of personality are in the column down the left side of the sheet (Zone and Worldview count as one Aspect; you know these as Level and Soul Age), and the seven Processes of personality are in the fifth row across the sheet. The Aspects of personality are space-like, and the Processes of personality are time-like. So, the Process/Aspect System is the Time/Space System. This has implications in the science of physics.
- 3. Regarding Dialectic Attributes, rather than use the original original Michaelian group word Exalted as the complement to Ordinal, I prefer to use the word Cardinal, which was introduced in *More Messages from Michael*. With this change in terminology, we see that Ordinal and Cardinal are both mathematical terms, so this naming convention has mathematical implications, in concert with other mathematical features of the Overleaf System.
- 4. Notice the third row and the left-most column of vertical text. These are the Axial Attributes of Action Inspiration Expression Assimilation; nothing new to report here. Nothing new to report in the fourth row and the second column of text, either. These are the Dialectic Attributes of Ordinal and Cardinal complementaries times three, followed by the Neutral. Thus, each Process and each Aspect has Septenarian Attributes: Cardinal Action, Ordinal Inspiration, and so on.
- 5. You have seen all of those Axial and Dialectic and Septenarian Attributes on numerous other Charts. Where you see something new is in the second row and in the second column of text, thus: -1-D-, +1-D+, -2-D-, and so on, ending with =P-D=. The D means Dimension and the P means Pan and the numbers mean what numbers ordinarily mean. I call these the Dimensions of the personality. As with

other features of the Overleaf System, Dimensionality has mathematical implications. Specifically, the Dimensions of the personality can be abstracted to geometric figures in the same way that physical phenomena of nature can be modeled with geometry. The rationale for this is explained in detail in Part One of my book *The Tao of Personality*. Briefly, 1-D Action is linear and has a +Beginning and an – End; 2-D Inspiration is a planar surface and has a +Top (up) and a –Bottom (down); 3-D Expression is a hollow solid and has an +Inside and an –Outside; P-D Assimilation is all of the above combined.

- 6. I arranged the Dimensions in ascending numerical order on the Chart, from left to right and from bottom to top. To me, this seemed to be meaningfully appropriate.
- 7. This arrangement of Dimensions also creates groups of four Overleaves, which exhibit various kinds of duality. I refer to these as Quadrates. Pick any Overleaf, and the other three Quadrate mates help define it by comparison and contrast. In each Quadrate, Ordinal is on the bottom, Cardinal is on the top, Ordinal is on the left, Cardinal is on the right. To me, this seemed to be meaningfully appropriate.
- 8. This Chart may be used to assess how two people might get along in a relationship. The more Overleaves the two people have in the same Quadrate, the more meaningful the relationship would be, all other things being equal. The fewer Overleaves the two people have in the same Quadrate, the more meaningless their relationship would be, all other things being equal. This use of the Overleaf System is explained in great detail in Part Three of my book *The Tao of Personality*.
- 9. The fourth row of text near the top of the Chart shows the usual seven Overleaf (aka Aspect) categories: Goal Mode Shadow (aka Chief Feature) Role Attitude Center Zone/Worldview. You have seen all of them on other Charts. What is new is that I have assigned Septenarian Attributes to those Overleaf, aka Aspect, categories. For instance, Role has the Septenarian Attribute of Cardinal Inspiration. This provides a symmetry with the Processes, which have been assigned Septenarian Attributes ever since *MFM*. Please examine and consider now whether those Attributes for the Overleaf categories make sense to you.
- 10. The fifth row in the table shows names for the seven Processes. This is new, not shown on any previous Chart. There is the usual triad of Ordinal and Cardinal complementary pairs plus the Neutral, thus: Termination and Origination, Involution and Evolution, Analysis and Synthesis, and Combination. Notice the oppositeness in each pair on each Axis. This naming of Processes provides a symmetry with the names of the Aspects (Overleaf categories: Goal Mode, and so on), which have had names since their original revelation in the original Michaelian group.
- 11. The names for the Processes are my attempt to capture the combined quality of all seven Aspects of each Process. For instance, the word "Origination", the name given to the Cardinal Action Process, captures the essence of Dominance Aggression Impatience King Realist Excitation Activation Activism combined. That is, all of these Aspects are about making events happen. Some study and thought will reveal that the meaning of the name for each Process is manifested in all seven Aspects of that Process.
- 12. The Processes have more than a passing resemblance to the Aspect with which they correspond because they have identical Septenarian Attributes. That is, the Termination Process corresponds with the Goal Aspect because they both have the Septenarian Attribute of Ordinal Action; Origination corresponds with Mode because they are both Cardinal Action, and so on. Some study and thought will reveal the resemblance for all seven correlations.
- 13. Most of the names of the Overleaves and their Poles are what can be seen on other Charts, but some are not. These are explained in Part Two of my book *The Tao of Personality*.
- 14. Some other Chart–makers changed the name Chief Feature to either Obstacle or Dragon. In this Chart I introduce the word Shadow. I show it juxtaposed, or perhaps rather opposed, to the Role. That is, Shadow has the Attribute of Ordinal Inspiration and Role has the Attribute of Cardinal Inspiration.
- 15. Zone (aka Level) and Worldview (aka Soul Age) both have the Attribute of Neutral Assimilation. This means they have a quality that is the combination of the other six Aspects in the same Process. For example: Growth Goal + Passion Mode + Arrogance Shadow + Priest Role + Spiritualist Attitude + Sympathy Center = Transcendence Zone and Transpersonalism Worldview.
- 16. What others call Levels I refer to as Zones on this Chart. Most Chart-makers do not even show Levels on their Charts, but when they do, they never provide descriptive names for them other than "First",

- "Second", and so on. My Charts are the only ones that provide names for the Levels/Zones. Charts that do show Levels usually provide names for the Positive and Negative Poles, which were borrowed verbatim, without examination, from Yarbro's 1986 book, *More Messages from Michael*. The *MMFM* names never worked well for me, so I reworked them to my satisfaction in 1992, as explained in Chapter 4K in Part Four. My names for the Levels are synonyms for the names of the Processes, since the names of the Processes also embody all seven Aspects of each Process. Thus: Combination = Experience; Synthesis = Unification; Analysis = Separation; Evolution = Transcendence; Involution = Immanence; Origination = Activation; Termination = Resolution.
- 17. I have chosen names for the Worldviews (aka Soul Ages) that differ from the usual Soul Age names. Therefore, this Chart is appropriate for people who do not know or care about reincarnation and its ramifications. Also, naming rather than numbering Zones, aka Levels, circumvents issues of superiority and inferiority that typically arise when discussing Levels (and Soul Ages).
- 18. As noted above, I have changed most of the names of the Positive and Negative Poles of the Zones, aka Levels, from the names given in *MMFM*. There are two reasons for this: a) The names given in *MMFM* lack "complementarity" on the Ordinal and Cardinal sides of the Axis, whereas all of the other Overleaves on an Axis have obvious complementarity; b) The names of the Poles of the Levels given in *MMFM* also lack "resonance" with the names of the other six Aspects in the same Process, whereas the other six Aspects in the same Process have obvious resonance. Refer to Chapter 4K in Part Four, "The Names of the Levels", for a thorough explanation.
- 19. Some other Chart-makers propose names for the Positive and Negative Poles of the Worldviews (aka Soul Ages). I use some of those same names as well as proposing some different names. My goal for name selection was to provide the same complementarity and resonance with the other six Aspects in the same Process that was sought in the selection of names of the Levels and their Poles, as well as providing an accurate fundamental terminology for each Worldview and its Poles. Therefore names for Levels and Ages are approximately synonymous, and each can be used to enhance the understanding of the other.
- 20. The last two Worldviews (aka Soul Ages) are named neither Transcendental and Infinite, nor Astral and Causal, both pairs of which have been used on previous Charts. There are some students inside and outside the Michaelian teachings who believe or suspect (as I do) that it might take all seven Ages for the soul to get through incarnation on the Physical Plane. Or perhaps the last two Ages are used by Bodhisattvas, souls who are free of karma and have completed the Monads but reincarnate for philanthropic or compassionate reasons. Whatever the case, I have named the two last Worldviews "Transpersonalism" (with Poles of +Liberation and –Catharsis) and "Messianism" (with Poles of +Revolution and –Provocation). These two words do not necessarily imply the aging and maturing process of reincarnation. The rationale for all of this is presented in Chapter 4M in Part Four, "The Seven Soul Ages".
- 21. This chart and my other chart (see next chapter) show names for seven Life-Stages, and their Positive and Negative Poles. These are derived for the most part from the so-called "Milestones" or "Internal Monads" of the Michaelian teachings. This is the septenary that comprises the stages that a person goes through during an ideal full lifetime from birth to death. Because my understanding has some differences from the prevailing Michaelian teachings orthodoxy, I adopted the names for that fit better with the research of developmental psychologists. The Internal Monads first appeared in *Messages from Michael*, and they have been described by numerous Chart-makers since then, but the only other Chart to include this septenary is #18, which originated within the Yarbro group. Refer to Chapter 4Q in Part Four, "The Seven Life-Stages", for an explanation of this septenary.
- 22. Most of the names on other Charts are nouns with a few adjectives sprinkled here and there. The consistent holdout on all Charts is the names of the Centers, due perhaps to the fact that their originator, Gurdjieff, used the adjective form. Only with this Chart are the names of all Overleaves and Poles given in noun form, including the Centers.
- 23. Refer to Chapter 4F in Part Four for a thorough discussion of the Instinctive Center, which I prefer to call the Impulse Center.
- 24. Some name changes for Overleaves are notable: In the Centers category, Higher Emotional becomes Sympathy and Higher Intellectual becomes Concept. The rationale for this change is explained in

Chapter 4G in Part Four, "The Higher Centers". Briefly, there is a mundane, less common but not extraordinary, manifestation of these Centers, and the use of the word "higher" is misleading; the Dialectic Attribute, Cardinal, is adequate. With the Shadow Aspect, Lowliness substitutes for Self-deprecation, and Renunciation substitutes for Self-destruction. Also in the Centers category, Motion substitutes for the Lower Moving Center, and Excitation substitutes for the Higher Moving Center. This latter change is discussed in Chapter 4H in Part Four, "The Action Centers".

- 25. Near the bottom of this Chart I show names of the seven Body Types as given in the Michaelian teachings, named after the seven visible "planets". Elsewhere in this book, in Chapter 4D in Part Four, "Body Types", I make it clear that Body Types are not an Overleaf except to the extent that they might be combined with Centering in some way, but I show them on this Chart anyway, with the correlation to Septenarian Attributes that I prefer.
- 26. Near the bottom of this Chart I show the names of the locations of the seven major Chakras. Refer to Chapter 1C in Part One and Chapter 4J in Part Four, "The Seven Chakras", to read about the evidences and arguments for the placements as shown.
- 27. Some Chart-makers assign colors to the Overleaves, and so do I. My preferred schema is shown on my Chart in the penultimate row. Various Chart-makers have various other schemes. You may read about them all in Chapter 4P in Part Four, "Color Assignments".
- 28. The bottom row of this chart shows the names of the planes that Theosophy has given to them, and which I have adopted. Refer to Chapter 1A in Part One and Chapter 4E in Part Four, "The Seven Planes", for the discussion.

Concluding Remarks

Much about this approach to the Overleaf System will be unfamiliar and therefore might be puzzling to the typical Michaelian student. Some of it even goes against the dogma-doctrine of the orthodox Michaelian teachings. Please bear with me on this. I do my best to explain it all in two of my books *The Tao of Personality* and *The Tao of Cosmogony*.

Introduction

My previous Chart, #23, is more suitable for non-students of the Michaelian teachings because it does not explicitly show the maturation process driven by reincarnation. My Chart above, #24, does show that, and other processes of maturation.

Everything shown on the previous Chart, *Space Structure*, is also shown on this Chart, *Time Structure*, just rearranged. Consequently, much of what can be said about this Chart has already been said about the previous Chart, so it is not repeated here. There is an abundance of information in my other books explaining the features of both Charts, but if readers study this and the previous Chart and try to understand them before reading the explanations in those books, they can come up with their own answers, or at least their own questions. Then the answers offered in my books will be more meaningful.

In 1986, in the "Michael Math" chapter of *More Messages from Michael (MMFM)*, Dialectic (Ordinal — Cardinal — Neutral) and Axial (Action — Inspiration — Expression — Assimilation) Attributes for Age/Level were proposed for the first time in the history of the Michaelian teachings. It correlated the Infant Soul / First Level with Ordinal Inspiration; the Baby Soul / Second Level with Ordinal Expression; the Young Soul / Third Level with Ordinal Action; the Mature Soul / Fourth Level with Neutral Assimilation; the Old Soul/ Fifth Level with Cardinal Expression; the Astral Soul / Sixth Level with Cardinal Inspiration; and the Causal Soul / Seventh Level with Cardinal Action. I have come to call this the Michael Math Sequence. In this Chart, I show an alternative that I call the Natural Sequence, which came to me immediately upon reading *MMFM* in 1986. (The Planes and numerous other space/time phenomena are structured per the Natural Sequence, hence the name.) It was intuitively obvious to me that the Michael Math Sequence was incorrect in the Ordinal Triad. The correct sequence is: First = Ordinal Action; Second = Ordinal Inspiration; and Third = Ordinal Expression. I leave the remainder unchanged. This makes the Ordinal triad the reverse or mirror image of the Cardinal Triad. Brief evidences and arguments for this alteration are found in other chapters of this *History* book in various places, but the full explanation is found in the appendix to this *History* book, in Chapter E2, "The Natural Sequence of the Cosmic Septenary".

Commentary

- 1. On this Chart, the Ordinal triad is separated from the Cardinal Triad by the Neutral. This is an arrangement shown on the very first Overleaf Chart from the original Michaelian group, Chart #1 in this series, and only three other Charts after that, including the *MMFM* Chart, Chart #8.
- 2. In the MMFM Chart, the Septenarian Attributes were ordered as: Ordinal Inspiration Ordinal Expression Ordinal Action Neutral Assimilation Cardinal Expression Cardinal Inspiration and Cardinal Action. Note the lack of mirror symmetry between Ordinal and Cardinal sides. By contrast, this Chart shows the sequence as: Ordinal Action Ordinal Inspiration Ordinal Expression, and the remainder the same as MMFM. This arrangement makes for a mirror symmetry between Ordinal and Cardinal sides of the Chart.
- 3. Besides the mirror symmetry of Septenarian Attributes on the horizontal axis of the page in terms of the Processes of Personality, there is an identical mirror symmetry on the vertical axis in terms of the Aspects of Personality. Altogether, this is the most symmetrically possible arrangement of the Overleaf System. As such, it becomes a beautiful object because of its mathematical elegance; all other Charts are seen to be ugly in comparison; they offend aesthetic sensibilities.
- 4. This Chart is called "Time Structure" partly because it arranges Level and Worldview (Soul Age) in numerical sequence. The Levels are numbered on this Chart from the First Level to the Seventh Level, left to right across the page. Names for these Levels are shown on the previous Chart and in Chapter 4K, "The Names of the Levels". The Soul Age row likewise indicates the aging process from left to right in that row. Five of the Soul Age names are different from the original, and these are explained in Chapter 4M in Part Four, "The Seven Soul Ages".
- 5. By counting how many Overleaves are in the left or Ordinal and the right or Cardinal half of the Chart, then totaling them, leaving the Neutral out of the count, one may assess a person's Cardinal / Ordinal Index (COI). For instance, I am in +Acceptance, +Arrogance, +Spiritualist, +Senior, +Fifth, +Concept, -Artisan, =Observation, totaling a Cardinal / Ordinal Index of +5. Most Michaelian students are probably in the Cardinal COI range because people in the Ordinal COI range are more interested in the mundane world than they are in the metaphysical world.

- 6. The first row below the usual block of forty-nine Overleaves shows the seven Body Types. The names of the Body Types and their Poles are mostly the same as those provided by the Michaels to the original Michaelian group; I made a few changes to suit my unique understanding and sensibilities. There is some disagreement among Michaelian students about which Body Types correlate with the other Overleaf categories, so I have examined the situation and, again, come up with my own correlations. Refer to the chapters on Body Type in Part One and Part Four.
- 7. The next row down shows the seven major chakras, a subject that is covered in the chapters "The Seven Chakras" in Part One and Part Four. The colors ascribed to the chakras are standard in modern esoteric lore; refer to Chapter 4P in Part Four, "Color Assignments" for the details.
- 8. The bottom row shows the seven Planes. Those are discussed at length in the chapters, "Planes", in Part One and Part Four. Here again, I show some departures from the orthodox Michaelian teachings, arrived at via my extensive process of Validation, following my maxim, "The unexamined teaching is not worth believing".

Concluding Remarks

When one compares the twenty plus Overleaf Charts that have appeared over more than four decades, one sees that there is little consistency in their structural arrangement. To my way of thinking, it seems unfortunate that the Michaels did not reveal the complete pattern of the Overleaf System, including its underpinnings in logic and mathematics, at the very beginning. For whatever reason, that task fell to me. My two Overleaf Charts reveal the pattern; my other books explain the pattern in detail.

Chapter 25

TABULATION OF NAMES OF OVERLEAVES AND POLES

The aspiration and endeavor to come up with exactly the right name of the Overleaves and of the Poles of the Overleaves has been going on since the original Michaelian group. For instance, soon after the Michaels revealed the Slave Role, someone suggested that there should be a better name, and the Michaels promptly suggested Server.

Don't you think it would be very instructive and handy to have all of those suggested changes in one place so that you could compare and contrast them and extract as much understanding as you can, to determine which one you prefer? So do I. In this chapter, I provide a tabulation of different names shown on the Overleaf Charts reviewed in the previous chapters, beginning with the "Ordering of the Cosmos" Chart from the original Michaelian group in 1974 and continuing to the present day. Tables displaying all terms used, Overleaf category by Overleaf category, are found on the next few pages.

Various comments on how the following tables were prepared may be helpful:

- 1. A separate table was compiled for each of the Overleaf categories: Goal, Chief Feature, Attitude, Level (within Soul Age), Soul Age, Center, Role, Mode, and Body Type. Not every Chart reviewed above includes every one of these as an Overleaf, or even agree as to whether, for instance, Role is an Overleaf or Body Type is an Overleaf. (Because of this disagreement in the Michaelian teachings community about which trait septenaries are "Overleaves", I prefer to refer to all of these septenaries as "Aspects" of Personality.) But these are all core items in understanding the Michaelian teachings on Personality.
- 2. The tables are presented in the Natural Sequence for the Aspects (Overleaf categories): Goal, Chief Feature, Attitude, Soul Age, Level, Center, Role, Mode. Several chapters in this book and Appendix Chapter E-2 describe the Natural Sequence, but the full exposition is found in my book *The Tao of Cosmogony*.
- 3. In any particular box, the alternative terms are listed top-to-bottom in order of their first appearance in the Charts reviewed above. There is no indication of how many different Charts a term appears in, since some Charts adopt almost all of the terminology of certain previous Charts, indicating much shared understanding of the Overleaves. One might say there are "families" of Chart styles represented.
- 4. The effort was to assemble a comprehensive list of every term used in every Chart. A basic review of the tables will reveal that for some Overleaves (and their Poles) the same term is used repeatedly by multiple Chart–makers, while in other cases a term has been sufficiently problematic that Chart–makers have searched for alternatives. Every Chart–maker calls the Cardinal Expression Goal by the same name, "Acceptance", but the Ordinal Inspiration Goal shows up in the combined Chart with five different names indicating that the flavor of this particular Goal has been difficult to render in the English language. It can be interesting to study comparatively such word choices as to whether or not they clarify the understanding of an Overleaf and its Poles. One can imagine a Michaelian student, after study, producing a Chart where certain terms are represented by more than one of the alternatives on the following combined tables (but certainly not all of the alternatives shown).
- 5. The compilation demonstrates inconsistency among Chart-makers as to when nouns or adjectives are used to label Overleaves and Poles. This has already been seen within some of the individual Charts reviewed above. This inconsistency becomes more apparent when bringing together the terms used in multiple Charts. As one example, the Pragmatist Attitude is listed with a Positive Pole of either

- +Practical or +Practicality and a Negative Pole of either –Dogmatic or –Dogma, among other word choices made for the Poles of this Attitude. (My preference is to always use nouns; this was the precedent established in the original Michaelian group, and it makes the most sense to me.)
- 6. Although the effort was to list every term from every Chart, a couple of exceptions must be noted. The very first Charts of the original Michaelian group (#1, #2, and #3 above, but particularly #2) were such preliminary efforts to pull together the information being obtained that certain confusions, as identified by later understanding, are not carried into the combined tables. And the confusion in Charts #7, #11, and #12, which place the Emotional Centers on the Expression Axis and the Intellectual Centers on the Inspiration Axis clearly an error has been ignored in the following table of Centers.
- 7. However, the major confusions in the names and Poles of the Ordinal and Cardinal Action Centers are reflected in the combined table. The Michaelian student community may need to take a closer look at these confusions and what they might mean.
- 8. The discrepancies among the various Charts that included Body Type (with regard to correlating with Septenarian Attributes) were so great that four separate Body Type tables could have been created. However, I chose to conflate them into one table and show Body Types correlated with Septenarian Attributes per my preferred schema. Refer to Chapter 4D in Part Four, "Body Types", for evidence and argument.
- 9. The name(s) of the Overleaf itself is (are) shown in bold capital letters in the center of the cells; the Positive Pole(s) are stacked above the Overleaf names (in a separate cell of the table); the Negative Pole(s) are hung below the names (in a separate cell of the table). This is the most common format in the Charts themselves.
- 10. General comments on the tables are as follows:
 - FIRST ROW shows the name(s) that have been proposed for the Overleaf category (aka Aspect) in bold upper case letters. Also shown are the Septenarian Attributes of the Aspect in lower case letters.
 - SECOND ROW shows the Dialectic Attributes.
 - THIRD ROW shows the Axial Attributes. Add the Axial Attributes to the Dialectic Attributes and we have the Septenarian Attributes.
 - FOURTH ROW shows the Processes in Personality. The name of a Process is a single word that
 expresses the nature of the two-word Septenarian Attributes. (The names of the Roles are often
 used as 'personifications' of the Septenarian Attributes/Processes.)
 - FIFTH ROW shows the names that have been proposed for the Positive Poles of the seven
 Overleaves in the Overleaf category.
 - SIXTH ROW shows the names that have been proposed for the seven Overleaves in the Overleaf category, in upper case letters.
 - SEVENTH ROW shows the names that have been proposed for the Negative Poles of the seven Overleaves in the Overleaf Category.

Because there is no consensus in the Michaelian teachings community, in this table Body Types are shown with Septenarian Attributes as Wittmeyer understands them, not as anyone else understands them.

CONCLUSION TO PART THREE

Looking at all of the changes that have occurred over the last fifty-plus years in Overleaf Chart-making might be confusing to Michaelian students. It is to be hoped that this lack of agreement among Chart-makers will induce Michaelian student to ponder and study out what works for them, and not adopt any particular Chart-maker as their unquestioned authority. In other words, one might learn from all of these Charts, neither rejecting nor accepting any of them thoughtlessly and heartlessly. Obviously, I have gone through this process myself, and come up with what seems best for me, as shown on my own two Charts. I believe that one lesson to take away from this series of chapters in Part Three is that those who really study hard to understand the Overleaves and their Poles often come up with words that differ from the original, not because the original might not ultimately offer the very best words, but because they might not be the very best words for every individual. Coming to one's own conclusions is all part of *choice* and *validation*, two keystones in the Michaelian teachings.

May I emphasize in passing that if you personally feel frustrated by all the variations in names of Traits and Poles, then the best way to sort things out in your own understanding is to write your own book about it (as I have, *The Tao of Personality.*) Observe people, chart people, compare and contrast people, record and polish and embellish your descriptions to your heart's content. Then share your insights and understandings with the Michaelian teachings community. A smaller task would be to do the scientific examination and exploration, and then make your own Chart that resonates with you personally. Whatever you do will be rewarded internally with a feeling of accomplishment, and if you share it, there might be external rewards.

This is the end of Part Three of this series of chapters, the Part that reviews Overleaf Charts spanning the entire history from the beginning to the present. Numerous questions were raised and various discrepancies were noted in Part Three during the review of the Charts; many of these questions and discrepancies are examined in detail in Part Four. Part Four consists of sixteen chapters, collectively called *Essays on Issues*. The purpose there is to extract as much benefit as possible from understanding the crown jewel of the Michaelian teachings, the Overleaf System.

Part Four

ESSAYS ON ISSUES

Chapter 4A

Introduction to Part Four

The purpose of Part Four is to examine some of the discrepancies that were noted among the Overleaf Charts that were reviewed in Part Three. By "discrepancies", I do not refer to the differences in names of Overleaves (Stagnation versus Flow versus Relaxation versus Equilibrium, for instance), or the Poles of Overleaves (+Discrimination versus +Sophistication versus +Differentiation versus +Discernment versus +Distinction, for instance), or the differences in the names of Attributes (Exalted versus Cardinal, for instance). One can gain insights by comparing and contrasting the different names that various students have come up with for these items, but that is not the function of these chapters in Part Four. "Discrepancies" refers to more than just the variations in terminology; it refers to the

- 1. contradictions, where one Chart says something that is not consistent with other Chart(s)
- 2. incoherence, where there is a lack of understanding that the Overleaf Chart is actually a system, the product of a logical and mathematical algorithm that explains the deep meaning of the Chart
- 3. Charts are not consilient with other esoteric teachings, scientific findings, or philosophical notions.

Sometimes discrepancies can be reconciled: more than one variation can be correct in some way. Sometimes discrepancies mean that one variation is correct and another is incorrect. Sometimes discrepancies mean that all variations are incorrect, and there is some other view that is correct. For the most part the chapters in Part Four present my view of these discrepancies. I present evidence and argument to help resolve them. Other students have examined some of these issues and come to their own conclusions. When I know of their work, I present it and examine it also.

So, where did the discrepancies come from? Reading Messages from Michael (MFM), the first Michaelian teachings book, one might get the impression that the Michaelian teachings fell, fully formed, out of the sky into a vacuum. Now that we have the transcriptions of the original Michaelian group channeling sessions in our possession, we know that that perception, fostered by Chelsea Quinn Yarbro, is a fiction. The founding members of the original Michaelian group had been involved in and read about numerous spiritual teachings for years before the Michaels appeared, and they continued to read about them during the course of the original Michaelian group. In order to facilitate their message, the Michaels adopted and adapted and built upon some of the ideas and terminology from these other teachings.

In my opinion, there are a few errors that were carried over from the Gurdjieffian teachings and other teachings that original Michaelian group members knew about, and these are discussed here in Part Four. The Michaels also, of course, introduced ideas of their own that went beyond what the members already knew. The

Michaelian teachings has evolved over the decades since the 1970s when it was originally given — mostly adding to, but sometimes supplanting, the original revelation. This was obvious as we examined the various Overleaf Charts — from the original Michaelian group to the present — in Part Three. Thus, the evolution of the Michaelian teachings subsequent to the original Michaelian group has introduced some discrepancies.

And there is another source of discrepancies. One of the differences between the Michaelian teachings and many other channeled sources of information is that there are several Michaelian channels, not just one, and they do not all say the same things. And when they do convey the same general information, they say it in different ways. The advantage of this lack of uniformity is that there is less tendency for the typical Michaelian student to devolve into dogmatism in some potential faction of the Michaelian teachings. The discrepancies, one hopes, help students to validate the Michaelian teachings for themselves by turning to their own resources for discernment of personal truth rather than giving themselves over to external authorities such as favorite channels and/or their books and/or their websites. The disadvantage of this variation in source of information is, of course, that there is a lack of consistency and coherence and consilience. It can potentially be an impediment to group cohesion — community and communion — if members of the group have different understandings on the same subject, and/or if they appoint or anoint different channels as their champion or their preferred authority. If a student is disinclined by their nature to confront discrepancies head on, then this type of problem might lead them to just metaphorically 'throw up their hands' in frustration. My frustration is that these discrepancies have been ignored and repressed; these 'dirty little secrets' in the Michaelian teachings have been 'swept under the rug' for too long, in my opinion.

The history of the Michaelian teachings indicates to me that few Michaelian students actually believe it is important to resolve these discrepancies, so they have no strong feeling about them. For the most part, I agree with this feeling, because we all appreciate each other as fellow students on the spiritual path in spite of doctrinal differences. Even if some students think discrepancies are worth looking at, it may be that they simply do not have the resources to pursue resolutions to such issues — they are not autodidacts (who have trained themselves) or academics (who have been trained by teachers) in epistemology (how is it that we come to know stuff), or in research methods, or in critical thinking about what they learn. However, here in Part Four, you will see that I have not given in to frustration, and I do not ignore the problems, or dismiss them as insignificant, or assume that I do not have the resources to tackle the issues. Rather, I take the fact that discrepancies exist as a challenge to improve my epistemic sophistication, to find means and methods for validation and growth in knowledge and in understanding, to approach truth as best I can, and eventually approach Agape, which is the stated purpose of the Michaels and of their students: "Truth is the greatest good, and love is the greatest truth".

Michaelian Endorsement

If I may be so presumptuous, I claim that my willingness to confront the discrepancies is endorsed in the Michaelian teachings themselves. The following Q&A exchange occurred near the beginning of the original group:

Dick: Are the means for doing this [validation] available to us? I'm so stuffed with systems — Gurdjieff, [Castaneda's] Don Juan, parapsychology. Actually, information like this might interfere with itself.

[Soleal:] There should be a <u>synthesis</u> if the information comes through cosmic [sources]. If The Synthesis is not felt [intuitively], then the <u>system</u> is probably not valid.

This was said by Soleal even before the Michaels appeared. The Michaels themselves referred to their revelation as "The Synthesis", meaning that it is an integrated, coherent, unified, systematic whole, a modern retelling of the so-called Perennial Wisdom/Philosophy; refer to the chapter "Synthesis, The" in my book *Study Papers on the Original Michaelian Group* for the whole story about that. The point to be emphasized here is that, to the extent that various Michaelian versions presented by various alleged Michaelian channels do not embody The Synthesis principle consilient with the collective Perennial Wisdom, they are suspect, they should evoke doubt, and they should be carefully examined. Unfortunately, there are numerous inconsistencies in the various Michaelian teachings versions that have appeared subsequent to the original Michaelian group. What are we to do?

The Q&A exchange continued:

Dick: I just wonder if there is any jealousy, rivalry. If I listen to what Soleal says, will Tomas be put out — you know?

If there is synthesis, there should be <u>no conflict</u>. If there is not <u>The Synthesis</u>, then one of us is not telling the <u>truth</u>, and as in all previous situations [with various teachings], it will be up to you in the end to <u>verify</u>.

So then, if we are serious students, if/when we notice a conflict between what a source or a channel says, we are enjoined by the Michaelian teaching itself to do whatever we can to 'separate the wheat from the chaff'. The fact is that there are numerous "conflicts" or discrepancies within the various versions of the Michaelian teachings that have appeared via various channels over the decades. That such is the case has been an incentive for me to examine them with a view to resolving them, moving toward "Validation and Verification" of the "Truth" of "The Synthesis"; refer to chapters by those names in my book *Study Papers on the Original Michaelian Group*. What I learn in my personal journey I write in my books, and you can learn from reading them ... but that does not absolve you of the responsibility to do your own research if you are a serious student. The fact that the channels and the students have shown little or no interest in consistency, coherence, and consilience tells me that they do not have the motivation and/or do not have the talent for such an endeavor.

The Q&A exchange continued:

Dick: Would you please elaborate on that one?

There is a deep-seated fear that you will choose the wrong path and be inadvertently left behind. The Synthesis is always, is always there for those who are willing to <u>search beneath the surface</u>. The <u>readings [from various teachings] are good</u>; the <u>confusion is not [good]</u>. That [mitigation of confusion by searching beneath the surface] takes <u>conscious effort</u> on your part. [03 July 1973]

It is good to consult and compare and contrast various teachings as part of sorting out the truth of The Synthesis that the Michaels claim their teaching to be — this is what "consilience" means. As part of that pursuit, "confusion" — sometimes appearing as "conflict" and sometimes appearing as ambiguity — should not be glossed over by any serious student of the Michaelian teachings. Note that we should not be lazy in that consultation; it takes intention and effort. Note that we should not be shallow in that consultation; we should search deeply. If/when one looks beneath the surface of a teaching, if it is a true teaching, then, among other indicators of validity, one should find that it is systematic, organized, coherent — and consilient with other true teachings. The world is full of lies, but they are often diverse and contradictory, whereas you will see much agreement from true sources. It requires discretion and validation to sort through and look for the common theme in various teachings — the similarities are clues to what is probably valid. I refer to my personal conscious effort as the "Meta-Michaelian project" — "meta" being the Greek language word for 'above and beyond'. My claim is that the Michaelian teachings has evolved to the place where it is high time for mature students thereof to look at it from a higher and later perspective — a consistent, coherent, consilient perspective.

Please indulge me while I bang on and on about why I do what I do regarding my aspiration for consistency, coherence, and consilience in the Michaelian teachings. No one else seems to care that much, so I have given a lot of thought to *why I do care*. Here goes.

Creeds and Covenants

In the Unitarian Universalist Church, of which I was once a member, they claimed to be a "covenant" faith as distinct from a "creed" faith. In a creed faith, one is expected to believe the dogmas and doctrines of the faith, many of which are not provable in any academic or scientific or philosophical or experiential way. Many fundamentalistic churches have a creed, such as a belief in a particular interpretation of an alleged divinely—inspired document — "scriptures". In a different fashion, in a covenant faith, the members covenant with each other to be benevolent: to be good to oneself, to be good to other people, and to be good to the planet. Many liberal, as distinct from fundamentalistic, religions have a similar covenant as their basis. Many religions have both, to varying degrees, on a spectrum between mostly creedal and mostly covenantal faiths.

The Michaelian teachings has both creed and covenant mixed together. There is the alleged supernatural revelation of a systematic cosmology that is taught as a doctrine without evidence or argument, and there is the spiritual–path component that is supposed to lead to Agape and that can be validated experientially. Here in Part Four of this book I address the discrepancies in the creedal component of the Michaelian teachings, the stuff that is taught but that is not validated experientially as the covenant component is but that can be validated using academic and/or scientific and/or philosophical means and methods.

Even though the emphasis in the Michaelian teachings has always been on validation, the fact is that much of the teaching has come into the Michaelian teachings that has not been validated, and perhaps cannot

actually be validated — because it deals with the supernatural, which we as humans do not typically experience. I refer to this as the "dogma–doctrine" component of the Michaelian teachings. Both of those words refer to didactic teaching, as in "the Michael teaching"; in many uses by many people the words have a pejorative connotation, because dogmas and doctrines are often falsehoods promulgated by demagogues rather than truths promulgated by enlightened beings. However, I do not use these words in a pejorative way in reference to the Michaelian teachings; I use them to refer to the aspect of the Michaelian teachings that is of creed rather than of covenant. I believe we students all agree on the benevolent covenant part of the Michaelian teachings, although we each understand and implement it in our own idiosyncratic and imperfect ways. Here in Part Four of this *History* book, I demonstrate repeatedly that oftentimes we do not agree on the dogma–doctrine part of the Michaelian teachings. Can we do something about that? Should we even try? Is there academic or scientific or philosophical or experiential evidence if not proof for the dogmas–doctrines of the Michaelian teachings — evidence and experience that has not been presented heretofore?

To some extent there has been a certain balkanization and cliquishness in the Michaelian teachings and its communities, the major one being between the secretive and exclusive Yarbro contingent and the non-Yarbro contingent, and a minor one being between groups that develop around one particular of the more public channels and other groups around other channels. Discrepancies exist among these major contingents, and other minor contingents. There is a natural inclination in some channels to doubt that other channels are "channeling the real Michael". Personally, I have no interest in discerning the "real" Michael from alleged "frauds and impostors" (Yarbro's assessment of the non-Yarbro contingent); my interest is in discerning the utilitarian and epistemic values of the messages contained in the Michaelian teachings and other esoteric teachings regardless of alleged source. My attitude does not lend itself to preferring one channel or one dogma–doctrine over another; my attitude prefers a commitment to searching for the truth wherever and however and whenever it can be found.

I do regard consistency, coherence, and consilience as having a utilitarian and an epistemic value. According to their own words, the Michaels gave us their synthesis with the expressed intention that we have a systematic vocabulary that we can use to communicate with each other effectively and efficiently, leading to community and communion. This was quoted in the Introduction to Part One. Rest assured that this is my intention also, and is in fact one of the reasons for my focus on disputed issues — to arrive at a consistent and coherent and consilient understanding of dogmas—doctrines, as close to Validation status as we are able to come.

Admittedly, many of the issues discussed in these chapters are academic and/or theoretical and/or even petty and don't matter a whit in the real world of our daily, mundane lives. Therefore, the points I hope to drive home by sharing the following chapters are: 1) The gist of the Michaelian teachings is not about obscure bits of the dogma-doctrine portion of the Michaelian teachings — stuff that is not commonly expected to be Validated; and 2) we might do better to focus our attention on the stuff that does matter and that we can Validate experientially, namely the components of the Michaelian teachings that describe a psychotherapeutic path and a spiritual path that allegedly leads to Agape. Therefore, the only values per se that I can see in discussing most of the issues raised in this Part of this History book are these: 1) intellectual exercise — to sharpen our mental acuity and critical thinking so that we are not led astray by dogmas-doctrines in the Michaelian teachings or in any other realm of our lives; 2) hone our interpersonal communication skills that we might get along better by understanding each other more deeply. In other words, communication with ourselves and with others on these issues or any other subjects should be conducted in a spirit of intimacy. Other than these two values, I have not been able to think of a good reason why these issues matter in our daily lives. In other words, so far as I am concerned, the discrepant issues exist for the purpose of sorting them out, for the exercise we get in sorting them out, for the greater good gained by having them sorted out, and for the increasing intimacy we gain in the process of sorting them out. To use a cliché, "It is the journey, not the destination, that counts".

Let's look at this journey from another angle. As a product of my intellectual exercise, some of these chapters are long and tedious. It might seem that I devote far more energy to examining these issues than they deserve per se. Perhaps it can even be said that I may have "nitpicked them to death". I apologize, but there is just something about the way my brain works. You might think it has something to do with a Goal of Rejection, but in fact it is my Goal of Acceptance that has something to do with my focus on discrepancies. In Part Three I pointed out that there are many discrepancies between the various Overleaf Charts. That bothers my Goal of Acceptance, because I naturally prefer and seek agreement. The Charts cannot all be right. Which ones are

right? Which ones are wrong? Which ones can be reconciled? This inquiring mind with a Goal of Acceptance wants to know. That is one reason why I do this. A potential result — agreement on the dogma–doctrine component of the Michaelian teachings within the Michaelian community as a whole — is relatively unimportant *per se*, but for me both the process and the goal are important. This is just something I feel impelled to do for my own satisfaction and fulfillment. And I enjoy it. You may dismiss my fun as "mental masturbation" if you like, but this book is the wordy ejaculate, and I would like to believe that it benefits readers. I prefer to regard it as intellectual exercise, as I said, but I do hope that you also get something from it, so that it is not just me experiencing the enjoyment.

How Shall We Approach the Resolution of Discrepancies?

Albert Einstein allegedly said words to the effect that a problem cannot be solved at the level where it was created. In the Michaelian teachings there are a number of problems that have been created by bogus, or at least dubious, "channeling". Every Michaelian student knows this, whether they face the issue squarely or not. In my experience, these problems cannot always be solved — maybe some can and maybe some cannot — by more channeling, because more alleged channeling does not go to a level above (or below) where the problems were created. The source of all the problems is, of course, that we do not actually know where "channeled" information comes from in every case, and the contradictions among channels indicates that channeling is not to be implicitly trusted, because it is so unreliable. For the most part, in the chapters here in Part Four, I have been able to resolve the discrepancies — to my satisfaction at least — using ordinary tools of evidence and argument developed and honed in academic and scientific and philosophical realms.

However, to go beyond mere-problem-solving at the ordinary level with typical tools, in my other books I expound on an integrated theory of interpretation and understanding of the Overleaf System. As a non-channel myself, and for a certain class of discrepancies, I believe this is the way to rise above, or get below, issues created by disparate channeling. If that class of discrepancies applies to a system or pattern, then anomalies in the pattern are immediately suspect. My book *The Tao of Personality* derives the Overleaf System from "first principles": logic, mathematics, and physics. By understanding the principles that algorithmically generate the Overleaf System, one can spot interpretations that do not fit. I am suggesting that Part Four of this *History* book, and *The Tao of Personality book*, look at the discrepancies in the Michaelian teachings from an engineering (Artisan) mentality and a scientific (Scholar) methodology. It so happens that I am a Scholar–Cast Artisan. Hence my suitability and talent for this Meta-Michaelian project.

The three favorite tools in my discrepancy-resolution toolbox are these, the three "Cs":

The Consistency Principle

When there are contradictions between channels, either one of them is wrong, both of them are wrong, or both of them are right from a higher level of understanding or a more encompassing perspective. Regarding the resolution of inconsistencies, sometimes a contradiction is a matter of semantics: the same concept is given different names or the same name is given to different concepts. When a person is self-contradictory, we say that, at minimum, they have cognitive dissonance, or they are neurotic, or at maximum, they are insane. From my point of view, it is nonsensical to the point of insanity to not examine and try to resolve the contradictions within and among the various Michaelian teachings as much as possible. Some obvious and well known examples of contradictions reviewed here in Part Four are:

- 1. The Yarbro contingent of the Michaelian teachings says that Essence Twins are almost always the same Role, whereas the non-Yarbro contingent of the Michaelian teachings says that Essence Twins are almost always different Roles.
- 2. The Yarbro contingent says that the Moving Center is a Cardinal Center, whereas the non-Yarbro contingent says that it is an Ordinal Center.
- 3. The Yarbro contingent says that people in the Instinctive Center are *less* sane than normal whereas the non-Yarbro contingent says that people in the Instinctive Center are *more* sane than normal.
- 4. Various contingents of the Michaelian teachings ascribe different colors to Roles.
- 5. Various contingents correlate Centers and chakras in numerous different ways.
- 6. Various contingents attempt to correlate the Body Type System with the Overleaf System in various ways.

Spoiler alert: I have been able to resolve most of them to my satisfaction, but some contradictions remain, and, so as not to go insane, I put them in the ambiguous category or limbo zone for now, anticipating future resolution.

To my sensibilities, contradictions between the channels are the most offensive type of defect or deficiency in the Michaelian teachings, but there is a lesser offender, namely, incoherence:

The Coherence Principle

The virtue of coherence is a different virtue than consistency:

When something has *coherence*, all of its parts fit together well. An argument with *coherence* is logical and complete — with plenty of supporting facts.

Coherence comes from a Latin word meaning "to stick together". When you say policies, arguments, and strategies are coherent, you're praising them for making sense. Scientists are always looking for coherence in data to support their hypotheses. And coaches are always looking for coherence in their teams, so they don't fall apart. [>https://www.vocabulary.com/dictionary/coherence< — retrieved 19 May 2023]

In terms of the Overleaf charts reviewed in this book, it is obvious by comparing and contrasting them that there has not been a recognition by Michaelian students (other than myself) that the collection of Overleaves is a system, a framework or structure built from a pattern of logic, mathematics, and physics that gives the Overleaf System an overall coherence. As one can plainly see just by looking at the Charts in Part Three, Michaelian students have not even converged on which septenaries are properly called "Overleaves". Also, students have not even converged on how the septenaries should be sequenced on the chart. My claim is that if students were to recognize and understand the meaning of the logical and mathematical structure of the collection of personality traits, that would cause a coherence. And beyond that, students would see that the pattern of Ordinal–Cardinal–Neutral and Action–Inspiration–Expression–Assimilation Attributes applies to both horizontal and vertical axes of the Overleaf chart, forming a 7x7 matrix. Beyond the coherence of the Overleaf System, students would also see that such other components of the Michaelian teachings as Karma and Monads and Milestones also fit coherently into the pattern that governs the Overleaf System.

The consistency tool is used to resolve contradictions between channeled revelations within the Michaelian teachings, and the coherence principle is used to systematize the structure within the Michaelian teachings. The consilience principle reviewed in the next subsection is another tool in my discrepancy–resolution toolbox.

The Consilience Principle

This word "consilience" may not be familiar to some readers. Besides using consistency and coherence as tools for resolving discrepancies within the Michaelian teachings, another tool that I apply is to bring outside sources to bear on the disputed dogma-doctrines. As stated above, the original Michaelian group members were keen to fit the Michaelian teachings into prior and extraneous esoteric teachings and mystical traditions, in the spirit of what is known as Perennialism — the notion that the great world religions and philosophies and mysticisms have a common core of beliefs, values, and practices. Subsequent to the original Michaelian group, this practice has been neglected, in my opinion; we have become insular, and the 'clan' has become 'inbred'. I suggest that the Michaelian teachings community would do well to resume some 'intercourse' with other sources. I do a lot of that in my books; I am rather 'promiscuous' regarding 'cross-fertilization'. The technical and philosophical name for the confluence of evidence and argument from various and varied sources is "consilience":

In science and history, consilience (also convergence of evidence or concordance of evidence) is the principle that evidence from independent, unrelated sources can converge on strong conclusions. That is, when multiple sources of evidence are in agreement, the conclusion can be very strong even when none of the individual sources of evidence is significantly so on its own. Most established scientific knowledge is supported by a convergence of evidence: if not, the evidence is comparatively weak, and there will probably not be a strong scientific consensus. The principle is based on unity of knowledge; measuring the same result by several different methods should lead to the same answer. [>https://en.wikipedia.org/wiki/Consilience< — retrieved 14 May 2023]

To use a metaphor, the founders of the American republic established a constitution with three semi-independent branches of government (executive, legislative, judicial) and built "checks and balances" into the system so that it would be less likely to go astray. One might think that, the fact that the Michaelian teachings has more than one channel would provide a check-and-balance environment, but rather than providing an

error-correction procedure, more channels have just generated more discrepancies. Internal error-correction having failed, I suggest that the Michaelian teachings would benefit from some examination of some external resources. For the most part, the standard Michaelian teachings conforms to the Perennial principle, and I want to expand that principle to encompass the non-consilient portions of the Michaelian teachings.

Narrowing my focus from the Michaelian teachings as a whole to the Overleaf System in this *History* book, dozens of extraneous sources, which have a septenary as part of their cosmology, arrange the seven elements per the Natural Sequence, rather than per the Michael Math Sequence often used on Overleaf Charts. A few of those sources have been mentioned here and there in this book, and a list of them is provided in the "Natural Sequence" section of Chapter 2C "Proposed Sequences of Overleaves". My book *The Tao of Cosmogony* examines dozens of other sources, so the Consilience Principle supports the Natural Sequence, not the Michael Math Sequence. As it so happens, the Natural Sequence resolves some inconsistencies and incoherencies found in the collection of Overleaf Charts.

The point of this subsection is to drive home the notion that, whenever the resolution of discrepancies is not obvious from examination of Michaelian sources, then it is expedient to look to other sources in different realms, the more the better, including mystical and spiritual and religious and philosophical and scientific and sociological and psychological sources. Thus, whereas some other Michaelian students have put forward their preferences, sometimes without any evidence or argument, what I am putting out there for your considerations is what I like to think of as more than just another opinion. Rather, I have a coherent, consistent, integrated, comprehensive theory of interpretation and understanding; it is an informed opinion built with the help of these three error detection and error correction tools.

To sum up my regard for the three Cs, I would say that lack of consistency, coherence, and consilience in the standard Michaelian teachings offends my Validation sensibilities. Furthermore, an inconsistent, incoherent, non-consilient teaching is an "ugly" teaching, and that offends my aesthetic sensibilities.

Let's Science and Engineer the Michaelian Teaching

Here in Part Four of this book I examine in detail some of the discrepancies shown in the various Overleaf Charts. And I do mean *detail*. If one were a poet keen on alliteration, one might even regard these Part Four chapters as "doctrinal disputation dissertations" or "excruciating exegetical exercises" or "tedious treatises on tendentious trivialities". This is just the way a Scholar Soul, Artisan Role Fragment (myself) approaches disagreements; perhaps this is all just an overly "engineery" approach to problem–solving, but here it is.

Recently I read something about Asperger's Syndrome, those who are at the high-functioning end of the Autism Spectrum Disorder. They are particularly good at attention-to-detail and pattern–recognition and concentration–focus on problem–solving. I believe those words fit me — as amply demonstrated by this book — even though I do not regard myself as an "aspie", and no one else has diagnosed me as that, so far as I know. Many Artisans do engineering (I did, now retired), and a significant percentage of engineers are aspies (I am not).

I may not be an aspie in this life, but it may be that I am not exactly "neurotypical" either. I am not satisfied with "good enough for all practical purposes" when it comes to the Michaelian teachings, as most Michaelian students appear to be. Perhaps I was a Jewish Talmudist in a past life, and in this life I am attempting to extract every shred of understanding from the particular "sacred text" (the Michaelian teachings) that I am obsessed with in this lifetime.

Whatever the source of my motivation to reconcile the discrepancies, besides the engineering (Artisan) and aspie methods, I apply the scientific (Scholar) method. Thomas Kuhn, author of *The Nature of Scientific Revolutions* (1977), suggested five standards that can be invoked in evaluating various hypotheses:

- 1. accuracy (it is free of obvious errors);
- 2. **consistency** (both within itself and with other relevant currently–accepted ideas);
- 3. **scope** (its consequences should extend beyond the data it is required to explain);
- 4. simplicity (it organizes otherwise confused and isolated phenomena with a minimum of fuss);
- 5. **fruitfulness** (for further research).

To these five I would add a couple of other qualities that I learned in my engineering career, namely:

- 6. **thoroughness** (nothing is left out);
- 7. **clarity** (lack of ambiguity).

Kuhn referred to a "scientific revolution" as a "paradigm shift". If you appreciate the ways and means of the fictional Star Trek Vulcan, Spock, then you will appreciate my Scholar–Artisan ways and means in this book for changing the paradigm of the Michaelian teachings from discrepant channeling to consistent, coherent, consilient synthesis. My aspiration is that the evidences and arguments that I present here in Part Four apply all of these seven values to the resolution of discrepancies that are found in the systematic component of the Michaelian teachings.

Speaking of science and engineering, in the science of information theory there is the concept of *signal versus noise*: the more of one, the less of the other. Considering the number of discrepancies in regard to the systematic component of the Michaelian teachings — only some of which will be examined here in Part Four — I perceive that there is way too much "noise" in the Michaelian teachings and not enough "signal". One of my purposes is to minimize the noise and maximize the signal. My assertion is that the Michaelian teachings will "live long and prosper" if and only if it significantly improves its signal—to—noise ratio. Even if the Michaelian teachings community as a whole does not adopt my signals, then individuals within it can adjust their perceptions to have less noise and more signal in their understanding of the systematic portion of the Michaelian teachings, which purports to be a map of the spiritual path through life. This is Good Work. If one has an accurate map of the territory, it makes for a more efficient and effective journey.

Another point that I would like to make here and now in this context is this: the Michaels said that the Overleaf System was given to their students as a temporary expedient, with the expectation that understanding the subject of personality — one's own and that of others — would provide a path from tolerance to understanding to appreciation to acceptance to Agape. When one has achieved Agape, one no longer needs the Overleaf System for guidance. It is like that with what I am doing here in Part Four of this History book. In the published Michaelian teachings, the "cosmos" (orderly part of the Michaelian teachings) is in "chaos" (disorder) considering all of the discrepancies among various teachers. Considering all of the discrepancies in the foundation of the Michaelian teachings, how can one build thereon an edifice that transcends the foundation? Is the Michaelian teachings nothing more than a 'house of cards' built on a 'foundation of sand' (to mix a couple of metaphors)? Some outsiders might think so when they see the discrepancies therein. But I think not, and my aim is to rebuild the Michaelian teachings upon a more solid foundation, grounded in first principles and built on logic and mathematics and physics. The following chapters, presenting evidences and arguments for removing chaos from cosmos, noise from signal, are a small part of my "systematic cosmology project". My other books are other components of my Meta-Michaelian project.

It is my perception that the Michaels have metaphorically 'dumped a box of picture puzzle pieces out onto the table' over the years since 1973, and it is now time to assemble the pieces into a beautiful picture. As another analogy, I see the Michaelian teachings as being like an uncut diamond that has been dug out of the ground; it is dirty and it is ugly, but it has potential. It needs to be cleaned and cut and polished if it is to become a brilliant, startling, beautiful diamond. Using another metaphor, my Meta-Michaelian project is the 'baby' that remains after consistency, coherence, and consilience have 'thrown out' the dirty 'bathwater' found in the dogma–doctrines of the Michaelian teachings.

Why Am I the Person Doing This With the Michaelian Teachings?

It is a weird thing in the Michaelian teachings community to write an academic study paper on discrepancies within the Michaelian teachings. I don't think it has ever been done before. What kind of a person would do something like that? Well, I am not your typical student of the Michaelian teachings, hence the difference between other Michaelian teachings books and my books. There are reasons for this, which I would like to enumerate as follows, so that the reader will have some understanding of who I am and why I do what I do, in hopes that readers will better understand and appreciate what I have to say in the chapters that follow. Also, perhaps readers will be more open to my means and methods and tools, and hence open to my conclusions, if they can come to appreciate me as a person. Some elements of the following numbered list repeat or embellish what was stated above, but here they are included in a different story line.

In 1981, my Ouija board said that my strongest Center was the Higher Intellectual Center.
 Subsequently — for my purposes and perhaps yours — I have changed the name to Concept Center and altered its description somewhat, for reasons explained in one of the following chapters here in Part Four of this book, namely, "The Higher Centers" chapter.

- 2. One of the functions of the Concept Center is to categorize things in order from the general to the specific, from the abstract to the concrete. You can read about that in a chapter devoted to the Concept Center in Part Two of my book *The Tao of Personality*.
- 3. I use a particular talent of the Concept Center as a sieve for 'separating the wheat from the chaff' when it comes to discrepancies in the Michaelian teachings. That super power is the ability to recognize and appreciate what is beautiful, elegant, and exquisite. My Meta-Michaelian project is a product of my strong Concept Center. Products of my Meta-Michaelian project such as Tao's Template of First Principles and the Natural Sequence and the Process/Aspect System are beautiful; they do a lot with a little. Certain parts of the Michaelian teachings are ugly; I want to fix that.
- 4. The Concept Center is an Aspect of the Synthesis Process; the Intellect Center is an Aspect of the Analysis Process. So far as I can tell, very few students of the Michaelian teachings have a strong Concept Center, as I do, and many are not even in the Intellect Center very much. This means that they do not spend much time in either Center; this means that I synthesize and analyze the Michaelian teachings differently from most students, and more than most students.
- 5. This alone makes me a kinda sorta "intellectual", but another clue is that I really enjoy listening to people who are way smarter than I am and way more knowledgeable than I am as they discuss some big and deep ideas. To some extent I have absorbed their ways and means in my presentations. I also read science magazines at breakfast and science books at bedtime.
- 6. In my fundamentalist Christian days, in the 1970s, I was writing a book on Bible Chronology; I read a lot of scholarly books and journals on the subject, and absorbed those ways of doing and writing about scholarly research.
- 7. In addition to that, I am a Scholar–Cast Artisan with a background in an engineering career. This means I am a techno-geek by nature. This means that my Essence fulfillment is to figure out what is (science, knowledge) and how it works (engineering applications). These two factors personify the Processes of (Scholar-ish) Assimilation and (Artisan-ish) Analysis. It is said that Artisans are focused on structure: how the parts fit together and how they interact. The Michaelian teachings provides a wonderful playground for me to explore and experiment with those questions and solve these intellectual puzzles. Not many people in the Michaelian teachings are techno-geeks; this means that I see the Michaelian teachings from a more unusual perspective than most students.
- 8. In addition to the Concept Center, I have a Personality profile with a lot of other Cardinal Overleaves: older Soul Age, late Level, Acceptance Goal, Spiritualist Attitude, and Arrogance Shadow. This means that I am all about the synthesis of a diverse body of information into a coherent whole. This is similar to the enterprises and aspirations of science and philosophy and theology. Not many people in the Michaelian teachings or elsewhere have a similar Cardinality; this means that I see the Michaelian teachings from a wider overview than most students I can see the entire 'forest', not just the 'trees' in my immediate vicinity.
- 9. I have a sub-personality that I call "The Writer"; it has been with me since my pre-teen years. It lives in the Concept Center, aka right hemisphere of my brain, and it does a lot of the processing, and then it feeds the results to my left hemisphere in words, when "I" let it through. It needs to put thoughts and concepts into words. Left brain, right brain, subconscious, super-conscious who knows where this stuff really comes from. For me, thoughts come into my head before I get out of bed or while I sit on the park bench or at other odd times and I write them down on scraps of paper. It might be words, or phrases, or sentences, or paragraphs, or sections. And I know the location where these "inspirations" belong in the books. Later I enter the words and concepts into my book manuscripts on the computer, where I polish them extensively. As Thomas Edison said: invention is 1% inspiration and 99% perspiration. Wherever this stuff comes from, the hope is that you the reader find some useful utility that increases your understanding, regardless of claims of natural or supernatural origin. I do not have a sub-personality called "The Speaker", so you will not often find me giving a lecture to a group, or even to another person.
- 10. A few words about channeling and writing books are in order. "Channeling" is said to be a person "taking dictation" from a consciousness integrity on a "higher" plane of existence. I do not claim to be a channel, but a large part of my books do seem to be "inspired" in the sense that it is as if other parts of my mind or brain are involved, but not in trance or other altered states of consciousness. I

prefer to conceptualize it as my right brain (Concept Center) talking to my left brain (Intellect Center).

Rhetoric

As I reflected on the question "Why me", I found that the particular way that I present the evidence and argument here in Part Four — against discrepancies and for the paradigm shift to the Meta-Michaelian reformulation — actually has a name: "rhetoric":

Rhetoric is the art of persuasion. It is one of the three ancient arts of discourse along with grammar and logic/dialectic. Rhetoric aims to study the techniques speakers or writers use to inform, persuade, or motivate their audiences. Aristotle defines rhetoric as 'the faculty of observing in any given case the available means of persuasion' and since mastery of the art was necessary for victory in a case at law, for passage of proposals in the assembly, or for fame as a speaker in civic ceremonies, he calls it 'a combination of the science of logic and of the ethical branch of politics'. Rhetoric typically provides heuristics for understanding, discovering, and developing arguments for particular situations. An example is Aristotle's three persuasive audience appeals: logos [Expression], pathos [Inspiration], and ethos [Action]. The five canons of rhetoric, or phases of developing a persuasive speech, were first codified in classical Rome: invention, arrangement, style, memory, and delivery. From Ancient Greece to the late 19th century, rhetoric played a central role in Western education in training orators, lawyers, counselors, historians, statesmen, and poets." [>https://en.wikipedia.org/wiki/Rhetoric< — retrieved 04 November 2023]

The philosopher Aristotle was a fountain of ancient wisdom that carried a lot of weight for two thousand years, and some of what he had to say, including rhetoric, still applies today. Unfortunately, people these days do not get any specific schooling in rhetoric (or critical thinking), hence the prevalence of misinformation in the world in general. This dearth of rhetorical sophistication among students of the Michaelian teachings applies to the creation and perpetuation of misinformation within the Michaelian teachings. And for whatever reason, rhetoric comes naturally to me for my purposes with this Part of this *History* book. Thus, my goal is to persuade readers via rhetoric that the Michaelian teachings has problems, and that it would be Good Work to resolve them, and that we students have tools to do the job. More is said about "three persuasive audience appeals" in the next section.

Three Modes of Rhetoric

The Wikipedia article on rhetoric made reference to another article, "Modes of Persuasion". It so happens that these three modes can be correlated with the four Axes of the Overleaf System: Action, Inspiration, Expression, and Assimilation, so it seems expedient to me to include a discussion here.

The modes of persuasion, modes of appeal or rhetorical appeals (Greek: *pisteis*) are strategies of rhetoric that classify a speaker's or writer's appeal to their audience. These include *ethos* [Action], pathos [Inspiration], and logos [Expression], all three of which appear in Aristotle's [book] Rhetoric.

Notice that in this Wikipedia article these three modes of rhetoric are listed in the Natural Sequence: Action \rightarrow Inspiration \rightarrow Expression. This is probably just a coincidence because not all internet descriptions of the triad list them in this order, but I favor the Natural Sequence, so I point it out.

ETHOS [= Action Axis = Motion and Excitation Centers]

Ethos ... is an appeal to the authority or credibility of the presenter. It is how well the presenter convinces the audience that the presenter is qualified to speak on the subject. This can be done by:

- Being a notable figure in the field in question, such as a college professor or an executive of a company whose business is related to the presenter's topic
- Demonstrating mastery of the terminology of the field (jargon)
- Being introduced by or producing bona fides from other established authorities

It is true that I have credentials that makes me somewhat of an authority on the subject — such as forty plus years of involvement with and study of the Michaelian teachings, about which I have written several weighty tomes. However, I am not asking readers to believe me just because of those credentials. Rather, I suggest that argument and evidence should have a convincing impact; I suggest that your beliefs should be changed by the authority of the information, not by the authority of my expertise.

PATHOS [= Inspiration Axis = Emotion and Sympathy Centers]

Pathos ... is an appeal to the audience's <u>emotions</u>. The terms sympathy, pathetic, and empathy are derived from it. It can be in the form of metaphor, simile, a passionate delivery, or even a simple claim that a matter is unjust. Pathos can be particularly powerful if used well, but most speeches do not solely rely on pathos. Pathos is most effective when the author or speaker demonstrates agreement with an underlying <u>value</u> of the reader or listener. In addition, the speaker may use pathos and fear to sway the audience. Pathos may also include appeals to audience imagination and hopes, done when the speaker paints a scenario of positive future results of following the course of action proposed.

The quotation mentioned positive and negative appeals to emotions and values. My two such incentives are the metaphorical versions of the 'carrot' and the 'stick' that, historically speaking, were literally used to motivate a horse to pull a carriage. The 'stick' is that these discrepancies might be harmful to our well-being and at minimum they are embarrassing and we should be ashamed of them, whereas the 'carrot' is that approaching truth feels good because it is inherently rewarding. *Pathos* appeals to my tertiary Role influence, which happens to be Priest-ish, and some of that shows up here and there in this book: "We can do better!"

LOGOS [= Expression Axis = Intellect and Concept Centers]

Logos ... is logical appeal or the simulation of it, and the term logic is derived from it. It is normally used to describe <u>facts and figures</u> that support the speaker's claims or thesis. There are also more traditional forms of <u>logical reasoning</u>, such as syllogisms and enthymemes. Having a *logos* appeal also enhances *ethos* because information makes the speaker look knowledgeable and prepared to their audience. However, the <u>data</u> can be confusing and thus confuse the audience. Logos can also be misleading or inaccurate, however meaningful it may seem to the subject at hand. In some cases, inaccurate, falsified, or misconstrued even be used to enact a *pathos* effect. Such is the case with casualty numbers, which, while not necessarily falsified, may include minor casualties (injuries) that are equated with deaths in the mind of an audience and therefore can evoke the same effect as a death toll.

Obviously, because I am a Scholar-Cast Artisan, mental *logos* appeals to me more than behavioral *ethos* or emotional *pathos*, so most of my rhetorical tools in this *History* book and my other books are logoic.

KAIROS [= Assimilation Axis = Impulse Center]

Kairos ... is an arguable fourth mode of persuasion which means the "right time", "season", or "opportunity". Kairos is an appeal to the timeliness or context in which a presentation is publicized, which includes contextual factors external to the presentation itself but still capable of affecting the audience's reception to its arguments or messaging, such as the time in which a presentation is taking place, the place in which an argument or message is being made, the background information and demographics of an audience such as age, culture, faith, creed, etc., the appropriateness of the speaker's tone given the nature of the occasion, and the relationship between the speaker, the audience and the topic. [>https://en.wikipedia.org/wiki/Modes_of_persuasion< — retrieved 04 November 2023]

The reason that I correlate *kairos* with the Assimilation Axis is that Soul Age (psychological maturation) is the Assimilation Aspect of the Overleaf (Process/Aspect) System. One of my concerns about Part Four of this *History* book is that my *kairos* for writing and publishing it (early 2020s) might not be the *kairos* of most readers. If now is not the right time for them, my hope is that Michaelian students will eventually, if not now or soon, find the information in this book to be *ethos* (convincing) and *pathos* (valuable) and *logos* (sensible). It seems to me most likely that this can only happen after a student's enthrallment with, and indoctrination by, dubious and bogus channeling has run its course, and has served its purpose of learning the hard way (experiencing the negative consequences of ignorance and stupidity) and then dissipated, such that learning the easy way — via truth and wisdom — becomes available. When a student has matured to that point, only then can Validation, discussed at length in the next chapter, begin. During enthrallment and before Validation, being a Michaelian student can somewhat resemble entrapment in cultish brain-washing. At least, that is what it seems like to me in retrospect.

Introduction to Part Four Contents

One might note during the examination of the Overleaf Charts that there has in fact been an evolution of the understanding of the Overleaf System over the decades, both the names and the arrangement, the content and the context. In order to address this evolution fully, some chapters on particular components of the Overleaf System seem desirable. These are those chapters:

- Chapter 4A INTRODUCTION. This is, of course, what you just read above. It presents the purpose and philosophy of Part Four of this book. I regard it as valuable and useful.
- Chapter 4B VALIDATION. One of the Michaels' recommendations to their students is to Validate their teaching rather than accept it on their word. How do we do this effectively?
- Chapter 4C WHICH TRAIT SEPTENARIES ARE OVERLEAVES? There is a difference of opinion among various students of the Michaelian teachings about which septenaries of Soul and Personality and Body traits are to be called "Overleaves", and therefore there is a difference of opinion about how many Overleaf categories there are. Evidences and arguments are presented in this chapter that there are seven of them, and they are Goal and Mode, Chief Feature and Role, Attitude and Center, and Age/Level.
- Chapter 4D BODY TYPES. This septenary was invented by a student of the Gurdjieff/Ouspensky teaching in the 1950s, Rodney Collin. In this chapter it will be argued that this is not an Overleaf category because it applies to the body, not the Personality, and because it does not have the characteristics of a "proper" Septenary such as Dialectic and Axial and Septenarian Attributes in a specific sequence. Besides that, Michaelian students have not been able to come to agreement on how the Body Types fit comfortably into the Overleaf System. There is a way to integrate a Body Type System into the Overleaf System (particularly the Centers), but it requires significant alterations.
- Chapter 4E PLANES. These are not a part of the Personality Array, the Overleaf System, but they were listed in the first Chart, "The Ordering of the Cosmos", a listing which indicates that in the original Michaelian group there was an understanding that the Personality Trait Septenaries correlated with the planes Septenary. This indicates that the Septenary System is indeed "cosmic" in its scope. In other words, physics and personality have the same basic underling logical and mathematical structure. This chapter explores the development of the concept of planes subsequent to the original Michaelian group.
- Chapter 4F- THE INSTINCTIVE CENTER. In the Gurdjieffian teaching, the Instinctive Center was a "Part" of the #1 Moving Center, but in the Michaelian teachings, it became a Center of its own, and it was moved to the #4 Neutral position in the Septenary. This change in status and move in location has implications that are not generally appreciated; the implications are explored and explained in this chapter.
- Chapter 4G THE HIGHER CENTERS. These had a description and a sequence in the Gurdjieffian teachings that was carried over into the original Michaelian group. The sequence was amended by Yarbro in *More Messages from Michael*. I propose that the descriptions should also be amended as part of the ongoing improvement process.
- Chapter 4H THE ACTION CENTERS. In the Gurdjieffian teachings and in the original Michaelian group, the Sexual Center was "higher" and the Moving Center was "lower", but Yarbro reversed this in her books. Shepherd Hoodwin followed Yarbro, but other Michaelian teachers and groups have not reversed the original order. What can we learn from this discrepancy?
- Chapter 4J THE SEVEN CHAKRAS. The chakras of the human body are a feature of esoteric cosmology with more than a passing resemblance to the Centers. Michaelian students and their Charts and books show variations. What is the relationship of the chakras to the Centers, and can they in fact be correlated with each other, and what is that correlation? Furthermore, which Septenarian Attributes apply to which chakras?
- Chapter 4K THE NAMES OF THE LEVELS. Yarbro in her book *MMFM* was the first to provide names for the Poles of the Levels. These were adopted outside the Yarbro contingent, but they never made sense to me because they did not resonate with the six other Poles of Overleaves with the same Septenarian Attributes, and they did not exhibit complementarity on the Action, Inspiration, and Expression Axes like that of the other Overleaves. I propose names that resonate and complement.
- Chapter 4L THE MID-CYCLE DISCREPANCY. Quinn Yarbro in *MMFM* introduced an extra little step between the Third and Fourth Levels. It was said to be a blend of the Levels on either side, and yet it was also said to contradict them. This makes the Mid-Cycle an anomalous wrinkle in the otherwise orderly fabric of the Overleaf System. Is this legitimate? Sarah Chambers said No, and I provide evidences and arguments to support her. On the other hand, I generalize this idea into what I call the "Transition Principle" there is an ambiguous and/or turbulent transition zone between all stable stages of development, not just the Third Level and the Fourth Level.

- Chapter 4M THE SEVEN SOUL AGES. There is disagreement among various teachers of the Overleaf System about the nature of the Soul Ages. In fact, the subject of Soul Age is one of the most contentious components of the Michaelian teachings cosmology. Parts of my other books discuss all Ages in detail, but this chapter concentrates on the most discrepant area, the sixth and seventh Ages. Are they to be named "Transcendental and Infinite", or "Astral and Causal", or "Elder and Ancient" ... or what? To what extent, if any, are they manifest on the Physical Plane?
- Chapter 4N CASTING CONCERNS. The Casting of Fragments from the Oversoul into seven sizes of Composites (which I call "Underleaves") has a lot of similarities to, and differences from, the seven categories of Overleaves. There are as many discrepancies in the former as in the latter. These are examined in this chapter.
- Chapter 4P COLOR ASSIGNMENTS: Several Chart–makers have applied colors to the Overleaf categories, and many times they differ from each other. In this chapter we review the variations in detail, and then propose one color system to rule them all.
- Chapter 4Q THE SEVEN LIFE-STAGES: Starting with *Messages from Michael* and continuing through the history of the Michaelian teachings, it has been said that an ideal or normal or typical full lifetime consists of seven major developmental transitions from birth to death. The name typically given to these stages is "Internal Monads". Unfortunately but as usual in the Michaelian teachings it seems there are ambiguities within, and contradictions between, the various channeled sources regarding the Internal Monads themselves, and the understanding of the Internal Monads is inconsistent with the other seven-stage developmental sequences, such as Levels and Soul Ages and Planes. This chapter is dedicated to sorting out those issues.
- Chapter 4R CONCLUSION TO PART FOUR. What is it all about? Was it worth it? Where do we go from here as individuals and as a community?

By the way, note that there is no "I" chapter and there is no "O" chapter. This is not a mistake; I did not omit actual chapters; I did this because of the confusing similarity of those alphabetic characters to the numbers "1" and "0". You must put up with confusion of another kind. Apologies.

Chapter 4B

VALIDATION

Before we get into the chapters that attempt to reconcile and/or transcend some of the ambiguities and contradictions in the Overleaf Charts of the Michaelian teachings community, it behooves us to affirm that we are doing what the Michaels refer to as "Validation". Part of the previous chapter, the Introduction to Part Four, presented some general clues about the process of Validation. There are also sections in chapters that talk about Validation in the Epilogue to this *History* book, wherein I provide the Prologue of *The Tao of Personality* and the Prologue of *The Tao of Cosmogony*. This chapter serves to expand on those chapters a little bit in the context of this book, and to emphasize my commitment to the process of Validation.

The Michaels repeatedly say that it is important to Validate their teaching. I like to capitalize the word because it is that important, and because it is one of the Michaels' jargon words, with a special meaning and purpose. Following are some quotes on the subject, extracted from *MFM* and *MMFM*.

We neither require nor desire belief in what we say. If you choose to question and validate for yourself, the progress will be accomplished with knowledge and recognition. But progress will occur whether you perceive it or not. [MMFM, p. 48]

We impart our knowledge impartially. We do not require that you agree. You may reject anything we say. The choice is yours. [MFM, p. 37]

We are not here to give you a new dogma. It is too easy for you to be lured by your expectations into making this a new faith, which is in complete opposition to our intention. Blind faith eliminates understanding, and without understanding there can be no growth or Agape, which is the goal. [MFM, p. 51]

We offer this teaching unconditionally. You are not expected or required to accept what we say, to agree with it, to 'believe' in it. We do not offer the one true way, for each Fragment has many paths to the goal, and each of you is capable of finding your way. If we serve any purpose, it is as an information service to travelers, and as sign posts. We do not say this lightly: No one is required to 'believe' in sign posts, or even read them. The information we provide is valid — we have no reason to distort information, for that would impose conditions on what we teach — and we make a gift of it to you. Note that we do not say 'bribe'. We do not require or expect anything in return. You may choose to hear the words and to validate this teaching for yourselves. If you decide to explore this teaching, we would wish that you do not accept it 'on faith' but question it and test it, for that is the most direct means to validation accessible to you. We would hope those who choose to pursue this teaching would exercise skepticism in dealing with the material given, so that validation may come. We impart our knowledge to you. That is our purpose. Your use of it, or lack of use of it, does not change the teaching, nor does it change us. No matter what your opinion of us may be, we, and you, will continue to evolve. The evolution does not require anything of you or us. [MMFM, pp. xiii–xiv]

I have Validated the value of the above component of the Michaelian teachings. There is a reason why I am perhaps more sensitive to the matter of Validation than your typical Michaelian student. For about twenty years I was a member of a fundamentalist Christian church, from age 12 to age 32. I was drawn into this when I was too young to know any better. My instincts/intuitions did not save me from this experience, so I suspect that being involved in this cult was a part of my Essence's "Life Plan", to use the Michaelian terminology, or "God's plan" to use Christian terminology. In any case, it appears that I "needed" it for personal growth. The experience was very instructive about a lot of things on a lot of different levels, and I do not regret it at all; it contributed to my development as a person, and presumably as a soul. Anyway, there was some mild "programming" involved in this cult, and it took some deprogramming to get me out of it. Like many fundamentalist Christian cults, it was required to believe that the Bible was the "Word of God", inspired

verbatim and to be taken literally. In retrospect (after I left it) it was obvious that the doctrines of the church were a 'house of cards', built on a 'foundation of sand'. The foundation of sand, of course, was the assertion that the Bible was divinely inspired. The house of cards was, of course, the particular system of interpretation built on that Bible by that particular cult. The Michaelian teachings is not cultish because they do not claim to be The One True Way — as they say above — but on the other hand, there are some things about it that could be made cultish if some Michaelian students were so inclined. For instance:

- 1. There is an alleged supernatural source of information, claiming things that cannot exactly be confirmed by science, nor tested against universally accepted understanding such as logic and mathematics and physics, nor verified by other sources of information or personal experiences. There might be a natural tendency for some people to see this source as an omniscient authority figure, hence the injunction of the Michaels to resist that as indicated in the quotes above.
- 2. There are persons "channels" who claim to have a talent for receiving and transmitting information from that alleged supernatural source, thus potentially establishing a *de facto* hierarchy in the organization. This is reminiscent of the priesthood in various religions. The channels themselves have to go against the natural impulse of self-aggrandizement to mitigate and, it is to be hoped, to neutralize this tendency, and remind people to Validate and follow their own conscience and intuition.
- 3. There is a special vocabulary that goes with the system, that "insiders" are expected to understand and that "outsiders" do not understand without explanation. Perhaps this is unavoidable in any specialized system of learning, but it has its advantages and disadvantages. It facilitates easy and rapid communication within the group, but it tends to exclude people not "in the know". There are secret societies that establish privileges of the elite by this means. I have not seen any evidence of this potential consequence of jargonizing in the Michaelian teachings, but in any case, it tends to 'fossilize' the basic concepts; once they have been established in the community, it is difficult to dislodge them if/when something better comes along.
- 4. Once the teachings have been promulgated to the students, it is difficult to improve the information among the students, even if a preponderance of external evidence or later channeling makes a correction. Because of this phenomenon, error can become institutionalized, so much so that it is practically impossible to reform.
- 5. Thus, the Michaelian teachings is encumbered with some tendencies that are part of the typical human condition, namely the tendency to get stuck in dogmas and doctrines because it is often the path of least resistance. It often takes troublemakers and mavericks to keep a movement healthy and to goad it into making progress.

I hasten to reiterate that the above items do not mean I believe the Michaelian teachings is a blatant cult, although it has some of the feel of a subtle cult; having been in a cult in my youth, I see that it merely has vaguely cultish properties. The potential cultish behaviors do not seem to be taking firm hold, at least not in the open contingent that I am intimately familiar with. For that I commend the communities of Michaelian students in general. Because of some of the cultish elements enumerated above, it could conceivably go the other way, but the nature of the Michaelian teachings does not attract the kind of people who easily succumb to overt cult leaders or promote cult leaders.

That's nice, but there is another phenomenon in the Michaelian teachings that reminds me of cultishness: I swear, the leadership is not committed to "the truth, the whole truth, and nothing but the truth".

Why do the Michael's Lie to Us?

There is another factor that mitigates the human tendency toward cultishness, toward unearned belief in an authority figure. Would you believe it if I told you that the Michaels acknowledge that they sometimes provide misinformation, that they do not always make an attempt to correct unintentional errors in channeling, and that this is purposeful, and that this misinformation or disinformation is for our own good?

Gene asked why there have been <u>errors</u> in Soul Levels and Roles — are they purposeful? He had been told by Michael much earlier that he was an Artisan, and during a session the night before someone in the group had asked about his Role and was told it was Scholar, which seems to fit him better.

The <u>errors occasionally happen [purposefully] with growth in mind</u>, yes. Often, they are [unintentional] errors [due to channel bias or ignorance or stupidity or fantasy]. The man is right in one respect. The test is not

testing [the channel], but rather a <u>lesson to be learned [by you] in trust and getting in touch with intuition</u>. The soul level discrepancies are not reflective of too much more change [actual advancement]. The coincidence of the changes just happened to come in order of the guestions. [09 November 1974]

Even though neither the words validation nor verification occurs in this passage, it is relevant to the subject of this chapter. In addition to what has been said elsewhere, this is another indication that it is important to learn to get in touch with your intuition and learn to trust it — instead of credulously trusting channeling. You might not like this answer, but this answer — if it is not just more bogus channeling added to the abundance of bogus channeling — indicates that the Michaels sometimes intentionally introduce discrepancies, and sometimes let unintentional errors appear due to channel bias or ignorance or stupidity or fantasy without later correcting them, so that students learn to trust their intuition more than they learn to trust channeling; it is actually a matter of your spiritual growth that you learn to not rely too much on the channeled source. The way that the Michaels handle this progress toward truth is pretty much the same way that the universe handles its evolutionary process: in the exploration of "possibility space", shit happens until shift happens, resulting in less bias, less ignorance, less stupidity, and less fantasy.

Maybe the above quotation was just a bias or a mistake of that particular channel, Sarah Chambers. Maybe not. During the second half of the 1980s, The Michael Educational Foundation published "The Michael Connection Magazine". In Volume 2 Number 4, August/September 1986, in the Editorial titled "Self-Validation", M. C. Clark had this to say:

Michael has said, "On a good day the information that comes through a clear channel is about 80% accurate. And then there is another 5-10% of the information where we are deliberately inaccurate in order to make sure you're on your toes and validating the information for yourself."

Which channel said that is not recorded. Might you still think that this statement could be just another error in channeling about errors in channeling? In Volume 4, Number 1, Spring 1988 of the Michael Connection Magazine, in an article titled "More on Channeling", Shepherd Hoodwin wrote:

Deliberately "wrong" Information

Once in a while, information may be withheld or given incorrectly because one isn't ready to hear the truth. It might be too traumatic, or it would interfere with completing a karma or lesson, or perhaps it is something best learned for oneself. Wrong information may also be used as a teaching technique designed to trigger further questions, especially when it is <u>obviously contradictory</u>, or to remind a questioner to trust her own perceptions, no matter what anyone else says.

Let's look carefully at what is being said here — if this channeling accurately reflects the Michael's policy that it is a good idea to mix a little falsehood into their truthfulness. Do you find the notion disconcerting that the Michaels intentionally plant misinformation, and also allow unintentional errors in channeling to accumulate and proliferate indefinitely? Do you question if this policy is in accordance with their claim that "truth is the greatest good and love is the highest truth"? To my way of thinking, this policy would mean that the Michaels do not take responsibility for their own teaching. Instead, they 'pass the buck' onto their students to Validate the teaching, those far less likely than the Michaels to have the resources to discern the truth. One might hope that the professional channels would take responsibility for what comes out of their mouths, but what I typically see is that they also 'pass the buck' of responsibility for Validation onto their clients. Therefore, dear fellow students, regardless of whether the Michaels actually lie to us for our own good, or the channels just made up that excuse for the Michaels and for their own sloppy or bogus channeling, this is the situation that we find ourselves in: it is indeed up to us students to Validate. How many times do I have to say this: the unexamined teaching is not worth believing. We cannot trust the channels implicitly; hell, apparently we cannot even trust the Michaels; they might be lying to us "for our own good", teaching us that we cannot trust them or their alleged channels. But then, apparently, that might indeed be the *loving* thing to do; it a devious but effective device to get us to experience the consequences of their lies before we experience the consequences of the truth, a procedure that drives the lessons home in the most effective way, namely, by learning the hard way. Now, my questions to students are these: Have you had your fill of bogus channeling yet? Will you have your fill of bogus channeling after you read this Part of this History book?

Personally, I have serious misgivings about a source of information that allegedly puts a burden of responsibility to Validate on recipients who have little appetite or aptitude for Validation, which, to me, seems to be the case with the vast majority of Michaelian channels and students. I find the lack of integrity on both sides of the teach/learn equation to be dismaying, even odious. I rather prefer the strategy that Ra chose over

the strategy that (allegedly) the Michaels chose, when questions arose that were judged to be better left ambiguous for now. Sometimes Ra invoked what they referred to as "the Law of Confusion"; you may read about that on a website dedicated to the free dissemination of "the Law of One", namely this one: >https://lawofone.info/results.php?q=law+of+confusion<. Instead of intentionally misleading their students "for their own good", Ra refused to answer some questions, leaving it up to the questioner to figure it out the easy way using their own resources, or live it out experientially, which usually means learning the hard way.

During the original Michaelian group, sometimes the Michaels chided their students for asking questions that they could have learned to suss out on their own. On many occasions, the Michaels encouraged their students to learn to use their intuition and other resources to figure stuff out on their own. It would be Good Work for us students to remember the statement, "We [the Michaels] are not the Ann Landers of the cosmos." (MFM, p. 33; OMG, 10 April 1977) However, subsequent to the original Michaelian group, I have yet to see a professional Michaelian channel encourage their clients to learn how to get their own answers. As I see it, the professional Michaelian channels have become a sort of self-perpetuating priesthood. As I see it, with this Part of this History book, I am acting somewhat as a 'protestant' reformer, somewhat like Martin Luther nailing his 95 Theses to the door of the Catholic church in 1517, saying in effect, "Here is where the priesthood has gone astray; perhaps the priesthood should learn to make an honest living."

It is not as if we are unfamiliar with the process of Validation. Many if not most students find themselves dissatisfied when they first have their Overleaves channeled — they do not all seem to fit what they know about themselves — so they go to some other channel or do some serious research and/or introspection. It might take years for some of them to arrive at a settled opinion about what their Overleaves really are. In this Part of this *History* book, I implement the same Validation procedure with respect to more than a dozen dogma-doctrines that the Michaelian teachings communities have either not gotten right or have not come to a consensus on. We have learned not to trust the channels in regard to Overleaves; I suggest that it is now time to learn to not trust the channels in regard to other dogma-doctrines.

A search for the words 'test' and 'testing' in the original Michaelian group transcriptions reveals that several times students tested the channel, hoping to discern the level of trust that the students could place in the channel. This is not the right way to do Validation; rather, students should learn to Validate their own internal intuitive faculty, and otherwise upgrade their epistemic sophistication via such external measures as academic, historical, scientific, and philosophical exploration. My own intention here in Part Four is exactly this: to point out the errors in channeling so that students learn to apply and trust their Validation process — whether by their own intuitive faculty or by their own academic research or by their own experiences of ignorance and stupidity that result in suffering — with the purpose of weeding out the inconsistencies, the incoherence, and the inconsilience in the channeling.

By "inconsilience", I remind the reader that I refer to the fact that the Michaelian teachings does not always agree with other esoteric sources. Even though there are contingents within the Michaelian teachings with different ideas about things, and even though there is intermingling of those ideas, I believe that the Michaelian teachings has been too 'incestuous'; it could seriously benefit from some 'promiscuity' with other sources; the cross-fertilization with other spiritual and secular systems of understanding would be Good Work. The Michaelian teachings could teach them some things; they could teach the Michaelian teachings some things.

For instance, there is a lot of other channeling from alleged supernatural beings available today. You can look up any of the following on the internet and get an overview of their work, and if you like them you can buy their books. For instance, there is Seth, Abraham, Kryon, A Course in Miracles, Conversations with God, The Ra Material, Lazaris, Bashar, and so on. Comparing the Michaels with this other channeling, we find much information that is similar, but we also find that some information is different, even contradictory. This fact alone mitigates against regarding any channeled information as being The Truth. As we examine the dozen or so issues in the following chapters, we will keep in mind that we aspire to approach the truth, but we are not claiming to have arrived at The Truth.

Another point to be made in this chapter is that one could compare the Michaelian teachings community to an inbred clan. It is a mixed bag: I see some 'bad genes', where dubious dogma—doctrines have been spread from channel to channel and to the student body. I also see where the channels have not bothered to coordinate with each other, as scientists would in the "peer review" process in professional journals, to work out the weaknesses and errors in their hypotheses. When you don't take channeling as the gospel truth, it frees your mind to consider other options and sources, among them mystical insights and esoteric traditions. The

Michaelian teachings could use some cross-fertilization with other spiritual teachings; we need to be more 'promiscuous' in that regard; one of my strategies for resolving issues is to do just that here in Part Four. As noted above, this is called consilience; it is the confluence of evidence converging on a consensus.

My suspicion is that few Michaelian students believe that they have the resources to address the discrepancies that are found among various Michaelian teachings sources. They read what those smart, knowledgeable channels say in their books, and they see that other smart, knowledgeable channels say contradictory things in their books. They don't know what to do with that, so they do nothing. My suspicion is that I might possibly have some of the resources required to examine and challenge and attempt to resolve some of the discrepancies. Perhaps then the question for you is, Do you have the resources to discern if I have done a decent job? Is reading my stuff an adequate way for you to Validate? Let's give it a try and see what happens.

Chapter 4C

WHICH TRAIT SEPTENARIES ARE OVERLEAVES?

As discussed in a chapter in Part Two of this *History* book, Chapter 2A, "Revelation of Overleaves", in the original Michaelian group transcriptions, the origin and meaning of the term "Overleaf" is obscure. However, in the Michaelian teachings community, Overleaves are generally understood as traits that apply to the Personality self (as distinct from the soul self or the body self) during incarnation; they are "overlays" to the Essence or soul self, adopted for the purpose of understanding the Physical Plane when seen through the various filters and lenses of experience that the Personality traits provide.

(Notice that I capitalize the word "Personality" in this section when referring to the Overleaves, because these are both Michaelian teachings jargon words, and because the Overleaves are said to be of the "True Personality" rather than of the "False Personality".)

It is also obscure to many Michaelian students *which* of the septenaries (sets of seven) of Personality traits should be designated as Overleaves. There is actually no official consensus or hard dogma–doctrine within the Michaelian teachings community on the subject. The so-called Overleaf Charts reviewed in Part Three present many of the same septenaries of traits, but not all of the Charts show all of the same septenaries — some add septenaries and some omit septenaries; there is no consistency.

Besides the Charts, in various Michaelian teachings books and websites that have been published over the decades subsequent to the original Michaelian group, there are different septenaries that get or do not get placed into the Overleaf category. An examination of the published Michaelian literature reveals that there is no disagreement from the opinion that the septenaries of Goal, Mode, Attitude, Center, and Chief Feature are Overleaves. However, there is disagreement on whether or not the septenaries of Role, Age and Level, and Body Type belong with those Overleaves; some say Yes and some say No and some say Sorta and some say Kinda for various septenaries — refer to the Table at the end of the next section for a graphical representation of the discrepancies, listed by source.

As documented in Chapter 2A in Part Two, "Revelation of Overleaves", in the original Michaelian group transcriptions, the Overleaves were revealed in this order: (1) Centers (adopted from Gurdjieff), (2) Ages/Levels, (3) Roles, (4) Goals, (5) Attitudes, (6) Chief Features, and (7) Modes. When Modes were revealed on 02 April 1974, it was said that it was the "seventh" and "final" Overleaf category. During the entire history of the original Michaelian group, and the Michaelian teachings community subsequent to the original Michaelian group, no additional Overleaf categories have been forthcoming.

The quantity *seven* should not come as a surprise to Michaelian students, considering the prominence of that number in the Michaelian teachings and other esoteric cosmologies. Is it just a coincidence that in the original Michaelian group there were said to be seven Overleaf categories? Or is that fact a clue that we should look for the archetypal pattern of Septenarian Attributes (Action, Inspiration, Expression, Assimilation, Cardinal, Ordinal, Neutral) in the Overleaf categories? If so, why has the pattern not been recognized by the Michaelian teachings community all these decades after their original revelation? What distracted or misled the Michaelian student community? What has obscured the proper understanding of the Overleaf System such that the prominent expositors do not even agree on which trait septenaries are Overleaves?

It seems remarkable to me that this central aspect of the Michaelian teachings — the subject that was at the top of the Michaels' revelation agenda and that Michaelian students are endlessly fascinated with and that we want to tell the world about — lacks clarity and agreement.

In the next part of this section we will trace the history of this topic subsequent to the original Michaelian group. Then in the next section after that, we will look at the apparent "reasons" for the differences. Then in the next sections after that we will look at the resolution of the differences.

(Note that where Messages from Michael (MFM) and More Messages from Michael (MMFM) are quoted and the page numbers are given, they are from the original editions (1979 and 1986 respectively), not the 25^{th} Anniversary Editions.)

Discrepancies in Various Books and Websites

In this section I present the differences in Overleaf identification found in various Michaelian teachings publications. At the end of this discussion, for your viewing convenience, there is a table that graphically summarizes the results.

Chelsea Quinn Yarbro

The Yarbro books don't discuss the seven Body Types named after astronomical bodies, which were named after mythological deities, but they do discuss the Overleaves, for the first time in a publication. At the location in the first Yarbro book, *MFM*, where the subject of Overleaves is introduced, it says:

All that we have been telling you about the nature of the soul we refer to as the overleaves.

And there are more to them than just soul age, level, and type [Role] — is that right?

There is also mode, goal, centering, chief feature, and attitude. [MFM, p. 104]

I count eight Overleaf categories here, unless one conflates Age and Level, in which case *MFM* would bolster the implication in the original Michaelian group transcriptions (see above) that there are seven Overleaf categories.

On the next page of MFM it says,

There are poles in all aspects of the overleaves. The Slave Role has ...

... which definitely implies that Role is an Overleaf.

Although they are not called "Overleaves", the list of Overleaves is confirmed on page 117 of MFM:

Is that all, then? Role in essence, age, level, mode, goal, attitude, center, and chief feature?

Those are your choices to enable you to fulfill your agreements, complete your sequences and monads, and burn karma. [MFM, p. 117]

Thus, *MFM* did not add to the list of Overleaf categories from what was shown in the original Michaelian group transcriptions, and it listed eight of them because it did not conflate Age and Level into Age/Level.

However, the placement of Role is ambiguated with the following passage:

What makes the agreements is your astral self, which between lives is mostly the role, which is mostly in essence, and the vestiges of personalities [incarnations]. Agreements are not made by the essence. Role stands both in essence and personality. It has a sense of essence but it is attracted to the physical plane. [MFM, p. 197]

By "ambiguated", I mean that Role is said to overlap the line between the spiritual soul and the physical Overleaves. This is a key passage for understanding why the placement of Role is disputed — allegedly it does not go on one side or the other of the dividing line between Essence (spiritual soul) and Personality (incarnate Overleaves); it overlaps, or the boundary is blurred, with both categories. The disagreement in subsequent sources is that some prefer to put it in one or the other rather than put it in both categories, as I do. And Yarbro herself is one of those disputants, because she changed the original Michaelian group/MFM stance in her next book.

In the second Yarbro book, *MMFM*, where Overleaves are again explained, in a chapter called "The Naming of Parts", it lists seven of them:

The cycle [Age], level, mode, goal, attitude, centering, and chief feature are all factors in the overleaves. [MMFM, p. 25]

Role is missing from this list, but the quantity still adds up to seven because it does not conflate Age and Level into a single Overleaf, Age/Level. This same *MMFM* passage then goes on to make an adjustment or alleged clarification to what was said in *MFM*: it excludes Role from the list of Overleaves:

The essence [Role], while included in description of the overleaves, is not truly part of them.

Presumably then, in *MMFM*, the Role is not in *both* Essence and Personality as it says in *MFM*; it is only in Essence. (After *MMFM*, other Michaelian students followed Yarbro in excluding Role from the Overleaf category.) More will be said about the common phrase, Essence Role, in subsequent sections, because it is a key for understanding why the placement of Role is disputed — why it has a shifting history.

So, right there in *MMFM* is where the published Michaelian teachings first departed from the original Michaelian group (and *MFM*) revelation of what the seven Overleaf categories were. Some trait septenaries began to be thought of as quasi-Overleaves or semi-Overleaves, for stated or unstated suppositions. The exclusions from the true Overleaf designation continued in subsequent publications, as we shall see further on, in what I regard as even more misguided attempts at clarification.

Yarbro mentions the subject of Body Types in her books, but never discussed the *seven* Body Types named after the seven visible planets of the Solar System (even though they were revealed in the original Michaelian group transcriptions that she had in her possession), so it appears that she almost surely excludes Body Type from the Overleaf designation.

Putting the above statements together, it seems that Yarbro, in her second book, does not conflate Age and Level into one Overleaf category, Age/Level, and does place Role in the non-Overleaf category, making a total of seven Overleaves: Age, Level, Mode, Goal, Attitude, Center, and Chief Feature.

José Stevens

Stevens lived in the Bay Area for decades before he moved to New Mexico in the late 1990s. On the promise that he would not share them, he was given original Michaelian group transcriptions in the mid-1970s, while the original Michaelian group was still convening, by a University co-worker who happened to be a member of the original Michaelian group. Stevens and Warwick-Smith published the first non-Yarbro book about the Michaelian teachings: *The Michael Handbook (TMH)* (1986), where it says on page 121:

Briefly, the overleaves are made up of the role (already discussed), the goal, the attitude, the chief feature, the mode, centering, and body types. There are seven of each of these characteristics contained within each set [of Overleaves].

Again, there are seven of them, but Age and Level, or Age/Level, are *not* included, and Role and Body Type *are* included. This is another departure from original Michaelian group/*MFM*, and yet another departure from *MMFM*, which had been published earlier the same year.

In Stevens's two other 1980's books, *Tao to Earth (TTE,* 1988) and *Earth to Tao (ETT,* 1989), Role was *perhaps* excluded from among the Overleaves; the evidence is inconclusive. Both of these books followed the publication of *MMFM* in 1986, so maybe Stevens followed Yarbro's lead in excluding certain trait categories from the Overleaves based on one premise or another. Note this statement on page 326 of *TTE,* in the Glossary:

Overleaves: Specific traits and characteristics that make up personality each lifetime. Goal, mode, attitude, chief feature, centering, and body type.

The count there is six. By excluding Role and Age/Level and adding Body Type, that departs from original Michaelian group and *MFM*, and adds up to six Overleaf sets. The same Glossary entry can be found on page 251 of *ETT*. On pages 240 and 241 of *ETT*, the description of Role is separated from the description of Overleaves. However, because the exclusion of Role is implicit rather than explicit, I put "YES?" in the Role box in the table below to remain consistent with *TMH*. If Role were included, as it was in *TMH*, it would add up to seven.

JP Van Hulle, and others

In the book, Michael: the Basic Teachings (MTBT, 1988), it says on page 67:

Of all the overleaves (goal, mode, attitude, chief feature, and centering) an Essence can choose during a particular lifetime, the choice of goal is the most significant.

So, this book seems to exclude Role, Age/Level, and Body Type from the Overleaf designation. This is yet another departure from the preceding sources, original Michaelian group, *MFM, MMFM,* and *TMH*. Indeed, on page 133 it explicitly says:

Although the body type is not part of the personality and, therefore, technically not one of the overleaves, choosing a body type is similar to choosing an overleaf.

So, here we have a total of five Overleaves. The rationale for this further departure from the earlier sources is not explained so far as I have been able to determine — but I have conjectures in the next section. Van Hulle

et al did not have access to the transcriptions of the original Michaelian group as Stevens did (we know that Stevens did not share them because of a promise made to his source within the original Michaelian group), which said that there were seven Overleaves.

Judithann David

David was another one of the Bay Area Michaelian students who wrote a book in the 1980's, as did Stevens and Van Hulle. In her book *Michael's Gemstone Dictionary* (1986), written with input from Van Hulle, on page 8 we read the following:

This section is composed of six parts: Roles, Goals, Modes, Attitudes, Centers, and Chief Features. The latter five are known as the overleaves. The role describes one's essence or the way of "being" one has throughout one's lives. The overleaves describe the basic personality characteristics and [they] change with each lifetime to provide a variety of different lessons.

This passage, like *MMFM*, posits an alleged reason why Role is not to be considered an Overleaf: it is not like them because it is said to be permanent across lifetimes, and it is of Essence and not of Personality. This passage seems to number the Overleaves as five by excluding Role, Age/Level, and Body Type. This is the same as *MTBT*, as stated above. However, on page 79 we find the following assertions regarding Body Types, which might be a rationale for why Body Types are not considered to be a full-fledged Overleaf by this and other sources:

Choosing a body type is similar to choosing an overleaf. It is chosen astrally prior to birth and will in some way facilitate the lessons and karmas for that particular life. The effect of body type is less than that of the other overleaves and the effect can be neutralized somewhat by being aware of its workings.

Does the phrase "other overleaves" imply that Body Type is an Overleaf, or does the phrase "similar to choosing an overleaf" imply that Body Type is not an Overleaf? To me, this passage seems ambiguous about whether or not to include the Body Types in the category of Overleaves; it could go either way. Whatever the case, Body Type is regarded as not exactly a full-fledged Overleaf.

Age and Level are mentioned in the book, but not in the context of Overleaves.

David authored this book with Van Hulle, so it is likely she followed Van Hulle's understanding, which is to exclude Role, Age/Level, and Body Type from the Overleaf category. Nevertheless, because of the ambiguities, I put "NO?" in the appropriate boxes in the table below.

Joya Pope

Pope was another one of the Bay Area Michaelian students (along with Stevens, Van Hulle, and David) in the 1980s. In Joya Pope's book *The World According to Michael* (1987) she says nothing about Body Types that I could find in a quick scan of the book. In her chapter named "Overleaves", on page 60, she names four of them: Goal, Mode, Attitude, and Chief Feature.

She has a separate chapter to describe Centers — as she has for Age/Level, Roles, Frequency, and Male/Female energy — as if Center, Age/Level, and Role were not Overleaf categories. There is no explanation for the unusual grouping of trait categories into chapters in the book; does it mean something or not? My guess is that Pope followed Van Hulle rather than Stevens, but I am loath to imply too much from this lack of explicitness, so I just put "NO?" in the appropriate boxes in the table.

Emily Baumbach

Baumbach was yet another one of the Bay Area Michaelian students (along with Stevens, Van Hulle, David, and Pope) in the 1980's. Regarding her book, *Michael's Cast of Characters* (1989), it is difficult for me to say for certain what she considers an Overleaf and what she does not. In the Introduction she says:

Those of us who are familiar with the Michael System know that each of us is one of seven Essence Roles (King, Artisan, etc.), and those seven Essence Roles are further modified by the overleaves (Goal, Mode, Attitude, Chief Feature, and so forth).

I have more to say about the phrase "Essence Role" in sections further on. Note that Age and Level and Center and Body Type are not mentioned here, but they might be included in the "and so forth", so we have to look elsewhere for clues about their status as Overleaf categories or not.

On page 107 we find that the Centers are definitely considered to be an Overleaf category:

Centering adds an interesting angle to the Overleaves, providing yet another opportunity for us to develop compassion for people who, in their ignorance, see the world differently than we do. As with the other Overleaves, we can change our Centering from lifetime to lifetime in order to round ourselves out.

However, in the chapter on Ages and Levels, nothing is said about them being in the Overleaf category, so that is ambiguous. In the table below, I put a question mark in the column for Age/Level. Nothing is said about Body Types in the entire book except a mention on page 117 that they exist, so that is also ambiguous.

On page 117 we find this:

Given that there are 7 Roles and 28 main overleaves in the Michael System (not counting Centering, Part of Center, Body Type, Frequency and so forth), there are approximately 16,807 main overleaf combinations possible for us to choose from.

The "28 main overleaves" apparently refers to seven each of four Overleaf categories mentioned in the quote above, therefore Goal, Mode, Attitude, and Chief Feature. My guess is that Centering was not considered to be a "main overleaf" because it consists of Parts, whereas the four "main overleaves" do not. But still, the implication is that it is considered to be an Overleaf. I am also not certain if this implies that Body Type and Frequency are also considered to be Overleaves. In the table below, I put a question mark in the column for Body Type. In the Michaelian teachings communities, Frequency is generally considered to be a part of Essence, not Personality — it is said to be permanent across incarnations.

As I said above, Baumbach is not explicit about what is and what is not an Overleaf. Because of their friendship, it is most likely that she followed Van Hulle rather than Stevens and Yarbro, so I put a "NO?" in the appropriate boxes in the table.

Terri Benning

Benning is a student and channel who also lives in northern California. On her 2003 website, >http://michaelmosaics.com/sevens/essentialsevens.html<, in a table labeled "Essential Sevens — THE OVERLEAVES", she lists Roles, Modes, Goals, Attitudes, Chief Features, and Body Types. Obviously that amounts to six Overleaves. Note that this list excludes Age/Level. Centers are listed in another table of Essential Sevens, along with Chakras and Colors. Roles are also shown on that table, so I am not certain how she categorizes Centers, but I am relatively certain she puts them in the Overleaves category, so that is what I show on my table. She did not hang out with the Bay Area sources, so some independent thinking might be showing up in her work.

Stephen Cocconi

Cocconi is yet another one of the northern California group of Michaelian students. On his website, >http://www.themichaelteaching.com/michael/overleaves/<, he lists Role, Goal, Attitude, Chief Feature, Mode, Centering, and Body Type. These are the Overleaves shown on Cocconi's Overleaf Chart reviewed in Part Two. Note that there are seven of them, but also note that Age/Level is not mentioned here, and neither is it shown on his Chart, although they are discussed on another of his web pages, namely this one: >http://www.themichaelteaching.com/michael/soul-ages/<. Because the Soul Age exclusion is implicit, not explicit, I put a "NO?" in the Soul Age category in the table below.

Then, in an online presentation for the East Coast Michael gathering in 2022, he explicitly excluded Role and Soul Age from the Overleaf designation, so this is what I showed in Table 4Ca below.

Troy Tolley

Tolley is not one of the northern California Michaelian students; he is a channel, and, so far as I know, he does not necessarily trace his understanding of the Michaelian teachings to particular named others. He lists and explains Goal, Mode, Attitude, Body Type, Centers, and Chief Feature on his website, and the date is 2016: >http://our.truthloveenergy.com/articles.html/library/start-here/basic-introduction/overleaves-personality-r12/<. Obviously that amounts to six Overleaves. Note that this list excludes Role and Age/Level. Those two are explained elsewhere on other web pages, so I am reasonably certain he does not include them in the Overleaf designation, and that is the way I show it in the table below.

Shepherd Hoodwin

Hoodwin is not one of the northern California Michaelian students; he is a channel, and he does not necessarily trace his understanding of the Michaelian teachings to others. In his book *The Journey of Your Soul*

(1995), page 255 and Glossary, he lists Goal, Mode, Attitude, Center, and Chief Feature as Overleaves. That would seem to exclude Age/Level, Role, and Body Type, but when we look further, we find that, on his Michael Reading Chart, spanning pages 92 and 93 of that book, Body Type is listed under the Overleaves heading. Then on page 304, it says, "Strictly speaking, body types are not an overleaf ...". On this Chart, Role and Soul Age and Level are listed under the Essence heading, not the Overleaves heading.

However, in the second edition of *JOYS* (2013), he displays an updated Michael Reading Chart, spanning pages 112 and 113, in which Age/Level is located under the Overleaves heading rather than the Essence heading of the Michael Reading Chart. Therefore, it would seem that Hoodwin moved Age/Level into the Overleaf designation. This is further confirmed on his current website,

>https://shepherdhoodwin.com/michael-teaching/sample-chart-and-explanation/<. There Hoodwin shows seven Overleaves on his standard Chart: Goal, Attitude, Mode, Center, Chief Obstacle, Body Type, and Age/Level.

On page 248 of the second edition (2013) of *JOYS*, at the beginning of the chapter "Comments on Overleaves", Hoodwin clarifies this somewhat further by stating his rationale for Overleaf designation:

Overleaves are personality traits that overlay essence. We <u>select</u> a new combination of overleaves for each lifetime, mostly before it begins, to facilitate the purposes of that lifetime. We solidify our centering at the second internal monad (age two) and chief obstacle at the third (around eighteen or earlier), although we make tentative <u>choices</u> before birth and stay with them most of the time.

Sometimes we use the term 'overleaves' more generally to refer to all of someone's Michael teachings traits, including role, as in the question, "What are your overleaves?" Essence-level traits, however, are not technically overleaves — they don't <u>change</u>. Role, for example, remains the same during a grand cycle. Soul age is not <u>chosen</u> (it's experienced sequentially) but it still changes, which is why I include it here.

The words that I underlined in this quoted text, "select, choices, chosen, change" provide clues about what criteria Hoodwin applied to the question, "What is an Overleaf?" And the answer he apparently gives is, if Essence chooses it and it changes, then it is an Overleaf.

With all of this said, I am still not certain if Hoodwin considers Body Type and Age/Level to be *real* Overleaves, so that is why I put "KINDA" and "SORTA" in those columns in the table below. Even for someone who has thought deeply about and written extensively on the subject, the issue of Overleaf designation for him still has ambiguities and confusions and technicalities.

Tabulation of Differences

These differences in understanding and nomenclature among channels as described above are tabulated below. There might be additional sources with differing opinions and rationales, but you get the idea — there is no consensus, as I stated in the Introduction to this Part Four. Age and Level are conflated in this tabulation, even though one of the sources, Yarbro, seemed to regard them as separate Overleaves.

| Table 4Ca — WHICH TRAIT SEPTENARIES ARE OVERLEAF CATEGORIES | | | | | | | | | |
|---|------|------|----------|--------|-------------|----------|-----------|-----------|--|
| | GOAL | MODE | ATTITUDE | CENTER | CHIEF FEAT. | ROLE | AGE/LEVEL | BODY TYPE | |
| Orig. Mich. Gr. | YES | YES | YES | YES | YES | YES | YES | * | |
| YARBRO | YES | YES | YES | YES | YES | YES > NO | YES | NO | |
| STEVENS | YES | YES | YES | YES | YES | YES? | NO | YES | |
| VAN HULLE | YES | YES | YES | YES | YES | NO | NO | NO | |
| DAVID | YES | YES | YES | YES | YES | NO? | NO? | NO? | |
| POPE | YES | YES | YES | YES? | YES | NO? | NO? | NO? | |
| BAUMBACH | YES | YES | YES | YES | YES | NO | NO? | NO? | |
| HOODWIN | YES | YES | YES | YES | YES | NO | KINDA | SORTA | |

| Table 4Ca — WHICH TRAIT SEPTENARIES ARE OVERLEAF CATEGORIES | | | | | | | | | | |
|---|--|-----|-----|-----|-----|-----|-----|-----|--|--|
| | GOAL MODE ATTITUDE CENTER CHIEF FEAT. ROLE AGE/LEVEL BODY TY | | | | | | | | | |
| BENNING | YES | YES | YES | YES | YES | YES | NO | YES | | |
| COCCONI | YES | YES | YES | YES | YES | NO | NO | YES | | |
| TOLLEY | YES | YES | YES | YES | YES | NO | NO | YES | | |
| WITTMEYER | YES | YES | YES | YES | YES | YES | YES | * | | |

^{*} Based on original Michaelian group transcriptions, Body Types are only considered to be an Overleaf category to the extent that they can be integrated with the Centers as aspects of a single Overleaf category; see discussion further on.

Notice that the first five columns are not showing any disagreements (there is one ambiguity), but that the last three are subject to disagreement. My suggestion is that the cause of these differences of opinion is that the sources are not using the right criteria or criterion to come to a consistent and definitive resolution of the question, "What Septenarian sets are Overleaves?"; thus their rationales, whatever they may be, are irrelevant to the problem. Let's look at what I consider the wrong criteria in the next section. 'Your mileage may vary.'

Why the Uncertainty?

As stated in the previous discussion, a careful reading of *Messages from Michael* — the only book based on the original Michaelian group transcriptions — confirms the original Michaelian group revelation that there were seven Overleaf categories, as shown on Table 4Ca above. However, subsequent Michaelian students departed from that understanding with various rationales, and in various ways, as documented in the previous section. What was originally simple and straightforward got all ambiguous and complicated. I have some conjectures about why this was the case, and how this divergence happened.

The Michaelian student community did not have access to the original Michaelian group transcriptions (which are more clear even than *MFM* that there are seven Overleaf categories) until the mid-1990's. And now that we have them, apparently no one (other than myself) has studied the documents (and the Septenary) enough to prompt a reexamination of the thinking that led to discrepancies among Michaelian teachings expositors. The various sources do not always explain their rationale, but, near as I can tell, this issue is confused for five possible reasons:

- 1. There is a difference between typical and atypical descriptions of Overleaf categories in the book, *MFM*.
- 2. There is a difference between chosen and unchosen trait categories.
- 3. A teaching about Centers and Body Types preceded the original Michaelian group and were adopted into it and then adapted to suit the new environment.
- 4. In the original Michaelian group and in *MFM*, there were no Positive and Negative Poles given to Level and Age, and no correlation to the other trait categories was given, as if Level/Age was of a different nature, but later on some sources added this Polarity info to them, apparently bringing Level/Age into alignment.
- 5. There is a difference between Essence and Personality and body.

Yep, that's a lot of reasons to get confused — if one does not understand, as I do, that the Natural Sequence (see below for a reminder of what this is) rules the Overleaf categories.

The following bullet points are an elaboration of the five rationales; a detailed examination of the disputed categories is presented in subsequent sections.

• ATYPICAL DESCRIPTIONS: Some of the proposed Overleaf categories get a typical description, and some of them get an atypical description. Goal, Mode, and Attitude have nothing unusual about their description: there is said to be one of them in each lifetime, and they last for the entire lifetime. The other proposed Overleaf categories are said to have something unusual in their descriptions: Roles do not change from lifetime to lifetime; Centers are said to have a Part and a Trap and the Cardinal Centers are rare and weird and do not manifest until after the second Internal Monad (after age two); Chief Features are said to be formed during adolescence and can be extinguished or exchanged later

in life; Level and Age are said to escalate from lifetime to lifetime; Body Types obviously last a lifetime and change from lifetime to lifetime, the same as Goal, Mode, and Attitude, but apply to the body and not to the Personality. Should any or all of these variations in descriptions influence their placement, or not, in the Overleaf category?

- CHOICE: Then there is the matter of *choice*. It is said that Essence gets to *choose* its Goal, its Mode, its Centering, its Body Type, and its Attitude for the purpose of varying its experience during a particular lifetime. However, the Role is said to span all lifetimes and therefore is not *chosen* the same way as the *real* Overleaves are chosen by Essence for incarnations. On the other hand, the Centers are said to develop and get firmed up after the second Internal Monad (after age two): the Chief Feature is said to develop in the teenage years in response to life-altering experiences, and can allegedly be extinguished, and therefore it is not *chosen* by Essence as the *real* Overleaves are chosen; the Ages and Levels are said to escalate in subsequent incarnations and are therefore not really *chosen* in the same way that the *real* Overleaves are chosen. And finally, the Body Types are said not to be Personality traits at all, even though they are said to be *chosen* by Essence. It would seem that the factor of choice is not a good predictor of what is a real Overleaf.
- ORIGINS: The categories of Center and Body Type were revealed and invented (respectively) before the original Michaelian group, and were adopted into the original Michaelian group, and then adapted to suit the new environment. These trait categories are expounded upon at length in Part One and other sections here in Part Four of this *History* book. The take-away from those discussions is that, in my opinion, this factor alone is not sufficient to decide whether or not to include these two categories under the Overleaf umbrella, but their irregular origins are a potential source of uncertainty in the minds of some students.
- DELAYS: The names given to the Positive and the Negative Poles of Levels and Ages were years late in arriving. The Levels got names for Poles in 1986 in MMFM, but no names for the Levels themselves were given other than First, Second, and so on. The Ages got names for Poles almost another decade later, in 1995, in Hoodwin's book, TJOYS, p. 205. (If they appeared in print earlier, I have not seen it.) This delay might make one wonder if Age/Level belongs under the Overleaf umbrella, and indeed, most of the sources do not include it there. But on the other hand, does Age/Level belong exclusively in the Essence category?
- AMBIGUITY: There is ambiguity and/or disagreement and/or misunderstanding about where the dividing line or overlap between Essence and Personality and body should be placed. That is to say, which septenaries, if any, belong (exclusively?) to the discarnate soul (therefore they are not Overleaves); which septenaries, if any, belong (exclusively?) to the Personality of an incarnation (therefore they are Overleaves); which septenaries, if any, belong exclusively to the body (and is that an Overleaf or not?); which septenaries, if any, fall into some nether region which is not exclusive to any. I believe that a proper understanding of the dividing line and/or overlap is useful but not necessary for disambiguating this issue.

So there you go. Does the Essence/Personality/body distinction versus overlap have any part to play in the inclusion or exclusion of some septenaries? Or is there some other criterion to include and exclude one or more of the septenaries, such as the choice distinction and/or the typical/atypical distinction and/or the origin distinction and/or the delay distinction? It is my perception that the existence of all these variations in description and explanation have led to the confusion and the ambiguity and the discrepancies — they are the various causes, and none of them are the solution to the problem, the answer to the simple question "Which of the trait categories are Overleaves?". In my opinion, all of these factors, even if they are legitimate, are noise that has obscured the signal that leads to an understanding of the structure and meaning of the Overleaf System. Apologies for shouting, but I believe that it is important to emphasize that there is a hitherto unknown or overlooked criterion, one that overrides all of these other variegated considerations. I refer to that criterion as the Natural Sequence; it provides a coherence that mitigates the confusion promulgated by people who seem to have no aptitude for pattern recognition.

Michaelian students typically are unaware of, or unconcerned with, the meaningful pattern of the fundamental archetypal system of the cosmos, of which the collection of traits is a distorted manifestation. The Overleaf septenaries are obviously parts of a *system*, so that begs the question, What is the nature and meaning and structure of the system? And does the fact that there is a systematic component to Overleaves

provide any clues about which septenaries are properly called Overleaves and which are not? I believe that a coherent understanding of the *system* as a whole provides clues as to what is properly called an Overleaf.

Table 4Ca shows that the five Aspects of Goal, Mode, Chief Feature, Attitude, and Center are undisputed as Overleaves by the entire Michaelian teachings community, and the three Aspects of Role, Age/Level, and Body Type are disputed by various sources in various ways. I listed several potential rationales in this section, but, near as I can tell (the sources are not explicit), the disagreements really just boil down to one factor: ambiguity. Ambi- is from a Latin root meaning both. In the case of Role, it is said to be present — or not — in both Essence and Personality; in the case of Age/Level, it is said to apply — or not — to both Essence and Personality; in the case of Body Type, it is said to apply — or not — to both Body and Personality.

Perhaps if we approached the problem systematically, logically, mathematically, we could discern and define more accurately which categories of traits are Overleaves. Let's first consider whether or not Body Type can legitimately be considered an Overleaf, and then we will discuss the other two septenaries that are in dispute, Role and Age/Level. There is also going to be some discussion of Center; even though it is not in dispute that it is an Overleaf, there is an overlap of Center with Body Type. This should cause us to examine it, as well as the disputed septenaries.

In the next few sections of Part Four, I will present my evidences and arguments for sticking with the original original Michaelian group revelation.

Body Type

A thorough discussion of Body Type can be found in two chapters in this book dedicated to the subject, Chapter 1M in Part One and Chapter 4D, which follows this chapter. The first chapter is about the history of the subject before and during the original Michaelian group; the second chapter is the history of the subject within the Michaelian teachings community after the original Michaelian group. The analysis and synthesis contained in those sections resulted in my understanding that the Body Type system — as originally formulated and as understood in the Michaelian teachings — does not properly belong within the Overleaf designation, with the following rationale:

- The seven Body Types cannot reasonably be correlated with the other Overleaf categories in terms of Dialectic Attributes and Axial Attributes and Septenarian Attributes. The original presentation had little resemblance to the Overleaf System beyond the number seven and some alleged polarity factors. Consequently, attempts to force-fit the original presentation into the Overleaf System is just that forced and depending on how you force it, it is still a wonky mess. The number 7 itself is suspect in this case because of the addition of the 3 outer planets of our solar system. Furthermore, astrologers have added major asteroids and some newly-discovered trans-Neptunian dwarf planets to the list of alleged influences on the human condition. All of these facts negate the idea that the planets have any correlation with the Overleaves.
- Even though the Body Types had personality traits according to the Fellowship of Friends, according to a statement in the original Michaelian group transcriptions, Body Types did not have personality traits associated with them. Later on, subsequent to the original Michaelian group, they were ascribed personality traits, and this might be one reason that there is uncertainty about whether the Body Type system is properly classified as an Overleaf category, with or without personality traits.
- In the Body Type system, the Body Types are named after planets of the solar system according to Roman mythology; the planets are named after Roman deities; the Body Types are ascribed physical and psychological traits according to mythological and astrological traits assigned to those deities. The professional astrologers that I have spoken to about this do not agree on the correlation of planets and Overleaves. One therefore wonders if there is a correlation. None of this speculation is remotely empirical or scholarly or scientific.
- The Body Type system was originally formulated, based on the theories of an endocrinologist named Louis Berman, who lived in the first half of the 20th Century. His science has been superseded; it is no longer considered to be scientific. Therefore, one wonders if his Body Type system should be superseded.

These four arguments resonate with the thinking of someone who, like myself, has issues with the inclusion of the Body Type system in the Overleaf category. In his presentation on the subject of the Body Type system in the first edition of his book *The Journey of Your Soul*, on page 303, Hoodwin says:

Strictly speaking, body types are not an overleaf, but like the overleaves, they are chosen before the lifetime begins ... [TJOYS, p. 304]

A reason or rationale or rationalization for this statement is not provided. On page 313, Hoodwin says he has seen several different correlations of the Body Type system with Roles; each with their own rationale or rationalization. He concludes:

Although I've become comfortable with the arrangement of Body Types on the four axes as depicted at the beginning of the chapter, Body Types probably don't fit perfectly on the Michael chart, and perhaps any arrangement is a little arbitrary. [TJOYS, p. 314]

I agree with this except I would delete the qualifiers "probably", "perfectly", "perhaps", and "a little". Thus, I would put it this way: "The Body Type System (as commonly understood in the Michaelian teachings community) does not fit in the Overleaf System, and any arrangement is arbitrary."

The two statements quoted above were removed from the second edition of *JOYS*, published in 2013.

Decades ago I went through Joel Friedlander's book *Body Types* — which Hoodwin mentions in his book — and tried to correlate them with the Overleaf system based on personalities allegedly associated with the Body Types, but gave up in frustration. That book is probably the most thorough and authoritative available on the subject. I think that the disagreement about the Body Type system correlated with the Overleaf System exists for the same reason that Michaelian students cannot come to a consensus for correlating the descriptions of the seven astrological planets with the seven Roles: the fit is arguable in various ways. In other sections in this *History* book, you find that I regard the Body Type system as a holdover from a book by Rodney Collin, and that the Body Type system as currently understood in the Michaelian teachings should not be considered an Overleaf category. On this point I agree with Hoodwin and some other channels subsequent to the original Michaelian group.

I really do not like to indulge in speculation, but I am going to connect some dots that sort of make sense to me; you see if it works for you:

My speculation is that the real Overleaves — whatever they are — are attached to what is called the etheric body and not to the physical body where the Body Type characteristics are. Nor are the Overleaves attached to the Astral Plane soul, not to mention the Essence, "the intrinsic core of the soul" (a phrase from MFM). Recall that, in the Michaelian teachings and other esoteric cosmologies, the Physical Plane consists of seven levels, with an Ordinal triad of levels where the material aspects manifest, and then there is the Cardinal triad of levels where the abstract aspects of the Physical Plane manifest — and where the so-called etheric body functions and influences the physical body, probably through the Neutral middle level, which spans the Ordinal and Cardinal Levels, and/or through the chakras, which are said to connect the physical body to more "subtle" bodies. What we normally see of the physical body — the Body Type — is of the Ordinal levels of the Physical Plane, not the Cardinal levels. One evidence that could be cited for this notion is the case of "walkins": when one soul leaves the body and another takes its place, the personality changes noticeably. If the Overleaves were attached only to the body, or a product of Body Type, this would not be the case. This is speculation heaped upon speculation, which makes me uncomfortable, but there it is.

So, I place all physical traits and whatever personality traits might be associated with the physical body — genetically influenced — under the term "Body Type". The Michaels mention this with the comment that:

The behavior in utero [before ensoulment at or near birth] is a function of Body Type. [MFM, p. 217]

A physical body has its Body Type traits even when asleep, whereas Overleaves do not manifest except in the waking Personality, animated by the etheric body, per my allegation. According to this understanding, Body Type is not an Overleaf category since it is attached to the physical body rather than the etheric body. However, Body Type characteristics can 'color and flavor', so to speak, all of the etheric Overleaves, just as all the Overleaves can color and flavor each other.

Body Types were given Positive and Negative Poles in the original Michaelian group, in 1975, even though the Michaelian teachings community did not find out about it until a decade later, in 1986, with José Stevens's book *The Michael Handbook*, on page 263. (Stevens was not a member of the original Michaelian group, but he received transcriptions from a member.) In the late 1980's, three more Body Types were added, to go with the three outer planets of the solar system. To my way of thinking, this removed Body Type — in its original formulation — even further out of the possibility that it should be considered to be an Overleaf category.

For the reasons stated above, and other reasons discussed in other chapters in this book that discuss Body Type, my conclusion is that the Body Type system — in its original formulation — is not to be considered a

part of the Overleaf System. However, the physical body per se could legitimately be considered to be the foundation of the Overleaf System, since it is necessary to have a physical body with a conscious brain in order to have a Personality — Overleaves — expressing through the use of a body. In the next chapter, Chapter 4D, which is on Body Types, I suggest there might be a way to add a body type system — in a different formulation that is more scientific and more compatible with the Overleaf System and certain statements in the original Michaelian group transcriptions — to be the material foundation of the etheric Overleaf System. It is called the somatotype theory, and it appears to be compatible with the Overleaf System in ways that Collin's Body Type System is not. More is said about the theory in the section on Centers further on in this chapter.

Essence [Role] versus Personality

There are a lot of ambiguities in the use of the words Essence and Personality in the Michaelian teachings. In another one of my books, *Study Papers on the Original Michaelian Group*, I have a lengthy chapter on the subject of "Essence and Personality". (In that same book, there is another chapter on the pairing of Essence with Twin, which is another can of worms because one contingent of the Michaelian teachings claims Essence Twins are almost always the same Role, and another contingent of the Michaelian teachings claims Essence Twins are almost always different Roles.) Anyway, I will not go into it in detail here. Suffice it to say that these two words were adopted from the Gurdjieffian teachings and then adapted into the Michaelian teachings in the original Michaelian group; there are other names in other teachings that the original Michaelian group members were familiar with. Whatever they are named, the discussion of the concepts continued into the original Michaelian group, and there were adjustments in the definition of these terms, as we see in these Q&A exchanges:

Someone in the group had a question about Michael's use of "Soul," "Essence," and "Self" interchangeably, and the departure from the Gurdjieffian system where there is a False and True Personality, and that Essence and True Personality go together [to] form the "self."

The soul is the Essence. This is synonymous with "self." Even we have a personality. It simply is no longer challenged by maya. [SJC, 22 September 1973]

The question was asked if Essence and Role were two different things. The answer given was that, yes, they are as different as cats and pears. The Essence is the true part of you — the part that is underneath all the "yamma yamma" of the mind. They distinguish "self", "soul", and "Essence" as the same thing — something spiritual. The Body [Type] and False Personality are on the Physical Plane. False Personality does not like to see you make it spiritually. [23 October 1973]

Do the Roles continue after the Physical Plane experience?

Although the Roles are necessary on the Physical Plane, they must be discarded before transcendence can fully occur. The Roles are certainly blunted on the Astral Plane. [SIC, 23 June 1974]

Can we talk about Centers on higher planes being counter part?

Not really. You see, the need for the Roles is a Physical [Plane] one, but the need of Centering is found throughout [creation] — at least in our experience it is. [S/C, 08 October 1974]

I am still confused about my Essence and my Role.

The Role is chosen as the Role in Essence. Read the description of this Role in the transcription [of October 1973]. Your Essence is your soul, that part of you that is immortal and eternal. The Role you chose concerns only that interval you spend on the Physical Plane, which is brief to say the least. [SJC, 01 November 1973]

Another exchange in another session, not long after all of the Overleaf categories had been revealed:

What part of Overleaves are in Essence and what are in Personality?

All of these Overleaves are geared to the Physical Plane and thus primarily of the False Personality. Of course, you cannot alter your Body Type or Role except by subtle extinguishment, and this is achieved only after all else is Balanced. Thus the Role can still manifest in one acting primarily out of Essence, but not to any measurable extent in the occult Master [at the seventh Level of Being]. [S/C, 25 June 1974]

Can you tell us about the Astral Plane and its levels?

The first level of the Astral Plane is populated by living Fragments adept at astral travel and those souls who penetrate this plane accidentally through drugs. The second level of the Astral Plane is inhabited by all those between [physical] bodies. The third level attracts Old Souls who are trying to burn final karma without being reborn. The mid-astral [fourth level] bodies are partially reunited Entities. The three higher levels [fifth, sixth, seventh levels] are progressively integrated [Entity-wise]. [SJC, 08 October 1974]

Roles are in Essence, not changeable. What are Roles on higher Astral Plane, if any?

The Roles are, of course, retained on the low [levels of the] Astral Plane where the souls remain separate [as Fragments]. As the integration [of kindred souls] begins to take place [on the mid-Astral sub-Plane], the Roles become more and more blurred, until they are [completely] dissolved, or better yet resolved [= reintegrated

with its complementary Role], on the high [Levels of the] Astral Plane. They are not transcended here, but the *memory* of them is retained. If you like, you can compare it to a racial mixture that eventually leads to assimilation. [SJC, 08 October 1974]

The question was asked [by someone] if Essence and Role were two different things. The answer given [by others] was that, yes, they are as different as cats and pears. The essence is the true part of you, the part that's underneath all the 'yamma yamma' of the mind. He [Michael] distinguishes self, soul, and Essence as the same thing — something spiritual: the body and false personality as on the Physical Plane. [23 October 1973]

These statements are quite clear that even though the Role is chosen "in Essence" (and the phrase "Essence Role" is common in the transcriptions), Role is a factor of the Physical Plane, therefore an *overlay* of Essence, the same as the other Overleaves are. The fact that the description of the Role as permanent throughout the incarnations is different from the other Overleaves that are not permanent throughout the incarnations is irrelevant to the question of inclusion or exclusion of Role from the Overleaf designation. These clear statements from the original Michaelian group transcriptions did not become available to the Michaelian teachings community until the mid-1990s, long after the notion that Role was not an Overleaf became entrenched as a result of channeling that is dubious, in my estimation, as documented in the next paragraph.

In the "Michael Math" chapter of *MMFM*, there is a seeming contradiction to the original Michaelian group statement quoted above that "Role ... concerns only the interval you spend on the Physical Plane." It says:

Between lives, all that remains of the "personality" is the Role in Essence — that is, Slave, Artisan, Warrior, Scholar, Sage, Priest and King — and the Fragment order in Casting. All the rest can and does change, but those two are immutable in any sense that you might perceive. [MMFM, p. 189]

This is one of the statements from post-original Michaelian group channeling that some might construe as saying that Role is not an Overleaf. However, my reconciliation of these two sources is to say that whatever Role one adopts for use on the Physical Plane, those are immutable as far as the Physical Plane is concerned, and they are also immutable between lifetimes on the Astral Plane, but only during the reincarnation cycle. According to the channeling from 08 October 1974, when the reincarnation cycle is complete then the Roles begin the process of reintegration, on the middle and upper levels of the Astral Plane. My speculation is that this happens according to their Ordinal/Cardinal polarities: Artisans and Sages merge; Servers and Priests merge; Warriors and Kings merge, and finally they all merge into the Scholars; refer to Chapter 4N here in Part Four, "Casting Concerns", for a fuller description. This process of reintegration of Role Fragments is the Astral Plane version of completing Monads on the Physical Plane. The subject of "Monads" is covered in a chapter in my book *Study Papers on the Original Michaelian Group*. The subject of "Fragmentation and Reintegration" is covered in another chapter in that book.

One of the differences between Gurdjieff and the Michaels is that Gurdjieff did not believe that people had inherent immortal souls; he said that "Essence" had to be developed by "work" on oneself. The Michaels taught that people did have immortal souls, but they adopted Gurdjieff's word Essence for that anyway. In the original Michaelian group, the Personality self was said to have at its core the Overleaves, aka overlays, of the Essence Self.

Please remember that the Role is in Essence, not in Personality. All the *other* Overleaves [other than Role] are in Personality. Only the Role gives you a glimpse of the Essence. [SJC, 01 October 1977]

The phrase "other Overleaves" perhaps implies that Role is an Overleaf, but unlike the other Overleaves, it is said to be a *glimpse* of Essence, not that it *is* the Essence. Here the Essence is contrasted with Personality, as it was in Gurdjieff; therefore I capitalize these words. There are uses of the word personality that are not in contrast to Essence; therefore I don't capitalize those instances, as in the quote above: "Even we [the Michaels] have a personality".

The reason for, or meaning of, the sentence, "Only the Role gives you a glimpse of the Essence" is interesting to me. There are numerous statements in the original Michaelian group transcriptions that the higher Centers provide access to transcendent awareness. Evidently this is different from glimpses of Essence. The statements regarding the higher Centers are found in Chapter 4G here in Part Four, "The Higher Centers".

In the original Michaelian group transcriptions, Role is often part of a phrase, "Essence Role" and "Role in Essence", and sometimes only the single word Essence is used when it obviously refers to the Role rather than to the soul. A review of the original Michaelian group transcriptions — published in *Michael Speaks: the Legacy of Sarah Chambers* — will verify this, so I will not document it here. To me, this seems like an ambiguous practice, but perhaps this was done to obviate another ambiguity; it might have been a device to make clear

when the Michaels were referring to Overleaf Role rather than some life role, such as one's occupation, as in this Q&A exchange:

Can a soul take on a dual Role?

Not in Essence. However, the life role often bears little relation to the Essence Role, and if False Personality is firmly in command it will almost be impossible to detect the Essence Role. On a personal level, others can often detect the facade [role] and the underlying Role before the student can. [S/C, 15 November 1973]

A word search of the original Michaelian group transcriptions on the phrases that connect Essence with Role are consistent with this interpretation. This interpretation would also be consistent with the previous quote, the one about "the need for the Roles is a Physical [Plane] one". This practice of using the phrase "Essence Role" was carried over into *MFM* and henceforth subsequent publications, perhaps without understanding the possible reason the phrase was used by the Michaels in the first place, namely to distinguish Role from role.

There is much more that could be said about the history of Essence and Personality in the Michaelian teachings that I will not say here. One of the conclusions of the referenced study paper is that the definition of the term Essence is very fuzzy; sometimes it seems to refer to the highest aspects of the Personality self; other times it seems to refer to the highest aspects of the Soul Self; maybe it spans the whole spectrum, and in its least ambiguous use only refers to the "higher self" at whatever stage the "self" currently resides. The reason for this ambiguity might be because the term itself was borrowed from Gurdjieff, where it had a different meaning from what the Michaels gave it.

Another one of the conclusions from the referenced study paper is that the dividing line between Essence and Personality is very ambiguous. This is the case for obvious reasons: there is said to be a lot of interaction and feedback between the two, and thus there is overlap. And whatever dividing line or overlap there may be moves around a lot. In fact, the essence of the spiritual path is to lessen, or at least improve, the function of Personality, and increase the function of Essence within the Personality during an incarnation; intercourse between the two is promoted as Good Work because it helps both Essence and Personality to progress. In the Michaelian teachings, one's Role is said to play a key part in this transformation, because:

Role stands both in Essence and Personality. [MFM, p. 197]

This exact statement does not appear in the original Michaelian group transcriptions that have become available to the post-original Michaelian group Michaelian teachings community, but it is similar to the previous quote. That is why the word ambiguity is fitting for the problems Michaelian students have had sorting out these two things. Essence and Personality are alleged to overlap (via the Role); the words are distinct but the separation/connection between them is not. Students were confused about this from the beginning; they are still confused about it in the modern Michaelian teachings community.

Because of this ambiguity, and the differences in descriptions between Role and the other Overleaf categories, it is obvious why the majority of Michaelian students — as shown in Table 3Ca — prefer to put Role in the Essence category rather than in the Overleaf category, in spite of the fact that the quote from the original Michaelian group transcription of 08 October 1973 said that "the need for the Roles is a Physical [Plane] one", and despite the fact that MFM said that "Role stands both in Essence and Personality". My preference is to leave Role in the Overleaf category as stated in the original Michaelian group and in MFM; further evidence and arguments are presented in subsequent subsections.

So how then do I reconcile the original Michaelian group story that Role is only a temporary Physical Plane construct with statements such as the following from *The Michael Handbook*, page 74:

When pure essence, the spark or soul of consciousness, is cast out from the Tao so that it can have its own unique experience, it adopts a role. Essence leaves the Tao like pure white light. White light traveling through a prism is refracted into the seven colors of the spectrum (frequencies). In a similar way the essence, as white light, is refracted into one of seven frequencies or roles upon leaving the Tao.

And then there is this statement from Michael: The Basic Teachings, page 44:

From the time the Essence leaves the Tao to come to the Physical Plane until it travels through the six other planes of existence and returns to the Tao, it remains one role. After the cycle is complete and the Essence returns to the Tao, it remains in that role, merged with the total consciousness of this universe, until it feels the urge to grow further by taking on another cycle. At that time, the Essence will most likely choose to experience another of the roles, and will combine with a new entity and come to the Physical Plane on a different planet.

My reconciliation of this apparent contradiction to the original Michaelian group transcriptions is that Role is a stand-in for what in other esoteric septenarian cosmologies is referred to as "Ray". Therefore, I refer to the

Rays as having Role-ish properties, qualities, and characteristics. Wikipedia has an article on the Rays; the neo-Theosophy of Alice Bailey is full of references to, and descriptions of, the Rays. In Chapter 1F in Part One, "The Seven Human Temperaments", there is an introduction to the Rays. I have a lengthy chapter on Rays in my book *The Tao of Cosmogony*. Therefore, my preference is to let the word Role be a manifestation only that is most applicable on the Physical Plane as it says in the original Michaelian group transcriptions, and let the word Ray refer to the seven emanations of Tao through all seven planes.

Basically, the Rays are easily identified by the Septenarian Attributes as shown in Table 4Cb, with the corresponding Role-ishes:

| | Table 4Cb — The SEVEN RAYS (in Theosophy) | | | | | | | | | | | |
|--------|---|-------------|-------------|--------------|--------------|-------------|-------------|-------------|--|--|--|--|
| R | RANK | FIRST | SECOND | THIRD | FOURTH | FIFTH | SIXTH | SEVENTH | | | | |
| A | COLOR | VIOLET | INDIGO | BLUE | GREEN | YELLOW | ORANGE | RED | | | | |
| | NAME | WILL | LOVE | INTELLIGENCE | HARMONY | SCIENCE | DEVOTION | ORDER | | | | |
| A | DIALECTIC | Cardinal | | | Neutral | Ordinal | | | | | | |
| T R | AXIAL | Action | Inspiration | Expression | Assimilation | Expression | Inspiration | Action | | | | |
| | PROCESS | Origination | Evolution | Synthesis | Combination | Analysis | Involution | Termination | | | | |
| U | ASPECT | Mode | Role | Center | Age/Level | Attitude | Shadow | Goal | | | | |
| E | ROLE-ISH | King-ish | Priest-ish | Sage-ish | Scholar-ish | Artisan-ish | Server-ish | Warrior-ish | | | | |

My comments on this table are as follows:

- RANK: The first row shows the rank order of the Rays the way that the Theosophists present it, which is the opposite direction as the Michaelian teachings normally presents it. There is no significance to either way of ranking the sequence so far as I know. In other words, the numbers associated with the Rays have no ultimate significance; it is an artificial assignment.
- COLOR: The second row shows the rainbow color artificially ascribed or assigned to the Rays by the Theosophists artificial in the sense that the Rays do not actually have colors, but these colors represent the idea that that Red is of the "lowest vibration" and violet is of the "highest vibration", indicating that there is a progression in the Rays. Sometimes progression is a representation of "densities", from most dense at the low end to least dense, aka most subtle, at the high end.
- NAME: The third row shows the descriptive name typically given to the Ray. Actually the Theosophical names are more than one word or a phrase, not a single word; you can discover the full name (and description) via an internet search and via Chapter 1F in Part One, "The Seven Human Temperaments".
- DIALECTIC: The fourth row shows the Dialectic Attributes from Michaelian teachings terminology.
- AXIAL: The fourth row shows the Axial Attributes from Michaelian teachings terminology.
- PROCESS: The fifth row shows my names for the seven Processes of the Overleaf System. These are explained in Part One of my book *The Tao of Personality*.
- ASPECT: The sixth row shows my names for the seven Aspects of the Overleaf System. In the Michaelian teachings community, these Aspects are called the "Overleaf categories".
- ROLE-ISH: The seventh row shows the Role-ishes that correspond to the Septenarian Attributes and Rays (and Processes and Aspects).

Notice that the rank order numbering sequence is the reverse of the way it is done in the Michaelian teachings, but this is the way that it is done in Theosophy, and the direction of the rank order sequence has no significance. Colors and numbers are ascribed to each of the Rays, but this is just a formality, you might say, that makes it easier to remember the Ray; colors and numbers are a stand-in for the Ray; it is the finger pointing to the Ray; neither number nor color describe the quality of the Ray. I believe that it is the same with the Roles when the name is used as a stand-in for the Ray. Beyond colors and numbers, the name of the Role-

ish gives one a sense of what the Ray is all about in addition to what the Theosophists have named and described.

The general understanding in the Michaelian teachings community is that Tao differentiates within itself what are referred to as "sparks", there being seven types, which are referred to as Roles. On the other hand, in other esoteric teachings, the most fundamental differentiation is into seven Rays. My opinion is that the word Role is misplaced as a personification of the Rays; the word should be applied only to a specific Physical Plane manifestation, as stated in the original Michaelian group transcriptions. In my view, the Role is to be understood and defined as an Aspect of human Personality, the Cardinal Inspiration Aspect; the other Aspects are Goal, Mode, Shadow, Attitude, Center, and Age/Level.

I believe it is unfortunate that Role has become the personification of the Rays; it is convenient, but it is inaccurate, because the Rays are part of the structure of all seven planes, whereas Roles are limited to the Physical Plane and the low levels of the Astral Plane, wherefrom Fragments are still involved in the reincarnation recycle. The names of the Septenarian Attributes and the names of the Processes provide a more accurate understanding of what the seven fundamental archetypes, Rays, are about. As a compromise, and for the convenience of the Michaelian teachings community, I have adopted the term Role-ish for the attributes of the Rays.

My acceptance of the original Michaelian group transcriptions as canonical regarding the limitation of Role to the Physical Plane and the low levels of the Astral Plane provokes a question: when does the Essence choose its Role for the purposes of incarnation? The "Michael Math" chapter of *MMFM* would have you believe that it is when the Entity begins the Fragmentation process:

Within the entities the essences [Roles] are cast, and they are cast in sequence. Therefore, let us assume that the second-cast entity [in this discussion] has priests — cast first — scholars — cast second — artisans — cast third — and sages — cast fourth. That casting order will influence function of the essences within the entity. [MMFM, p. 190]

Combining this statement with the original Michaelian group statements, we may surmise that the differentiation of the Entity into Roles happens at the fourth, aka middle, level of the Astral Plane. We may also surmise that the Casting of Roles is the last process in the differentiation of the Entity; it occurs after the Casting of the Sides of 343 Fragments, then the Greater Cadences of 49 Fragments, and finally the Cadences of 7 Fragments. When there is no longer a need for a Role to serve the Physical Plane incarnation experience, Role is subsumed in the reversal of the Fragmentation process. That is, the Roles unite Warriors with Kings, Servers with Priests, Artisans with Sages, and Scholars. Then First and Seventh Positions in the Cadence reunite, the Second and Sixth Positions in the Cadence reunite, the Third and Fifth Positions in the Cadence reunite. And so on up to the larger Composites of what used to be Fragments; refer to Chapter 4M here in Part Four, "The Seven Soul Ages", for more discussion about Composites. Refer to Chapter 4N here in Part Four, "Casting Concerns", for more information about Casting.

Notice the use of the temporal indicators, "last" and "after" and "then", in the previous paragraph. I suspect that, even as it takes what passes for "time" on the planes beyond the Physical for the Roles, Cadences, Greater Cadences, Sides, Entities, Cadres, and Cadre Groups to reintegrate their Fragments, so it takes what passes for "time" on the planes beyond the physical to disintegrate = Fragment. Even though it has not been spoken of in the Michaelian teachings so far as I am aware, it seems to me that Fragmentation might be a lengthy process, similar to reintegration.

The Role serves a function on the Physical Plane, the Position serves a similar function to the Role in the Cadence on the Astral Plane; the Cadence serves a similar function to the Role in the Greater Cadence on the Astral Plane; the Greater Cadence serves a similar function to the Role in the Side on the Astral Plane; the Side serves a similar function to the Role in the Entity on the Astral Plane; the Entity serves a similar function to the Role in the Cadre Group. This adds up to seven levels of Casting beyond Role: Position, Cadence, Greater Cadence, Side, Entity, Cadre, Cadre Group. There is Role on the Physical Plane, and then there are seven levels of Role-ish that we know of 'above' or 'beyond' the Physical Plane. Refer to Chapter 4N further on in Part Four, "Casting Concerns", for more information.

In conclusion and in summary of this section on Roles:

1. The word Role has mistakenly come to be understood in the Michaelian teachings as the personification and characterization of Ray. That is convenient, but another Overleaf could have

- served the same purpose. In fact, we will see further on that the Michaels in the original Michaelian group transcriptions seemed to do the same personification for Rays with another Aspect of Personality: Centers.
- 2. Essence is not the Role; in the Michael's terminology, Essence is probably at the top of the Casting hierarchy, "the intrinsic core of the soul", as it says in the original Michaelian group transcriptions and in MFM. My understanding is that Essence is what Role the Cardinal Inspiration Aspect of Personality aspires to as its idealized personification. The definition of Essence is confused in the Michaelian teachings because the term was borrowed from Gurdjieff, who had a different reference for the term; he did not even believe in the existence of the soul, except to the extent that one could use the spiritual work to "crystallize" (his term) a soul that survived the death of the physical body. (This reminds me of the Greek idea of "character development".) When the phrase Essence Role is used in the transcriptions, to me this means that the Role is an "Overleaf/overlay" of Essence (Soul is an Overleaf of Essence, Role is an Overleaf of Soul); it does not mean that Role is equivalent to Essence. Rather to use a theatrical metaphor Role is the 'part' that the soul 'plays' in the 'theater', on the 'stage' of incarnation on the Physical Plane. This is in accordance with Michael Newton's books: most of the soul (Position in Casting, which is usually different from the Role) remains on the Astral Plane when it focuses some of its consciousness into an incarnation.
- 3. Role is nevertheless an Overleaf/overlay of Essence even if/though it spans all incarnations, unlike the other six Overleaf categories.

Apologies if this section seemed convoluted to you. The problem is that untangling the mess of disparate and ambiguous and confused channeling cannot be otherwise. The solution that I presented was governed by the cosmology of the Overleaf System and by sources outside of the Michaelian teachings.

Age/Level

In a previous section, we saw that in MFM and MMFM, Age and Level appear to be regarded as two separate Overleaf categories. This makes no sense to me because Levels are subsets within the Age category; whatever category you put Age in — Essence or Personality — there also you will put Levels. My preference is to conflate them into Age/Level and make it into one category, the primary and secondary manifestations of the "Physical Plane maturity" category. Yes, they are two different septenaries, but, in the sense that Level is contained within Age, it is also true that they are not separate septenaries; the characteristics of each Level just recapitulate the characteristics of each corresponding Age in a shorter timescale. In my book *The Tao of Personality* I conflate the two into one aspect of personality that I call "Worldview/Zone", a primary and a secondary manifestation, similar to what can be said about the other Overleaf categories.

One potential argument or rationale for not conflating Age and Level is that most Michaelian students have a different understanding of Age than they do of Level. The typical understanding is that not all seven Ages are experienced on the Physical Plane, whereas the seven Levels are. Perhaps in their minds this adds an element of ambiguity to Age — whether it should fit in the Overleaf category or not — that Level does not have. Both Age and Level have their own sections dedicated to them here in Part Four of this *History* book. In Chapter 4M, "The Seven Soul Ages", I present evidences and arguments that all seven Ages are experienced on the Physical Plane, thus removing this ambiguity and any related rationale for not conflating them.

Age is often referred to as "Soul Age" in the original Michaelian group transcriptions, and in various Michaelian teachings books ever since. So, the question is, is Age a factor of the discarnate Essence self or of the incarnate Personality self — or both, the same as Essence Role was said to be? Based on the phrase, Soul Age, one might reasonably wonder if it "stands in both Essence and Personality", the same as Role, but according to the following quotation from *MFM*, that is not the case:

Wait a minute. If there's limited perception within the Cycles, but a kind of Astral [Plane] review between lives, what happens? Isn't the soul limited by its Age and Level?

Not between lives. Soul level [Age] is the function of the Physical Plane. [MFM, p. 83]

This statement is not to be found in the original Michaelian group transcriptions that have become available to us. There is evidence from near death experiences (NDEs) and other sources that the soul between lives is aware of its past and future incarnations; therefore its perceptions are *not* limited to the Age of any particular incarnation, as stated here. The testimony of between-lives regressions, reported in the books of Michael Newton, indicates that souls *are* limited by something at least similar to Age during the Astral interval — their

auras have colors that are indicative of their earth-school 'grade'. This information is discussed in another section here in Part Four of this *History* book, Chapter 4M, "The Seven Soul Ages".

Looking a little deeper for a reconciliation of "Personality Age" and "Soul Age", there are two possible reconciliations of the statement that Soul Age is only of the Physical Plane in the Michaelian teachings, and that, per Newton, it is also present on the Astral Plane between lives. In the case of Newton's regression therapy interviews, he talks to the portions of souls that are currently incarnate on the Physical Plane; therefore they could be 'showing their Age', even if Physical Plane Age is not reflected in Astral Plane Age.

The other complicating factor is that Astral Plane "time" is not strictly coupled with Physical Plane time; therefore Astral Plane Age would not be the same thing as Physical Plane Age. There is a more thorough development of this idea in Chapter 4M further on, "The Seven Soul Ages".

Putting this all together — assuming that the channeling is accurate — my preference is to regard Age/Level the same way I regard Role; that is, I keep Age/Level and Role as Overleaf categories, but acknowledge that there is an overlap, or some kind of interface, between the Astral and Physical aspects of Age and Role that is different from what other Overleaves have. If the alleged overlap is not accurate channeling, then my perception is that "Soul" is attached to "Age" (or "Level" or "Cycle") in the original Michaelian group transcriptions for the same reason that "Essence" is attached to "Role": it is for the purpose of *clarification*, to distinguish those Overleaves from other instances of those words; it does not necessarily mean that Age and Role are not Overleaves of the Personality. That is to say, the phrase "Soul Age" was used by the Michaels, and should be used by their students, to distinguish it from Physical Plane chronological Age, not because the soul on the Astral Plane is limited in its perceptions by the same limitation that it assumes for an incarnation.

My working hypothesis is this: because there seems to be a connection of Role and Age with the Astral self more than is the case with the other Overleaf categories, it may be that the Role and Age are Cast in the astral body, where it has more durability, while a portion of the astral body is being Cast into reincarnation in the etheric body — on the Cardinal levels of the Physical Plane — whereas the other Overleaves are Cast only in the etheric body, and etheric body Overleaves are changed from incarnation to incarnation. I suggest that the uses of words such as Essence and Soul are ambiguous in Michaelian teachings terminology, and that they could use a review and a clarification and a tight definition and a standardization. My disambiguation method is as follows.

The connection of Soul to Age in the Michaelian teachings phraseology could be construed to mean that one's Soul is limited by Age on the Astral Plane, contrary to *MFM* quoted previously. However, I apply the word Fragment to the smallest component of the Astral body or Composite, and I apply the word Soul to the etheric body, which is of the Cardinal levels of the Physical Plane. To the extent that the Fragment while on the Astral Plane is focused on the incarnation with a fraction of its consciousness, it is limited by Soul Age. The consensus of various sources familiar to me, is that a Fragment only Casts part of its being into an incarnation, most of it remaining on the Astral Plane to serve as the "higher self" of the incarnate Personality. This factor might not be understood this way by all Michaelian students, but I believe that it is important to make this distinction, and this clarification, of an ambiguous component of the Michaelian teachings. This topic is discussed further on in Part Four, in Chapter 4M, "The Seven Soul Ages", and in Chapter 4N, "Casting Concerns".

There are a few more pertinent comments that I would like to make about Age in this section: the matter of Dialectic Attributes and Axial Attributes.

Regarding the application of the Dialectic Attributes to Ages in the original Michaelian group transcriptions, the evidence is scant. There are references to 'older souls' and 'younger souls' — often contrasted with each other — and those phrases hint at the Dialectic (Ordinal and Cardinal) Attributes of Ages. However, Chart #1 is explicit in applying the Dialectic Attributes to the Ages: Infant, Baby, and Young are Ordinal; Mature is Neutral, and Old, Transcendental, and Infinite are Exalted, aka Cardinal. So, the Dialectic Attributes of the Ages were established from the very beginning. Unfortunately, nothing is said about this in *MFM*, which I first read in late 1980. As a consequence of this omission, for five years I was unable to correctly correlate Ages with the Dialectic Attributes that were assigned to the other Overleaf categories, until *MMFM* was published in early 1986.

So that takes care of the revelation of the Dialectic Attributes of the Ages, but there are insufficient clues in the original Michaelian group transcritions and in *MFM* to definitely apply the Axial Attributes to the Ages. The Axial Attributes — Action, Inspiration, Expression, Assimilation — did not get applied to the Ages until *MMFM*, and then it was partly erroneous, as explained in the appendix of this *History* book, Chapter E-2.

Briefly, the Ordinal Soul Ages follow the Axial Attributes of the Natural Sequence, not the Axial Attributes of the Michael Math Sequence. The descriptions of the Ages in *MFM* and elsewhere/elsewhen make sense when the proper Axial Attributes are applied.

There are some additional comments about Level that are pertinent to this current discussion — as with Age (above), it is the matter of Dialectic Attributes and Axial Attributes.

In the original Michaelian group transcriptions, there was no description of the nature of the Levels other than their rank: First Level, Second Level, and so on. They were also divided into "early Level", "mid-Level", and "late Level" categories, which was another way of saying they partook of the Dialectic Attributes of Ordinal, Neutral, and Cardinal. There are dozens of instances of the Dialectic clues in the original Michaelian group transcriptions, but I did not pick up on this clue before *MMFM* was published. The Levels were not shown on any of the Overleaf Charts that were created during the original Michaelian group. On Chart #4, there is a category labeled "Soul Levels", but the names therein are of the Ages.

In MFM, page 82, there is a story arc of the progress through the Levels, but there was no description of the qualities of the Levels that could have definitely correlated them to the Axial Attributes: Action, Inspiration, Expression, Assimilation. These did not get applied to the Levels until MMFM, and then it was partly erroneous, as explained in the appendix of this History book, Chapter E-2. The descriptions of the Levels in MFM and elsewhere/elsewhen make sense when the proper Axial Attributes are applied.

The subject of Levels is covered in detail in Chapter 4K, further on, "The Names of the Levels". The conclusion there, which is relevant to the discussion here, is that the Levels — their names and their Poles — should partake of the same Septenarian Attributes as the other Overleaf categories.

Chief Features

This is not one of the disputed Aspects — to be or not to be an Overleaf category — but this is a good place to make some comments about it.

The general Michaelian teachings orthodoxy is that Chief Feature does not become established in the personality until the third Internal Monad, the teen years, and that it develops as a reaction to adverse events. You may read about that in numerous Michaelian teachings books. I dispute this because I can trace my Chief Feature all the way back to my childhood, the second Life-Stage, and I saw my children exhibit theirs at a very early age also. Anyway, even if this late-onset idea is generally accurate, the original Michaelian group transcriptions claim that the Chief Feature is *chosen* (by Essence), the same as the other Overleaves:

What function does Chief Feature have and what role does it play?

We would say [it plays] an enormous part. Often, it alone prevents the soul from operating out of the Role in Essence.

How does it come to be in our lives? Do we choose it?

It is chosen, yes, as is everything. [SJC, 27 February 1974]

I know this original Michaelian group statement seems to contradict what is said elsewhere, such as this:

The *emergence* of the chief feature usually takes place at the time of the third milestone, the point when the individual separates from the identity of the family and is 'out of the nest', whether he continues to live in the family or not. This usually happens between the ages of eighteen and twenty, at least in Occidental civilizations, although there is a lot of variation. [MMFM, pp. 17, 32]

The way I reconcile this *MMFM* statement with the original Michaelian group statement is to focus on the word "emergence" above and below, and the word "manifest" below:

[This is] the major milestone most frequently written about, the one which occurs around age thirty-five and causes the soul level [age] to *manifest* clearly. [MFM, p. 216]

The fourth milestone takes place generally in the mid-thirties, and is similar to what has been called the 'mid-life crisis'. In this milestone, the overleaves will either *manifest* themselves as the true personality *emerges* from what has been learned, copied, programmed and taught, or the false personality will take over entirely. [MMFM, p. 32]

So, my understanding is that all seven of the Overleaves, including Chief Feature, are chosen by the Astral aspect of Essence, and then configured in the etheric body according to the plan for the incarnation, but the chosen Overleaves often do not *emerge-manifest* clearly in the Personality until years or even decades of that

incarnation are past, due to obscuring and distorting influences early in the lifetime, influences that are referred to as Imprinting and False Personality.

In my Process/Aspect System, the reason for the rub between Chief Feature and Role is very obvious: These two Aspects are the opposite of each other, the Ordinal and Cardinal Aspects on the Inspiration Axis. I prefer to call this Overleaf category "Shadow", rather than "Chief Feature" — it is the "shadow" of the Role, so to speak — the "dark side". It is said that one achieves enlightenment via the extinguishment of the Chief Feature. To do so frees the Role to express itself unencumbered and without distortion. To my way of thinking, it makes sense that it be chosen for a lifetime, the same as the other Overleaves.

So, even if one wanted to remove Shadow from the Overleaf System, one could not do so on the basis that it is not chosen, or on the basis that it is only semi-permanent for a lifetime — arguments that have been put forward against the inclusion of some other trait septenaries in the Overleaf System.

Centers

Centers have a special description, different from other Overleaf categories, partly because they originated in the Gurdjieffian teaching. In fact, they were a central unifying framework upon which other aspects of that teaching were hung, such as Level of Being; refer to the chapters in Part One that review this history. Those chapters provide evidence and argument that the understanding of Centers in the Gurdjieffian teachings was distorted and confused. Evidence and argument presented in chapters here in Part Four indicate that the confusion was transferred to the original Michaelian group, and that the confusion has increased within the Michaelian teachings subsequent to the original Michaelian group. Many Michaelian students are just repeating the dogma–doctrine that originally came from Gurdjieff, and they interpret their own experiences and what they see exhibited in other people within that distorted framework and viewpoint. Sad.

In this *History* book I attempt to rectify that confused situation in the following ways:

- 1. There is the Gurdjieffian teachings idea that only the "lower" (Ordinal) Centers were routinely and ordinarily available for experience. I argue against this assertion in Chapter 4G below, "The Higher Centers". The gist of my presentation there is that:
 - Some Centers are more common than others in the population, as some Roles are more common than others, the higher Centers being less common just as the Cardinal Roles are less common.
 - All of the Centers, including the higher Centers, have an *ordinary* manifestation as well as the *extraordinary* manifestation spoken of in Gurdjieffian and Michaelian teachings dogma–doctrine.
 - People have a primary and a secondary and a tertiary Center that dominate their response to the world, just as the other Overleaf categories have a primary, a secondary, and a tertiary influence on each person. Although rare, people can have one or more higher Center as primary in its *ordinary* manifestation.
- 2. There is the Gurdjieffian teachings idea that the Instinctive Center is only about physiology and has nothing to do with the personality. This idea has morphed considerably in the Michaelian teachings; the history is told in Chapter 4F below, "The Instinctive Center". The gist of my presentation there is that the Instinctive Center is a Personality factor, as the other Overleaves are; it is not about physiology. It short, my claim is that its strength in the Personality is a measure of impulsiveness and intuition.
- 3. In the Gurdjieffian teachings it is said that people have a dominant Center, and this has a "Part" and/or a "Trap" related to other Centers. In my schema, I claim that people have a primary and a secondary and a tertiary Center and so on, as the other Overleaf categories do. This is covered in more detail in the appendix of this *History* book, Chapter E-1. There I argue at length that every Overleaf category should have a common schema of explanation and understanding, rather than varied explanation as they do in the orthodox Michaelian teachings community.
- 4. The meaning of the Action Centers as understood in the Gurdjieffian teachings is different from the way they are understood in the modern Michaelian teachings community. This history is told in Chapter 4H below, "The Action Centers". Briefly, the Moving Center is correctly understood in the Gurdjieffian teachings and in most contingents of the Michaelian teachings, but the understanding of the Sexual Center is in dispute, and I present my resolution to the dispute.

Besides the three chapters here in Part Four devoted to untangling the messy understanding of the Centers in the Michaelian teachings, there is yet another concern about the Centers as understood in the Michaelian teachings that I want to address in this section of this chapter.

In this chapter, so far, we have examined Body Type, Role, Age/Level, and Chief Feature for their possible/probable inclusion or exclusion from the "Overleaf" designation. All of these had some special description compared to the three Overleaf categories that have no special description: Goal, Mode, and Attitude. Centers are the only remaining Overleaf category, that has a special description, to be examined in this chapter. Besides that, teaching about it existed prior to the Michaelian teachings, as it did for Body Types. Even though its disposition as an Overleaf category is not in dispute in the Michaelian teachings community, it might be that, for these two reasons alone, if they thought about it, some Michaelian students might be tempted to put Centers outside the Overleaf designation. I regard this as a legitimate question, and that is why I examine it in this section of this chapter.

And there is a third reason to question the inclusion of Centers with the Overleaves: Centers are somewhat overlapped with Body Types, which potentially confuses and ambiguates their status as an Overleaf category, or not. Why do I say this? For three reasons: 1) Chakras; 2) Triune Brain theory; 3) alleged astrological influences. Let's explore each of these factors further, after some preliminary paragraphs.

I am not the first and/or only one to see that the Body Types and Centers have an overlap in function of some kind. It was noticed by an astute and thoughtful member of the original Michaelian group:

Dick: Are there two or three Overleaves left? Are Body Types and Centers one [Overleaf]?

There are remaining three Overleaves, the physical makeup [Body Type and Center] counting as one. [SJC, 03 January 1974]

The questioner apparently somehow knew, or at least suspected, that there were seven Overleaf categories, but in order for them to add up to seven (with five categories — Center, Body Type, Age/Level, Role, Goal — already known) he knew that there were two or three others, depending on whether Body Type and Center were separate or combined, or perhaps one could be excluded. At that time, the Michaels said that there were three remaining, and as it turned out, over the next few months, the Overleaf categories subsequently revealed were Attitude, Chief Feature, and Mode. When the "final" Overleaf category, Mode, was revealed in April, it was explicitly said to be the "seventh". It was obvious to the questioner (months before Mode was revealed) that there would be seven of them, but how he knew this is not recorded in the transcriptions. His uncertainty was the status of Body Types and Centers (not Role and Age/Level as in the subsequent Michaelian teachings communities as documented in previous sections). In the passage quoted above, the Michaels say that Body Types and Centers are counted as one Overleaf category.

How can this be? The next three subsections present my proposed explanations.

Chakras

First of all, I suggest that the *chakras* are a bridge between *Body Types* and *Centers*; the descriptions and functions of chakras and Centers are so similar that everyone notices it. Refer to chapters on chakras and Centers in Part One and Part Four: the connection and the overlap in descriptions and functions is more than the correspondence due to Septenarian Attributes that one sees among and between the six Overleaf categories other than Center.

In esoteric teachings, the chakras are generally understood to be energy transfer connections between the physical body and the so-called "subtle" bodies, which are not made of matter as the physical body is. My understanding of this basic concept, when placed within the context of the Michaelian teachings, is that material bodies are joined energetically, via the chakras, with the nonmaterial Centers configured in the etheric body. This understanding prompts some questions: are seven Body Types a real thing (or just a totally invented thing), and if they are legitimate, how so? My working hypothesis is that the astral body Fragment of Essence configures the Centers in the etheric body in preparation for ensoulment of a physical body. My suggestion is that the etheric body then shapes the physical body — the Body Type — through the chakras before and/or after conception and/or ensoulment. This idea is an extension of the process of Casting as described in Chapter 4P further on, "Casting Concerns"; the higher levels *supervene* on the lower levels in the process of Fragmentation: Oversoul > Cadre Group > Cadre > Entity > Side > Greater Cadence > Cadence > Position > soul > etheric body > physical body. Presumably the chakras are an intermediary for imprinting the

Centers onto the Body Type. Another way to say this is that a person's Body Type is an instantiation of the person's Centering.

As you know from reading the section on Body Types above, I prefer to exclude Body Types from the Overleaf System — at least in their original and current formulation and rationalization. If the concept of seven Body Types as an adjunct to the Overleaf System is to survive, then I suggest that it might have something to do with a connection of Centers through chakras to the Body Types, rather than some astrological influence at the time of conception as stated in the original Michaelian group transcriptions. In the next chapter, on Body Types, I attempt to make this case, and if the case 'holds water', it might be proper to regard Body Types as the "zeroth" Overleaf category, because the physical body is the vehicle through which the seven Overleaves, including Centers, are expressed on the Physical Plane. More is said about this further on in this section, as well as the next chapter.

The difficulty of disambiguating the role of Body Types and chakras and Centers (distinguishing their separate contributions to the human experience) is just a start of the concerns; there are other things to consider.

Triune Brain

The second concern that I have, when it comes to a complete understanding of Centers, is that there is something called the Triune Brain Theory. This topic has an entire chapter in my book *The Tao of Cosmogony*. Briefly, the human brain is at the end of an evolutionary development in the animal lineage. The lineage is represented in what the Gurdjieffian teachings and the Michaelian teachings calls the Moving Center, the Emotional Center, and the Intellectual Center. Reptiles operate primarily in the Moving Center; mammals appear to be a branch off a common ancestor from the reptiles, and the mammals have added the Emotional Center on top of the Moving Center; the descendants of mammals, the humans, have added the Intellectual Center on top of the other two Ordinal Centers. These brain structures are actually informally referred to as the "Reptilian Brain", the "Mammalian Brain", and the "Human Brain" respectively. This evolutionary perspective on brain functions provides a pretty good explanation for why the Gurdjieffian teachings and the Michaelian teachings orthodoxy assert that only the Ordinal Centers and Parts of these Centers are *normally* available to us. These three Centers are certainly useful for the surviving and thriving of the organism under Darwinian evolutionary pressures. This useful function of the lower Centers applies, I presume, even if/when they are present in mere animals that are not ensouled with Overleaves configured in the etheric body, as humans are said to be.

The Triune Brain Theory is complicated by the fact that animals, including humans, have brains with two hemispheres. There is evidence that, in humans, the left hemisphere houses the Ordinal Centers and the right hemisphere houses the Cardinal Centers, generally speaking; refer to the book *The Master and His Emissary: The Divided Brain and the Making of the Western World* by Iain McGilchrist. You can read an introduction at his website, >http://iainmcgilchrist.com<, and there are many YouTube videos where he speaks of this. There is some evidence in the original Michaelian group transcriptions that Personality (when understood as the lower Centers) functions from the left brain hemisphere and Essence (when understood as the higher Centers) functions from the right hemisphere, thus:

It is interesting that the left cerebral hemisphere is unable to allow this perception (of the Essence). Many times, persons sustaining brain damage in the left side do experience their Essence for the first time. [SJC, 12 December 1976]

So, there is some evidence that the Centers of the so-called "etheric body" or "etheric template" have counterparts in the structure of the brain. This is not exactly the way that "Body Types" are normally conceived in the Michaelian teachings; one could call it "Brain Types". This factor further complicates the task of distinguishing the proper place of Brain Types and Centers in the Overleaf System, and the task of distinguishing which of these sources, material or etheric, one might be responding from in any given situation.

It would fit the pattern if Body Types and Brain Types were compatible in the same body. I am trying to clarify the understanding of Centers by making these distinctions. At present, my thinking is that material Body Type, material Brain Type, and Etheric Body Type are three expressions of the Centers, and are part of a concept that I call Embodiment, which I discuss further on. Some psychological philosophies speak of becoming united in body, mind, and soul/spirit; that idea is where I am going with this discussion.

So it seems that there is a connection of Centers to Body Types if one considers that a version of the Centers are instantiated in physical body+brain functions. But that does not mean to me that Centers are *only* a product of brain function; presumably there is also a contribution from the etheric body Centers, along with the other Overleaves. My premise is that the Overleaves, chosen by the soul or Fragment, are configured in the etheric body rather than the physical body, and that the etheric body influences, or maybe even shapes, the physical body through the chakras. This has a counterpart on the higher planes: it is universally understood in the Michaelian teachings that the various levels of Essence on planes beyond the Physical Plane — Position, Cadence, Greater Cadence, Side, Entity, Cadre, Cadre Group — provide a 'coloring' and 'flavoring' influence on the Roles. This does not mean that Role is not an Overleaf. Likewise, my suggestion is that the chakras and the Brain Type factors have a Center-like influence on the Personality. This does not mean that Center is not an Overleaf category.

Astrology

Besides chakras and the Triune Brain being a bridge between physical Body Types and etheric Centers, in the original Michaelian group, astrology is said to have some influence on both:

Question regarding astrology.

The relationship [of astrology] primarily pertains to the Body Types and the Centering. [SJC, 27 March 1974] Add this statement to the original Michaelian group transcription quoted above indicating that there is a relationship between Body Types and Centers, such that they can be considered to be one Overleaf category. In this subsection and the other two above, I am trying to sort out what that relationship is by making distinctions in the terminology.

So how does astrology allegedly figure in to this discussion? Recall from Chapter 1M in Part One, "The Seven Body Types", that astrological factors were said in the original Michaelian group transcriptions to have an influence on determining a person's Body Type; the passage quoted above says the same thing about the influence of astrology on Centers. I have my doubts about astrology, but this is one of the dogma–doctrines that is generally accepted in the mainstream Michaelian teachings communities. I mention it here just to point out all of the various factors that muddy the understanding of Centers in ways that are not ascribed to the other Overleaf categories. This elicits the question, should we understand Centers differently from the other Overleaves? The most sensible answer to me is "yes". Elsewhere I have speculated that the Overleaves are configured by the soul in the etheric body in preparation for incarnation in a physical body, and I presume this applies to the Centers. The thing that might perhaps be unlike other Overleaf categories is that the Centers might be configured in the physical body as well as in the etheric body. This is where so much of the potential confusion about the place of the Centers in the Overleaf System could come from; perhaps this is why the meaning and function of the Centers is obscured by several factors that do not apply to the other Overleaves.

If there is any validity to the original Michaelian group statement that astrological considerations influence Body Types and Centers, then I suggest that it might not be standard Western astrology. The Michaels would seem to agree with this:

Is astrology as we know it valid? Also is the Gurdjiefian [Enneagram of Body Types?] system valid?

[Astrology is] not [valid] as you know it, although you have good beginnings. Gurdjieff did see this. Ouspensky rejected astrology. If you construct [astrological] charts for entire families, you will find striking similarities [in Body Type appearance and astrological factors]. [S/C, 22 September 1973]

There is much more discussion of the alleged influence of the planets on Body Types in the chapter on Body Types in Part One. I suggest that if there is a real connection between planets and Body Types, then it is due to a choice of the soul to conform to the context of the astrological "thought form" prevalent in the culture into which it is incarnating. It makes more sense to me that Body Type astrology has more to do with non-physical influence than physical influence from physical planets. That is, the soul chooses Centers and configures the etheric body, and Centers influence Brain Types via the chakra energy exchanges, and this might also have something to do with Body Types down at the bottom of the causal choice chain of Casting.

The subject of Body Type is confused in the Michaelian teachings, and I have made some clarifying distinctions as follows. The component of Body Type which has to do with brain structure might be connected to Centers, and thus it involves Personality, but there is another component of Body Type that involves physiology and only physiology, as discussed in Chapter 4F coming up, "Instinctive Center". In that chapter, I

suggest that it makes sense to locate the *physiological* component, not the Personality component, of Body Type in the zeroth position in the Overleaf septenary.

This path of exploration in this section leads to some other ideas about embodiment in general. The Centers of the Overleaf System perhaps represent a general principle that not only applies to a factor in physical embodiment, but higher embodiments.

Embodiment

Besides the apparent overlap — more than correlation — of Centers with chakras and brain structures and astrology and Body Types, there appears to be an overlap of Centers with higher planes. This was quoted in a previous subsection:

Can we talk about Centers on higher planes being counter part [to Centers on the Physical Plane]?

Not really. You see, the need for the Roles is a Physical [Plane] one, but the need of Centering is found throughout [creation] — at least in our experience it is. [S/C, 08 October 1974]

The meaning of this statement about the Centers is obscure to me, but I attempt an explanation, as follows. At minimum it would seem to indicate that Centers are more fundamental and widespread than Roles. One interpretation is that the "Centers" — as the Michaels used the term in this case — are the stand-in for what other esoteric cosmologies call "Rays". There are seven Rays; they are fundamental; they are archetypal; they exist in all Planes of creation; they are discussed briefly in subsections of Part One. My equivalent to the seven archetypical Rays are the seven Septenarian Attributes which are embodied in the seven Processes and the seven Aspects of Personality.

So what do we do with the statement quoted above about Centers being required throughout the cosmos? My working hypothesis is that this refers to the seven archetypical forms of *embodiment* on all of the Ordinal planes, Physical, Emotional (Astral), and Mental (Causal). As such, there is an overlap of Centers with Body Types as speculated above, but there might also be an overlap of Centers with soul type (Ray) per the quote. Thus, not only do the physical body and the etheric body have Centering, so do the Emotional (Astral) body and the Mental (Causal) body. There is a Septenary 'below' the Personality (Body Types in the physical body), and there are Septenaries 'above' the Personality, in what some esotericists call the "Great Chain of Being". All of these bodies within bodies reminds me of Russian dolls, each nested inside the next larger doll. The largest doll is the Tao itself. This is the *space* equivalent of the nested different-sized Septenaries in *time*; that is, Sub-Stages within Life-Stages within Levels within Ages within Sub-planes within Planes. One can see how this multiplicity of Centering might be confusing, if the distinction between different *bodies* of Centering is not made by the informed Michaelian student. It looks to me as if the challenge for all of us is to distinguish where these Center-like influences come from, the Etheric Body Centers, the Brain Types, the chakras, and Body Types of the physiology sort.

More is said about the Centers in the context of the general idea of embodiment in Chapter 4F below, "The Instinctive Center". In Part One of my book *The Tao of Personality*, more is said about the Expression Aspects of the Overleaf System, Attitude and Center, being "three-dimensional", meaning, in abstract terms, that they create an inside and an outside, like the fundamental unit of biology, the cell. This is the essence of *embodiment* as I am using the term. More is said further on in Chapter 4N, "Casting Concerns", about the different sizes of embodiment on the planes above the Physical Plane; there I refer to them as Composites because they consist of reunited groups of Fragments: the Cadence, the Greater Cadence, and so on, are "Composites" of Fragments of various quantities.

Perhaps the following table will make my understanding of the relationships between these layers of embodiment clearer:

| Table 4Cc — WITTMEYER'S CHART of EMBODIMENTS | | | | | | | | | | | |
|--|--------------------|----------------|------------|--------------------|---|-------------|------------|--|--|--|--|
| TAO | ONENESS | | | | | | | | | | |
| DIALECTIC | | Ordinal — Lowe | r | Neutral | Cardinal — Higher | | | | | | |
| AXIAL | Action Inspiration | | Expression | Assimilation | Expression | Inspiration | Action | | | | |
| CENTER | Motion | Emotion | Intellect | Impulse | Concept | Sympathy | Excitation | | | | |
| CHARKA | Groin | Navel | Plexus | Heart | Throat | Brow | Crown | | | | |
| BRAIN | Reptilian | Mammalian | Human | corpus callosum | Right hemisphere counterparts to the left hemisphere structures | | | | | | |
| BODY TYPE | Martial | Lunar | Mercurial | Saturnine | Venusian | Solar | Jovial | | | | |

My comments on this table are as follows:

- ONENESS: As is my custom in several tables, I show the breakdown of the Tao in steps, starting with Oneness, leading to Twoness, leading to Threeness, leading to Allness/Sevenness/Cyclicity. The rows below this row are the steps of the fragmentation, aka Casting, of Oneness.
- DIALECTIC: This is the Twoness step. The Dialectic Attributes apply to all of the Overleaf categories, and in this table in particular they apply to the other septenaries shown: Center, chakras, Body Types.
- AXIAL: The Axial Attributes. This is the Threeness step combined with the Twoness step that creates Allness/Sevenness.
- CENTER: These are my names for the Seven Centers. My surmise is that these seven Centers are chosen by the soul, and then configured in the etheric body for an incarnation, same as with the other six Overleaf categories. The etheric body lives on the abstract, nonmaterial levels of the Physical Plane; it is commonly known as the soul; it is the portion of the Fragment of Essence that reincarnates.
- CHAKRA: These are my correlations of chakras with Centers; refer to chapters on chakras in Part One and here in Part Four for the explanation. The chakras are the locations of "energy centers" on the physical body. My understanding, with the help of esoteric lore, is that the physical body connects to the etheric body (and perhaps even more subtle bodies on higher planes) through the chakras. The health or lack thereof of the chakras may color and flavor the expression of the etheric body Centers (as well as with the more subtle bodies).
- BRAIN: This row shows the Triune Brain Theory connected with the ideas of Iain McGilchrist, namely that the right brain hemisphere has an asymmetry with the left brain hemisphere; the right hemisphere is concerned with the *context* of a situation whereas the left hemisphere focuses on the *content*. These brain structures are correlated with Cardinality (higher Centers/chakras) and Ordinality (lower Centers/chakras) respectively. The *corpus callosum*, shown in the center column, is a nerve bundle that connects the two brain hemispheres; thus the Neutral, Assimilation column seems like an appropriate location to put it in this table. So far as I know, these brain structures of the physical body, and their relationship to the Centers, have been completely ignored in the Michaelian teachings; I surmise that they correlate with the Centers of the etheric body. I wonder about the interaction of the two.
- BODY TYPE: These are my dubious and reluctant correlations of the Body Types with the Centers; refer to the next chapter for an explanation. In my studied opinion, there are too many problems with Body Types, as currently understood in the Fellowship of Friends and Michaelian teachings communities, to confidently correlate them with the Centers, or even to confidently include them with the Overleaves. If there is a correlation, it makes sense to me that physical Body Types and etheric Centers are mediated by a chakra connection between the two, and I have more confidence in that correlation. The connection of brain structures to Centers is way more obvious than Body Types or chakras. I have almost zero confidence that astrology has a connection to this general subject. A better Body Type system than one inherited by the Michaelian teachings from the Fellowship of Friends is proposed in the next chapter.

My working hypothesis is that the Negative Poles of the Centers — the "traps" spoken of in both the Gurdjieffian teachings and in the Michaelian teachings — are from the physical Brain Type structures, and that the Positive Poles of the Centers are from the Centers configured in the etheric body; negative emotions — anger, disgust, fear, guilt, shame, apathy — are obviously of the body, not of the soul. The Overleaves, as part of True Personality, are of the soul in the etheric body. Only a portion of the Fragment animates an incarnation according to Michael Newton's books, and according to a book, *Incarnation and Reincarnation*, by Roy Smith.

One wonders if, as the spiritual path progresses, one responds more and more from the etheric Centers and less and less from the brain centers, and less and less from the Body Type. Another way to pose this question is: how are the primary, secondary, and tertiary "centers" related to each other. Is one or the other of the Body Type, of the brain structures, of the chakras, of the etheric Centers?

It seems to me that much more study and research on these related subjects, and perhaps more channeling, is needed to clarify whether my understanding about these subjects and their inter-relationships is correct and sufficient.

Archetypes versus Instantiations

In the last few sections, I have only just started to cut through the confusion about Overleaves, one Overleaf category at a time. In this section, I start to reveal the pattern that ties the seven Overleaf categories into a coherent system.

I submit a proposal for your consideration about a way of thinking about the Overleaf categories that overrides all of the variations in descriptions that have accrued to them in the history of the Michaelian teachings. We can use it to look past the smoke screen of ambiguity to see a beautiful and elegant picture. I say that the clarification is in what I call the Natural Sequence, which is itself just one-seventh of the Process/Aspect System. The question about What is an Overleaf? can be answered definitively by the Process/Aspect System and Natural Sequence because the Process/Aspect System and Natural Sequence has the capacity to cut through the confusion that obscures the underlying fundamental pattern of this reality system in which we find our consciousness embedded. There are other components of the Michaelian teachings that are likewise served; all of my books aim to explicate those facets. For an explication of the Process/Aspect System and the Natural System you must read those other books, expecially the *Tao of Personality* book and my book, *The Tao of Cosmogony*.

Occasionally in this book and my other books I indulge in a whiny rant that the Michaelian teachings in its current condition lacks *coherence*, by which I mean that students have not been told, and do not see for themselves, that various components are instantiations of *archetypes*. The subject under discussion in this chapter is one of the most obvious examples of incoherence: it is not generally recognized that the seven Overleaf categories (what I call "Aspects", namely Goal and Mode, Shadow and Role, Attitude and Center, and Age/Level) are instantiations of the archetypal Septenarian Attributes, the same as the "Processes" are, namely Termination and Origination, Involution and Evolution, Analysis and Synthesis, and Combination. Recognition of this coherent pattern on both horizontal and vertical axes of the 7x7 Overleaf matrix is the final step in the endeavor to confirm a proper understanding of what is and what is not properly designated as a so-called "Overleaf".

What I can say briefly in this short section of this chapter of this book is that the Overleaf System is an instantiation (specific example) of fundamental archetypes. By "archetypes" and "instantiations", I mean that the Septenarian Attributes are fundamental archetypes, and the Overleaf System is an instantiation of the archetypes. Unfortunately, the varying descriptions of the Overleaf categories, as documented above, have obscured their archetypal foundation so much that their Septenarian Attributes have been overlooked. It is not a meaningless coincidence that there are SEVEN Overleaf categories, concomitant with the other septenaries found in the Michaelian teachings and other esoteric cosmologies. Please excuse me for shouting; it is just that it is amazing to me that no one that I know of other than myself (and Die Quelle; refer to Chart #14) has taken note of this fact and realized the significance of it in terms of the application of the Septenarian Attributes to them. Despite the obscuring factors that have been presented in the Michaelian teachings descriptions, it is not too much of a stretch to see the correlation of the Septenarian Attributes and the Overleaf categories, once one has had it pointed out and explained to them.

Explanation follows.

Recall from Chapter 2B in Part Two, "Attributes of Overleaves", that the Septenarian Attributes are these: Ordinal Action, Ordinal Inspiration, Ordinal Expression, Neutral Assimilation, Cardinal Expression, Cardinal Inspiration, and Cardinal Action. My assertion is that the seven (what I call) "Aspects" of Personality — Goal, Chief Feature, Attitude, Age/Level, Center, Role, Mode — correlate with those Attributes respectively. It is also my assertion that the seven (what I call) "Processes" of Personality — Termination, Involution, Analysis, Combination, Synthesis, Evolution, Origination — correlate with the Septenarian Attributes. That might be hard to follow in mere text, so here is the information in table form:

| | Table 4Cd — ARCHETYPES and OVERLEAVES, ASPECTS and PROCESSES | | | | | | | | | | |
|-----------|--|--|----------|-------------|-----------|-----------|-------------|--|--|--|--|
| DIALECTIC | ORDINAL NEUTRAL CARDINAL | | | | | | | | | | |
| AXIAL | ACTION | ACTION INSPIRATION EXPRESSION ASSIMILATION EXPRESSION INSPIRATION ACTION | | | | | | | | | |
| ASPECT | Goal | Chief Feature | Attitude | Age/Level | Center | Role | Mode | | | | |
| PROCESS | Termination | Involution | Analysis | Combination | Synthesis | Evolution | Origination | | | | |

It might take more than a cursory look at the table for you to see and understand the correlation. If it is not self-evident or intuitively obvious to you, then for a thorough presentation refer to my book *The Tao of Personality*, especially Part One. Obviously I will not repeat all of that here, but I can summarize it as follows.

My argument in the Prologue to *The Tao of Personality* book (Chapter E-1 in the Epilogue of this *History* book) is that the irregularities and inconsistencies in the explanations of the Overleaf categories, enumerated in a previous section ("Why the Confusion?"), could be eliminated, and yet there would be very little loss in understanding of the way we actually experience them. In other words, we would sacrifice nothing of significance if we understood that everyone experiences all seven Overleaf categories this way: rank them in a strength hierarchy from strongest to weakest, but realize that it doesn't add much insight to go beyond your primary—, secondary—, and maybe tertiary—strength trait in each of the seven Overleaf categories. Just dump all the confusing 'baggage' that has accrued to the description of each Overleaf category. Even if the baggage is true, we cannot Validate it, and it is not actually very useful in our daily lives; it is just dogma—doctrine that cannot be justified to a person who does not believe in the supernatural revelation from the Michaels on the Causal Plane. To such people, "Michael says…" is not credible evidence of anything.

In the science called Information Theory, there is the concept of "signal versus noise": the more of one the less of the other; the more noise the harder it is to understand the signal. In reference to the Overleaf System, I regard the Septenarian Attributes as the signal that has been obscured by a lot of noise — the various irregularities that have been applied to the Overleaf categories. The archetypes, the Septenarian Attributes, are clear and distinct categories that have a well–defined logical and mathematical foundation and structure. The Overleaf System is far removed from the archetypes, applying as it does to the human personality. The primordial fundamental archetypes have been stepped down through many 'generations', so to speak, from their pure state to the human state — so much so that some of the correlations to the pure abstract archetypes have become so obscured by noise that the signal has not been noticed, perceived, and understood by the Michaelian teachings community. One of my aims in all of my books is to bring a greater appreciation of the archetypes to the Michaelian teachings community.

Concluding Remarks About Septenaries of Overleaves

- 1. In the original Michaelian group, Overleaves were defined in the channeling transcriptions as "overlays" of incarnate personality traits that covered over the discarnate soul. In the original Michaelian group, there were explicitly said to be seven aspects of Personality: Goal, Mode, Chief Feature, Role, Attitude, Center/Body Type, and Age/Level. (The original Michaelian group did not really get into the seven aspects of Essence, such as Position, Cadence, Greater Cadence, Side, Entity, Cadre, and Greater Cadre.) Even though Yarbro had access to those original Michaelian group transcriptions, she did not present the Body Types as being part of the Overleaf System, and she did not conflate Level and Age into one Overleaf category, which I do.
- 2. However, the second Yarbro book, *MMFM*, declared that "Essence Role" was not really an Overleaf category like the other six, because, unlike the Overleaves of the Personality–self, it allegedly did not

- change from lifetime to lifetime; therefore it transcended a single incarnate Personality-self. This distinction introduced the notion that some sets of septenaries did not fit a strict definition of an Overleaf. In *MMFM*, other aspects of the Essence-self were introduced, such as Position, Cadence, Greater Cadence, Entity, Cadre, and Greater Cadre. This potentially complicated and ambiguated which trait categories belonged to the Essence-self embodiments and which belonged to the Personality-self embodiments.
- 3. Re-categorizing Role was just the start of the confusion. Subsequent students in the Bay Area did not have access to the original Michaelian group transcriptions, and did have access to MMFM, and did add some other Aspects of the Essence–self, such as Frequency and Male/Female Energy Ratio, so they looked at the various aspects of Personality and decided that some of them did not fit their idea of what an Overleaf was. Some dropped Level/Age, and some added Body Type, to the original Michaelian group revelation.
- 4. The primary source of misunderstanding seems to be that there are three levels of the human being; the body-self, the Personality-self, and the Essence-self, and the boundaries between these three levels are ambiguous; they overlap, and some of the Overleaf categories allegedly fit in these overlaps. The disagreement in the Michaelian teachings communities is where to put Role, Age/Level, and Body Type when forced to make a binary decision.
- 5. The fact that different channels have produced contradictory channeling and come to different conclusions about which aspects of the Personality–self should be designated as "Overleaves", indicates that channeling leaves something to be desired in resolving the question: to be or not to be an Overleaf. There is a cogent and coherent system of understanding that transcends the divergent channeling and various rationales: the Process/Aspect System, which proposes that logic and mathematics provides the structural framework of the Overleaf System. That System validates the original Michaelian group identification of the seven Overleaves as Goal, Chief Feature, Attitude, Age/Level, Center/Body Type, Role, and Mode. That System shows the symmetry between the seven "Aspects" of Personality (Goal, Chief Feature, Attitude, Age/Level, Center, Role, Mode), and the seven "Processes" of Personality (Termination, Involution, Analysis, Combination, Synthesis, Evolution, Origination). When properly understood, instead of being an ugly confusing ambiguous mess, it turns out that the Overleaf System is a beautiful picture.
- 6. As I argue at some length in the Appendix of this *History* book, in Chapter E-2, it subtracts nothing from the pragmatic understanding and use of the personality trait system if we strip out all the variations of description of the categories of Overleaves, and make them consistent. All of that variation is just part of the dogma–doctrine of the Michaelian teachings, which has created confusion as much as anything else. In our daily lives, let's stick with what we can Validate.
- 7. In conclusion, if Michaelian students do not agree with my arguments and evidence for my selection of Overleaf categories, then of course they may apply the name "Overleaf" for whichever of the septenaries they prefer, and I will sidestep the semantic quibbling by using the overall term that I prefer to give to the collection of Goal and Mode, Chief Feature and Role, Attitude and Center/Body Type, and Age/Level, namely that they are "Aspects" of Personality. This provides a symmetry with the seven "Processes" of Personality: Termination and Origination, Involution and Evolution, Analysis and Synthesis, and Combination. So far as I know, only myself (Charts #23 and #24) and Die Quelle (Chart #14) have noticed this symmetry between the horizontal and vertical axes of the Overleaf/Matrix Chart, but it is valid, and it is important if one cares about the *context* of the Overleaf System (the Attributes) and not just about the *content* of the Overleaf System (the Traits). The ramifications and implications of this symmetry are huge, as documented in my books *The Tao of Cosmology, The Tao of Cosmogony*, and *The Tao of Personality*.

Chapter 4D

BODY TYPES

Before we get into a discussion of the various issues and problems within the Overleaf System itself — the primary task of Part Four of this *History* book — we will discuss a pseudo-quasi-Overleaf that has illegitimately found its way into the Overleaf System, namely the Body Types. There are valuable insights to be had in the exercise of sorting truth from fiction, science from pseudoscience, regarding this subject. These insights transfer to the discussion of sorting out issues within the legitimate Overleaf System in subsequent chapters.

This chapter is the successor to another chapter on Body Types in this *History* book. In Part One there is a chapter on the history of Body Types before and during the original Michaelian group. In Part Three there is a review of more than twenty Overleaf Charts, and many of those Charts, or associated books and websites, show the Body Types among the other Trait septenaries.

In the previous chapter here in Part Four, Chapter 4C, "Which Trait Septenaries are Overleaves?", we examined the question whether Body Types — as presently understood in the Michaelian teachings community — properly have the "Overleaf" designation, and my conclusion was: No, they do not — except to the extent that they are perhaps an extension of Centers, and that extent is very ambiguous in the present state of our understanding. The reasons that led me to this conclusion will be made known in this chapter as we thoughtfully compare the Body Type system with the Overleaf System. Having not carefully considered what we see in this chapter, many Michaelian teachings sources have attempted to fit the Body Type system into the Overleaf System, and because of the incongruity of the two, their attempts at reconciliation have yielded inconsistent results. Occasionally I deliver a whiny rant about the glaring contradictions that are found within the Michaelian teachings as currently promulgated by various teachers within the movement, and this whole chapter is another one of those rants. For shame.

The problem has not been with the descriptions of each Body Type; those have been consistent from the beginning and throughout the history of the subject. (I will not review that in this chapter; you can read the chapter on Body Types in Part One, and, of course, you can read books and internet resources on the subject.) Rather, the problem has always been with the correlation of Body Types with Roles. In that regard, in this chapter we examine various versions of the Body Type/Role correlation, from the original formulation all the way through the history of the Michaelian teachings up to recent publications. There are various and numerous inconsistencies from one source to another. We look at the sources that are found in the published (book and internet) Michaelian teachings sources, to understand what is going on with them, and to discern possible reasons why there are these inconsistencies. This required some "forensic sleuthing" on my part, you might say, because the sources did not reveal their rationales for their correlations; the edicts were just declared and proclaimed *ex cathedra* — without argument or evidence or rationale or justification or explanation. This is a common problem in the Michaelian teachings, which is why I like to say that "the unexamined teaching is not worth believing". Anyway, in the course of this chapter it will become abundantly clear to you just how forced and arbitrary the fit of the Body Type system, as originally and currently formulated, into the Overleaf System has been.

Furthermore, as demonstrated in this chapter and in other chapters in my books, the subject of Body Types is an example of the inability of the Michaelian teachings community as a whole to 'get their story straight' and 'get their act together'. We see this phenomenon in more than a dozen chapters, "Essays on Issues", here in Part Four of this *History* book. This brings a question to my mind: Would the Michaelian teachings community be better off or worse off if they did get their story straight, if they were consistent rather than self-contradictory? Personally, I have mixed feelings about an orthodoxy of dogma–doctrine being established,

partly on account of my being a rather heterodox freethinker myself. On the one hand, I prefer consistency and clarity over inconsistency and ambiguity. On the other hand, I dislike authoritarian rigidity that would impose any kind of orthodoxy, even if that was *my* heterodoxy. If others are *persuaded* by the authority of my good arguments and solid evidence, then that is not an imposition; it is progress in the evolution of the Michaelian teachings toward ever greater beauty and truth and wisdom and goodness and love and power.

In any case, the Michaelian teachings community as a whole will probably never seek or achieve consistency and clarity. Not that there is anything wrong with that — students focus on stuff that is important to them — there is quite simply a dearth of scientific and philosophical minds in this teaching who have an inclination to review the dogma-doctrine using academic tools. If there ever is a 'meeting of the minds' in some sort of 'doctrinal convention' by the Michaelian teachings community, then this book represents my contribution to the discussion. If the Michaelian teachings community collectively ever came to believe that it mattered, then a communal discussion might clear up at least *some* of the discrepancies — and it might not. I cannot see this ever happening; the nature of the Michaelian teachings community, like myself, is anti-authoritarian: there is no authoritative source to establish an orthodoxy within the Michaelian teachings — on the subject of Body Types or any other subject — *not even the Michaels themselves*. This is apparently due to the inability of various mediums to accurately channel the Michaels, and this fact has *caused* self-contradictory information to exist throughout the Michaelian teachings. All Michaelian students learn that this inconsistency exists if they compare and contrast the various sources.

Regardless of what the Michaelian teachings community as a whole does, individual students can mitigate the contradictions that have been fostered in the Michaelian teachings by various sources, and disambiguate their own perceptions, with the help of this book and my other books. I do my part in seeking and achieving consistency and clarity. This Part Four of this *History* book is mostly about clearing up contradictions and ambiguities with good arguments and valid evidence, to the best of my ability.

As we see in this chapter and the other chapter on the Body Types in this book, the original sources of the teaching on Body Types are no more authoritative than the Michaelian teachings sources. As a result of my own analysis, I see very little scientific validity in the Body Type system; it is a messy, artificially-contrived system of classification. This lack of scientific validity does not mean that people cannot find it to be *useful* information for understanding themselves and other people within stereotypical categories.

Let me explain that.

It is often useful in a practical sense to chunk a mass of data into groups with similar characteristics, even though in reality the categories have vague or even nonexistent boundaries. This procedure of stereotyping helps to make perceptions more efficient when the diversity and ambiguity of reality is too much for our limited brains to hold in memory and then process the confused data effectively. The understanding of Body Types is in the realm of topics that need simplification and low-resolution imaging in order to function efficiently. The Overleaf System itself serves that function, but differs from the Body Type system in that I find logical and mathematical principles underlying the Overleaf System, whereas I do not see this in the Body Type system. There is a certain type of person who likes to collect and divide masses of data into tidy categories; I am one of them. When I applied that predilection to the Overleaf System, it had wonderful results. When I applied that predilection to the Body Type system, it went awry.

Nevertheless, I believe that the Body Type system can be useful if it gets people communicating with each other about a subject of mutual interest. The other reason that I present this information about Body Types is my Scholarly impulse to archive a historical record of my research, and reveal my thought processes regarding my research — for better or worse; readers will be the judges of whatever value it might have to them.

With those caveats and disclaimers in mind, let's dig into some of the available information about Body Types here and now.

Rodney Collin (1954)

The originator of the Body Type system is Rodney Collin. There is a Wikipedia article about him, and an internet search will uncover a great deal more about this student of Peter Ouspensky; both Ouspensky and

Collin are leading lights in the so-called 'Fourth Way' teaching. Some of the founding members of the original Michaelian group attended a local Fourth Way group in the Bay Area in the early 1970s before founding the original Michaelian group, and this is where they learned about Body Types — and the Enneagram. This group called itself "Fellowship of Friends", and that is the name I will use henceforth.

The graphic on the right is the Enneagram from the Fellowship of Friends, with the Body Types shown at numbered points around the perimeter of a circle. Refer to Chapter 1B in Part One, "Personality Typologies" for a thorough introduction to the Enneagram.

Collin's book *The Theory of Celestial Influence* (1954, 1968, 1984) is seminal in the understanding of Body Types as understood in the Michaelian teachings. Hereinafter this book will be

abbreviated to *TCI*. There is a more thorough presentation of information from this book in the chapter on Body Types in Part One of this *History* book; in this section that information is reduced to the following tabulation.

| Table | Table 4Da — BODY TYPES per RODNEY COLLIN in THE THEORY OF CELESTIAL INFLUENCE | | | | | | | | | | | |
|------------|---|------------------|------------------|-----------------------|------------------|------------------------|------------------|--|--|--|--|--|
| NODE | 1 | 4 | 2 | 8 | 5 | 7 | _ | | | | | |
| SEQUENCE | First | Second | Third | Fourth | Fifth | Sixth | Seventh | | | | | |
| BODY TYPE | LUNAR | VENUSIAN | MERCURIAL | SATURNINE | MARTIAL | JOVIAL | SOLAR | | | | | |
| ATTRIBUTES | Fem (Pas Neg) | Fem (Pas Pos) | Mas (Act Neg) | Mas (Act Pos) | Mas (Act Neg) | Fem (Pas Pos) | Neu (Act Pos) | | | | | |
| ENDOCRINE | Pancreas | Parathyroid | Thyroid | Anterior Pituitary | Adrenals | Posterior Pituitary | Thymus | | | | | |

- NODE: These are the Enneagram positions per the graphic at the beginning of this section. The digits
 are from the first six digits of the infinitely repeating decimal expansion of the fraction 1/7, which
 your handy local calculator will reveal to be 0.142857... The Gurdjieffian teachings understands, as I
 do and scientists generally do, that the foundational structural framework of the cosmos is
 mathematics: numerical and geometrical.
- SEQUENCE: The "Sequence" row of rank-order numbers is found in *TCI* on page 222 and explained in nearby text. It is an essential component in the Enneagram figure. The planets got associated with the rank-order numbers starting with the fastest planet, the Moon in the #1 position around the Enneagram, and the slowest planet, Saturn, in the #8 position. The sun is shown in the #9 position on this table, but usually it is shown in the center of the circle, not on the perimeter.
- BODY TYPE: The "Body Type" row is also found in *TCI* on page 222, and in the Enneagram figure, and in associated text.
- ATTRIBUTES: The "masculine" and "feminine" "attributes" shown in this row are given in *TCI* on and around page 309, and in the Enneagram figure, and in associated text. Much of the Body Type system is built around the Enneagram. Refer to Chapter 1B in Part One, "Personality Typologies", for more information about the dubious validity of the Enneagram. The other attributes (in parentheses) shown in this row, and descriptions of Body Types, were found at >http://www.astralis.it/gauq.htm<, which is about the Enneagram. The names of the attributes are abbreviated: Fem = Feminine, Mas =

Masculine, Pas = Passive, Act = Active, Neg = Negative, Pos = Positive; Neu = Neutral. All of those attributes are found in various components of the Michaelian teachings, but here they are mixed in a way that does not make it easy to correlate with Michaelian teachings components. Magnetic attraction of Body Types for each other is said to exist between Body Types on the left and right sides of the Enneagram figure, thus: Saturn (Mas Act Pos) and Moon (Fem Pas Neg) are attractive to each other; Jupiter (Fem Pas Pos) and Mercury (Mas Act Neg) are attractive to each other; and Mars (Mas Act Neg) and Venus (Fem Pas Pos) are attractive to each other.

• ENDOCRINE: The "Endocrine" row is found in *TCI* on page 250; further discussion is found in a section further on in *TCI*. Endocrine glands are also sometimes correlated with chakras, so one might hatch the idea to correlate Body Types with chakras (and thence with Roles), but even a quick glance at the locations of the endocrine glands in the body compared to the locations of the chakras in the body reveals that this is an exercise in futility. It is not clear if today's endocrinologists would make this particular group of endocrines a distinct septenary, but we know that no one thinking of endocrines in terms of chakras would do so. The endocrine factor is just another indication that Body Types do not correlate with Roles in any straightforward way — at least not in a way that I have been able to discern. On the other hand, the chakras do correlate nicely with the Roles, as we see further on in Chapter 4J, "The Chakras".

Numerous Michaelian teachings sources have adopted and adapted the Enneagram Sequence, the Body Type Attributes in one form or another, and the endocrine information in their explanations of Body Types. They inherited the outlines of the Body Type system from the Fellowship of Friends that founding original Michaelian group members had been involved in.

So far as I have been able to determine, Collin made no attempt to correlate the Body Type system with the understanding of Centers as found in the Gurdjieffian teaching. One would think this was a very natural thing to do, since there are seven in each system. Furthermore, the supposed or alleged chakra–endocrine connection was widely presented in esoteric circles even in the 1950s when Collin was writing. To my way of thinking, this lack of correlation with other systems is the most obvious clue that no such correlation exists, and that any attempts to do so are probably misguided and unsuccessful. If the originator of the Body Type system, who was intimately familiar with both Centers and Body Types, did not go there, then that omission argues against the validity of any attempt to go there.

As I read the *TCI* book, the rationale for all of the correlations shown in the rows of this table seems quite convoluted and speculative to me. My perception is that Collin was very much a Scholar in the Negative Pole of –Theory. There is a pejorative meaning of that word in this usage as a Negative Pole in the Overleaf System: it involves stringing limited data or incomplete knowledge or speculative ideas together in such a way that it tells a fanciful story, a story that is only loosely tethered to actual +Knowledge, which is the name of the Positive Pole. Synonyms for the Negative Pole are –Conjecture, –Hypothesis, and –Speculation. In my estimation, the whole *TCI* book is an excellent example of what has come to be called "pseudoscience" — it has some of the superficial trappings of science and mathematics, but it is nevertheless illegitimate; Wikipedia has an article on the subject of pseudoscience, and I highly recommend it to "spiritual" types, who are prone to be ungrounded in terms of scientific knowledge and philosophical epistemology. More will be said about the pseudo-scientific roots of the Body Type system in a section near the end of this chapter.

Not everyone shares my view that Collin's Body Type system is a pseudoscience. Whatever its ontological (adherence to reality) status, the Body Type system, which originated in a Fourth Way group, found its way into subsequent Fourth Way groups — particularly the Fellowship of Friends — and thence into the Michaelian teachings via some of the founding members of the original Michaelian group.

The Fellowship of Friends (1971)

In 1970, Robert Burton, identified in original Michaelian group channeling as a Seventh Level Old King, started a Gurdjieff/Ouspensky Fourth Way group in the San Francisco Bay Area. They referred to themselves as the Fellowship of Friends. Burton gathered some followers, and that included some people who soon left that group in 1972, and then founded the original Michaelian group in 1973. The Fellowship of Friends adopted and adapted Collin's ideas about Body Types that had been published in *The Theory of Celestial Influence* two decades earlier. I constructed the following table from their documents found among the original Michaelian group documents that were given to members of the Center for Michael Teachings, Inc., in the mid 1990s.

| | Table 4Db — BODY TYPES per the FELLOWSHIP OF FRIENDS | | | | | | | | | | |
|--------------|--|--|------------------|------------------|--------------------|-------------------|------------------|--|--|--|--|
| LVL OF BEING | Man #1 | Man #1 Man #2 Man #3 Man #4 Man #5 Man #6 Man #7 | | | | | | | | | |
| CENTER | Moving | Emotional | Intellectual | (Balance) | Hi'r Moving | Hi'r Emotion'l | Hi'r Intellect'l | | | | |
| ATTRIBUTES | | Ordinal Neutral Cardinal | | | | | | | | | |
| | The sequence o | f the bottom four | rows is scramble | d compared to th | ne sequence of the | e top three rows. | | | | | |
| BODY TYPE | LUNAR | VENUSIAN | MERCURIAL | SATURNIAN | MARTIAL | JOVIAL | SOLAR | | | | |
| SEQUENCE | First | Second | Third | Fourth | Fifth | Sixth | Seventh | | | | |
| ENNEAGRAM | One | Four | Two | Eight | Five | Seven | Zero | | | | |
| ATTRIBUTES | Fem Pas Neg | Fem Pas Pos | Masc Act Neg | Masc Act Pos | Masc Act Neg | Fem Pos Pas | Neut Act Pos | | | | |

- LEVEL OF BEING: The first row shows Gurdjieff's "Level of Being", a rank-order sequence of spiritual development that he correlated with the Centers, which are shown in the second row. This lineup of Centers is what I have come to call the "Gurdjieff Sequence". I included it here in order to show the lack of correlation with the Body Types in the Enneagram Sequence shown in rows below the divider row. Not only here, but in subsequent tables, it will be shown again that the Enneagram Sequence bears no resemblance to the Gurdjieff Sequence. It seems odd to me that, so far as I know, Collin and the Fellowship of Friends made no attempt to correlate the two even though "Seven-ness" exists in both sequences, and even though both are said to be developmental sequences. (Recall that there are chapters on "Level of Being" and "The Law of Seven" in Part One of this History book.)
- CENTER: In the second row, the Centers are shown in the Gurdjieff Sequence from left to right. Besides what is stated in the bullet point above, another reason I showed them in this table is because of a reference in the Fellowship of Friends documents to characteristics of three categories of Body Types as related to Moving Center, Emotional Center, and Intellectual Center. However, those documents did not actually do the job of correlating Body Types with Centers. Nor have I found any evidence that the Fellowship of Friends did that subsequently. However, there were attempts in the Michaelian teachings to correlate Body Types with Septenarian Attributes/Centers/Roles that is what this chapter is mostly about.
- ATTRIBUTES: In the third row I show the Dialectic Attributes that apply to the Centers shown in the row immediately above. We will see that these attributes were used by Michaelian teachings sources to attempt to correlate the Body Type system with the Overleaf System.
- In the divider row I note that the columns above and below the divider are not correlated. This chapter is mostly about attempts to correlate them in the Michaelian teachings community; the results are not pretty.
- BODY TYPE: In the fourth row, I show the Body Types in what I have come to call the "Enneagram Sequence"; Lunar is in the First position and Solar in the Seventh position. This lineup is per *TCI* and Fellowship of Friends.
- SEQUENCE: The fifth row shows the Enneagram rank-order sequence that applies to the Body Types listed in the row immediately above it. In Collin's book *TCI* this is said to be a *developmental* sequence, a progression of development via the use of Body Types in successive lifetimes. However, as stated above, so far as I have been able to discover, there was never any attempt to correlate it with that other developmental sequence, the one that came from Gurdjieff, the Level of Being, shown in the first row.
- ENNEAGRAM: In the sixth row, I show the numbered position of the Body Types around the Enneagram. Those numbers are the six digits of the infinitely-repeating decimal expansion of 1/7 = .142857.... This schema is one of the defining features of the Enneagram that I regard as pseudo-scientific; it lends an air of mathematics to the graphic without having any substance.

• ATTRIBUTES: In the seventh row, I show the names of the attributes used by Collin and the Fellowship of Friends: Fem = Feminine, Pas = Passive, Neg = Negative, Masc = Masculine, Act = Active, Pos = Positive, Neut = Neutral. Michaelian students will recognize that these more or less correspond to the Dialectic Attributes: Ordinal and Cardinal. However, note that there was no Neutral Attribute in *TCI*. In order to correlate Body Types with the Dialectic Attributes, the Michaelian teachings tried to make the Solar Body Type to be Neutral because it was not on the Enneagram circle; it was in the middle, therefore not polarized, there being an alleged polarity between the Body Types on the left and right sides of the Enneagram.

Two books about the Body Types have been written by members of the Fellowship of Friends: Joel Friedlander, *Body Types* (1986) and Susan Zannos, *Human Types* — *Essence and the Enneagram* (1997). These two books are the most authoritative regarding the development of the Body Type system post-*TCI*, at least in that particular group. I have not encountered any other individual or group that has developed the original *TCI* formulation.

It looks to me as if people in the Fellowship of Friends saw hints that there were some common features of the Enneagram and the Law of Seven, but they did not pursue a thorough reconciliation. However, attempts in that direction were made in the Michaelian teachings — with very poor results, as we see in the following sections.

The Original Michaelian Group (1973 – 1978)

This is a quick review of the fuller exposition of Chart #1 in the chapter on Body Types in Part One of this *History* book.

The first Chart from the original Michaelian group, Chart #1, which was reviewed in Part Three, shows the seven Body Types. Jovial, Lunar, and Venusian were shown in the Ordinal columns, and the words "feminine or passive" were handwritten next to them. Solar was shown in the Neutral column with the words "(genderless) modifying" handwritten next to it. Mercurial, Saturnine, and Martian were shown in the Cardinal columns, with the words "active or masculine" handwritten next to them. This information is shown in Table 4Db above, rows three and four. It is obvious from Chart #1 and Chart #3 and documents found with the original Michaelian group transcriptions that the original Michaelian group was attempting to incorporate the Collin and Fellowship of Friends teachings about Body Types into the Overleaf System that the Michaels were revealing to them. The attempted correlation of Body Types with Dialectic Attributes (Ordinal/Cardinal) appears to have occurred via attributes such as passive/active and feminine/masculine. We see this in the table below, and in subsequent tables further on in this chapter, derived from other sources.

| | Table 4Dc — BODY TYPES per the ORIGINAL MICHAELIAN GROUP | | | | | | | | | | |
|-----------------------------------|---|---|--|------------------------------------|--------------------------------|-----------------------------------|----------------------------|--|--|--|--|
| DIALECTIC | | Ordinal | | Neutral | Cardinal | | | | | | |
| BODY TYPE | 1. JOVIAL | 1. JOVIAL 2. LUNAR 3. VENUSIAN SOLAR 1. MERCUR'L 2. SATURN'N 3. | | | | | | | | | |
| ATTRIBUTES | Pas Fem Pas Fem Pas Fem Genderless Act Masc Act Masc Act Masc | | | | | | | | | | |
| | | | prrelation betweer much the origina | | | | | | | | |
| CENTER | Moving | Emotional | Intellectual | Balance | Hi'r Intellect'l | Hi'r Emotion'l | Hi'r Moving | | | | |
| Septenarian Attributes ROLE | Ordinal Action WARRIOR | Ordinal Inspiration SERVER | Ordinal Expression ARTISAN | Neutral Assimilation SCHOLAR | Cardinal Expression SAGE | Cardinal Inspiration PRIEST | Cardinal Action KING | | | | |

- DIALECTIC: The first row shows the Dialectic Attributes Ordinal, Neutral, Cardinal in the same sequence left to right that they are shown on Chart #1.
- BODY TYPE: The second row shows the seven Body Types, with numbers as they were shown on Chart #1. I am not certain how the original Michaelian group came up with those numbers. If we compare the numbers associated with the Overleaf traits on Chart #1, we see that the original Michaelian group had no understanding of the Axial Attributes of 1D-Action, 2D-Inspiration, and 3D-Expression

- because those Axes are scrambled with respect to the numbers assigned to them. For this reason, I do not regard these numbers or this lineup of Body Types as canonical or inspired or channeled.
- ATTRIBUTES: The third row shows the attributes applied to the Body Types in Chart #1: Pas = Passive; Fem = Feminine; Act = Active; Masc = Masculine. Note that these are not always the same attributes as were applied to the Body Types by the inventor, Rodney Collin, as described in the chapter on Body Types in Part One and shown in Table 4Da.
- CENTER: The fourth row shows the Centers in the Natural Sequence. If we correlate the Body Types
 with the Centers the same way they are correlated in Table 4Db, we have a match with the second
 row of Table 4Dc which correlation was highly speculative on my part. I am prepared to say that
 the original Michaelian group did not understand this, because they did not understand the Axial
 Attributes.
- ROLE: The fifth row shows the Septenarian Attributes and corresponding Role in the Natural Sequence
 — for comparison only even though the original Michaelian group did not have an understanding
 of the Axial Attributes. If you know the descriptions of the Body Types shown in the second row, you
 will see how mismatched they are with the Roles in practically all cases.

Michaelian students subsequent to the original Michaelian group *did* know about the Axial Attributes, and they attempted to correlate the Body Types with them, as part of the attempt to integrate the Body Type system fully into the Overleaf System. The results are not pretty and are not consistent, as we see in subsequent sections; it was an exercise in futility then, and it is an exercise in futility now. Nevertheless, let us go through with the exercise in the sections below, so that the reader thoroughly understands the futility of integrating the Body Type system into the Overleaf System.

José Stevens (1986 – 1989)

An examination of José Stevens's work is critical to an understanding of how the information on Body Types was transferred from the original Michaelian group to subsequent Michaelian teachings groups. We know that Stevens was given a copy of the transcriptions of the original Michaelian group while it was still meeting, by a member of the original Michaelian group. We know this for certain because that original Michaelian group member told The Center for Michael Teachings, Inc. about it, and because Stevens provided the Body Type names with their Positive and Negative Poles in his first book, *The Michael Handbook* (1986). These names are shown on Overleaf Chart #3 which originated in the original Michaelian group. Stevens probably also received the sheets of Body Type descriptions and the cartoons by Harold Wirk that came from the Fellowship of Friends that some original Michaelian group members attended. You can see all of this source material reproduced in Volume 2 of *Michael Speaks* — *The Legacy of Sarah Chambers*, published by The Center for Michael Teachings, Inc. Other cartoons appear on page 258 of *TMH*, with Axial Attributes added.

Stevens has an entire chapter on Body Types in *TMH*, pages 255 through 272. His novel contribution to the Body Type system was that he applied the Axial Attributes (Action, Inspiration, Expression, Assimilation) to the Body Types. The Axial Attributes were not known to the original Michaelian group, but they were revealed in 1979 in *MFM*. I have not been able to figure out how Stevens sorted that out, partly because Stevens contradicts himself, and partly because the Body Type descriptions don't have explicit Axial Attributes. Perhaps he had a rationale, but perhaps he was inconsistent in the application of his rationale; I can speculate on his possible line of reasoning as follows.

In "Diagram 1" on page 260 of *TMH*, Stevens asserts that there is a circulation through the Body Types from one lifetime to the next, and so on. This is straight out of *TCI*, so this means that Stevens was aware of Collin's book *TCI* and the Enneagram discussed therein. In several places in the text of his chapter on Body Types, Stevens applies attributes to each Body Type — Passive/Active, Feminine/Masculine, Negative/Positive — these are tabulated below.

Stevens states that the subject of Body Types is difficult and ambiguous, and I agree:

Bodytype is a difficult topic because it is the least clear-cut of all the information offered in this volume. As people are a mixture of types, recognizing the permutations and combinations is difficult. The information is useful where people recognize one influence and can gain insights around it. [TMH, p. 256]

This entire chapter in this *History* book makes abundantly clear how difficult and ambiguous the subject is. The following table summarizes the information contained in Stevens's chapter on Body Types in *TMH*, and in the Overleaf Chart in the same book and two of his other books.

| | Table 4Dd — BODY TYPES per THE MICHAEL HANDBOOK (TMH) | | | | | | | | | | | | |
|-----------------------------------|---|----------------------------------|----------------------------------|------------------------------------|--------------------------------|-----------------------------------|----------------------------|--|--|--|--|--|--|
| RANK-ORDER | First | Second | Third | Fourth | Fifth | Sixth | Seventh | | | | | | |
| Septenarian Attributes ROLE | Ordinal Action WARRIOR | Ordinal Inspiration SERVER | Ordinal Expression ARTISAN | Neutral Assimilation SCHOLAR | Cardinal Expression SAGE | Cardinal Inspiration PRIEST | Cardinal Action KING | | | | | | |
| TEXT B.T. | VENUSIAN | LUNAR | MERCURIAL | SOLAR | JOVIAL | SATURNIAN | MARTIAL | | | | | | |
| ATTRIBUTES | Pos Pas <u>Fem</u> | Neg Pas <u>Fem</u> | Neg Act <u>Fem</u> | Neutral | Pos Pas <u>Masc</u> | Pos Act Masc | Neg Act <u>Masc</u> | | | | | | |
| CHART B.T. | VENUSIAN | LUNAR | JOVIAL | SOLAR | MERCURIAL | SATURNIAN | MARTIAL | | | | | | |
| ATTRIBUTES | Pos <u>Pas</u> Fem | Neg <u>Pas</u> Fem | Pos <u>Pas</u> Masc | Neutral | Neg <u>Act</u> Fem | Pos <u>Act</u> Masc | Neg <u>Act</u> Masc | | | | | | |
| ENNEAGRAM | Second | First | Third | Seventh | Sixth | Fourth | Fifth | | | | | | |
| PREFER'D BY | Sage | Server | Art, Sch | Priest | King, Sage | War Kin Pri Sa | War Kin | | | | | | |
| CHAKRA | Fifth | Third | Fifth | Fourth | Sixth | Sixth | First | | | | | | |

- RANK ORDER: The first row shows the rank-order sequence of the Roles shown in the second row. Compare it with the Enneagram Sequence in the seventh row and note the dis-correlation in six out of seven instances. The two are obviously incompatible; therefore, the Enneagram Sequence cannot be used to attempt correlation of Body Types with Roles.
- ROLE: In the second row, as in all other tables in this chapter, the Roles are shown in the Natural Sequence, as is my custom. This consistency aids the correlation of Body Types with Roles from table to table. Compare this with the Body Types shown in the third row, which is Stevens's correlation of Body Types with the Septenarian Attributes/Roles in the *text* of *TMH*.
- TEXT BODY TYPES: In the third row, the Body Types are listed per the text and diagrams and tables in Stevens's *chapter* on Body Types in *TMH*, for instance, in the table on page 257.
- ATTRIBUTES: The fourth row shows the attributes that correlate with the Body Types shown in the third row. This row lists the attributes given in the introductory bullet points of Stevens's one-page description of each Body Type on pages 264–270 of *TMH*: Neg Pas Fem = Negative Passive Feminine; Pos Act Masc = Positive Active Masculine. This shows that the *chapter* is consistent with the Dialectic Attributes (Ordinal/Cardinal) in terms of Feminine and Masculine attributes. Note that I showed Fem and Masc in bold-underlined text, because it appears that those were the chosen attributes to correlate with the Dialectic attributes of Ordinal and Cardinal, rather than the attributes of Pos and Neg, or of Pas and Act. (I have not figured out where Stevens got his Neg and Pos attributes for Body Types.)
- CHART BODY TYPES: In the fifth row, the Body Types are correlated with the Roles per the Overleaf Chart near the end of TMH. Notice that he switched Mercurial and Jovial from the lineup indicated in the chapter on Body Types. If this is an error, it was not changed in identical Overleaf Charts that appear in his two other books published in the same decade, Earth to Tao and Tao to Earth. You can see this correlation of Body Types and Roles in Chart #9 in Part Three of this History book. In other words, Stevens is inconsistent with himself. However, there might have been a rationale for the switch: whereas the chapter correlates Feminine/Masculine with Ordinal/Cardinal, the Chart correlates Passive/Active with Ordinal/Cardinal. In original Michaelian group Chart #1, there is no distinction between Fem/Masc and Pas/Act and Ordinal/Cardinal, as shown in Table 4Dc.
- ATTRIBUTES: In the sixth row, I show the attributes that go with the Body Types in the fifth row. Note that I showed Passive and Active in bold-underlined text, because it appears that those were the chosen attributes to correlate with the Dialectic attributes of Ordinal and Cardinal, rather than the attributes of Positive and Negative, or of Feminine and Masculine. The difference between the fourth row and the sixth row gives us a possible clue as to why Stevens's text correlation of Body Types with

- Roles differs from his *Chart* correlation it was all about attributes. The original Michaelian group had not reached clarity on attributes and thus had no such issue.
- ENNEAGRAM: In the seventh row, I show the rank order sequence of the Enneagram. On the Enneagram figure, Lunar, Venusian, and Mercurial are on the right side of the Enneagram circle, and Saturnian, Martial, and Jovial are on the left side of the Enneagram circle. This might be another explanation why Stevens showed those Roles where he did in the Body Type *chapter* of *TMH*, in contradiction to his Overleaf *Chart*.
- PREFERRED BY: The eighth row shows the Roles that Stevens alleges prefer the Body Types shown in the second row, according to the *text* of his Body Type chapter. The preferred Role matches the actual Role correlated to the Body Type in only two or three cases (some Roles allegedly prefer more than one Body Type). To me, this is evidence that my perception is correct: there is no good septenarian match of Roles to Body Types. This preference of certain Body Types by certain Roles is discussed by others; see further on. It makes sense to do this when attempting to correlate the two, but those attempts also yield contradictions among sources.
- CHAKRAS: The ninth row shows the chakras that Stevens correlated with Body Types as shown in the third row, not the fifth row. This is from "Diagram 4" on page 262 of TMH. Notice that some Body Types have more than one chakra (fifth, sixth), and some chakras are missing (second, seventh). It makes sense to include chakras into attempts to correlate septenaries, because both chakras and Body Types are typically associated with endocrine glands. Refer to Chapter 4J below, "Chakras", and you will see that this only makes the matter even more confused than it already is. I have not seen other Michaelian teachings sources that correlate Body Types with chakras.

There is discussion of the alleged Uranian, Neptunian, and Plutonian Body Types in the text of *TMH*, but they are not shown on Stevens's Overleaf Chart. There will be no discussion of them in this chapter, except to note that the existence of ten planets in our solar system speaks against a tidy correlation of ten Body Types with seven Roles.

It is obvious from what Stevens did, as shown in this table, that he was trying to fit the Body Type system into the Overleaf System, based on descriptions provided in the original Michaelian group documents which derived from the Fellowship of Friends documents and *TCI*. We also see that the results were confused. It confused me just trying to untangle this confusion, and I rather imagine that it confuses you also. Need I say again that this is because the Body Type system is incompatible with the Overleaf System? At any rate, Stevens's inconsistencies left, and/or created, some issues that subsequent Michaelian students wrestled with, as documented in sections below.

Beware: more confusion follows.

Michael: The Basic Teachings (1990)

In the book by that name, authored by Van Hulle, Christeaan, and Clark, Second Edition (1990), there are three sources of information about Body Types; there is an Enneagram diagram shown on page 8 with the Septenarian Attributes shown on the numbered nodes, and from this I have correlated with the Fellowship of Friends Enneagram of Body Types; there is a chapter of *text* on Body Types from page 132 to 161 that includes a diagram on page 135 that shows the alleged circulation of Body Types discussed in previous sections; there is an Overleaf Chart near the end of the book on page 212 that also shows Body Types in columns with the Overleaves. Surprisingly (?), the three do not agree with each other. There is plenty of random chaos in the table below, which is reasonable to expect because the Body Types are themselves not at all able to be correlated with the Roles.

| T | Table 4De — BODY TYPES per MICHAEL: THE BASIC TEACHINGS (MTBT) | | | | | | | | | | |
|-----------------------------------|--|----------------------------------|----------------------------------|------------------------------------|--------------------------------|-----------------------------------|----------------------------|--|--|--|--|
| RANK ORDER | FIRST | SECOND | THIRD | FOURTH | FIFTH | SIXTH | SEVENTH | | | | |
| Septenarian Attributes ROLE | Ordinal Action WARRIOR | Ordinal Inspiration SERVER | Ordinal Expression ARTISAN | Neutral Assimilation SCHOLAR | Cardinal Expression SAGE | Cardinal Inspiration PRIEST | Cardinal Action KING | | | | |
| DIAGRAMS/TEXT | VENUSIAN | LUNAR | MERCURIAL | SOLAR | JOVIAL | SATURNIAN | MARTIAL | | | | |
| ATTRIBUTES | Pas Fem | Pas Fem | Active | Neutral | Feminine | Masculine | Active | | | | |
| ENNEAGRAM | SECOND | FIRST | THIRD | SEVENTH | SIXTH | FOURTH | FIFTH | | | | |
| PREFERRED BY | _ | Art. & Sch. | Sage | Artisan | _ | Sch. Pri. King | Sag. & Pri. | | | | |
| OVERLEAF CHART | MARTIAL | LUNAR | MERCURIAL | SOLAR | SATURNIAN | VENUSIAN | JOVIAL | | | | |

- RANK ORDER: The first row shows the sequence of the Septenarian Attributes/Roles shown in the second row. Compare it with the Enneagram Sequence in the fifth row and note the dis-correlation in six out of seven instances.
- ROLE: In the second row, as in all other tables in this chapter, the Septenarian Attributes and Roles are shown in the Natural Sequence, as is my custom. This consistency aids the correlation of Body Types with Roles from table to table. The Ordinal triad is on the left, the Cardinal triad is on the right, and the Neutral is in the middle.
- DIAGRAMS/TEXT: In the third row, the Body Types are correlated with the Septenarian Attributes (Roles) according to the Enneagram on pages 8 correlated with the circulation diagram on page 136 of MTBT and the chapter text, starting on page 132 and continuing to page 161. This is the same correlation as the text in Stevens's book TMH but not the Overleaf Chart in TMH; it would appear that the two sources communicated with each other to some extent. Notice that the diagrams/text only agrees with the MTBT Overleaf Chart (see bottom row) in three out of seven instances.
- ATTRIBUTES: The fourth row shows the attributes (Passive, Active, Feminine, Masculine, Neutral) that were extracted from the *text* descriptions of each Body Type, on pages 139 to 155 of the book. Pas = Passive; Fem = Feminine. These are reminiscent of the original attributes assigned to the Body Types by Rodney Collin as shown in Table 4Da. Notice that some of the Attributes have two factors, and some of them have only one. Notice that there is agreement five times out of seven between Passive—Feminine and Active—Masculine Attributes with the Dialectic (Ordinal and Cardinal) Attributes shown in the top row.
- ENNEAGRAM: The fifth row shows the Enneagram sequence correlated with the third row lineup. There is a graphic and some text on page 135 of MTBT that alleges that Body Types are chosen in successive lifetimes in a specific sequence, starting with Lunar as the most "immature": Lunar > Venusian > Mercurial > Saturnian > Martial > Jovial > Solar. The idea is straight out of Rodney Collin's book TCI, page 222. In that book it was based on a correlation of Body Types with Enneagram features; hence the title of this row. This makes it a developmental sequence. However, notice that it has very little in common with the Natural Sequence, aka the Natural Sequence, the fundamental developmental sequence of creation which is shown in the top row of the table. There is only agreement between these two sequences at the third position, and even if the Enneagram rank-order numbers were shifted to start with other than Lunar, the sequence would still be scrambled with respect to the Natural Sequence. To my way of thinking, this speaks against the notion of validity for the Enneagram as any kind of developmental sequence.
- PREFERRED ROLES: The sixth row shows the preference of the Roles for specific Body Types as alleged in the *MTBT* book. Notice that in most cases the alleged preferred Role does not match the Role that is allegedly correlated with the Body Type. It is puzzling to me that *MTBT* assigns certain correlations of Roles to Body Types, then says that certain Roles "prefer" certain Body Types that are out of character

- for that Role. And if it is compared with Stevens in the previous table, we find that there is more disagreement than agreement between the two. This preference of certain Roles for certain Body Types is also compared to channeling by Sarah Chambers a few sections further on, with yet more inconsistency.
- CHART BODY TYPES: The eighth (bottom) row shows the correlations of Body Types with Septenarian Attributes/Roles as shown in the Overleaf Chart on page 212 of MTBT. This is the Chart #11 discussed in Part Three of this History book. Notice that the Chart only agrees with the text in three out of seven instances. Notice that this is not the same lineup as Stevens's Chart #9 from TMH, which agrees with Chart #11 from MTBT in only five out of seven instances. Perhaps we should not be surprised at this self-contradiction given that we have already seen that Stevens contradicts himself in terms of text versus Chart.

The consistency of inconsistencies does not get any better or worse in subsequent Michaelian teachings sources.

Stephen Cocconi (1992)

The table below is derived from Chart #13 in Part Three, authored by Stephen Cocconi.

| | Table 4Df — BODY TYPES per STEPHEN COCCONI | | | | | | | | | | | |
|-----------------------------------|---|-------|-----------|-------|--------|--------|---------|--|--|--|--|--|
| Septenarian Attributes ROLE | Attributes Action Inspiration Expression Assimilation Expression Inspiration Action | | | | | | | | | | | |
| BODY TYPE | VENUSIAN | LUNAR | MERCURIAL | SOLAR | JOVIAL | SATURN | MARTIAL | | | | | |

My comments on this table are as follows:

- ROLE: In this table, in the first row, as in all other tables in this chapter, the Septenarian Attributes/Roles are shown per the Natural Sequence from left to right, as is my custom. This consistency aids the correlation of Body Types with Roles from table to table, revealing the inconsistency on the part of various sources.
- BODY TYPE: In the second (bottom) row, the correlation of Body Types with Roles is the same as shown in the two previous tables, the part derived from the *text* of *MTBT* and the *text* of *TMH*. Perhaps this is to be expected if for no other reason than that the California channels all hung out with each other. However, notice that it does not follow the Overleaf *Charts* found in *MTBT* and *TMH*. One wonders if Cocconi had an actual thoughtful reason for this preference of his predecessors' text over their Charts.
- As for attributes (Active/Passive, Masculine/Feminine, Positive/Negative), Cocconi's Chart #13 did not show them, and his website at the time of this writing does not show any such information. Therefore an attributes row is not shown in this table.
- As for the Enneagram correspondences, Cocconi's website at the time of this writing does not show
 any such correlation. Therefore an Enneagram row is not shown in this table. Further, none of the
 Chart-makers subsequently reviewed in this chapter indicates an interest in Enneagram
 correspondences.
- As for Body Types preferred by each Role, Cocconi's website at the time of this writing does not show any such information. Therefore a preferences row is not shown in this table.

Sarah Chambers (1998)

Another factor of disagreement in the Michaelian teachings community is the identification of the 'preferred' or 'natural' body Type of each Role. We have already seen this in the *TMH* and the *MTBT* sections. On this very subject, in the 24 January 1998 session transcription of unpublished channeling from Sarah Chambers, we find the following:

 $\label{thm:continuous} Do \ the \ Body \ Types \ correspond \ to \ the \ seven \ Roles \ in \ Essence, \ and \ if \ so, \ what \ are \ they?$

Well, loosely, yes, because there is a definite appearance here that corresponds to most Fragments' idea of what that Role looks like. For instance, Jupiter is the archetypal body type associated with Sages. "Falstaffian" would be the adjective here, we believe. Venus is the archetypal Artisan, Mars the archetypal Warrior, and Saturn the archetypal Priest. Lunar would represent the Slave, while Solar is more archetypal of the King. When he was Alexander, that Fragment had a Solar/Mercury body type, and this commanded a great deal of attention. Mercury is the archetypal Scholar. This is not a firm correlation in that it is not necessary that Fragments choose these particular Body Types each and every time they reincarnate; however, they do seem to be more comfortable when they have them in at least one half of the configuration. Usually Fragments who don't have it are not completely at ease with their bodies and sometimes that is part of the lesson they learn. These are the natural Body Types for the Roles, or some combination thereof.

This channeling has its own row in Table 4Dg below.

| | Table 4Dg — BODY TYPES per SARAH CHAMBERS | | | | | | | | | | | |
|-----------------------------------|---|----------|-------------|-----------|--------------|--------------|------------|--|--|--|--|--|
| Septenarian Attributes ROLE | Attributes Action Inspiration Expression Assimilation Expression Inspiration Action | | | | | | | | | | | |
| PREFER'D BT | MARTIAL | LUNAR | VENUSIAN | MERCURIAL | JOVIAL | SATURNIAN | SOLAR | | | | | |
| CHAMBERS | 1. JOVIAL | 2. LUNAR | 3. VENUSIAN | SOLAR | 1. MERCURIAL | 2. SATURNIAN | 3. MARTIAL | | | | | |

My comments on this table are as follows:

- ROLE: In this table, in the first row, as in all other tables in this chapter, the Septenarian
 Attributes/Roles are shown per the Natural Sequence from left to right, as is my custom. This
 consistency aids the correlation of Body Types with Roles from table to table, revealing the
 inconsistency on the part of various sources.
- PREFERRED BODY TYPE: The second row shows the alleged preferred or natural Body Types of the Roles shown in the row above it, according to the channeling quoted above the table.
- CHAMBERS: The third row shows the original Michaelian group lineup of Body Types, borrowed from Table 4Dc. Notice that it agrees with the second row in three out of seven cases at most. I say "at most" because the sequence of the original Michaelian group Body Types and their correlation with the Roles is ambiguous, but in any rearrangement of the Ordinal and Cardinal triads of Body Types, there is no way to arrange the original Michaelian group Body Types to correlate with the Roles more than three out of seven times.

Refer to Table 4Dq for a comparison of the preferred Body Types of the seven Roles from various Michaelian teachings sources: Stevens, *MTBT*, Chambers, and Wittmeyer.

Troy Tolley (2001)

So far as I have been able to determine, Tolley has two different correlations of Body Types with Roles, both of which are shown in the table below. The first was compiled from a posting by Troy Tolley to the TruthLoveEnergy website, derived from material originally posted to a Yahoo group on 21 October 2001; the second was also found on the TLE website, and it was that from which I derived Chart #21 discussed in Part Three, and dated ~2012.

| | Table 4Dh — BODY TYPES per TROY TOLLEY | | | | | | | | | | | |
|-----------------------------------|--|----------------------------------|----------------------------------|------------------------------------|--------------------------------|-----------------------------------|----------------------------|--|--|--|--|--|
| Septenarian Attributes ROLE | Ordinal Action WARRIOR | Ordinal Inspiration SERVER | Ordinal Expression ARTISAN | Neutral Assimilation SCHOLAR | Cardinal Expression SAGE | Cardinal Inspiration PRIEST | Cardinal Action KING | | | | | |
| 2001 BTs | MARTIAL | LUNAR | MERCURIAL | SOLAR | JOVIAL | SATURNIAN | VENUSIAN | | | | | |
| ATTRIBUTES | Act Pos | Pas Neg | Act Neg | Act Pos | Pas Neg | Act Pos | Pas Pos | | | | | |
| 2012 BTs | VENUSIAN | LUNAR | JOVIAL | SOLAR | MERCURIAL | SATURNIAN | MARTIAL | | | | | |

- ROLES: In this table, in the first row, as in all other tables in this chapter, the Septenarian Attributes/Roles are shown per the Natural Sequence from left to right, as is my custom. This consistency aids the correlation of Body Types with Roles from table to table, revealing the inconsistency on the part of various sources.
- 2001 BODY TYPES: The second row shows the Body Types that are correlated with the Roles in the row above it, according to Tolley. On this point, Tolley had this to say: "I'd also like to bring to your attention that I do not have the Body Types correlating to the Roles in the same way that most have them." In fact, Tolley's correlation does not match anyone else's that I have seen and that is reviewed in this chapter. To me, this indicates that he has reasons for being totally original, or else he channeled it, in which case no reason or rationale or explanation is required. So, is his correlation just his intuition, or is it channeling, or what was it that led him to be different from the others? I wish I knew, because besides being a very good channel, he is a thoughtful and thorough student of the Michaelian teachings, in my opinion.
- ATTRIBUTES: The third row shows the attributes of the Body Types that Tolley ascribes to the Body
 Types shown in the row above. Body Types are either Active or Passive, and either Positive or
 Negative. Note that none of them are Masculine or Feminine, which is another set of attributes that
 are applied to Body Types by some of the sources.
- 2012 BODY TYPES: This correlation of Body Types with Roles matches his earlier assignments in only
 three out of the seven cases. Unlike his earlier correlation, this later correlation is more in alignment
 with some other sources reviewed in the chapter, and it is exactly in alignment with Stevens's TMH
 Chart, reviewed previously.

In the 2001 source, Tolley provides brief descriptions of the seven "basic" Body Types and three "eccentric" Body Types: Uranian, Neptunian, and Plutonian. These descriptions of Body Type characteristics match those given by other sources, so at least in this respect, Tolley was not original.

Mature Scholar Steve (2007, 2009)

It seems to me that Yarbro was right to not wade into the swamp of Body Type exposition in her four books on the Michaelian teachings. We do not know her reasons or rationale for the omission. She might or might not have shared my perception that there are too many things about Body Types that are too unsettled to speak about with any conviction. Even though the seven Body Types were given Positive and Negative Poles during the original Michaelian group — somewhat as if Body Types were an Overleaf category — she deemed the information unworthy of inclusion in her books. Recall that it is impossible to correlate Body Types with Roles from original Michaelian group data. Perhaps that is why Yarbro deemed it sufficient to mention Body Type attraction, repulsion, and neutrality, but nothing else specific about them — neither names nor Poles nor descriptions are given. This meager information about Body Type attraction and repulsion is useful to know because it helps to navigate relationship dynamics, but we don't need to know the alleged and disputable specifics for the alleged seven, or ten, Body Types.

The lack of information in the Yarbro contingent does not end with the four Yarbro books. Chart #18, discussed in Part Three, came from a member of the Yarbro contingent of the Michaelian teachings who called himself Mature Scholar Steve, and who posted it in an internet discussion group, so I assume it is the official understanding of the otherwise secretive Yarbro contingent. His correlation was per this table:

| | Table 4Di — BODY TYPES per MATURE SCHOLAR STEVE | | | | | | | | | | | |
|-----------------------------------|---|-------|--------|-------|-----------|-----------|---------|--|--|--|--|--|
| Septenarian Attributes ROLE | Attributes Action Inspiration Expression Assimilation Expression Inspiration Action | | | | | | | | | | | |
| BODY TYPE | VENUSIAN | LUNAR | JOVIAL | SOLAR | MERCURIAL | SATURNIAN | MARTIAL | | | | | |

- ROLE: In this table, in the first row, as in all other tables in this chapter, the Septenarian
 Attributes/Roles are shown per the Natural Sequence from left to right, as is my custom. This
 consistency on my part aids the correlation of Body Types with Roles from table to table, revealing the
 inconsistency on the part of various sources.
- BODY TYPE: Compare this correlation of Roles and Body Types with the one that is two sections above and you see that two of the top channels in the Michaelian teachings (Yarbro and Chambers) agree in only two instances out of seven.
- Notice that this correlation of Roles and Body Types is the same as Stevens's *TMH* Overleaf *Chart*, Chart #9 in Part Three, which, you will recall, is not the same correlation as shown in Stevens's *text* in the chapter on Body Types in *TMH*. This might not be a coincidence; some other sources are the same as Stevens's *Chart*, and some are the same as his *text*; there might have been some thoughtless copying going on here; see next section. I would note that it is mentally lazy and reputationally risky to assume that one's predecessors have done their 'due diligence' in figuring things out, lest one spread someone else's disinformation or misinformation if that is what is going on here and elsewhere in what appears to be copying.

Terri Benning (2009)

Terri Benning's Overleaf Chart, Chart #19, discussed in Part Three, provides the correlation of Body Types to Roles that are shown in the following table:

| | Table 4Dj — BODY TYPES per TERRI BENNING | | | | | | | | | | |
|-----------------------------------|--|----------------------------------|----------------------------------|------------------------------------|--------------------------------|-----------------------------------|----------------------------|--|--|--|--|
| Septenarian Attributes ROLE | Ordinal Action WARRIOR | Ordinal Inspiration SERVER | Ordinal Expression ARTISAN | Neutral Assimilation SCHOLAR | Cardinal Expression SAGE | Cardinal Inspiration PRIEST | Cardinal Action KING | | | | |
| BODY TYPE | VENUSIAN | LUNAR | JOVIAL | SOLAR | MERCURIAL | SATURNIAN | MARTIAL | | | | |

My comments on this table are as follows:

- ROLE: In this table, in the first row, as in all other tables in this chapter, the Septenarian Attributes/Roles are shown per the Natural Sequence from left to right, as is my custom. This consistency aids the correlation of Body Types with Roles from table to table, revealing the inconsistency on the part of various sources.
- BODY TYPE: The second row shows the same correlation of Body Types with Roles that we see in Yarbro's Overleaf Chart #17 and Stevens's Overleaf Chart #9. This is the closest the various sources documented in this chapter come to agreement. Notice that this correlation of Roles and Body Types is the same as Stevens's *TMH* Overleaf *Chart*, Chart #9 in Part Three, which, you will recall, is not the same correlation as shown in Stevens's *text* in the chapter on Body Types in *TMH*.
- Benning's website, >www.michaelmosaics.com<, does not provide any descriptions or attributes of the Body Types; therefore they are not shown in this tabulation.

Shepherd Hoodwin (2013)

Moving right along to the next source in this series, Shepherd Hoodwin: the information in the following table is from pages 300 and 301 of *Journey of Your Soul* (2013).

| | Table 4Dk — BODY TYPES per SHEPHERD HOODWIN | | | | | | | | | |
|-----------------------------------|---|----------------------------------|----------------------------------|------------------------------------|--------------------------------|-----------------------------------|----------------------------|--|--|--|
| Septenarian Attributes ROLE | Ordinal Action WARRIOR | Ordinal Inspiration SERVER | Ordinal Expression ARTISAN | Neutral Assimilation SCHOLAR | Cardinal Expression SAGE | Cardinal Inspiration PRIEST | Cardinal Action KING | | | |
| BODY TYPE | VENUSIAN | LUNAR | JOVIAL | SOLAR | MERCURIAL | SATURNIAN | MARTIAL | | | |
| ATTRIBUTES | <u>Pas</u> Pos Fem | Pas Neg Fem | Pas Pos Masc | Act Pos Neut | Act Neg Fem | Act Pos Masc | Act Neg Masc | | | |

- ROLE: In this table, in the first row, as in all other tables in this chapter, the Septenarian
 Attributes/Roles are shown per the Natural Sequence from left to right, as is my custom. This
 consistency aids the correlation of Body Types with Roles from table to table, revealing the
 inconsistency on the part of various sources.
- BODY TYPE: The second row shows the same correlation of Body Types with Roles that we see in Stevens's Overleaf Chart #9, Yarbro's Overleaf Chart #17, and Benning's website. This is the closest the various sources documented in this chapter come to agreement.
- ATTRIBUTES: The third row shows the same attributes for each Body Type that Stevens showed in the text of TMH. Pages 303–307 of JOYS explain in detail what is meant by Passive and Active, Negative and Positive, and Feminine and Masculine which I have not seen elsewhere. Note that I show Passive and Active in bold underlined text to indicate that those attributes were at least some of the basis for his correlation with Ordinal and Cardinal attributes, rather than Negative and Positive attributes, or Feminine and Masculine attributes as happens in some other sources. (We get to take our pick.)

Hoodwin is known to be familiar (*JOYS*, p. 302) with the definitive and authoritative resources on Body Types, namely Joel Friedlander's book by that name, and a book by Susan Zannos, *Human Types* — *Essence and the Enneagram*. That familiarity might include the Third Edition of *Body Types*, published in 2009. Hoodwin has information on Body Types that I have not seen in other Michaelian teachings resources; I assume it came from Friedlander and/or Zannos and/or his own observation and/or channeling.

Hoodwin is also aware that other Michaelian teachings books correlate Body Types differently from him, as stated on pages 310 and 311 of the Second Edition of JOYS (2013). He specifically mentions *The Michael Handbook* and *Michael — The Basic Teachings*, then he provides the rationale for his preferences in his correlations. Other sources typically do not give arguments and evidence for their correlations of Body Types with Roles; they deliver the information as a dogma-doctrine.

Larry Byram (1990s, 2016)

Moving right along to the next source in this series, Larry Byram: The following tabulation is derived from Chart #12 dated in the early 1990's, and some web pages that start with an introduction to the Body Types: >https://alignmenttechnologies.us/introduction-8<, dated 2016.

| Table 4Dm — BODY TYPES per LARRY BYRAM | | | | | | | | | |
|--|------------------------------|----------------------------------|----------------------------------|------------------------------------|--------------------------------|-----------------------------------|----------------------------|--|--|
| Septenarian Attributes ROLE | Ordinal Action WARRIOR | Ordinal Inspiration SERVER | Ordinal Expression ARTISAN | Neutral Assimilation SCHOLAR | Cardinal Expression SAGE | Cardinal Inspiration PRIEST | Cardinal Action KING | | |
| CHART #12 | MARTIAL | LUNAR | MERCURIAL | SOLAR | SATURNIAN | VENUSIAN | JOVIAL | | |
| WEBSITE | LUNAR | MERCURIAL | MARTIAL | SOLAR | VENUSIAN | JOVIAL | SATURNIAN | | |
| ALTERNATE NAMES | Inner Brilliance | Speed Com- municator | Sporty Action | Radiant Healer | Safe and Supportive | Group Anchor | Quiet Authority | | |

- ROLE: In this table, in the first row, as in all other tables in this chapter, the Septenarian
 Attributes/Roles are shown per the Natural Sequence from left to right, as is my custom. This
 consistency aids the correlation of Body Types with Roles from table to table, revealing the
 inconsistency on the part of various sources.
- CHART #12: In the second row, the pairing of Body Types on the Axes and correlation with Roles is identical to the *MTBT* Chart shown a few sections previously. Byram is known to have been friends with JP Van Hulle when he lived in the Bay Area (he now lives in Colorado), so perhaps this is the reason that he preferred her work to that of others (such as Stevens) who had proposed correlations with Roles before Byram created his Chart in the early 1990s.
- WEBSITE: In the third row, the correlations of Body Types with the Roles from the website are different from those on his Chart in six out of seven instances. The website correlation of Body Types with Roles does not match any other Chart reviewed in this chapter. The scrambling between Chart (~1990) and Website (2016) is not just per Axial; it was also per Dialectic pairings. Perhaps the Website, dated 2016, reflects an actual change in Byram's understanding from the early 1990s Chart. Maybe instead of just copying MTBT as he did with his early Overleaf Chart, he thought about it, or learned about other sources over the decades, and came up with his own correlation.
- ALTERNATE NAMES: The fourth row shows the names that Byram, in his later work, has substituted
 for the planetary names. These names were found on the 2016 website. You can see that they fit with
 the typical Body Types shown in the row above, but you can also see that they make no sense with the
 Roles shown in the first row. The problem is that Byram the same as all of the other sources so far
 has misaligned the Body Types with the Roles.

The descriptions that Byram has of the Body Types is standard throughout the history of the concept. It seems unlikely that he was unaware of this history, because his participation in the Michaelian teachings goes all the way back to the mid-1980s in the Bay Area, the same as the other early sources.

This section concludes the history of Body Types as presented in the published Michaelian teachings, until this *History* book.

Philip Wittmeyer (~1988)

Despite everything said heretofore about the impossibility of correlating the Body Type system with the Overleaf System, in this section I present my fit of the Body Type system into the Overleaf System, for whatever it is worth. The descriptions of the Body Types have not changed subsequent to the original formulation by Collin, but numerous parameters have been explored in subsequent attempts to correlate with the Overleaf System, as we saw in previous sections. I have some different parameters that kinda sorta make sense to me. Let's see if it makes more sense to you than what you have seen or thought heretofore.

Because the Michaelian teachings community in general has not come to an authoritative consensus by any means, it leaves me free to come up with my own understanding by my own means. Other people have their rationales; I have mine. It so happens that I know a bit about astronomy, astrology, and the mythological deities associated with the seven visible planets — "planets" being an astrological designation (not an astronomical designation) that includes the sun and the moon. If the Michaelian teachings community is going to continue to discuss and use the Body Type system, then I submit the following rationale to them; they can discern if it works better than the confusing mess currently extant. And, of course, if the fit feels better to them, then individual Michaelian students can adopt my system regardless of what other students do, and/or the Michaelian teachings community does collectively.

Here is the story of how I came to my correlation of the Body Type system with the Overleaf System.

Some professional astrologers attended my Michaelian teachings group meetings for a few years in the late 1980s. A couple of them were founding members of the Kansas City astrological association, and one was a professional astrologer. They compared their astrological knowledge with the Roles, and they could not completely agree on correlating all of the planets, hence Body Types, with Roles. That did not stop me from using what I knew of astronomy, astrology, and mythology to come up with my own correlations and descriptions. I also purchased and read Joel Friedlander's book *Body Types*; in that book he provided extensive personality trait descriptions along with body-appearance descriptions, which helped me to correlate. My best fit of Body Types and Roles are shown in this table:

| Table 4Dn — BODY TYPES per PHILIP WITTMEYER | | | | | | | | | |
|---|------------------------------|----------------------------------|----------------------------------|------------------------------------|--------------------------------|-----------------------------------|----------------------------|--|--|
| Septenarian Attributes ROLE | Ordinal Action WARRIOR | Ordinal Inspiration SERVER | Ordinal Expression ARTISAN | Neutral Assimilation SCHOLAR | Cardinal Expression SAGE | Cardinal Inspiration PRIEST | Cardinal Action KING | | |
| PROGRESSION | First | Second | Third | Fourth | Fifth | Sixth | Seventh | | |
| BODY TYPE | MARTIAL | LUNAR | MERCURIAL | SATURNIAN | VENUSIAN | SOLAR | JOVIAL | | |
| ATTRIBUTES | Pas Masc | Pas Fem | Pas Fem | Neut Masc | Act Mix | Act Mix | Act Masc | | |
| POS & NEG POLES | +Wiry -Muscular | +Luminous –Pallid | +Agile –Nervous | +Rugged –Gaunt | +Voluptuous -Sloppy | +Radiant –Ethereal | +Imposing -Corpulent | | |

- ROLES: In this table, in the first row, as in all other tables in this chapter, the Septenarian Attributes/Roles are shown per the Natural Sequence from left to right, as is my custom. This consistency aids the correlation of Body Types with Roles from table to table.
- PROGRESSION: The second row shows the rank-order sequence of the Natural Sequence. In my view, the Enneagram Sequence (Lunar > Venusian > Mercurial > Saturnine > Martial > Jovial > Solar) is irrelevant to this whole discussion; so far as I can tell, it has no discernible validity or utility, so I have discarded it from my analysis and synthesis of the Body Type system.
- BODY TYPE: The third row is my proposed placement of the Body Types in correlation with the Septenarian Attributes/Roles; rationale follows, in the numbered list further on in this section.
- ATTRIBUTES: The fourth row shows the attributes typically attributed to the Roles in the Michaelian teachings, and they work pretty well, with modifications, for the Body Types that I have correlated with the Roles. Masc = Masculine: Warrior, Scholar, Sage, and King Roles are regarded as masculine according to original Michaelian group channeling and the Michaelian teachings community, so Martial, Saturnian, and Jovial are attributed as Masculine. Fem = Feminine: Server, Priest, and Artisan are regarded as feminine according to the original Michaelian group channeling and the Michaelian teachings community, so Lunar and Mercurial are regarded as feminine in my formulation. Mix =Mixed masculine and feminine, because, in my opinion, the Cardinal Roles of Priests ("feminine") and Sages ("masculine") are not as easily gendered as are the Ordinal Roles of Artisans and Servers. Regarding Pas = Passive, that attribute correlates more closely with Ordinal than it does with Feminine; the Cardinal Triad is the reverse of the Ordinal Triad, hence Act = Active. One of the confusing components of the original Michaelian group Body Type, Ordinal/Cardinal placement was to not make a distinction between Passive and Feminine — both were attributed as Ordinal — and between Active and Masculine — both were attributed as Cardinal; in this table I make that distinction in order to have a greater harmony between Roles and their alleged preferred Body Types in my formulation.
- POLES: The fifth row shows the Positive and Negative Poles of the Body Types as originally revealed in Chart #3 from the original Michaelian group. Subsequent students, including myself, have tweaked some of those names, but I will not go into that here. Notice that they are descriptions of physical factors, not of personality factors. Those names of Poles seem reasonable to me based on the descriptions of Body Types which have not significantly changed from TCI to Fellowship of Friends to original Michaelian group to Michaelian teachings. Take a look and see if you do not agree with me that the names of Poles seem at least somewhat appropriate for the corresponding Role archetypes. Some matches are more obvious than others, and the remaining, less obvious, matches are good enough in my estimation about as good as one can hope for when the Body Type system does not truly correlate with the Overleaf System. If you look at the drawings of the Body Types from the Fellowship of Friends group as shown in Volume Two of The Legacy of Sarah Chambers, I think you will find that my correlation of Body Types with Roles is reasonable, if not always obvious, especially if you proceed from the most obvious to the least obvious by a process of elimination. There are also pictures in TMH and MTBT that you can use to compare names of Poles with Body Types. This is my estimation of most-to-least obvious based on cartoons provided in the various sources: Martial =

Warrior, Lunar = Server, Solar = Priest, Jovial = King, Saturnian = Scholar, Mercurial = Artisan, Venusian = Sage.

You can easily see that my correlation of the Body Type system with the Overleaf System differs in many ways from other Michaelian teachings sources. And you can also see that some of my correlations do not fit in terms of masculinity and femininity attributed to Body Types. While keeping in mind that there is no validity to the Body Type system (see section further on), and while keeping in mind that there is no way to fully harmonize it with the Overleaf System (some attributes and characteristics of the original descriptions must be sacrificed), I acknowledge that we Michaelian students have always done what we can to force-fit the two together with minimal violence to the Body Type system.

My rationale for my correlations is based on the following considerations, which may or may not work for any other particular Michaelian student:

- 1. The first consideration is based on Michaelian teachings factors. Warrior, King and Scholar Roles are said to be masculine, so they are assigned the attribute Masculine. That left the other four Roles to attribute as Feminine or Neutral or Mixed. Per *MMFM*, p. 29, the Ordinal Roles are attributed as passive and the Cardinal Roles are attributed as active, and the Neutral Role is attributed as neutral. That accounts for the types of attributes Collin originally used, but not the placements; as stated elsewhere, there can be no perfect correlation.
- 2. The second consideration is based on actual astro*nomical* factors. There is a natural pairing of Mercury and Venus because they are the inner planets from earth to sun. Mercury is obviously the Ordinal and Venus is obviously the Cardinal because of their relative brightness. Likewise, there is an obvious natural pairing of Moon and Sun, with Moon being Ordinal and Sun being Cardinal because of their relative brightness. That leaves the three outer planets Mars, Jupiter, Saturn to be a triad of some kind. I made them the triad of masculine Roles/Planets via a rationale as follows in points 3 and 4.
- 3. The third consideration is based on astrological and mythological factors. By that I mean, the characteristics ascribed to the planets in Western astrology are borrowed straight from Greek and Roman mythology, and Collin borrowed them straight from astrology, as reviewed in Chapter 1M in Part One, "The Seven Body Types". The mythological meaning of the planets as archetypal deities is typically de-emphasized in the typical Michaelian teachings correlations because it did not fit some other considerations, so far as I have been able to discern. For instance, it is most natural that Mars, the god of war, correlate with the Warrior Role, and Jupiter, the king of the gods correlate with the King Role, but that is not the majority report among the Michaelian teachings sources. However, I take the natural route. I also take Venus, the goddess of love, and said to be aesthetically appealing, as the most natural fit for the Sage, the personification of the Synthesis Process, which is somewhat about attraction and beauty. The complement to Venus/Sage is Mercury, the quick-witted messenger god, which fits well enough with Artisan, in my estimation. In Chapter 1B in Part One, "Personality Typologies", I have a section on the personality traits that astrologers ascribe to planets; planets got their names from Roman deities, and Roman deities had personality traits. Based on those astrological correlations of planets with personalities, I was able to reasonably correlate the planets of astrology with the Roles of the Michaelian teachings. It so happens that when Roles are associated with planets on the basis of similar personality traits, it matches the correlation of Body Types and Roles that I made in previous paragraphs. In that chapter, there is a table that lists the personality traits that Western astrology ascribes to the Planets, based on the personalities of the Roman deities after which the Planets were named. I got those personality descriptions from a Wikipedia article on planets in astrology. Based on the personality traits ascribed to Planets, it was relatively easy to match Roles with Planets — the fit is pretty good — and as it so happens the match is the same as with Planetary Body Types that I made in a previous section of this chapter by astronomical means, in terms of Cardinal-Ordinal Attributes, and Masculine-Feminine Attributes. So far as I am concerned, that clinches my match of the *personality* of Body Types with Planets.
- 4. Almost all Overleaf Charts and texts that show Body Types correlate Moon with Server, and that seems reasonable to me also, based on similar descriptions of both. From the second consideration mentioned above, that sets up Sun as its pair, and that correlates Sun with Priest; this makes sense because both Role and Body Type are 'enlightening' or 'illuminating'. The pair of Mercury and Venus, the inner planets (closer to Sun than Earth is), fit naturally with the Expression Axis pair, Artisan with

Mercury (Ordinal) and Sage with Venus (Cardinal) respectively. That leaves the three outer planets (further from Sun than Earth) — Mars, Jupiter, Saturn — to correlate with the three masculine Roles: Warrior, King, and Scholar respectively. This makes sense to me because Mars (Greek = Ares) was the god of war (hence correlated with the Warrior Role), and Jupiter (Greek = Zeus) was the king of the gods (hence correlated with the King Role). Saturn (Greek = Chronos) was said to be the god of time, perhaps because it is the slowest of the visible planets to circle the Zodiac being the furthest from the sun of these planets, with all of the other visible planets within its orbit. To me this makes sense for the Scholar, which encompasses = assimilates all of the other Roles as the orbit of Saturn encompasses all of the other planetary orbits. In my Process/Aspect System formulation, the Neutral Aspect of Personality is Age/Level, which also has to do with time.

To me, collectively, these are pretty strong arguments that, if the Body Types are to find any place whatsoever in the Michaelian teachings—Overleaf System, then the Michaelian teachings community would do better to prefer my correlation over the others that have been put forward.

Anyway, that was my rationale for correlating Body Types with Roles in the late 1980's, and decades later it still works for me. The astrological–mythological Body Type characteristics fit well enough with the look and feel of my corresponding Roles that I have few reservations about my correlation as near the best that we can do in such an ambiguous situation. Even if no one else in the Michaelian teachings community adopts my understanding, I still use it for my own purposes, and my correlation does not hinder effective and efficient communication with other Michaelian students, when discussing the characteristics of each Body Type rather than when discussing the correlation.

If this subject still interests you after reading about all the discrepancies in the Michaelian teachings community that I discuss in this chapter, then you can either adopt one of them that suits your fancy, or work out a system that suits you regardless of what others may opine and pontificate on, which is what I have done.

Tabulating the Discrepancies

It is difficult to follow the various sources as they are presented in the tables above, so, for your convenience, I show a combined correlation of Body Types with Roles in the table below. There it is easier to see that there are many differences of opinion. Following the table is some discussion of these differences.

| | Table 4Dp — BODY TYPE/ROLE CORRELATION DISCREPANCIES | | | | | | | | | |
|-------------|--|-------------|------------|--------------|------------|-------------|----------|--|--|--|
| | There was no understanding of Septenarian Attributes before MFM was published in 1979. | | | | | | | | | |
| Collin B.T. | 1 LUNAR | 2 VENUSIAN | 3 MERCUR'L | 4 SATURN'N | 5 MARTIAL | 6 JOVIAL | 7 SOLAR | | | |

| Wittmeyer | MARTIAL | LUNAR | MERCURIAL | SATURNIAN | VENUSIAN | SOLAR | JOVIAL |
| attributes | Pas Mas | Pas Fem | Pas Fem | Neut Mas | Act Mix | Act Mix | Act Mas |

- Everyone without exception agrees that Lunar correlates with Server. This is the only universal agreement in the Michaelian teachings community.
- Everyone except Chambers agrees that Mercurial correlates with an Expression Role, but there is disagreement as to whether with the Ordinal (eight times) or Cardinal (four times) Role of this Axis. Chambers aligns Mercurial with Neutral Scholar.
- Everyone except MTBT Chart, Chambers, Byram, and Wittmeyer agrees that Venusian correlates with an Action Role, again disagreeing on whether with the Ordinal or the Cardinal Role of the Axis. Ignoring Role discrepancies, Venusian is aligned with an Ordinal Role eight times, a Cardinal Role five times, and never with Neutral Scholar.
- For everyone except Byram website, Martial is always an Action Role, either Warrior (five times) or King (seven times), thus more often King. (Byram website correlates Martial with Artisan.) I stated previously why I prefer to make the God of War correlate with Warrior. Beyond that, the descriptions and images of Martials is obviously very suited for a Warrior, and the descriptions and images of Venusians does not fit that of an archetypal Warrior.
- Everyone except *MTBT* Chart, Byram, and Wittmeyer assign Jovial to an Expression Role, without agreeing whether the correlation is to the Ordinal or the Cardinal Role of the Axis. Jovial is assigned as Cardinal nine times, as Ordinal four times, and never as Neutral Scholar.
- Everyone except Wittmeyer, Byram, and MTBT Chart #13 agrees that Saturnian correlates with Priest. It is identified twelve times as a Cardinal Role and once as Neutral Scholar.
- So far as I have been able to discern, the reason that most sources put Solar in the Scholar column (twelve times) is because Solar is not even on the Enneagram circle; it is in the middle of the circle, in a non-polarized location you might say, not being on the left or right side of the Enneagram circle with the other six planets. That is not a good enough reason for me; I prefer other, more compelling, criteria. The two times it is not seen as Neutral Scholar, it is identified with a Cardinal Role (Priest or King).
- Most people have followed or copied the lead of either Stevens's Overleaf Chart #9, or the text and diagrams of his chapter on Body Types in *TMH*. That was the first presentation of the Body Type system in the Michaelian teachings community. The only difference between the text and the Chart is that Mercurial and Jovial are switched in terms of Dialectic Attributes, Ordinal and Cardinal. Some of Stevens's copiers went one way, and some went the other way.
- The first row, taken from various explanations of Rodney Collin's work (as documented in the section on Body Types in Part One) shows the numbered sequence in which the Body Types are arranged according to a theory of developmental circulation around the Enneagram; refer to Chapter 1M in Part One, "The Seven Body Types", for more explanation. Notice that the attributes of Active/Passive

- and Masculine/Feminine have no pattern with respect to the sequence, and there is some duplication of attributes to more than one Body Type. Recall from Part One that active and passive, and masculine and feminine, were words used in the original Michaelian group to refer to the Ordinal and Exalted sides of the Monad. Based on this, there is no way to arrange Collin's attributes into a proper Septenary or even a Monad. This means that Collin's attributes, as they were originally given, simply cannot be mapped onto the Overleaf System; some major compromises are required if one is to fit Collin's Body Type system into the Overleaf System.
- The second row lists the Body Types as given in original Michaelian group Chart #3. Notice how this scrambles the Body Types compared to Collin's lineup — there is not a single match. Although documents from the Fellowship of Friends show the Enneagram sequence, Chart #3 does not show Body Types in the Enneagram Sequence; we do not know if the original Michaelian group actually subscribed to the Enneagram System, since the Enneagram was never mentioned in the original Michaelian group transcriptions. Therefore, I show the Chart #3 Body Types according to their correlation with the Septenarian Attributes per the Natural Sequence (third row), a correlation which is the work of José Stevens, not the work of the original Michaelian group. Notice that the attributes are the same as the Collin attributes, but only two of the seven are applied to the same Body Types as the Collin attributes. This appears to be an effort on the part of the original Michaelian group to force-fit the Body Type system into the Overleaf System as they understood it at the time, with only the Dialectic Attributes (Ordinal, Neutral, Cardinal) understood, but not the Axial Attributes (Action, Inspiration, Expression, Assimilation) understood. It should also be noted that in Chart #1 and Chart #3, Mercurial and Jovial are opposed as Cardinal and Ordinal, Martial and Venusian are opposed as Cardinal and Ordinal, Saturnine and Lunar are opposed as Cardinal and Ordinal. An astrologer told me that these are pairings that an astrologer would make, based on these planets "ruling" opposing Zodiacal signs, though the Cardinal/Ordinal attributions are obscure, as are the assignments to Axes.
- The third row lists the Septenarian Attributes and their corresponding Role per the Natural Sequence
 from left to right. This consistency aids the correlation of Body Types with Roles from table to table.
 The Natural Sequence is related to the Enneagram Sequence in the row above with respect to number,
 but not with respect to Body Type. The Septenarian Attributes do apply to all of the Body Types in the
 rows below.
- The fourth row is the work of José Stevens (*The Michael Handbook*, p. 257), which appears to have been mostly copied by all subsequent Chart–makers except myself. This is the first proposed correlation of Body Types with the Roles. Stevens had access to the original Michaelian group Body Type information, including Positive and Negative Poles. (He changed a few of the names of the Poles from those given in the original Michaelian group, but that is irrelevant to this chapter.)
- In the last row, I show my proposal for the Body Types arranged per the Natural Sequence; please compare with the third row for correlation with Septenarian Attributes and Roles. More has been said about my rationale for this arrangement in a section above.
- In the third row, the seven Septenarian Attributes are shown, along with the seven appropriate Roles per the Natural Sequence. This row correlates with the nine rows below it but does not correlate with the two rows above it. We simply do not have a clue how Rodney Collin (first row), inventor of these Body Types, would correlate them with the Septenarian Attributes, or even IF he would correlate with them. However, the second row represents the guess that the original Michaelian group might have correlated Passive with Ordinal and Active with Cardinal, as does Shepherd Hoodwin in the seventh row.
- In the first row below the title row, Rodney Collin applied the attributes of Feminine and Masculine, and Passive and Active to the seven Body Types. Notice that there were four Active and four Masculine, and three Passive and three Feminine Body Types. There were no Neutrals, except Solar was outside the nine Enneagram nodes. Actually, what Collin called Negative and Positive, the Michaelian books referred to as Feminine and Masculine, so I placed Collin's planets with that in mind, but it is really rather speculative about where Collin would have placed the planets if he had known about the Overleaf System.

- The fact that Collin assigned Masculine and Feminine, and Active and Passive, attributes to each of the seven planetary influences makes it impossible to correlate the original formulation with the Michaelian attributes of Ordinal and Cardinal.
- Regarding the second row from the top: the original Michaelian group in their Charts only assigned Active/Masculine and Passive/Feminine attributes to the Body Types. (There was no mixing such as Active/Feminine or Passive/Masculine that was how they departed from the original conceptualization by Collin.) It was Chart #1 that was taken by Stevens and his copiers to correlate with Cardinal and Ordinal respectively. That is also the correlation published in MMFM, p. 29, where the Negative Pole of Cardinality is said to be –Activity and the Negative Pole of Ordinality is said to be –Passivity. However, as indicated in Part One, in the original Michaelian group they had not yet come to an understanding of the three Axes of Action, Inspiration, and Expression, so it is just a guess at where they might correlate Axes to the Body Types. I therefore matched to the later books shown in the rows below the fourth row from the top.

If you are not yet confused by all this nonsense, you should be; there is no making sense of it, really. Writing this chapter was extremely frustrating for me, so I must not have "the patience of a saint"; I am unable to "suffer this fool[ishness] gladly".

Tabulation of Body Types Allegedly Preferred by Roles

Because of the difficulty — or rather, *impossibility* — of accurately and unequivocally and unambiguously correlating Body Types with Roles, it is not surprising that there should be disagreement regarding which Body Type is preferred by each Role. The information from various Michaelian teachings sources has already been given in previous tables, but, for your convenience, the information on this factor is collected in the following table.

The notion found in the Michaelian teachings community that each Role has a natural affinity for a certain Body Type might or might not even be true. It makes intuitive sense to me that it is true, but on the other hand, perhaps the preference would be to choose a Body Type that does not keep the soul 'in a rut', but helps the soul explore outside of a 'comfort zone'. According to channeling, the soul chooses variations in many factors in order to diversify its experience, so why not in the realm of Body Type also? I do not know, and I would have to say that the channels do not know either, because they disagree with each other on this question.

The problem in identifying the preference of Role for Body Type arises because of the ambiguities in correlating Roles with Body Types; hence the differences of opinions found in the table below. In all three cases other than my own, the sources disagree among themselves for the most part, and they disagree with themselves in terms of matching the Role's alleged preferred Body Type with their alleged corresponding Body Type. Take a look at this:

| | Table 4Dq — DISCREPANCIES in ROLE PREFERENCES for BODY TYPES | | | | | | | | | |
|-----------------------------------|--|----------------------------------|----------------------------------|------------------------------------|--------------------------------|-----------------------------------|----------------------------|--|--|--|
| Septenarian Attributes ROLE | Ordinal Action WARRIOR | Ordinal Inspiration SERVER | Ordinal Expression ARTISAN | Neutral Assimilation SCHOLAR | Cardinal Expression SAGE | Cardinal Inspiration PRIEST | Cardinal Action KING | | | |
| TMH prefer | Mar Sat | Lunar | Mercurial | Mercurial | Jov Sat Ven | Sat Sol | Mar Sat Jov | | | |
| TMH corr txt | Venusian | Lunar | Mercurial | Solar | Jovial | Saturnine | Martial | | | |
| TMH corr cht | Venusian | Lunar | Jovial | Solar | Mercurial | Saturnine | Martial | | | |
| MTBT prefer | Martial | _ | Lun Sol | Lun Sat | Mer Mar | Sat Mar | Sat Mar | | | |
| MTBT corr txt | Venusian | Lunar | Mercurial | Solar | Jovial | Saturnian | Martial | | | |
| MTBT corr cht | Martial | Lunar | Mercurial | Solar | Saturnian | Venusian | Jovial | | | |
| OMG correl | Venusian? | Lunar? | Jovial? | Solar | Mercurial? | Saturnian? | Martial? | | | |
| SJC prefer | Martial | Lunar | Venusian | Mercurial | Jovial | Saturnian | Solar | | | |
| PJW prefer | Martial | Lunar | Mercurial | Saturnian | Venusian | Solar | Jovial | | | |
